2022-2026

BACHELOR OF TECHNOLOGY (B.Tech.) in

ELECTRONICS AND COMMUNICATION ENGINEERING

based on Choice Based Credit System (CBCS) and Outcome Based Education (OBE)

(As amended up to the 24th Meeting of the Academic Council held on 3rd August 2024. This document supersedes all previous guidelines)

Regulations No.: **Regulations No.: PU/AC-24.108/ECE19/ECE/2022-26**

Resolution No. 10 of the 24th Meeting of the Academic Council held on 3rd August, 2024, and ratified by the Board of Management in its 23rd Meeting held on 19th July, 2024.

AUGUST-2024

Table of Contents

PART A – PROGRAM REGULATIONS

1. Vision & Mission of the University and the School / Department

1.1 Vision of the University

To be a Value-driven Global University, excelling beyond peers and creating professionals of integrity and character, having concern and care for society.

1.2 Mission of the University

- Commit to be an innovative and inclusive institution by seeking excellence in teaching, research and knowledge-transfer.
- Pursue Research and Development and its dissemination to the community, at large.
- Create, sustain and apply learning in an interdisciplinary environment with consideration for ethical, ecological and economic aspects of nation building.
- Provide knowledge-based technological support and services to the industry in its growth and development.
- To impart globally-applicable skill-sets to students through flexible course offerings and support industry's requirement and inculcate a spirit of new-venture creation.

1.3 Vision of Presidency School of Engineering

To be a value based, practice-driven School of Engineering and Technology, committed to developing globally-competent Engineers, dedicated to transforming Society.

1.4 Mission of Presidency School of Engineering

- Cultivate a practice-driven environment with a contemporary Learning-pedagogy, integrating theory and practice.
- Attract and nurture world-class faculty to excel in Teaching and Research, in the field of Core Engineering.
- Establish state-of-the-art facilities for effective Teaching and Learning-experiences.
- Promote Interdisciplinary Studies to nurture talent and impart relevant skill-sets for global impact.
- Instil Entrepreneurial and Leadership Skills to address Social, Environmental, and Community-needs.

1.5 Vision of Department of Electronics and Communication Engineering

To be a value-based, industry driven Electronics and Communication Engineering Department committed to develop globally competent Electronics and Communication Engineering professionals dedicated to transform the society.

1.6 Mission of Department of Electronics and Communication Engineering

- Committed to inculcate application of Engineering knowledge, develop problem analysis and solving skills to be able to investigate complex engineering problems with modern tools.
- Create value-driven engineering professionals who are sensitive to societal concerns of environmental sustainability through ethical conduct.

- Develop excellent communication abilities with core skills of project management and team work.
- Imbibe passion for lifelong learning with individual growth path.
- Commitment towards excellence in Electronics and Communication Engineering education through advancements in research and innovation.
- Design flexible course contents in disciplinary, interdisciplinary and research areas to enhance student's competitiveness.

2. Preamble to the Program Regulations and Curriculum

This is the subset of Academic Regulations and it is to be followed as a requirement for the award of B.Tech degree.

The Curriculum is designed to take into the factors listed in the Choice Based Credit System (CBCS) with focus on Social Project Based Learning, Industrial Training, and Internship to enable the students to become eligible and fully equipped for employment in industries, choose higher studies or entrepreneurship.

In exercise of the powers conferred by and in discharge of duties assigned under the relevant provision(s) of the Act, Statutes and Academic Regulations of the University, the Academic Council hereby makes the following Regulations.

3. Short Title and Applicability

a. These Regulations shall be called the Bachelor of Technology Degree Program Regulations and Curriculum 2022-2026.
b. These Regulations are subject to, and pursuant to the Academic Regulations.
c. These Regulations shall be applicable to the ongoing Bachelor of Technology Degree Programs of the 2022-2026 batch, and to all other Bachelor of Technology Degree Programs which may be introduced in future.
d. These Regulations shall supersede all the earlier Bachelor of Technology Degree Program Regulations and Curriculum, along with all the amendments thereto.
e. These Regulations shall come into force from the Academic Year 2022-2023.

4. Definitions

In these Regulations, unless the context otherwise requires:

a. "Academic Calendar" means the schedule of academic and miscellaneous events as approved by the Vice Chancellor;
b. "Academic Council" means the Academic Council of the University;
c. "Academic Regulations" means the Academic Regulations, of the University;
d. "Academic Term" means a Semester or Summer Term;
e. "Act" means the Presidency University Act, 2013;
f. "AICTE" means All India Council for Technical Education;
g. "Basket" means a group of courses bundled together based on the nature/type of the course;
h. "BOE" means the Board of Examinations of the University;
i. "BOG" means the Board of Governors of the University;
j. "BOM" means the Board of Management of the University;

k. *"BOS" means the Board of Studies of a particular Department/Program of Study of the University;*

l. *"CGPA" means Cumulative Grade Point Average as defined in the Academic Regulations;*

m. *"Clause" means the duly numbered Clause, with Sub-Clauses included, if any, of these Regulations;*

n. *"COE" means the Controller of Examinations of the University;*

o. *"Course In Charge" means the teacher/faculty member responsible for developing and organising the delivery of the Course;*

p. *"Course Instructor" means the teacher/faculty member responsible for teaching and evaluation of a Course;*

q. *"Course" means a specific subject usually identified by its Course-code and Course-title, with specified credits and syllabus/course-description, a set of references, taught by some teacher(s)/course-instructor(s) to a specific class (group of students) during a specific Academic Term;*

r. *"Curriculum Structure" means the Curriculum governing a specific Degree Program offered by the University, and, includes the set of Baskets of Courses along with minimum credit requirements to be earned under each basket for a degree/degree with specialization/minor/honours in addition to the relevant details of the Courses and Course catalogues (which describes the Course content and other important information about the Course). Any specific requirements for a particular program may be brought into the Curriculum structure of the specific program and relevant approvals should be taken from the BOS and Academic Council at that time.*

s. *"DAC" means the Departmental Academic Committee of a concerned Department/Program of Study of the University;*

t. *"Dean" means the Dean / Director of the concerned School;*

u. *"Degree Program" includes all Degree Programs;*

v. *"Department" means the Department offering the degree Program(s) / Course(s) / School offering the concerned Degree Programs / other Administrative Offices;*

w. *"Discipline" means specialization or branch of B.Tech. Degree Program;*

x. *"HOD" means the Head of the concerned Department;*

y. *"L-T-P-C" means Lecture-Tutorial-Practical-Credit – refers to the teaching – learning periods and the credit associated;*

z. *"MOOC" means Massive Open Online Courses;*

aa. *"MOU" means the Memorandum of Understanding;*

bb. *"NPTEL" means National Program on Technology Enhanced Learning;*

cc. *"Parent Department" means the department that offers the Degree Program that a student undergoes;*

dd. *"Program Head" means the administrative head of a particular Degree Program/s;*

ee. *"Program Regulations" means the Bachelor of Technology Degree Program Regulations and Curriculum, 2022-2026;*

ff. *"Program" means the Bachelor of Technology (B.Tech.) Degree Program;*

gg. *"PSOE" means the Presidency School of Engineering;*

hh. *"Registrar" means the Registrar of the University;*

ii. "School" means a constituent institution of the University established for monitoring, supervising and guiding, teaching, training and research activities in broadly related fields of studies;

jj. "Section" means the duly numbered Section, with Clauses included in that Section, of these Regulations;

kk. "SGPA" means the Semester Grade Point Average as defined in the Academic Regulations;

ll. "Statutes" means the Statutes of Presidency University;

mm. "Sub-Clause" means the duly numbered Sub-Clause of these Program Regulations;

nn. "Summer Term" means an additional Academic Term conducted during the summer break (typically in June-July) for a duration of about eight (08) calendar weeks, with a minimum of thirty (30) University teaching days;

oo. "SWAYAM" means Study Webs of Active Learning for Young Aspiring Minds.

pp. "UGC" means University Grant Commission;

qq. "University" means Presidency University, Bengaluru; and

rr. "Vice Chancellor" means the Vice Chancellor of the University.

5. Program Description

The Bachelor of Technology Degree Program Regulations and Curriculum 2022-2026 are subject to, and, pursuant to the Academic Regulations. These Program Regulations shall be applicable to the following ongoing Bachelor of Technology (B.Tech.) Degree Programs of 2022-2026 offered by the Presidency School of Engineering (PSOE):

1. Bachelor of Technology in Civil Engineering, abbreviated as B.Tech. (Civil Engineering)

2. Bachelor of Technology in Electronics and Communication Engineering, abbreviated as B.Tech. (Electronics and Communication Engineering)

3. Bachelor of Technology in Electrical and Electronics Engineering, abbreviated as B.Tech. (Electrical and Electronics Engineering)

4. Bachelor of Technology in Mechanical Engineering, abbreviated as B.Tech. (Mechanical Engineering); and

5. Bachelor of Technology in Petroleum Engineering, abbreviated as B.Tech. (Petroleum Engineering)

5.1 These Program Regulations shall be applicable to other similar programs, which may be introduced in future.

5.2 These Regulations may evolve and get amended or modified or changed through appropriate approvals from the Academic Council, from time to time, and shall be binding on all concerned.

5.3 The effect of periodic amendments or changes in the Program Regulations, on the students admitted in earlier years, shall be dealt with appropriately and carefully, so as to ensure that those students are not subjected to any unfair situation whatsoever, although they are required to conform to these revised Program Regulations, without any undue favour or considerations

6. Minimum and Maximum Duration

6.1 Bachelor of Technology Degree Program is a Four-Year, Full-Time Semester based program. The minimum duration of the B.Tech. Program is four (04) years and each year comprises of two academic Semesters (Odd and Even Semesters) and hence the duration of the B.Tech. program is eight (08) Semesters.

6.2 A student who for whatever reason is not able to complete the Program within the normal period or the minimum duration (number of years) prescribed for the Program, may be allowed a period of two years beyond the normal period to complete the mandatory minimum credits requirement as prescribed by the concerned Program Regulations and Curriculum. In general, the permissible maximum duration (number of years) for completion of Program is 'N' + 2 years, where 'N' stands for the normal or minimum duration (number of years) for completion of the concerned Program as prescribed by the concerned Program Regulations and Curriculum.

6.3 The time taken by the student to improve Grades/CGPA, and in case of temporary withdrawal/re-joining (Refer to Clause **Error! Reference source not found.** of Academic Regulations), shall be counted in the permissible maximum duration for completion of a Program.

6.4 In exceptional circumstances, such as temporary withdrawal for medical exigencies where there is a prolonged hospitalization and/or treatment, as certified through hospital/medical records, women students requiring extended maternity break (certified by registered medical practitioner), and, outstanding sportspersons representing the University/State/India requiring extended time to participate in National/International sports events, a further extension of one (01) year may be granted on the approval of the Academic Council.

6.5 The enrolment of the student who fails to complete the mandatory requirements for the award of the concerned Degree (refer Section 19.**Error! Reference source not found.** of Academic Regulations) in the prescribed maximum duration (Sub-Clauses 18.1 and 18.2 of Academic Regulations), shall stand terminated and no Degree shall be awarded.

7 Programme Educational Objectives (PEO)

After four years of successful completion of the program, the graduates shall be:

PEO-1:Demonstrate as a successful ECE Professional with innovative skills and with a moral and ethical values.

PEO-2:Engage in life-long Learning through Research and Professional Development.

PEO-3:Serve as a leader in the profession through Consultancy and

Entrepreneurship.

8 Programme Outcomes (PO) and Programme Specific Outcomes (PSO)

8.1 Programme Outcomes (PO)

On successful completion of the Program, the students shall be able to:

PO1. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.

PO2. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO6. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one’s own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Life-long learning: Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

8.2 Program Specific Outcomes (PSOs):

On successful completion of the Program, the students shall be able to:

PSO1: Evolve as a successful engineer by applying the knowledge of signal processing, embedded systems and antenna design.

PSO2: Become a successful entrepreneur by understanding the impact of wireless communication, networking and provide solutions to real world problems related to global, environmental and socio-economic context.

PSO3: Emerge as a successful researcher by identifying, formulating and solving the security, Defence and VLSI Design related problems.

PSO4: Identify, formulate and solve the communication engineering problems from knowledge gained during the course to work in a team as well as to lead a team.

9 Admission Criteria (as per the concerned Statutory Body)

The University admissions shall be open to all persons irrespective of caste, class, creed, gender or nation. All admissions shall be made on the basis of merit in the qualifying examinations; provided that forty percent of the admissions in all Programs of the University shall be reserved for the students of Karnataka State and admissions shall be made through a Common Entrance Examination conducted by the State Government or its agency and seats shall be allotted as per the merit and reservation policy of the State Government from time to time**.** The admission criteria to the B.Tech. Program is listed in the following Sub-Clauses:

9.1 An applicant who has successfully completed Pre-University course or Senior Secondary School course (+2) or equivalent such as (11+1), 'A' level in Senior School Leaving Certificate Course from a recognized university of India or outside or from Senior Secondary Board or equivalent, constituted or recognized by the Union or by the State Government of that Country for the purpose of issue of qualifying certificate on successful completion of the course, may apply for and be admitted into the Program.

9.2 Provided further, the applicant must have taken Physics and Mathematics as compulsory subjects in the Pre-University / Higher Secondary / (10+2) / (11+1) examination, along with either Chemistry / Biology / Electronics / Computer Science / Biotechnology subject, and, the applicant must have obtained a minimum of 45% of the total marks (40% in case of candidates belonging to the Reserved Category as classified by the Government of Karnataka) in these subjects taken together.

9.3 The applicant must have appeared for Joint Entrance Examinations (JEE) Main / JEE (Advanced) / Karnataka CET / COMED-K, or any other State-level Engineering Entrance Examinations.

9.4 Reservation for the SC / ST and other backward classes shall be made in accordance with the directives issued by the Government of Karnataka from time to time.

9.5 Admissions are offered to Foreign Nationals and Indians living abroad in accordance with the rules applicable for such admission, issued from time to time, by the

Government of India.

9.6 Candidates must fulfil the medical standards required for admission as prescribed by the University.

9.7 If, at any time after admission, it is found that a candidate had not in fact fulfilled all the requirements stipulated in the offer of admission, in any form whatsoever, including possible misinformation and any other falsification, the Registrar shall report the matter to the Board of Management (BOM), recommending revoking the admission of the candidate.

9.8 The decision of the BOM regarding the admissions is final and binding.

10 Lateral Entry / Transfer Students requirements

10.1 Lateral Entry

The University admits students directly to the second year (3rd Semester) of the B.Tech. Degree program as per the provisions and/or regulations of the Government of Karnataka pertaining to the "Lateral Entry" scheme announced by the Government from time to time. Further, the general conditions and rules governing the provision of Lateral Entry to the B.Tech. Program of the University are listed in the following Sub-Clauses:

10.1.1 Admission to 2nd year (3rd Semester) of the B.Tech. Degree program shall be open to the candidates who are holders of a 3-year Diploma in Engineering (or equivalent qualification as recognized by the University), who have secured not less than forty-five percentage (45%) marks in the final year examination (5th and 6th Semesters of the Diploma Program) in the appropriate branch of Engineering. Provided that, in case of SC / ST and OBC candidates from Karnataka the minimum marks for eligibility shall be forty percent (40%).

10.1.2 Provided further that, candidates seeking Lateral Entry may be required to complete specified bridge Courses as prescribed by the University. Such bridge Courses, if any, shall not be included in the CGPA computations.

10.1.3 All the existing Regulations and Policies of the University shall be binding on all the students admitted to the Program through the provision of Lateral Entry.

10.1.4 The Course requirements prescribed for the 1st Year of the B.Tech. Program shall be waived for the student(s) admitted through Lateral Entry and the duration of the B.Tech. Program for such students is three (03) years, commencing from the 3rd Semester (commencement of the 2nd Year) of the B.Tech. Program and culminating with the 8th Semester (end of the 4th Year) of the B.Tech. Program.

10.1.5 Provided that, if a Lateral Entry student misses any mandatory program specific courses that are typically offered in the 1st year (1st or 2nd semesters), then those courses must be cleared by the students as soon as possible, preferably during the Summer Term.

10.1.6 The existing Program Regulations of the concerned Program to which the student is admitted through the provision of Lateral Entry shall be binding on the student with effect from the 3rd Semester of the Program. i.e., the Program Structure and Curriculum from the 3rd to 8th Semesters of the Program concerned shall be binding on the student admitted through Lateral Entry. Further, any revisions / amendments made to the Program Regulations thereafter, shall be binding on all the students of the concerned Program.

10.1.7 All the Courses (and the corresponding number of Credits) prescribed for the 1st Year of the concerned B.Tech. Program shall be waived for the student(s) admitted to the concerned B.Tech Program through Lateral Entry. Further, the *Minimum Credit Requirements* for the award of the B.Tech. Degree in the concerned Program shall be prescribed / calculated as follows:

The ***Minimum Credit Requirements*** for the award of the Bachelor of Technology (B.Tech.) Degree prescribed by the concerned Bachelor of Technology Degree Program Regulations and Curriculum, 2022-2026, minus the number of Credits prescribed / accepted by the Equivalence Committee for the 1st Year (1st and 2nd Semesters) of the B.Tech. Program.

For instance, if the *Minimum Credit Requirements* for the award of the Bachelor of Technology (B.Tech.) Degree as prescribed by the Regulations for B.Tech. (Mechanical Engineering) is "N" Credits, and, if the total credits prescribed in the 1st Year (total credits of the 1st and 2nd Semesters) of the Program concerned is "M" Credits, then the *Minimum Credit Requirements* for the award of the B.Tech. in Mechanical Engineering for a student who joins the Program through the provision of the Lateral Entry, shall be "N – M" Credits.

10.1.8 Further, no other waiver except the Courses prescribed for the 1st year of the B.Tech. Program of the University shall be permissible for students joining the B.Tech. Program through the provision of Lateral Entry.

10.2 Transfer of student(s) from another recognized University to the 2nd year (3rd Semester) of the B.Tech. Program of the University

A student who has completed the 1st Year (i.e., passed in all the Courses / Subjects prescribed for the 1st Year) of the B.Tech. / B.E. / B.S., Four-Year Degree Program from another recognized University, may be permitted to transfer to the 2nd Year (3rd

Semester) of the B.Tech. Program of the University as per the rules and guidelines prescribed in the following Sub-Clauses:

10.2.1 The concerned student fulfils the criteria specified in Sub-Clauses 10.1.1, 10.1.2 and 10.1.3.

10.2.2 The student shall submit the Application for Transfer along with a non-refundable Application Fee (as prescribed by the University from time to time) to the University no later than July 10 of the concerned year for admission to the 2nd Year (3rd Semester) B.Tech. Program commencing on August 1 on the year concerned.

10.2.3 The student shall submit copies of the respective Marks Cards / Grade Sheets / Certificates along with the Application for Transfer.

10.2.4 The transfer may be provided on the condition that the Courses and Credits completed by the concerned student in the 1st Year of the B.Tech. / B.E. / B.S. Four Degree Program from the concerned University, are declared equivalent and acceptable by the Equivalence Committee constituted by the Vice Chancellor for this purpose. Further, the Equivalence Committee may also prescribe the Courses and Credits the concerned students shall have to mandatorily complete, if admitted to the 2nd Year of the B.Tech. Program of the University.

10.2.5 The Branch / Discipline allotted to the student concerned shall be the decision of the University and binding on the student.

11. Change of Branch / Discipline / Specialization

A student admitted to a particular Branch of the B.Tech. Program will normally continue studying in that Branch till the completion of the program. However, the University reserves the right to provide the option for a change of Branch, or not to provide the option for a change of Branch, at the end of 1st Year of the B.Tech. Program to eligible students in accordance with the following rules and guidelines: framed by the University from time to time.

11.1 Normally, only those students, who have passed all the Courses prescribed for the 1st Year of the B.Tech. Program and obtained a CGPA of not less than 6.50 at the end of the 2nd Semester, shall be eligible for consideration for a change of Branch.

11.2 Change of Branch, if provided, shall be made effective from the

commencement of the 3rd Semester of the B.Tech. Program. There shall be no provision for change of Branch thereafter under any circumstances whatsoever.

11.3 The student provided with the change of Branch shall fully adhere to and comply with the Program Regulations of the concerned Branch of the B.Tech. Program, the Fee Policy pertaining to that Branch of the B.Tech. Program, and, all other rules pertaining to the changed Branch existing at the time.

11.4 Change of Branch once made shall be final and binding on the student. No student shall be permitted, under any circumstances, to refuse the change of Branch offered.

11.5 The eligible student may be allowed a change in Branch, strictly in order of *inter se* merit, subject to the conditions given below:

11.5.1 The actual number of students in the 3rd Semester in any particular Branch to which the transfer is to be made, should not exceed the intake fixed by the University for the concerned Branch;

11.5.2 The actual number of students in any Branch from which transfer is being sought does not fall below 75% of the total intake fixed by the University for the concerned Branch.

The process of change of Branch shall be completed within the first five days of Registration for the 3rd Semester of the B.Tech. Program.

12 Specific Regulations regarding Assessment and Evaluation (including the Assessment Details of NTCC Courses, Weightages of Continuous Assessment and End Term Examination for various Course Categories)

12.1 The academic performance evaluation of a student in a Course shall be according to the University Letter Grading System based on the class performance distribution in the Course.

12.2 Academic performance evaluation of every registered student in every Course registered by the student is carried out through various components of Assessments spread across the Semester. The nature of components of Continuous Assessments and the weightage given to each component of Continuous Assessments (refer Clause 12.5) shall be clearly defined in the Course Plan for every Course, and approved by the DAC.

12.3 Format of the End-Term examination shall be specified in the Course Plan.

12.4 Grading is the process of rewarding the students for their overall performance in each Course. The University follows the system of Relative Grading with statistical approach to classify the students based on the relative performance of the students registered in the concerned Course except in the following cases:

- Non-Teaching Credit Courses (NTCC)
- Courses with a class strength less than 30

Absolute grading method may be adopted, where necessary with prior approval of concerned DAC.

Grading shall be done at the end of the Academic Term by considering the aggregate performance of the student in all components of Assessments prescribed for the Course. Letter Grades (Clause **Error! Reference source not found.**) shall be awarded to a student based on her/his overall performance relative to the class performance distribution in the concerned Course. These Letter Grades not only indicate a qualitative assessment of the student's performance but also carry a quantitative (numeric) equivalent called the Grade Point.

12.5 Assessment Components and Weightage

Table 1: Assessment Components and Weightage for different category of Courses

Nature of Course and Structure	Evaluation Component		Weightage	Minimum Performance Criteria	
Lecture-based Course L component in the L-T-P Structure is predominant (more than 1) (Examples: 3-0-0; 3-0-2; 2-1-0; 2-0-2, 2-0-4 etc.)	Continuous Assessments	Assignments, Seminars, Poster Presentations, Quizzes, Mini Projects, Term Papers, Hack-a-thons, Make-a-thons, Code-a-thons, etc. as prescribed in the Course Plan	25%	-	40%
		Mid Term Examination (to be conducted by CoE centrally)	25%		
	End Term Examination		50%	30%	
Lab/Practice-based Course P component in the L-T-P Structure is predominant (Examples: 0-0-4; 1-0-4; 1-0-2; etc.)	Continuous Assessments	Laboratory Work / Practical exercises, conducted in every Laboratory / Practice session / activity, including Laboratory records, practice / project reports, attendance / class participation as applicable, and as prescribed in the	50%	-	40%

		Course Plan			
		Mid Term Examination (to be conducted at Department/ School Level during regular lab slots)	25%		
	End Term Examination		25%	30%	
Skill based Courses like Industry Internship, Capstone project, Research Dissertation, Integrative Studio, Interdisciplinary Project, Summer / Short Internship, Social Engagement / Field Projects, Portfolio, and such similar Non-Teaching Credit Courses, where the pedagogy does not lend itself to a typical L-T-P structure	Guidelines for the assessment components for the various types of Courses, with recommended weightages, shall be specified in the concerned Program Regulations and Curriculum / Course Plans, as applicable.			40%	

The exact weightages of Evaluation Components shall be clearly specified in the concerned PRC and respective Course Plan.

Normally, for Practice/Skill based Courses, without a defined credit structure (L–T–P) [NTCC], but with assigned Credits (as defined in Clause **Error! Reference source not found.** of the Academic Regulations), the method of evaluation shall be based only on Continuous Assessments. The various components of Continuous Assessments, the distribution of weightage among such components, and the method of evaluation/assessment, shall be as decided and indicated in the Course Plan/PRC. The same shall be approved by the respective DAC.

12.6 Minimum Performance Criteria:

12.6.1 Theory only Course and Lab/Practice Embedded Theory Course

A student shall satisfy the following minimum performance criteria to be eligible to earn the credits towards the concerned Course:

a. A student must obtain a minimum of 30% of the total marks/weightage assigned to the End Term Examinations in the concerned Course.

b. The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of the components of Continuous Assessments,

Mid Term Examinations and End Term Examinations in the concerned Course.

12.6.2 Lab/Practice only Course and Project Based Courses

The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of all assessment components in the concerned Course.

12.6.3 A student who fails to meet the minimum performance criteria listed above in a Course shall be declared as "Fail" and given "F" Grade in the concerned Course. For theory Courses, the student shall have to re-appear in the "Make-Up Examinations" as scheduled by the University in any subsequent semester, or, re-appear in the End Term Examinations of the same Course when it is scheduled at the end of the following Semester or Summer Term, if offered. The marks obtained in the Continuous Assessments (other than the End Term Examination) shall be carried forward and be included in computing the final grade, if the student secures the minimum requirements (as per Clause 12.6.1, 12.6.2 of academic regulations) in the "Make-Up Examinations" of the concerned Course. Further, the student has an option to re-register for the Course and clear the same in the summer term/ subsequent semester if he/she wishes to do so, provided the Course is offered.

13 Additional clarifications - Rules and Guidelines for Transfer of Credits from MOOC, etc. – Note: These are covered in Academic Regulations

The University allows students to acquire credits from other Indian or foreign institutions and/or Massive Open Online Course (MOOC) platforms, subject to prior approval. These credits may be transferred and counted toward fulfilling the minimum credit requirements for the award of a degree. The process of transfer of credits is governed by the following rules and guidelines:

13.1 The transfer of credits shall be examined and recommended by the Equivalence Committee (Refer **Error! Reference source not found.** of academic regulations) and approved by the Dean - Academics.

13.2 Students may earn credits from other Indian or foreign Universities/Institutions with which the University has an MOU, and that MOU shall have specific provisions, rules and guidelines for transfer of credits. These transferred credits shall be counted towards the minimum credit requirements for the award of the degree.

13.3 Students may earn credits by registering for Online Courses offered by *Study Web of Active Learning by Young and Aspiring Minds* (SWAYAM) and *National Program on Technology Enhanced Learning* (NPTEL), or other such recognized Bodies/ Universities/Institutions as approved by the concerned BOS and Academic Council from time to time. The concerned School/Parent Department

shall publish/include the approved list of Courses and the rules and guidelines governing such transfer of credits of the concerned Program from time to time. The Rules and Guidelines for the transfer of credits specifically from the Online Courses conducted by SWAYAM/ NPTEL/ other approved MOOCs are as stated in the following Sub-Clauses:

13.3.1 A student may complete SWAYAM/NPTEL/other approved MOOCs as mentioned in Clause 13.3 (as per academic regulations) and transfer equivalent credits to partially or fully complete the mandatory credit requirements of Discipline Elective Courses and/or the mandatory credit requirements of Open Elective Courses as prescribed in the concerned Curriculum Structure. However, it is the sole responsibility of the student to complete the mandatory credit requirements of the Discipline Elective Courses and the Open Elective Courses as prescribed by the Curriculum Structure of the concerned Program.

13.3.2 SWAYAM/NPTEL/ other approved MOOCs as mentioned in Clause 13.3 (as per academic regulations) shall be approved by the concerned Board of Studies and placed (as Annexures) in the concerned PRC.

13.3.3 Parent Departments may release a list of SWAYAM/NPTEL/other approved MOOCs for Pre-Registration as per schedule in the Academic Calendar or through University Notification to this effect.

13.3.4 Students may Pre-Register for the SWAYAM/NPTEL/other approved MOOCs in the respective Departments and register for the same Courses as per the schedule announced by respective Online Course Offering body/institute/ university.

13.3.5 A student shall request for transfer of credits only from such approved Courses as mentioned in Sub-Clause 13.3.2 above.

13.3.6 SWAYAM/NPTEL/other approved MOOCs Courses are considered for transfer of credits only if the concerned student has successfully completed the SWAYAM/NPTEL/other approved MOOCs and obtained a certificate of successful/satisfactory completion.

13.3.7 A student who has successfully completed the approved SWAYAM/NPTEL/ other approved MOOCs and wants to avail the provision of transfer of equivalent credits, must submit the original Certificate of Completion, or such similar authorized documents to the HOD concerned, with a written request for the transfer of the equivalent credits. On verification of the Certificates/Documents and approval by the HOD concerned, the Course(s) and equivalent Credits shall forwarded to the COE for processing of results of the concerned Academic Term.

13.3.8 The credit equivalence of the SWAYAM/NPTEL/other approved MOOCs are based on Course durations and/or as recommended by the Course

offering body/institute/university. The Credit Equivalence mapped to SWAYAM/ NPTEL approved Courses based on Course durations for transfer of credits is summarised in Table shown below. The Grade will be calculated from the marks received by the Absolute Grading Table **Error! Reference source not found.** in the academic regulations.

Table 2: Durations and Credit Equivalence for Transfer of Credits from SWAYAM-NPTEL/ other approved MOOC Courses		
Sl. No.	**Course Duration**	**Credit Equivalence**
1	4 Weeks	1 Credit
2	8 Weeks	2 Credits
3	12 Weeks	3 Credits

13.3.9 The maximum permissible number of credits that a student may request for credit transfer from MOOCs shall not exceed 20% of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree.

13.3.10 The University shall not reimburse any fees/expense; a student may incur for the SWAYAM/NPTEL/other approved MOOCs.

13.4 The maximum number of credits that can be transferred by a student shall be limited to forty percent (40%) of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree. However, the grades obtained in the Courses transferred from other Institutions/MOOCs, as mentioned in this Section (13.**Error! Reference source not found.**), shall not be included in the calculation of the CGPA.

14. Structure / Component with Credit Requirements Course Baskets & Minimum Basket wise Credit Requirements

The B.Tech. (Electronics and Communication Engineering) Program Structure (2022-2026) totalling 160 credits. Table 3 summarizes the type of baskets, number of courses under each basket and the associated credits that are mandatorily required for the completion of the Degree.

Table 3: B.Tech. (Electronics and Communication Engineering) 2022-2026: Summary of Mandatory Courses and Minimum Credit Contribution from various Baskets		
Sl. No.	**Baskets**	**Credit Contribution**
1	SCHOOL CORE (SC)	58
2	PROGRAM CORE (PC)	60
3	DISCIPLINE ELECTIVE (DE)	30

Table 3: B.Tech. (Electronics and Communication Engineering) 2022-2026: Summary of Mandatory Courses and Minimum Credit Contribution from various Baskets		
Sl. No.	**Baskets**	**Credit Contribution**
4	OPEN ELECTIVE (OE)	12
	Total Credits	**160 (Minimum)**

In the entire Program, the practical and skill based course component contribute to an extent of approximately 57% out of the total credits of 160 for B.Tech. (Electronics and Communication Engineering) program of four years' duration.

15. Minimum Total Credit Requirements of Award of Degree

As per the AICTE guidelines, a minimum of 160 credits is required for the award of a B.Tech. degree.

16. Other Specific Requirements for Award of Degree, if any, as prescribed by the Statutory Bodies,

16.1 The award of the Degree shall be recommended by the Board of Examinations and approved by the Academic Council and Board of Management of the University**.**

16.2 A student shall be declared to be eligible for the award of the concerned Degree if she/he:

a. Fulfilled the Minimum Credit Requirements and the Minimum Credits requirements under various baskets;

b. Secure a minimum CGPA of 4.50 in the concerned Program at the end of the Semester/Academic Term in which she/he completes all the requirements for the award of the Degree as specified in Sub-Clause a of Academic Regulations**;**

c. No dues to the University, Departments, Hostels, Library, and any other such Centers/ Departments of the University; and

d. No disciplinary action is pending against her/him.

17. Curriculum Structure – Basket Wise Course List (not Semester Wise) List of Courses Tabled – aligned to the Program Structure (Course Code, Course Name, Credit Structure (LTPC), Contact Hours, Course Basket, Type of Skills etc., as applicable).

Table 3.1 : List of School Core Courses (SC)						
S.No	Course Code	Course Name	L	T	P	C

		Total No. of Credits				60

18. Practical / Skill based Courses – Internships / Thesis / Dissertation / Capstone Project Work / Portfolio / Mini project

Practical / Skill based Courses like internship, project work, capstone project, research project / dissertation, and such similar courses, where the pedagogy does not lend itself to a typical L-T-P-C Structure as defined in Clause 5.1 of the Academic Regulations, are simply assigned the number of Credits based on the quantum of work / effort required to fulfill the learning objectives and outcomes prescribed for the concerned Courses. Such courses are referred to as Non-Teaching Credit Courses (NTCC). These Courses are designed to provide students with hands-on experience and skills essential for their professional development. These courses aim to equip students with abilities in problem identification, root cause analysis, problem-solving, innovation, and design thinking through industry exposure and project-based learning. The expected outcomes are first level proficiency in problem solving and design thinking skills to better equip B.Tech. graduates for their professional careers. The method of evaluation and grading for the Practical / Skill based Courses shall be prescribed and approved by the concerned Departmental Academic Committee (refer Annexure A of the Academic Regulations). The same shall be prescribed in the Course Handout.

18.1 Internship

A student may undergo an Internship for a period of 12-14 weeks in an industry / company or academic / research institution during the 7th or 8th Semesters, subject to the following conditions:

18.1.1 The Internship shall be in conducted in accordance with the Internship Policy prescribed by the University from time to time.

18.1.2 The selection criteria (minimum CGPA, pass in all Courses as on date, and any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Internship to a student;

18.1.3 The number of Internships available for the concerned Academic Term. Further, the available number of internships shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution

providing the Internship, as stated in Sub-Clause 2.6.1.2 above.

18.1.4 A student may opt for Internship in an Industry / Company or academic / research institution of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the Internship on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Internship confirms to the University that the Internship shall be conducted in accordance with the Program Regulations and Internship Policy of the University.

18.1.5 A student selected for an Internship in an industry / company or academic / research institution shall adhere to all the rules and guidelines prescribed in the Internship Policy of the University.

18.2 Project Work

A student may opt to do a Project Work for a period of 12-14 weeks in an Industry / Company or academic / research institution or the University Department(s) as an equivalence of Internship during the Semester Break between 4th and 5th Semesters or 6th and 7th Semesters, subject to the following conditions:

18.2.1 The Project Work shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.

18.2.2 The student may do the project work in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 2.6.2.1). Provided further, that the Industry / Company or academic / research institution offering such project work confirms to the University that the project work will be conducted in accordance with the Program Regulations and requirements of the University.

18.3 Capstone Project

A student may undergo a Capstone Project for a period of 12-14 weeks in an industry / company or academic / research institution in the 7th / 8th Semester as applicable, subject to the following conditions:

18.3.1 The Capstone Project shall be in conducted in accordance with the Capstone Project Policy prescribed by the University from time to time.

18.3.2 The selection criteria (minimum CGPA, pass in all Courses as on date, and any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Capstone Project to a student;

18.3.3 The number of Capstone Project available for the concerned Academic Term. Further, the available number of Capstone Project shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution providing the Capstone Project, as stated in Sub-Clause 2.6.3.2 above.

18.3.4 A student may opt for Capstone Project in an Industry / Company or academic / research institution of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the I Capstone Project on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Capstone Project confirms to the University that the Capstone Project shall be conducted in accordance with the Program Regulations and Internship Policy of the University.

18.3.5 A student selected for a Capstone Project in an industry / company or academic / research institution shall adhere to all the rules and guidelines prescribed in the Capstone Project Policy of the University.

18.4 Research Project / Dissertation

A student may opt to do a Research Project / Dissertation for a period of 12-14 weeks in an Industry / Company or academic / research institution or the University Department(s) as an equivalence of Capstone Project, subject to the following conditions:

18.4.1 The Research Project / Dissertation shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.

The student may do the Research Project / Dissertation in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 2.6.4.1). Provided further, that the Industry / Company or academic / research institution offering such Research Project / Dissertation confirms to the University that the Research Project / Dissertation work will be conducted in accordance with the Program Regulations and requirements of the University.

19.List of Elective Courses under various Specialisations / Stream Basket

Table 3.3 : Professional Electives Courses/Specialization Tracks						
Track 1 - General

23. Course Catalogue

Course Catalogue of all Courses Listed including the Courses Offered by other School / Department and Discipline / Programme Electives – Course Code, Course Name, Prerequisite, Anti-requisite, Course Description, Course Outcome, Course Content (with Blooms Level, CO, No. of Contact Hours), Reference Resources.

SCHOOL CORE

Course Code: MAT1001	**Course Title: Calculus and Linear Algebra** **Type of Course:1] School Core Lab Integrated**	**L-T- P- C**	**3**	**1**	**0**	**4**
Version No.	2.0					
Course Pre-requisites	Basic Concepts of Limits, Differentiation, Integration					
Anti-requisites	**NIL**					
Course Description	The course focuses on the concepts of calculus and linear algebra with reference to specific engineering problems. The course is of both conceptual and analytical type in nature.					
Course Objective	The objective of the course is to **familiarize the learners with the concepts of "**CALCULUS AND LINEAR ALGEBRA" **and attain Skill Development through problem solving techniques**.					
Course Out Comes	On successful completion of the course the students shall be able to: 1) Comprehend the knowledge of applications of matrix principles. 2) Understand the concept of partial derivatives and their applications. 3) Apply the principles of integral calculus to evaluate integrals. 4) Adopt the various analytical methods to solve differential equations.					
Course Content:						
Module 1	**Linear Algebra**					**16 Classes**
Review: Types of matrices, elementary transformations, **Linear Algebra:** Echelon form, rank of a matrix, consistency and solution of system of linear equations - Gauss elimination method, Gauss-Jordan method. Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton theorem – Diagonalization of matrices –						

Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms. Engineering Applications of Linear Algebra.

Module 2	**Partial Derivatives**				**14 CLASSES**

Review: Differential calculus with single variable.

Differential Calculus:

Partial differentiation, Homogeneous functions and Euler's theorem, Total derivative, Change of variables, Jacobians, Partial differentiation of implicit functions, Taylor's series for functions of two variables, Maxima and minima of functions of two variables, Lagrange's method of undetermined multipliers. Engineering Applications of partial derivatives.

Module 3	**Integral calculus**				**12 Classes**

Review: Integral calculus for single integrals.

Integral calculus:

Multiple Integrals- Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves, evaluation of triple integrals-change of variables between Cartesian and cylindrical and spherical polar co-ordinates.

Beta and Gamma functions–inter-relation-evaluation of integrals using gamma and beta functions. Evaluate double & triple integrals.

Module 4	**Differential Equations**	**Assignment**		**Programming**	**16 Classes**

Definition, types of differential equations, order and degree, Linear Differential Equations, Bernoulli's Differential Equation, Exact and Non - Exact Differential Equations.

Higher order Differential Equation with constant coefficients and with right hand side of the form eax, sinax, cosax, eaxf(x), xnf(x) etc., Linear equations with variable coefficients such as Cauchy Equation and Lagrange's Equation, Method of Variation of Parameters. Engineering applications of differential equations.

Targeted Application & Tools that can be used:

The contents of this course have direct applications in most of the core engineering courses for problem formulations, Problem Solution and system Design.

Tools Used: Python.

Assignment:

1. List at least 3 sets of Matrix Applications concerning the respective branch of Engineering and obtain the solution using C Programming/Python.
2. Select any one simple differential equation pertaining to the respective branch of engineering, identify the dependent and independent variable – Obtain the solution and compare the solution sets by varying the values of the dependent variable.

Topics relevant to SKILL DEVELOPMENT: The course focuses on the concepts of calculus and linear algebra with reference to specific engineering problems. The course is of both conceptual and analytical type in nature. The lab sessions associated with the course are concerned with acquiring an ability to use the MATLAB software. for **Skill Development through** Experiential Learning **methodologies.** This is attained through assessment component mentioned in course handout.	
Catalogue prepared by	Dr Veeresh A Sajjanara and Dr V Nagendramma
Recommended by the Board of Studies on	13th BOS held on 04/01/2025
Date of Approval by the Academic Council	24th ACM held in 3rd August 2024

Course Code: PHY1002	**Course Title: Optoelectronics and Device Physics Type of Course:1] School Core Lab Integrated**	**L-T- P- C**	**2**	**0**	**2**	**3**
Version No.	1.0					
Course Pre-requisites	**NIL**					
Anti-requisites	**NIL**					
Course Description	The purpose of this course is to enable the students to understand the fundamentals, working and applications of optoelectronic devices and to develop the basic abilities to appreciate the applications of advanced microscopy and quantum computers. The course develops the critical thinking, experimental and analytical skills. The associated laboratory provides an opportunity to validate the concepts taught and enhances the ability to use the concepts for technological applications. The laboratory tasks aim to develop following skills:					
Course Objective	The objective of the course is to familiarize the learners with the concepts of "Optoelectronics and device physics "and attain **Skill Development** through **Experiential Learning** techniques					
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Describe the concepts of semiconductors, magnetic materials and superconductors. CO2: Apply the concept of materials in the working of optoelectronic and magnetic devices. CO3: Discuss the quantum concepts used in advanced microscopy and quantum computers. CO4: Explain the applications of lasers and optical fibers in various technological fields. CO5: Interpret the results of various experiments to verify the concepts used in optoelectronics and advanced devices.					
Course Content:						
Module 1	**Fundamentals of Materials.**	Assignment			**07 Classes**	
Topics: Concept of energy bands, charge carriers, carrier concentration, concept of Fermi level, Hall effect, Superconductors: Josephson effect.						
Module 2	**Advanced Devices and applications**	**Assignment**			**08 CLASSES**	
Topics: p-n junctions, Zener diode, transistor characteristics, Optoelectronic devices, Solar cells, I-V characteristics, and LEDs						
Module 3	**Quantum concepts and Applications**	**Term paper**			**08 Classes**	
Topics: Planck's quantum theory, applications of Quantum theory: de-Broglie hypothesis, matter waves, properties. De-Broglie wavelength associated with an electron. Heisenberg's uncertainty principle						
Module 4	**Lasers and Optical fibers**	**Term paper**			**07 Classes**	
Topics: Interactions of radiations with matter, Characteristics of laser, conditions and requisites of laser, Modern day applications of laser: LIDAR, LASIK, Cutting, Welding and						

Drilling.

Principle of optical fibers, Numerical aperture and acceptance angle (Qualitative), Attenuation, Applications: Point to point communication with block diagram, application of optical fibers in endoscopy.

Targeted Application & Tools that can be used:

1. Areas of application are optoelectronics industry, Solar panel technologies, quantum computing software, electronic devices using transistors and diodes, memory devices, endoscopy, SQUIDS in MRI, Advanced material characterizations using SEM and STM.
2. Origin, excel and Mat lab soft wares for programming and data analysis.

Assignment:

- Midterm exam
- Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screen shot accessing digital resource.)
- Quiz
- End Term Exam
- Self-Learning

1. Prepare a comprehensive report on non-conventional energy resources in Karnataka and their pros and cons.
2. Write a report on importance of quantum entanglement in supercomputers

Topics relevant to SKILL DEVELOPMENT:

amentals of materials, Lasers and optical fibers. for Skill Development through Participative Learning Techniques. This is attained through the Assignment/ Presentation as mentioned in the assessment component in course handout..

Catalogue prepared by	Dr. Anindita, Dr. Sivasankar Reddy, Dr. Naveen C S, Dr. Mohan kumar Naidu, Dr. Deepthi P R, Dr. Mahaboob Pasha, Dr. Ranjeth Kumar Reddy, Dr. Pradeep Bhaskar, Dr. G. Srinivas Reddy, Dr. Saurav Kumar Kajli, Dr. Charan Prasanth
Recommended by the Board of Studies on	12th BOS held on 04/07/2024
Date of Approval by the Academic Council	24th ACM held in 3rd August 2024

Course Code: **ECE1001**	**Course Title: Elements of Electronics Engineering** **Type of Course: School Core Theory & Integrated Laboratory**	**L-T-P-C**	3	0	2	4
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	Nil					
Course Description	The purpose of this course is to enable the students to learn the fundamental concepts of electronic devices and circuits. The course aims at nurturing the students with the fundamental principles of electronics engineering, prevailing in various engineering applications. The nature of the course is conceptual and analytical which imparts knowledge of electronic components and their behavior under various operating conditions. The course develops thinking skills of the students, encouraging their quest for knowledge about electronic devices and their usage in higher semester courses. The associated laboratory provides an opportunity to validate the concepts taught in theory classes and enable the students to work with basic electronic circuits using electronics components.					
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Elements of Electronics Engineering and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING .					
Course Outcomes	On successful completion of this course the students shall be able to: 1. Identify various electrical and electronic components and basic electrical laws. 2. Explainapplications of Diodes and BJTs. 3. Summarize the concepts of Digital Electronics and Communication Systems. 4. Discuss the basic concepts of microprocessorand computer organization. 5. Perform experiments to familiarizevarious Electrical & Electronic components and equipment. 6. Verify Basic Electrical Circuit configurations and Laws.					
Course Content:						
Module 1	Basic Electrical and Electronic Components	Assignment / Quiz		Identification of Practical electronic and electrical components / Memory Recall based Quizzes		10 Sessions
Topics: ELECTRICAL CIRCUITS AND LAWS:DC Circuits: Classification of Electrical Elements, Ohm's law, Series and Parallel Circuits, Kirchhoff's Voltage and Current laws, Power and Energy, Transformers and their types. ELECTRONIC MATERIALS AND COMPONENTS: Conductors, Insulators, Semi-Conductor Material, P-N Junction diode, Characteristics and Parameters, Ideal Diode approximations, DC load line.						
Module 2	Applications of Diodes and Introduction to BJT	Assignment / Quiz		Simulation Task/ Memory Recall based Quizzes		12 Sessions

Topics:
RECTIFIERS: Half-wave rectifier, Two-diode Full-wave rectifier, Bridge rectifier, Capacitor filter circuit (only qualitative approach).
ZENER DIODE: Zener diode, Zener Characteristics, Zener diode as a voltage regulator.
BIPOLAR JUNCTION TRANSISTORS: BJT Construction and Operation, BJT Voltages and Currents, Common Base, Common Emitter Configuration and Characteristics, Current amplification Factor alpha and beta, DC Load line w.r.t. fixed bias circuit (Q-Point), AC Analysis.

Module 3	Digital Electronics and Communication System	Assignment / Quiz		Simulation Task / Memory Recall based Quizzes	13 Sessions

Topics:
NUMBER SYSTEMS: Decimal Number System, Binary Number System, Hexadecimal Number System, Conversions: Binary to and from Hexadecimal; Hexadecimal to and from Decimal;1's and 2's Complement of Binary Numbers, Binary Addition.
BOOLEAN ALGEBRA: Boolean Laws and Theorems, De Morgan's theorem. Digital Circuits: Logic gates, NOT Gate, AND Gate, OR Gate, XOR Gate, X-NOR Gate, NAND Gate, NOR Gate.
COMMUNICATION SYSTEM: Block diagram of communication system, Modulation: Definition of Modulation, Need of Modulation, Types of Modulation: Amplitude Modulation and Frequency Modulation (Waveforms only).

Module 4	Microprocessors and Computer Organization	Assignment / Quiz	Memory recall based Quizzes	10 Sessions

Topics:
INTEL 8085 MICROPROCESSOR: Basic Architecture and features of 8085 Microprocessor.
COMPUTER ORGANISATION:Basic structure of Computer Organisation describing the various Computer types, Functional Units, Basic Operational concepts, Bus Structures, Memory System: RAM and ROM.

List of Laboratory Tasks:

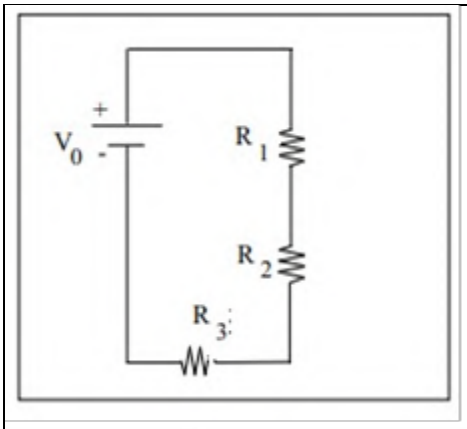
Experiment No. 1:Study of Resistors, Measuring instruments and DC Power Supply.
Level 1:Identification of resistor values from color bands and verification with Multimeter.
Level 2:Connecting a resistive circuit to a DC Power Supply and observing the input and output values using Voltmeters, Ammeters and hence calculate resistance values.

Experiment No. 2:Study of Reactive components, Multimeter, CRO and Function Generator.
Level 1:Identification of various types of capacitive and inductive components and verification with Multimeter.
Level 2:Connecting a reactive circuit to a function generator and observing the input and output waveform on CRO and calculation of Reactance and Impedance.

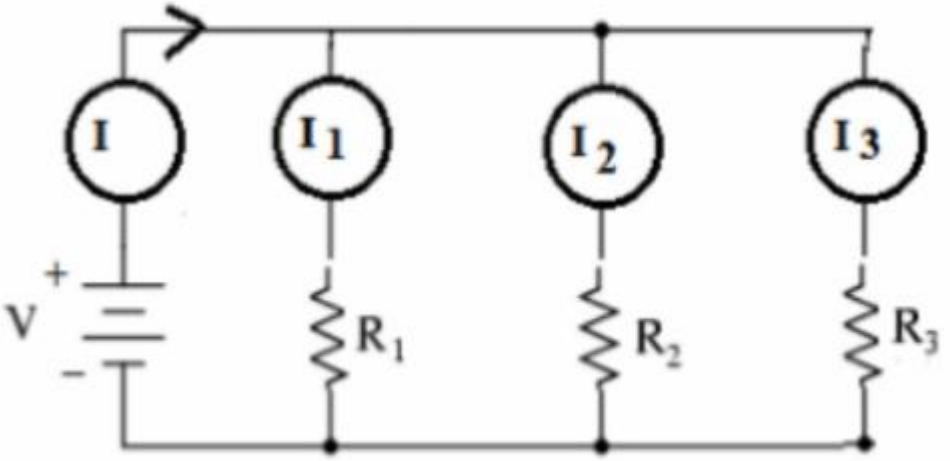
Experiment No. 3: Study of Ohm's Law.
Level 1:Rig up the circuit and verify Ohm's Law.
Level 2: Connect a 100Ω Resistor to a Voltage source of 0-5V. Plot a V- I graph by tabulating the Voltage Vs Current Values accordingly. Repeat the experiment for 1KΩ resistor and compare the results.

Experiment No. 4:Study of Series and Parallel Resistor Connections.
Level 1:Carry out the equivalent resistance of given four resistors 100Ω each connected in series and parallel combination using breadboard.
Level 2:Rig up a Current Divider Circuit and a Voltage Divider Circuit and verify the results.

Experiment No. 5:Study of Kirchhoff's Voltage Law and Kirchhoff's Current Law.
Level 1:Verify KVLand KCL with circuit(a) and circuit(b) with #values.

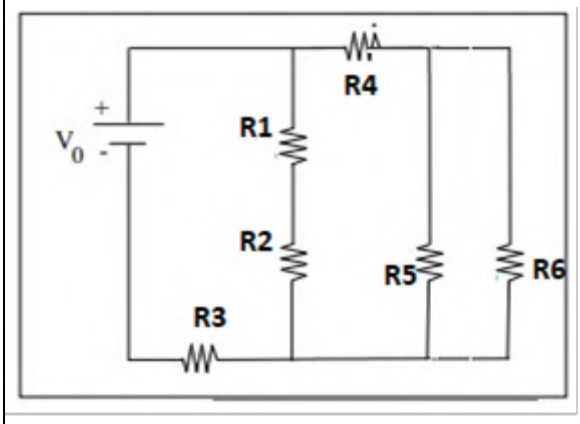


(a)



(b)

Level 2: Verify KCL with the help of given circuit having # values and carry out the equivalent resistance of the circuit by experimental and analytical methods.



Experiment No. 6: Study of PN-Junction Diode Characteristics in Forward and Reverse Bias Conditions.
Level 1:Carry out the experiment to find cut-in voltage on forward characteristics for Silicon P-N Junction diode.
Level 2: Carry out experiment to plot VI Characteristics of Silicon P-N Junction Diode in both forward and reverse biased conditions for Si P-N Junction diode.

Experiment No. 7: Study of Bipolar Junction Transistor in different regions of operation.
Level 1:Carry out the experiment to understand the importance of active, cut off and saturation regions.
Level 2: Carry out the experiment to design and analyze the operation of transistor as

switch.

