## PART A – PROGRAM REGULATIONS

### 1. Vision & Mission of the University and the School / Department

#### *1.1 Vision of the University*

To be a Value-driven Global University, excelling beyond peers and creating professionals of integrity and character, having concern and care for society.

#### *1.2 Mission of the University*

- Commit to be an innovative and inclusive institution by seeking excellence in teaching, research and knowledge-transfer.
- Pursue Research and Development and its dissemination to the community, at large.
- Create, sustain and apply learning in an interdisciplinary environment with consideration for ethical, ecological and economic aspects of nation building.
- Provide knowledge-based technological support and services to the industry in its growth and development.
- To impart globally-applicable skill-sets to students through flexible course offerings and support industry's requirement and inculcate a spirit of new-venture creation.

#### *1.3 Vision of Presidency School of Engineering*

To be a value based, practice-driven School of Engineering and Technology, committed to developing globally-competent Engineers, dedicated to transforming Society.

#### *1.4 Mission of Presidency School of Engineering*

- Cultivate a practice-driven environment with a contemporary Learning-pedagogy, integrating theory and practice.
- Attract and nurture world-class faculty to excel in Teaching and Research, in the field of Core Engineering.
- Establish state-of-the-art facilities for effective Teaching and Learning-experiences.
- Promote Interdisciplinary Studies to nurture talent and impart relevant skill-sets for global impact.
- Instil Entrepreneurial and Leadership Skills to address Social, Environmental, and Community-needs.

#### *1.5 Vision of Department of Mechanical Engineering*

To be a value-based, industry driven Mechanical Engineering Department committed to develop globally competent Mechanical Engineering professionals dedicated to transform the society.

#### *1.6 Mission of Department of Mechanical Engineering*

- Committed to inculcate application of Engineering knowledge, develop problem analysis and solving skills to be able to investigate complex engineering problems with modern tools.
- Create value-driven engineering professionals who are sensitive to societal concerns of environmental sustainability through ethical conduct.

- Develop excellent communication abilities with core skills of project management and team work.
- Imbibe passion for lifelong learning with individual growth path.
- Commitment towards excellence in Mechanical Engineering education through advancements in research and innovation.
- Design flexible course contents in disciplinary, interdisciplinary and research areas to enhance student's competitiveness.

## 2. Preamble to the Program Regulations and Curriculum

This is the subset of Academic Regulations and it is to be followed as a requirement for the award of B.Tech degree.

The Curriculum is designed to take into the factors listed in the Choice Based Credit System (CBCS) with focus on Social Project Based Learning, Industrial Training, and Internship to enable the students to become eligible and fully equipped for employment in industries, choose higher studies or entrepreneurship.

In exercise of the powers conferred by and in discharge of duties assigned under the relevant provision(s) of the Act, Statutes and Academic Regulations of the University, the Academic Council hereby makes the following Regulations.

## 3. Short Title and Applicability

a. These Regulations shall be called the Bachelor of Technology Degree Program Regulations and Curriculum 2021-2025.
b. These Regulations are subject to, and pursuant to the Academic Regulations.
c. These Regulations shall be applicable to the ongoing Bachelor of Technology Degree Programs of the 2021-2025 batch, and to all other Bachelor of Technology Degree Programs which may be introduced in future.
d. These Regulations shall supersede all the earlier Bachelor of Technology Degree Program Regulations and Curriculum, along with all the amendments thereto.
e. These Regulations shall come into force from the Academic Year 2024-2025.

## 4. Definitions

*In these Regulations, unless the context otherwise requires:*

a. *"Academic Calendar" means the schedule of academic and miscellaneous events as approved by the Vice Chancellor;*
b. *"Academic Council" means the Academic Council of the University;*
c. *"Academic Regulations" means the Academic Regulations, of the University;*
d. *"Academic Term" means a Semester or Summer Term;*
e. *"Act" means the Presidency University Act, 2013;*
f. *"AICTE" means All India Council for Technical Education;*
g. *"Basket" means a group of courses bundled together based on the nature/type of the course;*
h. *"BOE" means the Board of Examinations of the University;*
i. *"BOG" means the Board of Governors of the University;*
j. *"BOM" means the Board of Management of the University;*
k. *"BOS" means the Board of Studies of a particular Department/Program of Study*

*of the University;*

l. *"CGPA" means Cumulative Grade Point Average as defined in the Academic Regulations;*

m. *"Clause" means the duly numbered Clause, with Sub-Clauses included, if any, of these Regulations;*

n. *"COE" means the Controller of Examinations of the University;*

o. *"Course In Charge" means the teacher/faculty member responsible for developing and organising the delivery of the Course;*

p. *"Course Instructor" means the teacher/faculty member responsible for teaching and evaluation of a Course;*

q. *"Course" means a specific subject usually identified by its Course-code and Course-title, with specified credits and syllabus/course-description, a set of references, taught by some teacher(s)/course-instructor(s) to a specific class (group of students) during a specific Academic Term;*

r. *"Curriculum Structure" means the Curriculum governing a specific Degree Program offered by the University, and, includes the set of Baskets of Courses along with minimum credit requirements to be earned under each basket for a degree/degree with specialization/minor/honours in addition to the relevant details of the Courses and Course catalogues (which describes the Course content and other important information about the Course). Any specific requirements for a particular program may be brought into the Curriculum structure of the specific program and relevant approvals should be taken from the BOS and Academic Council at that time.*

s. *"DAC" means the Departmental Academic Committee of a concerned Department/Program of Study of the University;*

t. *"Dean" means the Dean / Director of the concerned School;*

u. *"Degree Program" includes all Degree Programs;*

v. *"Department" means the Department offering the degree Program(s) / Course(s) / School offering the concerned Degree Programs / other Administrative Offices;*

w. *"Discipline" means specialization or branch of B.Tech. Degree Program;*

x. *"HOD" means the Head of the concerned Department;*

y. *"L-T-P-C" means Lecture-Tutorial-Practical-Credit – refers to the teaching – learning periods and the credit associated;*

z. *"MOOC" means Massive Open Online Courses;*

aa. *"MOU" means the Memorandum of Understanding;*

bb. *"NPTEL" means National Program on Technology Enhanced Learning;*

cc. *"Parent Department" means the department that offers the Degree Program that a student undergoes;*

dd. *"Program Head" means the administrative head of a particular Degree Program/s;*

ee. *"Program Regulations" means the Bachelor of Technology Degree Program Regulations and Curriculum, 2021-2025;*

ff. *"Program" means the Bachelor of Technology (B.Tech.) Degree Program;*

gg. *"PSOE" means the Presidency School of Engineering;*

hh. *"Registrar" means the Registrar of the University;*

ii. *"School" means a constituent institution of the University established for*

*monitoring, supervising and guiding, teaching, training and research activities in broadly related fields of studies;*

*jj. "Section" means the duly numbered Section, with Clauses included in that Section, of these Regulations;*

*kk. "SGPA" means the Semester Grade Point Average as defined in the Academic Regulations;*

*ll. "Statutes" means the Statutes of Presidency University;*

*mm. "Sub-Clause" means the duly numbered Sub-Clause of these Program Regulations;*

*nn. "Summer Term" means an additional Academic Term conducted during the summer break (typically in June-July) for a duration of about eight (08) calendar weeks, with a minimum of thirty (30) University teaching days;*

*oo. "SWAYAM" means Study Webs of Active Learning for Young Aspiring Minds.*

*pp. "UGC" means University Grant Commission;*

*qq. "University" means Presidency University, Bengaluru; and*

*rr. "Vice Chancellor" means the Vice Chancellor of the University.*

## 5. Program Description

The Bachelor of Technology Degree Program Regulations and Curriculum 2021-2025 are subject to, and, pursuant to the Academic Regulations. These Program Regulations shall be applicable to the following ongoing Bachelor of Technology (B.Tech.) Degree Programs of 2021-2025 offered by the Presidency School of Engineering (PSOE):

1. Bachelor of Technology in Civil Engineering, abbreviated as B.Tech. (Civil Engineering)
2. Bachelor of Technology in Electronics and Communication Engineering, abbreviated as B.Tech. (Electronics and Communication Engineering)
3. Bachelor of Technology in VLSI, abbreviated as B.Tech. (VLSI)
4. Bachelor of Technology in Electrical and Electronics Engineering, abbreviated as B.Tech. (Electrical and Electronics Engineering)
5. Bachelor of Technology in Mechanical Engineering, abbreviated as B.Tech. (Mechanical Engineering); and
6. Bachelor of Technology in Petroleum Engineering, abbreviated as B.Tech. (Petroleum Engineering)

5.1 These Program Regulations shall be applicable to other similar programs, which may be introduced in future.

5.2 These Regulations may evolve and get amended or modified or changed through appropriate approvals from the Academic Council, from time to time, and shall be binding on all concerned.

5.3 The effect of periodic amendments or changes in the Program Regulations, on the students admitted in earlier years, shall be dealt with appropriately and carefully, so as to ensure that those students are not subjected to any unfair situation whatsoever, although they are required to conform to these revised Program Regulations, without any undue favour or considerations

## 6. Minimum and Maximum Duration

6.1 Bachelor of Technology Degree Program is a Four-Year, Full-Time Semester based program. The minimum duration of the B.Tech. Program is four (04) years and each year comprises of two academic Semesters (Odd and Even Semesters) and hence the duration of the B.Tech. program is eight (08) Semesters.

6.2 A student who for whatever reason is not able to complete the Program within the normal period or the minimum duration (number of years) prescribed for the Program, may be allowed a period of two years beyond the normal period to complete the mandatory minimum credits requirement as prescribed by the concerned Program Regulations and Curriculum. In general, the permissible maximum duration (number of years) for completion of Program is 'N' + 2 years, where 'N' stands for the normal or minimum duration (number of years) for completion of the concerned Program as prescribed by the concerned Program Regulations and Curriculum.

6.3 The time taken by the student to improve Grades/CGPA, and in case of temporary withdrawal/re-joining ( refer to clause 16.1 of academic regulations), shall be counted in the permissible maximum duration for completion of a Program.

6.4 In exceptional circumstances, such as temporary withdrawal for medical exigencies where there is a prolonged hospitalization and/or treatment, as certified through hospital/medical records, women students requiring extended maternity break (certified by registered medical practitioner), and, outstanding sportspersons representing the University/State/India requiring extended time to participate in National/International sports events, a further extension of one (01) year may be granted on the approval of the Academic Council.

6.5 The enrolment of the student who fails to complete the mandatory requirements for the award of the concerned Degree (refer Section of 19.0 Academic Regulations) in the prescribed maximum duration (Sub-Clauses 18.1 and 18.2 of Academic Regulations), shall stand terminated and no Degree shall be awarded.

## 7 Programme Educational Objectives (PEO)

After four years of successful completion of the program, the graduates shall be to:

**PEO1.** Demonstrate success as Mechanical Engineer with innovative skills and moral and ethical values.

**PEO2.** Engage in lifelong learning through research and professional development,

**PEO3.** Serve as a leader in the profession through consultancy, extension activities or entrepreneurship.

## 8 Programme Outcomes (PO) and Programme Specific Outcomes (PSO)

### 8.1 Programme Outcomes (PO)

On successful completion of the Program, the students shall be able to:

**PO1. Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

**PO2. Problem Analysis:** Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

**PO3. Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

**PO4. Conduct Investigations of Complex Problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

**PO5. Modern Tool Usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

**PO6. The Engineer and Society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

**PO7. Environment and Sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

**PO8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

**PO9. Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

**PO10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

**PO11. Project Management and Finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

**PO12. Life-Long Learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

### 8.2 Program Specific Outcomes (PSOs):

On successful completion of the Program, the students shall be able to:

**PSO1: Employability:** Acquire technical and managerial skill that make them an employable graduate.

**PSO2: Research:** Acquire theoretical background of each course that they are capable of applying it for solving real-time (Physical) problems.

**PSO3: Entrepreneurship**: Acquire time management, strategic thinking, team work, and network though out their course study and project work enable them to be an entrepreneurship.

**PSO4: Philanthropist:** Get experienced through SIC (Social Immersion Course), social outreach, blood donation and other social activity during their 4 years of stay and enable them to be a philanthropist.

## 9 Admission Criteria (as per the concerned Statutory Body)

The University admissions shall be open to all persons irrespective of caste, class, creed, gender or nation. All admissions shall be made on the basis of merit in the qualifying examinations; provided that forty percent of the admissions in all Programs of the University shall be reserved for the students of Karnataka State and admissions shall be made through a Common Entrance Examination conducted by the State Government or its agency and seats shall be allotted as per the merit and reservation policy of the State Government from time to time**.** The admission criteria to the B.Tech. Program is listed in the following Sub-Clauses:

9.1 An applicant who has successfully completed Pre-University course or Senior Secondary School course (+2) or equivalent such as (11+1), 'A' level in Senior School Leaving Certificate Course from a recognized university of India or outside or from Senior Secondary Board or equivalent, constituted or recognized by the Union or by the State Government of that Country for the purpose of issue of qualifying certificate on successful completion of the course, may apply for and be admitted into the Program.

9.2 Provided further, the applicant must have taken Physics and Mathematics as compulsory subjects in the Pre-University / Higher Secondary / (10+2) / (11+1) examination, along with either Chemistry / Biology / Electronics / Computer Science / Biotechnology subject, and, the applicant must have obtained a minimum of 45% of the total marks (40% in case of candidates belonging to the Reserved Category as classified by the Government of Karnataka) in these subjects taken together.

9.3 The applicant must have appeared for Joint Entrance Examinations (JEE) Main / JEE (Advanced) / Karnataka CET / COMED-K, or any other State-level Engineering Entrance Examinations.

9.4 Reservation for the SC / ST and other backward classes shall be made in accordance with the directives issued by the Government of Karnataka from time to time.

9.5 Admissions are offered to Foreign Nationals and Indians living abroad in accordance with the rules applicable for such admission, issued from time to time, by the Government of India.

9.6 Candidates must fulfil the medical standards required for admission as prescribed by the University.

9.7 If, at any time after admission, it is found that a candidate had not in fact fulfilled all the requirements stipulated in the offer of admission, in any form whatsoever, including possible misinformation and any other falsification, the Registrar shall report the matter to the Board of Management (BOM), recommending revoking the admission of the candidate.

9.8 The decision of the BOM regarding the admissions is final and binding.

## 10 Lateral Entry / Transfer Students requirements

### 10.1 Lateral Entry

The University admits students directly to the second year (3rd Semester) of the B.Tech. Degree program as per the provisions and/or regulations of the Government of Karnataka pertaining to the "Lateral Entry" scheme announced by the Government from time to time. Further, the general conditions and rules governing the provision of Lateral Entry to the B.Tech. Program of the University are listed in the following Sub-Clauses:

10.1.1 Admission to 2nd year (3rd Semester) of the B.Tech. Degree program shall be open to the candidates who are holders of a 3-year Diploma in Engineering (or equivalent qualification as recognized by the University), who have secured not less than forty-five percentage (45%) marks in the final year examination (5th and 6th Semesters of the Diploma Program) in the appropriate branch of Engineering. Provided that, in case of SC / ST and OBC candidates from Karnataka the minimum marks for eligibility shall be forty percent (40%).

10.1.2 Provided further that, candidates seeking Lateral Entry may be required to complete specified bridge Courses as prescribed by the University. Such bridge Courses, if any, shall not be included in the CGPA computations.

10.1.3 All the existing Regulations and Policies of the University shall be binding on all the students admitted to the Program through the provision of Lateral Entry.

10.1.4 The Course requirements prescribed for the 1st Year of the B.Tech. Program shall be waived for the student(s) admitted through Lateral Entry and the duration of the B.Tech. Program for such students is three (03) years, commencing from the 3rd Semester (commencement of the 2nd Year) of the B.Tech. Program and culminating with the 8th Semester (end of the 4th Year) of the B.Tech. Program.

10.1.5 Provided that, if a Lateral Entry student misses any mandatory program specific courses that are typically offered in the 1st year (1st or 2nd semesters), then those courses must be cleared by the students as soon as possible, preferably during the Summer Term.

10.1.6 The existing Program Regulations of the concerned Program to which the student is admitted through the provision of Lateral Entry shall be binding on the student with effect from the 3rd Semester of the Program. i.e., the Program Structure and Curriculum from the 3rd to 8th Semesters of the

Program concerned shall be binding on the student admitted through Lateral Entry. Further, any revisions / amendments made to the Program Regulations thereafter, shall be binding on all the students of the concerned Program.

10.1.7 All the Courses (and the corresponding number of Credits) prescribed for the 1st Year of the concerned B.Tech. Program shall be waived for the student(s) admitted to the concerned B.Tech Program through Lateral Entry. Further, the *Minimum Credit Requirements* for the award of the B.Tech. Degree in the concerned Program shall be prescribed / calculated as follows:

The ***Minimum Credit Requirements*** for the award of the Bachelor of Technology (B.Tech.) Degree prescribed by the concerned Bachelor of Technology Degree Program Regulations and Curriculum, 2021-2025, minus the number of Credits prescribed / accepted by the Equivalence Committee for the 1st Year (1st and 2nd Semesters) of the B.Tech. Program.

For instance, if the *Minimum Credit Requirements* for the award of the Bachelor of Technology (B.Tech.) Degree as prescribed by the Regulations for B.Tech. (Mechanical Engineering) is "N" Credits, and, if the total credits prescribed in the 1st Year (total credits of the 1st and 2nd Semesters) of the Program concerned is "M" Credits, then the *Minimum Credit Requirements* for the award of the B.Tech. in Mechanical Engineering for a student who joins the Program through the provision of the Lateral Entry, shall be "N – M" Credits.

10.1.8 Further, no other waiver except the Courses prescribed for the 1st year of the B.Tech. Program of the University shall be permissible for students joining the B.Tech. Program through the provision of Lateral Entry.

**10.2 Transfer of student(s) from another recognized University to the 2nd year (3rd Semester) of the B.Tech. Program of the University**

A student who has completed the 1st Year (i.e., passed in all the Courses / Subjects prescribed for the 1st Year) of the B.Tech. / B.E. / B.S., Four-Year Degree Program from another recognized University, may be permitted to transfer to the 2nd Year (3rd Semester) of the B.Tech. Program of the University as per the rules and guidelines prescribed in the following Sub-Clauses:

**10.2.1** The concerned student fulfils the criteria specified in Sub-Clauses 10.1.1, 10.1.2 and 10.1.3.

**10.2.2** The student shall submit the Application for Transfer along with a non-refundable Application Fee (as prescribed by the University from time to time) to the University no later than July 10 of the concerned year for admission to the 2nd Year (3rd Semester) B.Tech. Program commencing on August 1 on the year concerned.

**10.2.3** The student shall submit copies of the respective Marks Cards / Grade Sheets / Certificates along with the Application for Transfer.

**10.2.4** The transfer may be provided on the condition that the Courses and Credits completed by the concerned student in the 1st Year of the B.Tech. / B.E. / B.S. Four Degree Program from the concerned University, are declared equivalent and acceptable by the Equivalence Committee constituted by the Vice Chancellor for this purpose. Further, the Equivalence Committee may also prescribe the Courses and Credits the concerned students shall have to mandatorily complete, if admitted to the 2nd Year of the B.Tech. Program of the University.

**10.2.5** The Branch / Discipline allotted to the student concerned shall be the decision of the University and binding on the student.

## 11 Change of Branch / Discipline / Specialization

A student admitted to a particular Branch of the B.Tech. Program will normally continue studying in that Branch till the completion of the program. However, the University reserves the right to provide the option for a change of Branch, or not to provide the option for a change of Branch, at the end of 1st Year of the B.Tech. Program to eligible students in accordance with the following rules and guidelines: framed by the University from time to time.

11.1 Normally, only those students, who have passed all the Courses prescribed for the 1st Year of the B.Tech. Program and obtained a CGPA of not less than 6.50 at the end of the 2nd Semester, shall be eligible for consideration for a change of Branch.

11.2 Change of Branch, if provided, shall be made effective from the commencement of the 3rd Semester of the B.Tech. Program. There shall be no provision for change of Branch thereafter under any circumstances whatsoever.

11.3 The student provided with the change of Branch shall fully adhere to and comply with the Program Regulations of the concerned Branch of the B.Tech. Program, the Fee Policy pertaining to that Branch of the B.Tech. Program, and, all other rules pertaining to the changed Branch existing at the time.

11.4 Change of Branch once made shall be final and binding on the student. No student shall be permitted, under any circumstances, to refuse the change of Branch offered.

11.5 The eligible student may be allowed a change in Branch, strictly in order of *inter se* merit, subject to the conditions given below:
11.5.1 The actual number of students in the 3rd Semester in any particular

Branch to which the transfer is to be made, should not exceed the intake fixed by the University for the concerned Branch;

11.5.2 The actual number of students in any Branch from which transfer is being sought does not fall below 75% of the total intake fixed by the University for the concerned Branch.

The process of change of Branch shall be completed within the first five days of Registration for the 3rd Semester of the B.Tech. Program.

## 12 Specific Regulations regarding Assessment and Evaluation (including the Assessment Details of NTCC Courses, Weightages of Continuous Assessment and End Term Examination for various Course Categories)

**12.1** The academic performance evaluation of a student in a Course shall be according to the University Letter Grading System based on the class performance distribution in the Course.

**12.2** Academic performance evaluation of every registered student in every Course registered by the student is carried out through various components of Assessments spread across the Semester. The nature of components of Continuous Assessments and the weightage given to each component of Continuous Assessments (refer Clause 12.5) shall be clearly defined in the Course Plan for every Course, and approved by the DAC.

**12.3** Format of the End-Term examination shall be specified in the Course Plan.

**12.4** Grading is the process of rewarding the students for their overall performance in each Course. The University follows the system of Relative Grading with statistical approach to classify the students based on the relative performance of the students registered in the concerned Course except in the following cases:

- Non-Teaching Credit Courses (NTCC)
- Courses with a class strength less than 30

Absolute grading method may be adopted, where necessary with prior approval of concerned DAC.

Grading shall be done at the end of the Academic Term by considering the aggregate performance of the student in all components of Assessments prescribed for the Course. Letter Grades (Clause 8.10 of academic regulations) shall be awarded to a student based on her/his overall performance relative to the class performance distribution in the concerned Course. These Letter Grades not only indicate a qualitative assessment of the student's performance but also carry a quantitative (numeric) equivalent called the Grade Point.

### 12.5 Assessment Components and Weightage

| Table 1: Assessment Components and Weightage for different category of Courses | | |
|---|---|---|
| **Nature of Course and Structure** | **Evaluation Component** | **Weightage** |
| **Lecture-based Course**<br>L component in the L-T-P Structure is predominant (more than 1)<br>(Examples: 3-0-0; 3-0-2; 2-1-0; 2-0-2, 2-0-4 etc.) | Continuous Assessments | 50% |
| | End Term Examination | 50% |
| **Lab/Practice-based Course**<br>P component in the L-T-P Structure is predominant<br>(Examples: 0-0-4; 1-0-4; 1-0-2; etc.) | Continuous Assessments | 100% |
| **Skill based Courses** like Industry Internship, Capstone project, Research Dissertation, Integrative Studio, Interdisciplinary Project, Summer / Short Internship, Social Engagement / Field Projects, Portfolio, and such similar Non-Teaching Credit Courses, where the pedagogy does not lend itself to a typical L-T-P structure | Guidelines for the assessment components for the various types of Courses, with recommended weightages, shall be specified in the concerned Program Regulations and Curriculum / Course Plans, as applicable. | |

The exact weightages of Evaluation Components shall be clearly specified in the concerned PRC and respective Course Plan.

Normally, for Practice/Skill based Courses, without a defined credit structure (L–T–P) [NTCC], but with assigned Credits (as defined in Clause 5.2 of the Academic Regulations),the method of evaluation shall be based only on Continuous Assessments. The various components of Continuous Assessments, the distribution of weightage among such components, and the method of evaluation/assessment, shall be as decided and indicated in the Course Plan/PRC. The same shall be approved by the respective DAC.

### 12.6 Minimum Performance Criteria:

#### 12.6.1 Theory only Course and Lab/Practice Embedded Theory Course

A student shall satisfy the following minimum performance criteria to be eligible to earn the credits towards the concerned Course:

a. A student must obtain a minimum of 30% of the total marks/weightage assigned to the End Term Examinations in the concerned Course.

b. The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of the components of Continuous Assessments, Mid Term Examinations and End Term Examinations in the concerned Course.

**12.6.2 Lab/Practice only Course and Project Based Courses**

The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of all assessment components in the concerned Course.

**12.6.3** A student who fails to meet the minimum performance criteria listed above in a Course shall be declared as "Fail" and given "F" Grade in the concerned Course. For theory Courses, the student shall have to re-appear in the "Make-Up Examinations" as scheduled by the University in any subsequent semester, or, re-appear in the End Term Examinations of the same Course when it is scheduled at the end of the following Semester or Summer Term, if offered. The marks obtained in the Continuous Assessments (other than the End Term Examination) shall be carried forward and be included in computing the final grade, if the student secures the minimum requirements (as per Clause 8.91 and 8.9.2 of academic regulations) in the "Make-Up Examinations" of the concerned Course. Further, the student has an option to re-register for the Course and clear the same in the summer term/ subsequent semester if he/she wishes to do so, provided the Course is offered.

## 13 Additional clarifications - Rules and Guidelines for Transfer of Credits from MOOC, etc. – Note: These are covered in Academic Regulations

The University allows students to acquire credits from other Indian or foreign institutions and/or Massive Open Online Course (MOOC) platforms, subject to prior approval. These credits may be transferred and counted toward fulfilling the minimum credit requirements for the award of a degree. The process of transfer of credits is governed by the following rules and guidelines:

**13.1** The transfer of credits shall be examined and recommended by the Equivalence Committee ( refer Annexure B of academic regulations) and approved by the Dean - Academics.

**13.2** Students may earn credits from other Indian or foreign Universities/Institutions with which the University has an MOU, and that MOU shall have specific provisions, rules and guidelines for transfer of credits. These transferred credits shall be counted towards the minimum credit requirements for the award of the degree.

**13.3** Students may earn credits by registering for Online Courses offered by *Study Web of Active Learning by Young and Aspiring Minds* (SWAYAM) and *National Program on Technology Enhanced Learning* (NPTEL), or other such recognized Bodies/ Universities/Institutions as approved by the concerned BOS and Academic Council from time to time. The concerned School/Parent Department shall publish/include the approved list of Courses and the rules and guidelines governing such transfer of credits of the concerned Program from time to time. The Rules and Guidelines for the transfer of credits specifically from the Online Courses conducted by SWAYAM/ NPTEL/ other approved MOOCs are as stated in the following Sub-Clauses:

**13.3.1** A student may complete SWAYAM/NPTEL/other approved MOOCs as mentioned in Clause 17.3 (as per academic regulations) and transfer equivalent credits to partially or fully complete the mandatory credit requirements of Discipline Elective Courses and/or the mandatory credit requirements of Open Elective Courses as prescribed in the concerned Curriculum Structure. However, it is the sole responsibility of the student to complete the mandatory credit requirements of the Discipline Elective Courses and the Open Elective Courses as prescribed by the Curriculum Structure of the concerned Program.

**13.3.2** SWAYAM/NPTEL/ other approved MOOCs as mentioned in Clause 17.3 (as per academic regulations) shall be approved by the concerned Board of Studies and placed (as Annexures) in the concerned PRC.

**13.3.3** Parent Departments may release a list of SWAYAM/NPTEL/other approved MOOCs for Pre-Registration as per schedule in the Academic Calendar or through University Notification to this effect.

**13.3.4** Students may Pre-Register for the SWAYAM/NPTEL/other approved MOOCs in the respective Departments and register for the same Courses as per the schedule announced by respective Online Course Offering body/institute/ university.

**13.3.5** A student shall request for transfer of credits only from such approved Courses as mentioned in Sub-Clause 13.3.2 above.

**13.3.6** SWAYAM/NPTEL/other approved MOOCs Courses are considered for transfer of credits only if the concerned student has successfully completed the SWAYAM/NPTEL/other approved MOOCs and obtained a certificate of successful/satisfactory completion.

**13.3.7** A student who has successfully completed the approved SWAYAM/NPTEL/ other approved MOOCs and wants to avail the provision of transfer of equivalent credits, must submit the original Certificate of Completion, or such similar authorized documents to the HOD concerned, with a written request for the transfer of the

equivalent credits. On verification of the Certificates/Documents and approval by the HOD concerned, the Course(s) and equivalent Credits shall forwarded to the COE for processing of results of the concerned Academic Term.

**13.3.8** The credit equivalence of the SWAYAM/NPTEL/other approved MOOCs are based on Course durations and/or as recommended by the Course offering body/institute/university. The Credit Equivalence mapped to SWAYAM/ NPTEL approved Courses based on Course durations for transfer of credits is summarised in Table shown below. The Grade will be calculated from the marks received by the Absolute Grading Table 8.11 in the academic regulations.

**Table 2: Durations and Credit Equivalence for Transfer of Credits from SWAYAM-NPTEL/ other approved MOOC Courses**

| Sl. No. | Course Duration | Credit Equivalence |
|---|---|---|
| 1 | 4 Weeks | 1 Credit |
| 2 | 8 Weeks | 2 Credits |
| 3 | 12 Weeks | 3 Credits |

**13.3.9** The maximum permissible number of credits that a student may request for credit transfer from MOOCs shall not exceed 20% of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree.

**13.3.10** The University shall not reimburse any fees/expense; a student may incur for the SWAYAM/NPTEL/other approved MOOCs.

**13.4** The maximum number of credits that can be transferred by a student shall be limited to forty percent (40%) of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree. However, the grades obtained in the Courses transferred from other Institutions/MOOCs, as mentioned in this Section (13.0), shall not be included in the calculation of the CGPA.

## PART B – PROGRAM STRUCTURE

### 14. Structure / Component with Credit Requirements Course Baskets & Minimum Basket wise Credit Requirements

The B.Tech. (Mechanical Engineering) Program Structure (2021-2025) totalling 160 credits. Table 3 summarizes the type of baskets, number of courses under each basket and the associated credits that are mandatorily required for the completion of the Degree.

| Table 3: B.Tech. (Mechanical Engineering) 2021-2025: Summary of Mandatory Courses and Minimum Credit Contribution from various Baskets | |
|---|---|
| **Baskets** | **Credit Contribution** |
| SCHOOL CORE | 54 |
| PROGRAM CORE | 61 |
| DISCIPLINE ELECTIVE | 30 |
| OPEN ELECTIVE | 15 |
| **TOTAL CREDITS** | **Min. 160** |

In the entire Program, the practical and skill based course component contribute to an extent of approximately 61% out of the total credits of 160 for B.Tech. (Mechanical Engineering) program of four years' duration.

The curriculum structure is designed as per the CBCS and incorporating OBE Principles. The students are provided with at most flexibility in selection of the courses of their choice

A student will have to complete a minimum of 15 credits of Discipline Electives from a given specialization basket, to earn a specialization certificate in addition to the base degree to which he/she has taken admission

| **Minor Group** | **Minimum Credits from each minor group for various programs** | | | |
|---|---|---|---|---|
| | **MECHANICAL (MEC)** | **MECHATRONICS (MCM)** | **ADDITIVE MANUFACTURING (MAM)** | |
| General | 15 | 15 | Additive Manufacturing | 15 |
| Additive Manufacturing | 15 | | General | 15 |
| Thermal and Fluids Engineering | | | Thermal and Fluids Engineering | |
| Manufacturing Technology Basket | | | Manufacturing Technology Basket | |
| Mechanical Engineering Design | | | Mechanical Engineering Design | |
| Mechatronics Basket | | 15 | Mechatronics Basket | |
| **Total** | **30** | **30** | | **30** |

## 15. Minimum Total Credit Requirements of Award of Degree

As per the AICTE guidelines, a minimum of 160 credits is required for the award of a B.Tech. degree.

## 16. Other Specific Requirements for Award of Degree, if any, as prescribed by the Statutory Bodies,

16.1 The award of the Degree shall be recommended by the Board of Examinations and approved by the Academic Council and Board of Management of the University**.**

16.2 A student shall be declared to be eligible for the award of the concerned Degree if she/he:

a. Fulfilled the Minimum Credit Requirements and the Minimum Credits requirements under various baskets;

b. Secure a minimum CGPA of 4.50 in the concerned Program at the end of the Semester/Academic Term in which she/he completes all the requirements for the award of the Degree as specified in Sub-Clause 19.2.1 a of Academic Regulations**;**

c. No dues to the University, Departments, Hostels, Library, and any other such Centers/ Departments of the University; and

d. No disciplinary action is pending against her/him.

## PART C – CURRICULUM STRUCTURE

### 17.Curriculum Structure – Basket Wise Course List

| Table 3.1 : School Core Courses | | | | | |
|---|---|---|---|---|---|
| **S.No** | **Course Code** | **Course Name** | **L** | **P** | **C** |
| 1 | MAT1001 | Calculus and Linear Algebra | 3 | 2 | 4 |
| 2 | MAT1002 | Transform Techniques, Partial Differential Equations and Their Applications | 3 | 0 | 3 |

## 18. Practical / Skill based Courses – Internships / Thesis / Dissertation / Capstone Project Work / Portfolio / Mini project

Practical / Skill based Courses like internship, project work, capstone project, research project / dissertation, and such similar courses, where the pedagogy does not lend itself to a typical L-T-P-C Structure as defined in Clause 5.1 of the Academic Regulations are simply assigned the number of Credits based on the quantum of work / effort required to fulfill the learning objectives and outcomes prescribed for the concerned Courses. Such courses are referred to as Non-Teaching Credit Courses (NTCC). These Courses are designed to provide students with hands-on experience and skills essential for their professional development. These courses aim to equip students with abilities in problem identification, root cause analysis, problem-solving, innovation, and design thinking through industry exposure and project-based learning. The expected outcomes are first level proficiency in problem solving and design thinking skills to better equip B.Tech. graduates for their professional careers. The method of evaluation and grading for the Practical / Skill based Courses shall be prescribed and approved by the concerned Departmental Academic Committee (refer Annexure A of the Academic Regulations). The same shall be prescribed in the Course Handout.

### *18.1 Internship*

A student may undergo an Internship for a period of 4-6 weeks in an industry / company or academic / research institution during the Semester Break between 4$^{th}$ and 5$^{th}$ Semesters or 6$^{th}$ and 7$^{th}$ Semesters. Alternatively, he/she may complete a 12- to 14-week internship during a full semester (7th or 8th semester) subject to the following conditions:

18.1.1 The Internship shall be in conducted in accordance with the Internship Policy prescribed by the University from time to time.

18.1.2 The selection criteria (minimum CGPA, pass in all Courses as on date, and any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Internship to a student;

18.1.3 The number of Internships available for the concerned Academic Term. Further, the available number of internships shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution providing the Internship, as stated in Sub-Clause 18.1.2 above.

18.1.4 A student may opt for Internship in an Industry / Company or academic / research institution of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the Internship on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Internship confirms to the University that the Internship shall be conducted in accordance with the Program Regulations and Internship Policy of the University.

18.1.5 A student selected for an Internship in an industry / company or academic / research institution shall adhere to all the rules and guidelines prescribed in the Internship Policy of the University.

### *18.2 Project Work*

A student may opt to do a Project Work for a period of 4-6 weeks in an Industry / Company or academic / research institution or the University Department(s) as an equivalence of Internship during the Semester Break between 4$^{th}$ and 5$^{th}$ Semesters or 6$^{th}$ and 7$^{th}$ Semesters or during the 5$^{th}$ / 6$^{th}$ / 7$^{th}$ Semester as applicable, subject to the following conditions:

18.2.1 The Project Work shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.

18.2.2 The student may do the project work in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 18.2.1). Provided further, that the Industry / Company or academic / research institution offering such project work confirms to the University that the project work will be conducted in accordance with the Program Regulations and requirements of the University.