Experiment No. 8: Study of basic Digital Logic Gates using Integrated Chips IC's: NOT, AND, OR, XOR, NAND and NOR Gates
Level 1:Carry out the experiment to study and verify the truth table of logic gates using Digital ICs.
Level 2:Implementation of operation of a basic Boolean expression using basic gates.

Experiment No. 9: Study of Computer Organization: Identification of Components on Motherboard: CPU: Processor Chips (Processor Socket), PCI, Parallel Ports, Universal Serial Bus: USB, I/O Connectors, RAM Slots.
Level 1:Carry out the experiment to familiarize a computer system layout and mark the positions of SMPS, Motherboard, FDD, HDD, CD / DVD drive and add on cards.
Level 2:Study of a Desktop PC and its assembling.

Targeted Application & Tools that can be used:
Student will be able to find career opportunities in various domains such asAnalog Electronics, Digital Electronics, Microprocessors, VLSI Design, Telecommunication, Computers andWireless Communication. The students will be able to join a profession which involves basics to high level of electronic circuit design.

Professionally Used Software: MultiSim/ PSpice
Besides these software tools hardware equipment such as Multimeters, Function Generators, Power Supplies, Oscilloscopes etc., can be used to perform component/circuit testing and analysis.

<tr><td colspan="9">Topics: The man-environment interaction: Mastery of fire; Origin of agriculture; Emergence of city-states; Great ancient civilizations and the environment.
Self-learning topics: Humans as hunter-gatherers; Industrial revolution and its impact on the environment; Environmental Ethics and emergence of environmentalism.</td></tr>
<tr><td>Module 2</td><td colspan="2">Natural Resources and Sustainable Development</td><td>Assignment</td><td></td><td colspan="4">03 Classes</td></tr>
<tr><td colspan="9">Topics:
Overview of natural resources: Definition of resource; Classification of natural resources- biotic and abiotic, renewable and non-renewable. Water resources: Types of water resources- fresh water and marine resources;

Soil and mineral resources: Important minerals; Mineral exploitation Soil as a resource and its degradation.

Energy resources: Sources of energy and their classification, renewable and non-renewable sources of energy; Advantages and disadvantages.

Self- learning topics: Availability and use of water resources; Environmental impact of over-exploitation, issues and challenges.; Environmental problems due to extraction of minerals and</td></tr>
</table>

use; Sustainable Development Goals (SDGs)- targets, indicators, and challenges for SDGs.

Module 3	**Environmental Issues: Local, Regional and Global**	Case study		**02 Classes**

Topics:
Environmental Pollution: Types of Pollution- air, noise, water, soil, municipal solid waste, hazardous waste; Trans-boundary air pollution; Acid rain; Smog.
Land use and Land cover change: land degradation, deforestation, desertification, urbanization. Global change: Ozone layer depletion; Climate change
Self -learning topics: Environmental issues and scales

Module 4	**Conservation of Biodiversity and Ecosystems**	Assignment		**02 Classes**

Topics:
Biodiversity-Introduction, types, Species interactions, Extinct, endemic, endangered and rare species, Threats to biodiversity: Natural and anthropogenic activities.

Self-learning topics: Mega-biodiversity, Hot-spots, Major conservation policies. Biodiversity loss: past and current trends, impact.

Module 5	**Environmental Pollution and Health**	Case study		**03 Classes**

Topics:
Pollution, Definition, point and nonpoint sources of pollution, **Air pollution**- sources, major air pollutants, health impacts of air pollution.
Water pollution– Pollution sources, adverse health impacts on human and aquatic life and mitigation, Water quality parameters and standards.
Soil pollution and solid waste- Soil pollutants and their sources, solid and hazardous waste, Impact on human health.
Self-learning topics: Noise pollution, Thermal and radioactive pollution.

Module 6	**Climate Change: Impacts, Adaptation and Mitigation**	Assignment/case		**02 Classes**

Topics:
Understanding climate change: Natural variations in climate; Projections of global climate change with special reference to temperature, rainfall and extreme events; Importance of 1.5 °C and 2.0 °C limits to global warming; Impacts
Vulnerability and adaptation to climate change: Observed impacts of climate change on ocean and land systems; Sea level rise, changes in marine and coastal ecosystems; Impacts on forests and natural ecosystems; Indigenous knowledge for adaptation to climate change.
Self-learning topics: Mitigation of climate change: Synergies between adaptation and mitigation measures; National and international policy instruments for mitigation.

Module 7	**Environmental Management**	Case study	Data analysis	**02 Classes**

Topics:
Environmental management system: ISO 14001; Environmental risk assessment Pollution control and management; Waste Management- Concept of 3R (Reduce, Recycle and Reuse) and sustainability.
Self-learning topics: Environmental audit and impact assessment; Eco labeling /Eco mark scheme

Module 8	**Environmental Treaties and Legislation**	Case study	Data analysis	**01 Classes**

Topics:
Major International Environmental Agreements: Convention on Biological Diversity (CBD), Major Indian Environmental Legislations: Environmental Protection Act, Forest Conservation Act, Public

awareness.
Self-learning topics: Paris Agreement, Conference of the Parties (COP), India's status as a party to major conventions: Air (Prevention and Control of Pollution) Act, Water (Prevention and control of Pollution) Act, Wildlife Protection Act.

List of laboratory tasks : Any eight experiments will be conducted

1. Determination of total alkalinity of a water sample (knowledge)
2. Estimation of water hardness by EDTA method and its removal (by zeolite/ ion exchange method) (Comprehensive)
3. Estimation of copper from industrial effluents by colorimetric method (Comprehensive)
4. Estimation of iron from industrial effluents by titrimetric method/potentiometric method (Comprehensive)
5. Estimation of nickel from industrial effluents by titrimetric method (Comprehensive)
6. Estimation of chloride in drinking water by titrimetric method (Comprehensive)
7. Estimation of fluoride in ground water by colorimetric method (Comprehensive)
8. Determination of calcium in aqueous solution (Comprehensive)
9. Determination of Total Dissolved Salts, conductivity and pH of a water samples (Knowledge)
10. Determination of Chemical oxygen demand in the industrial effluent. (Comprehensive)
11. Biological oxygen demand of waste water sample (Comprehensive)
12. Determination of dissolved oxygen of an industrial effluent (Comprehensive)
13. Quality monitoring analysis of a soil sample (knowledge)
14. Flame photometric estimation of Sodium and potassium (Application)
15. Gas Chromatographic analysis of volatile organic compounds (Application)

Targeted Application & Tools that can be used:

Application areas are Energy, Environment and sustainability
Tools: Statistical analysis of environmental pollutants using excel, origin etc.

Project work/Assignment:

Assessment Type

- **Midterm exam**
- **Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screenshot accessing the digital resource.)**
- **Lab evaluation/Assignment**
- **End Term Exam**
- **Self-learning**

Assignment 1: Write a Statement of Environment report of your town/city/state/country
Assignment 2: Individual students will carry out the analyses of polluted solid, liquid, and gaseous samples and propose suitable mitigation measures. A detailed and in-depth report needs to be submitted for each case. This may include preparation of reagents, sample preparation (extraction), chemical analysis carried out, instruments and tools used, data collected and processed, inferences made and conclusions arrived at. Necessary support is given in the form of lab manual and reference links to e-books.

Topics relevant to Skill Development:

Industrial revolution and its impact on the environment, Environmental impact of over-exploitation of water resources, pollution and ill effects, lab experiments for Skills development through Problem solving Techniques. This is attained through assessment component mentioned in course handout.

All topics in theory component are relevant to Environment and Sustainability.

Catalog prepared by	Faculties of Department of Chemistry
Recommended by the Board of Studies on	PU/SOE/CHE/BOS-07/2022-23 9th BOS held on 10/07/23
Date of Approval by the Academic Council	21st Academic council dated: 6th September 2023

Couse Code ENG2001	Course Name Advanced English	L- T- P- C	1	0	2	2
Version No.	2.0					
Course Pre-requisites						
Anti-requisites	**NIL**					
Course Description	This course is designed to equip students to enhance their communication abilities in Listening, Speaking, Reading, and Writing. The curriculum covers interpersonal communication principles, the art of speech writing and delivery (including impromptu speaking), strategic approaches to critical reading, the identification of logical fallacies, and persuasive writing. Furthermore, the course will introduce students to the potential of AI tools and the techniques of prompt engineering to elevate their communication skills in the digital age. Upon course completion, students will be well-prepared to communicate effectively and critically in both academic and professional environments.					
Course Outcomes	On successful completion of the course the students shall be able to: 1. Recognize the elements of interpersonal and cross-cultural communication to address communication challenges effectively. 2. Demonstrate the ability to deliver structured and impromptu speeches using effective speaking techniques. 3. Interpret textual and visual materials using critical reading strategies to evaluate arguments, logic, and persuasion. 4. Produce persuasive and analytical essays using effective argumentation techniques and structured writing strategies.					

Course Content: Theory

Module 1	**Foundations of Effective Communication**	**Case Studies/ Role play**	**Cross-Cultural Competency**	**4 Classes**

Topics:
- Fundamentals of Interpersonal Communication
- Verbal, Non-verbal, and Paraverbal communication.
- Cultural dimensions theory (Hofstede's Cultural Dimensions).
- Active Listening Techniques
- Common Errors in Communication

Module 2	**Mastering Speech Delivery**	**JAM**	**Public Speaking Confidence**	**4 Classes**

Topics:
- Introduction to Prompt Engineering
- Speech Preparation and Organization
- Techniques for Effective Impromptu Speaking
- Practice Speech Delivery

Module 3	**Critical Reading and Logical Analysis**	**Worksheet**	**Critical Thinking and Analysis**	**4 Classes**

Topics:
- Critical Reading Strategies: Contextualizing, Figurative Language, Evaluating Logic of an Argument, Recognizing Emotional Manipulation, Analysing Visuals

- Recognizing Logical Fallacies: Slippery Slope, False Dilemma, Post Hoc, Hasty Generalization, Ad Hominem, Straw Man, Bandwagon, No True Scotsman, Red Herring, Appeal to Authority, Sunk Cost, Appeal to ignorance

Module 4	**Writing Effective Arguments**	**Assignment**	**Clear and Coherent Writing**	**3 Classes**

Topics**:**

- Understanding Critical Writing
- Building Arguments (Pathos, Ethos, Logos)
- Techniques for Persuasion

Course Content: Practical Sessions

Module 1	**Foundations of Effective Communication**	**8 Classes**

1. **Interpersonal Communication**
   Charades with a Twist/Tone and Emotion Experiment/Mixed Messages Challenge/Role Reversal Conversations/Observation Exercise
2. **Cross-cultural Communication**
   Cultural Iceberg Analysis/Role-Play: Cross- Cultural Scenarios/Stereotypes vs Realities/Cross- /Cultural Negotiation Exercise/Cultural Sensitivity Case Studies
3. **Active Listening**
   Bingo TEDx/Story Building/Listening for Key Details/Interactive Podcast Listening/Fact or Opinion
4. **Instagram/YouTube Vocabulary Activity**

Module 2	**Mastering Speech Delivery**	**8 Classes**

5. **Speech Writing**
6. **Impromptu Speech**
   JAM /"Would You Rather" Explainer/Picture Prompt Speech/Reverse Speech Crafting

Module 3	**Critical Reading and Logical Analysis**	**8 Classes**

7. **Critical Reading Strategies**
   Critical Reading Worksheet/Identifying Bias in News Articles
8. **Recognizing Logical Fallacies**
   Debate Challenge with Fallacy Detection/ Fallacy Investigation with Podcasts or Social Media

Module 4	**Writing Effective Arguments**	**6 Classes**

9. **Building Arguments**
   Causes or Effects/Appeal Mash-Up/Debates on Controversial Topics
10. **Persuasive Writing**
    Creative Persuasive Writing/Opinion Writing

Targeted Application & Tools that can be used: Quizziz, Chatgpt, Gemini, Youtube, Instagram, Quillbot, Grammarly, Padlet

Course Code: **CHE1017**	**Course Title: Applied Chemistry** **Type of Course: Program Core- Lab embedded theory course**	**L- T-P-C**	**1**	**0**	2	2
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	**NIL**					
Course Description	The primary objective of the course is to emphasize the concepts and applications of chemistry in Engineering. The course also aims to enhance the knowledge of chemical composition and properties of chemical molecules. The course cultivates an ability to identify chemistry in each and every piece of smart engineered products used in households and industry. It targets to strengthen the fundamental concepts of chemistry and then builds an interface with their industrial applications. **This course is designed to cater to Environment and Sustainability**					
Course Objective	The objective of the course is to familiarize the learners with the concepts of **'Applied Chemistry'** and attain **'SKILL DEVELOPMENT'** through **EXPERIENTIAL LEARNING** techniques**.**					
Course Outcomes	On successful completion of this course the students shall be able to: 6) Identify the suitable polymers to replace the conventional materials 7) Summarize the importance of various electrochemical sources in energy systems 8) Describe the knowledge of electrochemistry principles for protection of different metals from corrosion. 9) Explain the fundamental principles in water treatment					
Course Content:						
Module 1	**Polymers**	Case study	Data Collection and analysis	**4 Classes**		
Polymers: Introduction, Types of Polymerization, Thermoplastics & Thermosetting Polymers. Preparation, Properties, and Applications of the Teflon, PVC, Nylon and Phenol Formaldehyde; Elastomers: Classification; Natural Rubber, Vulcanization of Rubber, Synthetic Rubber and Inorganic Rubbers, Polymer Composites- Properties and Advantages, Synthesis and Applications of Kevlar, Conducting Polymers						
Module 2	**Battery Technology**	Assignment	Data Collection	**3 Classes**		
Basics of Electrochemical Energy Systems, Construction, Working Mechanism and Applications of Primary (Dry Cell) and Secondary (Lead-Acid) Batteries, Lithium Batteries: Primary and Secondary. Fuel Cells: Hydrogen-Oxygen, Methanol-Oxygen: Principle, Working and Their Applications						
Module 3	**Corrosion and its Control**	Case study	Data analysis	**3 Classes**		
Definition, Dry and Wet Corrosion, Electrochemical Theory of Corrosion, Types of Wet Corrosion –Differential Aeration, Galvanic, and Stress Corrosion Cracking. Factors that Enhance Corrosion and Choice of Parameters to Mitigate Corrosion. Corrosion Control – Anodic and Cathodic Coating, Cathodic Protection- Sacrificial Anodic						

Protection, Electro Plating of Chromium, Electroless Plating of Copper on PCBs				
Module 4	**Water Technology**	Case study	Data analysis	**4 Classes**
Degree of Hardness, Numerical Problems on Hardness Domestic Treatment, Desalination Techniques, Boiler Feed Water, External and Internal Treatments, Waste Water Treatment, Rain Water Harvesting				

Laboratory experiments:

1. Estimation of Fe (II) in Mohr's salt using Std. Potassium permanganate solution.
2. Estimation of Calcium in cement solution sample by rapid EDTA method.
3. Estimation of Copper by Iodometry.
4. Determination of Acid number of an oil.
5. Synthesis of polyaniline.
6. Determination of pKa value of weak acid using pH meter
7. Potentiometric estimation of FAS using Std. Potassium dichromate solution
8. Estimation of strength of acid mixture by conductometric titration
9. Estimation of Copper by colorimetric method
10. Determination of Viscosity co-efficient of a liquid using Ostwald's viscometer.

Targeted Application & Tools that can be used:

Application areas are Polymer, oil and gas, Boiler, automotive and mechanical industries

Tools: Statistical analysis of Corrosion in materials using tools like Design expert software (ANOVA, RSM, etc.)

Project work/Assignment:

Assessment Type

- **Midterm exam**
- **Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screen shot accessing digital resource.)**
- **Quiz**
- **End Term Exam**
- **Self-Learning**

Assignment: 1: Report writing on recycling plastic waste into plastic lumber

Assignment 2: Identify a corrosion problem encountered in your immediate surroundings and discuss your choice of mitigation

Date of Approval by the Academic Council	18th BOS meeting held on 3rd August 2022

Course Code: **MAT1003**	**Course Title:** **Applied Statistics** **Type of Course:** School Core	**L –T- P C**	1	0	2	2
Version No.	3.0					
Course Pre-requisites	None					
Anti-requisites	None					
Course Description	The goal of this course is to provide a firm understanding of probability and statistics by means of a thorough treatment of descriptive statistics, probability and probability distributions keeping in mind the future courses having statistical, quantitative and probabilistic components. The course covers topics such as descriptive statistics, probability, rules for probability, random variables and probability distributions, standard discrete and continuous probability distributions.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of "Applied Statistics" and attain Skill Development Through Problem Solving techniques.					
Expected Outcome:	At the end of this course, students will be in a position to 1. apply the techniques of descriptive statistics effectively 2. interpret the ideas of probability and conditional probability 3. demonstrate the knowledge of probability distributions 4. Compute statistical parameters, correlation and regression, probability and sampling distributions using R software.					
Module 1	**Descriptive Statistics**	Assignment	Coding needed			**10 classes**
Introduction to Statistics, Data and statistical thinking, review of basic statistical parameters, Covariance, Correlation, Types of Measures of Correlation - Karl Pearson's Correlation Coefficient, Spearman Rank Correlation, linear regression, Multi linear regression**.**						
Module 2	**Probability**					**6 classes**
Introduction to Probability, Probability of an event, Addition Principle, Multiplication law, Conditional Probability, Total Probability and Baye's theorem with examples						
Module 3	**Random Variables and Probability Distributions**		Coding needed			**14 classes**
Introduction to Random variables, Discrete Random Variables and Continuous Random Variables, Probability Distributions, Probability Mass Function and Probability Density Function, Various Probability distributions, Binomial, Negative Binominal (Self Study), Poisson, Normal and Exponential distributions						
Module 4	**Sampling Theory**		Coding needed			**15 classes**
Introduction to Sampling Theory, Population, Statistic, Parameter, Sampling Distribution, Standard Error. Testing of Hypothesis, Types of Errors, Critical Region, level of Significance. Difference between Parametric and Non-parametric Tests, Large Sample Tests: Z-Test for Single Mean and Difference of Means (Self Study), Small Sample Tests: Student's t-Test for Single Mean and Difference of Means, F-Test, Chi-Square Test.						
Targeted Application & Tools that can be used: The objective of the course is to familiarize students with the theoretical concepts of probability and statistics and to equip them with basic statistical tools to tackle engineering and real-life problems. Tools used: R Software / MS-Excel

Course Code: **CIV1008**	**Course Title:** **Basic Engineering Sciences** **Type of Course:** **School Core Theory Only**		**L-T-P-C**	2	0	0	2
Version No.	1.0					
Course Pre-requisites	**NIL**					
Anti-requisites	**NIL**					
Course Description	This basic course on engineering science is designed to introduce students to the fields of civil and mechanical engineering. Student will be exposed to various fields in civil engineering and different manufacturing techniques in addition to machinery for power production and consumption. This course acquaints students to basics of Industry 4.0 and Construction 4.0. The course aims to enable students to appreciate the multidisciplinary nature of engineering design and operations in the current era with mechanization and digitization transforming every aspect of engineering.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of **Basic Engineering Sciences** and attain **Skill Development** **through Participative Learning techniques**					
Course Outcomes	On successful completion of this course the students shall be able to: 1] Recognize the significance of various disciplines in Civil Engineering 2] Discuss the recent evolutions in Civil Engineering 3] Explain various energies, energy generating machineries and energy consumption machineries 4] Distinguish between conventional and modern manufacturing techniques.					
Course Content:						
Module 1	**Introduction to various fields in Civil Engineering**	Assignment	Case studies on different Civil Engineering Projects	**6 Sessions**		
Topics: Introduction to Civil Engineering: Definition, scope and branches of Civil Engineering, Role of Civil Engineer, Overview of Infrastructure.						
Module 2	**Current Trends and Evolution in Civil Engineering**	Assignment	Article Review	**6 Sessions**		
Topics: Mechanization in Construction, Application of Digital Technologies in Planning, Design, execution, monitoring and maintenance of Construction. Overview of Smart Cities.						
Module 3	**Power Production and Consumption Machinery**	Assignment & Quiz	Data Collection	**6 Sessions**		
Topics: Energy and its types, Engines and their applications, Pumps-Compressors and their applications.						
Module 4	**Industry 4.0**	Assignment & Quiz	Data Collection	**6 Sessions**		
Topics: Conventional manufacturing process: Metal forming, metal removal and metal joining process. Modern Manufacturing process: 3D Printing / Additive Manufacturing.						

Targeted Application & Tools that can be used:
Application Areas include design and implementation of Smart City projects, Infrastructure maintenance, Power production, IC engines, Electric vehicles.

Course Code: MEC1006	**Course Title: Engineering Graphics** **Type of Course: 1] Professional Core Course 2] Theory only**	**L-T- P-C**	2	0	0	2
Version No.	1.2					
Course Pre-requisites	**NIL**					
Anti-requisites	CAMD					
Course Description	The course is designed with the objective of giving an overview of engineering drawing with the help of software tools. It is introductory in nature and acquaints the students with the techniques used to create engineering drawings with computerized drafting tools. Computerized drafting provides accurate and easily modifiable graphic entities, easy data storage, easy retrieval facility and it enhances creativity. It will expose students to the concept of engineering drawing and teach them to draw different views of planes and solids in different orientations. The course will teach students to use AutoCAD to produce engineering drawings. They will learn to create drawing layouts, dimensioning, the theory of projection, orthographic projection of points, lines, planes and solids, isometric projection and be introduced to the development of surfaces.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of " **Engineering Graphics** " and attain **SKILL DEVELOPMENT** through Problem solving methodologies.					
Course Outcomes	**On successful completion of this course the students shall be able to:** **(**1) Describe competency of Engineering Graphics as per BIS conventions and standards. (2) Illustrate the theory of projection for drawing projections of Points, Lines and Planes under different conditions. (3) Prepare multiview orthographic projections of Solids by visualizing them in different positions.. (4) Prepare pictorial drawings using the principles of isometric projections to visualize objects in three dimensions.					
Course Content						
Module 1	Introduction to Drawing	Assignment	Standard technical drawing	**4 Sessions**		
Topics: Introduction, drawing instruments and their uses, relevant BIS conventions and standards, Lettering, Line conventions, dimensioning, Selection of drawing sheet size and scale.						
Module 2	Orthographic projections of Points, Straight Lines and Plane Surfaces	Assignment	Projection methods Analysis	**10 Sessions**		
Topics: Introduction, Definitions – Elements of projection and methods of projection, Planes of						

projection, reference line and conventions adopted. First angle and third angle projections. Projection of Points in all 4 quadrants. Projections of Straight Lines (located in first quadrant/first angle projection only): True and apparent lengths, true and apparent Inclinations to reference planes. (No application problems). Projection of Plane surfaces (First angle projection): Regular plane surfaces – triangle, square, rectangle, pentagon, hexagon and circle – in different positions inclined to both the planes using change of position method only.				
Module 3	Orthographic Projections of Solids	Assignment	Multi-view drawing Analysis	**8 sessions**
Topics: Introduction, Projection of right regular prisms, pyramids, cone, hexahedron and tetrahedron in different positions (Problems resting on HP only and First angle projection).				
Module 4	Isometric Projections of Solids (Using isometric scale only)	Assignment	Spatial Visualization	**8 sessions**
Topics: Introduction, Isometric scale, Isometric projections of right regular prisms, cylinders, pyramids, cones and their frustums, spheres and hemispheres, hexahedron (cube), and combination of 2 solids, conversion of orthographic view to isometric projection of simple objects.				
Targeted Application & Tools that can be used: Application Area is in understanding and interpreting an object in various positions and converting it into a technical drawing which can be universally accepted. Professionally Used Software: AutoCAD				
Text Book: 1.N. D. Bhatt, "Engineering Drawing: Plane and Solid Geometry," Charotar Publishing House Pvt. Ltd**.**

the Board of Studies on	BOS NO: 15th BOS held on 27/08/2022
Date of Approval by the Academic Council	Academic Council Meeting No. 18, Dated 03/08/2022.

Course Code: PPS 1002	**Course Title: Soft skills for Engineers** Type of Course: **Practical Only Course**	L- P- C	0	2	1
Version No.	1.0				
Course Pre-requisites	Students are expected to understand Basic English. Students should have desire and enthusiasm to involve, participate and learn.				
Anti-requisites	NIL				
Course Description	This course is designed to develop effective communication skills and boost confidence levels. The activity-based modules cover the art of Questioning, how to ask questions, goal setting with emphasis on time and stress management, creating the first impression and introducing one self and finally culminating with the etiquettes of email writing. The pedagogy used will be group discussions, flipped classrooms, continuous feedback, role-play and mentoring.				
Course Objective	The objective of the course is to **familiarize the learners with the concepts of "Soft Skills for Engineers" and attain Skill Development** through **Experiential Learning techniques**.				
Course Out Comes	**On successful completion of this course the students shall be able to:** CO1 **Employ** effective communication skills CO2 **Practice** questioning techniques for better decision making CO3 **Differentiate** individual strengths and weaknesses for self-awareness and stress management CO4 **Recognise** the need to set SMART GOALS				
Course Content:					
Module 1	Art of Questioning	Role plays	4 classes		
Topics: Note Taking, Framing Open-ended and Close-ended questions, Funnel technique, Probing questions, Leading questions, Rhetorical questions, 5W1H Technique					
	Vocab Building		Every Class		
Dedicate 5-10minutes towards vocabulary building in every session					
Module 2	Goal Setting & Time Management	Journal + Outbound training	8 Classes		
Goal Setting (SMART Goals), Time Management Matrix, Steps to managing time through outbound group activity, Making a schedule, Daily Plan and calendars (To Do List), Monitoring/charting daily activity					
Module 3	Self-introduction and Creating an Impression	Grooming checks + Evaluation	8 classes		
Topics: Body Language, Grooming guidelines for boys/girls, Common mistakes in Grooming at workplace and social gathering, Etiquettes at work place & social gathering, SWOT – Self-awareness analysis, Self-introduction template, evaluation of self-introduction in class					
Module 4	E-mail Etiquette	Industry expert / Trainer	4 Classes		

Topics: Dos and Don’ts of professional email etiquette, practice writing emails (activity)			
REVISION	Recap & Summary		2 Classes
Revision of all the modules, overall feedback from the students with regards to the syllabus.			
Targeted Application & Tools that can be used: LMS			
Topics relevant to development of “SKILL”: Art of Questioning, Goal Setting & Time Management, Self-introduction and Creating an Impression, E-mail Etiquette for Skill Development through Participative Learning Techniques. This is attained through assessment component mentioned in course handout. (Self-Introduction, Goal Setting, LMS Quiz)

Course Pre-requisites	**Knowledge and Skills related to all the courses studied in previous semesters.**					
Anti-requisites	**NIL**					
Course Description	Students observe science and technology in action, develop an awareness of the method of scientific experimentation, and often get an opportunity to see, study and operate sophisticated and costly equipment. They also learn about the implementation of the principles of management they have learnt in class, when they observe multidisciplinary teams of experts from engineering, science, economics, operations research, and management deal with techno-economic problems at the micro and macro levels. Finally, it enables them to develop and refine their language, communication and inter-personal skills, both by its very nature, and by the various evaluation components, such as seminar, group discussion, project report preparation, etc. The broad-based core education, strong in mathematics and science and rich in analytical tools, provides the foundation necessary for the student to understand properly the nature of real-life problems. The students have options to pursue this course as either Project Work or Dissertation at the university, or Project Work in an Industry/ Company/ Research Laboratory, or Internship Program in an Industry/Company.					
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Professional Practice and attain **Employability Skills** through **Experiential Learning** techniques.					
Course Outcomes	On successful completion of this course the students shall be able to: 1. Identify the engineering problems related to local, regional, national or global needs. 2. Apply appropriate techniques or modern tools for solving the intended problem. 3. Design the experiments as per the standards and specifications. 4. Interpret the events and results for meaningful conclusions. 5. Appraise project findings and communicate effectively through scholarly publications.

PROGRAM CORE

Course Code: ECE2001	**Course Title: Analog Electronics** **Type of Course: Program Core Theory &Integrated Laboratory**	**L-T-P-C**	3	0	2	4
Version No.	2.0					
Course Pre-requisites	**Semiconductor Physics, Diodes Characteristics, Biasing, Bipolar Junction Transistor: Symbol, Working. Zener Diode: Symbol & Characteristics & Breakdown.**					
Anti-requisites	**NIL**					
Course Description	**The course provides insights into the fundamentals of electronic devices. The course discusses the characteristics and applications of electronic devices. The course emphasizes on working, analysis and design of electronic circuits using active components. Additionally, this course creates a foundation for future courses such as Linear Integrated Circuits, Analog Communication and Digital Communication etc.** **The associated laboratory provides an opportunity to validate the concepts taught and enhances the ability to visualize the real system performance, using both hardware and simulation tools.**					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Analog Electronics and attain **SKILL DEVELOPMENT** through **EXPERIENTIAL LEARNING.**					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1) **Discuss** various fundamental parameters appearing in the characteristics of semiconductor devices and their applications 2) **Summarize** the operations of different biasing configurations of BJTs and amplifiers. 3) **Explain** various types, characteristics and modes of FETs 4) **Review** the operation of feedback amplifiers the working of various Oscillators 5) **Demonstrate** the working of electronic circuits to obtain the V-I Characteristics of various semiconductor devices. 6) **Sketch** the characteristics and waveforms relevant to standard electronic circuits					
Course Content:						
Module 1	**Diode Applications**	Assignment/ Quiz		Numerical solving Task		**12 Sessions**
Topics: Mass Action Law, Application of diodes - Clipping and clamping circuits. Zener diode, characteristics and its applications.Biasing & stabilization techniques.						
Module 2	**BJT**	Assignment/ Quiz		Numerical solving Task		**12 Sessions**
Topics: Thermal runaway**.** Hybrid model, h-parameter equivalent circuits.Small signal model.Classification of Amplifiers, Frequency Response, RC coupled amplifiers: analysis and frequency response, mid-band gain Cascading Transistor amplifiers, Darlington pair.						
Module 3	**Field Effect**	Assignment/ Quiz		Memory Recall		**8 Sessions**

	Transistor		based Quizzes	
Topics: JFET (Construction, principal of Operation and Volt – Ampere characteristics). Pinch- off voltage - small signal model of JFET. FET as Voltage variable resistor, Comparison of BJT and FET. MOSFET (Construction, principal of Operation and symbol), MOSFET characteristics in Enhancement and Depletion modes. FET Amplifiers: FET Common source Amplifier, Common Drain Amplifier, Generalized FET Amplifier, FET biasing.				
Module 4	**Feedback Amplifiers and Oscillators Circuits**	Assignment/ Quiz	Memory Recall based Quizzes	**10 Sessions**
Topics: Feedback Amplifiers: Classification of Feedback amplifiers and the Feedback concept, Negative Feedback amplifiers, Voltage-Series and Current-Series Feedback, Current-Shunt and Voltage-Shunt Feedback. Oscillators Circuit: Barkhausen's Criterion, RC Phase-shift oscillator, Colpitts and Hartley Oscillators, Power Amplifiers**.**				
List of Laboratory Tasks: **Experiment No. 1:** To observe the output waveform of half wave and full wave rectifier circuit and compute ripple factor and efficiency **Level 1:** Identify the components required for a rectifier circuit, rig up the circuit, and sketch the output waveforms without filter. **Level 2:** Rig up the rectifier circuit with RC filter, observe the output waveforms, determine the efficiency and ripple factor. **Experiment 2:** To construct clipping andclamping circuits for different reference voltagesandtoverifytheresponses. **Level 1:** Identify the components required for building a Clipper / Clamper circuit. Rig up the circuit according to the circuit diagram given and sketch the output waveform. **Level 2:** Given a sinusoidal input of 10 V p-p, implement a positive / negative clipper with output clipped at 2 V. **Experiment 3:** To calculate various parameters of emitter follower circuit using BJT **Level 1:** Identify the components required to implement an emitter follower circuit. Rig up the circuit and observe the variations in output waveform with respect to the variations in input waveform. **Level 2:** Determine the values of Z_{in}input impedance and Z_{out} output impedance for Emitter Follower. **Experiment 4:** To sketch input and output characteristics of a transistor and to calculate input/ output resistance and current gain using h-parameters **Level 1**: Setup an experiment to sketch the input and output characteristics of a transistor (BJT). **Level 2:** From the input and output characteristics obtained determine parameters such as input resistance, output resistance and gain of the transistor. **Experiment 5:** To Implement RC Coupled amplifier using a BJT and sketch the frequency response. **Level 1**: Identify the components required to implement an RC coupled amplifier				

circuit. Rig up the circuit and sketch the frequency response.
Level 2: From the frequency response curve determine the value of the mid band gain and the bandwidth.

Experiment 6: To implement oscillator circuit using BJT and observe the output waveforms.
Level 1:
Identify the components required to implement a Hartley Oscillator. Rig up the circuit and sketch the output waveform. Determine the frequency of the oscillations.
Level 2: NA

Experiment 7: Implement a Colpitts Oscillator and determine the frequency of oscillations.
Level 1: Implement a Colpitts Oscillator and determine the frequency of oscillations. Rig up the circuit and sketch the output waveform. Determine the frequency of the oscillations.
Level 2: NA

Experiment 8: To use transistor as a switch to operate a relay to ON/ OFF an LED
Level 1:
Identify the components required to demonstrating switching operation of transistor. Rig up the circuit and observe the LED output turning ON/OFF
Level 2: NA

Topics relevant to "SKILL DEVELOPMENT": RC Coupled Amplifiers, Feedback Amplifiers and Oscillators for **Skill Development** through **Experiential Learning** techniques. This is attained through assessment component mentioned in course handout.

Catalogue prepared by	Mrs. Kehkeshan Jalall S
Recommended by the Board of Studies on	**BOS Meeting NO: 12th BOS held on 10/08/2021**
Date of Approval by the Academic Council	**Academic Council Meeting No. 16th , Dated 23/10/2021**

Course Code: ECE2006	**Course Title:Digital Electronics Type of Course: Program Core Theory &Integrated Laboratory**	**L-T-P-C**	**3**	**0**	**2**	**4**
Version No.	2.0					
Course Pre-requisites	**[1] Elements of Electronics/Electrical Engineering, 2] Basic concepts of number representation, Boolean Algebra**					
Anti-requisites	**NIL**					
Course Description	**Digital Electronics: Learning of basics in digital electronic circuits that are used to process the digital signals. The course is designed to be one of the core course in electronics/ electrical engineering.Successful completion will provide the necessary foundation for more specialist learning in digital microelectronics, computer and communication engineering.The purpose of this course is to support the students to exhibit the Boolean Logic. The course is analytical in nature and needs fair knowledge of Boolean Theorems. The course shields theory and laboratory for Digital Electronics including basic principles, analysis and design. Further it covers the different methods of Boolean function simplification- Study and classification of Digital circuits- Design and Implementations of Digital Logic circuits-Programmable logic circuit The course also enhances the Design, Implementation and Programming abilities through laboratory assignments. The associated laboratory provides an opportunity to certify the theoreticknowledge.**					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Digital Electronics and attain **SKILL DEVELOPMENT** through **EXPERIENTIAL LEARNING .**					
Course Outcomes	**On successful completion of this course the students shall be able to:** i. **Discuss** the concepts of number systems, Boolean algebra and logic gates. ii. **Apply** minimization techniques to simplify Boolean expressions. iii. **Demonstrate** the Combinational circuits for a given logic iv. **Illustrate** the Sequential and programmable logic circuits v. **Implement** various combinational logic circuits using gates. vi. **Verify** the performance of various sequential logic circuits using gates.					
Course Content:						
Module 1	**Fundamentals of Number systems- Boolean algebra and digital logic**	Application Assignment	Data Analysis task		**8classes**	
Topics: Introduction to Number systems, Number base conversions, complement of numbers, Binary Codes, Boolean theorems and Boolean algebra, Boolean functions- canonical and standard forms, Digital logic gates. **[Bloom's level selected: Knowledge]**						
Module 2	**Boolean function simplification**	Application Assignment	Data Analysis task		**12 Classes**	
Topics: Introduction, two variable, three variable, four variable K-Map - Don't care conditions. -NAND & NOR Implementation. **[Bloom's level selected: Application]**						
Module 3	**Combinational Logic circuits:**	Application Assignment	Programming Task & Data Analysis task		**10 Classes**	

Introduction to Combinational circuits, Analysis, Design procedure, Binary Adder and Subtractor, Magnitude comparator,Multiplexers-Demultiplexers, Encoders - Decoders, HDL Models of combinational circuits. **[Bloom's level selected: Application]**

Module 4	**Sequential and Programmable logic circuits:**	Application Assignment	Programming Task & Data Analysis task	**15Classes**

Introduction to sequential circuits, Storage elements: latches and flip flops, Characteristic tables, characteristic equations, excitation table,Analysis of clocked sequential circuits, Mealy & Moore Models of finite state machines- Registers & Counters- HDL Models of Sequential circuits-ROMs, PLDs &PLAs. **[Bloom's level selected: Application]**

List of LaboratoryTasks:

Experiment N0 1: Verify the Logic Gates truth table
Level 1: By using Digital Logic Trainer kit
Level 2: By using Analog devices like RPS, Volt meter, Resistors and ICs

Experiment No. 2: Verify the Boolean Function and Rules
Level 1: By using Digital Logic Trainer kit
Level 2: By using Analog devices like RPS, Volt meter, Resistors and ICs

Experiment No. 3: Design and Implementations of HA/FA
Level 1: By using basic logic gates and Trainer Kit
Level 2: By using Universal logic gates and Trainer Kit

Experiment No. 4: Design and Implementations of HS/FS
Level 1: By using basic logic gates and Trainer Kit
Level 2: By using Universal logic gates and Trainer Kit

Experiment No. 5: Design and Implementations of combinational logic circuit for specifications
Level 1: Specifications given in the form of Truth table
Level 2: Specification should be extracted from the given scenario

Experiment No. 6: Study of Flip flops

Experiment No. 7: Design and Implementations of synchronous counter using JK flipflop
Level 1: TWO bit up counter/Down counter
Level 2: FOUR bit up counter/Down counter

Experiment No.8: HDL coding for basic combinational logic circuits
Level 1: Gate level Modeling
Level 2: Behavioral Modeling

Experiment No.9: HDL coding for basic sequential logic circuit
Level 1: Gate level Modeling
Level 2: Behavioral Modeling

Recommended by the Board of Studies on	**BOS Meeting NO: 12th BOS held on 10/08/2021**
Date of Approval by the Academic Council	**Academic Council Meeting No. 16th , Dated 23/10/2021**

Course Code: **ECE2004**	**Course Title: Network Theory** **Type of Course: Program Core& Theory only**	**L-T-P-C**	**3**	**0**	**0**	**3**
Version No.	2.0					
Course Pre-requisites	Fundamental concepts of Electrical Components and Laws like Ohm's and Kirchhoff's laws. Basic knowledge of differential & integral calculus and Linear algebra. Methods of solving Differential equations.					
Anti-requisites	**NIL**					
Course Description	This Course aims at obtaining the solutions to problems in electrical networks, using network reduction techniques and source transformations. The course also focuses on identifying and solving problems in electric circuits by applying network theorems. The course is conceptual and is an introductory level course and introduces students to the concepts of two port networks, behaviour under transient conditions.					
Course objective	The objective of the course is to familiarize the learners with the concepts of Network Theory and attain SKILL DEVELOPMENT through PROBLEM SOLVING .					
Course Outcomes	On successful completion of this course the students shall be able to: 1. Discuss various network reduction techniques. 2. Verify various network theorems. 3. Summarize the behavior of RL, RC circuits 4. Demonstrate Series and Parallel Combination of Passive Components as resonating circuits, related parameters and analyze frequency response 5. Illustrate the operation of two-port networks.					
Course Content:						
Module 1	**Network Reduction Techniques and Source transformation**	Assignment/Quiz	Problem Solving task		**13 Sessions**	
Topics: Types of electric circuit elements and sources, Source transformation, Mesh analysis, Super mesh analysis, Nodal analysis, Super node analysis, Star and delta transform, Loop and node analysis with linearly dependent and independent sources for DC and AC networks						
Module 2	**Network Theorems**	Assignment/Quiz	Simulation task		**10 Sessions**	
Topics: Network Theorems, Explanation of Superposition, Thevenin's, Norton and Maximum power transfer theorems and numerical examples on the same.						
Module 3	**Transient analysis**	Assignment	Simulation task		**10Sessions**	
Topics: Initial conditions, transient analysis of RL, RC circuits in time and frequency domains using Laplace transforms Resonance: Series and parallel resonance, frequency- response of series and Parallel circuits, Q–Factor, Bandwidth, Circuit Magnification Factor						
Module 4	**Two-portnetworks**	Assignment	Problem Solving task		**9 Sessions**	

Topics:
Introduction to Two-port networks, Z-Parameter, Y-Parameter, ABCD Parameter, H-Parameter and Transmission parameters,modelling with these parameters, relationship between parameters sets.

Recommended by the Board of Studies on	**BOS Meeting NO: 12th BOS held on 10/08/2021**
Date of Approval by the Academic Council	**Academic Council Meeting No. 16th , Dated 23/10/2021**

Course Code: ECE2003	**Course Title: Signals and Systems** **Type of Course: Program Core Theory only**		**L-T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**An understanding of basic concepts of linear circuits as examples of linear systems and a familiarity with complex numbers and calculus, including power series are desirable.**					
Anti-requisites	**NIL**					
Course Description	**This is an undergraduate level course that builds a mathematical foundation for understanding and analyzing any physical system. This course will teach signal/system properties, sampling, frequency transforms and responses, feedback, control applications as well as computer analysis using MATLAB/Python. The course feeds into several applications, including Data Science, Machine Learning, Communications, Networks and Systems.**					
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Digital Design and attain the SKILL DEVELOPMENT through PROBLEM SOLVING .**					
Course Outcomes	**On successful completion of this course the students shall be able to:** (1) **Understand** basic concepts of discrete-time signals and linear time invariant (LTI) systems to provide their time-domain and frequency-domain descriptions. (2) **Employ** Fourier analysis of signals and LTI systems. (3) **Implement** simple discrete-time systems, such as linear filters.					
Course Content:						
Module 1	**Introduction to Signals and Systems**	Assignment / Quiz	Memory Recall based Quizzes/ Programming and Simulation task			**12session**
Topics: What are signals, What are systems, Classification of signals, Classification of systems, Transformation of independent variable-time shifting, time scaling and time reversal, Properties of signals, Different types of elementary signals- unit-step, rectangular, triangular, unit-impulse, ramp signal, Continuous time systems, Block diagram representation of systems, Properties of systems- memory, causality, invertibility, time invariance, linearity, stability, Continuous time Linear Time-Invariant (LTI) Systems, Properties of continuous time LTI systems, Discrete time Linear Time-Invariant (LTI) Systems, Continuous time and discrete time convolution.						
Module 2	Fourier Series and Fourier Transform	Assignment / Quiz	Programming and Simulation task / Memory Recall based Quizzes			**13session**
Topics: Continuous time Fourier Series, Fourier series representation of continuous time periodic signals, Convergence and properties of continuous-time Fourier series, Continuous time Fourier series and Frequency spectra, Discrete time Fourier series and its properties, Discrete time Fourier series and Frequency spectra , Continuous time Fourier transform and its properties, Convergence of Continuous time Fourier Transform, Representation of aperiodic signal, Discrete-time Fourier transform and its properties, Convergence of Discrete time Fourier Transform, Sampling, Duality in discrete-time Fourier series.						
Module 3	z-transform	Assignment / Quiz	Programming			**15session**

	and Filter Design		Assignment	

Topics:
Laplace transform, ROC, Inverse Laplace transform, Filter design by placements of poles and zeros of system functions, properties of Laplace transform, analysis and characterization of LTI systems using Laplace transform, unilateral Laplace transform. Z- transform, properties of z- transform, Frequency response from pole-zero location, analysis and characterization of LTI systems using z-transform, unilateral z-transform. IIR/ FIR Filters.

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:
Application Area includes signal processing, networks, communication, data science, machine learning, control system design

Professionally Used Software: MATLAB, Simulink

Topics relevant to "SKILL DEVELOPMENT": CTFT, CTFS, DTFT, DTFS, Laplace Transform and Z Transform for **Skill Development** through **Problem Solving methodologies**. This is attained through assessment component mentioned in course handout. Topics related to development of "EMPLOYABILITY": CTFT, CTFS, DTFT, DTFS, Laplace Transform and Z Transform

Catalogue prepared by	Mrs. Pallabi Kakati
Recommended by the Board of Studies on	12th BOS held on 10/08/2021
Date of Approval by the Academic Council	Meeting No. 16th , Dated 23/10/2021

Course Code: **ECE3001**	**Course Title:** **Linear Integrated Circuits** **Type of Course:** **Program Core Theory &Integrated Laboratory**	**L-T-P-C**	3	0	2	4
Version No.	2.0					
Course Pre-requisites	Knowledge of passive and active elements, basics of diode – forward and reverse biasing, diode current equation, Transistors - BJT, Rectifiers. Network theorems- KCL, KVL, Voltage divider rule, super position theorem etc.					
Anti-requisites	**NIL**					
Course Description	The purpose of this course is to enable the students to appreciate the behaviour of operational amplifier based electronic circuits. This course introduces the fundamentals of analog computers. This course emphasizes on the use of operational amplifiers, their characteristics to design various analog circuits. The course also gives a brief idea about operational amplifier based integrated circuits. The associated laboratory provides an opportunity to validate the concepts taught in theory. It also enhances the ability to visualize the real-world problems in order to provide a solution using various simulation tools.					
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Linear Integrated Circuits and attain the SKILL DEVELOPMENT through EXPERIENTIAL LEARNING.**					
Course Outcomes	On successful completion of the course the students shall be able to: i.Describe the block diagram and characteristics of op-amp. ii.Demonstrate linear applications of op-amp. iii.Employ op-amp for various nonlinear applications. iv.Implement various applications of op-amp using IC 741. v.Illustrate Astable and Monostable Multivibrator using Timer IC 555.					
Course Content:						
Module 1	Introduction to op-amp	Quiz	Memory Recall based Quiz	**10Sessions**		
Topics: Introduction to op-amp, block diagram, op-amp IC, op-amp symbol, equivalent circuit, transfer characteristics and ideal characteristics of op-amp, op-amp parameters, open loop op-amp configurations - inverting, non-inverting and differential mode, concept of virtual ground.						
Module 2	Linear Applications of op-amp	Assignment	Simulation tasks	**15 Sessions**		
Topics: Non-inverting amplifier, Inverting amplifier, Voltage follower circuit, Summing amplifiers, Average circuit, Difference amplifiers, op-amp as ideal and practical Differentiator circuit, op-amp as ideal and practical Integrator Circuit, V to I Converter, I to V Converter, Instrumentation amplifier Circuit, AC amplifier, Operational transconductance amplifier (OTA),Sample and hold circuit,Multiplier and Divider using op-amp.						
Module 3	Non Linear Applications of op-amp	Quiz & Assignment	Quiz based on Numerical solving. Assignment based on Simulation	**15 Sessions**		
Topics: Comparators, Zero crossing detector, Schmitt trigger circuit. Square and Triangular waveform generators, IC 555 timer - Monostable Multivibrator, Astable Multivibrator. Filters – Low pass						

filter and high pass filter.Voltage regulators- Introduction, Series op-amp regulator, 723 general purpose regulator.
Converters- Introduction to ADC and DAC, Analysis of 3-bit binary weighted DAC, Analysis of 3-bit R-2R DAC, successive approximation ADC.

List of Laboratory Tasks:

Experiment No 1: To setup an Inverting amplifier circuit using OP-AMP 741 IC and observe the waveforms.
Level 1: Build the circuit of Inverting amplifier for the gain of 10 and input resistance of 1kΩ.
Level 2:Build the circuit of an inverting amplifier for a gain of 5 and input resistance of 1kΩ to avoid op-amp going into saturation.

Experiment No. 2: To setup a Non-Inverting amplifier circuit using OP-AMP 741 IC and observe the waveforms.
Level 1: Build the circuit of Non-Inverting amplifier for the gain of 10 and input resistance of 1kΩ.
Level 2:Build the circuit of open loop Non-Inverting amplifier, compare with closed loop circuit and comment on the observations.

Experiment No. 3: To setup an Inverting Summing amplifier circuit using OP-AMP 741 IC and observe the waveforms.
Level 1: Build the circuit of an Inverting Summing amplifier for the gain of 2 with dc voltage of 1.5v.
Level 2: Build the circuit to mix a sinusoidal signal and a dc signal without saturation for an amplification factor of 10.

To setup a zero-crossing detector circuit using OP-AMP 741 IC and observe the waveforms.
Level 1: Build the circuit of a zero-crossing detector for the gain of 2 with input voltage of 2Vp-p.
Level 2: NA

Experiment No. 4: To setup a Difference amplifier circuit using OP-AMP 741 IC and observe the waveforms.
Level 1:Build the circuit of a Difference amplifier for the gain of 2 with the input signal of DC value of 1.5 V and the sinusoidal voltage of 1V p-p.
Level 2:Built the circuit to mix a sinusoidal signal and a dc signal without saturation for an amplification factor of 2.

Experiment No. 5: Build the circuit of Differentiator and Integrator and observe the waveforms.
Level 1:Build an integrator and a differentiator circuit using op-amp for a square wave input. Plot the output you obtained.
Level 2:In continuation with Level 1, determine the relation between the time period of the waveform and RC time constant of the circuit you have used. Plot the output obtained for different input frequencies.

Experiment No. 6: To obtain the frequency response of active low pass and high pass filters and determine 3dB frequencies of both filters.
Level 1: Plot the frequency response for the first order low-pass and high-pass filter with a cut-off frequency of 10kHz with a pass band gain of 1.5.
Level 2: In continuation with Level 1, analyze the circuit to achieve frequency scaling.

Experiment No. 7: Generation of sine, square and triangular waveform using op-amp.
Level 1: Construct a Wien bridge oscillator using op-amp 741 and (i) Plot the output waveform (ii) Measure the frequency of oscillation.
Level 2: Set up the frequency range in order to obtain triangular wave from square wave

using Op-Amp 741 and plot the output waveform.

Experiment No. 8: To set up Astable and Monostable Multivibrator using IC 555.
Level 1:Setup Astable and Monostable Multivibrator using IC 555, plot the output waveform.
Level 2:Setup Astable Multivibrator using IC 555 for t1 = 0.7ms.

Targeted Application & Tools that can be used:
Targeted Applications: Automotive technologies, personal electronics, consumer appliances etc. This course is useful for placement in core companies, research & development work.
Professionally Used Software: NI Multisim, LabVIEW, PSpice etc., device setup in laboratory.