### *18.3 Capstone Project*

A student may undergo a Capstone Project for a period of 12-14 weeks in an industry / company or academic / research institution in the 7$^{th}$ / 8$^{th}$ Semester as applicable, subject to the following conditions:

18.3.1 The Capstone Project shall be in conducted in accordance with the Capstone Project Policy prescribed by the University from time to time.

18.3.2 The selection criteria (minimum CGPA, pass in all Courses as on date, and any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Capstone Project to a student;

18.3.3 The number of Capstone Project available for the concerned Academic Term. Further, the available number of Capstone Project shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution providing the Capstone Project, as stated in Sub-Clause 18.3.2 above.

18.3.4 A student may opt for Capstone Project in an Industry / Company or academic / research institution of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the I Capstone Project on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Capstone Project confirms to the University that the Capstone Project shall be conducted in accordance with the Program Regulations and Capstone project Policy of the University.

18.3.5 A student selected for a Capstone Project in an industry / company or academic / research institution shall adhere to all the rules and guidelines prescribed in the Capstone Project Policy of the University.

### *18.4 Research Project / Dissertation*

A student may opt to do a Research Project / Dissertation for a period of 12-14 weeks in an Industry / Company or academic / research institution or the University Department(s) as an equivalence of Capstone Project, subject to the following conditions:

**18.4.1** The Research Project / Dissertation shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.

The student may do the Research Project / Dissertation in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 18.4.1). Provided further, that the Industry / Company or academic / research institution offering such Research Project / Dissertation confirms to the University that the Research Project / Dissertation work will be conducted in accordance with the Program Regulations and requirements of the University.

**19. List of Discipline Electives Courses: Minimum Credits to be earned from this basket is 30 Credits**

| **Media Studies Basket** | | | | | | | | | | |
| 1 | BAJ3050 | Corporate Filmmaking and Film Business | 0 | 4 | 2 | EM | HP | - | - | - |
| 2 | BAJ3051 | Digital Photography | 2 | 2 | 3 | EM | HP | - | - | - |
| 3 | BAJ3055 | Introduction to New Anchoring and News Management | 0 | 2 | 1 | - | - | - | - | - |
| **Research URE Basket** | | | | | | | | | | |
| 1 | URE2001 | University Research Experience | - | - | 3 | S/ EM/ EN | - | - | - | - |
| 2 | URE2002 | University Research Experience | - | - | 0 | S/ EM/ EN | - | - | - | - |

| Type of Skill |
|---|
| F - Foundation |
| S - Skill Development |
| EM - Employability |
| EN - Entrepreneurship |

| Course Caters to |
|---|
| GS - Gender Sensitization |
| ES - Environment and sustainability |
| HP - Human values and Professional Ethics |

## 21. Semester wise Courses Structure:

| Semester 1 | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| S. NO. | COURSE CODE | BASKET | COURSE NAME | CREDIT STRUCTURE | | | | TYPE OF SKILL | COURSE ADDRESSES TO |
| | | | | L | P | C | CONTAC THOURS | | |
| 1 | MAT1001 | SC | Calculus and Linear Algebra | 3 | 2 | 4 | 5 | F | - |
| 2 | CSE1001 | SC | Problem Solving Using JAVA | 2 | 2 | 3 | 4 | F | - |
| 3 | PHY1001 | SC | Material Physics | 2 | 2 | 3 | 4 | F | - |
| 4 | ENG1001/ ENG1002 | SC | Foundation English/ Technical English | 1 | 2 | 2 | 3 | F | - |
| 5 | XXXxxxx | OE | Open Elective – I | 3 | 0 | 3 | 3 | EN | - |
| 6 | PPS1001 | SC | Introduction to soft skills | 0 | 2 | 1 | 2 | S | - |
| 7 | KAN1001/ KAN2001 | SC | Kali Kannada / Thili Kannada | 1 | 0 | 1 | 1 | F | - |
| | | | Total | 12 | 10 | 17 | 22 | | |
| F - Foundation; S - Skill Development; EM-Employability; EN-Entrepreneurship skills; GS-Gender Sensitization; ES - Environment and sustainability; HP- Human values and Professional Ethics. | | | | | | | | | |

| Semester 2 | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| S. NO. | COURSE CODE | BASKET | COURSE NAME | CREDIT STRUCTURE | | | CONTACT HOURS | TYPE OF SKILL | COURSE ADDRESSES TO |

**22. Course Catalogues :**

| **Course Code:** MEC1004 | **Course Title:** Elements of Mechanical Engineering **Type of Course:** Program core Theory & Laboratory Integrated | | | **L- P- C** | **1** | **2** | **2** |
|---|---|---|---|---|---|---|---|
| **Version No.** | 2.0 | | | | | | |
| **Course Pre-requisites** | NIL | | | | | | |
| **Anti-requisites** | NIL | | | | | | |
| **Course Description** | This basic course in mechanical engineering is designed to acquaint students with an exposure to fundamentals of mechanical engineering. The very purpose of this course is to introduce the field of mechanical engineering through an exposition of its broader areas. This course provides insights into fundamental aspects of mechanical engineering. It also introduces the field of mechanical engineering through an exposition of its broader areas such as thermal energy, power transmission drives, manufacturing processes etc. | | | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Elements of Mechanical Engineering**" and attain **SKILL DEVELOPMENT** through Experiential learning techniques. | | | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>CO1: Describe different types of energy resources, prime movers, refrigeration and air-conditioning system.<br>CO2: Explain various power transmission systems used in Mechanical Engineering.<br>CO3: Classify different metal cutting processes and machine tools used in industries.<br>CO4: Identify the different metal joining processes like Welding. | | | | | | |
| **Course Content:** | | | | | | | |
| **Module 1** | Thermal Engineering | Assignment | Data Collection/any other such associated activity | 4 Sessios | | | |
| Topics:<br>Steam formation and its properties, laws of thermodynamics (Numerical based on First Law), Types of Systems, Introduction to refrigerators and room air conditioning system. | | | | | | | |
| **Module 2** | Prime Movers | Assignment | Data Collection/any other such associated activity | 6 Sessions | | | |
| Topics:<br>Introduction to different types of prime movers like IC engines (4-stroke) and Turbines (Water). | | | | | | | |
| **Module 3** | Mechanical Power Transmission Drives | Assignment- Quiz | Data Collection/any other such associated activity | 4 Sessions | | | |
| Topics:<br>Classification of different power transmission systems. | | | | | | | |
| **Module 4** | Manufacturing Processes | Assignment -Quiz | Data Collection/any other such associated activity | 4 Sessions | | | |

Topics:
Introduction to Manufacturing processes deals with machines tools, welding (arc)

**List of Laboratory Tasks:**

Experiment N0 1: Demonstration of working of IC engines, and To compute the power losses in IC engines.
Level 1: For the data provided for a 5 kW IC engine, compute various power loses using C program
Level 2: For the data provided for a 5kW IC engine, compute various power loses using C program
Experiment No. 2: Demonstrate the working of different types of turbines.
Level 1: Working of Pelton Turbine and plotting its characteristic curves.
Level 2: Working of Kaplan & Francis Turbines, and plotting their characteristic curves.
Experiment No. 3: Demonstrate the performance of various welding Operations
Level 1: Performance of Spot welding
Level 2: Performance of Gas welding
Experiment No. 4: Demonstration of working of machine tools
Level 1: Working of Lathe Machine tool
Level 2: Performing Milling Operations

**Targeted Application & Tools that can be used:**

Application Area is Alternate energy resources – data collection related to renewable energy resources. IC engines. And Electric vehicles
Professionally Used Software: C programming/ Python/ MATLAB

**Textook:**

| | | | | | |
|---|---|---|---|---|---|
| **Course Code: MEC1006** | **Course Title: Engineering Graphics Type of Course: School Core & Theory Only** | **L- P- C** | 2 | 0 | 2 |
| **Version No.** | 1.2 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The course is designed with the objective of giving an overview of engineering drawing with the help of software tools. It is introductory in nature and acquaints the students with the techniques used to create engineering drawings with computerized drafting tools. Computerized drafting provides accurate and easily modifiable graphic entities, easy data storage, easy retrieval facility and it enhances creativity. It will expose students to the concept of engineering drawing and teach them to draw different views of planes and solids in different orientations. The course will teach students to use AutoCAD to produce engineering drawings. They will learn to create drawing layouts, dimensioning, the theory of projection, orthographic projection of points, lines, planes and solids, isometric projection and be introduced to the development of surfaces. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of " **Engineering Graphics** " and attain **SKILL DEVELOPMENT** through Problem solving methodologies. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>**(**1) Demonstrate competency using AutoCAD graphics software as per BIS conventions and standards.<br>(2) Comprehend the theory of projection for drawing projections of Points, Lines and Planes under different conditions.<br>(3) Prepare multiview orthographic projections of Solids by visualizing them in different positions.<br>(4) Prepare pictorial drawings using the principles of isometric projections to visualize objects in three dimensions**.** | | | | |

**Course Content**

| | | | | |
|---|---|---|---|---|
| **Module 1** | Introduction to Drawing | Assignment | Standard technical drawing | 02 Sessions |
| Topics:<br>Introduction, drawing instruments and their uses, relevant BIS conventions and standards, Lettering, Line conventions, dimensioning, Selection of drawing sheet size and scale.<br><br>[02 Hours: Comprehension Level] | | | | |
| **Module 2** | Orthographic projections of Points, Straight Lines and Plane Surfaces | Assignment | Projection methods Analysis | 10 Sessions |
| Topics:<br>Introduction, Definitions – Elements of projection and methods of projection, Planes of projection, reference line and conventions adopted. First angle and third angle projections. Projection of Points in all 4 quadrants. | | | | |

Projections of Straight Lines (located in first quadrant/first angle projection only): True and apparent lengths, true and apparent Inclinations to reference planes. (No application problems). Projection of Plane surfaces (First angle projection): Regular plane surfaces – triangle, square, rectangle, pentagon, hexagon and circle – in different positions inclined to both the planes using change of position method only.

[10 Hours: Application Level]

| | | | | |
|---|---|---|---|---|
| **Module 3** | Orthographic Projections of Solids | Assignment | Multi-view drawing Analysis | 10 Sessions s |

**Topics:**
Introduction, Projection of right regular prisms, pyramids, cone, hexahedron and tetrahedron in different positions (Problems resting on HP only and First angle projection).

[10 Hours: Application Level]

| | | | | |
|---|---|---|---|---|
| **Module 4** | Isometric Projections of Solids (Using isometric scale only) | Assignment | Spatial Visualization | 8 Sessions |

**Topics:**
Introduction, Isometric scale, Isometric projections of right regular prisms, cylinders, pyramids, cones and their frustums, spheres and hemispheres, hexahedron (cube), and combination of 2 solids, conversion of orthographic view to isometric projection of simple objects.
8 Hours: Application Level]

**Targeted Application & Tools that can be used:**
Application Area is in understanding and interpreting an object in various positions and converting it into a technical drawing which can be universally accepted.
Professionally Used Software: AutoCAD

**Text Book:**

| **Version No.** | 1.1 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | Material Science and Metallurgy Course provides basic concepts in materials structure and its relation to properties and application to engineering problems. The Course includes structure of metallic, ceramic, and polymeric materials. The Course discusses the type of bonding and crystal structure their effect on the mechanical, electrical, and chemical properties of materials.<br>MMT Lab course aims at learning the practical concepts in material testing, which includes destructive testing like Tensile, Compressive, Hardness, Impact and non-destructive testing like Ultrasonic, Dye penetration test and Magnetic test. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Material Science and Metallurgy & MMT Lab**" and attain **SKILL DEVELOPMENT** through Experiential learning techniques. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>1] Describe the crystal structure, crystal imperfections and diffusion process in solids<br>2] Explain phase diagrams and various heat treatment processes.<br>3] Classify various engineering materials and their applications.<br>4] Conduct Hardness, tensile, shear and compression tests of metallic specimens.<br>5] Identify the defects inside the body by using Non-Destructive testing methods. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to crystal structures and diffusion: | Project | Knowledge level | 08 Sessions | |
| Topics:<br>Fundamental concepts, atomic structure, atomic bonding, crystal structure, defects and diffusion | | | | | |
| **Module 2** | Phase diagram: | Assign ment | Understanding level | 08 Sessions | |
| Topics:<br>Solidification, Phase Equilibria, Phase transformation, Iron carbon system, Numericals | | | | | |
| **Module 3** | Heat treatment: | Case study | Understand level | 08 Sessions | |
| Topics:<br>TTT diagram, CC curve, Microstructures developed, Different HT processes. | | | | | |
| **Module 4** | Engineering materials | Assign ment | Knowledge level | 08 Sessions | |

Topics:
Properties and applications of alloy steels, tool steels, cast iron, copper and Al base alloy, Ni base alloys, Composites, ceramics, Polymers.

List of Laboratory Tasks:

Experiment N0 1: Study of Hardness of a given specimen using Rockwell Hardness Testing machine. [Level 1]

Experiment No. 2: Study of Hardness of a given specimen using Brinnel Hardness Testing machine.[Level 1]

Experiment No. 3: Study of Hardness of a given specimen using Vickers Hardness Testing machine. [Level 1]

Experiment No. 4: Izod and Charpy tests on Mild steel, Copper and Brass Specimen. [Level 1]

Experiment No. 5: Preparation of specimen for Metallographic examination of different Engineering materials. Identification of microstructures of plain carbon Steel, tool steel, Gray cast Iron, SG (Spheroidal Graphite) iron, Brass, Bronze & composites. [Level 1]

Experiment No. 6: Non-Destructive Test experiments like,

a) Ultrasonic flaw detection.
b) Magnetic crack detection.
c) Dye penetration testing

to study the defects of casted and welded specimens [Level 1]

Experiment No. 7: Tensile test on metallic (Mild steel) specimens using a Universal testing machine. [Level 2 ]

Experiment No. 8: Compression test on metallic (Mild steel) specimens using a Universal testingmachine. [Level 2]

Experiment No. 9: Shear test on metallic (Mild steel) specimens using a Universal testing machine. [Level 2]

Experiment No. 10: Bending test on metallic (Mild steel) specimens using a Universal testing machine. [Level 2]

Experiment No. 11: Torsion test on metallic (Mild steel) specimens using a Torsion testing machine. [Level 2]

Experiment No. 12: Fatigue Test on metallic (Mild steel) specimens using a fatigue testing machine. [Level 2

**Targeted Application & Tools that can be used:**

Materials scientists work with diverse types of materials (e.g., metals, polymers, ceramics, liquid crystals, composites) for a broad range of applications (e.g., energy, construction, electronics, biotechnology, nanotechnology) employing modern processing and discovery principles (e.g., casting, additive manufacturing, coating, evaporation, plasma and radiation processing, artificial intelligence, and computer simulations).
Destructive testing is undertaken in order to understand a specimen's performance or material behaviour, these procedures are carried out to the test specimen's failure. Destructive testing procedures can either follow specific standards or can be tailored to reproduce set service conditions in automobile, aerospace, construction industries etc. The standardized Nondestructive test methods are used in almost all industrial sectors, whether it concerns motor vehicles, airplanes, ships, machines or the quality assurance of buildings.

|---|---|---|---|---|---|
| **Course Code: MEC4001** | **Course Title: Basic Thermodynamics**<br>**Type of Course: Program Core Theory** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | MAT1001, MAT1002 | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The course aims at learning the practical concepts in different working cycles and operation of two stroke, four stroke SI and CI Engine cycles. Ignition, combustion, alternative fuels, emission and their control. The course is both conceptual and analytical in nature and needs basic knowledge of Mathematics. The course develops the critical thinking and analytical skills. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Basic Thermodynamics**" and attain **SKILL DEVELOPMENT** through Problem solving methodologies. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>1] Summarize the basic concepts of thermodynamics.<br>2] Compute the properties of pure substance with the help of steam tables.<br>3] Apply the first & second laws of thermodynamics to control mass and steady flow control volume system.<br>4] Predict feasibility of thermodynamic process and availability of maximum work. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Thermodynamics | Case Study | Data Analysis | 09 Sessions | |
| Topics:<br>Role of Thermodynamics in Engineering and Science, Applications of Thermodynamics: Power Generation, Thermal Environment Control, Cooling of Electrical Systems and Electronic Devices, Surroundings, Macroscopic and Microscopic Analysis, Definition of Substance, Properties of Substance: Intensive and Extensive, Thermodynamic Equilibrium, Concept of Quasi-Equilibrium, Process and Cycle, Fundamental Units, The Zeroth Law of Thermodynamics. | | | | | |
| **Module 2** | Application of First Law | Assignment | Data Collection and Analysis | 09 Sessions | |
| Topics:<br>Definition of Thermodynamic Work, Forms of Work, Definition of Heat, Statement of First Law of Thermodynamics: First Law for Cyclic Process, First Law for Change of State of a System: Internal Energy, First Law as a Rate Equation, First Law Applied to a Control Volume | | | | | |
| **Module 3** | Second Law of thermodynamics and entropy: | Assignment | Data Analysis through Programming | 8 Sessions | |
| Topics:<br>Definition of Heat Engine and Reservoirs, Kelvin-Planck and Clausius Statements of the Second Law, Reversible and Irreversible Engines and processes, Internal and External Irreversibility, The Efficiency of a Carnot Cycle, The Ideal Gas Temperature | | | | | |

| | | | | |
|---|---|---|---|---|
| Scale. Clausius Inequality, Entropy a Property of a System, Pure Substance, The Thermodynamic Property Relation, Calculation of Change in Entropy, Second Law Analysis of a Control Volume, Principle of Increase of Entropy, Definition of Exergy, Exergy Analysis of System and Control volume | | | | |
| **Module 4** | Properties of Pure Substances | Assignment | Simulation & Data Analysis | 11 Sessions |
| Topics:<br>Definition of Pure Substance, Facts about Pure Substances, Vapor, liquid, solid Phase Equilibrium, Equation of State for the Vapor Phase: Simple substance, Ideal Gases Characterization, Ideal Gas Equation, Real Gases.<br>Internal Energy, First Law as a Rate Equation, First Law Applied to a Control Volume, The SSSF processes | | | | |
| | | | | |
| **Targeted Application & Tools that can be used:**<br>Application area includes Power Plants (NTPC /BARC/NPCIL/BHEL), Automobile sector (Design – TATA/Hyundai/Bajaj etc.), Manufacturing Industries (Bosch/Irwin Tools/Casting Industries).<br>Tools used: Matlab, Ansys | | | | |

| **Course Code: MEC2011** | **Course Title: Mechanics of Solids**<br>**Type of Course: Program Core & Theory** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | MAT1001, MAT1002 | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course is designed with the objective of providing a fundamental understanding of the behavior of structural components commonly used in engineering structures and machines. It focuses on developing the skills to model and analyze the behavior of structural and machine components subjected to various loading and support conditions based on the principles of equilibrium and material constitutional relationships. It includes mechanics of rigid and deformable bodies in equilibrium and extends the depth of meaning contained in the basic principles of equilibrium to three dimensional continuous media including torsion, bending stresses and deflections. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Mechanics of Solids**" and attain **SKILL DEVELOPMENT** through Problem solving methodologies. | | | | |
| **Course Outcomes** | CO1 Compute the Normal Stress and Strain in Mechanical components<br>CO2 Compute the Bending Stress and Deflections of Beams<br>CO3 Compute Torsional Shear Stress and Strain in Shafts<br>CO4 Explain the concepts of Principle Stress and Strain Transformations | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Stress and Strain | Assignment | Data collection | | 15 Sessions |
| Topics:<br>Brief Introduction, Stress and strain graphs and concepts, elastic constants, axial loads, statically indeterminate axially loaded members, thermal strain. | | | | | |
| **Module 2** | Shear Stress and Deflection of Beams | Assignment | Mathematical | | 10 Sessions |
| Topics:<br>Transverse shear, shear flow in built-up members, combined loadings, Deflection of beams by the method of integration and Moment area method. | | | | | |
| **Module 3** | Torsion and Bending | Assignment | Mathematical | | 10 Sessions |
| Topics:<br>Torsion, angle of twist, statically indeterminate torque-loaded members, bending, eccentric axial loading of beams. | | | | | |
| **Module 4** | Stress and Strain Transformation | Assignment | Mathematical | | 10 Sessions |
| Topics: | | | | | |

Stress at a point on different planes in 2-D, transformation of stresses, principal and maximum shear stresses, Mohr's Circle.

**Targeted Application & Tools that can be used:**

Application Area is Geophysical phenomenon, Hydrology, Aerospace, Aerodynamics, Microfluidics, Pipe network, Turbo-machinery.
Industries using above applications and tools – Siemens, Quest Global, Simulent consulting, Triveni Engineering, TATA, GE etc

**TEXTBOOKS:**

E. P. Popov, "Engineering Mechanics of Solids", Prentice Hall,

| **Course Code: MEC2033** | **Course Title: Computer Aided Engineering Drawing**<br>**Type of Course: Program Core/ Laboratory only** | **L- P- C** | 1 | 4 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | MEC1006 | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | Technical Graphics is used to communicate the necessary technical information required for manufacture and assembly of machine components. These drawings follow rules laid down in national and International Organizations for Standards (ISO). Hence the knowledge of the different standards is very essential. The following topics have been covered to fulfill the above objectives. Classification of Machine Drawings, Principles of Drawings, Sectioning, Dimensioning, Limits, Fits and Tolerance, Symbols and Conventional Representation, Screw Fasteners, Key Joints, Coupling and its Types, Riveted Joints, Welded Joints, Structural Applications, Assembly Drawings, Production Drawings, Reproduction of Drawing, Introduction of Computer Aided Drafting, Introduction of Solid 3D Modeling. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Computer Aided Engineering Drawing**" and attain **SKILL DEVELOPMENT** through Experiential learning techniques. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>CO 1. Draw different fasteners, joints and sections of parts as per B.I.S & Practices<br>CO2. Distinguish between cut sections of components and assembly by using knowledge of limits, fits and tolerances through drawings.<br>CO3. Demonstrate 3-D models of machine parts and assembly using CAD software enabling 2-D drawings.<br>CO4. Demonstrate the knowledge of surface modeling of 3-D components/parts | | | | |
| **Course Content:** | **Task 01: Sections of solids**<br>Level No 01: Analyzing the views of the component<br>Level No. 02: construction of machine component using solid works<br>**Task 02: Iso to ortho conversions**<br>Level No 01: Detailed geometrical study of machine components<br>Level No. 02: construction of machine component using solid works<br>**Task 03: to ortho to Iso conversions**<br>Level No 01: Detailed geometrical study of machine components<br>Level No. 02: construction of machine component using solid works<br>**Task 04: Riveting and Couplings**<br>Level No 01: Types of riveted joints<br>Level No. 02: Types of joints and couplings<br><br>**Task 05: Assembly of machine components- Screw Jack**<br>Level No 01: Detailed studying of parts of screw jack<br>Level No 02: construction of all the parts using solid works | | | | |

| **Version No.** | 1.1 | | | | |
| **Course Pre-requisites** | MAT1001 | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This Course is designed to present the fundamental laws relating to the static and dynamic behavior of fluids. It provides a basic knowledge in fluid properties and statics utilizing the principles developed in previous mechanics Courses and illustrates the basic fluid properties and fluid statics. Introduction to the fundamentals governing laws. The Course also discusses the basic concepts about Fundamentals of fluid kinematics, dimensional Analysis and flow through pipes and external surfaces. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Fluid Mechanics**" and attain **SKILL DEVELOPMENT** through Experiential learning techniques. | | | | |
| **Course Outcomes** | CO1 Calculate pressure using various kinds of manometers<br>CO2 Examine simple fluid flow problem by using Bernoulli equation<br>CO3 Apply the control volume formulation of the basic laws to model physical systems<br>CO4 Examine certain types of flows using the Navier–Stokes equations | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction and Fluid statics | Assignment | Data collection | | 6 Sessions |
| Topics:<br>Introduction: definition of fluid, liquids and gases, continuum hypothesis, compressible and incompressible fluid/flow, viscosity, stress field, Newtonian and non-Newtonian fluids Introduction, Fluid properties,<br>Fluid Statics: Pressure distribution in a fluid, Manometry, Buoyancy. | | | | | |
| **Module 2** | Fluid Dynamics and Fluid Kinematics | Assignment | Mathematical | | 8 Sessions |
| Topics:<br>Newton's second law to fluid flow, Physical interpretations of Bernoulli equation, Static, stagnation, Dynamics and total pressure head, Venturi-meter, vertical orifice & orifice meter, Pitot tube<br>Fluid flow fields: Eulerian vs. Lagrangian descriptions, Velocity fields, Acceleration field, Control volume and system representation, Reynolds transport theorem. | | | | | |
| **Module 3** | Control volume analysis | Assignment | Mathematical | | 8 Sessions |
| Topics:<br>Control-volume analysis: Mass balance, Momentum balance, Energy balance | | | | | |
| **Module 4** | Differential analysis of fluid flow | Assignment | Mathematical | | 8 Sessions |
| Topics: | | | | | |

Fluid Element of Kinematics, Conservation of Mass, Linear momentum equation, Inviscid flow, Viscous flow

**List of Laboratory Tasks:**

**Experiment No. 1: Verification of Bernoulli's Theorem.**

**Level 1:** To calculate the total energy at different cross section of pipe.
**Level 2:** To plot the graph between total energy vs distance and prove the Theorem.

**Experiment No. 2: Discharge through Venturimeter and orifice meter to study the variation of coefficient of discharge with the Reynolds number.**
**Level 1:** To demonstrate the use of Venturimeter for fluid flow measurement
**Level 2:** To determine the coefficient of discharge for a given input.

**Experiment No. 3: Calibration and to Calculate the rate of flow using liquid Rotameter.**
**Level 1:** To demonstrate and calibrate the device.
**Level 2:** To determine the coefficient of discharge for a given input.

**Experiment No. 4: To measure the force developed by impact of jet of water on plates of different configurations and compare with the theoretical value.**
**Level 1:** To determine the impact forces of jet on flat vane.
**Level 2:** To plot the performance characteristics.

**Experiment No. 5: To determine flow regime using Reynolds apparatus.**
**Level 1:** To determine the Reynold's Number & hence the type of flow.
**Level 2:** To study transition zone.

**Experiment No. 6: Determination of loss of head due to bend, enlargement & contraction in pipes.**
**Level 1:** To determine loss of head due to bend, enlargement & contraction in pipes
**Level 2:** To determine the reason for friction loss

**Experiment No. 7: To evaluate the friction losses in pipes.**
**Level 1:** To determine the friction factor for Darcy - Weisbach equation.
**Level 2:** To determine the reason for friction loss.

**Targeted Application & Tools that can be used:**

Application Area is Geophysical phenomenon, Hydrology, Aerospace, Aerodynamics, Microfluidics, Pipe network, Turbo-machinery.
Industries using above applications and tools – Siemens, Quest Global, Simulent consulting, Triveni Engineering, TATA, GE etc

| **Course Description** | This course deals with the application of Thermodynamics - the science of applications of thermodynamics laws for different equipment. Different tools will be introduced to analyse energy systems from engines, power plants etc. The course is both conceptual and analytical in nature and needs basic knowledge of Mathematics. The course develops the critical thinking and analytical skills. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Applied Thermodynamics**" and attain **SKILL DEVELOPMENT** through Problem solving methodologies. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>**CO1**. Apply the first law and second law of thermodynamics to analyses the reciprocating internal combustion engine.<br>**CO2.** Apply the first law and second law of thermodynamics to analyses the gas turbine and Jet propulsion.<br>**CO3.** Apply the first law and second law of thermodynamics to analyses the vapor power cycle.<br>**CO4.** Apply the first law and second law of thermodynamics to analyses the refrigeration cycle. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Reciprocating Internal Combustion Engine**:** | Assignment | Data Collection/any other such associated activity | 10 sessions | |
| Topics:<br>Air Standard cycles: Carnot, Otto, Diesel, Dual, P-V and T-S diagrams, Efficiencies and mean effective pressures, Comparison of Otto, Diesel and Dual cycles. | | | | | |
| **Module 2** | Gas turbine and Jet propulsion | Assignment | Data Collection/any other such associated activity | 6 Sessions | |
| Topics:<br>Classification of Gas turbines, Analysis of open cycle gas turbine cycle. Advantages and disadvantages of closed cycle. Methods to improve thermal efficiency. | | | | | |
| **Module 3** | Vapour Power Cycles | Assignment- Quiz | Data Collection/any other such associated activity | 8 Sessions | |

<table>

| **Course Description** | The course is designed with an objective of giving an overview of the methods for analyzing the motion of mechanisms used in engineering applications.<br><br>It includes the concepts and methods for determining the mobility and performing kinematic analysis of planar mechanisms. The course emphasizes on Kinematic links, Kinematic pairs, Degree of Freedom of simple mechanisms, Kinematic chain, basic mechanisms and their Inversions. The velocity and acceleration analysis of basic mechanisms such as four bar mechanism, Slider – crank mechanism and their inversions are discussed using graphical methods. The course also discusses the concepts involved in the design and kinematic analysis of cam and follower pair, gears and gear trains. |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Kinematics of Machines**" and attain **SKILL DEVELOPMENT** through Problem solving methodologies. |
| **Course Outcomes** | On successful completion of this course the students shall be able to:<br><br>1) Describe the mobility analysis on planar mechanisms.<br><br>2) Explain the inversions of basic mechanisms.<br><br>3) Construct the velocity and acceleration profile of kinematic analysis on planar mechanisms<br><br>4) Outline the profile of the cam to get desired performance. |

| | | | | |
|---|---|---|---|---|
| **Course Content:** | | | | |
| **Module 1** | Introduction to Kinematics | Assign ment | Programming Task, Data Analysis task | 10 sessions |
| Topics:<br>Machines and mechanisms, Types of constrained motions, Kinematic links, Kinematic pairs, Types of joints, Degrees of Freedom of simple mechanisms, Kinematic chain, Mobility of Mechanisms, Kutzback's criterion, Gruebler's criterion. | | | | |
| **Module 2** | Basic Mechanisms and Their Inversions | Quiz | Analytical thinking | 12 Sessions |
| Topics: | | | | |

Four bar chain mechanism, Inversions of four bar chain mechanism, Grashof's law, Parallel crank four bar linkage, Deltoid linkage, Mechanical advantage, Transmission angle, Slider crank chain, Inversions of slider crank chain, Double slider crank chain, Inversions of double slider crank chain.

| | | | | |
|---|---|---|---|---|
| **Module 3** | Velocity and Acceleration Analysis | Assign ment | Data Collection and Analysis | 11 Sessions |

Topics:
Basics of Vectors, Motion of a link, Velocity and acceleration analysis of four bar mechanism and inversions, Velocity of rubbing, Velocity and acceleration analysis of slider crank mechanism and inversions, Coriolis acceleration.

| | | | | |
|---|---|---|---|---|
| **Module 4** | Cams and Gears | Assign ment | Data Collection and Analysis | 12 Sessions |

Topics:
Types of Cams, Types of Followers, Basic definitions, Follower displacement programming, High speed cams, Undercutting, Motions of the follower, Layout of cam profiles.

Classification of gears, Gear terminology, Law of Gearing, Forms of gear teeth – cycloidal and involute, Interchangeable gears, Path of Contact, Arc of Contact, Contact ratio, Interference in Involute Gears, Undercutting

**Targeted Application & Tools that can be used:**

Application Area is collision of vehicles, aerospace, automobile kinematics and dynamics, vibration of machines.
Professionally Used Software: MATLAB

| **Course Description** | The cost and quality of end product used by consumer is largely depends on the manufacturing process. A significant advancement in the manufacturing process has taken in the last decade, thus proper selection of manufacturing process needs a clear understanding of the various manufacturing process including its advantage, disadvantage, material that can be processed etc. This course help students to develop the understanding of various manufacturing process like casting, welding, metal forming and machining. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Production Techniques I**" and attain **SKILL DEVELOPMENT** through Experiential learning techniques. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>1]. Classify metal casting process and its types, metal joining process and its types.<br>2]. Summarize various joining processes and its defects<br>3]. Explain various metal forming and extrusion process.<br>4]. Discuss different sheet metal and Special forming processes.<br>5]. Demonstrate various skills in preparation of molding sand for conducting tensile, shear and compression tests using Universal sand testing machine. It also develop skills in determining permeability, clay content and Grain Fineness number of base sands.<br>6]. Demonstrate skills in preparation of forging models.<br>7]. Preparation of welded joints using different Welding process. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Casting and joining process | Case Study | Compare and analyze the microstructure obtained in different casting process through matlab. | 18 Sessions | |
| Topics:<br>**Casting Process:** Sand Casting : Sand Mold – Type of patterns - Pattern Materials – Pattern allowances –Molding sand Properties and testing – Elements of Gating system- Principle of special casting processes : Shell - investment – Pressure die casting - Centrifugal Casting – Stir casting; Defects in Sand casting.<br>**Joining Process:**<br>Classification of Welding process, Operating principle, basic equipment, merits and applications of: Fusion welding processes: Gas welding - Types – Flame characteristics; Manual metal arc welding – Gas Tungsten arc welding- Gas metal arc welding – Submerged arc welding –Electron beam welding: Operating principle and | | | | | |

| | | | | |
|---|---|---|---|---|
| applications of Solid state welding: Friction welding and Friction Stir Welding; Brazing and soldering; Weld defects: types, causes and cure. | | | | |
| **Module 2** | Metal working and sheet metal process. | Assignment | Simulate the open die forging process using Deform software. | 18 Sessions |
| Topics:<br>**Metal working process:** Hot working and cold working of metals – Forging processes – Open, impression and closed die Forging – forging operations. Rolling of metals– Types of Rolling – Defects in rolled parts. Principle of rod and wire drawing – Tube drawing – Principles of Extrusion – Types – Hot and cold extrusion.<br>**Sheet metal process:** Sheet metal characteristics – shearing, bending and drawing operations – Stretch forming operations– Formability of sheet metal – Special forming processes-Working principle and applications – Hydro forming – Rubber pad forming – Metal spinning– Introduction of Explosive forming, magnetic pulse forming, peen forming. | | | | |
| **Module 3** | Introduction to Machine Tools | Assignment | Programming to calculate machining time on various machine tool in Python. | 9 Sessions |
| Topics:<br>Lathe machine and its principle, drilling machine and its principle, Milling machine and its principle, shaper machine and its principle. | | | | |
| **List of Laboratory Tasks:** | | | | |
| **Experiment N0 1: Preparation of Sand Mold With Single Patterns**<br>**Level 1:** Enable students to learn about different tools used in making of mold with single pattern.<br><br>**Level 2:** Enables students to prepare simple sand mold using single pattern. | | | | |
| **Experiment No. 2: Preparation of Sand Mold With Split Patterns**<br>**Level 1:** Enable student to learn the relative advantage of split pattern over single pattern.<br><br>**Level 2:** Enables students to prepare simple sand mold using split pattern. | | | | |
| **Experiment No. 3: Preparation of Sand Mold Without Pattern**<br>**Level 1:** Enable student to learn the relative advantage and disadvantage of making sand mold without pattern over single and split pattern.<br><br>**Level 2:** Enables students to prepare sand mold without pattern. | | | | |
| **Experiment No. 4: Moisture Content Test**<br>**Level 1:** Enable student to learn the importance of moisture content in sand mold.<br>**Level 2:** Enables students to calculate the percentage moisture present in the given sand sample. | | | | |
| **Experiment No. 5: Clay Content Test**<br>**Level 1:** Enable student to learn the effect of clay content on the properties of the sand mold.<br>**Level 2:** Enables students to learn the technique and device used in calculation of clay content in the given sand specimen. | | | | |
| **Experiment No. 6: Permeability Test** | | | | |

**Level 1:** Student will learn about the importance of permeability in the sand mold. It also help student to learn how to minimize the defect such as gas holes by incorporating optimized permeability in the sand mold.