Course Content:						
Module 1	**Basics of DSP with DFT Convolution**	ApplicationAssignment	Data Analysis task		**9***Sessions*	
Overview and applications of DSP- Sampling Theorem: Introduction and needs of Transformation (i)DTFT (ii) DFT -Properties of DFT, Problems on DFT and IDFT, Introduction to Circular convolution, Circular convolution-Concentric circle method and Matrix multiplication method.						
Module 2	**FFT Algorithms**	Application Assignment	Data Analysis task		9*Sessions*	
Introduction to FFT, Comparison of FFT with Direct evaluation of the DFT, DIT-algorithm: Radix-2 DIT-FFT algorithm and its problems. Overview of DIF-algorithm						
Module 3	**IIR Filter Design**	Application	Data Analysis task		**11***Sessions*	

	and Realizations	Assignment		
Introduction of filters, Types of filters - IIR filters, Butterworth filters and Chebyshev filters. Design of analog low pass Butterworth and conversion to digital low pass using Impulse Invariance method and Bilinear transformation. Overview of Frequency transformation. Structure of IIR filter - direct form I, direct form II, Cascade, parallel realizations.				
Module 4	**FIR Filter Design and Realizations**	Application Assignment	Data Analysis task	**11***Sessions*
FIR filter design using windows (Rectangular/Hamming/ Hanning window), Frequency sampling method. FIR filter structures - direct form realizations - linear phase structure realizations.				
List of Laboratory Tasks: **Experiment N0 1:** Write the Matlab code, to find the Circular convolution of two sequences. **Level 1:** The input data provided as discrete sequence representation with specific length. **Level 2**: Data provided as discrete mathematical functional representation. **Experiment N0 2:** Write the Matlab code, to compute of N point DFT of a give sequence and to plot magnitude and phasespectrum. **Level 1**: The input data provided as discrete sequence representation with specific length. **Level 2**: Data provided as discrete Mathematical functional representation. **Experiment N0 3:** Write the Matlab code, to find Circular convolution of two given sequences using DFT and IDFT. **Level 1**: Using FFT function **Level 2**: Using direct formula method. **Experiment N0 4:** Write the Matlab code, to Construct theButterworth IIR filter for given specification. **Level 1**: Specification given directly **Level 2**: Specification given indirectly–Taking the input signal from real-time sources. **Experiment N0 5:** Write the Matlab code, to construct the FIR filterby using different windows to meet given specification. **Level 1**: Specification given directly **Level 2**: Specification given indirectly-Taking the input signal from real-time sources. **Experiment N0 6:** Write the Matlab code, to Find h[n] of the difference equation and plot impulse response and pole-zero plots. **Level 1**: Difference equation is described directly **Level 2**: Difference equation described indirectly. **Experiment N0 7:** Study of DSP KIT and Code Composer Studio. **Level 1**: NA **Level 2**: NA **Experiment N0 8:** Find Circular convolution of two given sequences on DSP Board with CCS. **Level 1**: The input data provided as discr Ms. Akshaya M Ganorkarete sequence representation with specific length. **Level 2**: Data provided as discrete Mathematical functional representation. **Experiment N0 9:** Computation of N point DFT of a given sequences on DSP Board with CCS. **Level 1**: The input data provided as discrete sequence representation with specific length. **Level 2**: Data provided as discrete Mathematical functional representation.				
Targeted Application & Tools that can be used: **Application Area includes all modern electronic devices (Music System, cellular phones, computers, digital cameras, high-definition smart televisions, Home Automation, Communication systems). The students will be able to join a profession which involves basics to a high level of digital signal processing and analysis.** **Professionally Used Software: Matlab/Python / Code Composer Studio/ Octave/SciPy** **Besides these software tools hardware equipment such as DSP Kits are used for validation purpose.**

Course Code: **ECE3003**	**Course Title: Microprocessor Programming and Interfacing** **Type of Course: Program Core Theory &Integrated Laboratory**	**L-P-C**	3	2	4
Version No.	2.0				
Course Pre-requisites	**Basic concepts of simple circuit design involving switches and LEDs, their interconnections and current and voltage levels. Basics of logic gates and implementation of digital logic circuits using gates, flip-flops, registers, multiplexers, decoders etc.**				
Anti-requisites	Microprocessor based Systems (ECE1004)				
Course Description	**The purpose of this course is to enable the students to appreciate the fundamentals of microprocessor based systems. The course is both conceptual and analytical which imparts knowledge of both hardware and software leading to a system design used in real-world applications. The course develops critical thinking skills by augmenting the student's quest to develop assembly language programs as well hardware interconnections for commonly used applications. The comprehensive nature of the course covers a number of quizzes, assembly language programming using simulation tools and various interfacing assignments, which enhances students' abilities to become an independent system designer.** The associated laboratory provides an opportunity to validate the concepts taught as well as enhances the ability to visualize the real-world problems in order to provide a solution using various simulation tools and hardware interfacing techniques.				
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Microprocessor Programming and Interfacing and attain the SKILL DEVELOPMENT through EXPERIENTIAL LEARNING.**				
Course Outcomes	**On successful completion of this course the students shall be able to:** **(1) Discuss thearchitecture and working principles of 8085 / 8086 microprocessor.** **(2) Solve assembly language programming problems using coding and debugging skills.** **(3)Demonstrate methods to interface memories, input/output devices and programmable peripheral devices to the microprocessor.** **(4)Illustrate various important features and associated terminologies of advanced microprocessors like 80286-80486 and Pentium.** **(5) Execute assembly language programs for various categories of operations.** **(6) Interface various input/output devices using assembly language programming of programmable peripheral devices.**				
Course Content:					
Module 1	Fundamentals of	Quiz	Memory Recall based	**09Sessions**	

	Microprocessors		Quizzes	
Topics: **Overview of 8086 MicroprocessorArchitecture, 8086 – 80486 Programming Model, Pin Diagram, Signals, Min/Max Mode, Timing Diagram, Instruction cycle, Machine Cycle and T-states.** **Addressing Modes: Register Addressing, Immediate Addressing, Direct Addressing, Register Indirect Addressing, Base-Plus-Index Addressing, Register Relative Addressing, Base Relative-Plus-Index Addressing, Memory Addressing Mode, Memory Classifications, Memory Interfacing: Memory Structure & it's requirement, basic concepts in Memory Interfacing, Input and Output Devices: I/O with 8-bit addresses, I/O with 16-bit addresses.**				
Module 2	8086 Instruction Sets and Assembly Language Programming	Assignment / Quiz	Programming and Simulation task	**12Sessions**
Topics: **Instruction Sets: Data movement instructions, Program control instructions, Arithmetic and Logical Instructions, Stack Instructions, String Instructions, Looping, Counting and Indexing Counter and Timing delays, Stack and Subroutines Code conversion, BCD Arithmetic operations, 16-bit data operations,Assembly Language Programs.**				
Module 3	Interfacing Techniques and Peripheral Interfacing Devices	Assignment	Memory Interfacing Task and Analysis	**12Sessions**
Topics: **I/O Interfacing: Basic interfacing concept, interfacing output displays, interfacing input devices, memory mapped I/O, comparison of memory mapped I/O and peripheral I/O, Interrupts, Peripheral Devices, Programmable Peripheral Interface (Intel 8255A), Programmable Interval timer (Intel 8253), Other support chips like Interrupt Controller (8259), Direct Memory Access (8237) Controller.**				
Module 4	Bus Interfaces and Advanced Processors	Assignment	System Design Task and Analysis	**09Sessions**
Topics: **Buses: 8-bit, 16-bit ISA, USB, COM, LPT** **PCI 80186 – 80386 &Pentium: Features, OS & Task Management, Bus Pipelining, Memory Management for 80286 & 80386, Memory Protection, 80486 Features, Cache Organization.**				
List of LaboratoryTasks: **Experiment No.1:**Arithmetic operations using microprocessors **Level 1:** To implement an assembly language program to perform 8-bit/16bit arithmetic operations such as addition, subtraction, multiplication and division. **Level 2:** There are **10 students** in a batch for whom the MPI EXAM is conducted and the marks scored by each students is stored in an array called **"MARKS"** given as **5,5,6,7,8,8,9,9,2,1.**Implement an assembly language program to find the average of the marks scored by these students and store				

the final result in memory location **"EXAM".** (HINT: Use arithmetic instructions)

Experiment No. 2: Logical operations using microprocessors
Level 1:
To implement an assembly language program to find (bit location / count) logical 1's and 0's in a given input data in memory.

Level 2:
In continuation with the above problem statement, find whether the numerical value given above is even or odd number, if it is an even number store **11h** in memory location **"EVEN"** else store **22h** in memory location **"ODD".** (HINT: Use logical instructions)

Experiment No. 3: Array Operations using microprocessors
Level 1:
To implement an assembly language program to find the largest and smallest numbers in an array.

Level 2:
Implement the following equation using assembly language program given **n x (n-1) x (n-2) x (n-3) x (n-4) x (n-5) x (n-6)** where **"n"** is the hexadecimal number stored in memory location **"INPUT"** and the final answer of the equation should be stored in the memory location **"OUTPUT".** The implementation of the given equation should be written inside the subroutine (HINT: Use program control instructions)

Experiment No. 4: String Operations using microprocessors
Level 1:
Given a string of character **"PRESIDENCY UNIVERSITY",** implement an assembly language program to transfer this string in forward direction from **"MEMORY1"** to **"MEMORY2",** assuming (a) overlapping and (b) non-overlapping memory blocks.(HINT: Use string instructions)

Level 2:
In continuation with the above problem statement, implement an assembly language program to find number of times the character **"E"** appears in the above string mentioned.

Experiment No. 5: DOS Interrupts
Level 1:
To implement an assembly language program using DOS INTERRUPT (INT 21H) in order to perform the following function:
(i) To read string of characters (first 8 natural numbers) from keyboard and also store the ASCII equivalents in data segment memory.
(ii) To display string of character "ECE DEPARTMENT" on the command prompt and also store the ASCII equivalents in data segment memory.
Level 2: NA

Experiment No. 6: Interfacing of stepper motor using programmable peripheral interface.
Level 1:
Implement an assembly language program to interface programmable peripheral device (PPI) to rotate the stepper motor in clockwise direction.

Level 2:
A toy robot has a stepper motor because its movement comprises of discrete steps. In continuation with the above problem statement, implement an assembly language program to interface programmable peripheral device (PPI) to rotate the stepper motor in anti-clockwise direction.

Experiment No.7: Generation of waveforms using DAC.
Level 1:
Implement an assembly language program to interface programmable peripheral device (PPI) to generate square wave on the CRO

Level 2:
Square waves are used as timing references or "clock signals", because their fast transitions are suitable for triggering synchronous logic circuits at precisely determined intervals.
In continuation with the above problem statement, implement an assembly language program to interface programmable peripheral device (PPI) to generate triangle wave on the CRO.

Experiment No.8: Elevator Interfacing
Level 1:
An Elevator, also called lift moves in a vertical shaft to carry passengers between the levels of a multistory building. Say a building has only 4 floors, implement an assembly language program to interface programmable peripheral device (PPI) to control an elevator using the interfacing card available in laboratory and control its direction between the floors.
Level 2: NA

Targeted Application & Tools that can be used:

Application Area:
Microprocessor-based systems are found everywhere today and not just in computers and smartphones. They are used also in automatic testing of products, speed control of motors, traffic light control, communication equipment, television, satellite communication, home appliances, such as microwave oven, washing machine etc. This course will enable students to become a Firmware Engineer, Computer Hardware Engineer etc.

Professionally Used Software: MASM/ emu8086 emulator / 8086 development kits for programming and interfacing experiments.

Recommended by the Board of Studies on	12th BOS held on 10/08/2021
Date of Approval by the Academic Council	Meeting No. 16th , Dated 23/10/2021

Course Code: ECE3004	**Course Title: Electromagnetic Theory** **Type of Course: Program Core& Theory only**	**L-T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Basic concepts of Engineering Mathematics, Basic concepts of Engineering Physics					
Anti-requisites	**NIL**					
Course Description	**This course introduces the basic concepts of electromagnetic theory which is essential for understanding circuit/network theory. This course imparts knowledge to explore numerous technological and scientific applications such as electric generators, electric motors, electrical appliances, electric bells and MRI scanning. This course gives a comprehensive coverage of a wide variety of real life applications related to numerous communication systems. This course also provides an opportunity to validate the concepts of mathematical modeling in the design of almost every electronic device.**					

Course Objective	**The objective of the course is to familiarize the learners with the concepts of Electromagnetic Theory and attain the SKILL DEVELOPMENT through PROBLEM SOLVING.**			
Course Outcomes	On successful completion of the course the students shall be able to: 1. Discuss the operating principles of electromagnetic field 2. Demonstrate the behaviour of light and its nature. 3. Apply the concept of Maxwell Equations which is the heart of Electromagnetics.			
Course Content:				
Module 1	Coordinate systems and Vector Analysis	Assignment	Memory Recall based Quizzes	**13 *Session***
Topics: Introduction, Concepts of fields, Cartesian coordinate, circular cylindrical coordinate, spherical coordinates, Scalar and vectors, vector addition and subtraction, vector multiplication, Differential length, area and volume, line surface and volume integral, Concept of Del operator, Gradient of a scalar, Divergence of a vector field, Curl of a vector field, Laplacian of a scalar field, Divergence and Stokes theorem, Numerical on vector calculus				
Module 2	Electrostatics and Magnetostatics	Assignment / Quiz	Memory Recall based Quizzes	**13*Session***
Topics: Coulombs law and electric field intensity, Electric field density, Gauss Law and application, Concept of scalar electric potential, Electric field in material space, Electric boundary conditions, Biot-savart law, Ampere circuital law, Application of ampere circuital law, Magnetic flux density, Concept of vector magnetic potential, Magnetic field in material space, Magnetic boundary conditions, Forces due to electric and magnetic field				
Module 3	Maxwell's Equations	Assignment	Memory Recall based Quizzes	**14*Session***
Topics: Introduction, Faradays Law of electromagnetic induction, Transformer and motional EMF, Failure of Amperes law, Concept of displacement current, Maxwell equations in final form, Application of Maxwell Equations, Time harmonic fields, Derivation of wave equation, Wave propagation in Unbound medium				
List of Laboratory Tasks: Nil				
Targeted Application & Tools that can be used: Student will be able to find the career opportunities in the domains such as Research & Development, Communication and Networking, Mobile, RADAR, Space communications. **Professionally Used Software :** Ansys, HFSS/CST Microwave Studio/MATLAB.

Course Code: **ECE3005**	**Course Title: Analog Communication** **Type of Course: Program Core Theory &Integrated Laboratory**	**L-T-P-C**	3	0	2	4
Version No.	2.0					
Course Pre-requisites	Basic concepts of Linear Time- Invariant Systems, Fourier series, Fourier Transforms, representation of signals in time and frequency domain, sampling theorem, diode and transistor characteristics, diode switching times, PLL, VCO and AGC etc.,					
Anti-requisites	**NIL**					
Course Description	This course will introduce the basic concepts and techniques for Analog communications. Applications of Analog communication systems will be emphasized. It will help the students to form a strong foundation for the specialization in communication engineering. The course will discuss the requirements for modulation before feeding the message signal to the communication channel from the transmitter. Similarly, the role of demodulation techniques at the receiver side will be discussed. The associated laboratory provides an opportunity to validate the concepts taught in theory as well as enhances the ability to visualize communication scenarios in order to provide a solution using various simulation tools and hardware tools.					
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Analog Communication and attain the SKILL DEVELOPMENT through EXPERIENTIAL LEARNING.**					
Course Outcomes	On successful completion of the course the students shall be able to: i. Discuss the working principles of various amplitude modulation methods. ii. Apply the techniques of frequency modulation to generate and detect FM waves. iii. Summarize various Pulse Modulation techniques. iv. Estimate the spectrum efficiency. v. Analyze the concepts of multiplexing					
Course Content:						
Module 1	Amplitude Modulation & Demodulation:	Assignment	Memory Recall based Quizzes		**10Sessions**	
Topics: Introduction: Elements of communication systems, Modulation, Modulation Methods and its Need, Frequency mixer, EM Spectrum and its Applications. Amplitude Modulation & Demodulation: DSB-FC (AM) modulation & its demodulation, Generation of AM signals, sideband and carrier power of AM, Double sideband suppressed carrier (DSB-SC) modulation & its demodulation. Single sideband (SSB) transmission, Generation of SSB signals, Features of Vestigial sideband (VSB) modulation, Comparison of various amplitude modulation techniques, Illustrative Problems.						
Module 2	Angle	Assignment /	Design and analysis of		**9 Sessions**	

	Modulation & Demodulation:	Quiz	parameters (simulation)		
Topics: Concept of instantaneous frequency, Generalized concept of angle modulation, Bandwidth of angle modulated waves – Narrow band frequency modulation (NBFM) and Wide band FM (WBFM), Phase modulation, Generation of FM waves – Indirect method, Direct method. Demodulation of FM, Pre-emphasis & De-emphasis filters, Non-linear effects in FM systems, FM Transmitter and Receiver, Illustrative Problems.					
Module 3	Analog pulse modulation	Assignment	Memory Recall based Quizzes		**8 Sessions**
Topics: Pulse amplitude modulation (PAM) & demodulation, synchronization in PAM modulation Pulse-Time Modulation – Pulse Duration and Pulse Position modulations, and demodulation schemes, Multiplexing techniques					
Module	Noise	Assignment	Memory Recall based Quizzes		**8 Sessions**
Topics: Introduction to noise in communication, External Noise- Atmospheric noise, Extra-terrestrialnoise, Industrialnoise; internal noise- Thermal agitation noise, Shot noise, Miscellaneous noise, noise calculation, noise figure, noise temperature.					
List of Laboratory Tasks: **Experiment N0 1:**Study of Amplitude Modulation And Demodulation Level 1: A message signal (baseband signal) will be generated by using function generator and high frequency carrier (Pass band Signal) will be used for Modulation. This can be done by either using MatLab Simulink or by using Experimental setup in laboratory. Level 2: A message signal (baseband signal) will be generated by own circuit and perform the modulation. **Experiment No. 2:**Study of AM-DSB-SC modulation and demodulation Level 1: Similar to previous experiment and how one of the side band will be suppressed. Analysis should be done on power calculations. Level 2: A message signal (baseband signal) will be generated by own circuit and perform the modulation **Experiment No. 3:** Study of AM-SSB-SC modulation and demodulation Level 1: Pass band signal and Base band signal both will be generate using Function generator. Level 2: NA **Experiment No. 4:**Study of Frequency Division Multiplexing with DSB-SC Level 1: Two message signals and two carrier signals will be using for FDM Level 2: analyze the spectrum efficiency of FDM **Experiment No. 5:**Study of Frequency modulation and demodulation Level 1: A message signal (baseband signal) will be generated by using function generator and high frequency carrier (Pass band Signal) will be used for Modulation. This can be done by either using MatLab Simulink or by using Experimental setup in laboratory. Level 2: A voice signal will be converted to baseband signal. **Experiment No. 6:**Study of Pulse Amplitude Modulation and Demodulation Level 1: Similar to amplitude modulation, here carrier will a periodic pulse train Level 2: Analyze how PAM will be used in Photo-biology and Ethernet network etc.,					

Experiment No. 7: Study of Pulse Position Modulation and Demodulation
Level 1: Both message and carrier signals will be generate from function generator.
Level 2: Analyze how PPM will be used in Non-coherent detection, RF communications and etc.

Experiment No. 8: Study of Pulse Width Modulation and their Demodulation
Level 1: Both message and carrier signals will be generate from function generator.
Level 2: Analyze how PWM will used in contactless smart card, high frequency, RFID (radio frequency ID) tags and etc.

Targeted Application & Tools that can be used:
Targeted Applications: This course is contributed for placement in core companies, research & development work and also useful to know the existing & developing communications.
Professionally Used Software: MatLab, device setup in laboratory.

Board of Studies on	
Date of Approval by the Academic Council	Meeting No. 16th , Dated 23/10/2021

Course Code: **ECE3006**	**Course Title:** **Digital Control System** **Type of Course:** **Program Core& Theory only**	**L-T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**Fundamental knowledge of Differential Equations, Laplace transforms, Discrete time signals and Z-Transform.**					
Anti-requisites	**NIL**					
Course Description	**The purpose of this course is to enable the students to understand the principles and significance of feedback and digital control systems design. The nature of the course is conceptual and analytical perception which will provide the students to be able to analyze a particular linear system. The concept of digital control system is used in various fields of Engineering like Petrochemical, Biomedical, and Robotics. The course will be aided by simulations, which will enable the students to validate their theoretical findings. The course will have several simulation assignments which will enhance the student's abilities to become a good digital control systems engineer.**					
Course Objectives	**The objective of the course is to familiarize the learners with the concepts of Digital Control System and attain the <u>SKILL DEVELOPMENT</u> through <u>PROBLEM SOLVING.</u>**					
Course Outcomes	**On successful completion of this course the students shall be able to:** (1)Describe various processes involved in digital control systems (2)Employ time domain specifications of digital control systems (3)Explain frequency domain specifications of digital control systems (4)Identify the need of State space approach					
Course Content:						
Module 1	Systems Modelling	Assignment/quiz	Programming Task	**12Sessions**		
Topics: **Basic elements in classical feedback in continuous control systems, Laplace transform to find transfer function of continuous control system, representation of digital controller from continuous control system using bilinear transformation discretization technique.**						
Module 2	Time Domain Specifications	Assignment/quiz	Programming task	**12 Sessions**		
Topics: **Time domain specifications, dynamic response to unit step and ramp functions, stability of discrete time systems, digital PID design, pole placement design**						
Module 3	Frequency domain	Assignment/quiz	Programming	**9 Sessions**		

	specifications		task	
Topics: **Frequency domain specifications, gain and phase margins, compensator design with bilinear transformation**				
Module 4	Digital control system through state space approach	Case study	Simulation task	**10 Sessions**
Topics: **State space description of discrete systems; State feedback design via pole placement; State estimator design; Controller design with state estimator.**				

Targeted Application & Tools that can be used:

Application of this course is in the field of process control industries, automobile industries, aerospace etc.

1. **MATLAB/ SIMULINK**
2. **Octave**

ASIC Design flow, Analog Testing, Floor Planning and Layout issues; Low Voltage and Low Power Circuits; Introduction to RF Electronics, Introduction to current mode VLSI design.

List of Laboratory Tasks:

Lab 0: Familiarization of the Cadence Lab.
Lab experiments:

1. Design a MOS transistor (nmos and pmos) using the cadence tool and obtain its Static Characteristics.
   Level 1: Find the relationship between Current ID (Drain current) and Voltage VDS (Drain to Source voltage) for different values of Vgs (Gate to Source voltages). Find ID, Vgs and VDS? In which region the transistor is operating? Level 2: NA
2. **Level 1:** Design and simulate the Invertor Circuits, Create Symbol and
   Level 2: Layout of the Invertor (All 3 Compulsory)
3. **Level 1:** Design and Simulate the NAND gate, Create Symbol and
   Level 2: layout of Nand gate. (All 3 Compulsory)
4. **Level 1:** Design and simulate the NOR gate, Create Symbol and
   Level 2: layout of NOR gate (All 3 are Compulsory)
5. **Level 1:** Design the common source amplifier with given specifications, completing the design flow mentioned below: (a) Draw the schematic and symbol and verify the following: DC Analysis, AC Analysis Transient Analysis
   Level 2: Draw the Layout and verify the DRC, ERC, Check for LVS, Extract RC and back annotate the same and verify the Design.
6. **Level 1:** Design the common drain amplifier with the given specifications, completing the design flow mentioned below: (a) Draw the schematic and symbol and verify the following: DC Analysis, AC Analysis Transient Analysis
   Level 2: Draw the Layout and verify the DRC, ERC, Check for LVS, Extract RC and back annotate the same and verify the Design.
7. **Level 1:** Design the single stage CMOS differential amplifier with the given specifications, completing the design flow mentioned below: (a) Draw the schematic and symbol and verify the following: DC Analysis, AC Analysis Transient Analysis
   Level 2: Draw the Layout and verify the DRC, ERC, Check for LVS, Extract RC and back annotate the same and verify the Design
8. **Level 1:** Design an op-amp with given specification* using given differential amplifier & Common source amplifier in library** and completing the design flow mentioned below. (a) Draw the schematic and symbol and verify the following: DC Analysis, AC Analysis Transient Analysis
   Level 2: Draw the Layout and verify the DRC, ERC, Check for LVS, Extract RC and back annotate the same and verify the Design
9. **Level 1:** Design a 4 bit R-2R based DAC for the given specification and completing the design flow mentioned using given op-amp in the library**.(a) Draw the schematic and symbol and verify the following: DC Analysis, AC Analysis Transient Analysis
   Level 2: Draw the Layout and verify the DRC, ERC, Check for LVS, Extract RC and back annotate the same and verify the Design
   (Optional Experiments)

Targeted Application & Tools that can be used:
Targeted Applications: Design of different VLSI Circuits and Sub circuits for industrial applications
Professionally Used Software: Cadence Virtuoso

Project work/Assignment:

1. **Find the aspect ratio of the Differential Amplifier for the given gain, slew rate and bandwidth and hence design and verify the differential amplifier in cadence virtuoso.**
2. **Find the aspect ratio of the 2stage OPAMP for the given gain, slew rate and bandwidth and hence design and verify the differential amplifier in cadence virtuoso.**
3. **Design the CMOS-based rectifier circuits in cadence virtuoso to obtain the constant output of 2 V, if the peak input ac voltage is 3 V at the frequency of 300 Hz and internal resistance is 2Mohm and Internal capacitance is 10 nF.**

Topics related to the development of "FOUNDATION SKILLS": MOS Transistors,
Topics related to the development of "EMPLOYABILITY": Design of Opamp

Catalogue prepared by	Dr Ashutosh Anand
Recommended by the Board of Studies on	12th BOS held on 10/08/2021
Date of Approval by the Academic Council	Meeting No. 16th , Dated 23/10/2021

Course Code: ECE3009	**Course Title: Transmission Lines and Waveguides** **Type of Course: Program Core & Theory only**	**L- T-P- C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**The knowledge of vector algebra, basics of electrical engineering, network theory and MATLAB-SIMULINK software tool**					
Anti-requisites	**NIL**					
Course Description	**The course focuses on various types of transmission lines used in daily life. The course includes stub impedance matching, transmission and reception of high frequency waves through co-axial cable and waveguide. This course lays a foundation for many communication related courses like satellite communication, mobile communication, analog and digital communication etc.**					
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Transmission Lines and Waveguides and attain the SKILL DEVELOPMENT through PROBLEM SOLVING.**					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. Discuss the working of transmission lines such as co-axial cable and associated parameters 2.Compute the calculations pertaining to stub impedance and its parameters 3. Describe the working of waveguide such as rectangular waveguide and associated parameters					
Course Content:						
Module 1	**Transmission Lines and its parameters**	Assignment	Simulation task (transmission lines and its parameters)			**13 Session**
Topics: Introduction to Transmission lines, transmission line parameters calculation for co-axial cable, Transmission line equations, Concept and numerical on input impedance, Reflection coefficient, VSWR, characteristic impedance, open and short circuited lines.						
Module 2	**Stub impedance matching**	Assignment	Simulation task (stub impedance matching parameters)			**13 Session**
Topics: Introduction to stub impedance matching, single stub impedance matching and numerical, double stub impedance matchingand numerical, Smith chart fundamentals , construction of Smith chart, use of Smith chart to solve stub impedance matching problems, Some applications of transmission lines						
Module 3	**Waveguide**	Assignment	Simulation task(parameters calculation in waveguide			**13 Session**
Topics: Introduction, properties and characteristics of waveguides, Applications of Waveguides, General approach to solve field inside waveguide,TM wave in rectangular waveguide, various TM modes, waveguide as a high pass filter, Power transmission and attenuation, TE wave in rectangular waveguide, various TE modes, excitation of waveguides, waveguide terminations, introduction to waveguide resonators						

List of Laboratory Tasks: Nil

Recommended by the Board of Studies on	12th BOS held on 10/08/2021
Date of Approval by the Academic Council	Meeting No. 16th , Dated 23/10/2021

Course Code: **ECE3011**	**Course Title: Digital Communication** **Type of Course: Program Core Theory &Integrated Laboratory**	**L-T-P-C**	3	0	2	4
Version No.	2.0					
Course Pre-requisites	Basics of analog circuit design, Binary operations in digital electronics, Knowledge of analog communication to highlight its demerits, signals and systems to perform operations on signals and digital signal processing for processing digital signals and for the implementation of digital filters.					
Anti-requisites	NIL					
Course Description	The course deals with the importance and applications of digital communication for data, video, audio, image transmission and reception. The course is conceptual and application oriented. This course acts as a foundation for the future courses in communication domain like mobile communication, antenna and microwave engineering, satellite communication and data communication and networks etc. The laboratory experiments integrated with the theory provide an opportunity for the students to validate the concepts learned in theory through experiments and motivate the students to extend such laboratory experiments to real life applications.					
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Digital Communication and attain the SKILL DEVELOPMENT through EXPERIENTIAL LEARNING.					
Course Outcomes	On successful completion of this course the students shall be able to: 1] Discuss the subsystem components needed to build both wired and wireless digital communication systems. 2] Describe various processes involved in the pulse code modulation and demodulation in wired communication. 3] Demonstrate various processes involved in digital modulation and demodulation in wireless communications. 4] Apply the concepts in power amplifier applications and to choose suitable antenna in digital communication. 5] Implement pulse code modulation technique to convert analog signal into binary data. 6] Carry out pulse code demodulation technique to convert binary data into analog signal.					
Course Content:						
Module 1	Introduction to Digital Communication	Assignment	Simulation task (Conversion of analog signal into		**12classes**	

			samples using Simulink)		
Topics: Block diagram of digital communication, Sampling Principles: Sampling Theorem, Quadrature sampling of Band pass signal, Practical aspects of sampling and signal recovery, Hilbert Transform, Pre-envelopes, Comple-envelopes					
Module 2	Waveform coding techniques and Inter Symbol Interference	Case Study	Simulation task(time division multiplexing modulation and demodulation)		**12 classes**
Topics: TDM, PCM, DPCM and DM, Numerical. ISI, Nyquist's criterion for distortion less base-band binarytransmission, correlative coding, eye pattern					
Module 3	Digital Modulation Techniques	Assignment	Simulation task(digital modulation and demodulation techniques using Simulink)		**12 classes**
Topics: Digital modulation formats, coherent binary modulation techniques, coherent quadrature modulation techniques. Non-coherent binary modulation techniques					
Module 4	Spread Spectrum Modulation and Detection and Estimation	Assignment	Simulation task(PN sequence generation using Matlab/Simulink)		**12 classes**
Topics: Pseudo noise sequences, notion of spread spectrum, direct sequence spread spectrum, frequency hop spread spectrum, applications, Numerical. Gram-Schmidt orthogonalization procedure, geometric representation of signals, Probability of error (statement only), Some applications of DS Spread Spectrum Signals, Generation of PN Sequences					
List of Laboratory Tasks: **Experiment N0 1**: **Level1:** Implementation of sampling circuit to convert given analog signal into its samples with sampling frequency fs≥2fmax using LT Spice/MATLAB simulation tool. **Level2:** Implementation of sampling circuit to convert given analog signal into its samples with sampling frequency fs≥2fmax using analog and/or digital hardware components. **Experiment N0 2**: **Level1:** Simulate the appropriate quantizer circuit to replace the samples of analog signal into its nearest value using LT spice/MATLAB simulation tool **Level2:** Rig up the appropriate quantizer circuit to replace the samples of analog signal into its nearest value using analog and/or digital hardware components. **Experiment N0 3**: **Level1:** Implementation of suitable encoder circuit to represent binary data for the quantized samples using LT spice/MATLAB simulation tool					

Level2:
Construct suitable encoder circuit to represent binary data for the quantized samples using analog and/or digital hardware components.

Experiment N0 4:

Level1:
Simulate appropriate parallel to serial converter for the encoded binary bits to obtain serial binary data using LT spice/MATLAB simulation tool.

Level2:
Rig up the appropriate parallel to serial converter for the encoded binary bits to obtain serial binary data using analog and/or digital hardware components.

Experiment No. 5:

Level1:
Simulate appropriate serial to parallel converter for the encoded binary bits to obtain serial binary data using LT spice/MATLAB simulation tool.

Level2:
Rig up the appropriate serial to parallel converter for the encoded binary bits to obtain serial binary data using analog and/or digital hardware components.

Experiment No. 6:

Level1:
Implementation of suitable decoder circuit to represent binary data for the quantized samples using LT spice/MATLAB simulation tool

Level2:
Construct suitable decoder circuit to represent binary data for the quantized samples using analog and/or digital hardware components.

Experiment No. 7:

Level1:
Implementation of reconstruction low pass filters to recover analog signal using LT spice/MATLAB simulation tool.

Level2:
Carry out the reconstruction low pass filter circuit to recover analog signal using analog and/or digital hardware components.

Experiment No. 8:

Level1:
Integration of all the experiments from 1 to 7, for the demonstration of pulse code modulation and demodulation using LT spice/MATLAB simulation tool.

Level2:
Integration of all the experiments from 1 to 7, for the demonstration of pulse code modulation and demodulation for the given analog signal using analog and/or digital hardware components. Use co-axial or telephone cable as wired channel to establish communication between modulator and demodulator.

Targeted Application & Tools that can be used:
Application Area is transmission and reception of data, voice, image, video, text, scanned documents etc. between the two places through wired or wireless communication using digital communication components or systems.
Professionally Used Hardware/Software: DSP processor/Arduino/Raspberry Pi, LT-Spice/MATLAB/SIMULINK

Course Code: ECE3012	**Course Title: Information Theory and Coding** **Type of Course: Program Core Basket Theory only**	**L- T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Basic concepts of simple Applied Statistics [MAT1003], Digital Communication [ECE3007]Mean and variance of discrete random variables, Joint probability, Probability theory Basic communication block diagram and its working, Channels					
Anti-requisites	NIL					
Course Description	The course is designed for undergraduate level students to learn about information coding in communication. The main objective of the course is to understand the basics of errorcontrol coding in the information. This course will be foundation for advanced signal processing and network security. The research potential of the subject can make students to learn and develop algorithm.Thiscourse provides an introduction to the concept of Entropy, rate of information and various source encoding algorithms. Discrete & continuous communication channels are included to get the knowledge of numerical computations in the development of communication system without any error.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Information Theory and Coding and attain the SKILL DEVELOPMENT through PROBLEM SOLVING.					
Course Outcomes	On successful completion of this course the students shall be able to: 1. Discuss the concept of dependent and independent source, measure of information, Entropy, rate of information and order of a source. 2. Apply the information source using Shannon encoding, Shannon Fano, encoding and Huffman encoding algorithms. 3. Analysis of the continuous and discrete communication channels using input, output and jointprobabilities. 4. Analysis of a codeword comprising of the check bits computed using linear blockcodes, cyclic codes and convolutional codes.					
Course Content						
Module 1	**Introduction to Information Theory**	Assignment/Quiz	Numerical/ Memory recall based			**10 Classes**
Topics Introduction, Measure of information, Information content of message, Average Information content of symbols in Long Independent sequences, Average Information content of symbols in Long dependent sequences, Markov Statistical Model of Information Sources, Entropy and Information rate of Markoff Sources.						
Module 2	**Information Coding**	Assignment	Numerical			**9 Classes**
Topics						

Source coding theorem, Kraft McMillan Inequality property – KMI, Encoding of the Source Output, Shannon's Encoding Algorithm, Shannon Fano Encoding Algorithm, Huffman codes, Extended Huffman coding				
Module 3	**Information Channel**	Quiz/ Assignment	Memory recall based / Numerical	**10 Classes**
Topics Communication Channel block diagram, Channel Matrix, Joint probability Matrix, Mutual Information, Channel Capacity, Channel Capacity of : Binary Symmetric Channel, Binary Erasure Channel, Muroga,s Theorem, Continuous Channels: Shannon's Hartley law and its numerical.				
Module 4	**Error Control Coding**	Quiz/ Assignment	Memory recall based / Numerical	**10 Classes**
Topics **Error Control Coding:** Introduction, Examples of Error control coding, methods of Controlling Errors, Types of Errors, types of Codes, Linear Block Codes: matrix description of Linear Block Codes, Error detection & Correction capabilities ofLinear Block Codes, Single error correction Hamming code, Table lookup Decoding using Standard Array				
List of Laboratory Tasks: N**A**				
Targeted Application & Tools that can be used: Application area of Information Theory and Coding in Network Security and Computer Communication System. Professionally used software : MATLAB

Recommended by the Board of Studies on	12th BOS held on 10/08/2021
Date of Approval by the Academic Council	Meeting No. 16th , Dated 23/10/2021

Course Code: **ECE3013**	**Course Title: Antenna and Wave Propagation** **Type of Course: Data Transfer Technologies Basket Theory**	**L-T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Basic concepts of Cartesian, cylindrical and spherical coordinate systems. Differential length (dl), surface (ds) and volume (dv). Line, surface and volume integrals. Divergence and curl operations. Fundamentals of static electric and magnetic fields which includes electric field density and intensity, magnetic field density and intensity, Maxwell's equations, boundary conditions.					
Anti-requisites	**NIL**					
Course Description	This course will introduce the basics of electromagnetic radiation and propagation and also deals with how VHF and UHF antennas are used in microwave communication. This course gives a comprehensive coverage of a wide variety of antennas and propagation techniques related to numerous communication systems. This course provides an opportunity to validate the concepts of mathematical modeling behind the antenna design.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Antenna and Wave Propagation and attain SKILL DEVELOPMENT through PROBLEM SOLVING.					
Course Outcomes	On successful completion of the course the students shall be able to: 1. Describethe fundamental parameters and Radiation Pattern of Different Types of Antennas. 2. Explainthe working and design of VHF, UHF and Microwave Antennas 3. Outline how the electromagnetic wave is propagates in different atmospheric conditions as a ground, space, sky wave.					
Course Content:						
Module 1	Fundamentals of Antenna parameters	Assignment	Memory Recall based Quizzes	**11 *Sessions***		
Topics: Introduction, Basic radiation Equation, Radiation Pattern., Beam Area, Beam Efficiency, Radiation Power density, Field Regions, Radiation Intensity, Directivity and Gain Bandwidth, Antenna Apertures, Front to back ratio, Friis Transmission formula, Antenna Theorems.						
Module 2	Basic antenna Design	Assignment / Quiz	Design and analysis of parameters (simulation)	**10*Sessions***		
Topics: Long wire And V antennas, Rhombic Antenna, Folded Dipole Antenna, Yagi Uda Antenna, Helical Antenna, and Horn Antennas. Micro strip Antennas, Reflector Antennas, Cassegrain Antenna, Feed methods of Parabolic Reflectors, Frequency independent Antennas.						
Module 3	Wave Propagation	Assignment	Memory Recall based Quizzes	**12*Sessions***		
Topics: Wave Propagation- Introduction, Ground wave Propagation, Classification of Electromagnetic						

Waves, Reflection of Radio waves by earth surface. Space wave Propagation- considerations, Tropospheric propagation, Sky wave propagation- structure of ionosphere, Propagation of radio waves through ionosphere. Mechanism of wave bending and critical frequency. MUF, skip distance, Relation between MUF and skip distance

Module 4	ANTENNA ARRAYS	Assignment	Memory Recall based Quizzes	**12*Sessions***

Topics
Electronic band gap structure and applications, Antenna Measurements-Test Ranges, Measurement of Gain, Radiation pattern, Polarization, VSWR, N element linear array, Pattern multiplication, Broadside and End fire array – Concept of Phased arrays, Adaptive array, Basic principle of antenna Synthesis-Binomial array

Targeted Application & Tools that can be used:
This course is contributed for placement in core companies, research & development work and also useful to know the existing & developing communications.
Professionally Used Software: MatLab.

Date of Approval by the Academic Council	Meeting No. 18th, Dated 03/08/2022

Course Code: **ECE3014**	**Course Title: Micro Controller Applications** **Type of Course: Discipline Elective; Theory & Integrated Laboratory**	**L -T- P - C**	**3**	**0**	**2**	**4**
Version No.	**2.0**					
Course Pre-requisites	Basics of Electronics Devises, Logic Design, 8 bit/16 bit Microprocessor Architecture and Assembly Language Programing, Basics of C-Language, Memory types.					
Anti-requisites	**NIL**					
Course Description	The course provides insights into the fundamentals of microcontroller. The course imparts basic knowledge for Embedded Systems Design. The course develops programming skills in both assembly language and middle level languages. The comprehensive nature of the course covers assembly language programming using simulation tools. The associated laboratory provides an opportunity to validate the concepts taught and enhances the ability to visualize the real-world problems in order to provide a solution using various simulation tools and hardware interfacing techniques.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Micro Controller Applications and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING.					
Course Outcomes	On successful completion of this course the students shall be able to: 1) Discuss the architecture and working principles of 8051 microcontrollers. 2) Develop assembly language programming problems using coding and debugging skills. 3) Interpret ALP/C program to realize various arithmetic and logical operations that can be carried in an ALU unit using instruction set. 4) Demonstrate basic operations and Analyze the 8051 C Microcontroller interfacing with external hardware. 5) Apply Timer-programming instructions to generate different timing signal, also use it as synchronizing factor in serial communication. 6) Understand the difference between Microcontrollers and ARM controller in terms of instruction set and processing.					
Course Content:						
Module 1	**Fundamentals of Microcontroller 8051:**	**Quiz**	**Memory Recall based Quizzes**			**10Sessions**
Topics: Microprocessor Vs Microcontroller, Embedded Systems, Embedded Microcontrollers, 8051 Architecture-Registers, Pin diagram, I/O ports functions, Internal Memory organization. External Memory (ROM & RAM) interfacing. Assembler directives						
Module 2	**8051 Instruction Set:**	**Quiz/**	**Programming and**			**14**

		Assignment	**Simulation task using ALP/ C**	**Sessions**

Topics:

Addressing Modes, Data Transfer instructions, Arithmetic instructions, Logical instructions, Branch instructions, Bit manipulation instructions. Simple Assembly language program examples (without loops) to use these instructions.

8051 Stack, I/O Port Interfacing and Programming: Stack and Subroutine instructions. Assembly language program examples on subroutine and involving loops - Delay subroutine with simple ALP programs.

Module 3	**8051 Timers and Serial Port:**	**Assignment**	**Programming and Simulation task using C**	**8 Sessions**

Topics:

8051 Timers and Counters – Operation and Assembly language programming to generate a pulse using Mode-1 and a square wave using Mode-2 on a port pin. 8051 Serial Communication- Basics of Serial Data Communication.

Module 4	**Introduction to ARM**	**Assignment**	**System Design Task and Analysis**	**08Sessions**

Topics:

ARM INTRODUCTION:ARM 32 Bit MCUs: Introduction to 16/32 Bit processors – ARM architecture and organization – ARM / Thumb programming model – ARM / Thumb instruction set – Development tools.

List of Laboratory Task:

Experiment 1:Data Transfer - Block move, Exchange, Finding largest element in an array

Level1: Write an ALP for data transfer with blocks.

Level2: Write an ALP for to find the largest element in an array.

Experiment 2:Arithmetic Instructions - Addition/subtraction, multiplication and division– (8 bits Arithmetic operations.

Level1: Write an ALP for addition/subtraction.

Level2: Write an ALP for multiplication program using successive addition.

Experiment 3:Counters

Level1: Write an ALP for decimal, hexadecimal up/down counter.

Level2: Write an ALP for mod 7 counter.

Experiment 4:Boolean & Logical Instructions (Bit manipulations)

Level1: Write an ALP to use Boolean and logical instructions in a specific Boolean expression of 3 variables.

Level2: Write an ALP for checking the status of AC flag and C flag and indicate whether data is going out of range.

Experiment 5:Code conversion: HEX - Decimal and Decimal – HEX, BCD- ASCII

Level1: Write an ALP for decimal to Hexadecimal conversion.

Level2: Write an ALP for conversion of Hexadecimal to Binary.

Experiment 6:External LCD interface to 8051

Level1: Write a C program for LCD Display of "ECE"

Level2: Write a C program for scrolling display.

Experiment 7:Generate different waveforms Square, Triangular using DAC interface to 8051 change the frequency and amplitude.

Level1: Write a C program for generating square wave.

Level2: Write a C Program for generation of staircase waveform with logic 0 as 0 volts as logic 1 as 5Volts.

Experiment 8:Stepper motor to rotate clockwise and anti-clock wise control interface to 8051

Level1: Write a C program for stepper motor for clockwise rotation.

Level2: Write a C program for rotating motor 3 times clock and 2 times anticlockwise.

Targeted Application & Tools that can be used

Application area is embedded system design, Instrumentation and Process Control, Consumer ElectronicsLight sensing & controlling devices, Temperature sensing and controlling devices.

Tools used are µVision IDE from Keil, MCU 8051 IDE.

Project work/Assignment:

1. Case Studies: At the end of the course students will be given a 'real-world' application based stepper motor and ARM Microcontroller as a case study. Students will be submitting a report which will include basic programming on ARM in appropriate format.

2. Book/Article review: At the end of each module a book reference or an article topic will be given to each student. They need to visit the library and write a report on their understanding about the assigned article in appropriate format.

3. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same**.**

4. Assignments:

Assignments on hardware interfacing with programming in C/Assembly language. Mini projects.

5. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer to the library resources and write a report on their understanding about the assigned article in an appropriate format.Presidency University Library Link .

DISCIPLINE ELECTIVES

GENERAL BASKET

Course Code: **ECE3015**	**Course Title: Measuring Instruments and Sensors** **Type of Course: Discipline Elective-General Basket**		**L-T-P-C**	3	0	0	3
Version No.	1.0						
Course Pre-requisites	**[1] Linear Integrated circuits-ECE 3001** **[2] Digital Electronics-ECE2002**						
Anti-requisites	**NIL**						
Course Description	This course deals with measuring instruments used for indicating, measuring and recording quantities. It is essential to learn its usefulness in the design of automatic process control, home automation systems, large integrated computer based system and their calibrations. Application of measurement and instrument helps students to calibrate industrial equipment's, design instruments for various application in Bio medical, Electrical, Mechanical fields and enhances the ability to visualize the real-world problems in order to provide a solution using various simulation tools and hardware interfacing techniques. It also provides a practice to the construction of testing and measuring set up for electronic systems and to have a deep understanding about instrumentation concepts that will result in basic process control in industry to manufacture quality products.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Measuring Instruments and Sensors and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING.						
Course Outcomes	On successful completion of this course the students shall be able to: 1. Discuss the concepts of measuring systems and error in measurement. 2. Demonstrate various types of Analog and Digital Instruments. 3. Analyze various types of sensors and transducers. 4. Acquire data using sensor interfaces and Lab-VIEW. 5. Compute the unknown parameters using bridge circuits.						
Course Content:							
Module 1	Measurements and Measuring Systems, Error in measurement and their statistical Analysis	Assignment/quiz	Programming Task	**13Sessions**			

Topics:
Significance of measurements, Methods of Measurement- Direct and Indirect Methods, True Value, Static Error, Static Correction, Error Calibration Curve, Accuracy and Precision, Static Sensitivity, Linearity. Hysteresis, Dead Time, Dead Zone, Resolution or Discrimination, Types of Errors, Arithmetic Mean, Range, Deviation, Average Deviation, Standard Deviation (S.D.), Variance.

Module 2	Storage and display devices	Assignment/quiz	Data collection and simulation task	**12 Sessions**

Topics:
D.C. and A.C. Bridges (Measurement of resistance, capacitance and Inductance), Digital Voltmeter (DVM), Digital Multimeter (DMM), Square and pulse generator, Relaxation oscillator.

Module 3	Sensors and Transducers	Assignment/quiz	Data collection and simulation task	**15 Sessions**

Topics:
Basic Principles of Operation, Different types of transducers, Resistive, Capacitive, Linear Variable differential transducer (LVDT), piezoelectric transducer, Temperature transducers, Pressure Transducers, Proximity Sensor.

List of Laboratory Tasks:
Experiment No. 1: Familiarization with virtual instrumentation using Lab VIEW Software
Level 1: To understand the principles of Virtual Instrumentation (VI) and learn the basics for creating Virtual Instrument and implement a circuit diagram to convert degree C to F using VI tools.
Level 2: NA
Experiment No. 2: Implementation of digital combinational circuits and loops
Level 1: Draw and implement the circuit diagram of Half Adder and Full Adder circuit using Boolean gates and verify output using truth table, generate a saw tooth waveform using while loop and find the sum of N natural numbers using for loop.
Level 2: Interpretation of a full adder circuit implemented in level 1 for Ripple carry adder and verifying the output.
Experiment No. 3: Implementation of case structures and arrays
Level 1: Draw a circuit diagram to implement conversion of temperature using case structures, insertion of element in an array and for computing maximum, minimum, average and the array size.
Level 2: Interpretation of array inserted with an element in level 1 to sort in ascending order and verifying the result.
Experiment No. 4: Measurement of unknown resistance using Wheatstone bridge
Level 1: Implement the circuit diagram for basic Wheatstone bridge collecting proper components and verifying the result.
Level 2: Interpretation of Wheatstone bridge usage for improving the sensitivity of any sensor output.
Experiment No. 5: Measurement of unknown inductance using Maxwell's inductance bridge
Level 1: Implement the circuit diagram for basic Maxwell's inductance bridge using appropriate components and verify the results.
Level 2: Interpret the usage of bridge for instrumentation purposes.
Experiment No. 6: Measurement of component values and voltage drop across series combination of resistors using NI ELVIS II+ Workstation
Level 1: Identify the component values and build a voltage divider circuit on the NI ELVIS II+ protoboard to calculate voltage drop across resistances for computing static error.
Level 2: Build a voltage divider circuit as implemented in level 1 using 5.5 kΩ and 10 kΩ resistors and compute the static error.
Experiment No. 7: Measurement of phase difference and power factor of a series R-L and R-C circuit using NI ELVIS II+ Workstation
Level 1: Implement the RL and RC circuits by collecting required components and verify the

results.
Level 2: Build the RL and RC circuits as implemented in level 1 using given component (3.5kΩ resistor, 2uf capacitor and 3 H inductance) and verify the output.

Experiment No. 8: Measurement of temperature using RTD, NI myDAQ and Lab-VIEW
Level 1: Draw the circuit using proper elements and develop the code to measure the temperature and verify the result.
Level 2: Level 2: Usage of temperature measurement for controlling of air conditioner.

Targeted Application & Tools that can be used:
Application Area is AWA-Biosensor BOD analyser,bio medical field ,Analog devices, Automatic process control, chemical sensors and analytical instruments
Professionally Used Software: MATLAB/ Lab VIEW NI Lab-VIEW
NI ELVIS II+ Workstation, NI myDAQ

Course Code: **ECE3017**	**Course Title: Linear Algebra for Communication Engineering** **Type of Course: Discipline Elective-General Bakset**		**L-T-P-C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites							
Anti-requisites	NIL						
Course Description	The course emphasizeson the applications of linear algebra in communication engineering. This course finds applications in various fields of engineering, like Signal Processing, Coding Theory, Machine Learning, Computer Graphics and Computer Vision. The course provides insights into the methods for reducing the problem from many areas of engineering into one in linear algebra extended to multi-dimensional spaces. The course also deals with techniques to solve problems analytically.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Linear Algebra for Communication Engineering and attain EMPLOYABILITY SKILLS through PROBLEM SOLVING.						
Course Outcomes	On successful completion of this course the students shall be able to: 1. Developthe algebraic methods essential for the study of systems of linear equations, matrix algebra, vector spaces. 2. Apply the concepts of determinants and eigenvalues to discriminate between invertible and non-invertible matrices for diagonalization and orthogonalization. 3. Execute linear transformations of finite dimensional vector spaces to compose their matrices in specific bases.						
Course Content:							
Module 1	Matrices and Gaussian Elimination	Assignment	Programming (Curve Fitting) Task	**10 Sessions**			
Topics: Introduction, the geometry of linear equations, elimination with matrices, multiplication and inverse matrices, factorization, column space and null space, Solution to homogenous equations, Row reduced form, Independence, Basis and Dimensions, the four fundamental sub-spaces, matrix spaces.							
Module 2	Least squares, Determinants and Eigenvalues	Assignment	Programming Task	**10Sessions**			
Topics: Orthogonal vectors and subspaces, projection onto subspaces, projection matrices and least squares, orthogonal matrices and Gram-Schmidt, properties of determinants, determinant formulas and cofactors, Cramer's rule, eigenvalues and eigenvectors, diagonalization and powers, differential equations, Fourier Series.							
Module 3	Positive Definite Matrices and Applications	Project Assignment	Programming and Simulation Task	**14Sessions**			
Topics: Symmetric matrices and positive definiteness, positive definite matrices and minima, Linear transformations and their matrices, change of basis, Singular Value Decomposition, Fourier Transform, similar matrices and Jordan form.							

Module 4	Optimization	Assignment	Programming Task	11 sessions
Topics: Matrix Games, Linear Programming—Geometric Method, Linear Programming—Simplex Method, Duality				
Targeted Application & Tools that can be used: Applications: Signal Processing, Coding Theory, Machine Learning, Computer Vision, Computer Graphics Tools: Matlab, Jupyter Notebook, TensorFlow

Course Code: ECE3018	**Course Title: Engineering Applications using Software Tools** **Type of Course: Discipline Elective- General Bakset**	**L- T-P- C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**Nil**					
Anti-requisites	**NIL**					
Course Description	The purpose of this course is to enable the students to use certain software tools which can be used for Engineering Applications. There is a lot of demand for software tools for various Engineering applications, and this course will cater to that demand area. The software tools that will be introduced are MATLAB, SIMULINK and NI LabVIEW. This is a laboratory integrated course.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Engineering Applications using Software Tools and attain EMPLOYABILITY SKILLS through PROBLEM SOLVING.					
Course Outcomes	On successful completion of this course the students shall be able to: (1) Use MATLAB to solve basic engineering problems (2) Solve ordinary differential equations in MATLAB using various methods (3) Use SIMULINK to solve electronics related real world problems. (4) Apply interfacing techniques to interface different components using NI myDAQ					
Course Content:						
Module 1	MATLAB	Assignment/ Quiz	Simulation Task	**10 Sessions**		
Topics: MATLAB basics - The MATLAB environment. MATLAB scripts and functions (m-files) - Simple sequential algorithms - Control structures (if…then, loops). User defined functions and function handles. Symbolic math, Numerical Integration and differentiation, Transforms. Solution of Ordinary Differential Equations. Data modeling -Linear regression, Optimization, Statistical analysis of data, reading from and writing to different data files, Curve fitting.						
Module 2	SIMULINK	Assignment / Quiz	Simulation Task	**9 Sessions**		
Topics: SIMULINK: Modelling differential equations. Practical examples of electrical circuits and mechanical systems. Representing model as a subsystem. Use MATLAB Function in SIMULINK. S Function. Examples using S Function, Modelling physical systems using Simscape						
Module 3	LabVIEW	Assignment/ Quiz	Simulation Task	**10 Sessions**		
LabVIEW: Data types, software constructs, and Graphical User Interface (GUI) elements. Variables and functions. Simple design patterns. SubVI design.						
Module 4	MyDAQ	Assignment/ Quiz	Simulation Task	**10 Classes**		
Topics: MyDAQ: Introduction to Data Acquisition and Sampling Theory, Filtering Signals, Digital Thermometer, DC motor speed control. Interfacing certain sensors and display devices using myDAQ.						
Targeted Application & Tools that can be used: Application: Learning about softwares which are widely used in academia as well as research will help						

the student in getting a job in various companies which utilizes these softwares. A student will be able to find job in the following companies

1. Mathworks
2. NI
3. Any company/ research organization which uses these softwares

Professionally Used Software:
MATLAB/SIMULINK, NI LabVIEW, myDAQ

Textbook(s):

Course Code: ECE3019	**Course Title: Python Programming for Electronics Applications** **Type of Course: Discipline Elective-General Basket**		**L-T-P-C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites	Fundamentals of python programming and basics of electronics such KVL, KCL, modulation techniques, transistors						
Anti-requisites	**NIL**						
Course Description	The purpose of this course is to enable the students to understand the need of python in various electronics applications. The course is introductory in nature, involving knowledge of programming concepts. This course introduces the process of simulation and also provides basic theory lectures to help understand how simulations can be used to learn about basic concepts related to electronics. This course targets at developing basic programing skills using python in order to perform signal processing, circuit simulation etc. using the basic knowledge. The benefit of this course aims at applying the fundamentals learnt into a realization in the electronics industry.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Python Programming for Electronics Applications and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING.						
Course Outcomes	**On successful completion of this course the students shall be able to:** 1) **Recall** the basics of python programming language 2) **Understand** the basic concepts of electronic circuits using python. 3) **Write** simple programs using python 4) **Demonstrate** the use of python to implement various circuits related to different areas of electronics						
Course Content:							
Module 1	**Fundamentals of Python Programming**	Assignment/ Quiz	Programming and simulation Task	**12 Sessions**			
Topics: Variables, Conditional Statement, Boolean expressions, If/Else statement, Loops, Functions, Objects, Lists, Files , Classes							
Module 2	**Circuit Simulation**	Assignment / Quiz	Programming and Simulation task	**12 Sessions**			
Topics: An Introduction to Electric Circuits simulation, verification of Ohm's law, simulation of electrical power and energy, Resistance, Series and parallel networks, Electromagnetism, Transistors, Logic Gates,							
Module 3	**Signal Processing Using Python**	Assignment / Quiz	Programming and Simulation task	**15 Sessions**			

Topics:
Python programming for Continuous time signal processing, Discrete time signal processing, Perform Convolution of two sequences, correlation, FFT, Filters using python

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:

Targeted Applications: Python finds wide application in the area of signal Processing, image processing, control engineering, IoT, power Electronics, Industrial Automation Application, Machine Learning, AI, etc.