**Level 2:** Student will learn about the device, its principle and the steps used in the calculation of permeability of the given sand mold. They also exposed to the actual problems encounted during the execution of the test.

**Experiment No. 7: Grain Fineness Number Test (Sieve Analysis)**

**Level 1:** Student will learn about the properties of the sand mold which is significantly affected by the size of the base sand and thus will learn the importance of grain fineness test in the sand mold preparation.

**Level 2:** Student will learn about the device, its principle and the steps used in the calculation of Grain Fineness Number of the given sand. They also exposed to the real problems encountered during the execution of the test.

**Experiment No. 8: Compression, tensile, green shear and transverse test of molding sand using universal sand testing machine.**

**Level 1:** Enable student to learn the role of compression strength, tensile strength, shear and transverse strength of the sand mold during casting process.

**Level 2:** Student will learn about the universal sand testing machine, its principle and the steps used in determining the different strength of the given sand mold. They also expose to hand on experience in handling the sand testing machine for determining the different Strength.

**Experiment No. 9: Forging of given round bar into square bar and square nail.**

**Level 1:** Enable student to learn how plastic based deformation helps in converting given shapes into desired shape.

**Level 2:** Student will learn about the steps and also exposed to hand on experience used in forging a given shape into required shape.

**Experiment No. 10: To perform different welding process(Gas welding, TIG welding, MIG welding and spot welding process)**

**Level 1:** Enable student to learn about different welding process, handling of various tools and surface preparation for different welding process.

**Level 2:** Student will expose to hand on experience in joining of material using different welding process.

**Targeted Application & Tools that can be used:**

Casting is used in producing automobile engine, aircraft engine and other parts where higher order complexity is involved.

Joining is find its use in small products like electronic items to fabrication of large bridge structure.

Plastic deformation based is significantly used when small components is to be made in large numbers such as toys.
Sheet metal process is largely used in automobile and aerospace industry to make outer structure.

**Professionally Used Software:** Deform, ANSYS

<tr><td colspan="9">Topics:<br>Definition and concept of metrology, Need of inspection, Principles of measurement, Process of measurement, Methods of Measurement, Classification of measuring instruments, Selection of measuring instruments, Measuring systems and accuracy of measurement, Precision and accuracy, errors in measurement.<br>Standards of Measurement: Classification of standards, conversion of line standard. Usage of Calipers.<br>Interferometry: Principle and uses of interferometry, optical flat and interferometers.<br>Angular Measurement: Construction, working principle, measurement procedure of sine bar, Taper measurement, application of angle gauge.</td></tr>
</table>

| | | | | |
|---|---|---|---|---|
| **Comparators**: Classification, Mechanical comparators- Dial indicator, Sigma Comparator, Electrical-Comparators-principles, LVDT, Pneumatic- back pressure gauge. Assignment on development of different standardization methods. | | | | |
| **Module 2** | Limits, Fits, Tolerances and Gauging | Case Study | Lab based activity | 08 sessions |
| Topics:<br>Introduction of limits and fits, Definitions of various parameters and terminologies. Types of fits and its designations with suitable applications, Tolerance systems and Geometrical tolerance notations with examples, Terms and symbols used, IT grades and simple formulae used, Numerical. Types of Limit gauges, Taylor's principle of gauge design, Present British System of Gauge & Wear Tolerance. Case study on geometrical tolerance on industrial specimen with specification chart. | | | | |
| **Module 3** | Metrology of Gears and screw threads | Case Study | CMM study in lab | 05 sessions |
| Topics:<br>Gear tooth terminology, Measurement of tooth thickness.<br>**Screw Thread Measurement**: Terminology of screw threads, measurement of major diameter, minor diameter, pitch, angle and effective diameter of screw threads by 2-wire and 3- wire methods. Study conducted in lab.<br>**Advances in metrology:** Basic concepts of Coordinate Measuring Machines-constructional features, applications, Image acquisition and digitization. | | | | |
| **Module 4** | Mechanical Measurements | Assignment | Awareness of different software for surface texture. | 05 sessions |
| Topics:<br>Need of mechanical measurement, Measurement methods, Generalized Measurement system. Transducers, transfer efficiency, advantages of each type transducers. Assignment on different transducers for industrial applications.<br>**Metrology of Surface finish:** Surface Metrology Concepts and terminology, Specification of surface Texture characteristics and symbols, and Method of measuring surface finish: Stylus system of measurement, Stylus probe instruments-Tally Surf. Texture designing based software assignment. | | | | |
| **Module 5** | Measurement of Force, Torque and Strain | Assignment | Lab based activity. | 05 sessions |
| Topics:<br>**Force measurement**: load cells, proving rings.<br>**Measurement of torque:** Types of dynamometers, Absorption dynamometer, Prony brake and hydraulic dynamometer.<br>**Measurement of strain**: Theory of strain gauges, types, electrical resistance strain gauge, preparation and mounting of strain gauges, gauge factor. Lathe tool and drill tool dynamometer.<br>**Temperature Measuring Devices:** Thermocouples, Resistance Temperature Detectors, Thermistor, Liquid in glass Thermometers, Pressure Thermometers, Pyrometer.<br>**Pressure measurement**: Principle, use of elastic members, Bridgman gauge, McLeod gauge, Pirani gauge, bourdon gauge. Assignment on AI based measuring system. | | | | |

**List of Laboratory Tasks:**

Experiment No 1: Calibration of Vernier caliper & Micrometer.

Level 1: Comparison of measurement value between a shop floor specimen and standard specimen using M112 slip block.
Level 2: Determine the criteria for accuracy and precision for specimen dimensions considering the effect of least count and various techniques of measurement from single instrument.

Experiment No. 2: Measurements of angle using Sine Center / Sine bar / bevel protractor.

Level 1: Measurement of angle for a cubical block and finding the difference in least count in angle measurement over linear measurement system.
Level 2: Measurement of a tapered cylindrical block and its comparison with the theoretical derivation.
.

Experiment No. 3: Calibration of Pressure transducer/LVDT/Thermocouple

Level 1: Finding different purposes of a transducer used in industry and its working.
Level 2: The impact of variants taken into consideration while measuring pressure. Displacement or temperature and converting it into readable output.

Experiment No. 4: Measurements of gear tooth profile using gear tooth Vernier /gear tooth micrometer.

Level 1: Simple vernier calculation of chordal addendum and chordal thickness and comparison with theoretical expression.
Level 2: Employing tool maker's microscope in another method and calculating the tooth profile such as pitch, major and minor diameter as well as flank angle.

Experiment No. 5: Measurements of Screw thread Parameters using floating carriage micrometer.

Level 1: Error analyzing between gear teeth and screw thread and understanding its various reason.
Level 2: Using prism, two wire method to find major and minor diameter of a screw thread in comparison with standard specimen.
Level 3: Employing projector in another method and calculating the tooth profile such as pitch, major and minor diameter as well as flank angle.

Experiment No. 6: Measurements of Surface roughness. Using Taly surf / mechanical Comparator.

Level 1: understanding the texture and pattern requirement in different mechanical components.
Level 2: Optical flats using basic diffraction pattern can also be utilized for better understanding of surface structure for the purpose of inspection.

Experiment No. 7: Measurements of temperature, strain and pressure.
Level 1: To calibrate the given Chromel-Alumel thermocouple and to determine the true temperature using calibration curves.
Level 2: To calibrate the given load cell for compressive loads and calculate the error and cumulative error.

Level 3: To calibrate the given pressure transducer by coupling the pressure transducer to indicator.

**Targeted Applications :**

Legal ***Metrology***. Industrial ***Metrology***. Aerospace. Construction. Communications. Energy. Health Care. Other ***job*** titles might include calibration engineers, calibration technicians, quality engineers, quality technicians, process control technicians, and safety engineers.

|---|---|---|---|---|---|
| **Course Code: MEC3006** | **Course Title: Mechatronics Type of Course: Program Core theory And Laboratory integrated** | **L- P- C** | 2 | 2 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The course is designed with an objective of giving an overview of designing mechatronic systems, which require integration of the mechanical and electrical engineering disciplines within a unified framework. The course includes: System modelling, Sensors and Transducers, Actuators, Digital logic, Microprocessors and Advanced application in Mechatronics. It deals with Hall and pitch sensors, DC motors, Stepper motors, Guide ways, Architecture of Microprocessor, Logic Gates and Pin diagrams.The course aims at learning the practical concepts in Mechatronics. It also includes Hydraulic and Pneumatic system along with the simulation software. The experiments involve design and testing of fluid power circuits to control velocity, direction and force on single and double acting actuators, design of circuits with logic sequence using Electro-Pneumatic trainer kits, Simulation of basic Hydraulic, Pneumatic and Electric circuits with the help of software tool. It also involves hand-on approach on modelling and analysis of basic electrical, hydraulic and pneumatic systems, computerized data logging system with control for process variables like pressure flow and temperature.. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of " **Mechatronics** " and attain **SKILL DEVELOPMENT** through Experiential learning techniques. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>1] Describe the fundamentals of mechatronic system and its applications.<br>2] Identify the types of sensors, transducers and signal conditioning processes used in automated machines.<br>3] Recognize sequencing schedule for a specific process using various actuating systems.<br>4] Describe logic gates and working of controllers.<br>5] To Practically use the hydraulic and pneumatic circuits for given application.<br>6] To identify the correct sequencing of pneumatic circuits and simulate in AUTOSIM-200 software.<br>7] To understand the working principles of electric motors. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Mechatronics | Assignment | Data Collection | 08 Sessions | |
| Topics: Multi-disciplinary Scenario, Origins, Evolution of Mechatronics, Elements of mechatronic system, system, measurement systems, control systems - open loop, closed loop systems, feedback and feed forward control systems, servomechanisms, advanced applications of mechatronic system. | | | | | |
| **Module 2** | Sensors Transducers and | Case Study | Data collection | 8 Sessions | |

| | | | | |
|---|---|---|---|---|
| | Signal Conditioning | | | |
| Topics: Introduction and background, difference between transducer and sensor, transducers types, transduction principle, photoelectric transducers, thermistors, thermo devices, thermo couple, inductive transducers, capacitive transducers, pyro electric transducers, piezoelectric transducers, Hall-effect transducers, Fiber optic transducers. Light sensors, Thermal sensors, Touch sensors, Pressure sensors, Magnetic sensors. | | | | |
| **Module 3** | Actuation Systems | Case Study | Data collection | 8 Sessions |
| Topics: Pneumatic and hydraulic systems, overview of components of hydraulic system, overview of components of pneumatic system, basic hydraulic circuits-single acting cylinder, double acting cylinder, sequencing circuit. Mechanical systems & Electrical systems-sequencing, all types of electrical motors. Sequencing of double and single acting cylinders. | | | | |
| **Module 4** | Digital Electronics, Microprocessors, and Controllers | Assignment | Data Collection | 6 sessions |
| Digital Electronics, Microprocessors, and Controllers:<br>Programmable logic controllers - Basic structure, programming and ladder diagram. | | | | |
| List of Laboratory Tasks:<br>Experiment N0 1: Operation of a single acting & double acting cylinder in pneumatic trainer kit<br>Level 1: Understand the various parts of pneumatic system, direction control valves, hose pipe connections and circuit diagrams.<br>Level 2: Simulation of the circuit in AUTOSIM-200 software and control the movement of single and double acting cylinders.<br>Experiment No. 2: Operation of single acting cylinder using Pneumatic Dual pressure valve and Shuttle valve<br>Level 1: Understand the various parts of pneumatic system, direction control valves, hose pipe connections, pneumatic dual pressure valve & shuttle valve working and circuit diagrams.<br>Level 2: Simulation of the circuit in AUTOSIM-200 software and control the movement of single acting cylinders, and knowthe applications in safety systems.<br>Experiment No. 3: Simulation and operation of single cycle automation of multiple cylinders using cascading method in A+B+A-B-and A+B+B-A-sequence of motions.<br>Level 1: Understand the various parts of pneumatic system, direction control valves, roller DCV's, cascading types, working, applications and circuit diagrams.<br>Level 2: Simulation of the circuit in AUTOSIM-200 software and control the movement multiple double acting cylinders, and know the applications in automations.<br>Experiment No. 4: To perform the time delay and counting operation using pneumatic trainer kits<br>Level 1: Understand the various parts of pneumatic system, direction control valves, time delay valve and its working, working of counters, applications and circuit diagrams.<br>NO: PU/AC-16/EEE/2021-2025/2021 | | | | |

Level 2: Simulation of the circuit in AUTOSIM-200 software and control the movement multiple double acting cylinders, and know the applications in automations.

Experiment No. 5: Speed control of AC and DC motors

Level 1: Understand the working principle of AC, DC Motors and its circuit diagram.

Level 2: Control the AC and DC motor by varying inputs (current/voltage) and plot the graph to know the relationship between speed or load characteristics.

Experiment No. 6: Operation of double acting cylinders using Electro-pneumatic and PLC based Pneumatic kits

Level 1: Understand the concept of relays, solenoids, sensors and its working, Programmable logical controllers, ladder logics.

Level 2: Simulate the double acting in AUTOSIM-200 software to know the working of electro-pneumatic and PLC.

Later Control the double acting using Push-buttons, PLC software & computer.

Targeted Application & Tools that can be used: This course finds applications mainly in automobile, space, defense, medical, consumer goods etc.

Jobtitles might include Hydraulic or Pneumatic Design engineer, Maintenance engineer, calibration technician, Embedded Programmers, Automation engineer etc.

Tools used in profession: PLC-Ladder Logic, AUTOSIM 200 –Software, keil □vision.

| **Course Code: MEC4004** | **Course Title: Dynamics of Machines**<br>**Type of Course: Program core** | L- P- C | 3 | 0 | 3 |
| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | MAT1001 | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The Course is designed with an objective of giving an overview of static and dynamic force analysis of machines and its methods. The Course discusses Static force analysis using graphical method and dynamic force analysis of basic mechanisms such as four bar mechanism, Slider crank mechanism using analytical method. Analysis of flywheel using turning moment diagrams is discussed with emphasis on I C Engines. The Course also includes the concepts of primary and secondary balancing of rotating masses and locomotives. The Course also contains Gyroscope, gyroscopic effects on engineering applications such as Aeroplanes, Naval ships and Automobiles. Further, Governors, types of governors and its applications are discussed | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Dynamics of Machines**" and attain **SKILL DEVELOPMENT** through Problem solving methodologies. | | | | |
| **Course Outcomes** | On successful completion of this course the students shall be able to:<br>C01 Identify static and dynamic forces in a scenario.<br><br>C02 Compute the flywheel dimensions for engine and punching press application.<br><br>C03 Illustrate the effect of gyroscopic couple on aero planes, ships and automotive vehicles.<br><br>C04 Employ various methods to balance rotating and reciprocating masses. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Static and dynamic force analysis | Assignment | Analytical thinking | 12 sessions | |
| Topics:<br>Introduction- Static and dynamic force analysis, Conditions for static equilibrium, Static force analysis of mechanisms. Dynamic force analysis of mechanisms, dynamic analysis of slider crank mechanism, Engine force analysis, turning moment on crank shaft. | | | | | |
| **Module 2** | Dynamics of Analysis of Flywheel | Quiz | Analytical thinking | 10 Sessions | |
| Topics: | | | | | |

| | | | | |
|---|---|---|---|---|
| Introduction, turning moment (crank effort) diagrams for reciprocating machines, coefficient of fluctuation of speed and energy, Design of flywheels for engines and punching machines | | | | |
| **Module 3** | Gyroscope | Assignment | Data Collection and Analysis | 12 Sessions |
| Topics:<br>Introduction, gyroscopic stabilization, ship stabilization, stability of four wheel and two wheel vehicles moving on curved paths**.** | | | | |
| **Module 4** | Balancing of Masses | Assignment | Data Collection and Analysis | 12 Sessions |
| Topics:<br>Introduction, Balancing of rotating masses, balancing of reciprocating masses, Effect of partial balancing in locomotives, balancing of inline engines, Balancing of V Engines. | | | | |

<tr><td>Course Out Comes</td><td colspan="7">On successful completion of the course the students shall be able to:<br>CO1 Describe the nomenclature of cutting tool and tool life.<br>CO2 Explain various lathe and drilling operations<br>CO3 Distinguish various milling, shaping & abrasive operations.<br>CO4 Comprehend CNC programme on turning and milling operations.</td></tr>
<tr><td>Course Content:</td><td colspan="7"></td></tr>
<tr><td>Module 1</td><td colspan="2">Theory Of Metal Cutting</td><td>Case Study</td><td colspan="2">Compare and analyze the microstructure obtained during chip formation through matlab.</td><td>8 sessions</td></tr>
<tr><td colspan="8">Topics:<br>Mechanics of chip formation, single point cutting tool, forces in machining, Types of chip, cutting tools– nomenclature, orthogonal metal cutting, thermal aspects, cutting tool materials, tool wear, tool life, surface finish, cutting fluids and Machinability.</td></tr>
<tr><td>Module 2</td><td colspan="2">Turning & Drilling Machines</td><td>Assign ment</td><td colspan="2">Learning different lathe & drilling operations</td><td>6 sessions</td></tr>
<tr><td colspan="8">Topics:<br>Lathe: Centre lathe, constructional features, specification, operations – taper turning methods, thread cutting methods, special attachments, machining time and power estimation. Capstan and turret lathes- tool layout – automatic lathes: semi automatic – single spindle: Swiss type, automatic screw type – multi spindle<br>Drilling Machine: constructional features, specification, operations.<br>Lab: Conduct operations related to turning, milling drilling</td></tr>
<tr><td>Module 3</td><td colspan="2">Shaper, Milling Gear Cutting, Abrassive & Broaching Machines</td><td>Assign ment</td><td colspan="2">Simulate the gear cutting operation process using Deform software.</td><td>8 sessions</td></tr>
</table>

**Topics:**
**Shaper** – Types of operations. Drilling , reaming, boring, Tapping. Milling operations-types of milling cutter. **Gear cutting** – forming and generation principle and construction of gear milling , hobbing and gear shaping processes –finishing of gears.

**Abrasive processes**: grinding wheel – specifications and selection, types of grinding process– cylindrical grinding, surface grinding, centreless grinding and internal grinding- Typical applications – concepts of surface integrity, broaching machines: broach construction – push, pull, surface and continuous broaching machines Lab: Conduct operations related to shaping

| **Module 4** | CNC Machining | Assign ment | CNC part programming | 10 sessions |
|---|---|---|---|---|

**Topics:**
Numerical Control (NC) machine tools – CNC types, constructional details, special features, machining centre, part programming fundamentals CNC – manual part programming – micromachining – wafer machining.
Lab: Conduct operations related to CNC turning

**Targeted Application & Tools that can be used:**
Lathe, drilling,milling, shaper & abrasive machines are used in all manufacturing, Automobile, Aerospace, agriculture…etc.
CNC machines are largely used in automobile and aerospace industry to make different parts.

</table>

| | | | | |
|---|---|---|---|---|
| **Module 3** | Design of Mechanical Springs | Assignment | Simulation and data analysis task | 08 sessions |
| Topics:<br>Stresses and deflections of helical springs – extension -compression springs – springs for fatigue loading, energy storage capacity – helical torsion springs – Flat Spiral Springs - leaf springs. Computer aided design of springs | | | | |
| **Module 4** | Design of Riveted, Welded and Bolted Joints | Assignment | Simulation | 07 sessions |
| Topics: Riveted, Welded and Bolted Joints, Computer aided design of joints. | | | | |
| **Module 5** | Design of Keys, cotters and knuckle joints | Assignment | Simulation/Data Analysis | 06 sessions |
| Topics: Design of keys-stresses in keys-cotter joints-spigot and socket, sleeve and cotter, jib and cotter Joints- knuckle joints. | | | | |
| **Module 6** | Design of Shafts | Assignment | Simulation/Data Analysis | 05 sessions |
| Topics: Design of solid and hollow shafts for strength and rigidity – design of shafts for combined bending and axial loads – shaft sizes. Computer aided design of shafts and analysis | | | | |
| **Module 7** | Design of spur gear | Assignment | Simulation/Data Analysis | 04 sessions |
| Topics: Spur Gears: Definitions, Stresses in Gear Tooth: Lewis Equation and Form Factor, Design for Strength, Dynamic Load and Wear Load. | | | | |

**Targeted Application & Tools that can be used:**

Contemporary issues: Knowledge of DME can help students in becoming Design engineer, CAD release engineer, Dimensional engineer where various employability opportunities are available at all automotive industries, OEM's, Tier 1 and Tier 2 organizations

Professionally Used Software: SolidWorks.

|---|---|---|---|---|---|
| **Course Code: MEC3091** | **Course Title: Finite Element Analysis**<br>**Type of Course: Program Core, Theory & Lab Integrated Course** | **L- P- C** | 2 | 2 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | MAT1001 | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The course is designed with the objective of giving an overview of the basics of finite element modeling of structures. It deals with the finite element formulation of one dimensional problems, like trusses and beams, two dimensional problems with constant triangles, axisymmetric solids subjected to axisymmetric loading, two dimensional isoparametric elements and time dependent problems. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Finite Element Analysis**" and attain **SKILL DEVELOPMENT** through Experiential learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>**CO1:** Apply the principle of variational techniques to different machine/structural elements.<br>**CO2:** Analyze the structural integrity of a machine with rods and bars.<br>**CO3:** Analyze the structural integrity of a concrete building with beams and columns.<br>**CO4:** Analyze the structural integrity of a steel reinforced skywalk.<br>**CO5:** Analyze the temperature variation within an enclosure. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Finite Element Method | Case Study | ogramming | 7 sessions | |
| Topics:<br>General description of Finite Element Method – Historical development – Comparison with classical methods – Other numerical methods such as FDM, BEM, etc. - General procedure of FEM – Application software's in FEM.<br>General field problems - GDE formulation - discrete and continuous models – approximate solution as a polynomial - minimization of residue – Weighted residual methods –Galerkin method - Variational formulation Ritz method - numerical problems. | | | | | |
| **Module 2** | Analysis of Bars | Case Study | ta collection. Programming & Data Analysis | 8 sessions | |
| Topics:<br>II order problems - Bar Problem – Formulation for the whole domain computing element matrices - Assembly of element matrices – Application of B.Cs – solution – post processing. | | | | | |

| | | | | |
|---|---|---|---|---|
| **Module 3** | Analysis of Beams | Case Study | ta collection. Programming & Data Analysis. | 10 sessions |
| Topics:<br>(IV order problems) – B.Cs & loading conditions on to nodes – element matrices - solution and post processing of results – I Dimension problems such as Heat transfer problems, Vibration problems in bar and beams. | | | | |
| **Module 4** | Analysis of Trusses | Case Study | ta collection. Programming & Data Analysis | 7 sessions |
| Topics:<br>Discretization: Geometrical approximations – Simplification through symmetry – Element shapes and behaviour – Choice of element types – Simplex - Complex and Multiplex elements – Selection of interpolation polynomials (shape functions) - Convergence requirements – Element shape and distortion – Location of nodes – Node and Element numbering, B.Cs & loading conditions on to nodes – element matrices - solution and post processing of results | | | | |

**List of Laboratory Tasks:**

**ACTIVITY. 1: Introduction to Python and Ansys**

**Level 1:** Installation of Python Studio, Data types in Python, Lists
**Level 2:** Matrices, mathematical operands, vector generation, sequence generation

**ACTIVITY. 2: Structural analysis of Bars.**
**Level 1:** Modelling.
**Level 2:** Simulation.

**ACTIVITY. 3: Structural analysis of Beams**
**Level 1:** Modelling.
**Level 2:** Simulation.

**ACTIVITY. 4: Structural analysis of Trusses**
**Level 1:** Modelling.
**Level 2:** Simulation.

**ACTIVITY. 5: Structural analysis of Trusses**
**Level 1:** Modelling.
**Level 2:** Simulation.

**Targeted Application & Tools that can be used:**

**Application**

- Automation and Robotics
- Automobile design and fabrication
- Construction and housing
- Machine Design and Analysis

**Tools**

- MATLAB
- Python
- Ansys

|---|---|---|---|---|---|
| **Course Code: MEC3003** | **Course Title: Heat-Mass Transfer Type of Course: Program Core Theory &Integrated Laboratory** | **L- P- C** | 3 | 2 | 4 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | MEC2010 | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This Course is designed to teach engineering students the concepts of heat transfer and application of heat transfer principles to the design. This Course provides an introduction to the fundamental concepts of heat transfer; Thermal conductivity steady-state and unsteady-state heat conduction multilayer conduction, heat transfer through a composite wall, critical insulation thickness, analytical and empirical relations for forced and free convection heat transfer; empirical relations used for pipe and tube flow, boundary layer and its thickness, heat exchanger analysis and design; to design and analyse the performance of heat exchangers and evaporators. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of " **Heat-Mass Transfer**" and attain **SKILL DEVELOPMENT** through Experiential learning techniques. | | | | |
| **Course Outcomes** | CO1] Apply the concept of steady state conduction heat transfer in solids.<br>CO2] Employ the methods of heat transfer with effective resistence.<br>CO3] Compute the heat transfer coefficient for natural and forced convection.<br>CO4] Apply the concept of radiation heat transfer between surfaces.<br>CO5] Compute the effectiveness of a specific heat exchanger. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Conduction | Assignment | Data collection | | 7 classes |
| Topics:<br>Introduction - basic modes of heat transfer and governing laws– conduction – general heat<br>conduction equation in Cartesian – one dimensional steady state conduction with and without heat generation – concept of thermal resistance – concept of composite wall – overall heat transfer coefficient – critical thickness of insulation – extended surface heat transfer – fin performance –effect of variable thermal conductivity- problems.<br>Unsteady state conduction in one dimension, lumped heat capacity system<br>. | | | | | |
| **Module 2** | Convection | Assignment | Mathematical | | 6 classes |
| Topics:<br>Newton's law – concept of boundary layer – significance of Prandtl number – boundary layer<br>equations – flat plate heat transfer– laminar and turbulent flow – Reynolds analogy – empirical<br>relations in forced convection – internal flow – boundary conditions – laminar and turbulent flow<br>– heat transfer coefficients – empirical correlations. Natural convection. | | | | | |
| **Module 3** | Radiation | Assignment | Mathematical | | 9 classes |

Topics:
Fundamentals of radiation – radiation spectrum – thermal radiation – concept of black body and
grey body – monochromatic and total emissive power – absorptivity, reflectivity and transmissivity- laws of radiation – radiation between two surfaces – geometrical factors for simple configuration– radiation shields

| | | | | |
|---|---|---|---|---|
| **Module 4** | Heat exchangers | Assignment | Mathematical | 8 classes |

Topics:
Classification – log mean temperature difference – overall heat transfer coefficient – fouling and
scaling of heat exchangers – LMTD and NTU method of performance evaluation of heat
exchangers. Introduction to mass transfer – Fick's law of diffusion - problems

**List of Laboratory Tasks:**

**Experiment No. 1: To calculate the thermal conductivity of metal rod and to plot temperature distribution along the length of rod .**

**Level 1:** To note down the temperatures readings on surface of copper rod.
**Level 2:** To measure the flow rate of water .
**Experiment No. 2: To calculate the thermal conductivity of insulating powder.**
**Level 1:** Measure the temperature on both sides of spherical shell.
**Level 2:** To determine the conductivity of powder.
**Experiment No. 3: To study the heat transfer through insulating medium.**
**Level 1:** To study the heat transfer through insulating medium .
**Level 2:** To calculate the heat transfer through insulating medium
**Experiment No. 4: To study the heat transfer through conduction in composite wall**
**Level 1:** To plot the performance characteristics..
**Level 2:** To calculate heat transfer.
**Experiment No. 5: To study the heat transfer in forced convection**
**Level 1:** To calculate surface heat transfer co-efficient for a pipe by forced convection .
**Level 2:** To compare heat transfer co-efficient for different air flow rates and heat flow rates..
**Experiment No. 6: To study the heat transfer in natural convection**
**Level 1:** To determine the heat transfer in natural convection
**Level 2:** To study the heat transfer in natural convection
**Experiment No. 7: To study the heat transfer in a pin fin apparatus by forced convection..**
**Level 1**: To determine the heat transfer in a pin fin apparatus by forced convection...
**Level 2**: To determine the heat transfer in a pin fin apparatus by forced convection...

**Targeted Application & Tools that can be used:**
Application Area is Geophysical phenomenon, Hydrology, Aerospace, Aerodynamics, Microfluidics, Pipe network, heat exchangers.
Industries using above applications and tools – Siemens, Quest Global, Simulent consulting, Triveni Engineering, TATA, GE etc

**Text Book:**

</table>

| | | | | |
|---|---|---|---|---|
| **Module 3** | Sequencing and Scheduling | Assignment | Data Collection and Analysis | 12 Sessions |
| Topics: Concept of Single Machine Scheduling - Shortest Processing Time (SPT) Rule to Minimize Mean Flow Time, Weighted Mean Flow Time, Earliest Due Date (EDD) Rule to Minimize Maximum Lateness, Introduction | | | | |
| to Branch and Bound Technique to Minimize Mean Tardiness. Flow Shop Scheduling - Introduction, Johnson's algorithm, Extension of Johnson's Rule, Branch and Bound Technique, CDS Heuristic. | | | | |
| **Module 4** | Modern Production Management Tools | Case Study | Data collection and Programming | 12 Sessions |
| Topics: Just-In-Time Manufacturing, Computer Integrated Manufacturing and Flexible Manufacturing System, Total Quality Management, Poka Yoke, Kaizen, Business Process Reengineering, Supply Chain Management, Lean Manufacturing, Quality Function Deployment. | | | | |

**Targeted Application & Tools that can be used:**

Application Area include almost all manufacturing organizations (Automotive – Suzulki, Toyota, Hyundai, KIA, Ford etc.,) Processing industries (Petroleum – Reliance, Shell, HP etc., Cement industries – Dalmiya, Ultra Tech),

Professionally Used Software: DYNAMIC 3i Production Planning, IQMS, Fishbowl

**Project work/Assignment:**

Project: Assuming yourself as an entrepreneur, carryout the analysis facility location for your new project.

Assignment: 1] Consider a flow shop environment and use the suitable algorithms to solve the problem considered.

Assignment 2: From your perspective, which are the modern tools of production management will have huge impact in the transition to industry 4.0 from current setting.

| **Course Code: MEC3086** | **Course Title: Design of Machine Elements-II** **Type of Course: Program Core & Theory** | **L-P- C** | 3 | 0 | 3 |
| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | MEC3090 | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The Course is designed with an objective of giving an overview of designing appropriate machine transmission components and their applications.<br>The Course covers: Design of Gears; Lubrication and Wear consideration in Design; Design and selection of Bearings: Hydrodynamic lubrication theory, Hydrostatic and Hydrodynamic bearings, Rolling Element Bearings; belts chains and Clutches Systems Approach to Design: Decision Making, Simulation of mechanical systems using CAD tools, Sensitivity analysis of design parameters, Value Analysis and Value Addition to design components and systems | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Design of Machine Elements-II**" and attain **SKILL DEVELOPMENT** through Problem solving methodologies. | | | | |
| **Course Outcomes** | CO1 Select belts, ropes and chains for different engineering applications,<br>CO2 Compute dimensions and stresses in different types of springs for different applications,<br>CO3 Compute gear specifications for various engineering applications,<br>CO4 Determine specifications for brakes and clutches used in practice, | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Belts, Ropes and Chains | Assignment | Data collection | 07 Sessions | |
| Topics:<br>Flat Belts, Length & Cross Section, and Selection of V-belts, Ropes and Chains for Different Applications. | | | | | |
| **Module 2** | Springs | Assignment | Mathematical | 09 classes | |
| Types of springs - stresses in helical coil springs of circular and non-circular cross sections. Tension and compression springs, springs under fluctuating loads, leaf springs: stresses in leaf springs & equalized stresses. | | | | | |
| **Module 3** | Spur Gears | Assignment | Mathematical | 20 Sessions | |
| definitions, stresses in gear tooth, Lewis equation and form factor, design for strength, dynamic load and wear load. Helical Gears: Definitions, formative number of teeth, design based on strength, dynamic and wear loads. Bevel Gear: Definitions, formative number of teeth, design based on strength, dynamic and wear loads. Worm Gears: Definitions, design based on strength, dynamic, wear load and efficiency of worm gear drives. | | | | | |
| **Module 4** | Clutches and Brakes | Assignment | Mathematical | 09 Sessions | |
| Topics: | | | | | |

Design of clutches: single plate, multi plate and cone clutches. Design of brakes, block and band brakes: self-locking of brakes: heat generation in brakes.

**Targeted Application & Tools that can be used:**

Application Area is Geophysical phenomenon, Hydrology, Aerospace, Aerodynamics, Microfluidics, Pipe network, Turbo-machinery.

Industries using above applications and tools – Siemens, Quest Global, Simulent consulting, Triveni Engineering, TATA, GE etc

**TEXTBOOKS:**

1.Design of Machine Elements: V.B. Bhandari, Tata McGraw Hill Publishing Company Ltd., New Delhi, 3rd Edition 2007.

2.Mechanical Engineering Design: Joseph E Shigley and Charles R. Mischke McGraw Hill International Edition, 6th Edition 2003.

**Reference Book(s):**

1.Machine Design: Robert L. Norton, Pearson Education Asia, 2001.

2.Design of Machine Elements: M.F.Spotts, T.E. Shoup, L.E. Hornberger, S.R. Jayram and C.V. Venkatesh, Pearson Education, 2006.

3.Machine Design: Hall, Holowenko, Laughlin (Schaum's Outlines Series) Adapted by S.K. Somani, Tata McGraw Hill Publishing Company Ltd., New Delhi, Special Indian Edition, 2008.

4.Fundamentals of Machine Component Design: Robert C. Juvinall and Kurt M Marshek, Wiley India Pvt. Ltd., New Delhi, 3rd Edition, 2007.

|---|---|
| **Catalogue prepared by** | Mr. Wasim Akram |
| **Recommended by the Board of Studies on** | BOS NO: 11th BoS held on 05/09/2020 |
| **Date of Approval by the Academic Council** | 14th Meeting of the Academic Council held on 24/12/2020 |

| | | | | | |
|---|---|---|---|---|---|
| **Course Code:** **MEC4008** | **Course Title: Mechanisms, Machines and Design Lab** **Type of Course: Program Core & Practical Only** | **L-P- C** | 0 | 2 | 1 |
| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | It is a new state of the art facility for experimental design research the Design Lab is providing facilities for students to learn different courses related to Mechanical Vibrations, Kinematics of Machines, Design of Machine Elements, Dynamics of Machines etc., and the concepts are demonstrated for better understanding to explore towards research and industrial engineering design field. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Mechanisms, Machines and Design Lab**" and attain **SKILL DEVELOPMENT** through Experiential learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of the course the students shall be able to:**<br>1. To practically relate to concepts discussed in Design of Machine Elements, Mechanical Vibrations & Dynamics of Machines courses.<br>2. To identify forces and moments in mechanical system components and identify vibrations in machine elements and design appropriate damping methods.<br>3. To understand the working Principles of machine elements such as Governors, Gyroscopes and measure strain in various machine elements using strain gauges.<br>4. Perform the journal bearing experiments and record the observation. | | | | |
| **Course Content** | | | | | |

**Syllabus:**

**PART-A**

1. Determine the natural frequency of the given Simple Pendulum
2. Determine the radius of gyration 'k' of given compound pendulum
3. Determination of natural frequency, logarithmic decrement, damping ratio and damping coefficient in a single degree of freedom vibrating systems (longitudinal and torsional).
4. Determination of critical speed of a rotating shaft.

**PART-B**

5. Determination of equilibrium speed, sensitiveness, power and effort of Porter/Proell / watt Governor (Only one or more).
6. Determination of Principal Stresses and strains in a member subjected to combined loading using Strain rosettes.
7. Determination of stresses in Curved beam using strain gauge.

8. Determination of Pressure distribution in Journal bearing.
9. Gyroscope

**Targeted Application & Tools that can be used:**

| **Recommended by the Board of Studies on** | BOS NO: 15th BOS held on 22/07/2022 |
| **Date of Approval by the Academic Council** | Academic Council Meeting No. 18, Dated 03/08/2022. |

| | | | | | |
|---|---|---|---|---|---|
| **Course Code: MEC4009** | **Course Title: IC Engines and Fuels Type of Course: Program Core** | **L - P - C** | 3 | 0 | 3 |
| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | MEC4001, MEC4003 | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course reviews the basic principles of physics for analysis of performance of IC engines. This course also includes fuels that are used for combustion, alternate fuels and different injection systems (mechanical and electronic). The course covers: Thermodynamic analysis of SI and CI engine combustion, Comparison of knocking in SI and CI engine. Fuels and Alternative fuels for I.C. engines, Formation and Control of Engine Emissions. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**IC Engines and Fuels**" and attain **SKILL DEVELOPMENT** through Participative learning techniques. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>CO1- Describe basic concepts of Internal Combustion Engines and evaluate their performance.<br>.CO2- Understand the necessity of different conventional and alternate fuels.<br>CO3- Select appropriate injection systems for the given Engine.<br>CO4- Explain the stages of combustion in both SI and CI Engines and their Knocking processes.<br>CO5-Discuss different Emission Control packages and Emission Norms. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to I. C. Engines | Assignment | Data Analysis Task | 8 Sessions | |
| Topics:<br>**Introduction to I. C. Engines**: Heat engines. Types of heat engines, Difference between engines and turbines. Engine Nomenclature, IC engine classification, Engine performance Parameters. Numerical**.** | | | | | |
| **Module 2** | Conventional and Alternate Fuels | Assignment | Data Analysis Task | 10 Sessions | |
| Topics:<br>**Conventional Fuels:** About fuels, Types of fuels (Solid, liquid, gaseous), , Petroleum Refining process, important qualities of Engine fuels. Chemical Structure of Petrol and Diesel<br>**Alternate fuels** - Need for alternate fuels, Liquid fuels- methanol & ethanol for SI and CI Engines, Gaseous Fuels - Hydrogen, CNG, Biogas. Biodiesels – Production, Characterisation and testing | | | | | |
| **Module 3** | Carburetion and injection Systems | Assignment | Data Analysis Task | 10 Sessions | |

Introduction, Definition, Air-Fuel mixtures, Principle of carburetion, Simple carburetor-working principle.
Mechanical injection system –. Introduction. Functional requirement of an injection system, Classification of injection systems.
Electronic Injection System **–** Introduction, Electronic fuel injection systems. MPFI systems, Functional divisions of MPFI systems, Electronic control system (ECU).

| **Module 4** | Combustion in IC Engines | Assignment | Data Analysis Task | 10 Sessions |
|---|---|---|---|---|

Topics
About combustion, Homogenous and Heterogeneous mixtures, Combustion in SI Engines, Stages of Combustion in SI engines, Flame front propagation, factors influencing Flame Speed, Rate of pressure rise, Abnormal combustion, The phenomenon of Knock in SI engines, Effect of Engine variables on Knock. Combustion in CI engines, Stages of Combustion in CI Engine, Factors affecting the delay period, The Phenomenon of Knocking, Comparison of Knock in SI and CI Engines.

| **Module 5** | Engine Emissions and their Control | Assignment | Data Analysis Task | 8 Sessions |
|---|---|---|---|---|

Topics:
Pollutant from emissions - Carbon Monoxide, Carbon dioxide, Unburnt hydrocarbon, Oxides of Nitrogen, Smoke and Particulate matter. Emission Control packages – Catalytic converter Package, Thermal reactor package, Exhaust gas recirculation (EGR), Emission Norms, Bharath and Euro norms.

**Targeted Application & Tools that can be used:**
Application area are Indian Railways and power generation sector.
Tools used: CFD software

<tr><td>Course Code:<br>MEC3039</td><td colspan="4">Course Title: Non Destructive testing<br>Type of Course: Discipline Elective theory</td><td>L- P- C</td><td>3</td><td>0</td><td>3</td></tr>
<tr><td>Version No.</td><td colspan="8">1.0</td></tr>
<tr><td>Course Pre-requisites</td><td colspan="8">NIL</td></tr>
<tr><td>Anti-requisites</td><td colspan="8">NIL</td></tr>
<tr><td>Course Description</td><td colspan="8">Nondestructive testing (NDT) is a wide group of analysis techniques used in science and industry to evaluate the properties of a material, component or system without causing damage. Because NDT does not permanently alter the article being inspected, it is a highly-valuable technique that can save both money and time in product evaluation, troubleshooting, and research. Common NDT methods include ultrasonic, magnetic particle, liquid penetrant, radiographic, and eddy-current testing. Penetrant is used to check discontinuities i.e. cracks, pits etc. open to the surface on parts made of non-porous materials. This method depends on the ability of the penetrant to enter into a surface discontinuity in the material to which it is applied. It is applicable to all solid non-porous material</td></tr>
<tr><td>Course Objective</td><td colspan="8">The objective of the course is to familiarize the learners with the concepts of " Non Destructive Testing" and attain EMPLOYABILITY SKILL through Participative learning techniques.</td></tr>
<tr><td>Course Out Comes</td><td colspan="8">On successful completion of the course the students shall be able to:<br>1. Describe various types of nondestructive testing methods.<br>2. Explain the various techniques in Magnetic particle inspection<br>3. Select an appropriate NDT method for a specific material in Ultrasonic testing.<br>4. Discuss advantages and limitations of Radiographic testing methods.<br>5. Recognize the developments and future trends in Eddy current testing.</td></tr>

Non-Destructive Testing, Fausto Pedro Garcia Marquez (ed.) 2016.

https://presiuniv.knimbus.com/user#/viewDetail?searchResultType=ECATALOGUE_BASED&unique_id=EBOOKDIRECTORY_1_3387

**Topics relevant to "EMPLOYABILITY SKILLS":** Principle of magnetic particle inspection, procedure for testing, methods used for magnetization, magnetic particles and suspending liquids, applications and limitations for developing **EMPLOYABILITY SKILLS** through **Participative Learning techniques**. This is attained through assessment component mentioned in course handout.

| **Course Code: MEC3021** | **Course Title: Intelligent Machining and Manufacturing**<br>**Type of Course: Discipline Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | Manufacturers are increasingly utilizing machine tools that are self-aware – they perceive their own states and the state of the surrounding environment – and are able to make decisions related to machine activity processes. This is called intelligent machining, and through this course student will receive a primer on its background, tools and related terminology. Learn how the integration of smart sensors and controls are helping to improve productivity. You'll be exposed to various sensors and sensing techniques, process control strategies, and open architecture systems that can be leveraged to enable intelligent machining. This course will prepare you to contribute to the implementation of intelligent machining projects. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of " **Intelligent Machining and Manufacturing** " and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>(1) To define intelligent manufacturing.<br>(2) To describe different type of sensors with their application for different manufacturing process.<br>(3) To list different process control strategies used for intelligent manufacturing and machining.<br>(4) To discuss future direction in advanced machining. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Intelligent Machining | Assignment | | 8 Sessions | |
| **Topics:**<br>Introduction to intelligent machining, machining basics, the evolution of intelligent machining, components of intelligent machining.Scope of machine intelligence in manufacturing systems - modelling and control of processes and machines. | | | | | |
| **Module 2** | Sensors and Sensing Techniques | Case Study | | 12 Sessions | |
| **Topics:**<br>Introduction of sensors, types of sensors, signal processing transforming data into information, practical uses of machine learning. Sensor-based Robotic systems for assembly, welding, machining etc. and mobile robots. Task level planning and path planning. Visuo-motor coordination and navigation problems. Intelligent structures. Behavioural approach and subsumption architecture for learning from environment | | | | | |

| | | | | |
|---|---|---|---|---|
| **Module 3** | Process Control Strategies | Assignment | | 12 Sessions |
| **Topics:** Programmable of logic controllers (PLC), Closed loop Process control systems, introduction to adaptive control, commercially available software. Neuro-Fuzzy-Expert systems for uncertain reasoning. Concept learning, associative memory and connectionist learning systems. Data abstraction in parallel distributed architectures. | | | | |
| **Module 4** | Future Directions in Advanced Machining | Assignment | | 10 Sessions |
| **Topics:** Intelligent Machining and the future, roadmap to success. | | | | |

**Targeted Application & Tools that can be used:**

1. Creating intelligent factories where manufacturing technologies are upgraded and transformed by cyber-physical systems (CPSs), the Internet of Things (IoT), and cloud computing
2. To make manufacturing systems able to monitor physical processes, create a so-called "digital twin" (or "cyber twin") of the physical world, and make smart decisions through real-time communication and cooperation with humans, machines, sensors, and so forth.
3. Industry 4.0 combines embedded production system technologies with intelligent production processes to pave the way for a new technological age that will fundamentally transform industry value chains, production value chains, and business models.

**Professionally Used Software:**

- AI & Machine Learning: no-code visual workflows,
- Python language.

| **Anti-requisites** | NIL | | | | |
| **Course Description** | In this course student will have an opportunity to learn something about the fundamentals of the structure/properties relationships of all types of materials. This<br>Course introduce the students to the principles of optical and electron microscopy, X-ray diffraction and various spectroscopic techniques like X-ray diffraction, optical, scanning electron and transmission electron microscopy along with demonstrations of the instrument details and imaging experiments through videos. | | | | |
| **Course Objectives** | The objective of the course is to familiarize the learners with the concepts of " **Material and Characterisation Techniques**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>1] Identify the different engineering materials and associated properties.<br>2] Choose appropriate microscopy techniques to investigate microstructure of materials at high resolution.<br>3] Explain the martial composition and their phases using diffraction techniques.<br>4] Summarize the Thermal, Electrical and optical chaectrization form materials | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to materials | Assignment | Report on General characterization techniques of metals | 15 Sessions | |
| Topics:<br>Classification of engineering materials, Structure-property relationship in engineering materials, Crystalline and noncrystalline materials, Miller Indices, Crystal planes and directions. Defects; Point, line and surface defects. Overview of properties of engineering materials, Selection of materials for different engineering applications. Need of materials characterization and available techniques | | | | | |
| **Module 2** | Microscopy techniques | Case Study | Identify the micro structure morphology | 15 Sessions | |
| Topics:<br>Introduction to Microscopes, Optical microscopy (OM), Transmission Electron Microscopy (TEM); Basic Electron scattering, Concepts of resolution, TEM instruments, Various imaging modes, Analysis of micrographs, Electron Energy Loss Spectroscopy Scanning Electron Microscopy, Rutherford backscattering spectrometry Atomic Force Microscopy, Scanning Probe Microscopy, Specimen preparation, Applications. | | | | | |
| **Module 3** | Structure analysis | Assignment | Report on material phases and associated properties | 12 Sessions | |
| Topics:<br>X-ray diffraction, Phase identification, indexing and lattice parameter determination, Analytical line profile fitting using various models Neutron diffraction; Reflection High energy electron Diffraction (RHEED), Low energy Electron Diffraction (LEED). | | | | | |

**Targeted Application & Tools that can be used:**
Application Area is material characterization
Professionally Used Software: Image analysis software, Phase analysis software, etc...

| **Course Code: MEC3066** | **Course Title: Python for Automation**<br>**Type of Course: Discipline Elective** | **L- P- C** | 2 | 2 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The course aims at helping students understand the basics of Python from a mechanical engineering perspective. Python is widely used in many industries owing to its ease of use and simple syntax. The course covers topics from the basic variable definition and covers the basic tools in Python to perform mathematical operations and data analysis of text files. This knowledge would be of use for mechanical engineers since Python offers widespread applications in the field of automation and data analysis. | | | | |
| **Course Objectives** | The objective of the course is to familiarize the learners with the concepts of " **Python for Automation**" and attain **EMPLOYABILITY SKILL** through Experiential learning techniques | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>1. Gain a fundamental grasp of Python to use graphing library for visualization.<br>2. Use Python to perform various mathematical operations as well as data manipulation. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Python Data Structures | Term paper/Assignment | Programming | 6sessions | |
| Topics: Integers + Floats; Variables; Strings; Methods + Functions; Booleans; Conditonal Statements; Lists; Indexing into strings + lists; Looping over lists. | | | | | |
| **Module 2** | Plotting, Visualization & Solving equations | Assignment | Programming | 7 sessions | |
| Topics: Learn to write programs to plot the relation between 2 variables (like Pressure-Volume lines). Solve ordinary differential equations using scipy module. | | | | | |
| **Module 3** | Curve Fitting, Regression & Iterative Solvers | Assignment | Programming | 07 sessions | |
| Topics: Predicting the relationship between different variables for which an existing relationship doesn't exist, and also predict what will happen in the future using the trend of the plot. (SciPy module). | | | | | |
| **Module 4** | Webscraping | signment | Programming | 06 sessions | |
| Topics: Introduction to using packages; Performing a GET request; String manipulation; Debugging a Python script , Beautiful Soup package; Honing in on data; Common webscraping pitfalls; Using loops in webscraping | | | | | |
| **Module 5** | Data Analysis | Case Study | Programming | 6 sessions | |
| Topics: Data manipulation to post-process the results from simulation. Automate the post-processing procedure | | | | | |
| **List of Laboratory Tasks:**<br>**Experiment N0 1:** Study of Integers + Floats; Variables; Strings; Methods + Functions; Booleans.<br>**Experiment No. 2:** Study of Indexing into strings + lists; Looping over lists . | | | | | |

**Experiment No. 3:** write programs to plot the relation between 2 variables (like Pressure-Volumelines).
**Experiment No. 4:** ordinary differential equations using scipy module .
**Experiment No. 5:** Performing a GET request; String manipulation .
**Experiment No. 6:** Debugging a Python script , Beautiful Soup package
**Experiment No. 7:** Predicting the relationship between different variables for which an existing relationship doesn't exist

**Targeted Application & Tools that can be used:**
Job profiles like Data Analyst, PLM engineer etc
Python 3.0 programming language.

| **Course Code:** MEC3095 | **Course Title:** Advanced Fluid Mechanics<br>**Type of Course:** Discipline Elective | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | MEC2010 | | | | |
| **Anti-requisites** | **NIL** | | | | |
| **Course Description** | This is an advanced course in Fluid Mechanics. The subject Fluid Mechanics has a wide scope and is of prime importance in several fields of engineering and science. Present course emphasizes the fundamental underlying fluid mechanical principles and application of those principles to solve real life problems. Special attention is given towards deriving all the governing equations starting from the fundamental principle. There is a well-balanced coverage of physical concepts, mathematical operations along with examples and exercise problems of practical importance. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Advanced Fluid Mechanics**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | On successful completion of the course the students shall be able to:<br>CO1] solve the boundary layer equations for laminar flows.<br>CO2] obtain the exact solutions to N-S equations for different geometries<br>CO3] solve the equations for turbulent flow and its models.<br>CO4] apply the numerical techniques for fluid flow problems. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction and Equations of Fluid Motion | Assignment | Mathematical | 12 Sessions | |
| Topics:<br>Definition of fluids, continuum concept, indicial notation, tensors, Cauchy stress tensor, fluid statics, fluid properties, importance of studying viscous flows, examples of fluid flow problems, Eulerian and Lagrangian description, strain-rate, vorticity, circulation, streamlines, streamlines and path lines, stream function, Derivation of continuity equation, Navier--Stokes (N--S) equation and energy equations; Stokes hypothesis, special cases, conservative and non-conservative forms, boundary conditions, cylindrical coordinates, vorticity equation, control volume formulation, integral and differential approaches in fluid dynamics, laminar and turbulent flow. | | | | | |
| **Module 2** | Exact solution of N-S equations | Assignment | Mathematical | 10 Sessions | |
| Topics:<br>Planar Poiseuille flow and Couette flow problems, Hagen-Poiseuille flow, flow between two concentric cylinders - axially moving and rotating; unsteady flow - pressure gradient effects and boundary effects (Stokes first and second problems); similarity solution - plane stagnation flow, flow near a rotating disk, flow in wedge-shaped regions; potential flow; low-Reynolds number creeping flows - Stokes solution, Oseen's approximation, theory of hydrodynamic lubrication.□ | | | | | |
| **Module 3** | Boundary Layer analysis and Stability | Assignment | Mathematical | 12 Sessions | |
| Topics:<br>Derivation of boundary layer equations, displacement, momentum and energy thickness, order of magnitude analysis, shape factor, momentum integral method, exact solution, separation, pressure gradient effects, approximate methods, free-shear boundary layers, asymptotic expansion, 3D laminar boundary layers Introduction to hydrodynamic stability; linearised stability analysis -- Orr-Sommerfeld equation; transition to turbulence | | | | | |
| **Module 4** | Turbulent flow | Assignment | Mathematical | 10 Sessions | |

Topics:
Introduction to the physical and mathematical nature of turbulent flow, Reynolds averaging and RANS equations, turbulence modelling, empirical laws, turbulent boundary layers (without and with pressure gradient), turbulent internal flows, free stream turbulence. non-Newtonian flow.

**Targeted Application & Tools that can be used:**

Application Area is Geophysical phenomenon, Hydrology, Aerospace, Aerodynamics, Microfluidics, Pipe network, Turbo-machinery.
Industries using above applications and tools –Oil Companies (IOCL, SHELL, BPCL and others), Automobile and Aviation companies (GE, AIRBUS, TATA Motors and others)

|---|---|---|---|---|---|
| **Course Code:** **MEC3028** | **Course Title:** **Compressible Fluid Flow** **Type of Course:** **Discipline Elective** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.1 | | | | |
| **Course Pre-requisites** | MEC2010 | | | | |
| **Anti-requisites** | **NIL** | | | | |
| **Course Description** | The course begins with the basics of thermodynamics and fluid mechanics, including types of flows. The next large block of lectures covers wave motion, and isentropic flows and effect of friction and heat transfer on ducts. The second half of the course deals with shock waves and its effect on various properties and concludes with another small block dealing with introduction of multi-dimensional flows. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Compressible Fluid Flow**" and attain **EMPLOYABILITY SKILL** through Problem solving methodologies. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>CO1 Define various thermodynamics and fluid flow properties and types of flows;<br>CO2 Analyze the assumptions and physical meaning of terms in the equations of motion for continuum flow;<br>CO3 Solve the governing equations for various flows including flow through ducts, normal and oblique shocks and its effect on various flow properties;<br>CO4 Solve the problems based on various shock waves, nozzle and diffuser, Rayleigh line and Fanno Curves;<br>CO5 Understand the concepts of the multi-dimensional flow. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Basic | Assignment | Experiment | 5 Sessions | |
| **Topics:**<br>Introduction, Thermodynamic properties like pressure, temperature, density, volume, equilibrium, ideal gas, 1st, 2nd, and 3rd laws of thermodynamics, enthalpy and entropy, various Fluid flows like laminar and turbulent, steady and unsteady, compressible and incompressible flows, Mach number.<br>**Assignment:** Teal time temperatutre measurement using thermocouple | | | | | |
| **Module 2** | Isentropic Flow and Wave Motion | Assignment | Analysis | 20 Sessions | |
| **Topics:**<br>Comparison of isentropic and adiabatic process, Mach number variation, stagnation function, Mass flow rate, Impulse function, Flow through nozzle and diffuser, Wave propagation in elastic solid medium, sound waves, steep finite pressure waves and expansion waves.<br>**Assignment:** Analyse an aerodynamics body under sub-sonic, sonic and supersonic flow condition by using Fluent software. | | | | | |
| **Module 3** | Shocks (Normal and Oblique) | Assignment | Data Analysis | 11 Sessions | |
| **Topics:**<br>Development of shock waves, Governing equations, Prandtl-Meyer relation, Static pressure ratio, temperature ratio, density ratio, stagnation pressure ratio, change in entropy across the shock, strength of shock, Mach number for subsonic flow, introduction to oblique shock, its relation, Prandtl equation, Rankine-Hugoniot equation.<br>**Assignment:** Obtain the fluid flow behavior of normal shock over various shaped-bodies using Ansys Fluent. | | | | | |
| **Module 4** | Flow in constant area ducts with friction and heat transfer | Case study | report | 7 Sessions | |
| **Topics:** | | | | | |

Fanno Curves, Fanno Flow equations and its solutions, variation of flow properties, table and charts for Fanno flow, Rayleigh line, Fundamental equation, variation on flow properties, charts and tables for Rayleigh flow.
**Assignment:** Write a brief report on below article related to flow in constant area duct.
https://www.researchgate.net/publication/332798145_Fanno Flow AdiabaticFlow in a Constant Area Duct with Friction

| **Module 5** | Introduction to Multidimensional Flow | Assignment | Study based | 2 Sessions |
|---|---|---|---|---|

**Topics:**
Continuity, momentum for Cartesian coordinates, Navier-stokes equation.
**Assignment:** Derive a Navier strokes equation for cylindrical body

**Targeted Application & Tools that can be used:**
Application area mainly includes in Aerospace, aerodynamics of aircraft, Rocket propulsion, etc.
Tools used: MS Excel, ANSYS Fluent

| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | MEC2010 | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The Course is designed with an objective of giving an overview of computational fluid dynamics (CFD), governing equations of fluid dynamics, mathematical behavior of partial differential equations, basic aspects of discretization, grids with appropriate transformations, and simple CFD techniques and their applications, numerical solutions of quasi-one-dimensional nozzle flows, numerical solution of a two-dimensional supersonic flow, incompressible Counter flow, and supersonic flow over a flat plate and advanced topics in CFD. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Computational Fluid Dynamics**" and attain **EMPLOYABILITY SKILL** through Problem solving methodologies. | | | | |
| **Course Outcomes** | On successful completion of the course the students shall be able to:<br>CO1. Understand the fundamentals of CFD and deriving governing equations.<br>CO2. To give a basic understanding to the discretization of equations of mass, momentum and energy.<br>CO3. Apply different CFD techniques to diffusion problems.<br>CO4. Solving convection-diffusion problems and N-S equation.<br>CO5. Understand numerical grid generation and apply time integration and turbulence methods to complex flows | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction | | | 6 Sessions | |
| Topics:<br>Introduction to CFD, Advantages, applications and the future of CFD, CFD solution procedure, problem setup processes, numerical solution, results report and visualization. | | | | | |
| **Module 2** | Governing Equations for CFD | Assignment | Mathematical | 8 Sessions | |
| Topics:<br>Conservation equation; mass; momentum and energy equations; convective forms of the equations and general description, Classification into various types of equation; parabolic elliptic and hyperbolic; boundary and initial conditions; over view of numerical methods. | | | | | |
| **Module 3** | CFD mesh generation and techniques | Assignment | Mathematical | 13 Sessions | |

Topics:
Types of meshes, local mesh refinement, moving meshes, guidelines for mesh quality and mesh design, Discretization of governing equations: FDM, FVM, converting governing equations to algebraic equation, FDM, FVM and comparison of the finite difference and finite volume method, numerical solutions to algebraic equations, pressure velocity coupling.

| **Module 4** | CFD solution analysis: Essentials | Assignment | Mathematical | 6 Sessions |
|---|---|---|---|---|

Topics:
Consistency, stability, convergence, accuracy Efficiency, case studies: channel flow and flow over a 90° bend.

| **Module 5** | Practical guidelines for CFD simulation and analysis | Assignment | Mathematical | 12 Sessions |
|---|---|---|---|---|

Topics: Guidelines for boundary conditions, turbulence modelling, strategy for selecting turbulence modelling, near wall treatments, test case: assessment of two equation turbulence modelling Indoor air flow distribution, gas particle flow in a 90° bend, heat transfer coupled with fluid flow.

**Targeted Application & Tools that can be used:**

Application Area is Geophysical phenomenon, Hydrology, Aerospace, Aerodynamics, Microfluidics, Pipe network, Turbo-machinery.
Industries using above applications and tools – Siemens, Quest Global, Simulent consulting, Triveni Engineering, TATA, GE etc

| **Course Description** | The Course is designed with an objective of giving an overview of principles of Refrigeration and Air conditioning (R and AC), thermodynamic analysis of R and AC systems, load estimates and design of various R and AC systems for comfort and industrial applications. The Course also includes theoretical or experimental investigation of refrigeration and air-conditioning problems. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Refrigeration & Air Conditioning**" and attain **EMPLOYABILITY SKILL** through Problem solving methodologies. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>1. Evaluate the performances of complex vapor compression systems.<br>2 Choose suitable components for refrigeration system.<br>3. Execute thermodynamic analysis of absorption refrigeration systems<br>4. Evaluate various psychrometric properties from measured values of barometric pressure, dry bulb and wet bulb temperatures.<br>5. Calculate the internal and external cooling loads on a building. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction | | Data Analysis | 7 Session | |
| Topics:<br>Basic concepts: unit of refrigeration and COP, refrigerators, heat pump, Carnot refrigerator, applications of refrigerators, vapor compression refrigeration, ideal cycle, effect of sub cooling of liquid, super heating of vapor, deviations of practical (actual cycle) from ideal cycle, construction and use of p-h chart problems. | | | | | |
| **Module 2** | Refrigerator Components | Assignment | Data Analysis | 10 Session | |
| Topics: Compressors: classification, working, advantages and disadvantages; Condensers: classification, working Principles. Evaporators: classification, working Principles; Expansion devices: types, working principles. Refrigerants: Properties, nomenclature selection of refrigerants, effects of refrigerants on global warming, alternate refrigerants. | | | | | |

| | | | | |
|---|---|---|---|---|
| **Module 3** | Vapour Absorption Refrigeration | Assignment | Data Analysis | 6 Session |
| Topics: Vapor absorption refrigeration: description, working of NH3-Water, Li Br–water system, calculation of HCOP, Principle and operation of three fluid vapor absorption refrigeration systems. | | | | |
| **Module 4** | Properties of Moist Air (Psychrometry) | Assignment | Data Analysis | 7 Session |
| Topics: Composition of moist air, Methods for estimating moist air properties, Methods for estimating moist air properties, Important psychrometric properties, Relations between psychrometric properties, Introduction to humidity ratio vs. dry-bulb temperature, psychrometric chart | | | | |
| **Module 5** | Air Conditioning Systems | Assignment | Data Analysis | 13 Sessions |
| Topics: Psychometric properties and processes, sensible and latent heat loads, characterization, need for ventilation, consideration of Infiltration, load concepts of RSHF, ASHF, ESHF and ADP; concept of human comfort and effective temperature, comfort air conditioning, industrial air conditioning and Requirements, air conditioning load calculations. | | | | |

**Targeted Application & Tools that can be used:**

Application area includes HAVC systems

Tools used: MS Excel, Matlab

| **Catalogue prepared by** | Dr. Devendra Singh Dandotiya |

| | |
|---|---|
| **Recommended by the Board of Studies on** | 12th BoS held on 06/08/2021 |
| **Date of Approval by the Academic Council** | 16th Meeting of the Academic Council held on 23rd October, 2021 |

| | | | | | |
|---|---|---|---|---|---|
| **Course Code: MEC3016** | **Course Title: Statistics and Quality Control Type of Course: Discipline Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | Nil | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The purpose of this course is to enable the students to understand underlying concepts in statistical quality control and to develop ability to apply those concepts to the design and management of quality control processes in industries. The course is both conceptual and analytical in nature. The course develops the analytical, critical thinking, and decision making skills. The course also enhances the problem solving abilities through assignments. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Statistics and Quality Control**" and attain **EMPLOYABILITY SKILL** through Problem solving methodologies. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>1. Explains the basic concept of Quality, Quality tools<br>2. Analyze process capability and operating characteristic curves<br>3. Construct control charts and evaluate revised control limits<br>4. Describe Six sigma methodology to improve quality | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Quality – An overview | Assignment | Data Collection and Analysis | 6 Sessions | |
| Topics:<br>Introduction and definition of quality, quality control, Cost of quality, 7 basic Quality control tools. | | | | | |
| **Module 2** | Data collection and measurement analysis. | Case Study | data analysis task | 15 Sessions | |
| Topics:<br>Type of data – variable and attributes, Data Sampling –Population and sampling, determining sample size, types of sampling, variation, types of variation- common cause, special cause, total variation.<br>statistical hypothetical test, practical examples.<br>Measurement system analysis- discrimination, accuracy, precision, Gauge R&R, Kappa analysis, Base lining- for discrete data- DPO, DPU, DPMO, using sigma value. For continuous date – Process Capability.<br>Data analysis using Minitab Software. | | | | | |
| **Module 3** | Control Charts | Assignment | Data Collection and Analysis | 14 Sessions | |
| Topics:<br>Control limits vs Specification Limit, Classification of Control charts, Control charts for variable data – I&MR chart, X bar R chart, X bar S chart. Control chart for attribute data – C chart, U chart, P chart, Np chart, Data analysis using Minitab Software. | | | | | |
| **Module 4** | Six Sigma – Quality Improvement Tool | Case Study | Data Collection and Analysis | 10 Sessions | |

Topics:
Introduction, DMAIC approach, DMADM approach, case studies.

**Targeted Application & Tools that can be used:**

Application Area is in health services, government organizations, banking and others such as marketing, finance, purchasing, industrial relations etc.

Professionally Used Software: Minitab/ Excel

**Text Book**

|---|---|---|---|---|---|
| **Course Code: MEC3042** | **Course Title: Powder Metallurgy**<br>**Type of Course: Discipline Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The course provides detailed knowledge of powder production and processing as well as to choose the right method to suit application in hand. The course discusses various techniques which are used for powder production and the versatile nature of these techniques to produce a wide range of products.<br>The major goal of the course is to hasten development of the necessary scientific and engineering base in the field of Powder Metallurgy i.e., to establish the powder fabrication route as a technologically and economically viable means of materials production. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Powder Metallurgy**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | On successful completion of this course the students shall be able to:<br>[1] Acquire the knowledge of Powder Metallurgy History, Applications and its importance.<br>[2] Measure various powder characteristics like apparent density, tap density, flow rate, friction index etc.<br>[3] Distinguish between various metal powder productions techniques.<br>[4] Explain the mechanism of sintering and types of sintering for development of various mechanical properties along with its applications. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction | Case Study | Data collection | 05 Sessions | |
| Topics:<br>Historical and modern developments in Powder Metallurgy. Advantages, limitations and applications of Powder Metallurgy**.** Microstructure control, Powder Characterization | | | | | |
| **Module 2** | Characteristics of Metal Powder | Assignment | Chemical Analysis of metal powder | 12 Session**s** | |
| Topics:<br>Chemical composition, Particle size, shape and size distribution, Characteristics of metal powder such as apparent density, tap density, flow rate, friction index**.** Powder Fabrication: Mechanical & Chemical fabrication | | | | | |
| **Module 3** | Metal powder production techniques | Assignment | Comparison of Powder production techniques | 12 Sessions | |
| Topics:<br>Atomization, Reduction from oxide, Electrolysis, Crushing, Milling, Powder Fabrication: Electrolytic fabrication & Atomization, Hydride and carbonyl processes, Mechanical Alloying, New developments. | | | | | |
| **Module 4** | Powder Characterization | Assignment | Powder compaction techniques | 08 Sessions | |
| Topics:<br>Powder conditioning, fundamentals of powder compaction, density distribution in green compacts, compressibility, green Strength, Powder packing, mixing and blending | | | | | |

| **Module 5** | Sintering | Assignment | Sintering Analysis | 08 Sessions |
|---|---|---|---|---|
| Topics:<br>Definition, stages, effect of variables, sintering atmospheres and furnaces, Mechanism, liquid-phase sintering, Secondary operations, Activated and Liquid phase Sintering | | | | |
| **Targeted Application & Tools that can be used:**<br>Application area is modern non-conventional manufacturing techniques for Industrial and commercial products.<br>Software : PMsolver | | | | |

| | | | | | |
|---|---|---|---|---|---|
| **Course Code: MEC3055** | **Course Title: Product Design for Manufacturing and Assembly** **Type of Course: Discipline Elective & Theory only** | **L-P-C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The purpose of this course is to enable the students to appreciate the need for influence the design of parts and part systems. Students will be introduced to the Design for Manufacturability (DFM) methodology, and will be motivated to understand infeasible or impractical designs. The course develops the critical thinking and analytical skills. The course also enhances the programming abilities through assignments. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of ": **Product Design for Manufacturing and Assembly**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | On successful completion of this course the students shall be able to:<br>[1] Understand constraints of manufacturing processes that limit design possibilities with respect to cycle time, material handling, and other factory costs.<br>[2]Apply casting considerations in machining<br>[3]Apply principles of DFA to make efficient patterns and moulds<br>[4]Select proper materials and manufacturing processes Die casting | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Material and process selection | Assignment | Demonstration of the Experiment | 12 sessions | |
| Topics:<br>Introduction, Advantages of applying DFMA, General requirements of early materials and process selection, Selection of Manufacturing processes, Selection of materials. Engineering Design features. – Dimensioning, Tolerances, General Tolerance, Geometric Tolerances, Assembly limits, achieving larger machining tolerances, Datum features. | | | | | |
| **Module 2** | Machining Considerations | Assignment | Case study | 10 sessions | |
| Topics:<br>Machining Considerations – Drills, Milling cutters, Drilling, Keyways, Dowels, Screws, Reduction in machining areas, Simplification by separation and amalgamation, work piece holding, surface grinding, Examples | | | | | |
| **Module 3** | Casting Procedures | Assignment | Design of molds using AutoCAD | 12 sessions | |
| Topics:<br>Pattern, Mould, parting line, cast holes, machined holes, identifying parting line, special sand cores, designing to obviate sand cores. Examples. Injection molding materials, Molding cycle, Systems, molds, machine size, cycle time, Cost estimation, Insert molding, | | | | | |
| **Module 4** | Design for Die casting and Powder metal processing – | Assignment | Seminar | 10 sessions | |
| **Topics:** | | | | | |

Die casting alloys, cycle, machines, dies, finishing, Assembly techniques, Design principles, Powder metallurgy processing, stages, compaction characteristics, Tooling, Sintering, Design guidelines