The students will be able to join a profession such as Hardware Developer, Web Developer, Game Developer, Data Analyst etc.

Professionally Used Software: Anaconda, Jupyter notebook / Google Colaboratory – on cloud / Spyder can be used to write code to build and simulate the circuits, and perform analysis of the same.

Recommended by the Board of Studies on	12th BOS held on 10/08/2021
Date of Approval by the Academic Council	Meeting No. 16th , Dated 23/10/2021

Course Code: **ECE3020**	**Course Title: Computational Intelligence and Machine Learning** **Type of Course: Discipline Elective-General Basket**	**L- T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Basic concepts of matrix operations, probability theory, vector and array representation.					
Anti-requisites	**NIL**					
Course Description	The course aims to make the students to understand the mathematical approaches for machine learning and computational intelligence algorithms. This course covers the basic concepts of Neural Networks which will enable the students to understand the concepts of machine learning. Concepts of Linear models for regression and classification will be discussed in such way that students can able to perform data analysis in practical applications. In this course, Computational intelligence algorithms are included to get better understanding of Artificial intelligence.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Computational Intelligence and Machine Learning and attain EMPLOYABILITY SKILLS through PROBLEM SOLVING.					
Course Outcomes	On successful completion of the course the students shall be able to: 1. Analyze and fundamental concepts of neural networks 2. Implement ML algorithms to regression, classification, clustering, and dimensionality reduction 3. Categorize the various pattern recognition techniques using machine learning into supervised and unsupervised.					
Course Content:						
Module 1	Fundamentals of ANN	Assignment	Memory Recall based Quizzes		**13 *Sessions***	
Topics: Introduction To Artificial Neural Networks (ANNs), Models Of A Neuron, Neural Networks-Associated Graphs And Feedback, Network Architectures And Knowledge Representation, Learning Algorithms. Perceptron, Perceptron Convergence Theorem, Relation Between The Perceptron And Bayes Classifier For A Gaussian Environment, and The Back-Propagation Algorithm. Introduction to Recurrent Neural networks						
Module 2	Regression and classification	Assignment/mini project	Memory Recall based Quizzes		**13 *Sessions***	
Topics: Linear models for regression and classification: Polynomial curve fitting. Probability theory-Bayesian probabilities, and Gaussian distribution, Linear basis function models for regression - Maximum likelihood and least squares, Regularized least squares, Bias variance decomposition-Bayesian linear regression, linear discriminant analysis (LDA), Principal Component Analysis (PCA), Independent Component Analysis (ICA). Kernal linear discriminant analysis (KLDA).						
Module 3	Kernel methods, Computational algorithms	Assignment/mini project	Programing / simulation		**14 *Sessions***	

Topics:
Kernel methods: Dual representations-Constructing kernels, K- means Algorithm, Fuzzy K-means Algorithm, Kohonen Self organizing Maps, Maximum margin classifier (Support Vector Machine), Particle swarm optimization--Ant colony optimization- Bacterial foraging. Genetic algorithm.

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:
Targeted Applications: This course is contributed for placement in data science companies, research & development work and also useful to know the existing & developing Artificial Intelligence.

Professionally Used Software: MatLab, Phython

Course Code: **ECE3021**	**Course Title: Optoelectronic Materials** **Type of Course: Discipline Elective-General Basket**	**L- T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**Fundamentals of basic electronic circuit components and relevant semiconductor physics concepts.**					
Anti-requisites	**NIL**					
Course Description	The course introduces the Materials Science and Engineering basics as well as the applications in optoelectronics and semiconductor devices. This course provides an introduction to physics of solid-state materials. The course also deals with a fundamental description of bonding in crystalline solids, electronic band structure and the fundamentals of different optoelectronic devices.					
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Optoelectronic Materials and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING.					
Course Outcomes	On successful completion of this course the students shall be able to: 1. Describe semiconductor materials, their properties and processing techniques. 2. Interpret the wave nature of light and physics of solid state. 3. Discuss the various display and optical detection devices. 4. Employ the concepts learnt to model new detection devices.					
Course Content:						
Module 1	**Electronic Structure and Properties of Materials**	Assignment/quiz	Programming & Simulation task	**14 classes**		
Topics: Free electron theory, Introduction to the role of lattice, Review of reciprocal lattice, Brillouin zone, free electron band diagram, potential in a crystal, conductivity in relation to band structure, Band structure of metals and semiconductors, empirical estimates of conductivity in metals and alloys. Semiconductor heterostructure- Lattice-matched-layers, Strained-Layer Epitaxy and Quantum well structures, Semiconductors - band diagrams, direct and indirect bandgap, degenerate and nondegenerate semiconductors, intrinsic and extrinsic semiconductors, determination of dopant levels and mobility measurements. Dielectric materials - dielectric constants and polarization, linear dielectric materials, capacitors and insulators, C-V characterization.						
Module 2	**Light And Solid State Physics**	Assignment/quiz	Programming & Simulation task	**12 classes**		
Topics: Wave nature of light, Polarization, Interference, Diffraction, Light Source, review of Quantum Mechanical concept, Interaction of photons with electrons and holes in a semiconductor, Review of Solid-State Physics, Review of Semiconductor Physics and Semiconductor Junction Device.						
Module 3	**Display Devices, Lasers and Optical Detection**	Assignment/quiz	Programming & Simulation	**14 classes**		

	Devices		task	

Topics:
Injection Luminescence, LED, LED characteristics, Modulation bandwidth, Plasma Display, Liquid Crystal Displays, Numeric Displays, Laser Emission, Absorption, Radiation, Population Inversion, Optical Feedback, Threshold condition, Laser Modes, Classes of Lasers, Mode Locking, Quantum well Laser, laser applications.
Photo detector, General characteristic, Responsivity, Thermal detector, Photo Devices, Photo Conductors, Photo diodes, Detector Performance. Buck converter, Boost converter, Bi-directional converter, Fly-back converter, PWM pulses generation, isolation and gate drive circuits.

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:
Application domain: Telecommunication, Medical Equipment, Automatic Access Control Systems, Military Services Ocean Navigation, Remote Monitoring and Control, Optical fiber communication.

Tools: LABVIEW, MATLAB

Course Code: ECE3022	**Course Title: Fundamentals of Photonics** **Type of Course: Discipline Elective- General Basket**		**L- T-P-C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites	A background in silicon photonics, fiber optics, or semiconductors is recommended, but not required. Proficiency in linear algebra and calculus will enhance understanding of design concepts. The course emphasizes on How to model photonic devices, working, analysis and design of photonic devices and also to create compact models for them . Additionally, this course will create a foundation for future courses such as advanced photonics.						
Anti-requisites	**NIL**						
Course Description	Photonic integrated circuit has evolved into a key technology with transformative impact on a wide variety of applications, ranging from high-speed data transmission to further quantum optics and optical computing.						
Course Objective	The objective of the course The objective of the course is to familiarize the learners with the concepts of Fundamentals of Photonics and attain is SKILL DEVELOPMENT of the student by using PARTICIPATIVE LEARNING techniques.						
Course Outcomes	**On successful completion of this course the students shall be able to:** 1: Apply advanced techniques and tools of sensing and computation to solve multi-disciplinary challenges in industry and society. 2: Strong cognizance in the area of high-speed data transmission. 3: To learn how to develop photonic devices. 4: Evaluate the gap between theoretical basics and high-impact applications by combining a lecture with a hands-on design.						
Course Content:							
Module 1	Introduction and review	Quiz	Memory Recall based Quizzes	**8 sessions**			
Topics: Optical communications: short-reach, long-haul, and data centers communications. Economic drivers towards photonic integration. Interaction of optical waves with dielectric and metal interfaces. Boundary conditions, total internal reflection. Review of silicon PN-and PN-junctions. Junction diode static and transient characteristics.							
Module 2	Fundamentals of Silicon photonics	Assignment/Quiz	Theory	**7 sessions**			
Topics: Symmetric dielectric waveguides. Asymmetric dielectric waveguides. Rectangular waveguides. Computational methods for integrated photonics, design and fabrication of silicon waveguide structures. Waveguide loss, scattering, absorption, radiation.							
Module 3	Photonic systems	Assignment	Memory Recall based Quizzes	**7 sessions**			
Introduction to photonic systems for short-reach and long-haul optical communications. Modulation formats, receiver and transmitter characteristics, optical link budget, BER and penalties. Introduction to data center optical networks. Optical switching. Optical switches.							
Module 4	Optical	Assignment	Comprehension	**8 sessions**			

	Cavities		based Quizzes and assignments	

Fabry-Perot resonators, Examples of optical cavities, Cavity mode structure, Micro-ring and micro-disk resonators, Numerical analysis of the cavity modes, Waveguide-Cavity Coupling, Theory of coupling of a waveguide and a cavity, Critical Coupling and Add/Drop filters using waveguide-cavity coupling.

Targeted Application & Tools that can be used:

Tools: N.A

Project work/Assignment:

1. Design a project based on analysis, design and testing of the silicon photonic circuits.

2. Create a simple network model with multiple scenarios, collect statistics on network performance through the use of simulation tools, analyse statistics and draw conclusions on network performance.

Course Code: ECE3023	**Course Title: Wireless Sensor Networks and IOT** **Type of Course: Discipline Elective-General Basket**		**L-T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**Digital Communication, Computer Networks**					
Anti-requisites	**NIL**					
Course Description	The purpose of this course is to enable the students to appreciate the fundamentals of Internet of Things and Wireless Sensor Networks (WSN) and various middleware protocols for IOT and WSN. The IOT and WSN are cutting-edge technologies which are popularly used in many areas like industrial automation, biomedical engineering, etc. These areas have great potential for research. This course will enable students to understand IOT and WSN applications and various middleware protocols in implementation.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Wireless Sensor Networks and IOT and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING.					
Course Outcomes	On successful completion of this course the students shall be able to: 1) Understand the architecture of IOT and WSN systems 2) Explore various middleware protocols for building IOT and WSN applications 3) Illustrate real time applications of IOT and WSN to make smart world 4) Discover competence in programming for IoT Applications.					
Course Content:						
Module 1	Introduction to WSN	Quiz	Memory Recall based Quizzes	**09 session**		
Topics: Introduction and background on WSN Technology, Basic Sensor Network Architecture, Examples of WSN in various categories, Sensor Node Technology, WSN Operating Environment, WSN Trends						
Module 2	WSN Middleware	Assignment / Quiz	Programming and Simulation task / Memory Recall based Quizzes	**12 session**		
Topics: Generic protocol stack for WSN, MAC Protocols for WSNs, Sensor-MAC Case Study, Data Dissemination and Gathering, WSN Routing Techniques, Flooding, and Its Variants, Low-Energy Adaptive Clustering Hierarchy, Power-Efficient Gatherin34g in Sensor Information Systems, WSN and internet communication.						
Module 3	Introduction to IOT	Assignment	Programming Assignment	**12 session**		
Topics: Introduction to IOT Technology, IOT VS WSN, Simplified IOT architecture, Functional blocks of an IoT ecosystem, Physical design of IoT, IoT enabling technologies, Characteristics IoT sensor nodes, Edge computer, cloud and peripheral cloud, single board computers, open-source hardware's, Examples of IoT infrastructure						
Module 4	Prototyping and	Assignment	Programming	**12 session**		

	Designing Software for IoT Applications:		Assignment	

Topics:
Introduction, Prototyping Embedded device software, Programming Embedded Device Arduino Platform using IDE, Reading data from sensors and devices, Devices, Gateways, Internet and Web/Cloud services software development. Programming MQTT clients and MQTT server. Introduction to IoT privacy and security. Vulnerabilities, security requirements and threat analysis, IoT Security Tomography and layered attacker model.

Course Code: **ECE3025**	**Course Title: Artificial Intelligence with Python** **Type of Course:Discipline Elective- General Basket**		**L-T-P-C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites	Introduction to computer science, database management system, probability theory.						
Anti-requisites	**NIL.**						
Course Description	This course on Artificial Intelligence with Python enables the students to acquire programming skills in core Python, Object Oriented Skills, designing Graphical User Interfaces and to write database applications in Python. The associated laboratory provides an opportunity to validate the concepts taught and enhances the ability to visualize the real system performance, using simulation tools.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Artificial Intelligence with Python and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING.						
Course Outcomes	**On successful completion of this course the students shall be able to:** (i) **Explain** basic principles of AI and Python programming language. (ii) **Understand** the mathematical and computational models of Classification, Regression using supervised learning and Predictive Analytics with Ensemble Learning. (iii)**Implement** object-oriented concepts. (iv)**Implement** database and GUI applications.						
Course Content:							
Module 1	Introduction to Artificial Intelligence	Quiz	Memory Recall based Quizzes	**14 Hours**			
INTRODUCTION TO PYTHON: Python for data science, data visualization in python, data analysis using SQL, advanced SQL and best practices, data analysis in excel, analytics problem solving, math for machine learning, Introduction to Artificial Intelligence, supervised versus unsupervised learning, Classification, Pre-processing data: Binarization; Mean removal; Scaling; Normalization. Label encoding, Logistic Regression classifier, Naïve Bayes classifier, Confusion matrix. Support Vector Machines. Regression.							
Module 2	Predictive Analytics with Ensemble Learning	Assignment/ Quiz	Conceptual Descriptive	**12 Hours**			
Ensemble Learning: Decision Trees, Random Forests and Extremely Random Forests, predicting traffic using Extremely Random Forest regressor. Unsupervised learning: Clustering data with K-Means algorithm, Estimating the number of clusters with Mean Shift algorithm, Estimating the quality of clustering with silhouette scores. Gaussian Mixture Models, building a classifier based on Gaussian Mixture Models.							
Module 3	Building Recommender Systems	Assignment/ Quiz	Programming & Simulation	**8 Hours**			
Creating a training pipeline, Extracting the nearest neighbors, building a K-Nearest Neighbors classifier, Computing similarity scores, finding similar users using collaborative filtering, building a movie recommendation system, Logic programming: Understanding the building blocks of logic programming, solving problems using logic programming.							
Module 4	Reinforcement Learning	Assignment/ Quiz	Case studies	**6 Hours**			
Reinforcement learning versus supervised learning, Real world examples of reinforcement							

learning, bzuilding blocks of reinforcement learning, creating an environment, building a learning agent

List of Laboratory Tasks:
Nill

Targeted Application & Tools that can be used:
Employability-
Data Scientist, Principal Data & Applied Scientist Manager, Applied Intelligence, Research Scientist, Business Intelligence Developer, AI Data Analyst, Big data engineering, Robotics Scientist, AI engineer.
TOOLS – Python.

Date of Approval by the Academic Council	**Meeting No. 16th , Dated 23/10/2021**

Course Code: ECE3027	**Course Title:** Industrial Automation and Control **Type of Course:** Discipline Elective- General Basket	**L – T-P - C**	**3**	**0**	**0**	**3**
Version No.	**2.0**					
Course Pre-requisites	**Digital Control Systems (ECE3005)** **Concepts of analog to digital and digital to analog conversions. To know about time response specifications of second order systems and Proportional-Integral-Derivative (PID) controllers.**					
Anti-requisites	**Nil**					
Course Description	**The purpose of this course is to enable the students to appreciate the need for Industrial Automation and control which play a key role in modern industries. Industries rely heavily on automation for economic viability and mass production. It is important for the students to learn the basics of automation and working of systems. The course will be supported by various simulation assignments, which will enhance the student's abilities to become a good Industrial Automation and Control engineer.**					
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Industrial Automation and Control and develop Employability Skills of the student by Participative Learning techniques.**					
Course Outcomes	**On successful completion of this course the students shall be able to:** **1) Discuss various components and parameters used in industrial automation.** **2) Demonstrate the working principles of PLCs.** **3) Illustrate the concepts of Distributed Control System (DCS).** **4) To provide a good understanding of Internet of Things (IoT) and its envisioned deployment domains.**					
Course Content:						
Module 1	**Introduction to Industrial Automation**	**Assignment/ Quizzes**	**Data Collection and Analysis**	**14 Classes**		
Topics: **Automation components: Need for process control, Pressure to Current (P/I), current to pressure (I/P) converters, basic Control elements, open loop and closed loop control systems. Sensors for temperature, pressure, force, displacement, speed, flow, level, humidity and pH measurement. Actuators, process control valves, power electronics devices DIAC, TRIAC, power MOSFET and IGBT.** **Automation overview, Requirement of automation systems, Architecture of Industrial Automation system, Introduction of PLC and SCADA, Different Systems in SCADA like Field Instrumentation, Remote terminal unit (RTU), Master Terminal Unit (MTU).**						
Module 2	**Programmable logic controllers and Relay Ladder Logic**	**Assignment / Quizzes**	**Programming and Simulation task**	**11 Sessions**		
Topics: **Programmable controllers, Programmable logic controllers, Analog digital input and output modules, PLC programming, Ladder diagram, Sequential flow chart, PLC Communication and networking, PLC selection, PLC Installation, Advantage of using**						

PLC for Industrial automation, Application of PLC to process control industries. Relay Ladder Logic and Programming.				
Module 3	**Distributed Control System**	**Assignment**	**Programming and Simulation task**	**06 Sessions**
Topics: **Overview of DCS, DCS software configuration, DCS communication, DCS Supervisory Computer Tasks, DCS integration with PLC and Computers, Features of DCS, Advantages of DCS.**				
Module 4	**Industrial Internet of Things**	**Assignment**	**System Design Task and Analysis**	**08 Sessions**
Topics: **Introduction to Internet of Things - Overview of Internet of Things- the Edge, Cloud and the Application Development, Anatomy of the Thing, Industrial Internet of Things (IIoT – Industry 4.0), Quality Assurance, Predictive Maintenance, Real Time Diagnostics, Design and Development for IoT, Understanding System Design for IoT, Design Model for IoT.**				

Targeted Application & Tools that can be used

Application Area:
Industrial automation is the technological enhancement of systems and machinery used for industries like manufacturing and production. The goal is to limit procedures performed by human workers. Industrial automation technology helps businesses enhance safety, save time, boost quality production, reduce monitoring, and lower costs. All of these benefits lead companies to higher productivity, greater efficiency, and more profitability.

Professionally Used Software: MATLAB/ SIMULINK, SIMATIC STEP 7-TIA Portal, CODESYS, LabVIEW etc.

Signal Processing Basket

Course Code: ECE3028	**Course Title: Speech Signal Processing** **Type of Course: Discipline Elective-Signal Processing Basket**	**L- T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Basic concepts like Energy, Magnitude, Zero Crossing rate, Autocorrelation function, pole zero analysis, DFT and some basic mathematical concepts.					
Anti-requisites	NIL					
Course Description	The purpose of this course is to introduce basic principle of speech production and perception, speech processing oriented to human-computer interaction, categorization of speech sounds based on the source-system. This course also develops speech recognition and verification models. The course offers a practical and theoretical understanding of how human speech can be processed by computers. The course deals with the details of algorithms, techniques and limitations of state of the art speech systems. The course involves quizzes and programming assignments using MATLAB based programming and using Goldwave and Audacity tools for speech analysis.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Speech Signal Processing to improve the learners' Employability Skills by using Participative Learning techniques.					
Course Outcomes	On successful completion of this course the students shall be able to: 1) Understand the fundamental concepts of speech production 2) Discuss short time principles in digital speech processing to understand various parameters of speech. 3) Demonstrate the properties of speech in the context of "frequency domain analysis". 4) Analyze different types of speech processing and its applications.					
Course Content:						
Module 1	**Fundamentals of Human Speech Production**	Quiz	Memory Recall based Quizzes and assignments/simulation task			**10 Sessions**
Topics: **Introduction to Speech, The Mechanism of speech production, Acoustic phonetics: vowels, diphthongs, semivowels, nasals, fricatives, stops and affricates**						
Module 2	**Discrete time speech signals**	Assignment	Comprehension based Quizzes and assignments; simulation with MATLAB			**10 Sessions**
Topics: **Introduction, Time dependent processing of speech, short time energy and average magnitude, short time Average zero crossing rate, Speech vs. silence discrimination using Energy and Zero Crossings, Pitch period estimation using parallel processing approach**						
Module 3	**Frequency domain methods for speech processing**	Assignment	Comprehension based Quizzes and assignments; simulation			**10 Sessions**

			with MATLAB	

Topics:

Introduction, definitions and properties: Fourier Transforms interpretation and Z transform interpretation, sampling rates in time and frequency, filter bank Summation method for short time Synthesis, Spectral estimation of speech using the discrete Fourier Transform

Module 4	**The Cepstrum and Homomorphic Speech Processing**	Assignment	System Design Task and Analysis	**10 Sessions**

Topics:

Introduction, Homomorphic Systems for Convolution, Homomorphic Analysis of the Speech Model, Computing the Short-Time Cepstrum and Complex Cepstrum of Speech, Homomorphic Filtering of Natural Speech, Cepstrum Analysis of All Pole Models, Cepstrum Distance Measures. Applications of speech processing.

Targeted Application & Tools that can be used:

DSP applications include audio and speech processing, sonar, radar and other sensor array processing, Speech coding, Speech recognition, Speech verification\identification, Speech enhancement, Speech synthesis Other Applications of speech processing: Human computer interfaces (e.g. speech I/O) Telecommunication (e.g. speech enhancement, translation)

Professionally Used Software: Matlab, Goldwave, Audacity, Kaldi.

Recommended by the Board of Studies on	12th BOS held on 10/08/2021
Date of Approval by the Academic Council	Meeting No. 16th , Dated 23/10/2021

Course Code: **ECE3029**	**Course Title: Digital Image Processing** **Type of Course: Discipline Elective- Signal Processing Basket**	**L-T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	The various signal processing operations are used as a tool for variety of basic image processing operation. Since DIP is a subfield of signal processing, a good knowledge ofFourier Transform and its properties would help in image analysis. The course needs a fair knowledge of Mathematics and Computational logic.					
Anti-requisites	**NIL**					
Course Description	The purpose of this course is to enable the students to appreciate the fundamental concepts of **Digital Image Processing.** The course is both conceptual and analytical which imparts knowledge on designing algorithms for real-world applications. The course also enhances the programming abilities through assignments. This course will help the students to get jobs in various areas where Image processing is needed, like the film industry, news channels, video mixing, social media platforms, YouTube, animation industry and so on.					
Course objective	The objective of the course is to familiarize the learners with the concepts of Digital Image Processing to improve the learners' **Employability Skills** by using **Experiential Learning** techniques					
Course Outcomes	On successful completion of this course the students shall be able to: 1. **Review** the fundamental concepts of a digital image processing system. 2. **Analyze** images in the frequency domain using various transforms 3. **Evaluate** the techniques for image enhancement and image restoration 4. **Categorize** various compression techniques.					
Course Content:						
Module 1	**Fundamentals Of Image Processing**	Application Assignment	Data Analysis task		**10 session**	
Topics: Fundamentals Of Image Processing: Introduction – Steps in image processing systems – Image Sensing and acquisition – Image formation Model-Sampling and Quantization - Representation of Digital Images –Pixel relationships –Mathematical tools used in Digital Image processing.						
Module 2	**Image Enhancement**	Assignment	Simulation and data analysis task		**12 session**	
Topics: Image Enhancement: Introduction to two dimensional orthogonal & unitary transforms- Two dimensional discrete Fourier transform - Properties of unitary transforms- Spatial Domain Gray level Transformations – Histogram processing – Image enhancement in the Frequency Domain filters – Smoothing and sharpening filters – Homomorphic Filtering						

Module 3	**Image Analysis**	Assignment	Data Collection and Analysis	**10session**
Topics: Image Analysis: Image restoration process- Fundamentals of Image Compression - Image Compression Model-Huffman coding. Fundamentals of Image Segmentation - Point, Line and Edge detection				
Module 4	**Color And Morphological Image Processing**	Assignment	Simulation/Data Analysis	**07 classes**
Topics: **Introduction –Basics and fundamentals of Color Image Processing and Color models-Pseudo color Image Processing-Wavelets and Multiresolution Processing - Image Pyramids-Subband Coding- Introduction to Morphological Image Processing. Ethical practices to be observed while doing Image processing.**				
List of Laboratory Tasks: Nil				
Targeted Application & Tools that can be used: **Applications of Digital Image Processing: Acquisition of instant information has become possible because of the advancements taking place in the domain of the internet. Image processing is already being used by a diverse range of companies and it holds a huge potential of wide adoption in the future. The students will be able to find career opportunities in various domains such as:** • **Image sharpening and restoration.** • **Medical field.** • **Remote sensing.** • **Transmission and encoding.** • **Machine/Robot vision.** • **Color processing.** • **Pattern recognition.** • **Video processing.** **Professionally Used Software: MATLAB is an extraordinary tool for making image processing applications and is generally utilized in research as it permits quick prototyping**

Recommended by the Board of Studies on	12th BOS held on 10/08/2021
Date of Approval by the Academic Council	Meeting No. 16th , Dated 23/10/2021

Course Code: ECE3030	**Course Title: Fuzzy Logic and its Engineering Applications** **Type of Course: : Discipline Elective- Signal Processing Basket**		**L- T-P-C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites	**Fuzzy Logic is an advanced topic, so the students opting for this subject should have preliminary knowledge of Set Theory, Logic, and Engineering Mathematics**						
Anti-requisites	**NIL**						
Course Description	The course is specially designed for candidates dealing with electrical, electronics, and communications engineering. The candidates can engage in the fuzzy systems theory concepts and gain an in-depth understanding of its usage in multiple domains. The course is designed to give a solid grounding of fundamental concepts of fuzzy logic and its applications. It will cover the basics of fuzzy set theory and presents different problems where one can apply this concept. In this course, students will learn how to implement fuzzy logic for problems involving uncertainties and vagueness. This course will act as a foundation course for the researchers working in different areas of science and engineering.						
Course Description	**The objective of the course is to familiarize the learners with the concepts of Fuzzy Logic and its Engineering Applications to improve the learners' Employability Skills by using Participative Learning techniques.**						
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. **Explain** the concept of fuzzy logic and fuzzy system theory. 2. **Discuss** the application of fuzzy system theory in artificial intelligence. 3. **Understand** various issues in fuzzy system theory. 4. **Illustrate** the application of fuzzy system on real time problem.						
Course Content:							
Module 1	**Introduction to Fuzzy Sets Theory**	Quiz	Memory Recall based Quizzes				**10 Sessions**
Topics: **Introduction, The Utility of Fuzzy Systems, Uncertainty and Information, Fuzzy sets and membership, Chance Versus Fuzziness, Fuzzy Set Operations, Properties of Fuzzy Set Operations**							
Module 2	**Membership Functions, Fuzzification and De-fuzzifications**	Assignment	Comprehension based Quizzes and assignments; simulation with MATLAB				**10 Sessions**
Topics: **Features of Membership function, Various Forms, Fuzzification, De-fuzzification to Crisp Sets, De-fuzzification to Scalars, Fuzzy(Rule-based) Systems**							
Module 3	**Fuzzy Classification**	Assignment	Comprehension based Quizzes and assignments; simulation with MATLAB				**10 Sessions**
Topics: **Classification by Equivalence Relations, Crisp Analysis, c-Means Clustering, Fuzzy c-means clustering, Classification metric, Hardening the Fuzzy c-Partition**							

Module 4	**Fuzzy Control System**	Assignment	System Design Task and Analysis	**10 Sessions**

Topics:

Control System Design Problem, Control(Decision) Surface, Assumption in a fuzzy control system design, Simple Fuzzy logic controllers, Fuzzy engineering process control, Fuzzy statistical process control

Targeted Application & Tools that can be used:

Fuzzy logic based speech recognition, Fuzzy image search, Handwriting recognition, Fuzzy set modeling of decision making, Trainable fuzzy systems for idle speed control, Control of automatic exposure in video cameras, Humidity control in a clean room, Air conditioning systems, Washing machine timing, Microwave ovens, Vacuum cleaners, Altitude control of spacecraft, Satellite altitude control, Flow and mixture regulation in aircraft deicing vehicles, Decision-making support systems

Professionally Used Software: MATLAB

Course Pre-requisites	Basic concepts of statistics, algebra and matrix operations					
Anti-requisites	**NIL**					
Course Description	**The purpose of this course is to enable the students to understand the theoretical concepts, algorithms and methodologies of Neural Networks, Deep Neural Networks, CNN, etc. The course also demonstrates the use of Python / MATLAB / SCILAB programming to develop classification applications using deep neural networks.**					
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Applications of Deep Learning designed to improve the learner's Employability Skills by using Participative Learning Methodologies.**					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1) **Describe** the basics of deep neural networks 2) **Understand** the architecture of Convolutional Neural Layer 3) **Illustrate** variants of Convolutional Neural Layer such as RNN, GAN 4) **Apply** the deep learning concepts in real life scenarios					
Course Content:						
Module 1	**Fundamentals of Deep Learning**	Quiz	Memory Recall based Quizzes	**12 session**		
Topics: The Perceptron - History, Discovery, and Theory, Multilayer Perceptron, Activation Functions: RELU, LRELU, ERELU Back-propagation algorithm and its variants, Width and Depth of Neural Networks, Curse of Dimensionality. Loss function, Optimization Techniques, Stochastic gradient decent						
Module 2	**Deep Learning Architecture**	Assignment / Quiz	Programming task	**12 session**		
Topics: Introduction to Deep Learning, Comparison - Machine Learning and Deep Learning, Architectural Overview of CNN, Layers, Filters, various performance metrics for CNN, Parameter sharing, Regularization, Concept of Transfer learning, Unsupervised Training of Neural Networks, Ethical considerations while developing Deep Learning Models						
Module 3	**Variants of CNN**	Assignment	Memory Recall based Quizzes	**10 session**		

Topics:
Variants of CNN: LeNet, AlexNet, GoogleNet, ResNet, Highway Networks, PolyNet, YOLO, VGG, Inception, BLSTM, Deep Belief Networks.

Module 4	**Applications of Deep Learning**	Assignment	Programming task	**09 session**

Topics:
Deep Learning applications: Image Processing- Segmentation, Classification, object detection, Case studies from medical image processing, object detection, agricultural applications etc.

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:

Course Code: **ECE3032**	**Course Title: Multimedia Signal Processing** **Type of Course: Discipline Elective- Signal Processing Basket**	**L- T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	A fair knowledge in digital signal processing and basic concepts of frequency transformations is desirable.					
Anti-requisites	**NIL**					
Course Description	This is an undergraduate level course that deals multimedia presentations (text, graphics, speech, audio, image, video) and their standards for coding, processing and compression. The subject shall provide an introduction to our perception of speech, audio, music, image and video to be able to understand advanced techniques, algorithms and concepts for digital processing of multimedia presentations. The course enables to know the principles and technologies of several important standards and their typical application scenarios.					
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Multimedia Signal Processing to improve the learner's Employability Skills by using Participative Learning Methodologies.**					
Course Outcomes	On successful completion of this course the students shall be able to: 1) **Discuss** the fundamentals behind multimedia signal processing and compression. (Comprehension) 2) **Explain** the basic principles behind existing multimedia compression and communication standards. (Comprehension) 3) **Apply** the acquired knowledge to specific multimedia related problems and projects at work. (Application)					
Course Content:						
Module 1	Basic Digital Signal Processing	Assignment	Programming Task, Data Analysis task	**12 classes**		
	Topics: **Digital Processing Basics, Multimedia Processing and Communications, Compression and Networking as Cornerstones, Information Theory Basics, Lossless Source Coding, Huffman/arithmetic Codes, LZW, Text/graphics Compression, Quantization (scalar/vector). Ethical practices to be observed while using multimedia techniques.**					
Module 2	Model Based Signal Processing	Assignment	Programming Task, Data Analysis task	**10 classes**		
	Topics: **Waveform, Transform, Model-based Coding, Performance Criteria, Perception, Human Visual System Models, Still Image Compression, JPEG, JPEG2000, Wavelet/Sub-band/Fractal, Perceptually-based Coders, 2 nd Generation Image Coding**					
Module 3	Multimedia Communication Standards	Project	Programming Task, Data Analysis task	**11 classes**		
	Topics: **Audio Compression, MPEG-1/2, Dolby AC-2 and AC-3, Compression of Stereo and Surround Sound, Video Compression Basics, Overview of Multimedia Communication Standards H.323 and H.324, Video Compression Standards H.261,**					

	H.263, Video Compression Standards MPEG-1, MPEG-2, and HDTV, MPEG-4, MPEG-7, Multimedia Transmission, Error Resilience and Concealment, Multimedia over IP			
Module 4	Applications of DSP to Multimedia	Assignment	Programming Task, Data Analysis task	**12 classes**

Topics:

Music Signal Processing and Auditory Perception, Speech Processing, Acoustic Theory of Speech-The Source–filter Model, Speech Models and Features, Speech Enhancement, Echo Cancellation

Recommended by the Board of Studies on	12th BOS held on 10/08/2021
Date of Approval by the Academic Council	Meeting No. 16th , Dated 23/10/2021

Course Code: **ECE3033**	**Course Title: Adaptive Signal Processing** **Type of Course: Discipline Elective-Signal Processing Basket**		**L- T-P- C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Digital Signal Processing, Signal and Systems					
Anti-requisites	**NIL**					
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Adaptive Signal Processing to improve the learner's Employability Skills of student by using Participative Learning techniques**					
Course Description	The course aims to develop a mathematical theory of linear adaptive filters. The course discusses the adaptation techniques of the filter to achieve the desired output. Such adaptive algorithms are frequently encountered in many signal processing and machine learning algorithms. The adaptive signal processing course will be aided by simulations, which will enable the students to validate their theoretical findings.					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. **Recognize** the importance of signal processing in non-stationary environment. 2. **Discuss** the role of adaptive signal processing in communication systems. 3. **Apply** the various mathematical models to adaptive signal processing. 4. **Use** of Weiner filter for given applications.					
Course Content:						
Module 1	Introduction/Stationary Processes and Model	Assignment/QUIZ	Memory Recall based quiz	**10 Sessions**		
Topics: INTRODUCTION: The filtering problem, Adaptive filters, linear filter structures, approaches to the development of linear adaptive filter algorithms, real and complex forms of adaptive filters, nonlinear adaptive filters, Applications. STATIONARY PROCESSES AND MODELS: Partial characterization of a discrete time stochastic process, mean ergodic theorem, correlation matrix, correlation matrix of sine wave plus noise, stochastic models, Wold decomposition, asymptotic stationarity of an auto regressive process. Yule-Walker equations						
Module 2	WIENER FILTERS	Assignment	Simulation task	**10 Sessions**		
Topics: WIENER FILTERS: Linear optimum filtering problem statement, principle of orthogonality, minimum mean squared error, Wiener Hopf equations, error performance surface. Channel equalization. Linearly constrained minimum variance filter, generalized side lobe cancellers**.**						
Module 3	Linear Prediction	Assignment	Simulation task	**10 Sessions**		
Topics: LINEAR PREDICTION: Forward Linear Prediction, backward Linear Prediction, Levinson-Durbin algorithm, properties of prediction error filters, Schur-Cohntest, auto regressive modeling of a stationary stochastic process. Method of steepest descent: Steepest descent algorithm, stability of the Steepest descent algorithm.						
Module 4	**Applications of Adaptive signal**	Assignment	Simulation task	**10 Sessions**		

	processing			

Topics:
Adaptive modeling of a multi-path communication channel, adaptive model in geophysical exploration, Inverse modeling, Adaptive interference canceling: applications in Bio-signal processing.

Targeted Application & Tools that can be used:
Application Area includes all modern electronic devices (Music System, cellular phones, computers, digital cameras, high-definition smart televisions, Home Automation, Communication systems).
Tools that can be used: Signal processing tool box in MATLAB

Recommended by the Board of Studies on	12th BOS held on 10/08/2021
Date of Approval by the Academic Council	Meeting No. 16th , Dated 23/10/2021

Course Code: **ECE3034**	**Course Title: Bio-Medical Instrumentation** **Type of Course: : Discipline Elective- Signal Processing Basket**		**L- T-P- C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites	**[1] Linear Integrated Circuits, 2] Measuring Instruments and Sensors**						
Anti-requisites	**NIL**						
Course Description	**The purpose of this course is to enable the students to appreciate the need for Biomedical Instrumentation and Role of engineers in biomedical field. The course is conceptual in nature which allows the students to understand the application of various engineering concepts used in biomedical for diagnosis, treatment and prevention of diseases.**						
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Bio-Medical Instrumentation and to improve the Employability Skills of student by using Participative Learning techniques.**						
Course Outcomes	**On successful completion of this course the students shall be able to:** 1) Summarize the components of biomedical Instrumentation and types of transducers used in BMI 2) Explain the principle of operation of the instruments used in Patient monitoring system and diagnosis. 3) Describe the concept of Electrocardiography, Electroencephalography, Electromyography and Electrooculography. **4)** Discuss Modern imaging system used in BMI						
Course Content:							
Module 1	Introduction to Biomedical Instrumentation system	Assignment	A short note on instruments used in medical field for diagnosis, treatment and prevention of diseases				**08 Sessions**
Topics: Role of Technology in Medicine, Physiological Systems of the Body, Basic Medical Instrumentation System, Wireless Connectivity in Medical Instruments, Classification of Transducers, Optical Fibre Sensors, Biosensors, Smart Sensors, A basic recording system, Types of preamplifiers. Basic components of BMI systems, Classification of Transducers, Potentiometric transducer, variable capacitance, variable inductance, Piezo-electric Transducer, Strain gauge pressure transducer, Thermocouple, Thermistor, A basic recording system, General consideration for signal conditioners, Types of preamplifiers, differential, instrumentation amplifiers, isolation amplifier, chopper amplifiers. Biotelemetry							
Module 2	Patient Monitoring System	Case Study	Any one state of art patient monitoring systems				**09 Sessions**
Topics: Introduction to patient monitoring system, Types of patient monitoring system, Blood pressure measurement: Direct and Indirect method of blood pressure measurement, Phonocardiograph (PCG) for heart sound measurement, Blood Flow meter: Electromagnetic blood flow meters, Ultrasound, Dye dilution, thermal dilution method etc. Spirometer for lung volume and lung							

capacity measurement. Pulse rate measurement using IR principle.				
Module 3	Bioelectric Recorders	Assignment	Different types of electrodes, its features and specific application	**10 Sessions**
Topics: Origin of bioelectric signals, polarization, depolarization, hyperpolarization. Propagation of bioelectric potentials. Electrode tissue interface, surface and deep-seated Electrodes. ECG: Function of heart, conduction path way, placement of electrodes, lead configurations. Block Diagram of an Electrocardiograph. EEG: Introduction to EEG, 10-20 system of placement of electrodes, Block Diagram of Electroencephalograph, EMG: Introduction to EMG, Block Diagram of EMG recording, Introduction to EOG.				
Module 4	Modern Imaging System	Case study	Trends and recent research projects based on medical images	**8 Sessions**
Topics: Introduction to medical imaging, Methods of Monitoring Foetal Heart Rate, Monitoring Labour Activity, Oximeters, Blood Flow Measurement, Methods of blood Cell Counting, Safety Codes for Electromedical Equipment, Introduction to medical imaging, Basics of diagnostics radiology, X-ray: Production of X-ray, X-ray Machine, application X-ray, CT: Basic Principle, CT Scan system components, Ultrasound: Principle of Ultrasound, Application of ultrasound in biomedical. MRI: Basic Principle, MRI Scan system components.				
Targeted Application & Tools that can be used: **Multisim for simulating the signal conditioners used in BMI. MATLAB, LabVIEW for preprocessing the raw data and extraction of features using signal and image processing. Any microcontrollers and FPGA for developing embedded systems for Biomedical Field for processing, displaying recording and transmitting the real time data.**				
Textbook(s): 1. **R S Khandpur, "Handbook of Biomedical Instrumentation", McGraw Hill Education, 3rd edition, 2014.** 2. **J. Webster, "Medical Instrumentation: Applications and Design", John Wiley and Sons, 4th edition, 2009.**

Catalogue prepared by	Dr. Ajit Kumar
Recommended by the Board of Studies on	12th BOS held on 10/08/2021
Date of Approval by the Academic Council	Meeting No. 16th , Dated 23/10/2021

Course Code: **ECE3035**	**Course Title: Biomedical Signal Processing** **Type of Course: Discipline Elective-Signal Processing Basket**	**L- T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**Basic concepts and techniques for processing of discrete-time signals, systems and transforms. Understanding of FIR and IIR Filters; Discrete Fourier Transform (DFT) and Fast Fourier transform (FFT) techniques and their applications; Implementation of DSP algorithms on DSP processors.**					
Anti-requisites	**NIL**					
Course Description	**The course describes the origin and characteristics of biomedical signals collected from humans. This course imparts knowledge of signal processing methods to analyze the health status of individuals in order to differentiate between a healthy and an unhealthy person. The course also develops critical thinking to choose and apply a signal model for a specific set of physiological disorders. The comprehensive nature of the course covers a number of quizzes and signal processing assignments using various tools to enhance students' abilities to become an**					

	independent biomedical engineer.			
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Biomedical Signal Processing and to improve the Employability Skills of student by using Participative Learning techniques.**			
Course Outcomes	On successful completion of this course the students shall be able to: (i) **Discuss** the origin and characteristics of various biosignals. (ii) **Apply** various analog and digital filtering techniques for removal of noise and artifacts. (iii) **Demonstrate** various feature extraction and event detection techniques using time-domain as well as frequency-domain analysis methods. (iv) **Employ** various parametric and non-parametric models of certain physiological systems.			
Course Content:				
Module 1	**Biosignals and its Origin**	Quiz	Memory Recall based Quizzes	**12 Classes**
Introduction to biosignals: Human anatomy and physiology, Electrical activities of a Cell, Origin and dynamics of Biomedical signals, Electrocardiography (ECG) signal origin and characteristics. Electroencephalography (EEG) signal and its characteristic. Electromyography (EMG) signal and its characteristic. Other Biomedical signals – Blood Pressure, Respiration, Electrooculogram (EOG) etc.				
Module 2	**Noise Removal and Processing of Biosignals**	Assignment / Quiz	Programming and Simulation task	**12 Classes**
Review of Discrete time signals and systems, Analog filters, Digital filters. Time domain filtering - Synchronized Averaging, Moving Average etc., Frequency Domain Filtering, The Weiner Filter, Adaptive Filtering, Adaptive interference cancellation. Filtering of physiological signals.				
Module 3	**Analysis of Biosignals**	Assignment	Memory Interfacing Task and Analysis	**15 Classes**
Practices followed for data collection from opposite gender patients. Feature Extraction and Event Detection from ECG (P, QRS and T Waves detection, Pan Tompkins Algorithm for QRS Detection), EEG and EMG signals.Time-domain Analysis – Biosignal Morphologies, Signal length, Envelop Extraction, Amplitude demodulation, The Envelogram, Activity Analysis etc.Frequency-domain Analysis – Periodogram, Averaged Periodogram, Blackman-Tukey Spectral Estimator, Daniell's Spectral Estimator, and Measures derived from Power Spectra Density.				
Module 4	**Modelling of Biomedical Signals and Systems**	Assignment	System Design Task and Analysis	**06 Classes**
Parametric Modelling of Biomedical Systems, Various Signal models like Autoregressive, Autocorrelation method, ARMA model etc., Random signals and their processing, Overview of Advanced Topics.				

Targeted Application & Tools that can be used:

Application Area is Biomedical Signal Processing applications leading to design of medical devices and systems.

Professionally Used Software: Matlab / Python / LabVIEW.

Recommended by the Board of Studies on	12th BOS held on 10/08/2021
Date of Approval by the Academic Council	Meeting No. 16th , Dated 23/10/2021

Course Code: **ECE3036**	**Course Title: Probabilistic Systems analysis** **Type of Course: Discipline Elective- Signal Processing Basket**	**L- T-P- C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	A college-level course in calculus and statistics is desirable. The students should be aware of double integrations and methods for solving partial differential equations.					
Anti-requisites	**NIL**					
Course Description	This course provides insights into the modeling and analysis of real-world random phenomena and processes, including the basics of statistical inference. The course introduces the relevant models, skills and tools, by combining mathematics with conceptual understanding and intuition. The assignment-based practices in this course lay a firm foundation for building probabilistic models in various application domains.					
Course Objective	**This course is designed to improve the learners' <u>EMPLOYABILITY SKILLS</u> by using <u>EXPERIENTIAL LEARNING</u> techniques using open source Design Tools.**					
Course Outcomes	On successful completion of this course the students shall be able to: 1) **Discuss** the basics of probability, sample space, events, statistics and apply them to real life problems 2) **Distinguish** probability density and distribution functions for single and multiple random variables and calculate the statistical parameters for random variables 3) **Apply** the concept of random processes along with its parameters in estimating the correlation, covariance and PSD.					
Course Content:						
Module 1	Probability Theory and Probability Statistics	Assignment	Problem Solving Task	**7 Sessions**		
Topics: **Probability models and axioms, Conditioning and Bayes' rule, Independence, Counting**						
Module 2	Random Variables	Assignment	Problem Solving Task	**10 Sessions**		
Topics: **Discrete random variables; probability mass functions; expectations, Discrete random variable examples; joint PMFs, Multiple discrete random variables: expectations, conditioning, independence, Continuous random variables, Multiple continuous random variables**						
Module 3	Distribution Functions and Random Processes	Assignment	Problem Solving Task	**11 Sessions**		
Topics: **Continuous Bayes rule; derived distributions, Derived distributions; convolution; covariance and correlation, Iterated expectations; sum of a random number of random variables, Bernoulli process, Poisson process, Markov chains, Weak law of large numbers, Central limit theorem, Bayesian statistical inference, Classical statistical inference**						

Module 4	Detection, estimation and filtering	Assignment	Problem solving task	**17** sessions

Statistical decision theory - Bayes' criterion (Binary hypothesis, M-ary hypothesis), minimax criterion, Neyman-Pearson criterion, sequential detection, Estimation-maximum likelihood estimation, generalized likelihood ratio test, Bayes' estimation (minimum mean-square error estimate, minimum mean absolute value of error estimate, maximum a posteriori estimate), Cramer-Rao Inequality, Multiple Parameter Estimation, least-square estimation, Filtering- Wiener filter, Kalman filter

Targeted Application & Tools that can be used:

Application Areas: Exploratory decision making, Machine Learning, Artificial Intelligence and Data analysis, computer vision, natural language processing, computational biology, Statistics and Statistical Signal Processing Domain.

TOOLS: Python and R programming.

Project work/Assignment:

Assignment 1: Problem solving assignment on probability theory
Assignment 2: Problem solving assignment on random variables
Assignment 3: Problem solving assignment on random processes
Assignment 4: Problem solving assignment on queuing theory

Textbook(s):

Course Code: **ECE3038**	**Course Title: Electronic Music Production** **Type of Course: Discipline Elective- Signal Processing Basket**	**L- T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**[1] Digital Signal Processing, Basic high school math, Probability and Statistics, Linear Algebra, Computer programming, Basic Music Theory**					
Anti-requisites	**NIL**					
Course Description	The course is specially designed for candidates dealing with electrical, electronics, and communications engineering. In the Electronic Music Production specialization, students will learn the tricks of the trade to create high-quality, professional sounding music. They will begin by learning about the nature of sound and how a signal flows through a home studio setup. Additionally, they will learn how to create their own custom musical sounds through music synthesis.					
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Electronic Music Production to improve the learners' Employability Skills by Participative Learning.**					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. **Explain** the concept of signal processing and music theory. 2. **Discuss** and design different algorithms of music production. 3. **Understand** various issues in music production. 4. **Illustrate** the application of electronic music production through compositions.					
Course Content:						
Module 1	**Basics of Music Technology.**	Quiz	Memory Recall based Quizzes			**9 Sessions**
Topics: Introduction, Music Production Process, Basics of Recording, Editing, and Mixing, Different tools available to create contemporary music on computer.Recording theory contemporary acoustic and digital recording practice, physics of sound and sound propagation. synthesis and sampling.						
Module 2	**Introduction to software (Ableton Live)**	Assignment	Assignment based on real time applications using Ableton			**10 Sessions**
Topics: Introduction to different existing software, MIDI programming, audio recording, warping and processing, looping editing, mixing, performing, file management, and troubleshooting.						
Module 3	**Creating Sounds for Electronic Music**	Assignment	Comprehension based Quizzes and assignments; simulation with Ableton			**10 Sessions**
Topics: Introduction to synthesizers, Database creation of designed sounds, or patches, to use in compositions, Introduction to FXpansion Strobe 2**.**						
Module 4	**Electronic Music Performance Techniques** Emerging Technologies	Assignment	Assignment on building music using software			**10 Sessions**
Topics: Introduction to Electronic Digital Instruments (EDI), Building an arrangement on EDI, Building drum beats and reading drum notation, Programmatic advertising, virtual reality, 3D printing, and Internet of						

Things

Targeted Application & Tools that can be used:

Composition of new music, Similarity retrieval, playlists, recommendation, Classification and clustering, Tag annotation, Rhythm, melody, chords, Music transcription and source separation
Professionally Used Software: Ableton, FXpansion Strobe 2

Topics relevant to "EMPLOYABILITY SKILLS": Music synthesis, creating sounds, for developing Employability Skills through Participative Learning techniques. This is attained through assessment component mentioned in course handout.

Catalogue prepared by	Dr. Azra Jeelani
Recommended by the Board of Studies on	12th BOS held on 10/08/2021
Date of Approval by the Academic Council	Meeting No. 16th , Dated 23/10/2021

Course Code: ECE3039	**Course Title: DSP Processors Type of Course: Discipline Elective- Signal Processing Basket**		**L-T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Basic concepts of simple high school math on trigonometry, complex numbers, signals and systems, Digital signal Processing algorithm computations, and a little familiarity with programming especially numerical computation.					
Anti-requisites	**NIL**					
Course Description	**This course provides insights into the fundamentals of DSP processors. The course imparts the knowledge of basic DSP concepts and number systems to be used, different types of conversion errors. The course emphasizes the architectural differences between DSP and General purpose processor.**					
Course Objective	**The objective of the course is to familiarize the learners with the concepts of DSP Processors to improve the learners' Employability Skills by Participative Learning.**					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. Understand the basics of Digital Signal Processing and transforms. 2. Able to distinguish between the architectural features of General purpose processors and DSP processors. 3. Understand the architectures of TMS320C54xx devices and Acquire knowledge about various addressing modes 4. Discuss about various memory and parallel I/O interfaces					
Course Content:						
Module 1	**Introduction To Digital Signal Processing**	Quiz	Memory Recall based Quizzes	**12 session**		
Introduction to Digital Signal Processing: Introduction, A Digital signal-processing system, The sampling process, Discrete time sequences. Review of Discrete Fourier Transform (DFT) and Fast Fourier Transform (FFT), linear time-invariant systems, Digital filters, Decimation and interpolation. **Computational Accuracy in DSP Implementations:** Number formats for signals and coefficients in DSP systems, Dynamic Range and Precision, Sources of error in DSP implementations, A/D Conversion errors, DSP Computational errors, D/A Conversion Errors					
Module 2	**Architectures for Programmable DSP Devices and Pipelining**	Assignment / Quiz	Programming and Simulation task	**12 session**		
Topics: **Commercial Digital signal-processing Devices**, Data Addressing modes of TMS320C54XX DSPs, Memory space, Program Control, instructions and Programming, On-Chip Peripherals, Interrupts, Pipeline Operation.						
Module 3	**Implementations of Basic DSP Algorithms**	Assignment	Analysis and Verification	**10 session**		
The Q-notation, FIR Filters, IIR Filters, Interpolation Filters, Decimation Filters, PID						

Controller, Adaptive Filters, 2-D Signal Processing, An FFT Algorithm for DFT Computation, A Butterfly Computation, Overflow and scaling, Bit-Reversed index generation, An 8-Point FFT implementation on the TMS320C54XX

Module 4	**Interfacing Memory And I/O Peripherals**	Assignment	Analysis and Verification	**10 session**

Topics:
Memory space organization, external bus interfacing signals, memory interface, parallel I/O interface, programmed I/O, interrupts and I/O, direct memory access (DMA).