**Targeted Application & Tools that can be used:**

Finding the various fits and tolerances of components experimentally using gauges and analyzing the same using Autodesk invent software

| **Course Code: MEC3038** | **Course Title: Smart Manufacturing**<br>**Type of Course: Discipline Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | Smart Manufacturing is an amalgamation of Information Technology, Cloud Computing & traditional Mechanical, Production Engineering towards achieving excellence in manufacturing. Maximum results with minimum resources being used. concepts of Smart Manufacturing, how various technologies can be leveraged to achieve minimum breakdowns, First Time Right Production, 100% Delivery on Time with minimum turnaround time. Nine Pillars of Smart Manufacturing will be explained to the Students developments in Technology those are going to alter the Traditional Manufacturing scenario. The following topics may be broadly covered in the classroom. The practical will be in the form of Group Discussion based on Case Study. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Smart Manufacturing**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>**1**] Explain the different areas of Industrial Internet<br>2] Outline the designing industrial internet systems<br>3] Explain the security of the Industrial Internet<br>4] Outline the active part of industry 4.0<br>5] Explain the economic aspects and applications of day to day life smart factories | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to the Industrial Internet | Assignment | A report on use of IoT in common applications | | 10 Sessions |
| Topics:<br>The Internet of Things: An overview; Horizontal and vertical aspects of the Internet of Things, What Is the Industrial Internet?, Innovation and the IIoT, Intelligent Devices, Introduction to Industry 4.0 , Industry 4.0 Reference assembly line, lean Manufacturing | | | | | |
| **Module 2** | Designing Industrial Internet Systems | Case Study | On IIoT | | 07 Sessions |
| Topics:<br>The Concept of the IIoT, Modern Communication Protocols, Wireless Communication Technologies Building Blocks of Industry 4.0, AI&ML | | | | | |
| **Module 3** | Securing the Industrial Internet | Case Study | Report on system Security | | 08 Sessions |
| Topics:<br>Security in Manufacturing, PLC, Securing the OT, Network Level: Potential Security Issues, System Level: Potential Security Issues, Smart Factories in current trends and its impact | | | | | |
| **Module 4** | Introducing Industry 4.0 | Assignment | Industrial revolution | | 10 Sessions |
| Topics:<br>Defining Industry 4.0, Why Industry 4.0 and Why Now?, Four Main Characteristics of Industry 4.0, The Value Chain, Industry 4.0 Design Principles, Building Blocks of Industry 4.0, Big Data and | | | | | |

| | | | | |
|---|---|---|---|---|
| Analytics, Autonomous Robots, Simulation, The Industrial Internet of Things (IoT), Industry 4.0 Reference Architecture, Smart Manufacturing, Equipment, Redefine the Workforce, Products, Business Processes, Application Area is any manufacturing/processing industries | | | | |
| **Module 5** | Smart Factories | Case study | Identification of areas where Smart Manufacturing can flourish | 10 Sessions |
| Topics:<br>Introducing the Smart Factory, Smart Factories in Action, Why Smart Manufacturing Is Important, Real-World Smart Factories, Siemens' Amberg Electronics Plant (EWA), Industry 4.0: The Way Forward, Adopt Smart Architectures and Technologies, Industry 4.0 Design Principles, design principles of Industry 4.0 | | | | |
| **Targeted Application & Tools that can be used:**<br>Application Area is any manufacturing/processing industries<br>Professionally Used Software: PLC and IoT. | | | | |

| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course is a study of various precision measurement, inspection techniques for non-destructive and destructive testing, sampling plans, investigation methods, and assessment of process variables and controls used in the materials joining / welding, manufacturing industry. Also the importance of quality control. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of **Quality Testing & Inspection** " and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:** **(**1) Understanding of Quality Control, inspection, precision measurement and quality assurance management used in the organization.<br>2) Develop the elementary knowledge of various techniques, procedures and methods used in the destructive inspection.<br>3]. Develop the elementary knowledge of various techniques, procedures and methods used in the non-destructive inspection<br>4] . Develop the elementary knowledge of various measurement techniques | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction | Assignment | Data Collection and Analysis | 10 Sessions | |
| Topics: Introduction, Fundamental Concept of Quality, Role of Inspection and Measurement for Quality Control in Manufacturing. | | | | | |
| **Module 2** | Inspection | Case Study | Simulation and data analysis task | 10 Sessions | |
| Topics: Need of Inspection. Inspection types and Principles, Design for Inspection, Destructive Inspection, Testing of Composite Materials | | | | | |
| **Module 3** | Non-destructive Inspection | Assignment | Data Collection and Analysis | 14 Sessions | |
| Topics: Visual Inspection, Dye Penetrant Inspection, Magnetic Particle Inspection, Eddy Current Inspection, Ultrasonic Testing. Acoustic Emission Inspection, Radiography, Leak Testing, Thermographic Non-destructive Testing, Advanced Non-destructive Techniques, NDT Standards, Safety in NDT | | | | | |

| | | | | |
|---|---|---|---|---|
| **Module 4** | Engineering Metrology | Case Study | Data collection and Programming | 10 Sessions |
| Topics: Linear Measurement, Angular Measurement, Measurement of Surface Finish, Screw Thread Metrology, Gear Measurement, Miscellaneous Measurements. | | | | |

| **Version No.** | 1.1 | | | | |
| **Course Pre-requisites** | Nil | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course is intended to provide an overview of basic maintenance systems used in industry. The course highlights concepts of reliability, failure data analysis, hazard models, various system configurations to solve complex problems. It also explains various methods for improving reliability, and techniques available to improve maintainability and availability. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of " **Reliability Engineering** " and attain **EMPLOYABILITY SKILL** through Participative learning techniques | | | | |
| **Course Out Comes** | **On successful completion of the course students shall be able to**<br>1. Describe engineering fundamentals to different types of maintenance.<br>2. Analyze the impact of reliability of an equipment with the help of failure data analysis.<br>3. Analyze the components of a mechanical system using equipment's system reliability.<br>4. Explain maintainability & availability concepts | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Maintenance | Assignment | | 12 Sessions | |
| Topics: Introduction, Causes of Maintenance, Objectives, Benefits of maintenance, type of maintenance systems, Maintenance Cost, Engineering Maintenance in 21st Century, Computers in Maintenance. | | | | | |
| **Module 2** | Introduction to Reliability | Assignment | | 12 Sessions | |
| Topics: Introduction, History, Root cause of equipment reliability, failure data analysis: introduction, failure data, MTTF MTBF, MTTR, MDT. | | | | | |
| **Module 3** | System Reliability | Assignment | | 10 Sessions | |
| Topics: Introduction, Series Configurations, Parallel Configurations, Combination of Series & Parallel Configurations and methods of solving complex systems. | | | | | |
| **Module 4** | Availability & Maintainability | Assignment | | 10 Sessions | |
| Topics: Introduction, formulas, techniques available to improve maintainability. Elements of Maintainability, Factors affecting Maintainability. Availability, System Downtime, Types of Availability, Factors affecting Availability. Trade-off among reliability, maintainability and availability . | | | | | |
| **Targeted Application & Tools that can be used:**<br>**NIL** | | | | | |

**Text Book:**

| | | | | | |
|---|---|---|---|---|---|
| **Course Code**: **MEC3053** | **Course Title: Theory of Elasticity**<br>**Type of Course**: **Discipline Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | MAT1001 | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The purpose of this course is to enable the students to understand the importance of the behavior of components in 3-dimnesional environment and practical application of theory of elasticity. Using Elasticity in the design process enables to attain more efficient structure as it can provide accurate values for the stress, strains and Displacements even for structures of complicated geometries and loadings. | | | | |
| **Course Objectives** | The objective of the course is to familiarize the learners with the concepts of " **Theory of Elasticity** " and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | On successful completion of this course the students shall be able to:<br>(1) Solve problems related to elasticity<br>(2) Apply numerical methods to solve continuum problems.<br>(3) Apply different principles to solve the 3 dimensional problems.<br>(4) Reduce the computation effort by adopting the axisymmetric method.<br>(5) Solve the problem related to thermal loading. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Analysis of Stress: | Assignment | Programming Task, Data Analysis task | 10 sessions | |
| Topics:<br>Definition and notation of stress, Equations of equilibrium in differential form, Stress components on an arbitrary plane, Equality of cross shear, Stress invariants, Principal stresses | | | | | |
| **Module 2** | Analysis of Strain: | Case Study | Simulation and data analysis task | 10 sessions | |
| Topics:<br>Strain invariants, Principal strains, Octahedral strains, Plane state of strain, Compatibility equations, Strain transformation. Principle of super position, Saint Venant principle. | | | | | |
| **Module 3** | Plane Stress And Plane Strain Problems | Assignment | Data Collection and Analysis | 10 sessions | |
| Topics:<br>Airy's stress function, Bi-harmonic equations, Polynomial solutions, Simple two-dimensional problems in Cartesian coordinates like bending of cantilever and simply supported beams, etc. | | | | | |
| **Module 4** | Polar Coordinates & Thermal Stress | Assignment | Simulation/Data Analysis | 15 sessions | |
| Equations of equilibrium, Strain displacement relations, Stress – strain relations, Axi – symmetric problems, Kirsch, Michell's and Boussinesque problems. | | | | | |
| **Targeted Application & Tools that can be used:** | | | | | |

Application area of theory of elasticity in Design of structure buildings, machines, and cars, aircrafts, satellites, and the space shuttle, Biomedical.

|---|---|---|---|---|---|
| **Course Code:** **MEC2018** | **Course Title:** **Value Engineering** **Type of Course:** **Discipline Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.1 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course is a study of resource management. It follows a systematic approach to solving problems and making decisions. The approach forces latent capabilities to be applied to challenging assumptions. The course will cover fundamentals of cost analysis, function analysis, creative problem solving, data evaluation, and reporting for decisive action. This explores the impact of technology on economics. The course is both conceptual and analytical in nature and develops the critical thinking and analytical skills through assignments. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Value Engineering**" and attain **EMPLOYABILITY SKILL** through Problem solving methodologies. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:** **(1)** Discuss the concepts of value engineering, identify the advantages, applications.<br>2) Discuss various phases of value engineering. Analyze the function, approach of function and evaluation of function. Determine the worth and value.<br>3] Discuss various value engineering techniques.<br>4] Appraise the value engineering operation in maintenance and repair activities**.** | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Value engineering (VE) in organization | Assignment | Analytical task | 10 Sessions | |
| Topics:<br>Introduction: Value engineering concepts, advantages, applications, problem recognition, and role in productivity, criteria for comparison, element of choice.<br>Organization: Level of value engineering in the organization, size and skill of VE staff, small plant, VE activity, unique and quantitative evaluation of ideas. | | | | | |
| **Module 2** | Job plan in VE | Assignment | Analytical task | 12 Sessions | |
| Topics:<br>Value Engineering Job Plan: Introduction, orientation, information phase, speculation phase, analysis phase. Selection and Evaluation of value engineering Projects, Project selection, methods selection, value standards, application of value engineering methodology.<br>Analysis Function: Anatomy of the function, use esteem and exchange values, basic vs. secondary vs. unnecessary functions. Approach of function, Evaluation of function, determining function, classifying function, evaluation of costs, evaluation of worth, determining worth, evaluation of value. | | | | | |
| **Module 3** | VE techniques | Case Study | Data Analysis | 12 Sessions | |
| Topics:<br>Value Engineering Techniques: Selecting products and operation for value engineering action, value engineering programmes, determining and evaluating function(s) assigning rupee equivalents, developing alternate means to required functions, decision making for optimum alternative, use of decision matrix, queuing theory and Monte Carlo method make or buy, measuring profits, reporting results, Follow up, Use of advanced technique like Function Analysis System. | | | | | |
| **Module 4** | Applications of Value Analysis | Assignment | Data Analysis | 10 Sessions | |

Topics:
Application of Value analysis in the field of Accounting, Appearance Design, Cost reduction, Engineering, manufacturing, Management, Purchasing, Quality Control, Sales, marketing, Material Management Etc., Comparison of approach of Value analysis & other management techniques.

**Targeted Application:**

Application Area is in process improvement of any existing process using VE techniques.

**Textbook:**

| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course introduces computer assisted modern manufacturing technologies. The course include basics of automation, NC programming (manual and APT), concepts of group technology, Flexible Manufacturing system and CIM. This course relates to the important theoretical concepts, and the state-of-the-art technological developments in the area of modern manufacturing. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Computer Integrated Manufacturing**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>1] Describe various types of automation and production concept<br>2] Distinguish various CNC machine tools.<br>3] Explain CNC machine tool features.<br>4] Describe the adaptive control system.<br>5] Explain the Computer aided process planning and concurrent engineering | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction and Scope of CIM in Industry | Assignment | Automation | 06 Sessions | |
| Topics: Introduction, Evolution of CIM, CIM Hardware and software, Elements of CIM system, Types of automation, Manufacturing Systems, Types of Manufacturing Systems, , Machine Tools and related equipment‟s, Computer monitoring and control, Manufacturing support systems, , Benefits of Computer integrated Manufacturing Systems. | | | | | |
| **Module 2** | NC/ CNC Machine Tools | Assignment & Case study | Machine tools | 08 sessions | |
| Topics: General architecture of CNC Machine, Components of the CNC Systems: Machine Control Unit, CNC Driving system components: Hydraulic, Servo Motors, Stepper Motors, Feedback Devices: Encoder, Resolver, Inductosyn, Tachometers, Counting devices. Constructional Features of CNC Machines | | | | | |
| **Module 3** | Constructional Features of CNC Machines | Seminar | CNC system | 10 sessions | |
| Topics: Design considerations of CNC machines for improving machining accuracy, Structural Members, Slide ways, bearings, Re-circulating ball Screws, Spindle drives, Work holding devices and tool holding devices, Automatic tool changers | | | | | |
| **Module 4** | Adaptive Control | Assignment | Application of Adaptive Control System | 12 sessions | |
| Topics: Machining systems. Adaptive control optimization system, adaptive control constraint system, applications to machining processes, Benefits of Adaptive control Machining.Typical production planning and control system, Material planning systems, Capacity planning, Shop Floor Control, Automatic identification, Automated data collection systems | | | | | |

| | | | | |
|---|---|---|---|---|
| Module 5 | Computer Aided Planning & Concurrent Engineering | Case study | CAPP | 08 Sessions |
| Topics:Topics: Introduction of Process planning, Retrieval CAPP system, Generative CAPP system, Computer managed Process plan (CMPP), Advanced Process Planning, Concurrent Engineering. | | | | |

**Targeted Application & Tools that can be used:**

Application area: Manufacturing sector, Automobile and assembly sectors, military and aerospace sector.

| **Course Code: MEC3033** | **Course Title: Alternate Fuels Type of Course: Discipline Elective** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course is designed to introduce the world of alternate fuels. The course acquaints the learners about production of alternate fuels, their performance and emission characteristics when used with Diesel in IC Engine. Latest emission norms like BS-6 and its comparison with Euro norms will be done. This course also reviews all the basic principles of IC Engine working, fossil fuels production and its structure. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Alternate Fuels**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>CO1-Understand basic concepts of Internal Combustion Engines and fossil fuels.<br>CO2-Understand the production methods of liquid and gaseous alternate fuels<br>CO3-Discuss combustion, performance and its emission characteristics of different conventional and alternate fuels.<br>CO4-Explain the National and International Emission Norms and Emission Control packages. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Basics of Engines and Fuels | Assignment | Data Analysis Task | 10 Sessions | |
| Topics:<br>**Basics of Heat engines.** Classification of IC engines, Nomenclature of engine components, working principle of four stroke Engines, Performance Parameters and their standards. Concept of theoretical Otto & Diesel cycles**.**<br>**Conventional fuels:** Solid, liquid, gaseous fuels, Characteristics of Engine fuels, fuels from Petroleum products, Chemical Structure of Petroleum fuels. | | | | | |
| **Module 2** | Liquid and Gaseous Alternate Fuels | Assignment | Data Analysis Task | 10 Sessions | |
| Topics:<br>**Alternate fuels** – Types of alternate fuels, Liquid fuels- alcohols, Production of methanol, ethanol. Their usage in engines. Gaseous Fuels- Hydrogen, LPG, CNG - Production, properties, storage and handling. Their usage in engines. | | | | | |
| **Module 3** | Bio Fuels | Assignment | Data Analysis Task | 12 Sessions | |

Topics:
Types of biofuels. Use of biomass as an energy source. Pyrolysis and Gasification processes. Biogas - Production and properties. Indian and Chinese biogas plants. Performance and emission characteristics of biogas.
Types of bio-diesels and their origin Need of bio-diesels, Trans-esterification method of production, Comparison of properties of bio-diesels v/s petro-diesel, Comparison of performance parameters and emission characteristics of bio-diesels v/s Petro diesel. Discussion on need for engine modifications to use biodiesels.

| | | | | |
|---|---|---|---|---|
| **Module 4** | Engine Emission norms in India and abroad | Assignment | Data Analysis Task | 12 Sessions |

Topics:
Sources and types of emissions. Effects of release of Carbon Monoxide, Unburnt hydrocarbon, Oxides of Nitrogen, Smoke and Particulate matter to the atmosphere. Control of effects of Emission – EGR, and Catalytic converter Package, Indian Emission Norms- Bharath stage and Euro norms. Comparison of Bharath stage 6 and Euro 6.

**Targeted Application & Tools that can be used:**
Application area are Automobile sector, Indian Railways and power generation.
Tools used: any CFD software

| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The course deals with different aspects of Vehicle Dynamics that are necessary for proper design of a vehicle. The topics include, the vehicle body (sprung mass), the suspension component (spring and damper) and tyre (unsprung mass) and steering mechanism. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Vehicle Dynamics**" and attain **EMPLOYABILITY SKILL** through Problem solving methodologies. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>CO1- Understand basic requirements of Vehicle Dynamics<br>CO2- Discuss on Steering and Suspension system<br>CO3-Discuss on drive train design.<br>CO4- Discuss on unsprung mass calculation. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Basic Principles of Vehicle Dynamics | Assignment | Assignment | 10 Sessions | |
| Topics:<br>Design principles of dynamics. Vehicle body and its concepts and considerations. Stability criterion for body. Need for dynamic stability and its components. Methods of analysis. | | | | | |
| **Module 2** | Drive Train Design | Assignment | Assignment | 12 Sessions | |
| Topics:<br>Definition of Drive train and its importance. Techniques for different class of vehicles like LMV, MV, Heavy Vehicles etc., | | | | | |
| **Module 3** | Design of Steering and Suspension mechanism | Assignment | Assignment | 10 Sessions | |
| Topics:<br>Steering Requirements and types. Steering mechanism. Modern day steering mechanisms.<br><br>Suspension Systems: Need for suspension. Basic concepts. Types of suspension systems. Damping. | | | | | |
| **Module 4** | Longitudinal & Lateral Dynamics | Case study | Case study | 10 Sessions | |

Topics:
Longitudinal dynamics - Explanation of the mechanism of Traction force generation in Braking and accelerating and explanation of working of Anti-lock brake systems.
Lateral dynamics- Understeer, Oversteer behavior of vehicle and root cause for that behavior in turning.

**Targeted Application & Tools that can be used:**
Application areas are vehicle dynamics.

| **Course Description** | The course deals with types of engines and its nomenclature. It covers Combustion phenomenon in both SI and CI engines and its requirements. It also discusses abnormal combustion and combustion chamber designs. Fuels used and their emissions are covered. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**IC Engines**" and attain **EMPLOYABILITY SKILL** through Experiential learning techniques. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>CO1- Understand types of IC engines and their nomenclature<br>CO2- Discuss on Combustion phenomenon in SI and CI engines<br>CO3-Understand the types and requirements of fuels for IC engines<br>CO4- Differentiate between different combustion chamber designs for Si and CI engines<br>CO4- Know the different emission norms | | | | |
| **Course Content:** | | | | | |
| **Module 1** | IC Engines and their combustion chambers | Assignment | Assignment | 10 Sessions | |
| Topics:<br>Types of heat engines, Basic Engine components and Engine Nomenclature, IC engine classification, working principle of Engines, Review of Otto cycle & Diesel cycle. Simple numerical on engines.<br>Combustion Chamber designs for SI and Ci engines – requirements and modifications. | | | | | |
| **Module 2** | Fuels and their injection in Engines | Assignment | Assignment | 12 Sessions | |
| Topics:<br>Conventional fuels: Types of fuels (Solid, liquid, gaseous), Petroleum Refining process, Chemical Structure of Petroleum fuels. Important qualities of Engine fuels.<br>Alternate fuels – Need, for alternate fuels, Liquid fuels- alcohol, methanol, ethanol, Alcohol for S I and C I Engines, Gaseous Fuels - Hydrogen, LPG, Natural gas, CNG, Biodiesel, Biogas.<br>Fuel injection in in engines. Mechanism of injection for SI and CI engines. Mechanical and electronic injection systems. | | | | | |
| **Module 3** | Combustion phenomenon in SI and CI engines | Assignment | Assignment | 12 Sessions | |
| Topics:<br>Definition of Combustion, Homogenous and Heterogeneous mixtures, Combustion in S I Engines, Stages of Combustion in S I engines, Flame front propagation, factors influencing Flame Speed, Rate of pressure rise, Abnormal combustion, The phenomenon of Knocking in SI engines, Effect of Engine variables on Knock. Combustion in C I engines, Stages of Combustion in C I Engine, Factors affecting the delay period, The Phenomenon of Diesel Knock, Comparison of Knock in SI and CI Engines. | | | | | |

| | | | | |
|---|---|---|---|---|
| **Module 4** | Pollution and their control | Case study | Case study | 10 Sessions |

Topics:

Pollutant from engines: Formation of Carbon Monoxide, Carbon di oxide, Unburnt hydrocarbon, Oxides of Nitrogen, Smoke and Particulate matter. Emission Control packages Catalytic converter Package, Thermal reactor package, Exhaust gas recirculation (EGR), Emission Norms, Bharat and Euro norms. Comparison of Bharat stage and Euro Norms.

**Targeted Application & Tools that can be used:**

Application areas are vehicle dynamics.

Tools used:

|---|---|---|---|---|---|
| **Course Code:** **MEC3044** | **Course Title: Modelling and Simulation of Manufacturing System** **Type of Course: Discipline Elective** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | In today's digital world, modernization and automation of manufacturing units is of the highest importance. Mechanisation of factories has begun long ago but requires usage modern tools like modelling and simulation to optimize the design and production systems. This course takes care of all and provides basics of modelling and simulation with case studies. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Modelling and Simulation of Manufacturing System**" and attain **EMPLOYABILITY SKILL** through Problem solving methodologies. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>CO1- Understand the designs and requirements of manufacturing systems.<br>CO2- Understand basic concepts of modelling of components.<br>CO3- Use simulation tools to simulate different situations<br>CO4- Apply the modelling and simulation concept to any practical situation | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Manufacturing Units | Assignment | Data Analysis Task | 10 Sessions | |
| Topics:<br>Requirements of a proper manufacturing unit. Types of manufacturing units. Factors considered for selection of site and materials. Tendering process. Material procurement, storage and handling. | | | | | |
| **Module 2** | Modelling | Assignment | Data Analysis Task | 12 Sessions | |
| Topics:<br>Basics of modelling. Different software and their tools. Modelling requirements and principles. Modelling of any one type of system. | | | | | |
| **Module 3** | Simulation Techniques | Assignment | Data Analysis Task | 12 Sessons | |
| Topics:<br>Need and requirements for simulation of any process. Methods adopted. Principles to be followed for proper simulation of a model. Simulation of any one system. | | | | | |
| **Module 4** | Industry and Research Applications | Assignment | Data Analysis Task | 10 Sessions | |
| Topics:<br>Introduction, network construction - rules, Fulkerson's rule for numbering the events, AON and AOA diagrams; Critical path method to find the expected completion time of a project | | | | | |
| **Targeted Application & Tools that can be used:** | | | | | |

Application area are Space, Engineering, Automobile, power generation sector etc., Tools used: ANSYS software

| **Course Code: MEC3079** | **Course Title: Design of Experiments**<br>**Type of Course: Discipline Elective/ Theory Only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course is intended to provide an overview of fundaments of Design of Experiments. The course highlights concepts of basic statistics, Hypothesis testing etc. It also focus on various methods in designing the experiments, analysis and interpretation of the same etc., | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Design of Experiments**" and attain **EMPLOYABILITY SKILL** through Problem solving methodologies. | | | | |
| **Course Out Comes** | **On successful completion of the course students shall be able to**<br>1. Describe basic principles for designing experiments.<br>2. Understand basic statistical concepts.<br>3. Understand the various experimental designs<br>4. Analyze various methods in Designing of Experiments | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction | Assignment | | 08 Sessions | |
| Topics: Strategy of Experimentation, Typical applications of Experimental design, Basic Principles, Guidelines for Designing Experiment. | | | | | |
| **Module 2** | Basic Statistical Concepts | Assignment | | 12 Sessions | |
| Topics: Concepts of random variable, probability, density function cumulative distribution function. Sample and population, Measure of Central tendency; Mean median and mode, Measures of Variability, Concept of confidence level. Statistical Distributions: Normal, Log Normal & Weibull distributions. Hypothesis testing, Probability plots, choice of sample size. Illustration through Numerical examples | | | | | |
| **Module 3** | Experimental Design | Assignment | | 12 Sessions | |
| Topics: Classical Experiments: Factorial Experiments: Terminology: factors, levels, interactions, treatment combination, randomization, Two-level experimental designs for two factors and three factors. Three-level experimental designs for two factors and three factors, Factor effects, Factor interactions, Fractional factorial design, Saturated Designs, Central composite designs. Illustration through Numerical examples. | | | | | |
| **Module 4** | Analysis And Interpretation Methods | Assignment | | 12 Sessions | |
| Topics: Measures of variability, Ranking method, Column effect method & Plotting method, Analysis of variance (ANOVA) in Factorial Experiments: YATE's algorithm for ANOVA, Regression analysis, Mathematical models from experimental data. Illustration through Numerical examples. | | | | | |
| **Targeted Application & Tools that can be used:** | | | | | |

Application area are Space, Engineering, Automobile, power generation sector etc., Tools used:

| **Recommended by the Board of Studies on** | 15th BOS and the Date of BOS 29/07/22 |
| **Date of Approval by the Academic Council** | Mention the Academic Council Meeting No. & the date of the meeting: 18, 03/08/2022 |

| | | | | | |
|---|---|---|---|---|---|
| **Course Code: MEC3097** | **Course Title: Plumbing Design Type of Course: Discipline Elective/Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The Course enables the entry level and working engineers to understand the basics, different systems used in Plumbing systems for Domestic and commercial purposes. To achieve the optimal design, one should needs good analytical skills and up-to-date technical knowledge of various system designs. This Subject is useful to design Plumbing Systems. This is an opportunity to apply the academics and develop an understanding of how to develop solution-driven concepts and translate them into a complete set of plans and prototypes. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Plumbing Design**" and attain **EMPLOYABILITY SKILL** through Problem solving methodologies. | | | | |
| **Course Outcomes** | **On successful completion of the course the students shall be able to:**<br>1. Understand the basic principles of mechanical, electrical, and plur<br>2. Apply construction management skills as an effective member of a team.<br>3. Analyze construction documents for planning and management of processes.<br>4. Design of pump Calculation, pipe size calculation | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Plumbing System | Assignment | | 08 Sessions | |
| Plumbing Introduction ,Plumbing – Codes & Standards, Fundamentals of Plumbing System, Water Supply System, Sanitary Drainage System, Storm Drainage System ,Irrigation System | | | | | |
| **Module 2** | Water Supply System | Case Study | Simulation and data analysis task | 15 Sessions | |
| Fixture Load as per Codes & Standard, Hot &Cold Water load, Water Supply Fixture Unit- WSFU, Fixture Water Requirement- GPM, Hot & Cold Water Pipe Size, Water Distribution – Pipe Routing ,Pipe Joining methods, Water Supply Demand Calculation, Storage Tank Types, Fundamental of Water Supply System Sources of Water, Water Supply – Commercial & Industrial | | | | | |
| **Module 3** | Plumbing System Equipment | Assignment | Data Collection and Analysis | 10 Sessions | |
| Plumbing Fixtures, Booster Pumps, Submersible Pumps, Boiler and Gaesser, Water Storage Tanks, Jacuzzi, Grease Interceptor | | | | | |
| **Module 4** | Piping Systems Design & Calculations | Case Study | Data collection and Programming | 10 Sessions | |

Pump calculation.Pipe size calculation,Design of process piping requirements per ASME B31.3

**Targeted Application & Tools that can be used:**
Plumbing Required in Commercial Buildings, Airports, Shopping malls, Petrochemical complex, refineries, pharmaceutical industry, Aerospace industry, Hospitals etc.

| **Course Code: MEC3067** | **Course Title: Engineering Instruments and Measurements** **Type of Course: Discipline Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The purpose of this course is to enable the students to appreciate the need for engineering instruments and Measurements and to develop the basic knowledge on various Metrological equipment's available to measure the dimension of the components. The course is both conceptual and analytical in nature and needs fair knowledge of Mathematical and computing. The course develops the critical thinking and analytical skills. The course also enhances the programming abilities through assignments**.** | | | | |
| **Course objective** | The objective of the course is to familiarize the learners with the concepts of "**Engineering Instruments and Measurements**" and attain **EMPLOYABILITY SKILL** through Problem solving methodologies. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>(1) Describe the concepts of measurements to apply in various Measuring instruments<br>2) Outline the principles of linear and angular measurement tools used for industrial applications<br>3] Demonstrate the techniques of form measurement used for industrial components<br>4] Discuss various measuring techniques of mechanical properties in industrial applications | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Engineering Instruments and Basic Measurements | Assignment | Error Measurement task | 10 Sessions | |
| Topics:<br>Introduction–Basics of Measurements: Accuracy, Precision, resolution, reliability, repeatability, validity, Errors and their analysis, Standards of measurement. Bridge Measurement: DC bridges- wheat-stone bridge, AC bridges – Kelvin, Hay, Maxwell, Schering and Wien bridges, Wagner ground Connection | | | | | |
| **Module 2** | Linear, Angular Measurements and Oscilloscopes | Assignments | Data collection task | 10 Sessions | |
| Topics:<br>Linear Measuring Instruments – Evolution – Types – Classification – Limit gauges –Angular measuring instruments,Oscilloscopes: Cathode Ray Tube, Vertical and Horizontal Deflection Systems, Delay lines, Probes and Transducers, Specification of an Oscilloscope. Oscilloscope measurement Techniques, Special Oscilloscopes – Storage Oscilloscope, Sampling Oscilloscope | | | | | |

| | | | | |
|---|---|---|---|---|
| **Module 3** | Form Measurement and frequency counters | Assignment | Data Collection and Analysis | 12 Sessions |
| Topics:<br>Principles and Methods of straightness – Flatness measurement – Thread measurement, gear measurement, surface finish measurement, Frequency Counters: Simple Frequency Counter; Measurement errors; extending frequency range of counters | | | | |
| **Module 4** | Power, Flow and Temperature Measurements and Digital Data Acquisition System | Assignment | Simulation/Data Analysis | 12 Sessions |
| Topics:Force, torque, power - mechanical, Pneumatic, Hydraulic and Electrical type. Flow measurement,Digital Data Acquisition System: Interfacing transducers to Electronics Control and Measuring System. Instrumentation Amplifier, Isolation Amplifier. An Introduction to Computer-Controlled Test Systems | | | | |
| **Targeted Application & Tools that can be used:**<br><br>Application Area is fluid flow measurements, power measuring instruments and temperature measurements in various industries<br>Software : Aberlink 3D | | | | |

| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The purpose of this course is to enable the students to appreciate the need for Strain gauge and Strain gauge Rosettes, Nature of light, 2-D & 3-Dimensional Photo elastic Analysis, Bire fringent coating and Introduction to holography. The course develops the critical thinking and analytical skills. The course also enhances the abilities through assignments. | | | | |
| **Course Outcomes** | On successful completion of this course the students shall be able to:<br>1. Explain the different types of strain gauges and its arrangement<br>2. Compute the stress and strain behavior of mechanical components using electrical strain gauges<br>3. Compute the Photo elastic analysis with various techniques<br>4. Explain the principles of circular polariscope | | | | |
| **Course Objectives** | The objective of the course is to familiarize the learners with the concepts of "**Experimental Stress Analysis**" and attain **EMPLOYABILITY SKILL** through Problem solving methodologies. | | | | |
| **Module 1** | Electrical Strain Resistance Gauges | Assignment | Demonstration of the Experiment | 14 sessions | |
| Topics:<br>Introduction, Strain sensitivity in metallic alloys, Gage construction, Adhesives and mounting techniques, Gage sensitivity and gage factor ,Performance' Characteristics, Strain Gage circuits: Potentiometer, Wheatstone's bridges, | | | | | |
| **Module 2** | Strain Analysis: | Assignment | Case study | 10 sessions | |
| Topics:<br>Two element, three element rectangular and delta rosettes, Correction for transverse strain effects, Stress gage, Plane shear gage, Stress intensity factor gage. | | | | | |
| **Module 3** | Photoelastic Analysis and coatings | Assignment | Analysis of Photo elastic Models using Ansys Software | 20 sessions | |
| Topics:<br>Nature of light, Wave theory of light - optical interference, Stress optic law –effect of stressed model in plane and circular polariscopes, Isoclinics &Isochromatics, Fringe order determination Fringe multiplication techniques , Calibration photoelastic model materials Separation methods: Shear difference method, Analytical separation methods, Model to prototype scaling, Properties of 2D photoelastic model materials, and Materials for 2D photoelasticity. | | | | | |
| | | | | | |
| **Targeted Application & Tools that can be used:**<br>Application Area is **HBK** Company selling and testing of Photo elastic models<br>**Octagon** company conducts Experimental Stress Analysis With using Strain Gauges During Load Tests On Door Fittings<br>Carryout the analysis using **Ansys Software** | | | | | |

| **Anti-requisites** | NIL | | | | |
| **Course Description** | The Course is designed with an objective of giving an overview of Micro and Nano manufacturing and their applications. This Course is aimed at teaching basic concepts of Micro and Nano manufacturing for mechanical engineering students. The course also enhances the knowledge of advanced technology applications through assignments**.** | | | | |
| **Course Objectives** | The objective of the course is to familiarize the learners with the concepts of "**Micro and Nano Manufacturing**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>1. Get an awareness of different techniques used in micro and nano manufacturing.<br>2. Understand micro and nanofabrication techniques and other processing routes in micro and nano manufacturing.<br>3. Discuss about different techniques used in micro joining and the metrology tools in micro and nano manufacturing | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Overview of Micro and Nano Manufacturing | Assignment | | Applications of Micro and Nano machining | 09 sessions |
| Topics:<br>Introduction to Precision engineering, macro milling and micro drilling, Micro-electromechanical systems – merits and applications, Micro phenomenon in Electro-photography – applications Introduction to Bulk micromachining, Surface micromachining steps. | | | | | |
| **Module 2** | Micro/Nano machining and forming techniques | Case Study | | Nano plastic forming applications | 08 Sessions |
| Topics:<br>Introduction to mechanical micromachining, Micro drilling – process, tools and applications Micro turning- process, tools and applications, Diamond Micro turning – process, tools and applications. | | | | | |
| **Module 3** | Micro and Nano Finishing Processes | Assignment | | Real time application of Micro and Nano Finishing Processes | 09 Sessions |
| Topics:<br>Introduction to Micro and Nano Finishing Processes, Magnetorheological Finishing (MRF) processes, Magnetorheological abrasive flow finishing processes (MRAFF) – process principle and applications, Force analysis of MRAFF process, Magnetorheological Jet finishing processes , Working principle and polishing performance of MR Jet Machine , Elastic Emission Machining (EEM) – machine description, applications. | | | | | |
| **Module 4** | Micro and Nano Fabrication | Assignment | | Applications of Diamond technology and CNT | 08 Sessions |
| Topics:<br>Introduction to Micro Fabrication: basics, flowchart, basic chip making processes, Introduction to Nanofabrication, Nanofabrication using soft lithography – principle, applications – Examples (Field Effect Transistor, Elastic Stamp), Manipulative techniques – process principle, applications, Diamond - Properties and applications, CVD Diamond Technology, LIGA Process. | | | | | |

| | | | | | |
|---|---|---|---|---|---|
| **Module 5** | Micro and Nano measurement and characterization techniques | Assignment | | Report on Nano metrology | 09 Sessions |
| Topics:<br>Introduction to micro and nano measurement, defining the scale, uncertainty, Scanning Electron Microscopy – description, principle, Scanning White-light Interferometry – Principle and application, Optical Microscopy | | | | | |
| **Targeted Application & Tools that can be used:**<br>Application Area is Aerospace and Space, Defense and Medical fields, Automobiles and special control systems, Energy sectors.<br>Professionally Used Software: Nil. | | | | | |

<tr><td>Course Outcomes</td><td colspan="9">On successful completion of this course the students shall be able to:<br>(1) Understand the stress, deformation, deformation, relationship between stress and deformation and plastic deformation in solids.<br>(2) Understand plastic stress/deformation relationships and flow rules.<br>(3) Perform stress analysis in beams and bars including Material nonlinearity<br>(4) Analyze the performance of a material according to different efficiency theories for a given state of plastic strain and deformation of metals in engineering problems.</td></tr>
<tr><td>Course Content:</td><td colspan="9"></td></tr>
<tr><td>Module 1</td><td>Fundamentals of Elasticity</td><td>Assignment</td><td></td><td>seminar</td><td>12 sessions</td></tr>
<tr><td colspan="10">Topics:<br>Basics Concept of stress, stress invariants, principal Stresses, octahedral normal and shearstresses, spherical and deviatoric stress,stress transformation; concept of strain,engineeringandnaturalstrains, octahedralstrain,deviator and spherical strain tensors, strain rate and strain rate tensor, cubical dilation, generalized Hooke's law, numerical problems.</td></tr>
<tr><td>Module 2</td><td>Permanent Deformation of Metals</td><td>Assignment</td><td></td><td>Case Study</td><td>12 sessions</td></tr>
<tr><td colspan="10">Topics:<br>Plastic Deformation of Metals: Crystalline structure in metals, mechanism of plastic deformation, factors affecting plastic deformation, strain hardening, recovery, re crystallization and grain growth, flow figures or Luder's cubes. Yield Criteria: Introduction, yield or plasticity conditions, Von Mises and Tresca criterion, geometrical representation</td></tr>
<tr><td>Module 3</td><td>Stress Strain Relations:</td><td>Assignment</td><td></td><td>Analysis using suitable software</td><td>10 sessions</td></tr>
<tr><td colspan="10">Topics:</td></tr>
</table>

Idealised stress-strain diagramsfor different material models, empirical equations, Levy-VonMises equation, Prandtl-Reuss and SaintVenant theory, and experimental verification of Saint Venant's theory of plastic flow. Concept of plastic potential, maximum work hypothesis,

| | | | | | |
|---|---|---|---|---|---|
| **Module 4** | Bending of Beams, Torsion of Bars and Slip Line Field Theory | Assignment | | Experimental Investigation | 12 sessions |

Topics:
Beams: Stages of plastic yielding, analysis of stresses, linear and nonlinear stress strain curve, problems.
Torsion of various shaped bars - Pure torsion of prismatic bars - Prandtle's membrane analogy - Torsion of thin walled tubes and hollow shafts.