Targeted Application & Tools that can be used:
Code Composer studio with C / C++ compiler for TI C6xxx DSPs, can be used for implement DSP algorithms.

VLSI and Embedded Systems Basket

Course Code: ECE3040	**Course Title: Embedded Systems Type of Course: Discipline Elective- VLSI and Embedded Systems Basket**		**L-T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Comparison between microprocessors and microcontrollers, Instruction set of microprocessors and microcontrollers, Real world interfacing, Embedded C programming.					
Anti-requisites	**NIL**					
Course Description	**The course provides insights into the fundamentals of Embedded Systems and their design using ARM microcontrollers. This course demonstrates System design examples and case studies for real-world applications. This course also gives brief introduction of Embedded Real Time Operating System (RTOS).**					
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Embedded Systems to improve the learners' Employability Skills by Participative Learning.**					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. Describe Embedded Systems and their Interfacing to the Analogue world 2. Distinguish between various ARM architecture versions 3. Program ARM processors using Assembly and C Languages 4. Understand the concept of Real Time Operating systems					
Course Content:						
Module 1	Fundamentals of Embedded Systems	Quiz	Memory Recall based Quizzes	**9 sessions**		
Topics: What is an Embedded System?, Inside the Embedded System, Embedded Processors, Memory Systems, Basic Peripherals, Interfacing to the Analogue world, Interrupts and Exceptions						
Module 2	**ARM Architecture**	Quiz, Mid Term Exam	Memory Recall based Quizzes, Mid Term Exam	**12 sessions**		

Topics:
Introduction to ARM® and ARM® Architecture, Cortex™-M TM4C123X processor, Comparing ARM® Cortex™-M TM4C123X processor with LPC21xx architecture, ARM and Thumb Instruction Set Overview, ARM Addressing Modes, ARM Assembly Programming

Module 3	ARM Programming and Interfacing	Assignment	Programming Assignment	**12 sessions**

Topics:
Embedded C Programming– Conditional Statements, Loop Statements, debugging, single stepping, breakpoints, Concepts of Input and Output Ports, Basics of Interfacing Switches and LEDs, Interfacing Stepper Motors and DC Motors, Serial Communication, USB, RS232, CAN BUS, MOD BUS, I2C

Module 4	Real Time Operating Systems (RTOS)	End Term Exam	End Term Exam	**12 sessions**

Topics:
Introduction to Embedded Real Time Operating Systems (RTOS), Types of RTOS, Architecture of Embedded RTOS, Kernel in RTOS, Overview of various systems:- MicroC/OS-II, VX Works, RTLinux, Free RTOS, Differences in operating systems.

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:
Targeted Applications: Industry 4.0, Biomedical and Agricultural automation
Professionally Used Software: Keil Version 05/ Code Composer Studio

Recommended by the Board of Studies on	12th BOS held on 10/08/2021
Date of Approval by the Academic Council	Meeting No. 16th , Dated 23/10/2021

Course Code: ECE3041	**Course Title: REAL TIME SYSTEMS Type of Course Discipline Elective- VLSI and Embedded Systems Basket**		**L- T-P-C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites	**Microcontroller Applications, Proficiency with ANSI-C and C++ is required. Familiarity with Microcontroller-Based systems along with relevant open source tools.**						
Anti-requisites	**NIL**						
Course Description	**The course provides insights into theory, algorithms, protocol concepts, mechanisms and implementation of real-time computer systems. The course deals with the design and applications of all real time aspects of various system components, like OS, memory, communication and an introduction to reliability evaluation methods. The course emphasizes on the basic concepts of real-time programming and also lays a foundation for development of small projects addressing the critical aspects of a modern software development life cycle.**						
Course objective	**The objective of the course is to familiarize the learners with the concepts of Real Time Systems and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING.**						
Course Outcomes	**On successful completion of this course the students shall be able to:** **(1) Describe** Real time systems. **(2) Understand** the concepts of computer control, operating system and computer hardware **(3) Discuss** the components of Operating Systems**.** **(4)Apply** suitable methodologies to design and develop Real-Time Systems.						
Course Content:							
Module 1	**Introduction to Real-Time Systems**	Assignment/Quiz	Memory Recall based Quizzes	**06 classes**			
Topics: Elements of a Computer Control System, RTS- Definition, Classification of Real-time Systems, Issues in Real Time Computing, Examples of real-time applications, Time Constraints, Classification of Programs. Concepts of Computer Control: Sequence Control, Loop Control, Supervisory Control, Centralized Computer Control							
Module 2	**Languages for Real-Time Applications**	Assignment / Quiz	Programming task	**10 classes**			
Topics: General Purpose Computer, Single Chip Microcomputers and Microcontrollers, Specialized Processors, Process-Related Interfaces, Data Transfer Techniques, Standard Interface. Syntax Layout and Readability, Declaration and Initialization of Variables and Constants, Compilation of Modular Programs, Data types, Control Structures, Co-routines, Interrupts and Device Handling, Real-time Support, Overview of Real-Time Languages.							
Module 3	**Operating Systems Concepts**	Assignment/Quiz	System Design Task and Analysis	**10 classes**			

Topics:

Operating systems and hardware support for real-time applications. Posix real-time extensions; features of well-known real-time operating systems;,Real-Time Multi-Tasking OS, Scheduling Strategies, Task Management, Scheduler and Real-Time Clock Interrupt Handler, Task Co-Operation and Communication

Module 4	**RTS Development Methodologies & Intertask Communication**	Assignment/Quiz	System Design Task and Analysis	**10 classes**

Topics:

Foreground/Background System. Yourdon Methodology, Ward and Mellor Method, Hately and Pirbhai Method, Buffering data – Time relative Buffering- Ring Buffers – Mailboxes – Queues – Critical regions – Semaphores – other Synchronization mechanisms – deadlock – priority inversion – process stack management – run time ring buffer .

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:

The students will be able to find a career in various domains such as Embedded systems, Smart Home automation and security, Power Generation and Robotics, Automotives.

Professionally Used Software: CODE COMPOSER STUDIO, MATLAB

Course Code: **ECE3042**	**Course Title: MEMS and Nanotechnology** **Type of Course: Discipline Elective- VLSI and Embedded Systems Basket**		**L- T- P- C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites	Basics of Analog Electronics						
Anti-requisites	**NIL**						
Course Description	The course deals with Micro electro mechanical systems (MEMS), devices and technologies. The course also discusses Micro-machining and microfabrication techniques, including planar thin- film processing, silicon etching, wafer bonding, photolithography, deposition and etching. The course also includes Transduction mechanisms and modelling in different energy domains. The course emphasizes on analysis of micromachined capacitive, piezoresistive and thermal sensors/actuators and applications.						
Course Objective	**The objective of the course is to familiarize the learners with the concepts of MEMS and Nanotechnology and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING.**						
Course Outcomes	**On successful completion of this course the students shall be able to:** i) Discuss Methods for Processing MEMS materials ii) Develop Characteristic techniques of micro system fabrication process iii) Demonstrate the concepts of Nano technology iv) Illustrate nano materials and various nano measurements techniques v) Implement nano scale manufacturing						
Course Content:							
Module 1	**Introduction and Fundamentals MEMS Device Physics**	Assignment/ Quiz	Memory Recall based Quizzes	**12 Sessions**			
Topics: Historical background development of microelectronics, evolution of micro sensors, MEMS, emergence of micro machines. Micro sensors: Introduction, thermal sensors, mechanical sensors, flow sensors and Introduction to SAW DEVICES.Microfabrication of MEMS: Surface Micromachining, Bulk Micromachining, And LIGA Process: Introduction, Basic Process and Application, micromachining of polymeric MEMS devices.Actuation: Electrostatic Actuation, Piezoelectric Actuation, Thermal Actuation, Magnetic Actuation, Mechanical Vibrations, The single degree of Freedom System, The many Degrees of freedom system							
Module 2	**MEMS Materials and fabrication process Modelling**	Assignment/ Quiz	Memory Recall based Quizzes	**8 Sessions**			
Topics: Metals, semiconductors, thin films for MEMS and their deposition techniques, materials for polymer MEMS. Microstereolithography: Introduction, Scanning Method, Projection Method, Applications. Solid modeling: Numerical Simulation of MEMS, Mechanical Simulation,							

Electrostatic Simulation.

Module 3	**MEMS Switches and RF Applications**	Assignment/ Quiz	Memory Recall based Quizzes	**12 Sessions**

Topics:
Switch parameters, basics of switching, Switches for RF and microwave applications, actuation mechanisms for MEMS devices, dynamics of switch operation, MEMS switch design considerations, Microwave Considerations, Material Consideration, Mechanical Considerations modeling and evaluation.
MEMS based RF and Microwave circuits : RF Filters, Micromachined Phase shifters, and Micromachined antenna.

Module 4	**MEMS Inductors and Capacitors**	Assignment/ Quiz	Memory Recall based Quizzes	**8 Sessions**

Topics:
MEMS Inductors: self and mutual inductance, micromachined inductors, modelling and design issues of planar inductors, variable inductor and polymer based inductor. MEMS Capacitors: MEMS gap tuning capacitor, MEMS area tuning capacitor, Dielectric Tunable capacitors.

Targeted Application & Tools that can be used:
Applications in various fields such as **biomedical, optical, wireless networks, aerospace, and consumer products.**

Catalogue prepared by	Dr. Puneeth S B Dr. Pritam Keshari Sahoo Dr. Ashutosh Anand
Recommended by the Board of Studies on	**12th BOS held on 10/08/2021**
Date of Approval by the Academic Council	**Meeting No. 16th , Dated 23/10/2021**

Course Code: ECE3043	**Course Title: Mixed Signal Circuit Design** **Type of Course: Discipline Elective- VLSI and Embedded Systems Basket**	**L- T- P- C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Basic Concepts of Operational Amplifiers, the parameters of Op-Amps, open loop and closed loop configurations of Op-Amps, inverting and non-inverting Operational Amplifier and Applications of Op-Amp. Modelling and operation of MOSFET, biasing of MOSFET.					
Anti-requisites	**NIL**					
Course Description	The purpose of the course is to provide the exposure to students about the mixed signal circuits by integrating various analog and digital circuits. The course helps students to learn how to design and implement product level design blocks for various VLSI applications. The course is designed with considering the need of VLSI design industry. This course encourages students to choose career as Analog or Mixed circuit design Engineer.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Mixed Signal Circuit Design and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING.					
Course Outcomes	On successful completion of this course the students shall be able to: 1) Understand the concepts of MOS Operational Amplifiers. 2) Describe the concepts of Switched Capacitor Circuits and realize the concepts of PLL. 3) Memorize the modeling and architecture of data converters and Oversampling Converters. 4) Relate the concepts of Phase Locked Loop and Voltage Controlled					

	Oscillator.			
Course Content:				
Module 1	**Operational amplifiers and Comparators**	Assignment / Quiz	Memory recall based Quiz	**14 Sessions**
Topics: **Operational amplifiers:** Basic two stage MOS Operational amplifier–Characteristic parameters, two stage MOS Op-Amp with Cascode. MOS Folded Cascode Op-amp. Fully differential folded Cascode op-amp. Current feedback op-amps. Stability and frequency compensation of op-amps. Phase margin and noise in op-amps. **Comparators:** Op-Amp Based Comparators, Charge Injection Errors – Latched Comparators – CMOS and BiCMOS Comparators.				
Module 2	**Switched capacitor circuits and PLL**	Assignment / Quiz	Implementation using Simulation Tools	**13 Sessions**
Topics: **Switched capacitor circuits:** Basic building blocks, basic operation and analysis, inverting and non-inverting integrators, signal flow diagrams, first order filter. Sample and hold circuits - Performance requirements, MOS sample and hold basics, clock feed through problems, S/H using transmission gates, high input impedance S/H circuits. **Phase locked loops**: Basic loop architecture. PLLS with charge pump phase comparators – dynamics of PLLS. Voltage controlled oscillators, characteristics of PLLS. Applications of PLLS.				
Module 3	**Fundamentals and Classification of Convertors**	Assignment / Application	Implementation using Simulation Tools	**12 Sessions**
Topics: **Data converter fundamentals**: Performance characteristics, ideal D/A and A/D converters, quantization noise. **Nyquist rate D/A converters**: Decoder based converter, binary-scaled converters. Thermometer code converters. **Nyquist rate A/D Converters:** Integrated converters – successive approximation converters, cyclic A/D converters, Flash or parallel converters. **Oversampling Converters:** Noise shaping modulators, Decimating filters and Interpolating filters, Higher order modulators.				
List of Laboratory Tasks: Nil				
Targeted Application & Tools that can be used: **Targeted Application:** VLSI Industries for IC Fabrication, Chip Designing, Digital Signal Processing, Digital Image Processing, Telecom Industries / Broadcasting Companies, Mobile Manufacturing Industry, Medical Applications. **Professionally Used Software:** MATLAB / SIMULINK, LAB View, E-Multisim, P-Spice, CADENCE, INTEL Quartus Prime.

Topics relevant to "SKILL DEVELOPMENT": Phase locked loops, Nyquist rate D/A converters, Nyquist rate A/D Converters, Oversampling Converters - for **Skill Development** through **Participative Learning techniques. This is attained through assessment component mentioned in course handout.**

Catalogue prepared by	Mrs. R Anusha
Recommended by the Board of Studies on	**12th BOS held on 10/08/2021**
Date of Approval by the Academic Council	**Meeting No. 16th , Dated 23/10/2021**

Course Code: ECE3044	**Course Title: IC Fabrication Technology** **Type of Course: Discipline Elective & Theory only** **Discipline Elective- VLSI and Embedded Systems Basket**		**L-T-P-C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites	**VLSI Design, design and implementation of VLSI circuits for complex digital and analog systems, NMOS and CMOS fabrication steps, design for testability and design verification.**						
Anti-requisites	**NIL**						
Course Description	**The purpose of this course is to enable the students to understand the basics of IC fabrication technology. This course aims to foster knowledge of Integrated circuit technology and fabrication techniques. This course introduces the various manufacturing methods and their underlying scientific principles in the context of technologies used in VLSI chip fabrication and Microcontrollers. This course also discusses the complexities and challenges associated with VLSI chip fabrication and different Microcontrollers. The course gives clear understanding about entire Chip fabrication.**						
Course Objective	**The objective of the course is to familiarize the learners with the concepts of IC Fabrication Technology and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING.**						
Course Outcomes	**On successful completion of this course the students shall be able to:** 1) **Describe** the process involved in semiconductor crystal growth and fabrication. 2) **Classify** various lithography and etching techniques used for pattern transfer. 3) **Summarize** the diffusion and ion implantation mechanisms in IC fabrication. 4) **Discuss** the process involved in packaging and yield.						
Course Content:							
Module 1	**Crystal Growth**	Quiz	Memory Recall based Quizzes				**12 Session**
Topics: Introduction, electronic-grade silicon, czochralski crystal growing-crystal structure, crystal growing theory, crystal growing practise, shaping operations, etching, process considerations.							
Module 2	**Oxidation and lithography**	Assignment	Theoretical Understanding				**12 Session**
Topics: Growth mechanics and kinetics, thin oxides, oxidation techniques and systems, optical lithography-optical resists, electron lithography-resists, mask generation, X-ray lithography-resists, ion lithography .							
Module 3	**Diffusion and Implantation**	Assignment	Theoretical Understanding				**14 Session**
Topics:							

Models of diffusion in solids, one dimensional diffusion equations, atomic diffusion mechanisms, measurement techniques, Ion implantation-range theory-ion stopping, range distribution, Furnace Annealing, high energy implantation, Metallization applications, choices, physical vapour deposition, metallization problems, introduction to packaging, package types,

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:

Application Area – Facility Manager, Process Engineer , Process development designer , Facility Engineer, Process simulation Engineer**.**

Professionally Used Software: ATHENA/SILVACO , SYNOPSIS , TCAD , VISUAL TCAD

by the Board of Studies on	
Date of Approval by the Academic Council	**Meeting No. 16th , Dated 23/10/2021**

Course Code: **ECE3045**	**Course Title: Sensor Technology** **Type of Course: Discipline Elective- VLSI and Embedded Systems Basket**		**L- T-P-C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites	**[1] Measurements and Instrumentation,[2] Linear Integrated Circuits** **Basic concepts of physical principles applied in measurement and a comprehensive understanding, on how measurement systems are designed, calibrated, characterized, and analyzed. Basics of sources and detectors of various Optical sensing mechanisms and provide in-depth understanding of the principle of measurement, and theory of instruments and sensors for measuring velocity and acceleration.**						
Anti-requisites	**NIL**						
Course Description	**The purpose of this course is Used to converting a physical parameter into an electrical quantity, Choose an appropriate sensor comparing different standards and guidelines to make sensitive measurements of physical parameters like pressure, flow, acceleration, etc**						
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Sensor Technology and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING.**						
Course Outcomes	**On successful completion of this course the students shall be able to:** **(1) Design and develop sensors using optical methods with desired properties** **(2) Evaluate performance characteristics of different types of sensors.** **(3) Realize different type of sensors used in real life applications and paraphrase their importance.** **(4) Create analytical design and development solutions for sensors.**						
Course Content:							
Module 1	Sensor fundamentals and characteristics and Physical Principles of Sensing	Assignment	Error Analysis	**12 Sessions**			
Topics: Sensors, Signals, and Systems, Sensor Classification, Sensor Characteristics-Transfer Function, Mathematical Model, Functional Approximations, Polynomial Approximations, Sensitivity, Linear Piecewise Approximation, Multidimensional Transfer Functions, Calibration, Calibration Error Electric Charges, Fields, and Potentials, Capacitance, Magnetism, Induction, Resistance, Piezoelectric Effect, Pyroelectric Effect, Hall Effect, Thermoelectric Effects, Temperature and Thermal Properties of Materials, Light, Dynamic Models of Sensor Elements.							
Module 2	Pressure, force, displacement and weight measurement, Flow	Assignment	Analyzing Physical properties	**10 Sessions**			

	measurement, RF sensing			

Topics:
Capacitive and inductive transducers, Displacement Sensor (LVDT), Strain Sensors – strain gauges, its principle, applications, types of strain gauges, Load cells, Piezo-electric sensors, Motion sensors.

Basic principle of flow meter, Differential pressure flow meters, Variable area flow meter, Volumetric flow meter, Hotwire anemometer, Magnetic and ultrasonic flow meter, Rota meter, Hall effect transducer working and measurement techniques

Basic principle of EM fields, Antenna, RFID, Near Field and Far Field Sensing, Radar and Navigation, EMI & EMC sensing.

Module 3	Optical Components of Sensors and Temperature Sensors	Assignment/Quiz	Optical communication		**10 Sessions**

Topics:
Introduction, Radiometry, Photometry, Windows, Mirrors, Fiber Optics and Waveguides, Concentrators, Coatings for Thermal Absorption, Nano-optics. Resistance Vs Temperature characteristics for different materials, Thermistors, Thermocouples - thermoelectric effects for thermocouples, thermocouple tables, RTD, Other Thermal Sensors.

Module 4	Interface Electronic Circuits	Mini project	Interfacing with the components		**10 Sessions**

Topics:

Input Characteristics of Interface Circuits, Amplifiers, Light-to-Voltage Converters, Excitation Circuits, Analog-to-Digital Converters, Direct Digitization, Capacitance-to-Voltage Converters, Batteries for Low-Power Sensors.

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:
Application Area is real time applications like Automotive, Manufacturing, Aviation, Marine, Medical, Telecom, Chemical, and Computer Hardware.
Professionally Used Software: keil/Arduino.cc

Project work/Assignment:

1. **Article review:** At the end of course an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link .

2. **Presentation:** There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

Project Assignment: Design a weighing machine having a range of 0-3 Kg with a sensitivity of 3 mg. What modification he/she has to do to change the upper range to 100 Kg with a sensitivity of 100 mg.
Assignment 1: Develop a displacement measurement system with the following sensors: i.e Inductive transducer (LVDT)
Assignment 2: Develop a sensor system for force measurement using piezoelectric transducer

Recommended by the Board of Studies on	**12th BOS held on 10/08/2021**
Date of Approval by the Academic Council	**Meeting No. 16th , Dated 23/10/2021**

Course Code: ECE3046	**Course Title: Low Power VLSI Design** **Type of Course Discipline Elective- VLSI and Embedded Systems Basket**		**L- T- P- C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**Basic concepts of digital circuits like gates, flip-flops, registers, multiplexers, decoders. Fundamentals of Analog and Digital VLSI design**					
Anti-requisites	**NIL**					
Course Description	**The purpose of this course is to enable the students to understand the fundamentals of low power VLSI architectures and systems. The course insights into the various methods used to confront the low power issue VLSI system from circuit level to system level of abstraction. This course enhances student's abilities to develop a low power design architecture and analysis of various parameters.**					
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Low Power VLSI Design and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING.**					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. **Identify** the sources of power dissipation in CMOS integrated circuits. 2. **Illustrate** different approaches of Low power design at circuit level**.** 3. **Summarize** issues in Low Power Design at circuit and logic levels. 4. **Explain** leakage sources and reduction techniques.					
Course Content:						
Module 1	**Device & Technology Impact on Low Power**	Assignment/Quiz	Designing and Analysis task			**10 Sessions**
Topics: **Introduction:** Need for low power VLSI chips, Sources of power dissipation on Digital Integrated circuits. Emerging Low power approaches. **Device & Technology Impact on Low Power:** Dynamic dissipation in CMOS, Transistor sizing & gate oxide thickness, Impact of technology Scaling, Technology & Device innovation.						
Module 2	**Power analysis**	Assignment/Quiz	Simulation and analysis task			**10 Sessions**
Topics: **Simulation Power analysis**: SPICE circuit simulators, gate level logic simulation, capacitive power estimation, static state power, gate level capacitance estimation, architecture level analysis, data correlation analysis in DSP systems, Monte Carlo simulation.						
Module 3	**Low Power Design at circuit and logic level**	Assignment/Quiz	Design Analysis			**10 Sessions**
Topics: **Low Power Design Circuit Level**: Transistor and gate sizing, network restructuring and Reorganization. Special Flip Flops & Latches design, high capacitance nodes, low power digital						

cells library.

Logic level: Gate reorganization, signal gating, logic encoding, state machine encoding, pre-computation logic.

Module 4	**Leakage Power minimization Approaches, Adiabatic switching, Memory Design**	Assignment/Project	Data Analysis	**10 Sessions**

Topics: **Low power Architecture & Systems:** Power & performance management, switching activity reduction, parallel architecture with voltage reduction, flow graph transformation, low power arithmetic components.

Low power Clock Distribution: Power dissipation in clock distribution, single driver Vs distributed buffers, Zero skew Vs tolerable skew, chip & package co design of clock network.

Probabilistic power analysis: Random logic signals, probability & frequency, probabilistic power analysis techniques, signal entropy.

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:

Application Area is high-performance digital systems, such as microprocessors, digital signal processors (DSPs).
Software: Xilinx-ISE; VIVADO; Cadence-Virtuoso.
Open source tools: EDA Playground; LT-Spice; Microwind.

Course Pre-requisites	**Basics of Digital logic and Digital design**					
Anti-requisites	**NIL**					
Course Description	**The purpose of this course is to enable the students to understand the basics of FPGA. This course aims to build knowledge on understanding programmable architectures and configuring them for different applications. The course also help student learn about the Verilog programming structures and modelling types which can be used for digital system design and help in building of an over-all concept for an application which can be tested on FPGA interfaced with various other hardware's.**					
Course Objective	**This course is designed to improve the learners' <u>EMPLOYABILITY SKILLS</u> by using <u>EXPERIENTIAL LEARNING</u> techniques using FPGA Board**					
Course Outcomes	On successful completion of this course the students shall be able to: 1. **Understand** the basic concepts of FPGA. 2. **Apply** embedded system concepts with appropriate FPGA based on applications 3. **Write** Verilog code for combinational and sequential logics CO4: Students can design a communication module using Verilog. 4. **Design** a motor control module using Verilog					
Course Content:						
Module 1	**FPGA Architecture And Overview**	Quiz	Memory Recall based Quizzes	**9 Sessions**		
Topics: Embedded system design flow - Robot Control System - Digital Design Platforms - Microprocessor based Design - Single-chip Computer/Microcontroller-based Design - Application Specific Standard Products (ASSPs) - Design Using FPGA - robotic rover application - FPGA Devices - FPGA and CPLD – Architecture of a SPARTAN-3ETM FPGA - Floor Plan and Routing - Timing Model for a FPGA - FPGA Power Usage.						
Module 2	**Embedded System Design**	Assignment	Theoretical Understanding	**10 Sessions**		
Topics: FPGA-based Embedded Processor - Design Re-use Using On-chip Bus Interface - Creating a Customized Microcontroller - Robot Axis Position Control - FPGA-based Signal Interfacing and Conditioning – Motor Control Using FPGA- Case Studies for Motor Control -Prototype Using FPGA- FPGA Design Test Methodology						
Module 3	**Verilog Constructs**	Assignment	Theoretical Understanding	**10 Sessions**		
Topics: VLSI Design flow- behavioral style, the dataflow style, and structural style - Data types - Constants - Assignment Statement - Operators - Conditional Expressions - Statement types -						

Vector operations – Bit selects - Functions - Gate level modeling.				
Module 4	**Verilog Modeling Building FPGA projects**	Assignment	Programming assignment	**13 Sessions**

Topics:
Design and test a Binary Coded Decimal Adder, Design and test a PWM Circuit, with verification by simulation. Design and test an ADC circuit, using Quartus Prime built-in tools to verify your circuit design. Enhance and test a working design, using most aspects of the Quartus Prime Design Flow and the NIOS II Software Build Tools (SBT) for Eclipse.

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:
Application Area – Video **imaging, Automotive computing, Aerospace applications. Signal processing, Medical devices**
Professionally Used Software: PyCharm,Qt Creator,MATLAB,Eclipse,WebStorm

Project work/Assignment:

1. Article review: At the end of course an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. **Presidency University Library Link .**

2.Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

3. Project Assignment- Implement various digital circuits in Verilog and verify the same on FPGA board., Write a report on the research article given., Explore the robotic application of embedded system with a research article and verify the coding done in the same.

Recommended by the Board of Studies on	BOS NO: 10th. BOS held on 17/01/2020
Date of Approval by the Academic Council	Academic Council Meeting No. 16, Dated 23/10/2021

Course Code: ECE3049	**Course Title: Developing Secure Embedded Systems** **Type of Course: Discipline Elective- VLSI and Embedded Systems Basket**	**L- T-P-C**	3	0	0	3
Version No.	1.0					
Course Pre-requisites	**Basic understanding of Microprocessor 8085, Microcontroller 8051. Basic knowledge of VLSI, Assembly language programming and c programming.**					
Anti-requisites	**NIL**					
Course Description	The course focuses on design, implementation and explore hardware and software security measures design using appropriate techniques and tools and to develop an ability to understand comprehensively the technologies and techniques underlying in building an embedded solution in a trustful and secure environment.					
Course Objective	This course is designed to improve the learners' EMPLOYABILITY SKILLS by using PROBLEM SOLVING methodologies of secure embedded systems.					
Course Outcomes	On successful completion of this course the students shall be able to: (1) **Explain** the origin and characteristics of Embedded Systems. (2) **Apply** various techniques to secure an Embedded Systems. (3) **Demonstrate** various security vulnerabilities and its solutions (4) **Employ** various techniques to deploy and secure Embedded systems.					
Course Content:						
Module 1	**Embedded System Primer**	Quiz	Memory Recall based Quizzes			**10 Classes**

Topics: Embedded system processor- PIC, ARM- Programming input and output, Components for embedded system, Models of program, Assembly, linking, loading, Compilation techniques, Program optimization.

Module 2	**Layers of embedded system**	Assignment / Quiz	Simulation Based	**10 Classes**

Topics: Embedded Design life cycle, Embedded System modelling, Layers of an Embedded System – hardware layer – Application layer – Software Layer – middleware. EDLC Approaches, Interfaces to the external world. FPGA- The Role of FPGAs, FPGAs types, FPGAs vs Custom VLSI, Fine - Grained and Course - Grained Reconfigurable Architecture, Case Studies.

Module 3	**Introduction to security and tools**	Assignment	Simulation Based	**12 Classes**

Topics: Security properties (confidentiality, integrity and availability), security vulnerabilities, threats and attacks, security models, policies and mechanisms, Encryption Techniques, Basic notions of security protocol.

Block Ciphers - DES, AES, Blowfish, modes of operation, Stream Ciphers-RC4, Linear and Differential cryptanalysis

Module 4	**Security in Embedded Systems**	Assignment	Design Based	**08 Classes**

Topics: Cryptography, Trusted computing, FPGA Flexibility, Trusted -untrusted zone isolation, Physical attack protection, Access control mechanism, Incentive based Trust model deployment for securing Embedded system and prevention of DDoS.

Project work/Assignment:

Project Assignment: 1. A systematic review of future trends in security and trust models in IoT.
2. Secure WEB-Deployment using Embedded Systems
3. Presentation: There will a group presentation on the programming assignment or any course related self-study topic/research related topic they had done.
4. Students will be made into group and given the programming assignment at the end of each module. Students need to use Embedded Development Kits for these assignments.
Tools:

1. **Kiel C5**
2. **Raspberry Pi**

Textbook(s):

Recommended by the Board of Studies on	10th BOS held on 17/01/2020
Date of Approval by the Academic Council	Meeting No. 16th, Dated 23/10/2021

Course Code: ECE3050	**Course Title: Design for Testability** **Type of Course: Discipline Elective- VLSI and Embedded Systems Basket**	**L- T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**Basic concepts of Digital Logic Circuits using gates, flip-flops, registers, multiplexers, decoders etc. Basic electronic Circuits and Mathematics and Fundamentals of VLSI Design-based systems.**					
Anti-requisites	**NIL**					
Course Description	This course provides an in-depth theory of fault analysis, test generation, and design for testability for digital VLSI circuits and systems. Design and manufacturing defect models are introduced along with test generation and fault simulation algorithms targeting the different fault models. Both combinational and sequential logic testing are covered, and different synthesis for testability schemes such as BIST (Built-In-					

	Self-Test), scan path design, and Core based testing are introduced. The course also demonstrates the test compression and compaction schemes such as code-based schemes, linear decompression based schemes and test response compaction.				
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Design for Testability and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING.**				
Course Outcomes	**On successful completion of this course the students shall be able to:** 1) **Interpret** the concepts of testing which can help to design a better yield in IC design. 2) **Discuss** the generation of test patterns. 3) **Analyze** the various test generation methods 4) **Summarize** the BIST techniques for improving testability.				
Course Content:					
Module 1	**Introduction to DFT and Fundamentals of DFT**	Assignment/Quizzes	Memory Recall based Quizzes		**10 Sessions**
Topics: Fundamentals of fault analysis, test generation, and design for testability for digital VLSI circuits and systems. ASIC Flow, DFT Basics, Chip Fabrication Process, ATE Basics.					
Module 2	**Scan Insertion and compression**	Assignment	Simulation and analysis task		**10 Sessions**
Topics: Scan Design Basics, Scan Golden Rules, Scan DRC Checks, Scan Insertion, Generate test protocol and understanding, Lock-Up Latches, Basics for Compression, Compression Techniques, On-Chip-Clocking, , hierarchical and boundary scan.					
Module 3	**Introduction to ATPG**	Assignment/Quizzes	Design Analysis		**10 Sessions**
Topics: Automatic Test Pattern Generation (ATPG) in DFT, ATPG classification, Combinational ATPG (e.g. D, PODEM, FAN), Sequential ATPG, ATPG STAGES,Fault models, Fault classes, Pattern generation and simulation, simulations and debugging, Diagnosis flow and fault simulation.					
Module 4	**BIST Architecture, Memory BIST, Logic BIST**	Assignment/Project	Data Analysis		**10 Sessions**
BIST Design Rules, Test Pattern Generation ,Exhaustive Testing ,Pseudo-Random Testing, -Exhaustive Testing ,Delay Fault Testing,					
Targeted Application & Tools that can be used: **Application Area –** Hardware design Engineer, DFT engineer, VLSI design Engineer. **Professionally Used Software:** Cadence-Modus, Tessent

Course Pre-requisites	Comprehension of concepts/logics in Machine and Deep Learning Algorithms. Basics of VHDL code for Digital Logic Circuits using EDA tools. Basics of Python programming for Machine and Deep Learning Algorithms.			
Anti-requisites	**NIL**			
Course Description	**This course aims at the real time implementation of Machine Learning and Deep Learning Algorithms using the FPGA device. The course penetrates into the fundamentals of Artificial Intelligence concepts and the logical representation of the ML and DL algorithms. This course motivates towards the development of synthesizable VHDL code for classification, identification and regression using the ML and DL algorithms. The course provides the opportunity for FPGA based Real time implementable AI applications.**			
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Machine Learning and Deep Learning using FPGA and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING.**			
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. Distinguish between Machine Learning and Deep Learning algorithms for classification, regression and identification. 2. Demonstrate the importance of VHDL in real time applications. **3.** Apply the concept of ML and DL algorithms for classification and Identification using the developed synthesizable VHDL code. **4.** Analyze the developed artificial intelligence based VHDL code for power, area and delay using the FPGA device			
Course Content:				
Module 1	**Introduction to Machine Learning**	Quiz	Memory Recall based Quizzes	**11 session**
Topics: Supervised Learning, Regression- Linear Regression, Ridge Regression, LASSO, Classifications of Supervised Learning: K-NN, Decision Tree, Naive Bayes, Support-Vector Machines, Perceptron, Logistic Regression, Unsupervised Learning- K-means Clustering, PCA.				
Module 2	**Digital Circuit Design**	Assignment / Quiz	Programming and Simulation task	**12 session**
Topics: Introduction to VHDL Programming, Modeling styles in VHDL, Importance of Behavioral Modeling in Machine Algorithm, Development of Decision Tree Algorithm using VHDL, Validation of Synthesizable code for Machine Learning, Machine Learning based Data classification using VHDL, Machine Learning based Regression using VHDL				

Module 3	**Deep Learning**	Assignment	Analysis and Verification	**10 session**

Topics:
History of Deep Learning, McCulloch Pitts Neuron, Thresholding Logic, Perceptrons Perceptron Learning Algorithm, Multilayer Perceptrons (MLPs), Representation Power of MLPs, Sigmoid Neurons, Gradient Descent, Feed forward Neural Networks, Representation Power of Feed forward Neural Networks, Back propagation, Compensation Code for neural network using VHDL, Neural Network based Classification and Regression using VHDL, Real time application using Neural Network in FPGA.

Module 4	**Implementable Neural Networks**	Project	Application		**7 session**

Topics:
Application of Neural network in Stuck-at Fault analysis of Digital Circuits, Recurrent Neural Network for Power Converters Switching Faults, Neural Network for Image Classification, EDA tools used for Neural Network based Applications

Data Transfer Technologies Basket

Course Code: ECE3053	**Course Title: Data Communication and Networking** **Type of Course: Discipline Elective- Data Transfer Technologies Basket**	**L- T- P- C**	3	0	0	3
Version No.	1.0					
Course Pre-requisites	**Problem Solving using JAVA (CSE1001), Digital Communication – ECE3007** **Basic programming skills for implementing protocols. Basic concepts of baseband and band pass transmission through AWGN channel, digital modulation modulators and Detectors, baseband and bandpass modulation schemes.**					
Anti-requisites	**NIL**					
Course Description	**The purpose of this course is to introduce the student to the basics of computer communications. Data communications and networking includes long haul network hardware, circuit and packet switching, interfaces between computer and network hardware, and performance issues. The course develops technical as well as debugging skills. The course enables the students to build various networks among different distributed networks.**					
Course Objective	**This course is designed to develop <u>ENTREPRENEURIAL SKILLS</u> by using <u>EXPERIENTIAL LEARNING</u> techniques.**					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1) Summarize the layers of OSI model, TCP/IP model associated with data communication 2) Discuss different noise handling and MAC protocols at data link layer. 3) Employ internet and transport protocols in various applications. 4) Illustrate Application layer protocols and Security functions.					
Course Content:						
Module 1	**Network Models & Physical Layer**	Quiz	Memory Recall based Quizzes	**7 Session**		
Topics:						

Introduction-Data Communications, Networks, internet, Protocols and Standards, layered tasks, The OSI Model layers, TCP/IP Protocol Suite, Network Models, Circuit switched networks				
Module 2	**Data Link Layer**	Assignment	Design oriented	**14 Session**
Topics: Framing, Flow and Error control, Protocols for Noiseless and noisy channels-Simplest Protocol, Stop and wait protocol, Stop and wait automatic repeat request, Go-Back-N automatic repeat request, HDLC, Random access, ALOHA, CSMA, Controlled access, channelization, wired LAN, Wireless LAN. FDMA, CDMA, TDMA				
Module 3	**Network and Transport Layer**	Assignment	Design Analysis	**9 Session**
Topics: IPv4 Addresses - spaces, notation, classful and classless addressing; IPv6 Addresses - structure, address space, internet protocols - Headers, IPv4, IPv6, Transport protocols-UDP-user datagram, check sum, operation and uses, TCP-services, features, segment, TCP connection.				
Module 4	**Application layer and Security**	Assignment	Application based analysis	**10 Session**
Topics: Domain name system-Name space, Domain name space, DNS in Internet, resolver, Overview of Cryptography and IP Security.				
List of Laboratory Tasks: NIL				
Targeted Application & Tools that can be used: Application Area are, companies like CISCO, IBM, TCS, Infosys, where network routing and maintenance of computer networks are handled. **Professionally Used Software:** Network simulator tools like NS2, NS3, GNS3, Cisco Packet Tracer, Putty, Microsoft Visio, Secure CRT.				
Project work/Assignment:				
1. Article review: At the end of course an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. **Presidency University Library Link .** **2. Presentation:** There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same. **3. Assignment:** (a) Create a simple network model with multiple scenarios, collect statistics on network performance through the use of simulation tools, analyse statistics and draw conclusions on network performance. (b) Performance analysis of layer 1 and layer 2 (physical and data link layer) devices in LAN.

Recommended by the Board of Studies on	BOS Meeting NO: 15th BOS held on 28/07/2022
Date of Approval by the Academic Council	Academic Council Meeting No. 18th , Dated 03/08/2022

Course Code: 3054	**Course Title: MOBILE COMMUNICATION** **Type of Course: Discipline Elective** **Discipline Elective- Data Transfer Technologies Basket**	**L- T-P- C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**1) Analog Communication [ECE3006],** **2) Digital Communication[ECE3007]** **Basic concepts of Analog Modulation and Demodulation Techniques** **Basic concepts Digital modulation and Demodulation Techniques**					
Anti-requisites	**NIL**					
Course Description	The purpose of this course is to enable the students to appreciate the need for fundamentals of wireless cellular / mobile / personal communications systems and basics of designing simple communication systems. Following this, various propagation effects and propagation mode will be analyzed to improve the received signal quality in mobile communication. Various application of mobile communications and its protocols is discussed.The Course provides various multiple access techniques and Standards in Cellular mobile Communication. These concepts will enable the students to carry out their research and development activities, placement opportunities and foundation to design the cellular architecture.					
Course Outcomes	**On successful completion of this course the students shall be able to:** **1)** Describe the infrastructure to build the mobile communication system. **2)** Summarize the characteristics of different multiple access techniques in mobile communication **3)** Discuss the basics of GSM and GPRS. **4)** Illustrate the concept of OSI model and mobile ad-hoc network.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Mobile Communication and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING.					
Course Content:						
Module 1	**INTRODUCTION TO MOBILE COMMUNICATION**	Quiz	Memory Recall based Quizzes		**10 Classes**	
Topics:						

Basics of communication system, Wired and wireless network, Cellular Concepts- cell structure, frequency reuse, cell splitting, channel assignment, capacity power control, Interference, handoff, interference, signal propagation-reflection, refraction, diffraction, path loss of radio signal, multipath propagation, spread spectrum					
Module 2	**MEDIUM ACCESS CONTROL**	Assignment	System Representation task		**09 Classes**
Topics: MAC- hidden and exposed terminals, near far terminal, FDM,SDM, TDM,CDM, Multiple Access Scheme –SDMA – FDMA – TDMA – CDMA – Cellular Wireless Networks, Aloha- classical, slotted, comparison of SDMA/TDMA/FDMA/CDMA					
Module 3	**GSM and GPRS (2G and 2.5G)**	Project		Small hardware based	**10 Classes**
Topics: Evolution of 1g/2g/2.5g/3g, GSM- services and features, architecture, traffic channel, control channel, localization and calling, GPRS – features, architecture					
Module 4	**MOBILE Ad-Hoc NETWORK, TRANSPORT AND APPLICATION LAYER**	Quiz	Memory Recall based Quizzes		**10 Classes**
Topics: Ad-hoc network- features, topology, routing, OSI Model, Mobile TCP-, transmission/ time-out freezing, Application Layer					

Targeted Application & Tools that can be used:

Application Area is Communication, connection of devices by BLUETOOTH, Accessing the Internet, Locating and Tracking-GPS, security systems, television remote control, computer-interface devices, Wi-Fi.

Professionally Used Software/Hardware: Embedded C Programing and Arduino integration with GSM Module, SMS gateway simulator which can be used for testing purpose.

Catalogue prepared by	Dr. Dharmesh Srivatsav
Recommended by the Board of Studies on	**15th BOS held on28/07/2022**
Date of Approval by the Academic Council	**Meeting No. 18th, Dated 03/08/2022**

Course Code: **ECE 3055**	**Course Title: Satellite Communication** **Type of Course: Discipline Elective- Data Transfer Technologies Basket**	**L- T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**[1] Analog Communication,2] Digital Communication, 3] Antenna and wave propagation** **Basic concepts of Digital modulation, antenna and wave propagation, SNR and CNR.**					
Anti-requisites	**NIL**					
Course Description	The course introduces the students to the basic concept in the field of satellite communication. This will enable the students to know how to place a satellite in an orbit and about the earth & space segment. The satellite services like broadcasting are also studied thoroughly.The course also provides the student with the thorough understanding of the fundamental principles when designing global satellite systems for communication purpose, unique challenges of designing, developing, fielding, maintaining, and operating satellite communications systems payload.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Satellite Communication and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING.					
Course Outcomes	**On successful completion of this course the students shall be able to:** **1)** Explain the fundamentals of Satellite Communication **2)** Apply the concept of Satellite Communication Link Budget. **3)** Illustrate the different parts of Satellite including On Board & Earth Segment. **4)** Discuss the applications of satellite mobile communication & various satellite systems adopted					
Course Content:						
Module 1	**Introduction to Satellite systems**	Quiz	Memory Recall based			**10 Sessions**
Topics: Introduction History, The Indian Scenario, INTELSAT, Frequency Allocation,List of present satellites with their features, Basic Satellite System, Satellite Orbit, Geostationary Orbit, Orbital Parameter & Perturbations,Launching Procedures - launch vehicles and propulsion						
Module 2	**Orbits & Link Budget Calculation:**	Case Study	Simulation/Signal Analysis task			**10 Sessions**
Topics: Introduction: Keplar's Laws, Space Link:, EIRP, Transmission losses, Link Power Budget, System Noise, CNR, Uplink, Downlink, Effects of Rain, Combined CNR						
Module 3	**Space Segment**	Assignment	Simulation/Signal Analysis task			**10 Sessions**
Topics:						

Introduction: Power Supply Unit, Attitude Control, Station Keeping, Thermal Control, TT &C, Transponders, Antenna Subsystem

Module 4	**Satellite Communication Services**	Assignment	Modeling Task, System Representation task	**12 Sessions**

Satellite Access, SPADE System, Spread Spectrum Transmission & Application, GPS & its application, .INTELSAT Series, INSAT, VSAT, Mobile satellite services: GSM, GPS, INMARSAT, LEO, MEO, Satellite Navigational System. GPS Position Location Principles, Differential GPS, Direct Broadcast satellites (DBS/DTH).

Targeted Application & Tools that can be used:

Application Areas in Weather forecasting ,Radio and TV broadcast satellites, Military satellites. Navigation, Global telephone backbones, Connections for remote or developing areas, Global mobile communication.

Professionally Used Software: Matlab and Satellite Communication Simulators.

Project work/Assignment/Quiz:

Case Study:

Identify the position of the HD Dish antenna placed over the building roof, analyse the orientation part of the dish antenna, its operating frequency bands and the Video signal processing through the setup box. Also justify why the downlink frequency should be lower than the uplink frequency bands.

Assignment1:

In most satellite TV receivers, the first IF band is converted to a second, fixed IF. Why is this second frequency conversion required?

Assignment2:

A satellite is orbiting in the equatorial plane with a period from perigee to perigee of 12hours. Given that the eccentricity is 0.002, calculate the semimajor axis. The earth's equatorial radius is 6378.1414 Km.

Recommended by the Board of Studies on	15th BOS held on28/07/2022
Date of Approval by the Academic Council	Meeting No. 18th, Dated 03/08/2022

Course Code: ECE3056	**Course Title: Wireless Communication and Networks** **Type of Course: Discipline Elective- Data Transfer Technologies Basket**	**L- T-P- C**	**3**	**0**	**0**	**3**
Version No.	**2.0**					
Course Pre-requisites	Analog Communication, Digital Communication, Wireless Networks, Basic concepts of **communication system, modulation, demodulation, well acquainted with terms such as evolution of wireless standards-1G to 4G and PAN technologies.**					
Anti-requisites	**NIL**					
Course Description	**The objective of this course is build an understandings of the core issues encountered in the design of wireless networks. The course includes the fundamentals of wireless communication and provides an overview of existing and emerging wireless communication networks. It covers fundamentals of cellular communications, multiple access technologies and various wireless networks including past and future generation networks. Further, the students will understand the basic concept of wireless system design and get familiar with various wireless networks. They will get the idea from the fundamentals of wireless communication and the evolution of wireless networks from first generation to LTE and LTE advanced after completion of this course.**					
Course Objective	**This course is designed to improve the learners' EMPLOYABILITY SKILLS by using PROBLEM SOLVING techniques using open source Design Tools.**					
Course Outcomes	**On successful completion of the course students shall be able to:** 1. **Apply** cellular concepts for reducing interference in mobile communication 2. **Distinguish** various multiple access techniques along with area of its application 3. **Classify** the various existing WLAN and WPAN network topologies 4. **Summarize** wireless communication standards based on architecture and operation					
Course Content:						
Module 1	**An Introduction to Wireless Communication and Cellular Concept**	Quiz	Memory Recall based Quiz	**10 Session**		
Topics: Communication Systems, Types of Wireless Communication Systems, Classification of modern wireless systems. Limitations of wireless networks. **:** Introduction to cell structure, Hexagonal cell geometry, concept of frequency reuse.						
Module 2	**Capacity Enhancement and Multiple Access Techniques**	Assignment	Case Study Based	**12 Session**		
Topics: Channel assignment strategies, Capacity enhancement techniques, Interference and system capacity,						

Handoff, Trunking and grade of service. Introduction to multiple access, Frequency division multiple access, Time division multiple access, Code division multiple access and Spread spectrum multiple access.

Module 3	**Multiple Antenna Techniques**	Project	Small hardware based	**08 Session**

Topics:
MIMO systems, spatial multiplexing, System model, Pre-coding, Beam forming, transmitter diversity, receiver diversity, Channel state information-capacity in fading and non-fading channels.

Module 4	**Wireless Networks**	Project	Small hardware based	**09 Session**

Topics:

Introduction to wireless Networks, Advantages and disadvantages of Wireless Networks, OSI model, WLAN topologies, WLAN Standard IEEE 802.11, IEEE 802.11 Medium Access Control, Comparison of IEEE 802.11 a,b, and g standards, WPAN technologies.

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:
Professionally Used Software: Arduino, Matlab integration with GSM receiver, integrate the GSM device with any microcontroller, the embedded programming, SMS gateway simulator which can be used for testing purpose.

Targeted Application:
Communication, connection of devices by BLUETOOTH, Television and Radio Broadcasting, Radio Frequency Identification (RFID), Mobile Telephone System (Cellular Communication), Radar, Infrared Communication etc.
Accessing the Internet, Locating and Tracking-GPS, security systems, television remote control, computer-interface devices, Wi-Fi, wireless power transfer and many projects based on mobile communications are applications of mobile communication.
Enhance Security: The different types of wireless communication can enhance security. For example, walkie-talkies transmit and receive radio signals

Project work/Assignment/Quiz:

Bluetooth based Garage Door Opening, Smart Card Technology-based Security System

Assignment 1: Election Day results are out. Everyone wants to congratulate the winner. Suppose the cell phone for everyone displays "G" on its top right corner of screen. Identify the technology standard. Draw its architecture and explain the main blocks.
Assignment 2: Distinguish various multiple access techniques along with area of its application
Assignment 3: Given codes are C_1= [-1,-1,-1,-1], C_2 = [1,-1,-1,1], C_3 = [-1,1,1,1], C_4 = [-1,1,1,-1], Considering these codes, Show that whether CDMA can be applied with these codes. Determine total no. of users in this system and give reason for your answer. Comment on capacity of CDMA. Why CDMA is called as Spread Spectrum Technology?

Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format **Presidency University Library Link .**

Date of Approval by the Academic Council	Meeting No. 18th , Dated 03/08/2022

Course Code: **ECE3057**	**Course Title: Radar Engineering** **Type of Course: Discipline Elective- Data Transfer Technologies Basket**		**L-T-P-C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites	Basic concepts of analog modulation anddemodulation schemes and probability theory						
Anti-requisites	**NIL**						
Course Description	This is an advanced research-oriented course designed for undergraduate students. Thiscourse will enablestudents' knowledge towards detection and tracking of radar signals. The course emphasizes on working, analysis and design of Radar wireless communication system. Additionally, this course will create a foundation for future courses such as optical Communication and Free Space Wireless Communication system.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Radar Engineering and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING						
Course Outcomes	**On successful completion of this course the students shall be able to:** 1: **Explain the** basic principle of RADAR System. 2: **Solve** the RADAR Equation and to calculate Transmitter power. 3: **Discuss**the working principle of CW and Frequency Modulated Radar. 4: **Compare** the principlesof MTI and Pulse Doppler Radar.						
Course Content:							
Module 1	**Basics of Radar**	Quiz	Memory Recall based Quizzes	**10 Sessions**			
Topics: **Basics of Radar:** Introduction, Maximum Unambiguous Range, Radar Waveforms, Definitions with respect to pulse waveform - PRF, PRI, Duty Cycle, Peak Transmitter Power, Average transmitter Power. Simple form of the Radar Equation, Radar Block Diagram and Operation, Radar Frequencies, Applications of Radar.							
Module 2	**The Radar Equation**	Assignment / Quiz	Comprehension based Quizzes and assignments	**9 Sessions**			
Topics: **The Radar Equation:** Prediction of Range Performance, Detection of signal in Noise, Minimum Detectable Signal, Receiver Noise, SNR, Modified Radar Range Equation, Probability of Detection, Radar Cross Section of Targets.							
Module 3	**MTI and Pulse Doppler Radar**	Assignment	Comprehension based Quizzes and assignments; simulation with MATLAB	**10 Sessions**			
Topics: **MTI and Pulse Doppler Radar:** Introduction, Principle, Doppler Frequency Shift, Simple CW Radar, Sweep to Sweep subtraction and Delay Line Canceler, MTI Radar with – Power Amplifier							

Module 4	**Tracking Radar**	Assignment	Project implementations in software, batch wise presentations	**10 Sessions**

Topics:

Tracking Radar: Role of the radar tracker,-Plot to track association, Track initiation, Track maintenance, Track smoothing, Types of Tracking Radar Systems- Lobe switching, conical scan, Alpha-beta tracker, Kalman filter, Multiple hypothesis tracker (MHT), Interacting multiple model (IMM)

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:

Targeted Applications: Data analytics,Automatic machine translation, object detection etc.