**Targeted Application & Tools that can be used:**

Application Area is NAL, ISRO Bangalore Analysis of Structural members like beams, bars, plates and trusses Professionally Used Software: **Ansys Software, Abacus.**

**Text Book (s)**

T1. Timoshenko and Goodier, (2000), Theory of Elasticity, McGraw Hill Company, New York

| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | Manufacturing Control and Automation in manufacturing systems, acquire the fundamental concepts of automated flow lines and their analysis, classify automated material handling, automated storage and retrieval systems and illustrate adaptive control systems and automated inspection methods. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Manufacturing Control and Automation**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>(1) Illustrate the basic concepts of automation in machine tools.<br>(2) Analyze various automated flow lines, explain assembly systems and line balancing methods.<br>(3) Describe the importance of automated material handling and storage systems.<br>(4) Interpret the importance of adaptive control systems, automated inspection systems**.** | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Automation & flow lines | Assignment | Cellular, Plant and Product Layout and flow lines analysis | 14 Sessions | |
| Topics:<br>Introduction: Single-Station Manufacturing Cells, types and strategies of automation, Automation in machine tools, automation principles, Mechanical feeding and tool changing, machine tool control, elements in product realization.<br>Automated Flow Lines: Methods of work part transport, transfer mechanisms, buffer storage, control function, Design and fabrication consideration. | | | | | |
| **Module 2** | Analysis of transfer line in automation | Assignment | Line balancing analysis | 10 Sessions | |
| Topics:<br>Analysis of Automated Flow Lines: General terminology, analysis of transfer lines with and without buffer storage, partial automation, implementation of automated flow lines. | | | | | |
| **Module 3** | Modeling and simulation for manufacturing plant automation | Assignment | AI technologies | 10 Sessions | |
| Module 3: Modeling and simulation for manufacturing plant automation<br>Modern Tools-Fuzzy logic, Application of Fuzzy logic system, Artificial Neural Networks in manufacturing automation, Machining Learning, AI in manufacturing systems, Benefits of AI systems, AI technologies and techniques, Future trends and opportunities, | | | | | |
| **Module 4** | Control technologies in automation | Assignment | Programming of microprocessors | 10 Sessions | |

Module 4: Control technologies in automation
Industrial Control Systems, process industries verses discrete-manufacturing industries, continuous versus discrete Control. Computer based control process and its forms. Programming of microprocessors using 8085 instructions. Programmable logic controllers.

**Targeted Application:**
Application Area is Industrial Automation, Automated processing stations, Assembly line balancing, Industrial process control loop.

**Textbook:**
1.Automation, Production Systems and Computer Integrated Manufacturing: M.P. Groover./PE/PHI 2016.

| **Course Code: MEC3023** | **Course Title: Rapid Tooling and Industrial Application** **Type of Course: Discipline Elective/ Theory Only** | **L-P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | Rapid tooling and industrial application appreciate the need for Rapid Tooling Techniques and to develop the basic abilities of modeling and analyzing the various Rapid Prototyping systems. The course is both conceptual and analytical in nature and needs fair knowledge of Physics and computing. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Rapid Tooling and Industrial Application**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>1. Understand and use techniques for the processing of CAD models for rapid prototyping.<br>2. Understand and apply the fundamentals of rapid prototyping techniques.<br>3. Use appropriate tooling for the rapid prototyping process.<br>4. Apply rapid prototyping techniques for reverse engineering. | | | | |
| **Course Content:** | **The course consists of 5 Modules, each module covering the contents of the subject in a balanced manner.** | | | | |
| **Module 1** | Introduction and Fundamentals | Assignment | Data Collection | 10 sessions | |
| Topics:<br>Prototype fundamentals, historical development, fundamentals of rapid prototyping, advantages of rapid prototyping, fundamental automated processes, process chain, 3D Modelling, data conversion and transmission. | | | | | |
| **Module 2** | Liquid- Based RP Systems | Term paper/Assignment | Data Collection | 10 sessions | |
| Topics:<br>Stereolithography Apparatus(SLA), Solid Ground Curing(SGC), Solid Creation Systems(SCS), Solid Object Ultraviolet Laser Printer(SOUP), Two Laser beams, Rapid Freeze Prototyping, Micro-fabrication | | | | | |
| **Module 3** | Solid- Based RP Systems | Assignment | Data Collection | 10 sessions | |
| Topics:<br>Laminated Object Manufacturing(LOM), Fused Deposition Modelling(FDM), Paper Lamination Technology(PLT), Multi Jet Modelling(MJM), Melted Extrusion Modelling(MEM), Multi-functional RPM systems(M-RPM) | | | | | |
| **Module 4** | Powder- Based RP Systems | Assignment | Data Collection | 8 sessions | |
| Topics:<br>Selective Laser Sintering(SLS), 3-D printing(3DP), Laser Engineered Net Shaping, Direct Shell Production Casting(DSPC), Multiphase Jet Solidification(MJS), Electron Beam Melting(EMB). | | | | | |

| | | | | |
|---|---|---|---|---|
| **Module 5** | Data Formats and Applications | Term paper/Assignment | Data Collection | 7 sessions |
| Topics:<br>STL format, STL file problems, STL file repair, other translators, Newly Proposed Formats, Applications in design, Applications in engineering, Applications in Manufacturing and Tooling and other applications. | | | | |
| **Targeted Applications & Tools that can be used:**<br>Application area in all manufacturing - related companies and Industries.<br>Professionally used software: AutoCAD, CATIA, Catalyst | | | | |
| **Text Book**<br>1. Chua C K, Leong K F, Chu S L, Rapid Prototyping: Principles and Applications in Manufacturing, World Scientific.<br>2. Noorani R, Rapid Prototyping: Principles and Applications in Manufacturing, John Wiley & Sons. | | | | |

| **Course Code: ME3024** | **Course Title: Reverse Engineering and Computer Aided Inspection**<br>**Type of Course: Discipline Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | Reverse Engineering and Computer Aided Inspection focus on either software (or) hardware reverse engineering (RE). In the process of RE students understand existing technologies, functions, features, objects, components and systems. Also understanding carefully of disassembling, observing, testing, analyzing and reporting. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Reverse Engineering and Computer Aided Inspection**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>C01: Understand basic engineering systems.<br>CO2: Understand the terminologies related to re-engineering, forward engineering, and reverse engineering.<br>CO3: Disassemble products and specify the interactions between its subsystems and their functionality<br>C04:Under stand Reverse Engineering methodologies.<br>CO5: Understand Reverse engineering of Systems, Mechanical RE etc., | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Reverse Engineering | Assignment | seminar | 09 Sessions | |
| Topics: Introduction to Reverse Engineering Forward Engineering Design, Design Thought and Process, Design Steps, System RE, RE Methodology, RE Steps, System level Design, and Examples | | | | | |
| **Module 2** | Objectives and Methodologies of Reverse Engineering | Assignment | Practical Exposure | 15 Sessions | |
| Topics:<br>Reverse Engineering: Objectives and common application fields, Existing Technologies, Contact systems, Non-contact systems, Manipulation of acquired data. RE Methodology, RE Steps, System level Design, and Examples Practical Experiences. | | | | | |
| **Module 3** | Additive Manufacturing | Assignment | Case Study | 08 Sessions | |
| Topics:<br>Introduction to the Basic Principles of Additive Manufacturing and Design for Additive Manufacturing | | | | | |
| **Module 4** | Reverse Engineering in Industrial Applications | Assignment | Mini Project | 13 Sessions | |
| | | | | | |

| |
|---|
| Topics: Reverse Engineering in Computer Applications, Re-engineering of PLC programs. Employment of Reverse Engineering and Rapid Prototyping technologies in different industrial fields with an outlook on the South Tyrolean industrial fabric. |
| **Targeted Application & Tools that can be used:** Application Area is engineering and Animation Services, Quality Magazine uses Reverse engineering in model-based metrology |
| **Text Books**<br>1. Product Design: Techniques in Reverse Engineering and New Product Development by K.Otto and K. Wood Prentice Hall, 2001.<br>2. Reverse Engineering: An Industrial Perspective by Raja and Fernandes. Springer-Verlag 2008<br>3. RE as necessary phase by rapid product development by Sokovic and Kopac. Journal of Materials Processing Technology 2005 |

| **Course Code: MEC3060** | **Course Title: Robotics Type of Course: Discipline Elective & Theory Only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Robotics**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Description** | Robotics and stimulate their interests in science and engineering through the participation of the entire engineering design process. This course provides an overview of robot mechanisms, dynamics, and intelligent controls. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>1. Apply the concepts of inverse manipulator kinematics to a robot.<br>2. Apply the concepts of kinetics and kinematics to a robot.<br>3. Choose a suitable trajectory generation scheme for robot tasks.<br>4. Identify the types of sensors used in various applications. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Industrial Robots and Their Applications | Assignment | Problem on DOF, Manipulator. | 12 Sessions | |
| Topics:<br>Introduction to robotics, classification of robots, workspace analysis, Manipulator Kinematics: Convention for affixing frames to links – DH Representation, Derivation of Direct kinematic equations for various types of robots. Inverse Manipulator Kinematics: Solvability, algebraic vs. geometric, Examples of inverse manipulator kinematics, repeatability and accuracy. | | | | | |
| **Module 2** | Kinematics of Robot | Assignment | Jacobians, rigid body, dynamic study | 10 Sessions | |
| Topics:<br>Jacobians: Velocities and static forces: Linear and rotational velocity of rigid bodies, velocity propagation from link to link, jacobians, singularities, static forces in manipulators, jacobians in force domain, Cartesian transformation of velocities and static forces. | | | | | |
| **Module 3** | Trajectory Planning | Assignment | Trajectory analysis | 12 Sessions | |
| Trajectory Generation: General consideration in path description and generation, joint space schemes, collision free path planning, Robot programming. | | | | | |
| **Module 4** | ROS | Case Study | Study different types of sensor | 10 Sessions | |
| ROS: Introduction, ROS - Services, Actions, Launch Files, Building your own ROS environment, Autonomous Navigation, Manipulation, Robot Vision,<br>Design: Blender Introduction | | | | | |
| **Targeted Application & Tools that can be used:**<br><br>Industrial applications of robots: Pick and place robots, welding and other industrial applications.<br>Automation in industries. | | | | | |

| **Course Code:** **MEC3080** | **Course Title: Fundamentals of plastic Injection Moulding** **Type of Course: Discipline Elective & Theory only** | L- P- C | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | Nil | | | | |
| **Anti-requisites** | Nil | | | | |
| **Course Description** | The Course is designed with an objective of giving an overview of designing appropriate moulds and their applications.Develops students' competence and self-confidence as product design engineers. Emphasis on the creative design process bolstered by application of physical laws. Robustness and manufacturability are emphasized. Subject relies on active learning via a minor design-and-build project. Lecture topics include idea generation, estimation, concept selection, visual thinking, computer-aided design (CAD). | | | | |
| **Course Outcomes** | On successful completion of this course the students shall be able to:<br>CO1. Gain a commercial appreciation of the injection moulding process<br>CO2.Understand advantages and disadvantages of injection moulding<br>CO3. Understand material categories in relation to properties, performance and selection<br>CO4.Understand product design<br>CO5.Gain an awareness of injection moulding faults and how to overcome them | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Fundamentals of plastic Injection Moulding**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Product Design | Assignment | Industrial application | 10 sessions | |
| Topics:<br>Plastics product design - Concepts - Essential factors - Principles - Methodical approach -process variables vs product design. Uniform and symmetrical wall thickness - Draft angle- Rib design – Fillets & Radius<br>**Assignment**: How can robots be used in plastic injection moulding with its applications | | | | | |
| **Module 2** | Injection Mould Design 1 | Case Study | | 10 sessions | |
| Topics:<br>Introduction -General mould construction- Mould design concepts - mould elements - parting line and parting surface<br>**Case Study**: Study on metal injection moulding used in industry for plastic injection moulding | | | | | |
| **Module 3** | Injection Mould Design 2 | Assignment | Data analysis | 12 sessions | |
| Topics:<br>Construction of core and cavities Bolsters - mould alignment, Feed system- Sprue, runner, gate & position of gate - runner & gate balancing.<br>**Assignment**: Find the effects of injection molding parameters on shrinkage and weight of plastic part. | | | | | |
| **Module 4** | Injection Mould Design 3 | Assignment | Auxillary parts cooling- analysis | 12 sessions | |
| | | | | | |

Ejection - types of ejections - mould cooling -venting- ancillary parts.
Two plate mould - three plate - external undercut- split mould, Side cores, Split and side core actuation
**Assignment**: Water cooling system used for auxillary parts of moulding.

**Targeted Application & Tools that can be used:**
Contemporary issues: Knowledge of PIM can help students in becoming Tool & die makers, CAD release engineer, Dimensional engineer where various employability opportunities are available at all automotive industries, OEM's, Tier 1 and Tier 2 organizations
Professionally Used Software: SolidWorks.

|---|---|---|---|---|---|---|
| **Course Code: MEC3047** | **Course Title: Metal Forming and Simulation**<br>**Type of Course: 1] Discipline elective 2] Theory** | **L- P- C** | **3** | **0** | **0** | **3** |
| **Version No.** | 2.0 | | | | | |
| **Course Pre-requisites** | NIL | | | | | |
| **Anti-requisites** | NIL | | | | | |
| **Course Description** | The purpose of this course is to enable the students to develop the detailed understanding of various forms of metal forming operations and its relevant industrial applications. The course also enables the students to equip themselves with a industry relevant practical skills to deliver the solutions in the form simulations of various metal forming processes along with relevant industrial case studies. | | | | | |
| **Course Objectives** | The objective of the course is to familiarize the learners with the concepts of "**Metal Forming and Simulation**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br><br>CO1. Discuss the important fundamental aspects of metal working.<br><br>CO2. Compute the forging load and rolling forces in closed die forging operations and rolling operations respectively.<br><br>CO3. Compute the various process parameters associated with deep drawing and forming process.<br><br>CO4. Compute the various process parameters associated with Sheet metal working operations.<br><br>CO5. Simulate the various metal forming operations using an industry relevant analysis tool. | | | | | |
| **Course Content:** | | | | | | |
| **Module 1** | Fundamentals of metal forming operations. | Assignment | Data collection | | 06 Sessions | |
| **Topics:** Classification of Forming Processes, Mechanics of Metalworking, Flow-Stress Determination, Temperature in Metalworking, Strain-Rate Effects, Metallurgical Structure, Friction and Lubrication. Deformation-Zone Geometry, Hydrostatic Pressure, Workability, Residual Stresses, Experimental<br>Techniques for Metalworking Processes.<br>Assignment: Case studies on effect of residual stresses, hydrostatic pressure and temperature in metal forming. | | | | | | |
| **Module 2** | Forging and Rolling Operations. | Case Study | Automotive and aerospace applications of forged and rolled components | | 10 Sessions | |

**Topics:**

**Forging:** Forging in Plane Strain, Open-Die Forging, Closed-Die Forging, and Calculation of Forging Loads in Closed-Die Forging, Relevant Numericals.

**Rolling of Metals:** Forces and Geometrical Relationships in Rolling, Simplified Analysis of Rolling Load: Rolling Variables, Problems and Defects in Rolled Products. Relevant Numericals.

**Case Study:** Case study on Automotive and aerospace applications of forged and rolled Components

| **Module 3** | Deep Drawing And Forming Process | Assignment | Data Collection | 10 Sessions |
|---|---|---|---|---|

Drawing :

Deep drawing – Applications-Redrawing – Single acting press with combination tool -double acting press with combination tool -defects in deep drawing process -Erichsen cupping machine -marforming -hydro forming

Forming :

Cold working process – shearing operations – Bending operations – squeezing -peening -sizing -coining -hobbing -rubber pressing – spinning -flow turning – stretch forming -coining – Embossing – high energy rate forming – Explosive forming – Electro Hydraulic forming- electromagnetic forming

**Assignment**: Deep drawing and forming processanalysis tools used in industry

| **Module 4** | Sheet Metal forming | Assignment | Data Collection | 6 Session**s** |
|---|---|---|---|---|

**Topics:**

**Sheet Metal Forming:** Forming methods, Open back inclinable press (OBI press), piercing, blanking, bending, deep drawing, Limiting Drawing Ratio (LDR) in drawing, forming limit criterion,. Roll bending & contouring.

Simple problems.

**Assignment:** Roll bending and contouring analysis

| **Module 5** | Simulation Techniques | Assignment | Data Collection | 14 Sessions |
|---|---|---|---|---|

**Simulation of Forming Operations:** Various simulations tools used in forming, significance of simulation in forming operations, Advances in simulations in forming operations, career opportunities and prerequisites skills for simulation engineering professional, steps involved in simulating forming operations, Simulation of various forging, rolling, drawing, extrusion and sheet metal operations using Ansys software.

**Assignment:** Various simulation tools in forming

**Targeted Application & Tools that can be used:**

Application Area is manufacturing industries to work as a design and simulation engineer.

**Professionally Used Software:** Ansys/Solidworks/Abaqus.

**Text Books:**

</table>

Topics:

Definition - Estimation of Manufacturing cost-reducing the component costs and assembly costs – Minimize system complexity - Prototype basics - Principles of prototyping - Planning for prototypes - Economic Analysis - Understanding and representing tasks-baseline project planning - accelerating the project-project execution.

Assignment: Latest Architecture Geometric layout used in product development

| | | | | |
|---|---|---|---|---|
| **Module 4** | Industrial design | Case study | Case study of major Environmental impacts which effect Industrial design. | 12 sessions |

Topic:

**Integrate process design** – Assessing the need for industrial design, impact of industrial design, industrial design process, Management of industrial design process- technology driven products, quality of industrial design.

**Design for environment and manufacturing:** Definition – Need of design for environment, Environmental impacts, DFE process and guidelines, Definition of Design for manufacturing, Estimation of Manufacturing cost – reducing the component costs and assembly costs, supporting production cost – Minimize system complexity – Impact of DFM decisions on other factor, Materials Cost and terminology. Robust design and its process.

**Case Study:** Case study of major Environmental impacts which effect Industrial design

**Targeted Application & Tools that can be used:**

Manufacturing and processing industries

**Professionally Used Software:**

**Text Book:**

| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | Nil | | | | |
| **Course Description** | The Course is designed with an objective of giving an overview of planning, control and inventory systems. The Course discusses about the generalized model of production systems, types of production flows, life cycle concepts, facilities location and layout planning, aggregate and batch production planning, inventory systems, materials requirements planning, elements of monitoring and production control. | | | | |
| **Course Outcomes** | On successful completion of this course the students shall be able to:<br>CO1 Explain the function of Production, Planning and control<br>CO2 Analyze the scope of forecasting principles and techniques<br>CO3 Explain the function of inventories and its relevant cost techniques method.<br>CO4 Outline the procedural activities of routing and scheduling<br>CO5 Explain the functions of dispatching and follow-up activities. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Production planning and Control**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Production Planning and Control | Assignment | Industrial application | 05 sessions | |
| Topics:<br>Objectives and benefits of planning and control-Functions of production control-Types of production-job- batch and continuous-Product development and design-Marketing aspect – Functional aspects-Operational aspect-Durability and dependability aspect aesthetic aspect. Profit consideration-Standardization, Simplification & specialization- Break even analysis-Economics of a new design<br>**Assignment**: Break Even analysis | | | | | |
| **Module 2** | Product Planning and Process Panning | Assignment | Data analysis | 08 sessions | |
| Topics:<br>Product Planning-Extending the original product Information-Value Analysis-Problems in lack of product Planning-Process planning and routing-Pre requisite information needed for process Planning-Steps in process Planning-Quantity determination in batch Production-Machine capacity, Balancing-Analysis of process capabilities in a multi-product system.<br>**Assignment**: Study on value analysis of product with respect to process capabilities. | | | | | |
| **Module 3** | Production Scheduling | Assignment | | 10 sessions | |
| Production Control Systems-Loading and scheduling-Master Scheduling-Scheduling rules-Gantt charts-Perpetual loading-Basic scheduling problems – Line of balance – Flow production scheduling-Batch production scheduling-Product sequencing – Production Control systems-Periodic batch control-Material requirement planning kanban – Dispatching-Progress reporting and expediting-Manufacturing lead time-Techniques for aligning completion times and due dates | | | | | |
| **Module 4** | Inventory control and recent trends in PPC | | | 10 sessions | |
| Inventory control -Purpose of holding stock-Effect of demand on inventories-Ordering procedures. Two bin system -Ordering cycle system-Determination of Economic order quantity and economic lot size-ABC analysis-Recorder procedure-Introduction to computer integrated | | | | | |

| | | | | |
|---|---|---|---|---|
| production planning systems-elements of JUST IN TIME SYSTEMS-Fundamentals of MRP II and ERP | | | | |
| **Module 5** | Quality Control Methods in PPC | | | 10 sessions |
| Quality process, the Juran trilogy, improvement strategies, types of problems, the PDSA Cycle, problem-solving methods, Kaizen, reengineering, six sigma, case studies. Statistical Process Control : Pareto diagram, process flow diagram, cause and effect diagram, check sheets, histograms, statistical fundamentals, Control charts, state of control, out of control process, control charts for variables, control charts for attributes, scatter diagrams, case studies | | | | |
| **Targeted Application & Tools that can be used:**<br>Contemporary issues: Knowledge of PPC can help students in planning the product design with less inventory and product cost.<br>Professionally Used Software: PPC softwares online . | | | | |

| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | Smart Structures and Intelligent System are nowdays extensively used in aerospace, automobile system and construction industries due to better performance and quick response feature. The subject is interdisciplinary in nature involving concepts of materials, composites, electronics and control system. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Smart Materials**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>CO1. Understand the different types of smart material and their application.<br>CO2. Understand the design of composite based smart material.<br>CO3. Understand the different types of actuators and their application in MEMS | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to smart materials | Case study | Shape memory alloys | 12 sessions | |
| **Topics:**<br>Introduction to smart materials, need of smart materials, different types of smart materials such as piezoelectric material, magnetostrictive material, polymer based smart material and shape memory alloys.<br>**Case study:** Case study on smart material application in architecture and engineering fields | | | | | |
| **Module 2** | Smart composite and their properties | Assignment | Smart Composites | 15 sessions | |
| **Topics:**<br>Introduction to composite, definition of smart composite, composite classification, composite application, Fibers and their types.<br>**Assignment:** Composite material application in aerospace engineering | | | | | |
| **Module 3** | Introduction to shape Memory Alloys, Fibre optics and MEMS | Assignment | Smart material based MEMS | 15 sessions | |
| *Topics:*<br>**Shape Memory Alloys:** Introduction, Phenomenology, Influence of stress on characteristic temperatures, Modelling of shape memory effect. Vibration control through shape memory alloys. Design considerations, multiplexing embedded NiTiNOL actuators.<br><br>**Fibre Optics:** Introduction, Physical Phenomenon, Characteristics, Fibre optic strain sensors, Twisted and Braided Fibre Optic sensors, Optical fibres as load bearing elements, Crack detection applications, Integration of Fibre optic sensors and shape memory elements<br><br>**MEMS:** History of MEMS, Intrinsic Characteristics, Devices: Sensors and Actuators. Microfabrication: Photolithography, Thermal oxidation, Thin film deposition, etching types, | | | | | |

Doping, Dicing, Bonding. Microelectronics fabrication process flow, Silicon based, Process selection and design.

**Assignment** : Smart materials based MEMS in medical applications

**Targeted Application & Tools that can be used:**
Parts produced composite material find its use in products like automobile parts, manufacturing units, machines, assembling of components, parts of electric and electronic items etc.
**Professionally Used Software:**

**Text Book:**
T1. "Smart Materials and Structures", M.V.Gandhi and B.S.Thompson Chapmen & Hall, London, 1992 (ISBN:0412370107)

|---|---|---|---|---|---|
| **Course Code: MEC3029** | **Course Title: Advanced Heat-Transfer**<br>**Type of Course: Discipline Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | MEC3003 | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This Course is designed to teach engineering students the concepts of heat transfer and application of heat transfer principles to the design. This Course provides an introduction to the fundamental concepts of heat transfer; Thermal conductivity steady-state and unsteady-state heat conduction multilayer conduction, heat transfer through a composite wall, critical insulation thickness, analytical and empirical relations for forced and free convection heat transfer; empirical relations used for pipe and tube flow, boundary layer and its thickness, heat exchanger analysis and design; to design and analyse the performance of heat exchangers and evaporators. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Advanced Heat-Transfer**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | CO1] Apply the concept of steady state conduction heat transfer in solids.<br>CO2] Employ the methods of heat transfer with effective resistence.<br>CO3] Compute the heat transfer coefficient for natural and forced convection.<br>CO4] Apply the concept of radiation heat transfer between surfaces.<br>CO5] Compute the effectiveness of a specific heat exchanger. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Conduction | Assignment | Data collection | | 12 Sessions |
| Topics:<br>Introduction - basic modes of heat transfer and governing laws– conduction – general heat<br>conduction equation in Cartesian – one dimensional steady state conduction with and without heat generation – concept of thermal resistance – concept of composite wall – overall heat transfer coefficient – critical thickness of insulation – extended surface heat transfer – fin performance –effect of variable thermal conductivity- problems. Unsteady state conduction in one dimension, lumped heat capacity system<br>. | | | | | |
| **Module 2** | Convection | Assignment | Mathematical | | 10 Sessions |
| Topics:<br>Newton's law – concept of boundary layer – significance of Prandtl number – boundary layer<br>equations – flat plate heat transfer– laminar and turbulent flow – Reynolds analogy – empirical<br>relations in forced convection – internal flow – boundary conditions – laminar and turbulent flow<br>– heat transfer coefficients – empirical correlations. Natural convection. | | | | | |
| **Module 3** | Radiation | Assignment | Mathematical | | 10 Sessions |

| | | | | |
|---|---|---|---|---|
| | | | | |
| Topics:<br>Fundamentals of radiation – radiation spectrum – thermal radiation – concept of black body and<br>grey body – monochromatic and total emissive power – absorptivity, reflectivity and transmissivity- laws of radiation – radiation between two surfaces – geometrical factors for simple configuration– radiation shields | | | | |
| **Module 4** | Heat exchangers | Assignment | Mathematical | 12 Sessions |
| Topics:<br>Classification – log mean temperature difference – overall heat transfer coefficient – fouling and<br>scaling of heat exchangers – LMTD and NTU method of performance evaluation of heat<br>exchangers. Introduction to mass transfer – Fick's law of diffusion - problems | | | | |
| **Targeted Application & Tools that can be used:**<br><br>Application Area is Geophysical phenomenon, Hydrology, Aerospace, Aerodynamics, Microfluidics, Pipe network, heat exchangers.<br>Industries using above applications and tools – Siemens, Quest Global, Simulent consulting, Triveni Engineering, TATA, GE etc | | | | |
| **Test book:**<br>1. J P Holman, Souvik Bhattacharyya, "Heat Transfer" McGraw Hill Education (India)Pvt Ltd | | | | |

<tr><td>Course Description</td><td colspan="7">This course introduces soft computing methods which, unlike hard computing, are tolerant of imprecision, uncertainty and partial truth. This tolerance is exploited to achieve tractability, robustness and low solution cost... The basics of each technique will be discussed and industrial applications will illustrate the strengths of each approach. The course is self-contained. Knowledge of calculus and familiarity with a medium-level programming language is assumed. The class will have several programming and homework assignments, and a final project</td></tr>
<tr><td>Course Outcomes</td><td colspan="7">On successful completion of this course the students shall be able to:<br>CO1. Apply Fuzzy logic to different optimization problems.<br>CO2. Apply Genetic Algorithm technique to different optimization problems.<br>CO3 Develop Artificial Neural Networks for different machine learning applications.<br>CO4 Develop codes using Matlab/R for various computational problems.</td></tr>
<tr><td>Course Objective</td><td colspan="7">The objective of the course is to familiarize the learners with the concepts of “Soft Computing Techniques” and attain EMPLOYABILITY SKILL through Problem solving methodologies.</td></tr>
<tr><td>Course Content:</td><td colspan="7"></td></tr>
<tr><td>Module 1</td><td>Fuzzy Logic</td><td>Case Study</td><td>Data collection. Programming & Data Analysis</td><td colspan="4">14 sessions</td></tr>
<tr><td colspan="8">Topics:<br>Introduction to Soft Computing, classification, applications, Introduction to Fuzzy logic, Fuzzy set, Fuzzy numbers, Fuzzy membership functions, Fuzzy operations, Fuzzy relations, Fuzzy propositions, fuzzy implications, Defuzzification techniques, logic controller, applicationof fuzzy logic.</td></tr>
<tr><td>Module 2</td><td>Genetic Algorithm</td><td>Case Study</td><td>Data collection. Programming & Data Analysis</td><td colspan="4">12 sessions</td></tr>
<tr><td colspan="8">Topics:<br>Introduction Genetic Algorithm, Genetic Algorithm for optimization, GA strategies, Terminologies, Techniques of GA: Multiobjective optimization, Cross over, Mutation. Classification of GA, Implementation of GA using MATLAB.</td></tr>
<tr><td>Module 3</td><td>Artificial Neural Networks</td><td>Case Study</td><td>Data collection. Programming & Data Analysis</td><td colspan="4">12 sessions</td></tr>
<tr><td colspan="8">Topics:<br>Biological neurons and its working, Simulation of biological neurons to problem solving, Different ANNs architectures, Training techniques for ANNs, Applications of ANNs to solve some real-life problems.</td></tr>
<tr><td>Module 4</td><td>MATLAB for Soft Computing</td><td>Assignment</td><td>Data collection. Programming & Data Analysis</td><td colspan="4">7 sessions</td></tr>

| **Course Code:** **MEC3063** | **Course Title:** **Control Engineering** **Type of Course:** **Discipline Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The Modern-day control engineering is a relatively new field of study that gained a significant attention during 20th century with the advancement in technology. Control engineering has an essential role in a wide range of control systems, from simple household washing machines to high performance F-16 fighter aircraft. It seeks to understand physical systems, using mathematical modelling, in terms of inputs, outputs and various components with different behaviours; use control systems design tools to develop controllers for those systems; and implement controllers in physical systems employing available technology. A system can be mechanical, electrical, fluid and even biological and the mathematical modelling, analysis and controller design uses control theory in one or many of the time, frequency and complex S domains, depending on the nature of the design problem. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>1. Identify the type of control system, controllers, various test signals, compensators, stability, concepts, analogous systems and frequency response terminologies,<br>2. Develop mathematical models of mechanical, electrical, electro-mechanical and hydraulic control systems in order to obtain system response for given input test signals,<br>3. Obtain the transfer functions by applying block diagrams reduction techniques and signal flow graphs for different applications of control system.<br>4. Predict the stability of a control system by developing R-H criterion, bode and root locus plots. | | | | |
| **Course Objectives:** | The objective of the course is to familiarize the learners with the concepts of "**Control Engineering**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction | Assignment | Programming Task | 07 Sessions | |
| Topics:<br>Concept of automatic controls, open and closed loop systems, concepts of feedback, requirement of an ideal control system. Types of controllers - Proportional, Integral, Proportional Integral, Proportional Integral Differential controllers. | | | | | |
| **Module 2** | Mathematical Models | Case Study | Simulation and data analysis task | 09 Sessions | |
| Topics:<br>Transfer function models, models of mechanical systems, models of electrical circuits, DC and AC motors in control systems, models of thermal systems, models of hydraulic systems. Analogous Systems: Force-voltage analogy and force – current analogy. | | | | | |

| | | | | |
|---|---|---|---|---|
| **Module 3** | Block Diagrams and Signal Flow Graphs | Assignment | Simulation task | 08 Sessions |
| Topics:<br>Transfer Functions definition, function, block representation of system elements, problems on reduction of block diagrams. | | | | |
| **Module 4** | Frequency Response Analysis | Assignment | Simulation/Data Analysis | 09 Sessions |
| Topics: Frequency Response Analysis using Bode Plots: Bode attenuation diagrams. Root Locus Plots: Definition of root loci, general rules for constructing root loci | | | | |
| **Module 5** | Series Feedback Compensation | Assignment | Simulation/Data Analysis | 09 Sessions |
| Topics: Series and feedback compensation, Introduction to state concepts, state equation of linear continuous data system. Matrix representation of state equations, controllability and observability, Kalmanand Gilberts test. | | | | |

**Targeted Application & Tools that can be used:**

Contemporary issues
Professionally Used Software: Matlab.