Professionally Used Software: Anaconda/ pytorch or google colab, Jupyter Notebook on cloud/ MATLAB Deep Learning Toolbox

Project Work/Assignment:

1. Article review: At the end of course an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link :**https://puniversity.informaticsglobal.com/login**
2. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.
3. Project Assignment:- Implementation of various concepts in from Radar Engineering using Python/ MATLAB

Text Books:

Course Code: **ECE3059**	**Course Title: Security in Computer Networks** **Type of Course: : Discipline Elective- Data Transfer Technologies Basket**	**L-T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**To succeed in this course the student should be comfortable with the practice of applied statistics involving analysis of data, which can be used to define the network security algorithms. The knowledge in digital communication helps to apply these algorithms in modern communication systems.**					
Anti-requisites	**NIL**					
Course Description	**The course is designed for undergraduate level engineering students. The aim of this course is to introduce the students to the areas of cryptography and network security. Variety of basic cryptographic primitives along with advanced algorithms is discussed in the course. This course develops a basic understanding of the major challenges in network security, authentication protocols, IP security and firewalls. These topics will enable the students to select employment opportunities and research and development activities.**					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Security in Computer Networks and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING					
Course Outcomes	On successful completion of this course the students shall be able to: 1) Identify the major challenges with Network security 2) Describe the classical encryption techniques and the major tasks in network security services. 3) Explain the encryption and decryption of a plain text with DES and AES. 4) Learn the different authentication protocols and basics of IP security.					
Course Content:						
Module 1	Introduction to network security and classical encryption techniques	Assignment	Programming Task	**10 Classes**		
Topics: Introduction: Cryptography, cryptanalysis, attacks, services, securitymechanisms.Classical Encryption Techniques: Symmetric key cryptography Caesar cipher, mono alphabetic cipher, play fair cipher, hill cipher, poly alphabeticcipher, OTP, transposition techniques, rotor machines, steganography						
Module 2	Symmetric ciphers and pseudorandom number generation	Article review	Programming Task	**10 Classes**		
Topics: Block Ciphers: Block Ciphers and the Data Encryption Standard: DES algorithm, differential and linear cryptanalysis, triple DES. Block cipher design principles, block cipher modes of operation, advanced encryption standard: AES, Pseudorandom number generation, prime numbers, Euler's theorem and CRT. Stream Ciphers: RC4. Cryptographic Hash Functions: Applications of hash Functions.MAC and Digital Signatures.						
Module 3	Public key cryptography and network security	Project Assignment	Programming and Simulation Task	**10 Classes**		
Topics: Public Key Cryptography: Principles of public key cryptosystem, RSA algorithm, security of RSA. Diffiehellman key exchange.Network Security: Security attacks, Transport level security, Wireless Network Security, Electronic mail security, IP security.						

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:

Targeted Applications: Cyber security, Advanced Network Security for 5G, Future generation network design

Professionally Used Software: Matlab/Simulink

Project work/Assignment:

1. Project Assignment: Compare the performance of different network security algorithms using Matlab. A final report and presentation are required.

2. Article review: At the end of course an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format.**Presidency University Library Link .**

3.Assignment : Perform DES algorithm using Matlab or Simulink

Catalogue prepared by	**Mrs. Amrutha V Nair**
Recommended by the Board of Studies on	15th BOS held on28/07/2022
Date of Approval by the Academic Council	Meeting No. 18th, Dated 03/08/2022

Course Code: ECE3060	**Course Title: Wireless Adhoc Networks** **Type of Course: : Discipline Elective- Data Transfer Technologies Basket**	**L-T- P-C**	**3**	**0**	**0**	**3**
Version No.	**2.0**					
Course Pre-requisites	**Wireless Communication and Networks, Wireless topologies and protocols**					
Anti-requisites	**NIL**					
Course Description	**This course is an advanced research-oriented course designed for under graduate students with computer and wireless networks background. The course will act as foundation for Mobile Ad Hoc Networks (MANETs), Wireless Sensor Networks (WSNs) and Wireless Mesh Networks (WMNs). The course examines wireless cellular, ad hoc and sensor networks, covering topics such as medium access control, network and transport protocols, unicast and multicast routing algorithms, mobility and its impact on routing protocols, application performance, quality of service guarantees, and security.**					
Course Objective	**This course is designed to improve the learners' <u>EMPLOYABILITY SKILLS</u> by using <u>PROBLEM SOLVING</u> techniques using open source Design Tools.**					
Course Outcomes	**On successful completion of the course students shall be able to:** 1. **Explain** fundamental principles of Ad-hoc Networks 2. **Discuss** a comprehensive understanding of Ad-hoc network protocols 3. **Outline** current and emerging trends in Ad-hoc Wireless Networks 4. **Analyze** energy management in ad-hoc wireless networks.					
Course Content:						
Module 1	**MAC Protocols**	Assignment / Quiz	Comprehension based Quizzes and assignments; simulation with MATLAB			10 Sessions
Topics: Introduction, Design goals of a MAC Protocol for Ad Hoc Wireless Networks, Classifications of MAC Protocols, Contention – Based Protocols, Contention – Based Protocols with reservation Mechanisms, Contention – Based MAC Protocols with Scheduling Mechanisms, MAC Protocols that use Directional Antennas, Other MAC Protocols.						
Module 2	**Routing Protocols**	Assignment	Network simulation Task and Analysis			09 Sessions
Topics:						

Issues in Designing a Routing Protocol for Ad Hoc Wireless Networks, Classification of Routing Protocols, Table –Driven Routing Protocols, On – Demand Routing Protocols, Hybrid Routing Protocols, Routing Protocols with Efficient Flooding Mechanisms, Hierarchical Routing Protocols, Power – Aware Routing Protocols.

Module 3	**Transport Layer Protocols**	Assignment and Lab projects with presentation	Project implementations in software and presentations	10 Sessions

Topics : Issues in designing a transport layer protocol for ad hoc wireless network, transport layer solutions Security in ad hoc wireless networks, network security requirements, issues and challenges in security provisioning, network security attacks

Module 4	**Quality of Service and Energy Management in Ad-hoc Wireless Networks**	Project	Project implementations in software and presentations	10 Sessions

Topics:
Introduction, Issues and Challenges in Providing QoS in Ad-hoc Wireless Networks, Classification of QoS Solutions, MAC Layer Solutions, Network Layer Solutions; Energy Management in Ad-hoc Wireless Networks: Introduction, Need for Energy Management in Ad-hoc Wireless Networks, Classification of Energy Management Schemes, Battery Management Schemes, Transmission Management Schemes, System Power Management Schemes.

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:
Professionally Used Software: Network simulator2/OPNET/Matlab, Arduino
Targeted Application:
Wireless Adhoc Network in Ultra wide band radio communication- Wireless fidelity systems.
Accessing the Internet, Locating and Tracking-GPS, security systems, television remote control, computer-interface devices, Wi-Fi, wireless power transfer and many projects based on mobile communications are applications of mobile communication.
Enhance Security: The different types of wireless communication can enhance security. For example, walkie-talkies transmit and receive radio signals

Project work/Assignment/Quiz:

Project Assignment: Consider a wireless network where the transmission is going on between nodes A & B that are separated by a distance d and the transmission range of each node is R.

Assignment 1: Collect the data for a network traffic and calculate the percentage of packet drop and packets delivered successfully.
Assignment 2: Calculate the probability of data packet collision in the MACA protocol. Assume that T_c is the control packet transmission propagation delay, T_w is the optimal maximum back-off time, β is the percentage of ready nodes, & R is the transmission range of each node.
Assignment 3: Assuming that all routers and hosts are working properly and that all software in both is free of all errors, is there any chance, however small, that a packet will be delivered to the wrong destination?
Assignment 4: Calculate the probability of data packet collision in the MACA protocol.

Assume that T_c is the control packet transmission propagation delay, T_w is the optimal maximum back-off time, β is the percentage of ready nodes, & R is the transmission range of each node.

Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format **Presidency University Library Link .**

Recommended by the Board of Studies on	15th BOS held on 28/07/2022
Date of Approval by the Academic Council	Meeting No. 18th , Dated 03/08/2022

Course Code: ECE3061	**Course Title: Optical Communication Type of Course: : Discipline Elective- Data Transfer Technologies Basket**		**L- T-P- C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites	Basic concepts of electronic devices, digital modulation and demodulation schemes, analog modulation and demodulation schemes, probability theory.						
Anti-requisites	**NIL**						
Course Description	The purpose of this course is to enable the students to learn the basic principle of optical fiber communication and also understand the transmission characteristics and losses in a wireless communication system. The course will act as a harbinger for exponentially growing modern communication systems. The course emphasizes on working, analysis and design of wireless communication system. Additionally, this course will create a foundation for future courses such as Radar Communication and Free Space Communication etc.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Optical Communication and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING.						
Course Outcomes	**On successful completion of this course the students shall be able to:** (1) Explain the basic concepts of optical Engineering (2) Apply the active, passive devices and optical amplifiers in optical wireless networks. (3) Analyze an optical wireless communication system. (4) Apply advanced concepts of optical Engineering to design and develop more efficient next generation optical wireless communication systems.						
Course Content:							
Module 1	**Introduction to optical wireless communication systems**	Quiz	Memory Recall based Quizzes	**10 Sessions**			
Topics: Wireless Access Schemes, Brief History of OWC, OWC/Radio Comparison, WC Application Areas, Safety and Regulations, OWC Challenges.							
Module 2	**Fluctuation Theory**	Assignment	Design oriented	**10 Sessions**			
Topics: Scintillation Theory-Plane Wave Model, Scintillation Theory-Spherical Wave Model, Wave ModelDistribution Models for the Irradiance[introduction].							
Module 3	**Modulation Techniques**	Assignment	Design Analysis	**10 Sessions**			
Topics Introduction, Analogue Intensity Modulation, Digital Baseband Modulation Technique Pulse							

Position Modulation, On–Off Keying.				
Module 4	**OPTICAL RECEIVER**	Assignment	Application based analysis	**9 Sessions**
Introduction, Optical Receiver Operation, receiver sensitivity, quantum limit, eye diagrams, coherent detection, burst mode receiver operation, Analog receivers.				

Targeted Application & Tools that can be used:

Tools: Matlab

Project work/Assignment:

Project Assignment:

1. Create a simple network model with multiple scenarios, collect statistics on network performance through the use of simulation tools, analyse statistics and draw conclusions on network performance.
2. Establish aFree space optical communication link.
3. Compare the Bit Error Rate for various weather conditions.

AI and Wearable Technologies Basket

Course Code: **ECE3062**	**Course Title: Fundamentals of Wearable Sensing** **Type of Course: Discipline Elective- AI and Wearable Technologies Basket**	**L- T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Basic knowledge in Wireless Communication					
Anti-requisites	NIL					
Course Description	The purpose of this course is to enable the students to understand measurement and instrumentation systems that are used in wearable sensors. This course is analytical in nature and provides a good knowledge about the construction of testing and measuring setup for wearable sensing systems. The course is beneficial in the design of resistive sensors, reactive sensors and self-generating sensors and its applications in real life scenarios that would be worn on body.					
Course Objective	**The objective of the course is <u>SKILL DEVELOPMENT</u> of student by using <u>PARTICIPATIVE LEARNING</u> techniques** using virtual testing through simulation.					
Course Outcomes	**On successful completion of the course students shall be able to:** 1. Demonstrate the concept of resistive and reactive sensors which can be applied for real life applications. 2. Understand the working principle of special purpose sensors and the need for developing smart sensors. 3. Describe the taxonomy of the wearable devices and its design constraints for measuring physical and biological signals. 4. Perform experimental study of various sensors.					
Course Content:						
Module 1	**Resistive and Reactive Sensors**	Assignment	Case study based		**08 Classes**	
Topics: Overview of Measurement System, Instruments and errors in sensing systems. Resistive sensors- Potentiometers, strain gages (piezo-resistive effect), resistive temperature detectors (RTD), thermistors, magneto- resistors, light dependent resistor (LDR), resistive hygrometers, resistive gas sensors. Wearable applications: Strain sensor for monitoring Physiological signals, body movement.						
Module 2	**Smart Sensors and Applications**	Project	Small hardware based		**09 Classes**	
Topics: Integrated and Smart sensors, IEEE 1451 standard & Transducer Electronic Datasheets (TEDs), Overview of various smart sensors: Digital temperature sensor (DS1621, TMP36GZ), Humidity sensor (DHT11, DHT22, FC28), IR sensor (FC51), Gas sensor (MQ2,MQ8), Pressure sensors (BMP180), Accelerometers (ADXL335), etc, Structural health monitoring sensors, Introduction to MEMS and Flexible sensors.						

Module 3	Scope of Wearable Devices	Assignment	Small hardware based	08 Classes

Topics:
Role of Wearables, Attributes of Wearables, The Meta Wearables – Textiles and clothing, Wearable and noninvasive assistive technologies, Detection and Characterization of food intake by wearable sensors, Wearing sensors inside and outside of the Human body for early detection of diseases.

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:

Targeted Applications: :

1. Fabrication of interdigitated (IDE) electrodes**.**
2. Piezoresistive sensors for cuffless blood pressure measurement.
3. Wearable sensors for Body Temperature: Intermittent and Continuous temperature monitoring.
4. Smart textile for neurological rehabilitation system (NRS)
5. Epidermal electronics system (EES)
6. 3D imaging and motion capture
7. safety and security, navigation, Enhancing sports media, Automatic digital diary
8. AI for respiratory diagnostics and clinical trials.

Professionally Used Software: python/C,C++, **Virtual testing through simulation in ANSYS software.**

Project work/Assignment/Quiz:

1. Case Studies: At the end of the course students will be given a 'real-world' Wearable application based devices etc. as a case study. Students will be submitting a report which will include Block/Circuit Diagrams, Design, Working Mechanism and Results etc. in appropriate format.

2. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link .

3. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

Course Pre-requisites	Fundamentals of Wireless Communication					
Anti-requisites	NIL					
Course Description	The objective of this course is to make the students to understand the need for development of wearable devices and its implications on various ssectors. It will also comprehend the design and development of various wearable inertial sensors and wearable bio-electrode and physiological activity monitoring devices for use in healthcare applications. The course will enable the students to become acquainted with various wearable locomotive sensors as assistive devices for tracking and navigation. This course also helps in carrying out research and development activities or employment opportunities in the area of wearable devices.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Wearable Devices and its Applications and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING					
Course Outcomes	On successful completion of the course students shall be able to: 1. Identify and understand the need for development of wearable devices and their influence on various sectors. 2. Discuss the applications of various wearable inertial sensors for biomedical applications. 3. Identify the use of various wearable locomotive tools for safety, security and navigation. 4. Design and develop various wearable devices for detection of biochemical and physiological body signals, environmental monitoring, safety and navigational assistivedevices.					
Course Content:						
Module 1	**IntroductiontoWearableDevices**	Quiz	Memory Recall based Quiz	**09 Classes**		
Topics: Motivation for development of Wearable Devices, The emergence of wearable computing and wearable electronics, Types of wearable sensors: Invasive, Non-invasive; Intelligent clothing, Industry sector overview–sports, healthcare, Fashion and entertainment, military, environment monitoring, mining industry,public						
Module 2	**WearableInertialSensors**	Assign ment	Case study based	**08Classes**		
Topics: Wearable Inertial Sensors- Accelerometers,Gyroscopic sensors and Magnetic sensors; Modality of Measurement-Wearable Sensors, Invisible Sensors, In-Shoe Force and Pressure Measurement; Applications: Fall Risk Assessment, Fall Detection, Gait Analysis, Quantitative Evaluation of Hemiplegic and Parkinson's Disease patients.Physical Activity monitoring: Human Kinetics,Cardiac Activity, EnergyExpenditure						
Module 3	**WearableCamerasandMicrophonesforNavigatio**	Project	Small hardware based	**14Classes**		

	n			
Topics: Cameras in wearable devices, Applications in safety and security, navigation, Enhancing sportsmedia, Automatic digital diary. Cameras in smart-watches; Use of Wearable Microphones: MEMS microphones, Bioacoustics, Microphones and AI for respiratory diagnostics and clinical trials. Wearable Assistive Devices for the Blind - Hearing and Touch sensation, Assistive Devices forFingers and Hands, Assistive Devices for wrist, forearmand-feet, vests and belts, head-mounteddevices.				
Module 4	**Other Applications**	Assign ment	Small hardware based	**08 Classes**
Topics: Wearables for life in space: Life on Moon and Mars, Optical cardiovascular Monitoring, Bioimpedance systems for home care monitoring using BSNs: the IPANEMA BSN, Fatigue monitoring techniques: Methods and wearables.				
List of Laboratory Tasks: Nil				
Targeted Application & Tools that can be used: **Targeted Applications:** **1.** Fabrication of inter digitated (IDE) electrodes**.** **2.** Piezoresistive sensors for cuffless blood pressuremeasurement. **3.** Wearable sensors for Body Temperature: Intermittent and Continuous temperature monitoring. **4.** Smarttextileforneurologicalrehabilitationsystem(NRS) Professionally Used Software: ANSYS software, python/C,C++				
Project work/Assignment/Quiz: 1. Students will be made into groups and given programming assignments at the end of each module. Students need to use MULTISIM for these assignments. 2. Book Review/ Article review: A chapter of abook or an article will be given to each student. They need to visit the library and write a report on their understanding about the assigned article for 1 page.

Date of Approval by the Academic Council	Meeting No. 18th, Dated 03/08/2022

Course Code: ECE3064	**Course Title:Embedded Platforms for Wearables** **Type of Course: Discipline Elective- AI and Wearable Technologies Basket**		**L-T-P-C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites	**Microprocessor, Microcontroller, Fundamentals of Wearable Sensing**						
Anti-requisites	**NIL**						
Course Description	**The objective of this course is to introduce concepts of wearable embedded system design and the insight of various ARM Cortex architectures and its applications in various areas of wearable computing and to introduce the I/O interfacing with ARM Cortex architectures.**						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Embedded Platforms for Wearables and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING						
Course Outcomes	**On successful completion of this course the students shall be able to:** 1) Understand design issues of wearable embedded system design 2) Explore various ARM processor architectures for wearable applications 3) Program ARM Cortex architecture using assembly and C programming 4) Interface I/O peripherals with ARM Cortex						
Course Content:							
Module 1	Introduction to Wearable Embedded Systems	Quiz	Memory Recall based Quizzes	**06session**			
Topics: Introduction to wearable embedded systems, Challenges in the design of wearable embedded system design, Design Methodology for wearable embedded systems, Selection criteria of embedded processor for wearable embedded systems, Application areas of wearable embedded systems.							
Module 2	Wearable Embedded Architectures	Assignment / Quiz	Programming and Simulation task / Memory Recall based Quizzes	**10 session**			
Topics: Features of ARM Cortex Series, Comparison of ARM Cortex-M and Cortex-A architectures, addressing modes, ARM instruction set for ARM Cortex.							
Module 3	Programming Embedded Architecture and Interfacing	Assignment / Quiz	Programming and Simulation task / Memory Recall based Quizzes	**12 session**			
Topics: Assembly language Programming, Embedded C Programming, Code Density and Thumb Mode in ARM, Power Control in ARM, Interrupt structure of ARM Cortex architecture, Interfacing with ARM Cortex: - LED, LCD, Keypad, PWM Programming, Communication Protocols: - Bluetooth, USB, CAN BUS, MOD BUS, UART, I2C.							
Module 4	Case Studies	Assignment	Programming Assignment	**12 session**			

Topics:
Various case studies of wearable system design:- Wearable Smart Watch, Hearing Aid for person with disability, Body parameter measurement in medical field, agricultural monitoring devices etc.

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:

Targeted Applications: Biomedical Embedded Systems Design, Wearable gadget design and development

Professionally Used Software: ARM Keil uVision-5, Code Composer Studio (CCS)

Project Work/Assignment:

1. Case Study: At the end of the course students will be given a 'real-world' application-based on wearable embedded system as a case study. Students will be submitting a report which will include Application Design, sensors used, middleware protocols used and working mechanism etc. in appropriate format.

2Book/Article review: At the end of the course a literature review of any 01 recent articles from the reputed national and international journal/ conferences will be given by students. They need to refer to tools like Scopus/ Google-Scholar and submit a report on their understanding of the assigned article in appropriate format.

3. Presentation: There will be a group presentation, where the students will be given a topic. They will have to present their review work.

Date of Approval by the Academic Council	Meeting No. 18th, Dated 03/08/2022

Course Code: ECE3065	**Course Title: RFID and Flexible Sensors** **Type of Course: Discipline Elective- AI and Wearable Technologies Basket**		**L- T- P- C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites	Basic concepts of Engineering Mathematics, Basic concepts of Engineering Physics, Knowledge of basic EM theory and sensors						
Anti-requisites	**NIL**						
Course Description	This course will introduce the concepts of RFID and Flexible Sensors. The goals of this course are 1. Gain basic knowledge of different types of materials and methods used for fabrication of flexible electronics. 2. Understand and designing Radio frequency identification (RFID) systems, middleware architectures for real-world applications. 3. Determine road map for transformation of flexible electronics from foils to textiles 4. Understand the principle and applications of flexible sensors.						
Course objective	**This course is designed to improve the learners' <u>EMPLOYABILITY SKILLS</u> by using <u>EXPERIENTIAL LEARNING</u> techniques.**						
Course Outcomes	On successful completion of the course the students shall be able to: 1. Have a clear understanding of the RFID technology. 2. Have a lucid picture of the material related concepts and fabrication techniques for flexible electronics 3. Know about the recent trends in wearable technology.						
Course Content:							
Module 1	Overview and RFID middleware	Assignment	Memory Recall based Quizzes	**10 *Sessions***			
Topics: Introduction- Core components of RFID systems-RFID Tags- RFID Interrogators- RFID Controllers- Frequency- selection criteria for RFID systems- Automatic identification and data, RFID Middleware- Recent focus on middleware- Core functions of RFID middleware- Middle ware as part of an RFID system-The EPC architecture- Present state of middleware development.							
Module 2	Applications of RFID technology	Assignment / Quiz	Memory Recall based Quizzes	**10 *Sessions***			
Topics: Short range RFID applications: Access control-Transportation Ticketing- Personnel identification-Vehicle identification- Production line monitoring, Long range RFID applications: Supply chain management- Mail and shipping-Clothing tags-Food production control							
Module 3	Materials for flexible electronics	Assignment	Memory Recall based Quizzes	**8 *Sessions***			
Topics:							

Introduction, Inorganic semiconductors and dielectrics, organic semiconductors and dielectrics, conductors - Print processing options for device fabrication: Overview, control of feature sizes of jet printed liquids, jet printing for etch mask patterning, methods for minimizing feature size, printing of active materials.

Module 4	Principles of Sensors	Assignment	Memory Recall based Quizzes	**12 *Sessions***

Topics:
Fundamentals and Operating principles of Sensors: Types of Sensors, Use of Sensors, Basic Considerations of Sensor Design, Requirements for Accuracy, Requirements for Resolution, Environment of the Sensor, Calibration, Wireless Sensors and Wireless Sensor Networks.

Targeted Application & Tools that can be used:

This course will impart knowledge in designing a RF component or a product applying all the relevant standards and with realistic constraints at a rudimentary level.
Professionally Used Software: **COMSOL Multiphysics/MATLAB/Simulink/Labview.**

Project work/Assignment:

Assignment-1: Design and Development of Sensing RFID Tags on Flexible Foil
Assignment-2: Flexible Biopolymer based UHF RFID-Sensor for food quality monitoring

Course Code: ECE3066	**Course Title: Wireless Technologies for Wearables** **Type of Course: Discipline Elective- AI and Wearable Technologies Basket**	**L- T- P- C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Basic concepts of Engineering Mathematics, Basic concepts of Wearable Technology ,Knowledge of basic EM theory and sensors					
Anti-requisites	**NIL**					
Course Description	1. Identify the need for development of wearable devices and its implications on various sectors. 2. Comprehend the design and development of various wearable inertial sensors and wearable bio-electrode and physiological activity monitoring devices for use in healthcare applications. 3. Acquaint various wearable locomotive sensors as assistive devices for tracking and navigation					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Wireless Technologies for Wearables and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING					
Course Outcomes	On successful completion of the course the students shall be able to: 1. Identify and understand the need for development of wearable devices and its influence on various sectors. 2. Discus the applications of various wearable inertial sensors for biomedical applications. 3. Comprehend the design and development of various wearable bio-electrode and physiological activity monitoring devices for use in healthcare applications. 4. Design and develop various wearable devices for detection of physiological body signals, environmental monitoring, safety and navigational assistive devices.					
Course Content:						
Module 1	Introduction to Wearable Devices	Assignment	Memory Recall based Quizzes	**10 *Sessions***		
Topics: Motivation for development of Wearable Devices, The emergence of wearable computing and wearable electronics, Types of wearable sensors:Invasive, Non-invasive;Intelligent clothing, Industry sectors' overview – sports, healthcare, Fashion and entertainment, military, environment monitoring, mining industry, public sector and safety.Wearable Sensors, Invisible Sensors,In-Shoe Force and Pressure Measurement; Applications Cardiac Activity, Pedometers.						
Module 2	Wireless technologies for wearable devices	Assignment / Quiz	Memory Recall based Quizzes	**10 *Sessions***		
Topics: Topics: wireless technologies for wearable: NFC, BLE, wi-fi Cellular etc. Wearable system for BAN (Body area network), system architecture, Human movement identification system, Human activity recognition system, E-health application, Assistive technology for Disabilities, sports and fitness, Augmented reality.						
Module 3	Wearable Devices for Healthcare	Assignment / Quiz	Memory Recall based Quizzes	**8 *Sessions***		
Topics:						

Smart textile for neurological rehabilitation system (NRS), Study of flexible and wearable EMG sensors.Epidermal electronics system (EES), Study of Multi-parametric (ECG, EEG, EMG) Epidermal Electronics Systems. Wearable Blood Pressure (BP) Measurement: Cuff-Based Sphygmomanometer, Cuffless Blood Pressure Monitor. Study of flexible and wearable Piezoresistive sensors for cuffless blood pressure measurement. Wearable sensors for Body Temperature: Intermittent and Continuous temperature monitoring, Detection principles – thermistor, infrared radiation, thermopile.

Module 4	Wearable Cameras and Microphones for Navigation	Assignment	Memory Recall based Quizzes	**12 *Sessions***

Topics:
Cameras in wearable devices, Applications in safety and security, navigation, Enhancing sports media, Automatic digital diary. Cameras in smart-watches; Use of Wearable Microphones: MEMS microphones, Bioacoustics, Microphones and AI for respiratory diagnostics and clinical trials. Wearable Assistive Devices for the Blind - Hearing and Touch sensation, Assistive Devices for Fingers and Hands, Assistive Devices for wrist,forearmandfeet, vests and belts, head-mounted devices.

Targeted Application & Tools that can be used:

Application Area:

Wearable technology is a ubiquitous technology to monitor human beings or animals. It includes all the wearable devices, sensors in devices, communication protocols including Bluetooth, Zigbee and 3G/4G/5G, cloud computing, data fusion algorithms, and big data. The integration of all these technologies evolved an amazing technology with a huge attraction of people and within a few years, those companies who are doing their business are at the top. We are getting surrounded by wearable technology day by day. They have multiple applications in our daily life including health monitoring, education, activity monitoring, fashion, and security.

Professionally Used Software: students can use open SOURCE Softwares like Arduino IDE, Python IDLE,Jupiter etc.

Project work/Assignment:

1. **Mini Projects: At the end of the course students will be assigned a project work on solving many societal relevant problems in the field of wearables.**
2. **Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in an appropriate format.Presidency University Library Link .**
3. **Presentation: There will be a group presentation, where the students will be given a project on wearable device applications. They will have to explain/demonstrate the working and discuss the applications for the same**

Course Code: **ECE3067**	**Course Title: Wearable Internet of Thing** **Type of Course: Discipline Elective** **Discipline Elective- AI and Wearable Technologies Basket**		**L – T- P- C**	**3**	**0**	**0**	**3**
Version No.	**2.0**					
Course Pre-requisites	**Micro Controller Applications**					
Anti-requisites	**Nil**					
Course Description	The purpose of this course is to enable the students to appreciate the fundamentals ofWearable technology. This field has been experiencing explosive growth with exciting applications in the fields of medicine, sports, fitness, entertainment, as well as new ways for people to interact, communicate, and experience the environment around them. Internet of Things (IoT) works with sensors and software in wearable technologies to provide a communications network that allows data collection and information exchange for wearable devices.In this course, we review aspects of wearable technologies, including the software, architecture, UX design, communication networks, and data analytics. We review current and proposed uses of this emerging technology.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Wearable Internet of Thing and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING.					
Course Outcomes	On successful completion of this course the students shall be able to: 1. Design IoT end points for wearable applications. 2. Identify the suitable materials and its processing for the development of thin film electronics. 3. Analyze the appropriate protocols, wireless techniques for the problem. **4.** Develop algorithms for wearable system and modeling of wearable system.					
Course Content:						
Module 1	**Wearable devices andRole of IoT in wearable devices**	Assignment / Quizzes	Memory Recall based Quizzes	**14 Sessions**		
Topics: Fundamentals of Wearable Technologies- Role of Wearables, attributes of wearables, Textiles and Clothing. Flexible Electronics and Textiles for Wearable Technologies- fibers to textile sensors, interlaced network, textile sensors for physiological state monitoring, non-invasive sweat monitoring by textile sensors, smart fabrics and interactive textile platforms for remote monitoring. Smart connectivity and Big picture of IoT-smart devices, networks, Wireless technologies and need for data analysis. Evolution of wearable technology, Wearable IoT use cases- Smart watches , Android wear, Smart glasses, fitness trackers, health care devices, cameras, smart clothing etc.						
Module 2	**Materials and Novel patterning methods for flexible electronics**	**Assignment / Quizzes**	**Programming and Simulation task**	**7 Sessions**		

Topics:
Materials considerations for flexible electronics: Overview, Inorganics semiconductors and dielectrics, organic semiconductors and dielectrics, conductors - Print processing options for device fabrication: Overview, control of feature sizes of jet printed liquids, jet printing for etch mask patterning, methods for minimizing feature size, printing active materials.

Module 3	**IOT architecture and Application Development:**	Assignment	Programming and Simulation task	**12 Sessions**

Topics:
IoT functional requirements, building blocks, IoT architecture layers, cloud and fog based architecture, M2M – Machine-to-Machine architecture, Web of Things, physical layer, MAC layer, 6LoWPAN security aspects in IoT.
Application Protocols: MQTT, REST/HTTP, CoAP, MySQL Back-end Application Designing: Apache for handling HTTP Requests, PHP & MySQL for data processing, MongoDB Object type Database, HTML, CSS &jQuery for UI Designing, JSON lib for data processing, Security & Privacy during development, Application Development for mobile Platforms: Overview of Android / IOS App Development tools.

Module 4	**Algorithms and system modeling**	Assignment	System Design Task and Analysis	**10 Sessions**

Topics:
Wearable Algorithms-Data Mining for Body Sensor Network, Physical Activity Modeling and Behavior Change.

Targeted Application & Tools that can be used

Smartphones and smart devices have emerged and penetrated deep into our everyday life. Wearables market has registered a tremendous rise in past years. Smart watches, wristbands, health monitors, and other solutions are projected to soar in the future. The goal is to increased productivityenhanced speed superior task accuracyoutstanding wireless readabilityincreased worker awareness using wearables.

Professionally Used Software:PyCharm IDE, Jupyter Notebook, Keras, Android Studio, Xcode, Tizen SDK etc.

Project work/Assignment:

Project Assignment: Development of IoT enabled - Smart watch, Cameras, Fitness meter etc.

Assignment 1: Interface Arduino to Zigbee module.

Assignment 2: Interface LED and Temperature sensor to Raspberry pi.

Assignment 3: Interface stepper motor to Raspberry pi.

Assignment 4: Interface camera to Raspberry pi.

Course Code: ECE3068	**Course Title: Embedded Intelligence in WIoT** **Type of Course: Discipline Elective- AI and Wearable Technologies Basket**		**L-T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Basics of computer science and embedded boards					
Anti-requisites	NIL					
Course Description	The course enables student to understand the basics of how hardware chips like microcontrollers, ARM or any programmable hardware board can be used for Internet of things and protocols. Introduces some of the application areas where Internet of Things can be applied. Students will learn about the middleware for Internet of Things. To understand the concepts of Web of Things.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Embedded Intelligence in WIoT and attain **EMPLOYABILITY SKILLS** through **PARTICPATIVE LEARNING**.					
Course Outcomes	On successful completion of this course the students shall be able to: 1) Understand with various concept of the IoT and their technologies. 2) Explain the real time embedded system and its components like sensors and actuators 3) To develop skillset to implement IoT systems for wearable applications by understanding the communication protocols. 4) Apply skills to conduct interfacing of embedded boards with components, actuators and sensors.					
Course Content:						
Module 1	**Fundamentals of IoT**	Quiz	Memory Recall based Quizzes	**9session**		
Topics: Introduction to Internet of Things (IoT)– Functional Characteristics – Recent Trends in the Adoption of IoT – Societal Benefits of IoT, Health Care –– Machine to Machine (M2M) - Smart Transportation – Smart Living – Smart Cities- Smart Grid.						
Module 2	**IoT Architecture**	Assignment / Quiz	Programming and Simulation task / Memory Recall based Quizzes	**10 session**		
Topics: Functional Requirements - Components of IoT: Sensors – Actuators – Embedded Computation Units – Communication Interfaces – Software Development						
Module 3	**COMMUNICATION PRINCIPALS**	Assignment	Programming Assignment	**10session**		
Topics: RFID – ZigBEE – Bluetooth – Internet Communication- IP Addresses - MAC Addresses - TCP and UDP – IEEE 802 Family of Protocols – Cellular-Introduction to EtherCAT						
Module 4	**Cloud Security basics**	Assignment	Assignment	**12 session**		

Topics:
What is cloud? ,Services provided by cloud are categorized :Software As a Service(SaaS) ,Infrastructure As a Service(IaaS) ,Platform As a Service(PaaS) ,Desktop As a Service (DaaS) and VDI etc. How Cloud Computing Works, Advantages & Disadvantages, Applications for Businesses Cloud Service.

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:
Targeted Applications: embedded system design, Instrumentation and Process Control, Consumer Electronics Light sensing & controlling devices, Temperature sensing and controlling devices.

Professionally Used Software: Anaconda/ pytorch or google colab, Jupyter Notebook on cloud/ MATLAB Deep Learning Toolbox

Project Work/Assignment:

1. Article review: At the end of coursean article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format.**Presidency University Library Link .**

2. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

3. Project Assignment:- Implementation of various concepts in from deep learning using Python/ MATLAB/ SCILAB

Topics relevant to "EMPLOYABILITY": Cloud computing concepts for developing **EMPLOYBILITY SKILLS** through **PARTICIPATIVE LEARNING** Techniques. This is attained through assessment component mentioned in course handout**.**

Catalogue prepared by	Mrs Anupama Sindgi
Recommended by the Board of Studies on	15th BOS held on28/07/2022
Date of Approval by the Academic Council	Meeting No. 18th, Dated 03/08/2022

Course Code: ECE3069	**Course Title:** Flexible Electronics And Sensors **Type of Course:** Discipline Elective- AI and Wearable Technologies Basket	**L-T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Measuring Instruments and Sensors.					
Anti-requisites	**NIL**					
Course Description	The purpose of this course is to provide an overview of flexible electronics technology and issues related material processing for thin film electronics.This course exposes the students for the materials selection and patterning methods for thin film electronics development.This course describes the process involved in transferring the flexible electronics from foils to textiles and also the challenges, opportunities and the future of wearable devices. It exposes the students to the design, challenges of wearable sensors employed for sensing the physical and biological parameters. A review on the process involved in the conversion of conducting and semiconducting fibers to smart textiles.					
CourseObjective	**The objective of the course is to familiarize the learners with the concepts of Flexible Electronics And Sensors and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING.**					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. **Realize** the technology developments in the flexible electronics technology. 2. **Ability** to identify the suitable materials and its processing for the development of thin film electronics 3. **Ability to design** the pattern and develop with suitable patterning methods. 4. **Realize** the process involved in the transformation of electronics from foils to textiles					
Course Content:						
Module 1	**Overview of flexible electronics technology**	Case study / quiz	flexible electronics technology	**10session**		
History of flexible electronics - Materials for flexible electronics: degrees of flexiblility, substrates, backplane electronics, front plane technologies, encapsulation - Fabrication technology for flexible electronics - Fabrication on sheets by batch processing, fabrication on web by Roll-to Roll processing - Additive printing.						
Module 2	**Amorphous and nano-crystalline silicon materials and Thin film transistors and** Wearable haptics	Case study / quiz	World of wearables	**10session**		
Topics:						

Fundamental issues for low temperature processing - low temperature amorphous and nanocrystalline silicon - characteristics of low temperature dielectric thin film deposition - low temperature silicon nitride and silicon oxide characteristics - Device structures and materials processing - Device performance - Contacts for the device - Device stability. World of wearables - Attributes of wearables - Textiles and clothing: The meta wearable - Challenges and opportunities - Future of wearables - Need for wearable haptic devices - Categories of wearable haptic and tactile display.

Module 3	**Materials and Novel patterning methods for flexible electronics**	Case study / quiz	Print processing	**12 session**

Materials considerations for flexible electronics: Overview, Inorganics semiconductors and dielectrics, organic semiconductors and dielectrics, conductors - Print processing options for device fabrication: Overview, control of feature sizes of jet printed liquids, jet printing for etch mask patterning, methods for minimizing feature size, printing active materials.

Module 4	Flexible electronics from foils to textiles & Wearable Bio, Chemical and Inertial sensors	Case study / quiz	Jet Printing	**12session**

Ink-jet printing, gravure, imprint lithography, spray pyrolysis, surface energy effects, multilayer patterning, design rule considerations. Displays, sensor arrays, memory devices, MEMS, lab-on-a-chip, and flexible solar panels

Targeted Application & Tools that can be used:

Project Assignment:

1. Article review: At the end of course an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format.Presidency University Library Link .

3. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

4. Project Assignment:-Printed electronics has the potential to revolutionize many industries. Some of the most interesting possibilities are in the areas of textiles and clothing.With electronics printed onto a substrate that is then applied to fabrics, we can add sensors, displays or other elements to existing clothing designs, or create entirely new items that take advantage of added features. Do survey on wearable sensors for monitoring patient health care system.

Date of Approval by the Academic Council	Meeting No. 18th, Dated 03/08/2022

Course Code: **ECE3071**	**Course Title:Wearable and Ubiquitous Computing** **Type of Course: Discipline Elective- AI and Wearable Technologies Basket**		**L-T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**Basic concepts of NFC, Wireless LAN**					
Anti-requisites	**NIL**					
Course Description	The goal of this course is to acquaint students with some of the fundamental concepts and state-of-the-art research in the areas of ubiquitous computing. Since this field is rapidly progressing, the course is aimed at students who want to explore it as researchers or track its evolution. The major focus of this is to course is to explore the high level facilities, system architecture and protocols of the ubiquitous system and apply data analytics to facilitate next generation computing. A significant portion of the course will cover the Internet of Things (IoT). Less emphasis will be given to the hardware and device level details.					
Course Objective	This course is designed to improve the learners' EMPLOYABILITY SKILLS by using EXPERIENTIAL LEARNING techniques using AI & IOT.					
Course Outcomes	On successful completion of this course the students shall be able to: (1) Describe the various types of location based architectures and its application. (2) Discuss the basics of context aware architecture and its applications. (3)Explain the augmented reality of digital pen and paper. (4)Employ techniques IoT in data processing and analysis.					
Course Content:						
Module 1	Introduction to **Networking Basics and Location in ubiquitous computing:**	Quiz	Memory Recall based Quizzes	**10Sessions**		
Topics: Overview, Challenges, NFC, Wireless LAN, Personal assistants, Location aware computing, Location tracking, Architecture, Location based service and applications, Location based social networks (LBSN), LBSN Recommendation.						
Module 2	**Context-aware computing**	Assignment/Quiz	Theoretical Understanding	**11 Sessions**		
Topics: Context and Context-aware Computing, Issues and Challenges, Developing Context-aware Applications, System Architecture, Privacy and security in ubiquitous computing, Energy constraints in ubiquitous computing.						
Module 3	**Wearable and Mobile affective computing**	Assignment/Quiz	Theoretical Understanding	**7 Sessions**		

Topics:
Glass and Augmented Reality, Eye-Tracking, Digital Pen and Paper, Mobile social networking & crowd sensing, Event based social network, Human Activity and Emotion Sensing, Health Apps, Mobile p2p computing, Smart Homes and Intelligent Buildings, Mobile HCI.

Module 4	**Introduction to IoT and data analytics**	Assignment	Theoretical Understanding	**9 Sessions**

Topics:
Definition, trend, IOT components, IOT Applications, Cloud centric IOT, Open challenges, Architecture, Energy Efficiency, Participatory sensing, New Protocols, QoS, QoE, IOT and Data Management, Data cleaning and processing, Data storage, models, Search techniques.

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used: Application Area is in the field of assistive robotics, Automatic machine translation, object detection etc.

Professionally Used Software: python/C,C++,Jupyter Notebook on cloud/ MATLAB.

Project work/Assignment:

1.Case Studies: At the conclusion of each module, we will have a 'case-based' discussion session for approximately half the class period. Cases will be from lecture / journal article content by considering a 'real-world' scenario where the course concepts can be applied. We will post the case one week in advance. For each case, each student from each group formed will write a 1-2-page executive summary outlining their understanding, including relevant analyses, schematics, and graphs. Guidelines on report format will be provided with the first case.**Presidency University Library Link.**

2.Book/Article review: At the end of each module, a book or an article will be given to each student. They need to visit the library and write a report on their understanding about the assigned article for 1 page.

3.Presentation: There will a group presentation on latest trends and advancements in Wearable robots**.**

Text Book(s):

Date of Approval by the Academic Council	Meeting No. 18th, Dated 03/08/2022

Course Code: **ECE3072**	**Course Title:Secure Wearable Internet of Things** **Type of Course: Discipline Elective- AI and Wearable Technologies Basket**		**L- T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**To succeed in this course the student should be comfortable with basic concepts of Wireless communication standards: Bluetooth - IEEE 802.15.1, Wireless LAN- IEEE 802.11(WiFi). The basic Fundamentals of communication, Signal Types and its characteristics, Data Transmission Types, Communication Techniques, Data Transmission Modes, Network Topologies and its applications and also Microcontroller units, Architecture, interfaces and memory architecture.**					
Anti-requisites	**NIL**					
Course Description	**The course is designed for undergraduate students to introduce the field of secure wearable IOT technology. Wearable technologies field has been experiencing explosive growth with exciting applications in the fields of medicine, sports, fitness, entertainment, as well as new ways for people to interact, communicate, and experience the environment around them. Internet of Things (IoT) works with sensors and software in wearable technologies to provide a communications network that allows data collection and information exchange for wearable devices. The applications of this exciting new field ranges from helping in managing chronic diseases to experiencing entertainment like sports and games in a virtual-reality setting.**					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Secure Wearable Internet and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING.					
Course Outcomes	On successful completion of this course the students shall be able to: 1) Design and develop IoT end points for wearable applications. 2) Identify the real-world problem and give IoT solutions. 3) Analyse and select appropriate protocols and wireless techniques for secured IOT. 4) Summarize various implementation and roadmaps of Wearable Device Technology.					
Course Content:						
Module 1	Role of IoT in wearable devices	Assignment	Programming and simulation Task	**8 Sessions**		
Topics: Smart connectivity and Big picture of IoT-smart devices, networks, Wireless technologies and need for data analysis. Evolution of wearable technology, Wearable IoT use cases-Smart watches, Android wear, Smart glasses, fitness trackers, health care devices, cameras and smart clothing.						
Module 2	IoT supported	Assignment	Case studies	10		

	technologies: Internet/Web and networking basics,Hardware platforms			Sessions
Topics: OSI model, data transfer referred with OSI model, IP Addressing, point to point data transfer, point to multi point data transfer & network topologies, sub-nets, network topologies referred with web, introduction to web servers and cloud computing. Network Fundamentals: Overview and working principle of wired and wireless networking equipment's – router, switches, access points, and hubs.				
Module 3	IOT architecture and application development	Project Assignment	Implementation	8 Sessions
Topics: IoT functional requirements, building blocks, IoT architecture layers, cloud and fog based architecture, M2M – Machine to Machine architecture, Web of Things, physical layer, MAC layer, 6LoWPAN security aspects in IoT.Application Protocols: MQTT, REST/HTTP, CoAP, MySQL Back-end Application Designing.				
Module 4	Implementations and RoadMap	Presentation		8 Sessions
Topics: Role of Wearables, Attributes of Wearables, The Meta Wearables – Textiles and clothing, Social Aspects: Interpretation of Aesthetics, Adoption of Innovation, On-Body Interaction; Case Study: Google Glass, health monitoring, Wearables: Challenges and Opportunities, Future and Research Roadmap.				
Targeted Application & Tools that can be used: Applications: Wireless Communication like 5G,LoRa Tools: Wireshark,SOASTACloudTest,Shodan/MATLAB

Course Code: **ECE3073**	**Course Title: Wearable Prosthetics and Robots** **Type of Course: Discipline Elective- AI and Wearable Technologies Basket**	**L-T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**Basic concepts of mechatronics and biomechanics**					
Anti-requisites	**NIL**					
Course Description	The purpose of this course is to enable the students to understand the fundamentals of wearable robot which is a mechatronic system that is designed around the shape and function of the human body, with segments and joints corresponding to those of the person it is externally coupled with. This course gives an overview of wearable robotics, providing the students with a complete understanding of the key applications and technologies suitable for its development. The courses develop technical thinking skills of the students and make them aware of the technology which is now employed in telemanipulation, man-amplification, neuromotor control research and rehabilitation, and to assist with impaired human motor control.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Wearable Prosthetics and Robots and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING					
Course Outcomes	On successful completion of this course the students shall be able to: (1) Describe the various types of exoskeletons and its application. (2) Discuss the basis of bioinspiration and biomimetic in wearable robots (3) Explain the kinematics dynamics involved in wearable robots. (4) Employ techniques for human-robot cognitive interaction.					
Course Content:						
Module 1	Introduction to Wearable Robots	Quiz	Memory Recall based Quizzes	**10Sessions**		
Topics: Wearable robots and exoskeletons, role of bio inspiration and bio mechatronics in wearable						

robots, Technologies involved in robotic exoskeletons,A classification of wearable exoskeletons: application domains.				
Module 2	Basis for bioinspiration and biomimetic in wearablerobots	Assignment/Quiz	Theoretical Understanding	**9 Sessions**
Topics: Introduction; General principles in biological design: Optimization of objective functions-energy consumption, Multifunctionality and adaptability, Evolution; Development of biologically inspired design: Biological models, Neuromotor control structures and mechanisms as models, Muscular physiology as a model, Sensorimotor mechanisms as a model, Biomechanics of human limbs as a model.				
Module 3	Kinematics and dynamics of wearable robots	Assignment/Quiz	Theoretical Understanding	**7 Sessions**
Topics: Introduction; Robot mechanics-motion equations: Kinematics analysis, Dynamic analysis; Human biomechanics: Medical description of human movements: Arm Kinematics, Leg kinematics, Kinematic models of the limbs, Dynamic modelling of the human limbs; Kinematics redundancy in exoskeleton systems: Introduction to kinematic redundancies, Redundancies in human-exoskeleton systems.				
Module 4	Human–robot cognitive interaction	Assignment	Theoretical Understanding	**9 Sessions**
Topics: Introduction to human–robot interaction; cHRI using bioelectrical monitoring of brain activity; Physiology of brain activity; Electroencephalography (EEG) models and parameters; Brain-controlled interfaces: approaches and algorithms; cHRI through bioelectrical monitoring of muscle activity (EMG); Physiology of muscle activity; Electromyography models and parameters; Surface EMG signal feature extraction; Classification of EMG activity; Force and torque estimation;cHRI through biomechanical monitoring ; Biomechanical models and parameters; Biomechanically controlled interfaces: approaches and algorithms.				
Targeted Application & Tools that can be used: Application Area is in the field of assistive robotics **Professionally Used Software: python/C,C++**

Module 3	**Communication in IoT**	Assignment/ Quiz	Memory Recall based Quiz	**11 Sessions**
Iot Accessing technology- IEEE 802.15.1, networking layers, physical layer and topology. IPV4 and IPV6 Addressing IoT nodes, IoT Edge, 6LOWPAN, MQTT, AMQP, COAP and MDNS, Web socket Application aware communication, Network and channel aware communication – Topologies and Hierarchy, IoT LAN and WAN connectivity RFID, BLE,LPWAN , LORA .Real time application of IoT.				
List of Laboratory Tasks: NIL				
Targeted Application & Tools that can be used: Important Applications range from civilian to defense sectors. These domains include agriculture, space, healthcare, manufacturing, construction, water, and mining, which are presently transitioning their legacy infrastructure to support IOT Professionally Used Software: Kiel, C and Python, Arduino boards and Raspber-iPi				
Project Work/Assignment:				
1.Case Studies: At the end of the course students will be given a 'real-world' application based circuits like Power Amplifier, Signal/Function Generator etc. as a case study. Students will be submitting a report which will include Circuit Diagrams, Design, Working Mechanism and Results etc. in appropriate format. **2. Book/Article review: At the end of each module a book reference or an article topic will be given to each student. They need to visit the library and write a report on their understanding about the assigned article in appropriate format.**Presidency University Library Link . **3. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.** **4. Assignment:Project Assignment: Design a IOT based application for healthcare and agriculture and physically challenged peoples.** **Assignment: 1] Write a brief report on Current IOT based systems available and identify their components, the Network they are using to communicate.** **Assignment: 2] Design a IOT based application for** a. **Health care** b. **Agriculture** c. **Transport Management** 1 **Stock Management** e. **COVID-19**

Course Code: **ECE3076**	**Course Title:** **IoT Platforms and Application Development** **Type of Course:Discipline Elective- IOT and Sensor Technologies Basket**	**L-T-P- C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Basic conceptual understanding of electric circuits with sensors to connect to IoT components. Familiarity with these networking protocols and web development concepts is highly recommended.					
Anti-requisites	NIL					
Course Description	This course on Internet of Things (IoT), is meant for any engineering undergraduate / graduate to acquire fundamental knowledge about the what, why, and how of IoT. It teaches you from the very basic building blocks of IoT, their relationship, and expands the details of developing these building blocks and making some end-to-end applications using IoT.					
Course Objective	This course is designed to improve the learners " EMPLOYABILITY SKILLS" by using PARTICIPATIVE LEARNING techniques using "THINKSPEAK" (Known as the cloud IoT platform with MATLAB analytics)					
Course Outcomes	On successful completion of this course the students shall be able to: 1. Explain the need and requirement for IoT Protocols. 2. List the most popular platforms on which IoT is employed. 3. Identify the networking requirements for a given IoT application. 4. Implement a given IoT scenario on a simulation platform.					
Course Content:						
Module 1	Introduction to IoT platform	Assignment/ Quiz	Memory Recall based Quizzes	**12 Hours**		
Background of IoT. Overview of IoT platforms: Platforms Supporting Network Servicing, Platforms Sitting Between Networks and Applications, Application-Layer Development Platforms. Listing the functionalities and capabilities of good IoT Platform. Building Blocks of an IoT Solution. Functional Blocks of an IoT Solution.						
Module 2	Essential requirement for Building IoT Platform	Assignment/ Quiz	Memory Recall based Quizzes	**12 Hours**		
Deciding Cloud Instance Specifics, Expanding on the IoT Platform Block Diagram: Edge Interface, Message Broker, and Message Bus, Message Router and Communications Management, Time-Series Storage and Data Management, REST API Interface, Microservices, Rule Engine, Device Manager and Application Manager.						
Module 3	Connecting with the Platform in Real Time	Assignment/ Quiz	Memory Recall based Quizzes	**11 Hours**		
Using MQTT as the Message Broker, Data Storage Schema, Accessing Platform Resources Through APIs, Data Accessing APIs, Elementary Microservices and Utilities, Routing and Filtering Data and Messages,						
Module 4	Block-level architecture of IoT platform	Assignment/ Quiz	Memory Recall based Quizzes	**10 Hours**		

Initializing the Cloud Instance, Installing Basic Software Stacks, Securing the Instance and Software, Installing Node.js and Node-RED.

Targeted Application & Tools that can be used:

JOBS-

- Collecting data using IoT devices as a data analyst.
- Designing PCB's like an embedded programs engineer.
- Setting up sensors and actuators as a professional in the field to meet application and design specifications.
- Leveraging customer understanding through user interface roles that define specifications and specialisations.
- Working with hardware and devices through integration.
- Working in security to face the internet's core problems and safeguard users and applications from malicious attacks.
- Deploying solutions as a network and networking structure expert.

TOOLS – MATLAB, Embedded-C/C++ and Python.

Project work/Assignment:

1.Case Study- Industry 4.0 Platform Helps Advance Smart Manufacturing Operations:

A leading global tool manufacturing company with multiple lines of business and more than 100 factories worldwide lacked visibility into production metrics, such as overall equipment effectiveness (OEE). With machines varying in age and complexity, and two fundamentally different types of facilities, few assets were instrumented with sensors that provided data analytics to management. The objective was to create significant value—in the hundreds of millions—in the next five years as it moves from a focus on efficiency improvements to an Industry 4.0 platform that promotes connectivity and digital visualization.
https://www.cognizant.com/us/en/case-studies/industrial-iot-platform

2. Book/Article review:

At the end of each module a book reference or an article topic will be given to each student. They need to visit the library and write a report on their understanding about the assigned article in appropriate format.