**Topics relevant to "EMPLOYABILITY SKILLS":** Frequency Response Analysis using Bode Plots, Bode attenuation diagrams and Root Locus Plots for developing **EMPLOYABILITY SKILLS** through **Participative Learning techniques**. This is attained through assessment component mentioned in course handout.

**Sample Thought provoking questions**

1. The root locus is a graphical representation in s-domain and it is symmetrical about the real axis. Because the open loop poles and zeros exist in the s-domain having the values either as real or as complex conjugate pairs. Calculate the angle of asymptotes and centroid for the given transfer function.
2. In order to obtain the desired performance of the system, we use compensating networks. Compensating networks are applied to the system in the form of feed forward path gain. Elucidate about Lag compensator with a neat sketch.

| **Course Code: MEC3082** | **Course Title: Elements of Solar Energy Conversion**<br>**Type of Course: Discipline Elective & Theory Only** | **L-P-C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course intends to introduce the basic concepts required for the engineers to work in the field of solar energy technology, both industrial installations and research endeavours. The major focus is on the following topics: the apparent movement of the sun, irradiation prediction, intensity estimation on tilted plane, flat plate collectors, concentrating collectors of various kinds, thermal and photovoltaic routes of solar energy conversion. The course assumes basic knowledge in UG level thermodynamics, optics, semiconductor physics, heat transfer and engineering mathematics. The advanced UG ME students and the PG ME students intending to work in the solar energy field should opt for this course. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Elements of Solar Energy Conversion**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>1] Recognize the significance of the principles of solar energy in the engineering context<br>2] Illustrate the fundamentals of solar energy conversion.<br>3] Explain the various devices for solar energy conversion | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Solar Energy Measurements | Assignment | Data Collection | 15 Sessions | |

**Topics:**

- Basic concepts related to solar radiation, the sun, spectral distribution, sun- earth relationship, extraterrestrial radiation, revolution of earth, seasons, position of sun in the sky, position of sun with respect to the center of the earth
- Concept of time, equation of time, solar time, standard time, Role of atmosphere on solar radiation, air mass, terrestrial spectrum, prediction of solar radiation
- Diffuse and direct radiation, derivation of the relationships between angles
- Sign conventions, angle of incidence o on a tilted plane, shading, sun-path diagram, overhangs, parallel rows of solar collectors, measurement of radiation
- Estimation of total irradiance on a tilted surface, radiation augmentation

**Assignment: Determination of solar radiation data for all southern states at different location.**

| | | | | |
|---|---|---|---|---|
| **Module 2** | Solar Collectors | Assignment | Data Collection/Excel | 15 Sessions |
| **Topics:**<br>Flat plate collector, thermal analysis, heat removal factor<br>Air heaters, thermal analysis of air heaters, overview of other thermal collectors, testing procedure<br>Single axis tracking, concentrating collectors, theoretical limit, classifications of concentrators<br>Parabolic trough collector, thermal analysis, compound parabolic concentrators, parabolic dish collector, central receiver tower<br>**Assignment:** Study of solar collectors for Indian scenario | | | | |
| **Module 3** | Friction on Rigid bodies | Assignment | Design | 15 Sessions |
| **Topics:**<br>Non-thermal routes for solar energy conversion, Basics of photovoltaic effect, Electron-hole carrier formation and motion<br>Band bending, photovoltaic generation, P-N junction diode, forward Bias, reverse bias<br>Dark current, light-generated current, IV characteristic curve for P-N junction diodes, efficiency, effect of temperature intensity and spectrum, Comparative discussion on different solar conversion technologies in the state of the art form and the future directions<br>**Assignment:** Design of PV system for one of the labs of Presidency University | | | | |
| **Targeted Application & Tools that can be used:**<br>Application in renewable energy industries<br>**Professionally used software** – Excel | | | | |

| **Course Code: MEC3062** | **Course Title: Hydraulics and Pneumatics**<br>**Type of Course: Discipline Elective** | **L-P-C** | 3 | 0 | 3 |
| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | Automobiles, missiles, machine tools, aero planes etc. extensively use fluid power technology. This course deals with the fundamental aspects of hydraulics and pneumatics, the two fields of relevance to fluid power engineering. | | | | |
| **Course Objectives** | The objective of the course is to familiarize the learners with the concepts of "**Hydraulics and Pneumatics**" and attain **EMPLOYABILITY SKILL** through Problem solving methodologies. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>1] Describe the fundamentals of Hydraulic Power Pumps, Actuators and Motors.<br>2] Explain control components in Hydraulic Systems.<br>3] Solve the numerical problems related to hydraulic efficiency of motors.<br>4] Describe the fundamentals of pneumatic system, Actuators, Valves, Pneumatic circuits and logic circuits. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Hydraulic System | Assignment | Data collection | 10 sessions | |
| Topics: Introduction to Hydraulic Power and Pumps: Review of fluid mechanics, Pascal's Law, structure of hydraulic control system. pumps: pumping theory, pump classification, gear pumps- external and internal type, vane pumps- simple, balanced, pressure compensated types, piston pumps- radial and axial (both swash plate and bent axis type), pump performances.<br>Hydraulic Actuators and Motors: Linear hydraulic actuators - single acting, double acting, tandem cylinder, telescopic rod cylinder, mechanics of hydraulic cylinder loading, cylinder cushioning, hydraulic rotary actuators, hydrostatic transmission – open and close circuit, performance of hydraulic motor. | | | | | |
| **Module 2** | Energy transfer in hydraulic actuators and motors | Case study | Identify various valves considering a hydraulic system. | 12 sessions | |
| Topics: Directional control valves (DCV), Constructional features, 2/2,3/2,4/2,4/3 DCV, Center configuration in 4/3 DCV- open, closed, tandem, regenerative, floating center configuration, Actuation of DCVs- manual, mechanical, solenoid, and indirect actuation, Relays for the solenoid operation, Check valve, Pilot check valve, Pressure control valves – Direct and Pilot operated types, Pressure reducing valve, Flow control valves- fixed throttle, and variable throttle, Throttle check valve, Pressure compensated flow control valve- relief and reducing types | | | | | |
| **Module 3** | Introduction to Pneumatic System and its control | Assignment | Data Collection | 12 sessions | |
| Topics: Choice of working medium, Characteristics of compressed air, structure of pneumatic control system, supply, signal generators, signal processor, final control elements , actuators, production of compressed air – compressors - reciprocating and rotary type, preparation of compressed air – driers, filters, regulators, lubricators, distribution of compressed air – piping layout. | | | | | |

| | | | | |
|---|---|---|---|---|
| Pneumatic memory valve, time delay valve. Pneumatic circuits and logic circuits: supply air and exhaust air throttling, will dependent circuits, travel dependent controls – types – construction – practical applications, cylinder sequencing circuits, travel step diagrams, practical examples involving two or three cylinders, use of logic functions in pneumatic manufacturing applications, practical examples involving the use of logic functions. | | | | |
| **Module 4** | Electro-Pneumatic control | Assignment | Data Collection | 11 sessions |
| Topics: Principles-signal input and output pilot assisted solenoid control of directional control valves, use of relay and contactors. Control circuitry for simple single cylinder applications. | | | | |
| **Targeted Application & Tools that can be used:**<br>This course finds applications mainly in automobile, space, defense, medical, consumer goods etc. *Job* titles might include Hydraulic or Pneumatic Design engineer, Maintenance engineer, Quality engineer, Service Engineer, Application engineer. | | | | |
| **Text Book**<br>T1: Fluid Power with applications, Anthony Esposito, Fifth edition Pearson education, Inc. 2000.<br>T2: Pneumatics and Hydraulics, Andrew Parr. Jaico Publishing Co. 2000.<br>T3: Hydraulics and Pneumatics, Dr.Niranjan Murthy and Dr.R.K.Hegde, Sapna Publications, 2013 | | | | |

| | | | | | |
|---|---|---|---|---|---|
| **Course Code: MEC3059** | **Course Title: Engineering Dynamics**<br>**Type of Course: Discipline Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course is an introduction to the dynamics of lumped-parameter models of mechanical systems. After this course students will be able to evaluate free and forced response of linear multi-degree of freedom systems and matrix eigenvalue problems. The course also enhances the programming abilities through assignments. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Engineering Dynamics**" and attain **EMPLOYABILITY SKILL** through Problem solving methodologies. | | | | |
| **Course Outcomes** | On successful completion of this course the students shall be able to:<br>1) Solve problems on kinetics of systems of particles.<br>2) Solve problems on kinetics of rigid bodies.<br>3] Interpret solutions to linearized, second-order equations of motions.<br>4) Analyze and comprehend free un damped and damped vibrations | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Dynamics of Particles and Systems of Particles | Assignment | Programming Task, Data Analysis task | 12 sessions | |
| Topics:<br>Kinematics: Position, velocity and acceleration of particles in the Cartesian, normal-tangential and polar coordinates. Kinetics: Force, mass and acceleration in Newton's second law of motion, work and energy, impulse and momentum for particles and systems of particles. | | | | | |
| **Module 2** | Dynamics of Rigid Bodies | Quiz | Analytical thinking | 10 Sessions | |
| Topics:<br>Kinematics: Rotation, absolute motion, relative velocity, relative acceleration.<br>Kinetics: Force, mass and acceleration in Newton's second law of motion, work and energy, impulse and momentum for rigid bodies. | | | | | |
| **Module 3** | Linearization and Solutions to Equations of Motions | Assignment | Data Collection and Analysis | 10 Sessions | |
| Topics:<br>Nonlinear and linear differential equations, linearization, solutions to second-order linear differential equations, interpretation of the solutions. | | | | | |
| **Module 4** | Undamped and damped vibrations | Assignment | Data Collection and Analysis | 12 Sessions | |
| Topics:<br>Vibrations. Undamped free vibrations. Damped free vibrations, equation for damped and un damped vibrations, basics of natural frequency and vibration measurement instruments. | | | | | |
| Targeted Application & Tools that can be used:<br><br>Application Area is collision of vehicles, aerospace, automobile kinematics and dynamics, vibration of machines. | | | | | |

Professionally Used Software: MATLAB

| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This Course includes: governing equations of motions using Newton's laws of motion and energy principles, effective springs and masses, free and forced vibration with and without damping of linear systems with one and two degree of freedom, vibration isolation, modal analysis, and vibration problems in multi degrees of freedom systems. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>1. Determine the natural frequencies vibration systems.<br>2. Analyze forced vibration for single degree of freedom system.<br>3. Discuss various vibration measuring techniques, signal analysis with condition monitoring.<br>4. Relate to concepts discussed in Design of Machine Elements, Mechanical Vibrations & Dynamics of Machines courses.<br>5. understand the working Principles of machine elements such as Governors, Gyroscopes and measure strain in various machine elements using strain gauges | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of **Mechanical Vibrations & Design**" and attain **EMPLOYABILITY SKILL** through Experiential learning techniques | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Free un-damped vibration of Single Degree of Freedom Systems | Assignment | Mini Project | 8 sessions | |
| Topics:<br>Introduction, Basic concepts of vibration, Classification of Vibration, Characteristics of Simple Harmonic motion. Fourier series. Single degree freedom system, Free Vibration of an Undamped Translational System, Free Vibration of an Undamped Torsional System. | | | | | |
| **Module 2** | Free damped Vibration of Single-Degree-of-Freedom Systems | Assignment | Seminar | 8 sessions | |
| Topics:<br>Types of damping, Free Vibration with Viscous Damping, Free Vibration with Coulomb Damping. Simple problems using MATLAB. | | | | | |
| **Module 3** | Vibration and Transmissibility | Assignment | Experiment Conduction & Calculation | 8 sessions | |
| Topics:<br>Forced vibration behaviour in a simple spring mass system, Magnification factor in forced vibration, Transmissibility- force and motion transmissibility, whirling of shafts, Fourier series in forced vibrations. | | | | | |
| **Module 4** | Multi degree of freedom Systems and Vibration | Assignment | Analysis with software | 8 sessions | |

| | | | | |
|---|---|---|---|---|
| | Measurements and it's Applications | | | |

Topics: Two-Degree-of-Freedom Systems, Continuous Systems - Longitudinal Vibration of a Bar, Stodola's method, Holzer's method and Dunkerley's method-. Simple problems using MATLAB
Vibration Measurements like Vibration Pickups, Signal Analysis, Machine-Condition Monitoring and Diagnosis.
Useful life estimation of asset, Accelerometer and vibrometer.

**List of Laboratory Tasks:**

Experiment N0 1: To Determine the Natural Frequency for simple Pendulum
Level 1: For the given Simple pendulum(bob, various length of the string) determine the Natural frequency [ Provide the data required in the processed form]
Level 2: For the given rubber ball determine the Time Period and Natural Frequency [ Provide the data required in the raw form]
Experiment No. 2: To find the radius of gyration 'k' of given compound pendulum
Level 1 : Discuss the physical meaning of the radius of gyration and give examples for it is importance from practical life [ Provide the related apparatus like Vibration apparatus, Stop Watch and measuring tape.]
Level 2 : In this experiment, we use pendulums to find the gravitational acceleration. Design another experiment with different procedures for the same purpose.
Carry out the compound pendulum experiment for both Knife edge and circular pivot point [ Provide the data for Centre of Gravity Distance 31.5CM ]
Experiment No. 3: Undamped Free Vibration Of Equivalent Spring Mass System
Level 1 : To determine time period and natural frequency of undamped free vibrations of equivalent spring mass system[Provide the related data]
Level 2:Determine the Natural frequency of various mass springs with different stiffness [Provide the Various Helical springs ]
Experiment No. 4:Whirling speed for various sizes of the shaft Level
1 : Determine the Whirling speed for various sizes of the shaft [Provide the related data]

**Targeted Application & Tools that can be used:**

For all the Vibrations applications like automobile, space, defense, medical etc.
Tools used in profession: MATLAB

| **Course Description** | This course introduces Product Lifecycle Management process and methods which aim to emphasize the importance of product data creation, processing, storage, transformation and reuse to aid in decision making process. The course covers wide range of industry oriented case studies on different aspects of product management to strengthen the belief of Product Lifecycle Management. The principal constituents of PLM covered are Product Lifecycle Process, Work flow, CPD, Engineering Change Management, Digital Manufacturing and PLM, PLM Strategy and Assessment. Entire course runs both on class room lectures and hands on training. This course is designed to give a holistic view on PLM. This course also incorporates training on PLM tool 'Teamcenter13' | | | | |
| **Course Outcomes** | On successful completion of this course the students shall be able to:<br>1] Describe different processes associated with Product Lifecycle.<br>2] Describe environment, drivers and PLM elements.<br>3] Deploy Engineering Change Management process.<br>4] Design Bill of Materials.<br>5] Deployment of Work flow on Team center**.** | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Product Lifecycle Management**" and attain **EMPLOYABILITY SKILL** through Experiential learning techniques | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Product Life Cycle Management (PLM) | Assignment | Data Collection and Analysis | 10 sessions | |
| Topics:<br>**Lecture:** Definition, PLM Lifecycle Model, Threads of PLM, Need for PLM, Opportunities and Benefits of PLM, Views, Components and Phases of PLM, PLM feasibility Study, PLM Visioning.<br>**Hands-on:** Introduction to Teamcenter13, Perspective, Views, Navigation Pane, Primary, Secondary, Configure applications, Perspective and Views customization. | | | | | |
| **Module 2** | PLM Concepts, Processes and Workflow | Case Study | data analysis task | 12 sessions | |
| Topics:<br>Characteristics of PLM, Environment Driving PLM, PLM Elements, Drivers of PLM, Conceptualization, Design, Development, Validation, Production, Support of PLM.<br>**Collaborative Product Development:** Engineering Vaulting, Product Reuse, Smart Parts, Engineering Change Management**.**<br>**Hands-on:** My Teamcenter**:** Item creation, Item revision, Item configuration, Views of items, Item data reuse, Item data vaulting, Item data transformation. | | | | | |

| | | | | |
|---|---|---|---|---|
| **Module 3** | Collaborative Product Development | Assignment | Data Collection and Analysis | 8 sessions |

Topics:
Bill of Materials and Process Consistency, Design for Environment, Virtual Testing and Validation, Marketing Collateral.

**Hands-on: Change Management:** ECN, ECR

**Structure Manager:** BOM creation, BOM revision, Revision rules.

**Workflow Designer:** Design

| | | | | |
|---|---|---|---|---|
| **Module 4** | Digital Manufacturing – PLM | Assignment | Case study/Data Analysis | 8 sessions |

Topics: Digital Manufacturing, Benefits of Digital Manufacturing, Manufacturing the First-One, Ramp Up, Virtual Learning Curve, Manufacturing the Rest, Production Planning.

**Hands-on:** Query Builder, Organization, Access Manager, BMIDE, Architecture 2T & 4T

| | | | | |
|---|---|---|---|---|
| **Module 5** | Developing a PLM Strategy and Conducting a PLM Assessment | Assignment | Simulation/Data Analysis | 08 sessions |

Strategy, Impact of strategy, implementing a PLM strategy, PLM Initiatives to Support Corporate Objectives, Infrastructure Assessment, Assessment of Current Systems and Applications

**Targeted Application & Tools that can be used:**

Application Area is in all IT industries who provide services for Product Lifecycle Management,
Software Requirement: Team Center by Siemens.

| **Course Code: MEC3096** | **Course Title: Product Design in RAC**<br>**Type of Course: Discipline Elective**<br>**Theory** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course will lead to an understanding of refrigeration and air-conditioning products, the components within these products, familiarity with selection parameters for the components and an appreciation of environmental impact of design choices. The course includes a case study to illustrate the process of design leading to a successful product in market. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Product Design in RAC**" and attain **EMPLOYABILITY SKILL** through Problem solving methodologies. | | | | |
| **Course Outcomes** | On successful completion of this course the students shall able to<br>CO1] Analyse, evaluate and compare the performances of complex vapor compression<br>systems.<br>CO2] Evaluate the various sources of heat load on buildings and perform a heat load estimate.<br>CO3] Design summer and winter air conditioning systems.<br>CO4] analyses different AC system i.e. railways, telecom cooling system | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction | Assignment | Mathematical | 10 Sessions | |
| Topics:<br>Introduction to the design process in general and for Ref. & AC in particular. Applied Thermodynamics as a design tool. Refrigerants and their properties, energy efficiency and<br>environmental considerations, Practical aspects□. | | | | | |
| **Module 2** | Ref. system Components & their types | Assignment | Mathematical | 10 Sessions | |
| Topics:<br>compressors, condensers, evaporators, expansion devices. Working principle of the components and unique feature | | | | | |
| **Module 3** | Selection of components | Assignment | Mathematical | 11 Sessions | |
| Topics:<br>election of components for an intended design. Balancing the diversity of design objectives<br>and optimization. Appreciation of the diverting in operating parameters in real applications and<br>incorporation of controls and safety components. | | | | | |
| **Module 4** | Product design | Assignment | Mathematical | 12 Sessions | |
| Topics:<br>Product design - New product launch – Performance testing, reliability, safety, Case studies etc. | | | | | |
| | | | | | |

**Targeted Application & Tools that can be used:**

Application Area is Refrigeration and Air Conditioning Industries, Aerospace, Data Center cooling.
Industries using above applications and tools –such as Carrier, Trane, LG, Samsung, Voltas, Blue star, Emerson, Danfoss etc.

</table>

| | | | | |
|---|---|---|---|---|
| **Module 3** | Gas turbine and Diesel power plant | Assignment | Report | 10 Sessions |

**Topics:**
Working principle of GT power plant, open type and closed types, Components of GT Plants, Ideal gas turbine and actual gas turbine, Methods to improve the thermal efficiency of the plant

**Assignment:** Write a comparative report indicating differences in turbine design for gas and diesel power plant.

| | | | | |
|---|---|---|---|---|
| **Module 4** | Nuclear and Hydroelectric Power Plant | Assignment | Data Analysis | 14 Sessions |

**Topics:**
Basics, Fission reaction, flow diagram of the nuclear power plant, Parts of the nuclear power plant, working principle, Description of parts in the reactor, Boiling Water Reactor (BWR), Pressurized Water Reactor (PWR). Layout of Hydroelectric power plant, Types of Hydropower plants. Description of intake, penstock, trash rack, turbines, and generator.

**Assignment:** Collect the data from below website, clean the data, make a visualization using Excel / Tableau / Power BI and find the insights from it.
https://www.kaggle.com/code/jonathanbouchet/nuclear-power-plant-geo-data

| | | | | |
|---|---|---|---|---|
| **Module 5** | Solar power plant | Assignment | Programming | 8 Sessions |

**Topics:**
Solar Radiation: Physics of Solar radiation, Global Beam and diffuse radiation, Fundamentals of Solar Cell: Solar PV basics, Solar PV Module, Solar Cell technologies, Crystalline cell, solar photovoltaic modules, Concentrators and PV Modules. Balance of Solar PV Systems: Battery technology, Batteries for PV systems, DC –DC converters, Charge Controllers, DC–AC inverters, Single phase, three phase, MPPThttps://www.kaggle.com/datasets/anderas/car-consume

**Targeted Application & Tools that can be used:**
Application in power plant handling and its control

**Professionally used software** – SQL, Excel, Tableau and Power BI

|---|---|---|---|---|---|
| **Course Code: MEC3036** | **Course Title: Flexible Manufacturing Systems** **Type of Course: Discipline Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | Nil | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The Course is designed with an objective of giving an overview on Computer Aided Design and Manufacturing (CAD/CAM) systems, Flexible Manufacturing Systems (FMS), system hardware and general functions, material handling system, work holding systems, cutting tools and tool management, physical planning of system, software structure functions and description, cleaning and automated inspection, communications and computer networks for manufacturing, quantification of flexibility, human factors in manufacturing, justification of FMS, planning and operation of FMS. | | | | |
| **Course objectives** | The objective of the course is to familiarize the learners with the concepts of "Flexible Manufacturing Systems" and attain EMPLOYABILITY SKILL through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>[1] Analyze the Quantitative aspects of FMS.<br>[2] Explain the Machine cell design and part families.<br>[3] Outline the various production control issues and tool management.<br>[4] Analyze the economic aspects and justification of FMS.<br>[5] Explain the FMS development towards factories of the future | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to manufacturing systems, Part programming | Assignment | Programming simple machined components | 8 Sessions | |
| Introduction:<br>Introduction to manufacturing system, Automation in production systems, types of automation, reason for automation, advantages and disadvantages, Costs involved in manufacturing, mathematical model of production performance, Computer controlled manufacturing systems, development of manufacturing systems – benefits – major elements – types of flexibility – FMS application and flexibility | | | | | |
| **Module 2** | Introduction to FMS, Group Technology and Cellular manufacturing | Assignment | Solving numerical to form ideal cells | 8 Sessions | |
| Topics: Introduction to FMS, Group Technology and Cellular manufacturing<br>Flexibility, types of flexibility, types of FMS, FMS components, Quantitative analysis, advantages and disadvantages of FMS.<br>Group Technology, part family, cell formation, simple cell formation techniques such as array-based method, similarity coefficient methods, and simple examples, scheduling in FMS. | | | | | |

| | | | | |
|---|---|---|---|---|
| **Module 3** | Material Handling systems, Production Planning and Control in FMS | Assignment | Justification of using FMS in manufacturing systems | 8 Sessions |
| Topics: Material handling and Production planning and control in FMS<br>Introduction to material handling, principles of material handling, different material handling equipment such as industrial truck, AGV, RGV, conveyors etc. Application and selection of material handling equipment's, economics justification, simple examples.<br>Production planning and Control in FMS<br>Need for different PPC methods in FMS environment, Scheduling and line balancing using similarity coefficient method. Simple examples. | | | | |
| **Module 4** | Tooling and system planning in FMS | Case study | Control of cutting tools and its practices in Machine Shop Lab | 10 Sessions |
| Introduction to tool management, Tool magazine, Tool management, Fault sensing, Tool strategies, control of cutting tools and its practices, design of flexible fixtures, modular fixtures, economics of fixtures<br>System planning in FMS, supervisory control in FMS, software system in FMS<br>Planning, preparation guidelines, Project team, supplier selection, system description and sizing, system definition and specification | | | | |
| **Module 5** | Planning and implementation of FMS | Assignment | Behavioral issues in implementing FMS | 12 Sessions |
| Planning, integration, system configuration, FMS layout and implementation<br>Organizational and behavioral issues in the implementation of FMS, economic justification of FMS<br>Toyoto production systems, Lean manufacturing and Kanban system.<br>Introduction to simulation of FMS and data base design for FMS.<br>FMS application in machining, sheet metal fabrication, prismatic component production – aerospace application – FMS development towards factories of the future – artificial intelligence and expert systems in FMS – design philosophy and characteristics for future. | | | | |
| **Targeted Application & Tools that can be used:**<br>Application Area is manufacturing systems involved in shop floor, automobile assembly and manufacturing systems involving rapid product changes in design and variety (Toyota Production Systems, Bidadi)<br>Professionally Used Software: For part programming, SEIMENS CNC PART PROGRAMMING. | | | | |

| **Course Code: MEC3051** | **Course Title: Fracture Mechanics**<br>**Type of Course: Discipline Elective & Theory only** | **L-P-C** | 3 | 0 | 3 |
| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The objective of this course is to introduce the mathematical and physical principles of fracture mechanics and their applications to engineering design to develop the ability in students to compute the stress intensity factor, strain energy release rate, and the stress and strain fields around a crack tip for linear and nonlinear materials. It will also expand the students' knowledge on experimental methods to determine the fracture toughness and develop the students understanding on the design principle of materials and structures using fracture mechanics approaches. | | | | |
| **Course objectives** | The objective of the course is to familiarize the learners with the concepts of " **Fracture Mechanics**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | On successful completion of this course the students shall be able to:<br>1. Identify the basic fracture and fatigue mechanisms<br>2. Understand crack resistance and energy release rate for crack criticality.<br>3. Apply Linear Elastic Fracture Mechanics on brittle materials.<br>4. Understand the relationship between crack tip opening displacement, SIF, ERR and application of such parameters for ductile and brittle materials<br>5. Determine the critical values of parameters at crack tip using experimental techniques | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction | Assignment | Programming Task, | 10 sessions | |
| Topics:<br>Introduction to Fracture Mechanics: Stress-Strain Curve, Elements of dislocation theory, Historical perspective, Stress Concentration effect of flaws, Fracture Mechanics approach to design, Effect of material properties on fracture, Cleavage, Brittle and Ductile fracture, ductile brittle transition, modes of fracture failure, Fatigue and stress corrosion crack growth, Damage tolerance. | | | | | |
| **Module 2** | Linear Elastic Fracture Mechanics | Case Study | Simulation and data analysis task | 10 sessions | |
| Topics:<br>An atomic view of fracture, Griffith Energy Balance, Energy release rate, instability and the R Curves, compliance, tearing modulus, Stress and Displacement field in isotropic elastic materials. | | | | | |
| **Module 3** | Elastic-Plastic Fracture Mechanics | Assignment | Data Collection and Analysis | 12 sessions | |

Topics:
Crack tip deformation and plastic zone size, plane stress vs plane strain, effective crack length, Irwin plastic zone correction, Dugdale approach, effect of plate thickness.
J Contour Integral: Relevance and scope, J as a path-independent line integral, J as a stress intensity parameter, Stress-Strain relations, J-Controlled fracture, Laboratory measurement of J, Crack Tip Opening Displacement (CTOD), Relationship between CTOD, K and G, Equivalence between CTOD and J, Determination CTOD from strip yield model, HRR Singularity

| | | | | |
|---|---|---|---|---|
| **Module 4** | Fatigue Fracture | Assignment | Simulation/Data Analysis | 13 sessions |

Topics: Introduction to fatigue, factors affecting fatigue performance, fatigue loading, constant and variable amplitude loading, some characteristics of fatigue crack, Paris Law
Numerical modelling by using k-e equations.

**Targeted Application & Tools that can be used:**

Application Area is Fracture Data collection, Automobile & Aerospace companies such as Boeing, Airbus, and Lockheed Martin etc.
Professionally Used Software: Matlab, SolidWorks & Ansys.

|---|---|---|---|---|---|
| **Course Code: MEC3011** | **Course Title: Battery and Fuel Cell Technology**<br>**Type of Course: Discipline Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The purpose of this course is to enable the students to appreciate the need for battery in automobiles and Charging of battery and testing, various types of batteries used in automobiles and also address the underlying concepts, methods and application of fuel cell technology. This course is both conceptual and analytical in nature and needs fair knowledge of principles of operation and constructional details of various Automotive Electrical and Electronic Systems like Batteries and charging System. The course develops the critical thinking and analytical skills. The course also enhances the programming abilities through assignments. | | | | |
| **Course objectives** | The objective of the course is to familiarize the learners with the concepts of " **Battery and Fuel Cell Technology**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>1) Enable Skill development of student by using Participative Learning techniques.<br>2) Understand the functioning of charging System<br>3] Identify different areas of fuel cell technology.<br>4] Discuss the various Application of Fuel Cell Technology. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Battery used in Automobiles | Assignment | Data Analysis task | 10 sessions | |
| Topics:<br>Different types of batteries - Lead acid- Nickel based-Sodium based-Lithium based-Battery Parameters-Power requirement of electric vehicles- Efficiency, Rating, Charging, Testing and Maintenance. Battery performance characteristics, Voltage to electro chemical impedance spectroscopy.- Programming Assignment | | | | | |
| **Module 2** | Charging of Battery | Assignments | data analysis task | 11 sessions | |
| Topics:<br>**Traditional Battery Charging Methods,** D.C. Generators and Alternators their Characteristics. Control cutout, Electrical, Electromechanical and electronic regulators. Regulations for charging. Battery charging index and rating. | | | | | |
| **Module 3** | Introduction To Fuel Cells | Assignment | Data Analysis | 12 sessions | |
| Topics:<br>Introduction – working and types of fuel cell – low, medium and high temperature fuel cell, liquid and methanol types, proton exchange membrane fuel cell solid oxide, hydrogen fuel cells – thermodynamics and electrochemical kinetics of fuel cells. Frequency response analyser for fuel cell. Fuel cell intoximeters**.** | | | | | |

| | | | | |
|---|---|---|---|---|
| **Module 4** | Fuel Cells For Automotive Applications | Assignment/Case study | Data collection and Analysis | 12 sessions |

Topics: Technology advances in fuel cell vehicle systems – onboard hydrogen storage – liquid hydrogen and compressed hydrogen – metal hydrides, fuel cell control system – alkaline fuel cell.

**Targeted Application & Tools that can be used:**

Application Area is Battery used in Automobiles, Production of fuel Cells and Fuel Cells For Automotive industries.
Software : FCView and ZVIEW
It is a powerful utility for analyzing, graphing, and comparing data collected from FuelCell®

| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The Course is designed with an objective of giving an overview of additive manufacturing and systems. The Course discusses about the generalized model of production systems, different techniques of AM and its systems. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Additive Manufacturing Machine and System**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>1.Understand history, concepts and terminology of additive manufacturing<br>2. Apply the reverse engineering concepts for design development<br>3. Understand the variety of additive manufacturing techniques<br>4. Design and develop newer tooling models<br>5. Identify, analyze and solve problems related to Additive Manufacturing. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction AM | Quiz | Impact of AM on product development | 08 Sessions | |
| Topic: Need - Development of AM systems – AM process chain - Impact of AM on Product Development - Virtual Prototyping- Rapid Tooling – RP to AM -Classification of AM processes-Benefits Applications. | | | | | |
| **Module 2** | Reverse engineering and cad modelling | Quiz | Data processing | 12 Sessions | |
| Topic: Basic concept- Digitization techniques – Model reconstruction – Data Processing for Rapid Prototyping: CAD model preparation, Data requirements – Geometric modeling techniques: Wire frame, surface and solid modeling – data formats - Data interfacing, Part orientation and support generation, Support structure design, Model Slicing, Tool path generation-Software for AM- Case studies. | | | | | |
| **Module 3** | Liquid based and solid based additive manufacturing systems | Quiz/Assignment | SLA process | 12 Sessions | |
| Topic: Stereolithography Apparatus (SLA): Principle, pre-build process, part-building and post-build processes, photo polymerization of SL resins, part quality and process planning, recoating issues, materials, advantages, limitations and applications. Solid Ground Curing (SGC): working principle, process, strengths, weaknesses and applications. Fused deposition Modeling (FDM): Principle, details of processes, process | | | | | |

| | | | | |
|---|---|---|---|---|
| variables, types, products, materials and applications. Laminated Object Manufacturing (LOM): Working Principles, details of processes, products, materials, advantages, limitations and applications - Case studies. | | | | |
| **Module** 4 | Powder based additive manufacturing systems | Assignment | SLS types and techniques | 12 Sessions |
| Topic: Selective Laser Sintering (SLS): Principle, process, Indirect and direct SLS-powder structures, materials, post processing, surface deviation and accuracy, Applications. Laser Engineered Net Shaping (LENS): Processes, materials, products, advantages, limitations and applications– Case Studies. | | | | |

| **Course Code: MEC3037** | **Course Title: Industrial Engineering Techniques Type of Course: Discipline Elective Theory only** | **L-P- C** | 3 | 0 | 3 |
| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course is designed to address the key industrial engineering issues in service and manufacturing organizations that have strategic as well as tactical implications. The course will give an overview of production management- production systems, scheduling forecasting techniques, line balancing, plant layout, CAPP, materials management- inventory models, purchase management, stores management, quality management- statistical quality control, control charts, quality assurance, computer applications, project management- Gantt chart, network techniques and analysis, CPM, PERT, computer applications, engineering economics- cost, inflation, depreciation, capital financing, cost engineering. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**: Industrial Engineering Techniques**" and attain **EMPLOYABILITY SKILL** through Problem solving methodologies. | | | | |
| **Course Outcomes** | CO1: Select the inventory management tools for managing inventory.<br>CO2: Apply quality tools and control charts for quality management.<br>CO3: Prepare optimization models like CPM, PERT to improve decision –making and develop critical thinking and objective analysis of decision problems.<br>CO4: Summarize the basic concepts used to determine process cost and cost of production. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Inventory Management and Forecasting | Assignment | Data collection | 11 Sessions | |
| Topics:<br><br>Inventory Management: Necessity for maintaining inventory, Inventory costs, Inventory control problem, Inventory models with deterministic demand, EOQ model (uniform demand rate and replenishment infinite), model 2 with uniform demand and finite production rate, Inventory model with probabilistic demand.<br>Forecasting: Forecasting levels, Components, Types of forecasting, Forecasting Metrics, Time series Analysis- Cumulative, Naïve, M Period moving average model, exponential smoothing, and Regression analysis. | | | | | |
| **Module 2** | Quality Management | Assignment | Mathematical | 10 Sessions | |
| Introduction and definition of quality, quality control, quality cost, seven quality control tools, control charts, process capability concept, Computer Application (Minitab, Excel) | | | | | |

| | | | | |
|---|---|---|---|---|
| **Module 3** | Project Management | Assignment | Mathematical | 12 Sessions |
| Introduction, network construction - rules, Fulkerson's rule for numbering the events, AON and AOA diagrams; Critical path method to find the expected completion time of a project, floats; PERT for finding expected duration of an activity and project, determining the probability of completing a project, Completion time of project; crashing of simple projects. | | | | |
| **Module 4** | Cost Accounting and Control | Assignment | Mathematical | 12 Sessions |
| Topics:<br>Introduction, Element of cost, prime cost. Overheads, factory costs, total cost, selling price, type of costs, process cost and cost of production, depreciation, Breakeven analysis, Breakeven chart. | | | | |

**Targeted Application & Tools that can be used:**

Application Area is Geophysical phenomenon, Hydrology, Aerospace, Aerodynamics, Microfluidics, Pipe network, Turbo-machinery.
Industries using above applications and tools – Siemens, Quest Global, Simulent consulting, Triveni Engineering, TATA, GE etc

**Text Books:**

1. O. P Khanna, "Industrial Engineering and Management", Dhanpat Rai & Co (P) Ltd.

2. Philip E. Hicks, "Industrial Engineering and Management: A New Perspective", McGraw-Hill, 1994

**Reference Book(s):**

</table>

| | | | | |
|---|---|---|---|---|
| **Module 4** | Product and integrated design for future | Assignment | Simulation | 08 Sessions |

Topics:
Advanced Prototyping for Design, Virtual and mixed reality for design, Advanced tool for early product design. Quality engineering, Rapid prototyping and free form fabrication. Simulation based Assignment.