3. Presentation:

There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

4. Project Assignment:

With cities and urban areas getting crowded by the minute, finding a parking space is nothing short of a challenge. It is not only time-consuming but also quite frustrating. For solving the parking problem crisis, develop IoT-based smart parking system to avoid unnecessary travelling and harassment in the search for an appropriate parking area.

Assignment1: If you are at a parking space, the developed model should use an IR sensor to monitor the entire area during the run time and provide you an image for the same. This allows you to see any free spaces in the parking lot and drive straight to it without wasting any time in looking for a parking space. **Assignment2:** The developed model should tun ON to open the car gate only if there are empty slots available in a parking space.

Recommended by the Board of Studies on	15th BOS held on28/07/2022
Date of Approval by the Academic Council	Meeting No. 18th, Dated 03/08/2022

Course Code: ECE3078	**Course Title: IoT and Cloud Computing** **Type of Course: Discipline Elective- IOT and Sensor Technologies Basket**		**L-T-P- C**	3	**0**	**0**	**3**
Version No.	2.0					
Course Pre-requisites	**Basics of Network Protocols**					
Anti-requisites	**NIL**					
Course Description	The purpose of this course is to enable the students about the Computing basics and its services which include SaaS, PaaS, and IaaS. It also deals with different types of cloud such as Google, Amazon, IBM, Redhat, Microsoft and Salesforce.com					
Course Objective	The objective of the course is to familiarize the learners with the concepts of IoT and Cloud Computing and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING.					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. **Understand** the various concept of Cloud Computing. 2. **Explain** the Concept of Broad Network Access 3. **Interpret** Application Programming Interface (API) and Cloud Deployment Models. 4. **Analyze** of various service platforms					
Course Content:						
Module 1	**Overview and Introduction of Computing**	Assignment / Quiz	Implementation using Simulation tools	**14 sessions**		
Topics: Recent trends in Computing - Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing. Evolution of cloud computing - Business driver for adopting cloud computing. Introduction to Cloud Computing, History of Cloud Computing, Cloud service providers. Properties, Characteristics & Disadvantages - Pros and Cons of Cloud Computing, Benefits of Cloud Computing, Cloud computing vs. Cluster computing vs. Grid computing. Role of Open Standards.						
Module 2	**Cloud Computing Architecture**	Assignment / Quiz	Implementation using Simulation Tools	**13 sessions**		
Topics: Cloud computing stack - Comparison with traditional computing architecture (client/server), Services provided at various levels, How Cloud Computing Works, Role of Networks in Cloud computing, protocols used, Role of Web services. Service Models (XaaS) - Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Software as a Service (SaaS). Deployment Models, Public cloud, Private cloud, Hybrid cloud, Community cloud.						
Module 3	Platform as a Service (PaaS)	Assignment / Quiz	Implementation using Simulation Tools	**12 sessions**		

Topics:
Platform as a Service(PaaS) What is PaaS, Service Oriented Architecture (SOA), Cloud Platform and Management, Examples like Google App Engine. storage as a service, Data storage in cloud computing (storage as a service). Renting, EC2 Compute Unit, Platform and Storage, pricing, customers.

Targeted Application & Tools that can be used:
Targeted Applications: Computing in all of the IoT applications connected to server.

Professionally Used Software: Python , Eclipse , Thinger.io

Project work/Assignment:

Project Assignment:
1. Article review: At the end of course an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. **Presidency University Library Link .**

3. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

4. Project Assignment:- Implementation of various concepts in from deep learning using Python/ MATLAB/ SCILAB

Date of Approval by the Academic Council	Meeting No. 18th, Dated 03/08/2022

Course Code: ECE3080	**Course Title: IOT Edge Nodes and its Applications** **Type of Course : Discipline Elective- IOT and Sensor Technologies Basket**	**L- T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Basic concepts of Real Time Operating Systems, Embedded Systems, and C /C++ skills.					
Anti-requisites	**NIL**					
Course Description	This course provides insights into the fundamentals of IOT based systems that develop the knowledge of both hardware and software to design and implementation Real time automated Applications in industrial level. The course emphasizes on the IOT node technology, highlighting the practical methodology, verification through testability in real time applications. The course also demonstrates the use of software languages and tools that supports to design for high level simulation and synthesis.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of IOT Edge Nodes and its Applications and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING					
Course Outcomes	On successful completion of this course the students shall be able to: **1.** Summarize the concept of IOT/IIOT and architecture of IoT/IIOT **2.** Demonstrate the computing types and highlight its importance in edge computing **3.** Illustrate the Technical design constraints needed in the IOT. **4.** Analyze the implementable edge computing based Internet of things **5.** Utilize the IOT platforms and understand the hardware deployment for IoT.					
Course Content:						
Module 1	**Industrial IOT Introduction IIoT Architecture**	Quiz	Memory Recall based Quizzes	**10 session**		
Topics: Components of IIOT - Sensors, Interface, Networks, Key terms – IOT Platform, Interfaces, API, clouds, Data Management Analytics, Sustainability through Business excellence tools Challenges Various Architectures of IOT and IIOT, Advantages & disadvantages, Industrial Internet - Reference Architecture; IIOT System components: Sensors, Gateways, Routers, Modem, Cloud brokers, servers and its integration, WSN, WSN network design for IOT						
Module 2	**Challenges in Federating Edge Resources**	Assignment/ Quiz	Memory Recall	**10 session**		
Topics: Relevant Technologies of Edge Computing ,Cloud-Hierarchy of Edge Computing-Business Models-Opportunities and Challenges ,Challenges in Federating Edge Resources ,Methodology-Integrated C2F2T Literature by Modeling Technique-Integrated C2F2T ,Literature by Use-Case Scenarios-Integrated C2F2T,Management and Orchestration of Network Slices in 5G, Edge, and Clouds						

Module 3	**Gateway Network and Challenges in IoT**	Assignment/ Quiz	Analysis and Verification	**10 session**
Topics: Implementation of IoT Edge Gateway; Edge Architecture: CloudPath; A Multi-Tier Cloud Computing Framework Femto Clouds; Leveraging Mobile Devices to Provide Cloud Service at the Edge Fast; Scalable and Secure Onloading of Edge Functions Using Air Box, computational resources- Data-storage. Virtualization concepts - Types of Virtualization Introduction to Various Hypervisors - High Availability (HA)/Disaster Recovery (DR) using Virtualization.				
Module 4	**Developing IoT Solutions and Domain specific applications**	Assignment/ Quiz	Application	**10 session**
Topics: Introduction to IoT tools, Developing applications through IoT tools, Developing sensor based application through embedded system platform, Edge Analytics, Edge Security and Artificial Intelligence(AI). Home automation; Industry applications; Surveillance applications; Other IoT applications.				
List of Laboratory Tasks: Nil				

Targeted Application & Tools that can be used:

Targeted Applications: Data analytics, Network and Structure, Protection, Device and Hardware, Cell and UI development, Cloud management, Network Security.

Professionally Used Software – MATLAB, Embedded-C/C++ and Python.

Date of Approval by the Academic Council	Meeting No. 18th, Dated 03/08/2022

Course Code:ECE3081	**Course Title:Security and Privacy in Traditional IoT Systems** **Type of Course: Discipline Elective- IOT and Sensor Technologies Basket**		**L-T-P-C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites	**Basic understanding of Microprocessors and Microcontroller. Interfacing of Raspberry pi. Basic knowledge of computer system architecture.**						
Anti-requisites	**NIL**						
Course Description	**The course is designed for intermediate users of IoT, with basic understanding of IoT and other allied systems; one should be able to implement security and privacy in traditional IoT systems to enhance the workability and trustworthiness of the overall deployed system. It focusses on a systematic approach of studying the vulnerabilities and countering them using available techniques and algorithms.**						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Security and Privacy in Traditional IoT Systems and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING.						
Course Outcomes	On successful completion of this course the students shall be able to: 1. Identify the areas of cyber security for the Internet of Things. 2. Assess different Internet of Things technologies and their applications. 3. Model IoT to business 4. Customize real time data for IoT applications. 5. Identify various applications and use cases of IoT						
Course Content:							
Module 1	**Introduction to IoT – Cyber Physical Systems**	Quiz	Memory Recall based Quizzes				**10 Classes**
Topics:IoT and cyber-physical systems, IoT security (vulnerabilities, attacks, and countermeasures), security engineering for IoT development, IoT security lifecycle. Network Robustness of Internet of Things- Sybil Attack Detection in Vehicular Networks- Malware Propagation and Control in Internet of Things- Solution-Based Analysis of Attack Vectors on Smart Home Systems							
Module 2	**IoT Standards and Applications**	Assignment / Quiz	Memory Recall Based				**10 Classes**
Topics: IoT standards in practice, Operating platforms and systems, design of IoT systems, development of prototypes, Applications: Lighting as a service, Smart Parking and Smart water management, Challenges in Mission critical applications and big data management.							
Module 3	**Privacy Preservation**	Assignment	System Design Based				**12 Classes**

	and Trust Models			
Topics: Privacy Preservation Data Dissemination- Privacy Preservation Data Dissemination- Social Features for Location Privacy Enhancement in Internet of Vehicles- Lightweight and Robust Schemes for Privacy Protection in Key Personal IoT Applications: Mobile WBSN and Participatory Sensing Authentication in IoT- Computational Security for the IoT- Privacy-Preserving Time Series Data Aggregation- Secure Path Generation Scheme for Real-Time Green Internet of Things- Security Protocols for IoT Access Networks- Framework for Privacy and Trust in IoT- Policy-Based Approach for Informed Consent in Internet of Things.			
Module 4	**IoT Security and Recent Trends**	Assignment	System Design Based	**07 Classes**
Topics: Security and Impact of the Internet of Things (IoT) on Mobile Networks- Networking Function Security-IoT Networking Protocols, Secure IoT Lower Layers, Secure IoT Higher Layers, Secure Communication Links in IoTs, Back-end Security -Secure Resource Management, Secure IoT Databases, Security Products-Existing Test bed on Security and Privacy of IoTs, Commercialized Products.

Catalogue prepared by	Nipun Sharma
Recommended by the Board of Studies on	15th BOS held on28/07/2022
Date of Approval by the Academic Council	Meeting No. 18th , Dated 03/08/2022

Course Code: ECE3082	**Course Title: Data Science for IOT** **Type of Course: Discipline Elective- IOT and Sensor Technologies Basket**	**L-T-P-C**	**3**	**0**	**0**	**3**
Version No.	2.0					
Course Pre-requisites	**Basic concepts of Microprocessor programming and memory interfacing, knowledge of Python and Embedded C.**					
Anti-requisites	**NIL**					
Course Description	The purpose of this course is to support the students to understand the fundamentals of Data Science and Internet of Things (IOT) along with real time applications. The course will give awareness to students, about how two independent technologies depend on each other. This course explains students about how IOT would collect data from physical objects through different sensors, and how big data will allow the faster and more efficient storage and processing of data. This course will make students to understand the meaning of big data, which is to process a large amount of data on real time basis by using different storage technologies. This course will help the students who want to choose their career as Data Scientists or IOT Analyst and also encourage students to become entrepreneurs to launch new products in IOT and Data Science.					
Course objective	The objective of the course is to familiarize the learners with the concepts of Data Science for IOT and attain EMPLOYABILITY SKILLS through PARTICPATIVE LEARNING.					
Course Outcomes	**On successful completion of this course the students shall be able to:** **CO1**: Explain the various concepts, terminologies and architecture of IOT systems. **CO3**: Recognize the role of big data, cloud computing and data analytics in a typical IOT system. **CO3:** Interface a node MCU to collect online data and carry out the computation.					
Course Content:						
Module 1	**Fundamentals of IOT**	Assignment/Quiz	IOT architectures, Frameworks and M2M	**15Sessions**		
Introduction, Definitions & Characteristics of IOT, IOT Architectures, Physical & Logical Design of IOT, Enabling Technologies in IOT, History of IOT, About Things in IOT, The Identifiers in IOT, About the Internet in IOT, IOT frameworks, IOT and M2M						
Module 2	**Data Handling& Analytics**	Project	Data Analysis task	**15Sessions**		
Introduction, Big data, Types of data, Characteristics of Big data, Data handling Technologies, Flow of data, Data acquisition, Data Storage, Introduction to Hadoop. Introduction to data Analytics, Types of Data analytics, Local Analytics, Cloud analytics and applications						
Module 3	**Applications of IOT**	Assignment	IOT and Data Science. Real time applications	**10Sessions**		

What is ESP8266 node-MCU ☐ Hardware Knowledge ☐ Hand Shake with ESP8266 ☐ Developing the Environment ☐ Overview about the board. Home Automation - Creating Webpage Button, Adding up required WEBPGE Elements Controlling Devices

Targeted Application & Tools that can be used:

Application Areas: Machine Learning, Deep Learning, Security Application, Home Automation, Wireless Communication in telecom industries.

Professionally Used Software: Python, Embedded C, google cloud fire base

Topics related to development of "EMPLOYABILITY"**:** Home Automation, Smart Cities for developing Employability skill through Participative Learning techniques. This is attained through assessment component mentioned in course handout

Catalogue prepared by	Dr. K BhanuRekha Ms. R Anusha
Recommended by the Board of Studies on	15th BOS held on28/07/2022
Date of Approval by the Academic Council	Meeting No. 18th, Dated 03/08/2022

Course Code: ECE3083	**Course Title: Hardware and Software Architecture for secured IoT Systems** **Type of Course: Discipline Elective- IOT and Sensor Technologies Basket**		**L- T-P-C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites	Basic understanding of communication protocol stacks. Interfacing of Raspberry pi. Assembly language programming and computer system architecture knowledge.						
Anti-requisites	NIL						
Course Description	The course aims at studying holistically the software and hardware architectures of IoT Systems for better understanding of deployment in the real world. As both the architectures work in conjunction with each other so the course aims at systematically exploring key anchor points between the two and how they can create a functional IoT system.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Hardware and Software Architecture for secured IoT Systems and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques.						
Course Outcomes	On successful completion of this course the students shall be able to: 1. To impart knowledge on the infrastructure, sensor technologies and networking technologies of Internet of Things (IoT). 2. Analyze, design and develop IoT solutions. 3. Identify software and hardware requirements to design IoT Systems 4. Apply the concept of Internet of Things in the real-world scenarios						
Course Content:							
Module 1	**IoT Fundamentals and Reference Architecture, Software Design**	Quiz	Memory Recall based Quizzes	**10 Classes**			
Topics: Definition & Characteristics of IoT - Challenges and Issues - Physical Design of IoT, Logical Design of IoT - IoT Functional Blocks, Security. Control Units – Communication modules – Bluetooth – Zigbee – WIFI – GPS- IOT Protocols (IPv6, 6LoWPAN, RPL, CoAP etc..), MQTT, Wired Communication, Power Sources							
Module 2	**Programming the microcontroller for IoT**	Assignment / Quiz	Programming and Simulation task	**10 Classes**			
Topics: IOT structure - RFID, Wireless Sensor Networks, SCADA (Supervisory Control and Data Acquisition), M2M - IOT Enabling Technologies - BigData Analytics, Cloud Computing, Embedded Systems. Working principles of sensors – IOT deployment for Raspberry Pi /Arduino/Equivalent platform – Reading from Sensors, Communication.							
Module 3	**Resource management and Web of Things**	Assignment	Simulation Tasks	**12 Classes**			

Topics: Clustering, Clustering for Scalability, Clustering for routing, Clustering Protocols for IOT The Future Web of Things – Set up cloud environment –Cloud access from sensors– Data Analytics for IOT- Rest Architectures- The web of Things				
Module 4	**Hardware and Software of IoT**	Assignment	System Design Task and Analysis	**07 Classes**
Topics: IoT Physical Devices and Endpoints – Introduction to Raspberry PI-Interfaces (serial, SPI, I2C) Programming – Python program with Raspberry PI with focus of interfacing external gadgets, controlling output, reading input from pins. IoT Physical Servers and Cloud Offerings – Introduction to Cloud Storage models and communication APIs Webserver – Web server for IoT, Cloud for IoT, Python web application framework Designing a RESTful web API				
Project work/Assignment:				
Project Assignment: Implementing Cloud services on Decentralized platforms. Presentation: There will a group presentation on the programming assignment or any course related self-study topic/research related topic they had done. **Students will be made into group and given the programming assignment at the end of each module. Students need to use IoT Development Kits like Azure for these assignments.** **Tools:** **1. Arduino IDE, Arduino Cloud** **2. IoT Cloud Remote, Web Editor**

Course Code: ECE3084	**Course Title: Mobile App Development for IoT** **Type of Course: Discipline Elective- IOT and Sensor Technologies Basket**		**L- T-P-C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites	Basics of mobile device architecture, basics of computer communication concepts and programming languages used for mobile applications and also software engineering and mobile interfacing with different sensors for IoT Applications. The course emphasizes on working, analysis and design of mobile communication application for IoT. Additionally, this course will create a foundation for future courses such as secured mobile based communication for IoT based application.						
Anti-requisites	**NIL**						
Course Description	This is an advanced research-oriented course designed for undergraduate students. This course deals with fundamentals of Android operating systems and also development of software with reasonable complexity on mobile platform.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Mobile App Development for IoT and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques						
Course Outcomes	**On successful completion of this course the students shall be able to:** 1: Apply advanced techniques and tools of sensing and computation for industry 4.0 problems for the benefit of society. 2: Strong cognizance in the area of app development, sensors, IoT for mobile communication, data science and signal processing through the application of acquired knowledge and skills. 3: To learn how to develop Mobile Applications for IoT 4: Evaluate the wireless technologies for IoT.						
Course Content:							
Module 1	Introduction	Quiz	Memory Recall based Quiz	**8 sessions**			
Topics: Sensors and actuators, introduction to industry 4.0, development of mobile App, application and architecture of data link layer. Introduction to smart sensors							
Module 2	IoT devices and mobile networking protocols	Assignment/Quiz	Theory	**7 sessions**			
Topics: IoT Devices and Networking Protocols: IoT devices, Networking basics, Data link protocol: IEEE 802.15.4, IEEE 802.11 AH, Wireless HART, Z-Wave, Bluetooth low energy, Zigbee , Wi-Fi, 4G/LTE, LTE-A.							
Module 3	Evolution of	Assignment	Memory Recall based	**7 sessions**			

	IoT for Mobile Applications		Quiz	
Topics: Review of computer communication **concepts** (OSI layers, components, packet communication, Networks, TCP-IP, subnetting, IPV4 addressing and challenges).IPV6 addressing. IoT architecture reference layer.				
Module 4	IoT point to point Mobile communication technologies	Assignment	Comprehension based Quizzes and assignments	**8 sessions**
IOT communication Technologies : IOT network design and cloud networks, networking technologies for data centers, software designed networking, network virtualization techniques, Adaptive and cognitive networks, wireless networks for IOT and cloud

Topics Relevant to development of "Employability Skills": Sensors and Actuators, App development for developing **Employability Skills** through **Participative Learning techniques.** This is attained through assessment component mentioned in course handout.				
Targeted Application & Tools that can be used: **Application Areas: Home automation, Agriculture, Retail, Smart city, self-driven cars, wearables, Industrial internet** **Professionally Used Software: Python, Embedded C, Eclipse, React Native, Android studio** **1) Project Work: Development of IoT enabled - Smart watch, Cameras, Fitness meter etc.**				

Assignment:

1. **We will be able to find IoT examples in all parts of our lives. Use the reading assignments and online search to identify a concrete example of an IoT system (existing or futuristic) in each of the following application areas: home, healthcare, transportation, and community (i.e., four examples in total). For each example, provide a description of what the problem is that the IoT solves, how it solves it, who the users are, and what a risk of the example is (e.g., in terms of ethical concerns, privacy, safety, etc.). Limit each example description to 200 words.**

2. **Write a client-server based intruder detection system using 2 Pis, a PIR sensor, and an LED (and/or sounder). Student need to collaborate with one or more of his/her classmates for this task, i.e., student will need to test his/her client and server programs on two Pis simultaneously. One Pi will have the PIR sensor connected, the second Pi will operate the LED and/or sounder. The server Pi will use a callback function for motion detected by the PIR. The other Pi acts as client and queries the server for the PIR value once every 5 seconds; if an intrusion is detected, the alarm is raised (e.g., flashing LED or activated sounder).**

3. **Book/Article review: At the end of each module a book reference or an article topic will be given to each student. They need to visit the library and write a report on their understanding about the assigned article in an appropriate format.**

Course Code: ECE3085	**Course Title: Security and Privacy in Edge Native Solutions** **Type of Course: Discipline Elective- IOT and Sensor Technologies Basket**	**L-T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**Basic understanding of Microprocessor and microcontroller RISC and CISC hardware, ARM processors. Interfacing of Raspberry pi. Basics of blockchain and Bitcoin and inclination towards cryptocurrencies, NFTs and enterprise solutions**					
Anti-requisites	**NIL**					
Course Description	**The course aims at studying the security and privacy issues in Edge Native Solutions architectures of IoT Systems for better understanding of deployment in the real world. As both the aspects work in tandem with each other so the course aims at systematically exploring key anchor points between the two and how they can create a secure Edge Native IoT system.**					
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Security and Privacy in Edge Native Solutions and attain SKILL DEVELOPMENT through <u>PARTICIPATIVE LEARNING</u> techniques**					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. Identify the areas of cyber security for the Edge Native Computing. 2. Assess different Internet of Things technologies and their applications. 3. Implement Model Edge Native Solutions to enterprise with Authentication 4. Incorporate security systems using elementary blocks					
Course Content:						
Module 1	**IOT SECURITY AND TRUST MODELING**	Quiz	Memory Recall based Quizzes	**10 Classes**		
Topics: Cyber Security vs IoT Security, IoT common protocols, IoT vulnerabilities, IoT attacks, IoT risks, IoT countermeasures, Cryptography, Trust Models, Merkle trees, elliptic curves, public-key crypto(PKI), signature algorithms						
Module 2	**INTRUSION AND ANOMALY DETECTION**	Assignment / Quiz	Simulation Based	**10 Classes**		
Topics: Attacks in IoT ecosystems, Intrusion detection datasets, challenges in IoT IDS. Authentication in IoT- Computational Security for the IoT.						
Module 3	**SECURE COMMUNICATION NETWORK AND PROTOCOLS for IoT**	Assignment	Memory Recall based Quizzes	**12 Classes**		
Topics: Application layer Protocols for security IETFs CoAP, IBMs MQTT,IPv4/IPv6, RPL, 6LoWPAN (adaption) XMPP, AMQP, Transport Layer: UDP, DTLS, TCP, Network Layer.						
Module 4	**IOT Authentication and Access Control**	Assignment	Design Based	**07 Classes**		
Authentication in IoT- Computational Security for the IoT- Privacy-Preserving Time Series Data Aggregation- Secure Path Generation Scheme for Real-Time Green Internet of Things- Security Protocols for IoT Access Networks- Framework for Privacy and Trust in IoT- Policy-Based Approach for Informed Consent in Internet of Things.						
Project work/Assignment:						
Project Assignment: **Case Studies of Enterprises utilizing Permissioned blockchain for building Trust and**						

maintaining security.
Presentation: There will a group presentation on the programming assignment or any course related self-study topic/research related topic they had done.
Students will be made into group and given the programming assignment at the end of each module. Students need to use IoT Development Kits like Azure for these assignments.

Course Code: **ECE3087**	**Course Title:** IoT Robots **Type of Course: Discipline Elective- IOT and Sensor Technologies Baske**	**L-T- P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**[1] IoT Robots – ECE3087** Basic concepts of IoT and Robots along with the usage and application of IoT as well as Robots.					
Anti-requisites	**NIL**					
Course Description	**The aim of this course is to enable the students to understand the role of IoT in Robots. This course is both conceptual and application based which imparts the control of Robot using IoT. The comprehensive nature of the course covers a number of quizzes based on IoT and Robots so that students may judge themselves.**					
Course Objective	**This course is designed to develop <u>ENTREPRENEURIAL SKILLS</u> by using <u>EXPERIENTIAL LEARNING</u> techniques.**					
Course Outcomes	On successful completion of this course the students shall be able to: 1. Summarize the concept of IoT and architecture for Robots 2. Employ various MAC protocol and routing protocols 3. Demonstrate various feature extraction and event detection techniques using time-domain as well as frequency-domain analysis methods. 4. Employ various parametric and non-parametric models of certain physiological systems in IoT based Robots.					
Course Content:						
Module 1	**IoT Concept an Implementation**	Quiz	Memory Recall based Quizzes	**8 Classes**		
Topics: Introduction: IoT concepts, Definition, Characteristics, Components of IoT System, IoT Applications, Physical and logical design of IoT , IoT Standards, Relevance of IoT for the future, Challenges in IoT implementation , IoT for Robot, IoT in Indian Scenario, its opportunities.						
Module 2	**IoT AND M2M**	Assignment / Quiz	Smart objects and Network basics	**10 Classes**		
Topics: Introduction, M2M, difference between IoT and M2M, software defined networking (SDN) and network function virtualization (NFV) for IoT, basics of IoT system management with NETCONF-YANG						
Module 3	**Introduction to Robots**	Assignment	Robots and Classification	**10 Classes**		
Topics: Robots: Definition, Classification of Robots - Geometric classification and Control classification, Laws of Robotics, Robot Components, Coordinate Systems, Power Source. Robot anatomy, configuration of robots, joint notation schemes, work volume, position representation, forward and reverse transformations, Factors influencing the choice of a robot, Types of industrial robots Load handling capacity, general considerations in Robotic material handling.						
Module 4	**Robot Drives and Power Transmission Systems**	Assignment		**12 Classes**		
Topics: Robot drive mechanisms: Hydraulic/Electric/Pneumatics, servo & stepper motor						

drives, Mechanical transmission method: Gear transmission, Belt drives, Rollers, chains, Links, Linear to Rotary motion conversion, Rotary-to-Linear motion conversion, Rack and Pinion drives, Lead screws, Ball Bearings. Robot end Effectors: Classification of End effectors – active and passive grippers. Application of Robots in continuous arc welding, Spot welding, Spray painting, assembly operation, cleaning, robot for underwater applications.

Targeted Application & Tools that can be used:
Application Area is Robot applications by implementing IoT for industrial Robots.
Professionally Used Software:

Project work/Assignment:

Project Assignment:

1. **PPT presentation on Introduction to IoT concepts, Applications, use of IoT in Robots**
2. **PPT presentation on Cloud Computing, Real time analytics, Sensor Networks and other related topics.**
3. **PPT presentation on Introduction to Robots, Robot Components, Coordinate Systems.**
4. **PPT presentation on Industrial Robots**
5. **PPT presentation on Robot drives Mechanism and other related topics.**

Assignment: 1: A brief study on survey on Components of IoT, its application and implementation of IoT in Robot.

Assignment 2: Prepare a comprehensive report on role of IoT in Robot and ita application in Industrial Robot.

Topics relevant to development of "EMPLOYABILITY": Use of IoT in Robot
Topics relevant to "GENDER SENISITASATION":

Catalogue prepared by	Dr. Dharmesh Kumar Srivastava
Recommended by the Board of Studies on	BOS NO: 15th BOS held on 28/7/2022
Date of Approval by the Academic Council	Academic Council Meeting No. 18th , Dated 03/08/2022

Course Code: ECE3088	**Course Title: Internet of Medical Things (IoMT)** **Type of Course: Discipline Elective- IOT and Sensor Technologies Baske**	**L- T- P- C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Basics of Internet of Things and Biomedical Engineering					
Anti-requisites	**NIL**					
Course Description	The purpose of this course is to enable the students to appreciate the fundamental of Internet of Medical Things and its application in Healthcare Systems. This course is analytical in nature and needs a fair knowledge about basics of IoT related topics. The focus of the course will be to make health facilities accessible to everyone irrespective of their geographical location. Remote monitoring of the patients is one of the significant aspects of IoMT.					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. Summarize the architectures of IoMT Devices and their system applications. 2. Apply the IoMT Schema for Remote Patient Monitoring. 3. Examine the operation of Block chain Technology for Privacy-Protection of Medical health records. 4. Analyze the data compression methods for lossless Medical Data Transmission.					
Course Objective	**The objective of the course is to familiarize the learners with the concepts of Internet of Medical Things (IoMT) and attain SKILL DEVELOPMENT through <u>PARTICIPATIVE LEARNING</u> techniques**					
Course Content:						
Module 1	**Introduction to IoMT**	Quiz	Threats and Challenges of IoMT	**12 Sessions**		
Topics: Introduction to IoMT, IoMT Devices: On-Body Devices, In-Home Devices, Community Devices, In-Clinic Devices, In-Hospital Devices, IoMT System Architecture: Data Collection Layer, Data Management Layer, Medical Server Layer, IoMT Attack Types, Challenges in IoMT Security Schemes.						
Module 2	**Healthcare Schema using IoMT for Remote Patient Monitoring**	Assignment	Solution for Storage and Transfer of Medical Data in IoTM	**10 Sessions**		
Topics: Intelligent Transit Healthcare Schema Using IoMT Networking System: Vibration-Sensing Methodology for Accident Detection, System Safeguards, GPS Integration, Hospital Communication About Accident Location, MCU Connection with the ITH-IoMT Subsystem, GPS-Enabled Module for Location Information, ECG and Health Data Monitoring Schema.						
Module 3	**Privacy Protection of IoMT-Based Health Records using Blockchain Technology**	Assignment	GPS and GUI based medical data storage in EHR	**8 Sessions**		
Topics: Introduction to Blockchain, Applications of Blockchain, Blockchain Advantages						

and Challenges, Personal Health Data Collection, Virtual Private Server (VPS)-Based Hyperledger Fabric Framework, Remote Monitoring Software Development

Module 4	**Medical Data Compression for Lossless Data Transmission**	Assignment	Compression methods for telemedicine applications	**8 Sessions**

Topics: Introduction to Medical Data Compression**:** Lossless Compression , Lossy Compression, Significance of Medical Data Compression, Benefits of Medical Data Compression, Characteristics of Data Acquisition and Storage, Data Compression Techniques for Lossless Data Transmission: Coding Scheme, Bandwidth, Storage and Data Compression Techniques.

Targeted Application & Tools that can be used:

Application: It includes complete Healthcare Automation Setup in Medical field with an objective to make health facilities accessible to everyone irrespective of geographical location.
Professionally Used Software: ITM-IoMT System, GPS-GUI System, GPS-Framework uses Global Navigation Satellite System-(GNSS),GPS-gadgets to provide data on location, vehicle speed, time and direction.

QUIZ/Assignment:

1. Project/Programming Assignment: Students will be made into group and given the programming assignment at the end of each module. Students need to use **GPS-GUI** for this assignments.
Sample Assignment 1: Study of wearable smart devices for remote healthcare monitoring to detect cardiac diseases.
Sample Assignment 2: Smart assistance of elderly individuals in emergency situations at home.

2. Book Review/ Article review: A chapter of a book or an article will be given to each student. They need to visit the library and write a report on their understanding about the assigned article for 1 page. Presidency University Library Link:- https://presiuniv.knimbus.com/user#/home
Presidency University Library Link .
3. Presentation: There will a group presentation on the programming assignment or any course related self-study topic/research related topic they had done.

OPEN ELECTIVE

Course Code: **ECE1003**	**Course Title: Fundamentals of Electronics** **Type of Course: School Core Theory**	**L-T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**NIL**					
Anti-requisites	**Elements of Electronics Engineering (ECE1001); Analog Electronics (ECE2001), Digital Electronics (ECE2002)**					
Course Description	**The purpose of this course is to introduce the students to Electronics and Communication Systems. The course is conceptual and is an introductory level course. It is primarily intended at Non-Electronics background students and introduces the basic concepts of semiconductor devices and electronics engineering.**					
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Fundamentals of Electronics and attain **SKILL DEVELOPMENT** through **PARTICPATIVE LEARNING.**					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. Describe the significance of electronic devices, specifically diodes 2. Explain the operating principles of BJT and its applications. 3. Summarize the concepts of number system, Boolean laws and logic gates. 4. Discuss the basic concepts of Microprocessors and Communication systems.					
Course Content:						
Module 1	**Basic Electronic Components and applications**	Quizzes and assignments	Memory Recall based Quizzes and assignments	**10SESSIONS**		
Topics: Classification of materials into Resistors, Conductors, Insulators, Ohm's law, Kirchhoff's laws. Semiconductor materials: Intrinsic and extrinsic. Bands and Bonds. The p-n junction diode, Characteristics and Parameters, Diode ideal approximation (only one approximation) DC load line, Half-wave rectifier, Two-diode Full-wave rectifier, Bridge Rectifier(only operation, no derivations)Rectifier with capacitor Filter operation(only qualitative waveforms, no derivations), Zener and Avalanche breakdown.						
Module 2	**Bipolar Junction Transistors**	Quizzes and assignments	Memory Recall based Quizzes	**10 SESSIONS**		
Topics: BJT Construction, BJT operation, BJT Symbol, Voltages and Currents, Common Base, Common Emitter and Common Collector configurations. Alpha, Beta, Gamma and current conversions.CE Characteristics in active, saturation and cutoff. DC Load line concept. Concept of biasing and feedback for stabilization(only operation, no derivations)						
Module 3	**Digital**	Quizzes and	Programming and	**11**		

	Electronics	assignments	Simulation Task	**SESSIONS**
Topics: Number Systems: Decimal Number System, Binary Number System, Converting Decimal to Binary, and Binary to decimal, Hexadecimal to and from Binary, Complement of Binary Numbers(no subtractions) Boolean Algebra Theorems, De Morgan's theorems. Digital Circuits: Logic gates, NOT Gate, AND Gate, OR Gate, XOR Gate, NAND Gate, NOR Gate, X-NOR Gate, SOP AND-OR implementation, NAND-NAND Implementation.				
Module 4	**Introduction to Microprocessor and communication systems**	Quizzes and assignments	Memory Recall Quizzes and assignments	**9 SESSIONS**
INTEL 8085 MICROPROCESSOR: Basic Architecture and features of 8085 Microprocessor. Flags. **COMMUNICATION SYSTEM:** Block diagram of communication system, Modulation: Definition of Modulation, Need of Modulation, Types of Modulation: Amplitude Modulation and Frequency Modulation (Waveforms only).

Recommended by the Board of Studies on	**BOS Meeting NO: 15th, Dated BOS 28/07/2022**
Date of Approval by the Academic Council	**Academic Council Meeting No. 18th, Dated 03/08/2022**

Course Code: ECE1004	**Course Title: Microprocessor based Systems** **Type of Course: Open Elective &Theory Only**	**L-T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	NIL					
Anti-requisites	Microprocessor Programming and Interfacing (ECE3003)					
Course Description	**This course provides fundamental concepts of microprocessor-based systems. It also imparts knowledge of both hardware and software, culminating in a system design that can be used in real-world applications. The course highlights assembly language programs as well as hardware interconnections for commonly used applications.**					
Course Objective	The objective of the course is to familiarize the learners with the concepts **of Microprocessor based Systems** and attain **ENTREPRENEURIAL SKILLS** through **PARTICPATIVE LEARNING**.					
Course Outcomes	**On successful completion of this course the students shall be able to:** **(1) Discuss the architecture and working principles of 8086 microprocessor.** **(2) Develop solutions using assembly language programming using coding and debugging skills.** **(3) Apply methods to interface memories and input/output devices to the microprocessor.** **(4) Deploy techniques to design a microprocessor-based system by interfacing programmable peripheral devices like 8255, 8254 etc.**					
Course Content:						
Module 1	Fundamentals of Digital Systems and Microprocessors	Quiz	Memory Recall based Quizzes	**10Sessions**		
Topics: A quick review of Digital Systems – Number Systems, Logic Gates, Some important digital circuits like Multiplexers, Decoders, Flip-Flops / Latches and Registers. Intel's 8086 Microprocessor: Architecture, Programming Model, Pin Diagram, Min/Max Mode, Timing Diagram, Instruction cycle, Machine Cycle and T-states.						
Module 2	8086 Instruction Sets and Assembly Language Programming	Assignment / Quiz	Programming and Simulation task	**12 Sessions**		

Topics:
Addressing Modes: Register Addressing, Immediate Addressing, Direct Addressing, Register Indirect Addressing, Base-Plus-Index Addressing, Register Relative Addressing, Base Relative-Plus-Index Addressing, Memory Addressing Mode.

Instruction Sets: Data movement instructions, Program control instructions, Arithmetic and Logical Instructions, Stack Instructions, String Instructions. Assembly Language Programs.

Module 3	Introduction to Interfacing Techniques	Assignment	Memory Interfacing Task and Analysis	**10 Sessions**

Topics:
Review of some assembly programming concepts, I/O Interfacing: LEDs and toggle-switches as example, Memory Interfacing, Interrupts, Input/Output techniques: CPU initiated unconditional and conditional I/O transfer, device-initiated interrupt I/O transfer.

Module 4	Interfacing of Peripheral Devices with 8086	Assignment	System Design Task and Analysis	**09 Sessions**

Topics:

Peripheral Devices, Programmable Peripheral Interface (Intel 8255A, pin configuration, internal structure of a port bit, modes of operation, bit SET/RESET feature), Programmable Interval timer (Intel 8254): pin configuration, internal block diagram of counter and modes of operation and counter read methods, READ-BACK command of Intel 8254, Microprocessor based system design.

Catalogue prepared by	Mrs. Priyanka Ray
Recommended by the Board of Studies on	**BOS Meeting NO: 15th, Dated BOS 28/07/2022**
Date of Approval by the Academic Council	**Academic Council Meeting No. 18th, Dated 03/08/2022**

Course Code: ECE1005	**Course Title: Journey of Communications** **Type of Course: Open Elective**		**L-T-P-C**	3	0	0	3
Version No.	1.0					
Course Pre-requisites	Basic concepts of statistics, algebra and matrix operations					
Anti-requisites	**NIL**					
Course Description	The purpose of this course is to enable the students to appreciate the need **for fundamentals** of communications systems and basics of designing simple communication **systems. The** course progress with the element of communication systems, types of communication, electromagnetic waves, need **for modulation, basic types of** Modulation: Amplitude Modulation & Frequency Modulation. Different Types of receivers, discussion on Practical Frequency Modulation, Internet, FAX, Mobile telephony Emerging of Digital technology, Various multiplexing schemes and its applications. Application of the course includes conceptual orientation, theoretical framework and analysis, and Practical RF system design.					
Course Objective	The objective of the course is SKILL DEVELOPMENT of student by using PARTICIPATIVE LEARNING techniques					
Course Outcomes	**On successful completion of this course the students shall be able to:** **1) Discuss on the evolution of communication systems** **2) Summarizes the need for modulation and its types.** **3] Demonstrate AM and FM Modulation and Demodulation Process** **4] Compare the analog communication with Digital Communication Systems.**					
Course Content:						
Module 1	**Basic Terminology of Communication System**	**Assignment**	**Modeling Task, System Representation task**	**12 classes**		
Topics: History of Communication Systems: Transmission of Information:, Elements of Communication Systems, basic terminology used in electronic communication systems, bandwidth of signals, Source of signal transmission, bandwidth of transmission medium, Electromagnetic Spectrum. Communication Channels. Analog and Digital Types of Communication. Difference between Wireless communication and Wireline Communication, Application at Various Bands of Frequencies.						
Module 2	Electromagnetic Wave Analysis	Practical Assignment	Simulation and Signal analysis task	**12 classes**		

Topics:
shannon's channel capacity ,propagation of electromagnetic waves , ground waves, sky wave, space waves. modulation and its necessity, physical transmission media, networks: LAN,PAN,WAN, moorse code and its properties, development of first wireless telegraphy, numericals examples. practical applications: internet, fax, mobile telephony.

Module 3	Transceivers Modelling	Case Study	Simulation/Signal Analysis task	**9 classes**

Topics:
Amplitude Modulation, Analog AM Amateur Radio. Frequency Modulation, Receiver type: Tuned radio-frequency (TRF) receiver, Super heterodyne receiver.AM Receivers, FM Receivers .Numerical Examples

Module 4	Concepts of Digital Technology	Assignment	Simulation/Signal Analysis task	**9 classes**

Topics:
Sampling theory and practices, digital technology, digital fundamentals ,the binary number system ,digital electronics, fundamentals of data communications systems ,the emergence of data communications systems ,characteristics of data transmission circuits, digital codes, multiplexing - frequency-division multiplex time-division multiplex, elements of long-distance telephony.

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:
Application Area is Wireless Communication, design of RF Tx section and Rx sections for various trust areas like Walky-Talky, Cellular communications, PSTN networks, Internet etc.

Professionally Used Software: Matlab, Multisim and LabView.

Project Work/Assignment:

Project Assignment: To design the channel capacity of 250kbps using shannon's channel capacity technique.

CASE Study: Analyse the Practical FM Transmitter which works for the frequency band of 88-108 MHz . Identify the tuning process involved in receiving 98.1MHz radio station.

Assignment 1: Using sampling theorem design the sampling rate required for the PSTN Network designed for Voice communication.

Assignment 2: Design the RF Tuner circuit to receive the AM signal.

Course Description	**The purpose of this course is to introduce the students to Machine learning and decision systems. The course is both conceptual and analytical and develops critical design skills by introducing the concept of "Thinking by machines". We talk of gathering and processing of knowledge, and classifiers and controllers based on approximate reasoning. It is intended at introducing basic concepts to Non ECE and CSE students.**						
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Artificial Neural Networks and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques						
Course Outcomes	**On successful completion of this course the students shall be able to:** i. Distinguish Learning paradigms and Learning Algorithms for a simple neural network. ii. Explain the implementation of linearly separable/ Non- linearly separable problems with SLP/ MLP. iii. Illustrate the implementation of non-linearly separable problems with MLP. iv. Discuss various real time problems and their solutions using ANN.						
Course Content:							
Module 1	**Introduction To Artificial Neural Networks**	Assignments	Assignments				**09 SESSIONS**
Topics: **Module: 1:** Natural and artificial neuron, Models Of A Neuron, simple real world learning problem like a two year baby learning sweet milk versus fire. Neural Networks- Associated Graphs And Feedback, Network Architectures And Knowledge Representation, 4 Rules of Knowledge. Learning Processes, Learning Algorithms and learning Paradigms. ANNs							
Module 2	**Single layer perceptron for linearly separable problems**	Quizzes and assignments	Quizzes and assignments				**10 SESSIONS**
Topics: Single Layer Feed forward N/W, Multilayer Feed Forward N/W, Rosenblatt's Perceptron, Error correction algorithm, Hebbian learning algorithm and Perceptron convergence algorithm. Introduction to Digital Logic gates. Implementation of learning with different algorithms for linearly separable digital logic gates. Derivation of perceptron convergence theorem and Introduction to LMS algorithm. Concept and Domain of MLP for non-linearly separable problems where SLP is unsuitable (no derivations).							
Module 3	**Multilayer**	Quizzes and	Quizzes and assignments				**10**

	perceptron	assignments		**SESSIONS**
Topics: The back propagation algorithm, Forward path for function computation, back ward path for error computation and synaptic adjustments, X-OR Problem and why it cannot be implemented with SLP, Heuristics for making back propagation perform better.				
Module 4	**Applications of ANN**	Quiz	Quizzes and assignments	**11 SESSIONS**
Topics:**Applications**: Implementing Artificial Neural Network training process in MATLAB and Python, Introduction to CNN, Implementation of classification task on MATLAB, Implementation of image recognition using CNN on python, Demonstration of real time projects based on image classification on Teachables				

List of Laboratory Tasks:

NA

Targeted Application & Tools that can be used :

JOBS- AI & ML ENGINEERS IN SOFTWARE INDUSTRY, Data Scientist, Machine Learning Engineer, Research Scientist, Business Intelligence Developer, AI Data Analyst, Big data engineering, Robotics Scientist, AI engineer
TOOLS – PYTHON, MATLAB, JAVA.

Project work/Assignment:

1. Sample Project works - Iris Flowers Classification Project, MNIST Digit Classification Machine Learning Project, Stock Price Prediction using Machine Learning, Wine Quality Test Project, Music Genre Classification Machine Learning Project, Handwritten Character Recognition

2. **Sample Assignments –**

i. You went to an agriculture farm which cultivates vegetables. Identify any three problems which can be solved by machine learning and mention the steps of database preparation and training the models.
ii. Implement the perceptron model of a two-input XOR gate in MATLAB/ Python and verify the structure using the truth table.
iii. Please visit the college library or e-resource and find the below Journal and submit the report for the following paper (Attach the title of the journal and the paper)
iv. A single layer n/n is given with two input values [x1 x2]=[0.05 0.10]; and initial weights as w1=0.15 w2= 0.20 w3= 0.25 w4= 0.30 w5=0.40 w6=0.45 w7=0.50 w8=0.55; bias value as b1=0.35 b2=0.60; target value T1=0.01, T2=0.99. Show the steps for both forward and backward pass at the output layer.

3. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link .

Topics relevant to "ENTREPRENEURIAL SKILLS": Applications of ANN for developing **Entrepreneurial Skills** through **Participative Learning techniques**. This is attained through assessment component mentioned in course handout.

Catalogue prepared by	Ms Anupama S, Mr. Arvind Kumar
Recommended by the Board of Studies on	15th BOS held on 28/07/2022
Date of Approval by the Academic Council	Meeting No. 18th , Dated 03/08/2022

Course Code: ECE3090	**Course Title: Digital System Design using VERILOG** **Type of Course: Discipline Elective, General Basket Theory only**		**L- T-P- C**	**3**	**0**	**0**	**3**
Version No.	**2.0**						
Course Pre-requisites	**Low Power VLSI Design,** Foundations for VLSI Design						
Anti-requisites	**NIL**						
Course Description	The purpose of this course is to enable the students to understand the fundamentals of Digital and embedded systems. The course insights into the various methodology and models for real-world circuits and enhances student's abilities to implement programmable logic devices for specific chip design. The course emphasizes on memory types with error detection and correction techniques and also demonstrates the use of Hardware Description Language (HDL) to develop designs for high level synthesis and simulation.						
Course Objective	**This course is designed to improve the learners' <u>EMPLOYABILITY SKILLS</u> by using <u>EXPERIENTIAL LEARNING</u> techniques using open source Design Tools.**						
Course Outcomes	**On successful completion of the course students shall be able to:** **1) Construct** the combinational circuits, using discrete gates and programmable logic devices**.** **2) Describe** how arithmetic operations can be performed for each kind of code, and also combinational circuits that implement arithmetic operations. **3) Design** a semiconductor memory for specific chip design. **4) Design** embedded systems using small microcontrollers, larger CPUs/ DSPs, or hard or soft processor cores.						
Course Content:							
Module 1	**Introduction and Methodology**	Quiz	Memory Recall based Quiz	**12 Session**			
Topics: Digital Systems and Embedded Systems, Real-World Circuits, Models, Design Methodology; **Combinational Basics:** Combinational Components and Circuits, Verification of Combinational Circuits; **Number Basics:** Unsigned integers, Signed Integers, Fixed point Numbers, Floating point Numbers; **Sequential Basics:** Sequential Data paths and Control Clocked Synchronous Timing Methodology.							
Module 2	**Memories**	Assignment	Design and Simulation Based	**08 Session**			
Topics: Concepts of memory, Memory Types, Error Detection and Correction.							
Module 3	**Implementation Fabrics**	Project	Simulation and small hardware based	**12 Session**			
Topics:							

Integrated Circuits, Programmable Logic Devices, Packaging and Circuit boards, Interconnection and Signal integrity.

Module 4	**Design Methodology**	Project	Software design based	**08 Session**

Topics:
Design flow, Design optimization, Design for test, Nontechnical Issues

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:
Professionally Used Software: Xilinx-VIVADO or modelsim/MATLAB
Targeted Application:

1. Fuzzy Based PID Controller Devices using VHDL in Transportation.
2. Design and Implementation of a Real-time Traffic Light Control
3. Design and VLSI implementation of anti-collision robot processor using RFID technology
4. Various sensor and Biomedical Health Monitoring gadget implementation.

Project work/Assignment/Quiz:

1. **Students will be made into group and given the programming assignment at the end of each module. Students need to use VERILOG for these assignments.**

Sample Assignment 1: Design a cyclic redundancy Checker using Verilog. Compare the power and area consumption for the code using two different approaches. Design and implement in Xilinx-VIVADO. Also perform debugging using the available tools.
Sample Assignment 2: How to interface a mouse with Basys 3 FPGA in Verilog
Sample Assignment 3: Design a real time traffic control system using Verilog.

2. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format **Presidency University Library Link .**
3. **Presentation:** There will a group presentation on the programming assignment or any course related self-study topic/research related topic they had done.

Topics related to development of "ENVIRONMENT AND SUSTAINABILITY": Methods of Error Detection and Correction.

Catalogue prepared by	Ms. Maitraiyee Konar
Recommended by the Board of Studies on	10th BOS held on 17/01/2020
Date of Approval by the Academic Council	Meeting No. 16th , Dated 23/10/2021

Course Code: **ECE3091**	**Course Title: Mathematical Physics** **Type of Course: Open elective**	**L- T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Sound knowledge of engineering mathematics including differential and integral calculus, linear algebra, vector calculus, numerical methods and probability theory					
Anti-requisites	**NIL**					
Course Description	The purpose of this course will be to understand and appreciate the symbiotic relationship that exists between mathematics and physics. The course combines studies in physics and mathematics to provide the learner with the tools required to understand the physical world and gain an introduction to advanced mathematical theory. This course will build a strong foundation for careers in logistics management, market research, medical or research analysis, finance, consulting, fluid dynamics, and electrodynamics.					
Course Objective	**The objective of the course is <u>SKILL DEVELOPMENT</u> of student by using <u>PARTICIPATIVE LEARNING</u> techniques**					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. Solve ordinary and partial differential equations. 2. Demonstrate the applications of partial differential equations encountered in physical problems. 3. Apply the concepts of Green's function in solving PDEs related to problems pertaining to electrical and mechanical engineering. 4. Analyze the concepts of complex calculus and functions in advanced formulation.					
Course Content:						
Module 1	**Ordinary and Partial Differential equations**	Assignment/Quiz	Problem Solving	**12 Classes**		
Topics: Ordinary Differential equations – Forbenius method, solution by inspection, change of dependent variables, change of independent variables, Partial Differential Equations - Separation of Variables in Spherical Coordinates, solving wave and heat equations, Bessel, Laplace and Legendre PDE, Hermite and Laguerre polynomials, Gauss's hypergeometric series						
Module 2	**Applications of partial differential equations in physics and engineering**	Assignment/Quiz	Simulation	**10 Classes**		
Topics: The diffusion equation – Fick's law, diffusion in one dimension, diffusion with drift, sedimentation, equation of motion of fluid element, Euler's Equation, Barotropic Flow, Bernoulli's Principle in Steady Flow, Irrotational Flow and the Velocity Potential, vorticity, flow of a viscous fluid, Navier-Stokes equation, Classical Electromagnetism, Maxwell's Field Equations, The Scalar and Vector Potentials, Gauge Invariance and Choice of Gauge, The Coulomb Gauge, Electrostatics, Magnetostatics, The Lorenz Gauge						
Module 3	**Green's function**	Assignment	Simulation	**8 Classes**		
Topics: Sturm-Liouville problem, Green's function in engineering, Green's function in closed form and series form, Green's identities, solution of PDEs using Green's functions – scalar Helmholtz equation (rectangular, cylindrical and spherical coordinates), dyadic Green's functions						

Module 4	Complex analysis	Assignment	Problem Solving	12 Classes

Topics: Complex calculus - Riemann sphere, analytic functions, Cauchy-Riemann equations, power series as analytic functions, Cauchy's integral theorem, singularities, contour integration, Mobius transformation and applications of conformal mapping in electrostatics

Targeted Application & Tools that can be used:
This course will lay a foundation for further study in engineering and physics. The knowledge gained from this course will find applications in other courses like classical field theory, fluid dynamics, electrostatics, etc.
Professionally Used Software: Matlab/Mathematica

Project work/Assignment:

1.Case Studies: NA.

2. Book/Article review: NA

3. Presentation: The student will have to present a topic of his/her choice individually, where he/she has to demonstrate the solution of an engineering/physical problem using one of the techniques learned in this course.

Assignment 1: Problems on Scalar Helmholtz equation.

Assignment 2: Cauchy's integral theorem .

Course Code: ECE3092	**Course Title: Photonic Integrated Circuits** **Type of Course: Elective Theory**.	**L- T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	A background in silicon photonics, fiber optics, or semiconductors is recommended, but not required. Proficiency in linear algebra and calculus will enhance understanding of design concepts. The course emphasizes on How to model photonic devices, working, analysis and design of photonic devices and also to create compact models for them . Additionally, this course will create a foundation for future courses such as advanced photonics.					
Anti-requisites	**NIL**					
Course Description	Photonic integrated circuits has evolved into a key technology with transformative impact on a wide variety of applications, ranging from high-speed data transmission to further quantum optics and optical computing.					
Course Objective	**The objective of the course is <u>SKILL DEVELOPMENT</u> of the student by using <u>PARTICIPATIVE LEARNING</u> techniques.**					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1: Apply advanced techniques and tools of sensing and computation to solve multi-disciplinary challenges in industry and society. 2: Strong cognizance in the area of high-speed data transmission. 3: To learn how to develop photonic devices. 4: Evaluate the gap between theoretical basics and high-impact applications by combining a lecture with a hands-on design.					

Course Content:					
Module 1	Introduction and review	Quiz		Memory Recall based Quizzes	**8 sessions**
Topics: Optical communications: short-reach, long-haul, and data centers communications. Economic drivers towards photonic integration. Interaction of optical waves with dielectric and metal interfaces. Boundary conditions, total internal reflection. Review of silicon PN-and PN-junctions. Junction diode static and transient characteristics.					
Module 2	Fundamentals of Silicon photonics	Assignment/Quiz		Theory	**7 sessions**
Topics: Symmetric dielectric waveguides. Asymmetric dielectric waveguides. Rectangular waveguides. Computational methods for integrated photonics, design and fabrication of silicon waveguide structures. Waveguide loss, scattering, absorption, radiation.					
Module 3	Photonic systems	Assignment		Memory Recall based Quizzes	**7 sessions**
Introduction to photonic systems for short-reach and long-haul optical communications. Modulation formats, receiver and transmitter characteristics, optical link budget, BER and penalties. Introduction to data center optical networks. Optical switching. Optical switches.					
Module 4	Photonic Crystal Structures	Assignment		Comprehension based Quizzes and assignments	**8 sessions**
Introduction to physics of 1D period structures Photonic crystal waveguides and bends Photonic crystal integrated circuits Waveguide couplers Add/Drop filters,Mach-Zehnders Delay lines.					

Targeted Application & Tools that can be used:

Tools: N.A

Project work/Assignment:

1.Design a project based on analysis, design and testing of the silicon photonic circuits.

Text Book(s):

Supervised Learning and Naive Bayes Classification, Discriminative Classifiers Genre Classification, Emotion Recognition and Regression, Tags, Music Visualization				
Module 4	**Music Retrieval Systems** **Toolbox for Music Information Retrieval**	Assignment	System Design Task and Analysis	**10 Sessions**

Topics:

Query Retrieval, Polyphonic Alignment and Structure Segmentation, Chord Detection and Cover Song Identification, Transcription and Sound Source Separation, Audio Fingerprinting and Watermarking

Toolbox for Music Information Retrieval:Motivation and approach, Feature extraction, pitch xtraction , Recent developments and Applications.

Targeted Application & Tools that can be used:

Similarity retrieval, playlists, recommendation, Classification and clustering, Tag annotation, Rhythm, melody, chords, Music transcription and source separation, Query by humming, Symbolic MIR, Segmentation, structure, alignment, Watermarking, fingerprinting and cover song detection

Professionally Used Software: MATLAB, Audacity, Sonic Visualizer

Project work/Assignment/Quiz:

1. Case Study: At the end of the course students will be given a 'real-world' application based on MIR tools as a case study. Students will be submitting a report which will include Block diagrams, Design, Working Mechanism and Results etc. in appropriate format.

2. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link .

3. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

4. Project Assignment: Students will be given different tasks based on learning from each module.
Assignment 1: Implement various signal processing techniques on music signal to find the scale and pitch.
Assignment 2: Implement various signal processing techniques on music signal for singer identification/ genre identification

5. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link .

Recommended by the Board of Studies on	BOS NO: 12 th. BOS held on 07/08/21
Date of Approval by the Academic Council	Academic Council Meeting No. 16, Dated 23/10/21

Course Code: ECE3094	**Course Title: Video Processing and Computer Vision** **Type of C ourse: Open Elective**		**L-T-P-C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	**Digital Image Processing, Signals and Systems, Transforms and Techniques**					
Anti-requisites	**NIL**					
Course Description	**This course aims to introduce students to a wide range of video processing and computer vision techniques. The purpose of this course is to familiarize the students with the fundamental ideas and problems in computer vision and video processing as well as the main solutions. An introduction to computer vision is provided in this course, along with advanced ideas like motion estimation and tracking, image classification, scene understanding, object categorization and tracking, image fusion, image registration, etc.**					
Course Objective	**This course is designed to improve the learner's <u>EMPLOYABILITY SKILLS</u> by using <u>PROBLEM SOLVING</u> Methodologies.**					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1) Know the fundamental techniques for video processing, and computer vision 2) Understand the basics of analog and digital video: video representation and transmission 3) Understand the basics of computer vision 4) Familiarize himself/herself with computer vision algorithms and applications					
Course Content:						
Module 1	Introduction to Video Processing	Quiz	Memory Recall based Quizzes	**09 session**		
Topics: Video data, video acquisition, video representation, Video data representation, sensors for video acquisition, working of digital camera (block diagram), camera resolution and color conversion, types of video cameras general mathematical operations for video processing, Color perception and specifications, color representation, video formats (NTSC, SECAM, PAL, VGA, HD), video storage requirements, video indexing						
Module 2	Video Processing	Assignment / Quiz	Programming and Simulation task / Memory Recall based Quizzes	**12 session**		

Topics:
Sampling in spatial and temporal domains, sampling conversion, video to frames and frames to video
Pre-filter in video cameras, interpolation filter in video displays, Fourier analysis of video sequence, spatial frequency, temporal frequency, temporal frequency caused by motion.

Module 3	Introduction to Computer Vision and Algorithms	Assignment	Programming Assignment	**12 session**

Topics:
Introduction to Computer Vision, Image Processing VS Computer Vision, Color Vision, Camera and Epipolar Geometry, Auto-calibration
Motion estimation: - Background Subtraction and Modeling, Optical Flow, KLT, Spatio-Temporal Analysis, Dynamic Stereo; Motion parameter estimation.

Module 4	Applications of Computer Vision	Assignment	Programming Assignment	**12 session**

Topics:
Object detection and tracking various scenarios, Pattern Analysis, Face recognition and Tracking, Applications of computer vision in robotics and Autonomous Vehicles (ADAS)

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:
Targeted Applications: Security and Surveillance, ADAS, Industry 4.0
Professionally Used Software: Python/ MATLAB/ SCILAB

Project Work/Assignment:

1. Case Study: At the end of the course students will be given a 'real-world' application-based on Computer Vision and Video Processing as a case study. Students will be submitting a brief report in appropriate format

2 Article review: At the end of the course a literature review of any 01 recent articles from the reputed national and international journal/ conferences will be given by students. They need to refer to tools like Scopus/ Google-Scholar and submit a report on their understanding of the assigned article in appropriate format.

3. Presentation: There will be a group presentation, where the students will be given a topic. They will have to present their review work.

Text Book(s):

Recommended by the Board of Studies on	BOS Meeting NO: 15th BOS held on 28/07/2022
Date of Approval by the Academic Council	Academic Council Meeting No.18th , Dated 03/08/2022

Course Code: ECE3095	**Course Title: Blockchain and Cryptocurrency Technologies** **Type of Course: Open Elective**		**L-T-P-C**	3	0	0	3
Version No.	1.0						
Course Pre-requisites	**NIL**						
Anti-requisites	**NIL**						
Course Description	**This course will explore the fundamental elements of blockchain technology and how it applies to cryptocurrencies. It will delve thoroughly into systems for distributed computing like Bitcoin and the blockchain. It will go through decentralized banking implementations, smart contracts, tokens, and the newest stablecoin, as well as how to use digital currencies in the banking industry.**						
Course Objective	**This course is designed to improve the learner's EMPLOYABILITY SKILLS by using PROBLEM SOLVING Methodologies.**						
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. Describe Blockchain and its applications. 2. Explain Blockchain Architecture 3. Implement Blockchain Businesses using Ethereum programming **4.** Illustrate various cryptocurrencies and their applications.						
Course Content:							
Module 1	INTRODUCTION TO BLOCKCHAIN	Quiz	Memory Recall based Quizzes	**08 sessions**			
Topics: Introduction to Block chain – History, Definition, Distributed Ledger, Blockchain Categories – Public, Private, Consortium, Blockchain Network and Nodes, Peer-to-Peer Network, Mining Mechanism, Generic elements of Blockchain, Features of Blockchain, and Types of Blockchain.							
Module 2	BLOCKCHAIN ARCHITECTURE	Assignment / Quiz	Programming and Simulation task	**10 sessions**			
Topics: Operation of Bitcoin Blockchain, Blockchain Architecture – Block, Hash, Distributer P2P, Structure of Blockchain- Consensus mechanism: Proof of Work (PoW), Proof of Stake (PoS), Byzantine Fault Tolerance (BFT), Proof of Authority (PoA) and Proof of Elapsed Time (PoET)							
Module 3	BLOCKCHAINS	Assignment	Analysis and	**12**			

	IN BUSINESSES		Verification	**sessions**

Topics:
Public versus private and permissioned versus permission less blockchains; Privacy and anonymity in Ethereum; The Ethereum Enterprise Alliance; Blockchainas-as-a-Service; Initial Coin Offering (ICO) - Project setup for ICO implementation; Token contracts, Token sale contract, Contract security and testing the code.

Module 4	Cryptocurrencies	Assignment	Case Studies	**12 sessions**

Basics of Cryptocurrency; Creation of coins; Payments and double spending; Bitcoin – Digital Signatures, eWallets, Personal Crypto security; Bitcoin Mining – Mining Hardware, Energy Consumption, Mining Pools, Mining Incentives and Strategies. Privacy and Security issues in Blockchains and Cryptocurrencies.

Targeted Application & Tools that can be used:
Application area is in Secure medical data, Cross-border payments, Real-time IoT operating systems, Personal identity security, Anti-money laundering tracking system, Supply chain and logistics monitoring, Voting mechanism, Cryptocurrency exchange, Real estate processing platform etc.

Professionally Used Software: Ethereum Enterprise Alliance; Blockchains-as-a-Service; Initial Coin Offering (ICO).

Project Work/Assignment:

1. Case Studies: At the end of the course students will be given a 'real-world' applications such as Secure medical data, Cross-border payments, Real-time IoT operating systems, Personal identity security, Anti-money laundering tracking system, Supply chain and logistics monitoring, Voting mechanism.

2. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link .
3. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

4. Project Assignment:

Assignment 1: Present a case study on blockchain and cryptocurrency that has been in public domain in recent times.

Assignment 2: Present a case study on Legal context and implications for financial crime, money laundering and tax evasion.

Course Code: **ECE3096**	**Course Title:** **Natural Language Processing** **Type of Course:** **Open Elective** **Theory only**	**L- T- P- C**	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Prior exposure to discrete math, probability, linear algebra, optimization, linguistics, artificial intelligence, machine learning and familiarity with python will be useful but not required					
Anti-requisites	**NIL**					
Course Description	This course is intended as a theoretical and methodological introduction to the most widely used and effective current techniques, strategies and toolkits for natural language processing, with a primary focus on those available in the Python programming language through programming and simulation.					
Course Objective	This course is designed to develop Entrepreneurial skills by using Experiential Learning Techniques					
Course Outcomes	**On successful completion of this course the students shall be able to:** **(1) Understand basics in natural language processing methods and strategies.** **(2) Evaluate the strengths and weaknesses of various NLP technologies and frameworks** **(3) Employ literary-historical NLP-based analytic techniques like stylometry, topic modeling, synsets and named entity recognition.**					
Course Content:						
Module 1	Syntactic Processing	Assignment	Programming and Simulation task			**09 Sessions**
Topics: **Introduction, Linguistic Background, Grammars and Parsing, Features and Augmented Grammars, Grammars for Natural Language, Toward Efficient Parsing, Ambiguity Resolution: Statistical Methods**						
Module 2	Semantic Interpretation	Assignment	Programming and Simulation task			**11 Sessions**
Topics: **Semantics and Logical Form, Linking Syntax and Semantics, Ambiguity Resolution, Other Strategies for Semantic Interpretation, Scoping and the Interpretation of Noun Phrases.**						
Module 3	Context and World	Assignment	Programming and Simulation task			**10 Sessions**

	Knowledge			
Topics: **Knowledge Representation and Reasoning, Local Discourse Context and Reference, Using World Knowledge, Discourse Structure, Defining a Conversational Agent**				
Module 4	INFORMATION RETRIEVAL AND LEXICAL RESOURCES:	Assignment	Programming and Simulation task	**12 Sessions**
Topics: Information Retrieval: Design features of Information Retrieval Systems-Classical, Non-classical, Alternative Models of Information Retrieval – valuation Lexical Resources: World Net-Frame NetStemmers-POS Tagger- Research Corpora.				
Targeted Application & Tools that can be used: **Application Area: Information Extraction, Machine Translation** **Professionally Used Software/Platforms/APIs/Library:** **1.** MonkeyLearn **2.** AYLIEN **3.** Spark NLP **4.** IBM Watson **5.** KILT **6.** Apache OpenNLP **7.** Cloud Natural Language | Google Cloud **8.** Natural Language Processing – Amazon Comprehend – Amazon Web Services **9.** NLTK :: Natural Language Toolkit **10.** Stanford CoreNLP **11.**TextBlob **12.**spaCy **13.**GenSim

Date of Approval by the Academic Council	Academic Council Meeting No. 18th, Dated 03/08/2022

Course Code: **ECE3097**	**Course Title:** **Smart Electronics in Agriculture** **Type of Course:**	**L- T-P-C**	3	0	0	3
Version No.	1.0					
Course Pre-requisites	**Basic concepts assembly programming and embedded C, Understanding of interfacing Memory and peripherals.**					
Anti-requisites	**NIL**					
Course Description	**The purpose of this course is to introduce students to smart and precision based agriculture are technology methods. Electronics has played a major role in developing the economy of the nation. India is the farmers land and agro based business are existing in India from long time. This course is designed to introduce a new approach of engineering where the modern sensors and embedded solutions along with mechanical and traditional equipment work hand in hand to increase the yield of the farmer. Electronics technologies and Industry 4.0 which is transforming the industry by integrating modern technology with the help of sensors, computational processes and communication technologies. The course inculcates critical thinking skill within students to develop and design a complete solution using program and interfacing hardware to provide wireless or wired smart solutions. The nature of course being comprehensive as well as application based, covers number of quizzes, simulations and interfacing practical's which helps to enhance students' abilities to become an IoT Application Designer.** **The associated assignment provides an opportunity to validate the concepts taught as well as enhances the ability to analyze the real-world problems in order to provide a solution using various simulation tools and hardware interfacing techniques.**					
Course Objective	**This course is designed to develop <u>ENTREPRENEURIAL SKILLS</u> by using <u>EXPERIENTIAL LEARNING</u> techniques.**					
Course Outcomes	**On successful completion of this course the students shall be able to:** **(1) Explain the Components and Process of Agriculture.** **(2) Demonstrate the electronics smart sensors and embedded systems.** **(3) Employ techniques for cloud based application in agriculture.**					
Course Content:						
Module 1	Component of Agriculture	QUIZ	Comprehension level Quiz	**12 classes**		
Topics: Indian Agriculture and green revolution. Methods of agriculture and role of technology in						

agriculture. Role of technology in fertilizers and pesticide and irrigation management in modern agriculture, integrating big data Practices in Agriculture, Internet of things (IoT) and data analytics in smart agriculture: Functional framework for IoT-based agricultural system Functional framework for edge-based agricultural system Benefits and challenges. IoT fundamentals and its applications devices for smart agriculture. Precision agriculture Hydroponics.

Module 2	Smart electronic for Agriculture	Case Study	Sensor and Embedded system	**15 classes**

Topics:
Sensors and actuator for agriculture, smart embedded systems, understanding Arduino Boards, Programming and Interfacing. Selection of Embedded Platform. IoT technology Edge computing, Fog computing cloud computing, Cloud architecture, SaaS, PaaS, IaaS. Cloud service provider Google Cloud. Iot Accessing technology- IEEE 802.15.1,IPV4 and IPV6 Addressing IoT nodes, IoT Edge, MQTT, AMQP, COAP Interfacing RFID and Sensors and Actuators through Protocols

Module 3	Cloud Based IoT Applications	Mini Project	System Design Task and Analysis	**12 Classes**

Topics:
The Internet of Things in agriculture for sustainable rural development. Internet of Things (IoT) in agriculture toward urban greening. Smart e-agriculture monitoring systems , smart agriculture using renewable energy and AI-powered IoT. Surveying smart farming for smart cities, Farm Automation. A fog computing-based IoT framework for prediction of crop disease using big data analytics Agribots: A gateway to the next revolution in agriculture**,** Transforming IoT in aquaculture: A cloud solution

Targeted Application & Tools that can be used:
Important Applications range from civilian to defense sectors. These domains include agriculture, space, healthcare, manufacturing, construction, water, and mining, which are presently transitioning their legacy infrastructure to support IOT
Professionally Used Software: Kiel, C and Python

Project work/Assignment:

1.Case Studies: At the end of the course students will be given a 'real-world' application based circuits like Power Amplifier, Signal/Function Generator etc. as a case study. Students will be submitting a report which will include Circuit Diagrams, Design, Working Mechanism and Results etc. in appropriate format.

2. Book/Article review: At the end of each module a book reference or an article topic will be given to each student. They need to visit the library and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link .

3. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

4.Assignment:Project Assignment: Design a IOT based application for healthcare and agriculture and physically challenged peoples.

Assignment: 1] Write a brief report on Current IOT based systems available and identify their components, the Network they are using to communicate.

Assignment: 2] Design a IOT based application for

A. Climate condition monitoring and automated systems
B. Internet of Things on sustainable aquaculture system
C. IoT-based monitoring system for freshwater fish farming: Analysis and design
D. Design a IoT based agricultural system for optimal management

Date of Approval by the Academic Council	**Academic Council Meeting No. 18, Dated 3/8/2022**

Course Code: ECE3098	**Course Title: Environment Monitoring system** **Type of Course:**	**L- T-P-C**	3	0	0	3
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	Internet of Things					
Course Description	This course provides fundamental concepts of various environment monitoring eco systems. It provide students with deep knowledge of sensors and data acquisition systems to monitor atmospheric Process, water resources, terrestrial ecosystems and wildlife monitoring systems. The course also provides students with deep knowledge of importance of single board computers and data loggers**.**					
Course Objective	**The objective of the course is <u>SKILL DEVELOPMENT</u> of student by using <u>PARTICIPATIVE LEARNING</u> techniques**					
Course Outcomes	**On successful completion of this course the students shall be able to:** **(1) Describe the concepts of continuous real time monitoring systems with Internet of Things.** **(2) Understand constraints and opportunities of single board computers.** **(3) Describe the various setup to monitor and measure the data collected from environment.** **(4) Able to design and perform experiments on sensors and develop the projects based on the customer needs.**					
Course Content:						
Module 1	Introduction	Quiz	Memory Recall based Quizzes	**10 Sessions**		
Topics: Environmental systems,Echo systems and planet earth.Human Interaction with the environment, from measuring to knowing, continuous real time monitoring,data management and World Wide Web. Sampling,Ground based,airborne and spaceborne systems.						
Module 2	From Sensors to systems.	Assignment / Quiz	Memory Interfacing Task and Analysis	**12 Sessions**		
Topics: Sensors and transducers: Principles of electrical quantities, circuits,sensor specifications, from sensors to transducers, case studies:from light sensors to a light transducers, from thermistor to temperature tranducers,temperature transducres for air,soil and water.Thermocouples,using thermocouples.						
Module 3	Data Acquisition systems	Assignment	Memory Interfacing Task and Analysis	**10 Sessions**		

Topics: Introduction to data loggers, applications in environment monitoring, analog channels, Real time clock, communications with datalogger,RS-232 standard, single board computers, ARM Architectures

Module 4	Applications	Assignment	Programming and Simulation task.	**09 Sessions**

Topics: Atmospheric Process, water resources, terrestrial ecosystems and wildlife monitoring systems

Targeted Application & Tools that can be used:

Application Area:

Environmental monitoring applications are essential to generating information about the quality of the environment around us, including whether it is improving, worsening, or staying the same. The kind of data environmental monitoring applications produce assist in decision making, both by governments and private actors. Of course policymakers need accurate, reliable information from applied environmental monitoring, and so do municipal engineers, public health experts, first responders dealing with environmental emergencies, farmers, foresters, hunters, and recreational wilderness users all rely upon these applications.

Professionally Used Software: students can use open SOURCE Softwares like Keil, Python IDLE etc.

Project work/Assignment:

1. Mini Projects: At the end of the course students will be assigned a project work on solving many environmental monitoring issues in real time.

2. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link .

3. Presentation: There will be a group presentation, where the students will be given a project on wearable device applications. They will have to explain/demonstrate the working and discuss the applications for the same.

Topics relevant to development of "SKILL": System design for environmental monitoring systems.	
Catalogue prepared by	Dr. Divya Rani
Recommended by the Board of Studies on	BOS NO: 15th BOS held on 28/07/2022
Date of Approval by the Academic Council	Academic Council Meeting No. 18, Dated 03/08/2022

Course Code: **ECE3099**	**Course Title: Modern Wireless Communication with 5G** **Type of Course: Open Elective**		**L- T- P- C**	3	0	0	3
Version No.	1.0						
Course Pre-requisites	Digital communications, Mobile Communication Systems, Wireless Networks						
Anti-requisites	**NIL**						
Course Description	**The aim of this course is to let the students understand that air Interface is one of the most important elements that differentiate between 2G, 3G, 4G and 5G. While 3G was CDMA based, 4G was OFDMA based; this course reveals the contents of air interface for 5G. While 4G brought in a deluge of infotainment services, 5G aims to provide extremely low delay services, great service in crowd, enhanced mobile broadband (virtual reality being made real), ultra-reliable and secure connectivity, ubiquitous QoS, and highly energy efficient networks.**						
Course Objective	**This course is designed to improve the learners' <u>EMPLOYABILITY SKILLS</u> by using <u>EXPERIENTIAL LEARNING</u> techniques using MATLAB tools.**						
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. Learn 5G Technology advances and their benefits 2. Learn the key RF, PHY, MAC and air interface changes required to support 5G 3. Learn Device to device communication and millimeter wave communication 4. Implementation options for 5G						
Course Content:							
Module 1	**Overview of 5G Broadband Wireless Communications**	Assignment/ Quiz	Memory Recall based Quizzes	**15 Sessions**			
Topics: Evaluation of mobile technologies 1G to 4G (LTE, LTEA, LTEA Pro), An Overview of 5G requirements, Regulations for 5G, Spectrum Analysis and Sharing for 5G.							
Module 2	**The 5G wireless Propagation Channels**	Assignment/ Quiz	Real time Application Project	**15 Sessions**			
Topics: Channel modeling requirements, propagation scenarios and challenges in the 5G modeling, Channel Models for mmWave MIMO Systems.							
Module 3	**Transmission and Design Techniques for 5G**	Assignment/ Quiz	Memory Recall based Quizzes	**10 Sessions**			
Basic requirements of transmission over 5G, Modulation Techniques – Orthogonal frequency division multiplexing (OFDM), generalized frequency division multiplexing (GFDM), filter bank multi-carriers (FBMC) and universal filtered multi-carrier (UFMC), Multiple Accesses							

Techniques – orthogonal frequency division multiple accesses (OFDMA), generalized frequency division multiple accesses (GFDMA), non-orthogonal multiple accesses (NOMA).				
Module 4	**Device-to-Device (D2D) Communications**	Assignment/ Quiz	Memory Recall based Quizzes	**10 Sessions**
Topics: Device-to-device (D2D) and machine-to-machine (M2M) type communications – Extension of 4G D2D standardization to 5G, radio resource management for mobile broadband D2D, multi-hop and multi-operator D2D communications.				
Targeted Application & Tools that can be used: Networked embedded systems appear in a variety of application domains such as automotive, train, aircraft, office building, and industrial areas—primarily for monitoring and control. **Professionally Used Software:** MATLAB				
Project Work/Assignment:				
1. Case Studies: At the end of the course students will be given a 'real-world' application based on automated access control and access management area, Networked Embedded Identification Systems with fingerprint and RFID sensors as a case study. Students will be submitting a report on the same which will include in appropriate format. **2. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link .** **3. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.** **4. Project Assignments:** 5G, which stands for 5th generation wireless communication technology, is the advanced technology that ensures enhanced speed in communication, increased response of the network, reduced latency. **Assignment 1:** Implement various modulation techniques using MATLAB and analyze the BER **Assignment 2:** Generation of 5G Waveforms using MATLAB 5G Toolset

Recommended by the Board of Studies on	15th BOS held on 28/07/2022
Date of Approval by the Academic Council	Meeting No. 18th , Dated 03/08/2022

Course Code: **ECE3100**	**Course Title: Underwater Communication** **Type of Course: Open Elective**		**L- T- P- C**	3	0	0	3
Version No.	1.0					
Course Pre-requisites	Digital Communication Systems					
Anti-requisites	**NIL**					
Course Description	**This course deals with the three main application areas of Network Embedded Systems – Wireless Sensor Networks, Automotive, and Industrial Automation and relatively new subtopic of Home Automation.**					
Course Objective	**The objective of the course is <u>SKILL DEVELOPMENT</u> of the student by using <u>PARTICIPATIVE LEARNING</u> techniques.**					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1 Discuss the concepts of sound waves 2 Design underwater signal processing systems 3 Analyze the performance of underwater signal processing systems 4 Outline the oceanography and sensors in the underwater system					
Course Content:						
Module 1	**Fundamentals of Underwater Acoustics**	Assignment/ Quiz	Memory Recall based Quizzes	**9 Sessions**		
Topics: The Ocean acoustic environment, measuring sound level, Sources and receivers, relevant units, sound velocity in sea water, typical vertical profiles of sound velocity, Sound propagation in the Ocean- characteristic sound propagation paths-deep water and shallow water, Range dependent environment. Sound attenuation in sea water, Bottom Loss, Surface bottom loss and volume scattering, Snell's law for range dependent Ocean.						
Module 2	**Characteristics of Sonar systems**	Assignment/ Quiz	Real time Application Project	**9 Sessions**		
Sonar systems, active and passive sonar equations, transducers and their directivities, Sensor array characteristics-array gain, receiving directivity index, beam patterns, shading and super directivity, adaptive beamforming						
Module 3	**Various Underwater Sensors**	Assignment/ Quiz	Memory Recall based Quizzes	**9 Sessions**		
Sonars – Active & passive sonars, hydrophones, DAS, ROV, AUV, Sidescan sonar, Echo sounder, MBEC, Sub bottom profiler, magnetometer, dredger, sensors application in shallow water and deep water.						
Module 4	**Underwater Noises and Oceanographic Instrumentation**	Assignment/ Quiz	Memory Recall based Quizzes	**13 Sessions**		
Basic Concept of noises in underwater- Types of noises — natural, man-made, ambient noise types -seismic, wind, biological, lobsters, dolphin, shipping, turbulence noise, rain etc., Descriptions of research vessels, cruise, position fixing in the sea; sampling devices — Grab samplers, bottom samplers, dredges, sediment traps, boomerang samplers, water samplers,						

Winches, temperature measurement instruments, tools for studying ocean floor topography.

Targeted Application & Tools that can be used:

Underwater communication appears in a variety of applications such as detection of the objects on the ocean floor, used in environmental monitoring and collecting of oceanographic information, used in seismic monitoring, pollution monitoring and ocean currents monitoring, used in environmental monitoring like climate recording, pollution control, prediction of natural disaster harbor protection, also in autonomous underwater vehicles.

Professionally Used Software: UWSim, MATLAB, NS2

Project Work/Assignment:

1. Case Studies: At the end of the course students will be able to study the location-based noises and comparison between various noises in underwater. Students will be submitting a report on the same which will include in appropriate format.

2. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link .

3. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

4. Project Assignments:

The ocean is the heart of the planet, as it affects the planet's climate on a global scale and provides countless resources and benefits to all of the creatures that live on Earth. The technology of underwater communications and networking can greatly enhance human's ability to study, monitor, explore, and protect the planet's precious aquatic environment. However, the unique characteristics under the surface of the sea present grand challenges to the development of wireless communication and networking systems, including a harsh environment, severe attenuation, multipath dispersion, Doppler shift, mobility, link and topology dynamics, and so on.

Assignment 1: Survey of Underwater wireless communication technologies
Assignment 2: Research Challenges and Applications for Underwater Sensor Networking

Introduction to KiCad, Schematic entry / drawing, netlisting, layering, component foot print library selection & designing, design rules, component placing: Manual & automatic, track routing: automatic & manual, rules: track length, angle, joint & size, Autorouter setup. IPC standards for schematic, designing, material and documentation</td></tr>
<tr><td>Module 3</td><td colspan="2">PCB Prototyping and Production</td><td colspan="2">Assignment</td><td colspan="2">Analysis and Verification</td><td colspan="2">16 session</td></tr>
</table>

Topics: PCB Prototyping: CNC Machine, Photo-Lithography process, Screen Printing process and chemical etching. PCB Mass Manufacturing Process: Gerber Generation, CAM, panelization, cleaning, drilling, plating, screen printing, etching, automated optical inspection, tinning, solder resist, legend printing, PCB testing

Module - 4	PCB design for EMI/EMC	Case study		10 session

Subsystem/PCB Placement in an enclosure, Filtering circuit placement, decoupling and bypassing, Electronic discharge protection, Electronic waste; Printed circuit boards Recycling techniques,Introduction to Integrated Circuit Packaging and footprints, NEMA and IPC standards,.

Targeted Application & Tools that can be used:

Application: Printed circuit board (PCB) design **brings your electronic circuits to life in the physical form**. Using layout software, the PCB design process combines component placement and routing to define electrical connectivity on a manufactured circuit board **The students will be able to find career opportunities in various domains such as:**

PCB design engineer
PCB layout engineer.
Application engineer technical support.
Professionally Used Software: Altium.,Fusion 360.,Altium 365,NI Multisim,Autodesk EAGLE,
KiCad EDA,Ansys RedHawk.EasyEDA.

Project Work/Assignment:

1.Case Studies: At the end of the course students will be given a PCB-HISTORY * TYPES * APPLICATIONS * ADVANTAGES * DIS-ADVANTAGES * TOP PCBs MANUFACTURERS IN INDIA * MATERIALS USED IN MANUFACTURING PCBs * MANUFACTURING PROCESS * SOLDER RESIST * TEST * PROTECTION AND PACKAGING **as a case study. Students will be submitting a report which will include Circuit Diagrams, Design, Working Mechanism and Results etc. using PCB**

2. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link .

3. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

4. Project Assignment:

Assignment 1: Implement simple analog circuits using KiCad.

Assignment 2: Assignment Each student was assigned a unique schematic to be drafted using MultiSim's schematic capture feature. You should create an error-free net list, import it into the PCB feature of Ultiboard, then design a proper laid-out and routing. Designs should be no bigger than 6"x6"

Course Code: **ECE3102**	**Course Title: Consumer Electronics** **Type of Course: Open Elective**		**L- T- P- C**	3	0	0	3
Version No.	1.0					
Course Pre-requisites	Basics of Electronics					
Anti-requisites	**NIL**					
Course Description	This course is designed to enhance the knowledge, skills and attitude in performing testing assembling/disassembling of electronic components, maintaining and repairing audio/video products and systems, terminating/connecting electrical & electronics circuit and maintaining and repairing electrically-controlled domestic appliance .It also covers Computer operation with internet browsing, industry control system, Color TV, LCD, LED,CD VCD, DVD, IPS, UPS, cellular phone, House hold appliance and using specialized equipment repair and commissioning of consumer electronic products and systems.					
Course Objective	**This course is designed to develop <u>ENTREPRENEURIAL SKILLS</u> by using <u>EXPERIENTIAL LEARNING</u> techniques**					
Course Outcomes	**On successful completion of this course the students shall be able to:** 1 Identify the devices and system functions 2 Classify the components in electronics 3 Demonstrate and explain the house hold appliances					
Course Content:						
Module 1	**Audio Fundamentals, Devices & Systems**	Assignment/ Quiz	Memory Recall based Quizzes	**15 Sessions**		
Topics: Basic characteristics of sound signal, Audio level metering, decibel level in acoustic measurement, Microphone & Types, speaker types & working principle, Sound recording principle & types. Basic characteristics of sound signal, Audio level metering, decibel level in acoustic measurement, Microphone & Types, speaker types & working principle, Sound recording principle & types.						
Module 2	**Television Fundamentals**	Assignment/ Quiz	Real time Application Project	**15 Sessions**		
Topics: Monochrome TV standards, scanning process, aspect ratio, persistence of vision and flicker, interlace scanning, picture resolution, Composite video signal, Colour TV standards, colour theory, hue, brightness, saturation, luminance and chrominance, Different types of TV camera, Transmission standards. PAL-D colour TV receiver, Digital TVs:- LCD, LED , PLASMA, HDTV, 3-D TV, projection TV, DTH receiver, Video interface, Digital Video, SDI, HDMI Multimedia Interface , Digital Video Interface, CD and DVD player.						
Module 3	**Home / Office Appliances**	Assignment/ Quiz	Memory Recall based Quizzes	**10 Sessions**		
Home Appliances: Inverter, Microwave oven, Domestic Refrigerator, Controls in Refrigerator, Room Air Conditioning.						

Office Appliances : Calculator, Facsimile (FAX) and Pager.

Targeted Application & Tools that can be used:

Consumer Electronics appear in a variety of application in repairing the electrical, electronic components and devices, repair of consumer house hold appliances

Professionally Used Software: Multisim

Project Work/Assignment:

1. Case Studies: At the end of the course students will be given a 'real-world' application based on consumer electronics. Students will be submitting a report on the same which will include in appropriate format.

2. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link .
3. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.
4. Project Assignments:

Consumer electronic products are invariably covered by a 'Manufacturer's Warranty' which offers the purchaser some protection against detective workmanship and component failure during a limited term.
Assignment 1: Device control using Smart Phone's Bluetooth
Assignment 2: Stereophonic Acoustic Echo Suppression for Speech Interfaces for Intelligent TV Applications.

Course Code: **ECE3103**	**Course Title: Product Design of Electronic Equipment** **Type of Course: Open Elective Theory only**	**L- T- P- C**	3	0	0	3
Version No.	1.0					
Course Pre-requisites	**NIL**					
Anti-requisites	**NIL**					
Course Description	**The purpose of this course is to give the students the opportunity to improve their design abilities for some well-known consumer electrical goods. Basic circuit configurations for many different electronic goods are covered throughout the course. By taking into account their electrical, mechanical, ergonomic, and aesthetic design aspects, the students will be able to design and develop various electronic components. The course's thoroughness includes a variety of tests, computer-aided design-based tools, and mockup-based projects that help students develop their talents to work independently as product design engineers.**					
Course Objective	**This course is designed to develop <u>ENTREPRENEURIAL SKILLS</u> by using <u>EXPERIENTIAL LEARNING</u> technique for designing various electronic products**					
Course Outcomes	On successful completion of this course the students shall be able to: (1) **Outline** various electronic products and their design considerations. (2) **Discuss** PCB design and fabrication flow.. (3) **Report** ergonomic, aesthetic and packaging requirements of electronic products. (4) **Discover** safety and reliability issues and compliance requirement in electronic products design.					
Course Content:						
Module 1	**Overview of Electronic Products and Product Design Considerations**	Quiz	Memory Recall based Quizzes		**10 Classes**	
Topics: Audio Systems; Video Systems and; Domestic & Consumer; Air-conditioners and Refrigerators; Computers office Systems; Telephone & Mobile Radio Systems.						
Module 2	**PCB Design and Manufacturing**	Assignment / Quiz	Programming and Simulation task		**12 Classes**	

Topics:
Power Supply Design – Basic circuit configurations, Regulators, Switching Regulators, Switch Mode Power Supply, PWM Control methods; CAD Tools for PCB Design – Design Rules, Schematic, Simulation, Netlist Import, Place and Route, Advance PCBs; PCB Fabrication Process; Electromagnetic Interference (EMI) – EMC and EMI, EMI Reduction and Shielding.

Module 3	**Ergonomics and Packaging for Electronic Products**	Assignment	Mock up Design and Analysis Tasks	**10 Classes**

Topics:
Ergonomics and Aesthetics in Electronic Product Design – Overview of Ergonomics and Aesthetics in for Electronic Products, issues in placement and integration various electronic components; Packaging, Enclosures and Cooling of Electronic Systems; 3D Printing and Computer Aided Design.

Module 4	**Product Safety and Reliability**	Assignment	System Design Analysis	**07 Classes**

Topics:
Product safety and reliability issues; System Reliability – MTTF, MTBF, MTTR etc. Maintainability, Faults and their analysis; Standards related to electrical safety and fire hazards, Design techniques for ESD, RF interference and immunity, Line current harmonics and mains voltage surge.

Targeted Application & Tools that can be used:
Application Area is electronic products and their appearance w.r.t. ergonomics and aesthetic leading to design of various consumer electronic devices and systems.
Professionally Used Software: Matlab / Python / LabVIEW / ORCAD

Project work/Assignment:

1. Case Studies: At the end of the course students will be given a 'real-world' product design design case studies. Students will be submitting a report which will include Circuit Diagrams, Design, Working Mechanism and Results etc. and/or a mock-up model in appropriate format.

2. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. <https://presiuniv.knimbus.com/user#/home **>.**
3. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

Project Assignment: Carry out various design and analysis task for various consumer electronics products.

Assignment: 1] Simulate and design the layout of an audio amplifier PCB..

Assignment 2: Prepare a mockup model of an electronic product by considering ergonomic and aesthetic issues in mind (e.g. a new mouse, a new table lamp, an audio device etc.)

Topics relevant to development of "EMPLOYABILITY": Working Principles of various electronic consumer products, PCB Design.

Topics relevant to development of "ENVIRONMENT AND SUSTAINABILITY SKILLS": Types of materials and wastes produced during fabrication processes as well as discarded electronic waste.	
Catalogue prepared by	Dr. Rajiv Ranjan Singh
Recommended by the Board of Studies on	BOS NO: 15th BOS held on 28/07/2021
Date of Approval by the Academic Council	Academic Council Meeting No. 18th , Dated 03/08/2022

Course Code: ECE3104	**Course Title:Vehicle To Vehicle Communication** **Type of Course: Open Elective Theory**		**L- T-P- C**	3	0	0	3
Version No.	2.0						
Course Pre-requisites	**Basic Knowledge on wireless communications, computer networks and mobile ad-hoc networks, Embedded systems**.						
Anti-requisites	**NIL**						
Course Description	**This course provides insights into the fundamentals of vehicle to vehicle communication based systems with IOT as its base. The course develops the knowledge of both hardware and software that leads to the design and implementation Real time automated Applications in industrial level.The course emphasizes on vehicle to vehicle communication technology on different types of networks like ADHOC wireless networks etc, highlighting the practical methodology, testability, and design verification in real time applications. The course also demonstrates the use of many software languages and platforms that supports develop designs for high level synthesis and simulation.**						
Course Objective	The objective of the course is to familiarize the learners with the concepts of **Vehicle To Vehicle Communication** and attain **ENTREPRENEURSHIP SKILLS** through **PARTICIPATIVE LEARNING.**						
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. **Understand** and describe the basic theories and principles, technologies, standards, and system architecture of vehicular ad-hoc networks (VANET) or inter-vehicle communication networks 2. **Analyze** vehicular communication platforms for various kinds of safety and infotainment applications. 3. **Assimilate** new technological development in related fields. 4. **Communicat**e effectively between different vehicles using the related technologies. 5. **Develop** a detail understanding of how vehicle communicate to other vehicles and to infrastructure over DSRC.						
Course Content:							
Module 1	**Introduction & Cooperative Vehicular Safety Applications**	Group Presentation	Memory Recall based Quizzes	**10 sessions**			
Topics: Basic principles and challenges, : Introduction to VANET,past and ongoing VANET activities, Enabling technologies, cooperative system architecture, safety applications. Introduction to DSRC and BSM.							
Module 2	**Vehicular Mobility Modeling**	Group Presentation	Memory Recall based Quizzes	**10 sessions**			

Topics:

Vehicular Mobility Modeling :
Vehicle Safety Communication - Apps (VSC-A),Random models, flow and traffic models, behavioral models, trace and survey-based models, joint transport and communication simulations .
Physical Layer Considerations for Vehicular Communications:
Signal propagation, Doppler spread and its impact on OFDM systems.

Module 3	**MAC Layer of Vehicular Communication Networks & VANET Routing protocols**	Group Presentation	Memory Recall based Quizzes	**10 sessions**

Topics:

MAC Layer of Vehicular Communication Networks :
Proposed MAC approaches and standards, IEEE 802.11p, Connected Vehicles& Connected Autonomous Vehicles, Dedicated Short Range Communication, :WAVE Physical Layer, WAVE MAC Layer WAVE Upper Layer.
VANET Routing protocols:
Vehicle to Infrastructure Safety Applications, DSRC Scalability,Opportunistic packet forwarding, topology-based routing, geographic routing, :Security and Privacy.

Module 4	**Emerging VANET Applications & Standards and Regulations**	Group Presentation	Memory Recall based Quizzes	**10 sessions**

Topics:

Emerging VANET Applications :
Limitations, example applications, communication paradigms, message coding and composition, data aggregation,WIMAX technology ,LI-FI technology and some practical design examples.
Standards and Regulations:
Regulations and Standards, DSRC Protocol Stack, Cellular V2X.

List of Laboratory Tasks: Nil

Targeted Application & Tools that can be used:
Targeted Applications - Data analytics, Network and Structure, Protection, Device and Hardware, Cell and UI development,Cloud management,Network Security,traffic managers, Automated locomotives .

Professionally Used Software - Autosar basic software (BSW) operating system, real-time operating systems such as Nucleus RTOS, and Linux container (LXC),secure communication is enabled using protocols such as Remote Processor Messaging (RPMsg) and VirtIO .Other softwares -MATLAB, Embedded-C/C++ and Python,,Keil software.

Course Code: **ECE3105**	**Course Title: Wavelets and Filter Banks (Open Elective)** **Type of Course: Theory Only**		**L- T- P- C**	3	0	0	3
Version No.	1.0						
Course Pre-requisites	Digital Signal Processing; Matlab; Linear Algebra.						
Anti-requisites	**NIL**						
Course Description	The course mainly involves the theories of multirate filter banks (FBs) and wavelet, in addition, and their applications. It falls into two sections: FBs and wavelet. The first section begins with the design of filter, and then introduces the fundamental concepts, properties and theory of multirate FBs. Furthermore, several types of FBs, such as cosine-modulated FBs, linear phase FBs, time varying FBs, 2-dimmensional FBs, directional FBs, are analyzed. In the end of this section, the applications of FBs in communication are introduced.						
Course Objective	**This course is designed to improve the learners' <u>EMPLOYABILITY SKILLS</u> by using <u>EXPERIENTIAL LEARNING</u> techniques using AI & IOT.**						
Course Outcomes	**On successful completion of this course the students shall be able to:** 1. Understand the terminologies that are used in the wavelets literature. 2. Understand the concepts and theory behind wavelets constructions from an interdisciplinary perspective that unifies harmonic analysis (mathematics), filter banks (signal processing), and multiresolution analysis (computer vision). 3. Be familiar with the modern signal processing using signal spaces, bases, operators and series expansions. 4. Apply wavelets and multiresolution techniques to a problem at hand, and justify why wavelets provide the right tool. 5. Research, present, and report a selected project within a specified time. 6. Think critically, ask questions, and apply problem-solving techniques.						
Course Content:							
Module 1	Introduction and filter design techniques	Quiz	Memory Recall based Quizzes	**12 Sessions**			
Topics: Multirate system fundamentals, Multirate filter design techniques: IFIR and FM approach, Design of two-channel linear-phase/low-delay filter banks, Two band filter banks with FIR							

and IIR filters, *M*-channel maximally decimated filter banks, *M*-channel near-perfect-reconstruction cosine-modulated filter banks, *M*-channel perfect reconstruction cosine modulated filter banks.				
Module 2	Non-uniform filter banks	Assignment/Quiz	Theoretical Understanding	**10 Sessions**
Topics: *M*-channel linear phase filter banks, Multiresolution analysis and wavelet theory, Comparison of wavelet and Fourier transform,				
Module 3	Filter banks and discrete wavelet transform	Assignment/Quiz	Theoretical Understanding	**11 Sessions**
Topics: Wavelet with FIR and IIR filters I, Wavelet with FIR and IIR filters II, *M*-band wavelet, Wavelet design based on cosine modulated filter banks, Wavelet transform application: de-noising and compression, Matching wavelet.				

Targeted Application & Tools that can be used:

- Audio and Image Compression, Quantization Effects, Digital Communication and Multicarrier Modulation, Trans multiplexers, Text-Image Compression: Lossy and Lossless,
- Medical Imaging and Scientific Visualization, Edge Detection and Feature Extraction, Seismic Signal Analysis,
- Geometric Modelling, Matrix Preconditioning, Multiscale Methods for Partial Differential Equations and Integral Equations.

Professionally Used Software:

- MATLAB® Wavelet Toolbox, Software for Filter Design, Signal Analysis, Image Compression, PDEs,
- Wavelet Transforms on Complex Geometrical Shapes.

Project work/Assignment:

1. **Case Studies:** At the conclusion of each module, we will have a 'case-based' discussion session for approximately half the class period. Cases will be from lecture / journal article content by considering a 'real-world' scenario where the course concepts can be applied. We will post the case one week in advance. For each case, each student from each group formed will write a 1-2-page executive summary outlining their understanding, including relevant analyses, schematics, and graphs. Guidelines on report format will be provided with the first case.

2. **Book/Article review:** At the end of each module, a book or an article will be given to each student. They need to visit the library and write a report on their understanding about the assigned article for 1 page. **Presidency University Library Link.**

3. **Presentation:** There will a group presentation on latest trends and advancements in Wavelets & Filter banks

Course Code: **ECE 3106**	**Course Title: Introduction to Data Analytics** **Type of Course: Open Elective Theory**		**L- T- P- C**	3	0	0	3
Version No.	1.0					
Course Pre-requisites	Probability and Statistics					
Anti-requisites	**NIL**					
Course Description	**This course presents an introduction to the concepts of data analysis, the role of a Data Analyst, and the tools that are used to perform data analytics. It will provide an understanding of the data ecosystem and the fundamentals of data analysis, such as data gathering or data mining. It also provides the knowledge required to effectively communicate data to stakeholders, and making a data driven decision.** **Throughout this course, students will learn the fundamentals of gathering data, and learning how to identify data sources. They will also learn how to clean, analyze, and share data with the use of visualizations and dashboard tools.**					
Course Objective	**This course is designed to develop <u>ENTREPRENEURIAL SKILLS</u> by using <u>EXPERIENTIAL LEARNING</u> techniques.**					
Course Outcomes	CO1] **Describe** the various processes of data analytics. CO2] **Manipulate** data in Python. CO3] **Demonstrate** an ability to solve and analyze the different types of data. CO4] **Identify** the need of data analytics.					
Course Content:						
Module 1	Introduction to Data Analytics	Quiz/Assignment	Memory Recall based Quizzes/Assignments	**6 classes**		
Topics: Data Analysis, Knowledge Domains of the Data Analyst, Understanding the Nature of the Data, Data Cleaning and Preparation, Handling Missing Data, Data Transformation, String Manipulation, The Data Analysis Process, Quantitative and Qualitative Data Analysis, Data Loading, Storage, and File Formats, I/O API Tools, CSV and Textual Files, Reading Data in CSV or Text Files, Time Series data analysis						
Module 2	Introduction to the Python's World- Plotting and Visualization	Quiz/Assignment	Programming, Analysis and Visualization	**8 classes**		

Topics:
Python—The Programming Language, Python 2 and Python 3, IPython, and Jupyter Notebooks, Essential Python Libraries, NumPy, pandas, matplotlib, SciPy, scikit-learn, Built-in Data Structures, Functions, and Files, The matplotlib Library, Plotting with pandas and seaborn, Other Python Visualization Tools.

Module 3	Statistics, data, and Statistical Thinking	Assignment	Programming, Analysis and Visualization	**8 classes**

Topics:
Describing Qualitative Data, Numerical Measures of Central Tendency, using the Mean and Standard Deviation to Describe Data, Methods for Detecting Outliers: Box Plots and z-Scores, Types of Random Variables, Probability Distributions for Discrete Random Variables, Expected Values of Discrete Random Variables, The Binomial Random Variable, The Poisson Random Variable, Statistical inference, Bias, The method of moments, Least squares/weighted least squares, Maximum likelihood

Module 4	Machine Learning with scikit-learn	Assignment	Programming, Analysis and Visualization	**9 classes**

Topics:

The scikit-learn Library, Supervised Learning with scikit-learn, The Iris Flower Dataset, K-Nearest Neighbors Classifier, Linear Regression, The Least Square Regression, Support Vector Machines (SVMs)

Project work/Assignment:

1. Project: At the end of the course, students will be given a 'real-world' data analytics application based topic as a project. Students will be submitting a report, which will include different steps of data cleaning and preparation, plotting and visualization and Results of the analysis etc. in appropriate format.

2. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

3. Assignments:

Assignment 1: Using Python programming, the students are required to analyze loan application data.

Assignment 2: Using Python programming, the students are required to analyze stock price data and perform different steps of data cleaning and preparation, plotting and visualization

Topics relevant to development of "FOUNDATION SKILLS": Interpret the type of data analysis tools and techniques.

Topics relevant to "HUMAN VALUES &PROFESSIONAL ETHICS": Concepts of Data collection and analysis for an assignment.

Catalogue prepared by	Mrs. Pallabi Kakati
Recommended by the Board of Studies on	BOS Meeting NO: 15th, Dated BOS 28/07/2022
Date of Approval by the Academic Council	Academic Council Meeting No. 18th, Dated 03/08/2022

Course Code: ECE3107	**Course Title :** Machine Vision for Robotics **Type of Course: Theory**	**L- T- P- C**	3	0	0	3
Version No.	1.0					
Course Pre-requisites	**NA**					
Anti-requisites	NIL					
Course Description	**The purpose of this course is to teach the principles and applications of vision system in modern manufacturing Environment. The nature of this course is analytical with practical understanding. It is also intended at introducing basic concepts to Non ECE and CSE students. The course is analytical in nature and needs fair knowledge of digital image processing. The first part of the course focuses the basics vision systems and object recognition. Further, it explores the knowledge in robot vision applications.**					
Course Objective	**This course is designed to improve the learners' EMPLOYABILITY SKILLS by using EXPERIENTIAL LEARNING techniques.**					
Course Outcomes	**On successful completion of this course the students shall be able to:** 4) Explore various vision systems for Machines 5) Understand the image capturing and processing techniques 6) Apply the robotic operating system to Machines					
Course Content:						
Module 1	**Overview of Machine Vision in IP**	Quizzes and assignments	**12 SESSION**			
Topics: Basic Components – Elements of visual perception, Lenses: Pinhole cameras, Gaussian Optics – Cameras – Camera-Computer interface- Fundamental Data Structures: Images, Regions, Sub-pixel Precise Contours – Image Enhancement : Gray value transformations, image smoothing, Fourier Transform – Geometric Transformation - Image segmentation – Segmentation of contours, lines, circles and ellipses – Camera calibration – Stereo Reconstruction- Object recognition, Approaches to Object Recognition, Recognition by combination of views – objects with sharp edges, using two views only, using a single view, use of depth values.						
Module 2	**Vision algorithms and applications**	Quizzes and assignments	**12 SESSION**			
Topics: Transforming sensor reading, Mapping Sonar Data, Aligning laser scan measurements - Vision and Tracking: Following the road, Iconic image processing, Multiscale image processing, Video Tracking - Learning landmarks: Landmark spatiograms, K-means Clustering, EM Clustering.						
Module 3	**ROBOT Vision**	Quizzes and assignments	**12 SESSION**			
Topics: Basic introduction to Robotic operating System (ROS) - Real and Simulated Robots - Introduction to OpenCV, Open NI and PCL, installing and testing ROS camera Drivers, ROS to OpenCV - The cv_bridge Package						
Targeted Application & Tools that can be used: **Application Area includes all intelligence devices like Unmanned Vehicle. The students will be able to join a profession which involves basics to high level of automation design and analysis.** **Professionally Used Software: PYTHON, MATLAB, JAVA. PyTorch, AWS cloud, Torch, Keras, TensorFlow-IBM Watson**						
Project work/Assignment:						

1.Case Studies: At the end of the course students will be given a real-world scenario for any application like, **Drive the solution of a shape-from-shading problem at a singular point, by fitting a smooth local shape near the singular point.** Students will be submitting a report which will include Design and implementation methodology.

2. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. **Presidency University Library Link .**

3. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

4.Assignment 1:) Consider a flying robotic system that uses binocular stereo to obtain three dimensional information from pairs of images. Suppose that the scale of the recovered three dimensional coordinates is not known accurately because the baseline between exposure stations is not known with precision. Now suppose that two such three-dimensional models — obtained along different flight paths — are to be related. In this case, determining the absolute orientation requires that, in addition to translation and rotation, a scale factor relating the two three dimensional models be found as well.