**Targeted Application & Tools that can be used:**
Application area is in Research and Development in Aeronautical, system design, Profile design as a design Engineer in Automobile companies and Robotics.
Professionally Used Software: Ansys, FTA, RoboDx.

| | | | | | |
|---|---|---|---|---|---|
| **Course Code: MEC3043** | **Course Title: Lasers in Manufacturing Technology**<br>**Type of Course: Discipline Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.1 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | Manufacturers are increasingly utilizing machine tools that are self-aware – they perceive their own states and the state of the surrounding environment – and are able to make decisions related to machine activity processes. This is called intelligent machining, and through this course students will receive a primer on its background, tools and related terminology. Learn how the integration of smart sensors and controls are helping to improve productivity. You'll be exposed to various sensors and sensing techniques, process control strategies, and open architecture systems that can be leveraged to enable intelligent machining. This course will prepare you to contribute to the implementation of intelligent machining projects. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of **"Lasers in Manufacturing Technology** " and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>1. To define intelligent manufacturing.<br>2. To describe different type of sensors with their application for different manufacturing process.<br>3. To list different process control strategies used for intelligent manufacturing and machining.<br>4. To discuss future direction in advanced machining. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Intelligent Machining | Assignment | | 10 Sessions | |
| **Topics:**<br>Introduction to intelligent machining, machining basics, the evolution of intelligent machining, components of intelligent machining.Scope of machine intelligence in manufacturing systems - modelling and control of processes and machines. | | | | | |
| **Module 2** | Sensors and Sensing Techniques | Case Study | | 12 Sessions | |
| **Topics:**<br>Introduction of sensors, types of sensors, signal processing transforming data into information, practical uses of machine learning. Sensor-based Robotic systems for assembly, welding, machining etc. and mobile robots. Task level planning and path planning. Visuo-motor coordination and | | | | | |

| | | | | |
|---|---|---|---|---|
| navigation problems. Intelligent structures. Behavioural approach and subsumption architecture for learning from environment | | | | |
| **Module 3** | Process Control Strategies | Assignment | | 14 Sessions |
| **Topics:**<br>Programmable of logic controllers (PLC), Closed loop Process control systems, introduction to adaptive control, commercially available software. Neuro-Fuzzy-Expert systems for uncertain reasoning. Concept learning, associative memory and connectionist learning systems. Data abstraction in parallel distributed architectures. | | | | |
| **Module 4** | Future Directions in Advanced Machining | Assignment | | 8 Sessions |
| **Topics:** Intelligent Machining and the future, roadmap to success. | | | | |

**Targeted Application & Tools that can be used:**

1. Creating intelligent factories where manufacturing technologies are upgraded and transformed by cyber-physical systems (CPSs), the Internet of Things (IoT), and cloud computing
2. To make manufacturing systems able to monitor physical processes, create a so-called "digital twin" (or "cyber twin") of the physical world, and make smart decisions through real-time communication and cooperation with humans, machines, sensors, and so forth.
3. Industry 4.0 combines embedded production system technologies with intelligent production processes to pave the way for a new technological age that will fundamentally transform industry value chains, production value chains, and business models.

**Professionally Used Software:**

- AI & Machine Learning: no-code visual workflows,
- Python language.

| **Course Code: MEC3040** | **Course Title: Modern Manufacturing Processes**<br>**Type of Course: Discipline Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 2 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course is intended to provide an overview of various Modern Manufacturing Processes such as Advanced Machining Processes, Advanced Casting Processes, Advanced Welding Processes, Advanced Metal Forming Processes, Lean Manufacturing, Industry 4.0 and related group technologies used in Industries. Also how these processes are used in smart manufacturing. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of " **Modern Manufacturing Processes**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>(1) Distinguish the various methods of manufacturing processes.<br>(2) Discuss the principles, processes and applications of Advanced Machining & Casting Processes<br>(3) Discuss the principles, processes and applications of Advanced Welding & Metal Forming Processes<br>(4) Apply the various Lean Techniques & utilization of various technology that can be applied to industries for improving organizational performance | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Manufacturing | Assignment | 10 Sessions | | |
| **Topics:**<br>Introduction, Importance of Manufacturing Process, Manufacturing Process and 5 M's, Classification of Manufacturing Processes, Selection of Manufacturing Process, Types of Production, Functions In Manufacturing, Organization and Information Processing In Manufacturing, Plant Layout. Types of Automation, Automated Assembly Systems, Designs For Automated Assembly, Types Of Automated Assembly Systems. | | | | | |
| **Module 2** | Advanced Machining & Casting Processes | Case Study | 15 Sessions | | |
| **Topics:**<br>Advanced Machining Processes: Abrasive Jet Machining (AJM), Ultrasonic Machining (USM), Water Jet Machining (WJM), Chemical Machining (CHM), Electro-Chemical | | | | | |

Machining (ECM), Plasma Arc Machining (PAM), Electrical Discharge Machining (EDM), Electron Beam Machining (EBM), Laser Beam Machining (LBM).
CNC Turining & Milling: The Machine Control Unit for CNC, CNC Words, CNC Part Program, Numerical examples
Advanced Casting Processes: Metal mould casting, Continuous casting, Squeeze casting, Vacuum mould casting, Evaporative pattern casting, Ceramic shell casting

| | | | |
|---|---|---|---|
| **Module 3** | Advanced Welding & Metal Forming Processes | Assignment | 12 Sessions |

**Topics:**
Advanced Welding Processes: Details of electron beam welding (EBW), laser beam welding (LBW), ultrasonic welding (USW)
Advanced Metal Forming Processes: Details of high energy rate forming (HERF) process, Electro-magnetic forming, explosive forming Electro-hydraulic forming, Stretch forming, Contour roll forming.

| | | | |
|---|---|---|---|
| **Module 4** | Lean Manufacturing & Industry 4.O | Assignment | 8 Sessions |

**Topics:**
Lean Manufacturing: Introduction. Toyota Production System, What is Lean? 3M's of Lean 5S's of Lean, Lean Manufacturing Principles. Lean Manufacturing Tools.
Industry 4.O: Introduction, Technologies of Industry 4.0, Application of Industry 4.O, Impact of Industry 4.O

**Targeted Application & Tools that can be used:**

- Creating smart factories where manufacturing technologies are upgraded and transformed by cyber-physical systems (CPSs), the Internet of Things (IoT), and cloud computing
- Industry 4.0 combines embedded production system technologies with intelligent production processes to pave the way for a new technological age that will fundamentally transform industry value chains, production value chains, and business models.

| **Version No.** | 1.1 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | Students will be able to Understand the fundamentals of various Additive Manufacturing Technologies for application to various industrial needs. Able to convert part file into STL format. Able to understand the method of manufacturing of liquid based, powder based and solid based techniques. Understand the manufacturing procedure of a prototype using FDM technique. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Fundamentals of Additive Manufacturing** " and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>1] Understand the fundamentals of Manufacturing Processes.<br>2] Understand the classifications of Manufacturing Process and methodologies of manufacturing for industrial applications.<br>3] Understand the fundamentals of Additive Manufacturing and its importance in Industrial Applications.<br>4] Understand the classifications of Additive Manufacturing and methodology of manufacturing the products using various technologies and study their applications, advantages and limitations.<br>5] Understand the methodology to manufacture the products using FDM technologies and study their applications, advantages and case studies. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Manufacturing Technology | Assignment | Identify the Major manufacturing Technologies and report the manufacturing capabilities | 10 Sessions | |
| Topics:<br>Introduction to Manufacturing Technology: Introduction, Prototyping fundamentals, Historical development, Advantages of MT, Commonly used terms, process chain, modelling, Classification of Manufacturing process, Applications to various fields. | | | | | |
| **Module 2** | Manufacturing Processes | Assignment | Literature review | 12 Sessions | |
| Topics:<br>Manufacturing Processes: Working methodologies of different Manufacturing processes like Casting Process, Machining process, Joining process, Forming process, Machine tools, Cutting tools, Material Specifications, applications, advantages and limitations. | | | | | |
| **Module 3** | Introduction to Additive | Assignment | Identify the Major manufactures in India | 10 Sessions | |

| | | | | |
|---|---|---|---|---|
| | Manufacturing (AM) | | for 3D printing and report the manufacturing capabilities | |
| Topics:<br>Introduction to Additive Manufacturing: Introduction, Prototyping fundamentals, Historical development, Advantages of AMT, Commonly used terms, process chain, 3D modelling, Data Conversion, and transmission, Checking and preparing, Building, Post processing, RP data formats | | | | |
| **Module 4** | AM processes and Software | Assignment | Decision Tree | 12 Sessions |
| Topics:<br>AM Processes: Classifications of Additive Manufacturing, Models and specifications, process, working principle, photopolymers, photo polymerization, layering technology, Cura Software, Slicing, DFAM ,applications, advantages and limitations. | | | | |
| **Targeted Application & Tools that can be used:**<br>Application Area is rapid prototyping, product design and development industries<br>Professionally Used Software: 3D Modeling software. | | | | |
| **Text Book;**<br>1. Jing Zhang; Yeon-Gil Jung, "Additive manufacturing: materials, processes, quantifications and applications", Cambridge, Massachusetts: Elsevier, 2018.<br>2. | **Version No.** | 1.1 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | Students will be able to decide between the various trade-offs when selecting AM processes, devices and materials to suit particular engineering requirements. Students will have in-depth knowledge in latest trends and opportunities in AM, including distributed and direct digital manufacturing, mass customization, and how to commercialize their ideas**.** | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Additive manufacturing & Its Applications**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>CO1. Identify the different AM techniques.<br>CO2. Explain the Design considerations in AM.<br>CO3. Illustrate the post processing for AM parts.<br>CO4. Summarize the AM process selection and its applications. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Manufacturing Process & Additive Manufacturing | Assignment | AM techniques | 10 Sessions | |
| Topics: Introduction to Manufacturing Technology: Introduction, Prototyping fundamentals, Historical development, Advantages of MT, Commonly used terms, process chain, modelling, Classification of Manufacturing process, Applications to various fields.<br>Introduction to Additive Manufacturing: Introduction to AM, AM evolution, Distinction between AM & CNC machining, Advantages of AM, AM process chain: Conceptualization, CAD, conversion to STL, Transfer to AM, STL file,Machine setup, build, removal and clean up, post processing. Classification of AM processes: Liquid polymer system, discrete particle system, molten material systems, and solid sheet system. | | | | | |
| **Module 2** | Design of AM | Case Study | Design Tools of AM | 14 Sessions | |
| Topics: Motivation, DFMA concepts and objectives, AM unique capabilities, Exploring design freedoms, Design tools for AM, Part Orientation, Removal of Supports, Hollowing out parts, Inclusion of Undercuts and Other Manufacturing Constraining Features, Interlocking Features, Reduction of Part Count in an Assembly, Identification of markings/ numbers etc. | | | | | |
| **Module 3** | Post Processing of AM parts | Assignment | Post processing of AM components | 10 Sessions | |
| | | | | | |

| | | | | |
|---|---|---|---|---|
| Topics: Support material removal, surface texture improvement, accuracy improvement, aesthetic improvement, preparation for use as a pattern, | | | | |
| **Module 4** | rocessing selection f AM and pplications | Case Study | Future productions of AM | 10 Sessions |
| Topics: Introduction, selection methods for a part, challenges of selection, example system for preliminary selection, production planning and control.AM Applications: Functional models, Pattern for investment and vacuum casting, Medical models, art models, Engineering analysis models, Rapid tooling, new materials development, Bi-metallic parts, Re-manufacturing. Application examples for Aerospace, defense, automobile, Bio-medical and general engineering industries | | | | |

**Targeted Application & Tools that can be used:**

Application Area include almost all manufacturing organizations (Automotive, Aerospace, Army, Medical equipment's etc.,)

Professionally Used Software: AutoCAD, Solid work

| Scanners, 3D reconstruction and Reverse Engineering (RE), Image Reconstruction Procedure, Digital Communication in Medicine (DICOM) format, Types of Artifacts. | | | | |
| **Module 2** | Medical Image Processing Software Systems | Case Study | 3D Visualization and Medical Modelling | 12. Sessions |
| **Topics:** Processing of medical data from CT/MRI scan to 3D model in MIMICS, 3D-Doctor, Velocity2Pro, VoXim, SurgiGuide, SimPlant Software, MIMICS software modules, Importing data, thresholding, segmentation, Editing, region growing, volume reduction, 3D Visualization, surgical simulation, Meshing, Measurement tools, Smoothing tools, STL conversion , Morphological operations, Labelling, volume, RP file generation, | | | | |
| **Module 3** | Biomaterials | Assignment | Data Collection and Analysis | 10. Sessions |
| **Topics:** Introduction to Biomaterials, Metallic Biomaterials, Ceramic Biomaterials, Polymeric Biomaterials, Composite Biomaterials, Biodegradable Polymeric Biomaterials, Tissue-derived Biomaterials. | | | | |
| **Module 4** | Design and Production of Medical Devices | Assignment | Design and Fabrication of prototypes | 12 Sessions |
| **Topics:** Biopsy needle housing, Drug delivery devices, Masks for burnt victims, Functional prototypes help prove design value, Design and fabrication of non-implantable devices, Tools, Guides, Templates, etc., | | | | |
| **Targeted Application & Tools that can be used:**<br>X-Ray technology, CT Scanners , surgical simulation , Orthopedic biomodelling customized implant<br>**Professionally Used Software:** 3D model in MIMICS, 3D-Doctor, Velocity2Pro, VoXim, SurgiGuide | | | | |

| **Course Code: MEC3002** | **Course Title: Introduction to Additive Manufacturing and Its Applications**<br>**Type of Course: Discipline Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | Students will be able to decide between the various trade-offs when selecting AM processes, devices and materials to suit particular engineering requirements. Students will have in-depth knowledge in latest trends and opportunities in AM, including distributed and direct digital manufacturing, mass customization, and how to commercialize their ideas. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Introduction to Additive Manufacturing and Its Applications**" and attain **EMPLOYABILITY SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>1] Relate the different AM techniques.<br>2] Explain the Design considerations in AM.<br>3] Illustrate the post processing. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Additive Manufacturing (AM) | Assignment | Identify the Major manufactures in India for 3D printing and report the manufacturing capabilities | 15 Sessions | |
| Topics:<br>Introduction to Additive Manufacturing: Introduction to AM, AM evolution, Distinction between AM & CNC machining, Advantages of AM, AM process chain: Conceptualization, CAD, conversion to STL, Transfer to AM, STL file, manipulation, Machine setup, build , removal and clean up, post processing. Classification of AM processes: Liquid polymer system, discrete particle system, molten material systems, and solid sheet system. | | | | | |
| **Module 2** | Design for AM & Post processing of AM parts | Case Study | Design comparison of a component | 15 Sessions | |
| Topics:<br>Part Orientation, Removal of Supports, Hollowing out parts, Inclusion of Undercuts and Other Manufacturing Constraining Features, Interlocking Features, Reduction of Part Count in an Assembly, Support material removal, surface texture improvement, accuracy improvement, aesthetic improvement, preparation for use as a pattern, property enhancements using non-thermal and thermal techniques. | | | | | |
| **Module 3** | Process Selection and AM application | Case Study | Process selection | 15 Sessions | |

| |
|---|
| Topics:<br>Introduction, selection methods for a part, challenges of selection, example system for preliminary selection, production planning and control.<br>AM Applications: Functional models, Pattern for investment and vacuum casting, art models, Engineering analysis models, new materials development. Application examples for Aerospace, automobile, Bio-medical and general engineering industries |
| **Targeted Application & Tools that can be used:**<br>Application Area is rapid prototyping, product design and development industries<br>Professionally Used Software: 3D Modeling software,Cura. |

| **Course Code: MEC3099** | **Course Title: Autonomous Mobile Robots**<br>**Type of Course: Discipline Elective** | **L-P-C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course provides an introduction to the fundamentals of mobile robotics, examining the basic principles of locomotion, kinematics, sensing, perception, and cognition that are key to the development of autonomous mobile robots. The course will give students an opportunity to design and fabricate a mobile robotic platform and program it to apply learned theoretical concepts. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "**Autonomous Mobile Robots**" and attain **EMPLOYABILITY SKILL** through Problem solving methodologies. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>1] Describe the fundamentals of mobile robots.<br>2] Identify the different principles of locomotion and kinematics.<br>3] Describe the different types sensing elements and perceptions.<br>4] Describe the cognition system to develop autonomous mobile robots. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Robot locomotion and Kinematics and Dynamics | Assignment | Data Collection | | 08 Sessions |
| Topics: Types of locomotion, hopping robots, legged robots, wheeled robots, stability, maneuverability, controllability; Mobile robot kinematics and dynamics: Forward and inverse kinematics, holonomic and nonholonomic constraints, kinematic models of simple car and legged robots, dynamics simulation of mobile robots. | | | | | |
| **Module 2** | Perception | Case Study | Data collection | | 15 Sessions |
| Topics: Proprioceptive/Exteroceptive and passive/active sensors, performance measures of sensors, sensors for mobile robots like global positioning system (GPS), Doppler effect-based sensors, vision based sensors, uncertainty in sensing, filtering. | | | | | |
| **Module 3** | Localization | Case Study | Data collection | | 12 Sessions |
| Topics: Odometric position estimation, belief representation, probabilistic mapping, Markov localization, Bayesian localization, Kalman localization, positioning beacon systems | | | | | |
| **Module 4** | Introduction to planning and navigation | Assignment | Data Collection | | 10 sessions |
| Topics: path planning algorithms based on A-star, Dijkstra, Voronoi diagrams, probabilistic roadmaps (PRM), rapidly exploring random trees (RRT), Markov Decision Processes (MDP), stochastic dynamic programming (SDP) | | | | | |
| **Targeted Application & Tools that can be used:**<br>Automation mobile robot is relevant in various industries including Automotive, Aerospace, Medical, Building, Consumer Goods and Packaging. | | | | | |

| **Version No.** | 1.0 | | | | |
| **urse Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course provides an overview of human robot interaction, non verbal interaction, sensors used, verbal interaction, applications of human robot interaction in several sectors. A wide scope is given to the area of Applications where in students understand how robotics can be applied in different industrial applications. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of **"Human Robot Interaction"** and attain **EMPLOYABILITY SKILLS** through **Participative Learning techniques.** | | | | |
| **Course Out Comes** | **On successful completion of the course the students shall be able to:**<br>1] Describe Robot, Robotics and Various Components of Robots.<br>2] List the major sensors used in robots for interaction<br>3] Explain how robots can manage non-verbal interaction<br>4] Explain the applications of Human Robot Interaction | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Human Robot Interaction | Assignment | Data Collection | 12 Sessions | |
| Topics:<br><br>Definition of Robot, types of robots, Robotics market and the future prospects, Asimov's laws, HRI as an interdisciplinary endeavor, evolution of HRI, Robot Anatomy, Robot configurations: Polar, Cartesian, cylindrical and Jointed-arm configuration. Robot motions, Joints, Work volume. | | | | | |
| **Module 2** | Sensors used in Interaction | Assignment | Data Collection | 12 Sessions | |
| Topics:<br>Sensors in Robotics for interaction– Sensors for Audio, Vision, Tactile sensors, Proximity and Range sensors, use of sensors in robotics. Machine Vision System: Introduction to Machine vision, the sensing and digitizing function in Machine vision. Actuators- Motors, Pneumatic actuators, speakers. Software. | | | | | |
| **Module 3** | Non Verbal Interaction | Assignment | Data collection and Analysis | 10 Sessions | |
| Nonverbal Interaction- Types of nonverbal interaction, Gaze and eye movement, Gesture, Mimicry and Imitation, Touch, Posture and movement, Interaction rhythm and timing. Nonverbal interaction in robots, Robot perception of nonverbal cues, generating nonverbal cues in robots. | | | | | |
| **Module 4** | Applications | Case Study | Data collection and analysis | 10 Sessions | |
| Applications of Human Robot Interaction- Service robots, Robots for learning, Robots for entertainment, Robots in Health care and therapy, Robots as personal assistants, Collaborative robots, robots in self driving cars, remotely operated robots. | | | | | |
| **Targeted Application & Tools that can be used:**<br>Industrial applications of robots: Medical sector<br>Automation in industries. | | | | | |

| **Anti-requisites** | NIL | | | | |
| **Course Description** | The Course is designed with an objective of giving an overview of role of operations research in decision-making, applications in industry. The Course includes Linear Programming, Deterministic Model, Waiting Line Models, Project Line Models, Transportation model and its variants, Inventory models, Decision making under certainty, risk, and uncertainty. The course is both conceptual and analytical in nature and develops the critical thinking and analytical skills through assignments. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of " **Operations Research and Management**" and attain **ENTREPRENEURIAL SKILL** through Problem solving methodologies. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>(1) Translate the verbal description of the real system to linear programming mathematical models.<br>2) Apply the concept of transportation and assignment problems to minimize the cost and time.<br>3] Influence the decision-making processes of other individuals and groups.<br>4] Solve waiting line problems for M/M/1 and M/M/C models. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Linear Programming | Assignment | Data collection and Analysis | 12 Sessions | |
| Topics:<br>Introduction: Linear programming, Definition, scope of Operations Research (O.R) approach and limitations of OR Models, Characteristics and phases of OR, Mathematical formulation of L.P. Problems, Graphical solution methods, Analytical solution methods - Simplex method, Two phase method, Dual simplex method. | | | | | |
| **Module 2** | Transportation model | Assignment | Data collection and Analysis | 12 Sessions | |
| Topics:<br>Transportation Problem: Formulation of transportation problem, types, initial basic feasible solution using different methods, optimal solution by MODI method, degeneracy in transportation problems, application of transportation problem concept for maximization cases. Assignment Problem: Formulation, types, application to maximization cases and travelling salesman problem. | | | | | |
| **Module 3** | Decision Making | Assignment | Decision making Analysis | 10 Sessions | |
| Topics:<br>Decision theory: Decision making under certainty, risk and uncertainty, game theory- concept of minimax and maximin (saddle point), dominance rule and graphical method. | | | | | |
| **Module 4** | Waiting Line model | Assignment | Steady State Performance Analysis | 10 Sessions | |
| Topics: | | | | | |

| | |
|---|---|
| Queuing Theory: Queuing systems and their characteristics, Pure-birth and Pure-death models (only equations), empirical queuing models – M/M/1 and M/M/C models (no derivations) and their steady state performance analysis. | |
| **Targeted Application & Tools that can be used:**<br><br>Application Area is Optimization of process parameters in decision making.<br>Professionally Used Software: MATLAB. | |

| **Course Content:** | | | | | |
| **Module 1** | Introduction to SCM | Assignment | Data Collection and Analysis | 10 Sessions | |
| Topics: Understanding Supply Chain – Objectives, Importance and Decision phases in Supply Chain, Process and Cycle view, Examples of Supply Chain., Supply Chain Drivers – Various drivers, Framework for structuring drivers, Supply Chain Performance – Achieving strategic fit. | | | | | |
| **Module 2** | Designing the Supply chain Network | Case Study | Simulation and data analysis task | 10 Sessions | |
| Topics: Designing distribution network – The Role of Distribution in the Supply Chain, Factors Influencing Distribution Network Design. Network Design In The Supply Chain - The Role of Network Design in the Supply Chain, Framework for Network Design Decisions and Making Network Design Decisions in Practice. Designing Global Supply Chain Networks. | | | | | |
| **Module 3** | Planning and Coordinating Demand and Supply | Assignment | Data Collection and Analysis | 10 Sessions | |

| | | | | |
|---|---|---|---|---|
| | | | | |
| Topics: Demand forecasting, Aggregate Planning in Supply Chain, Coordination in Supply Chain. Managing economies of scale in a supply chain: Cycle inventory, Managing Uncertainty In A Supply Chain: Safety Inventory, Determining The Optimal Level of Product Availability. | | | | |
| **Module 4** | Designing and Planning Transportation Networks | Case Study | Data collection and Programming | 08 classes |
| Topics: Transportation In a Supply Chain - The Role of Transportation in a Supply Chain, Modes of Transportation and Their Performance, The Role of IT in Transportation. The Role of Sourcing in a Supply Chain, Third- and Fourth-Party Logistics Providers, Supplier Selection—Auctions and Negotiations**.** | | | | |
| **Module 5** | Future Technologies in Supply Chain | Assignment | Simulation and Analysis | 07 Sessions |
| Topics: Information Technology In a Supply Chain, The Supply Chain IT Framework. The Future Technologies in the Supply Chain – AI, Additive Manufacturing, Driverless Vehicles, IoT, Block Chain Technologies, Wearable Devices. | | | | |
| **Targeted Application & Tools that can be used:**<br><br>Application Area include almost all manufacturing organizations (Automotive – Hyundai, KIA, Ford etc.,) Processing industries (Petroleum – Reliance, Shell, HP etc.,), service industries like Banking, Hospital, etc. and E-commerce platforms like Amazon, Flipkart etc.<br>Professionally Used Software: SAP SCM, E2Open, Oracle SCM | | | | |
| **Text Book**<br>1. Chopra, S., & Meindl, P., "Supply Chain Management: Strategy, Planning, and Operation.". Pearson Bostan, Fifth Edition, 2013. | | | | |

| **Topics relevant to "ENTREPRENEURIAL SKILLS":**The Future Technologies in the Supply Chain – AI, Additive Manufacturing, Driverless Vehicles, IoT, Block Chain Technologies for developing **ENTREPRENEURIAL SKILLS** through **Participative Learning techniques**. This is attained through assessment component mentioned in course handout. | | | | |
| **Catalogue prepared by** | Dr. R. Jothi Basu | | | |
| **Recommended by the Board of Studies on** | BOS NO: 15th BOS held on 29/7/2022 | | | |
| **Date of Approval by the Academic Council** | Academic Council Meeting No. 18, Dated 03/08/2022. | | | |

| | | | | | |
|---|---|---|---|---|---|
| **Course Code: MEC3010** | **Course Title: Automotive Engineering**<br>**Type of Course: Open Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This Course has been designed to make the students familiar with the automotive vehicle components. The Course emphasizes on internal combustion engines used in automotive vehicles, vehicle performance, analysis and design of various components of automotive vehicles, the Course also includes experimental or theoretical investigation of problems selected from the field of automotive vehicles. The Course also discusses lubrication systems, Clutches, Gear Boxes, propeller shafts, Universal Joint, Brakes, steering systems, Brake wheels and Ignition and starting systems. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of " **Automotive Engineering**" and attain **ENTREPRENEURIAL SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | Student will be able to<br>1. Identify the different parts of an automobile and it's working<br>2. Understand the working of transmission and braking systems<br>3. Comprehend the working of steering and suspension systems<br>4. Learn various types of fuels and injection systems | | | | |
| **Course Content:** | Vehicle structure and engines, variable valve timing, vehicle aerodynamics, engine auxiliary systems, unit injector system, rotary distributor type and common rail direct injection system, turbo chargers. Transmission systems. clutch-types and construction, gear boxes- manual and automatic, gear shift mechanisms, over drive, transfer box, fluid flywheel, torque converter, steering geometry and types of steering gear box-power steering, alternative energy sources. | | | | |
| **Module 1** | VEHICLE STRUCTURE AND ENGINES | Assignment | SI and CI engines | 10 Sessions | |
| Topics:<br>Types of automobiles vehicle construction and different layouts, chassis, frame and body, Vehicle aerodynamics (various resistances and moments involved), IC engines – components functions and materials, variable valve timing (VVT).Engine positioning, cooling requirements, methods of cooling, thermostat valves, different lubrication arrangements. Superchargers And Turbochargers | | | | | |
| **Module 2** | ENGINE AUXILIARY SYSTEMS | Case Study | Ignition system | 12 Sessions | |
| Electronically controlled gasoline injection system for SI engines, Electronically controlled diesel injection system (Unit injector system, Rotary distributor type and common rail direct injection system), Electronic ignition system (Transistorized coil ignition system, capacitive discharge ignition system), Turbo chargers (WGT, VGT), | | | | | |
| **Module 3** | TRANSMISSION SYSTEMS | Assignment | Systems of gear box | 10 Sessions | |
| **Topics** | | | | | |

| | | | | |
|---|---|---|---|---|
| Clutch-types and construction, gear boxes- manual and automatic, gear shift mechanisms, over drive, transfer box, fluid flywheel, torque converter, propeller shaft, slip joints, universal joints, Differential and rear axle, | | | | |
| **Module 4** | ALTERNATIVE ENERGY SOURCES | Assignment | Types of energy sources | 12 Sessions |
| **Topics:**<br>Use of Natural Gas, Liquefied Petroleum Gas, Bio-diesel, Bio-ethanol, Gasohol and Hydrogen in Automobiles- Engine modifications required –Performance, Combustion and Emission Characteristics of SI and CI engines with these alternate fuels - Electric and Hybrid Vehicles, Fuel Cell Note: | | | | |
| **Targeted Application & Tools that can be used:**<br>"Linkage X3" software for suspension design, "LightWave 3D" | | | | |
| **Books:**<br>1 Jain K.K. and Asthana. R. B, "Automobile Engineering" Tata McGraw Hill Publishers, New Delhi, 2002. 2. Kirpal Singh, "Automobile Engineering", Vol 1 & 2, Seventh Edition, Standard Publishers, New Delhi, 13th Edition 2014. | | | | |

| | | | | | |
|---|---|---|---|---|---|
| **Course Code: MEC2004** | **Course Title: Six Sigma for Professionals**<br>**Type of Course: Open Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 2 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | Six Sigma is a methodology of implementing a highly successful project, or producing a high-quality product or service, using techniques and principles that ensure excellence. The Six Sigma methodology incorporates many years of studying best practices in business and its goal is ultimately the creation of a nearly error-free business environment. This course will give a complete overview of the Six Sigma process and prepare to be a Six Sigma team member. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of " **Six Sigma for Professionals**" and attain **ENTREPRENEURIAL SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>1] Define the problem statement through customer analysis in terms of time, budget, and resource requirements.<br>2] Summarize a detailed process map by gathering baseline data.<br>3] Complete a root cause verification analysis by the help of inferential statistics and hypothesis testing.<br>4] Devise a preliminary implementation plan, update standard work procedures and write an action plan. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Define Phase | Assignment | Data Collection | 08 Sessions | |
| Topics:<br>Define Phase: The Basics of Six Sigma, The Fundamentals of Six Sigma, Selecting Six Sigma Projects. | | | | | |
| **Module 2** | Measure Phase | Case Study | Data Analysis | 12 Sessions | |
| Topics:<br>Measure Phase: Process Definition, Six Sigma Statistics, Measurement System Analysis, Process Capability. | | | | | |
| **Module 3** | Analyze Phase | Assignment | Data Analysis | 12 Sessions | |
| Topics:<br>Analyze Phase: Patterns of Variation, Inferential Statistics, Hypothesis Testing, Hypothesis Testing with Normal Data, Hypothesis Testing with Non-Normal Data. | | | | | |
| **Module 4** | Improve & Control Phase | Case Study | Data Analysis | 10 Sessions | |
| Topics: | | | | | |

Improve and Control Phase: Simple Linear Regression, Multiple Regression Analysis, Statistical Process Control (SPC), Six Sigma Control Plans**.**

**Targeted Application & Tools that can be used:**

Application Area: Employ Six Sigma skills to lead a successful process improvement project to deliver meaningful results to the organization.
Professionally Used Software: MINITAB/STATISTICA

**Textbook:**

1. John Morgan, "Lean Six Sigma for Dummies ", A Wiley Brand, 3rd Edition 2015.

**References:**

| **Recommended by the Board of Studies on** | BOS NO: 15TH BOS HELD ON 29/07/2022 |
| **Date of Approval by the Academic Council** | Academic Council Meeting No.18,Dated 03/08/2022 |

| | | | | | |
|---|---|---|---|---|---|
| **Course Code:** **MEC3069** | **Course Title: Engineering Optimization** **Type of Course: Open Elective** | **L- P-C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This Course is designed to impart the fundamental knowledge of linear programming, dynamic programming, classical optimization techniques, numerical methods in optimization. This course also concentrates on imparting basic programming knowledge and ways to use it to solve various optimization problems. Course has a section which mainly concentrates on the use of R-Programming to solve various optimization problems. Knowledge of calculus and familiarity with a medium-level programming language is assumed. The class will have several programming and homework assignments, and a final project. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of " **Engineering Optimization**" and attain **ENTREPRENEURIAL SKILL** through Participative learning techniques. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction To Optimization | Case Study | Programming | 10. sessions | |
| Topics:<br>Modern methods in optimization, Application of optimization, Statement of optimization problem, Classification of Optimization problems, Optimization techniques.<br><br>**R – Programming** : Introduction to R, Installation of R & R Studio, Data types in R, Lists, Matrices, mathematical operands, vector generation, R- Markdown, sequence generation, simple exercises. | | | | | |
| **Module 2** | Linear Programming | Case Study | Data collection. Programming & Data Analysis | 10. sessions | |
| Topics:<br>Introduction to Linear Programming**,** Simplex Method**,** Transportation Problem, Quadratic Programming. Simple numerical.<br>**R – Programming:** Introduction to tidyverse, dplyr, tidyr, ggplot, Use of IPSOLVE for simplex problems. | | | | | |
| **Module 3** | Non Linear Programming 1-D Minimization | Case Study | Data collection. Programming & Data Analysis. | 13. sessions | |
| Topics:<br>Elimination Methods: Golden Section, Fibonacci, Exhaustive Search, Interpolation Methods: Newton Method, Secant Method.<br>**R- Programming:** Use of R for EM and IM methods. | | | | | |
| **Module 4** | Non Linear Programming Unconstrained Optimization | Case Study | Data collection. Programming & Data Analysis | 13. sessions | |

Topics:
Direct Search Methods: Univariate, Random, Grid, Indirect Search Methods: Steepest Descent, Fletcher Reeves, Newton's Method.
**R- Programming:** Use of R for Direct Search and Indirect Search methods.

**Targeted Application & Tools that can be used:**

**Application**

- Automation and Robotics
- Decision Support Systems
- Investment and Trading
- Automotive Systems and Manufacturing

**Tools**

- MATLAB
- Python
- R Programming

| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This Course is designed to impart the fundamental knowledge of Conduction,<br>Convection modes of heat transfer and its application to various electronic appliances used in modern day computing systems. This course also concentrates on imparting practical knowledge on the necessary thermal concepts applied during the development of various microelectronic chips, heat sinks and heat pipes. Course has a section which mainly concentrates on the use of R/ Python Programming to solve thermal problems. Knowledge of calculus and familiarity with a medium-level programming language is assumed. The class will have several programming and homework assignments, and a final project. | | | | |
| **Course Objectives:** | The objective of the course is to familiarize the learners with the concepts of "**Thermal Management of Electronic Appliances**" and attain **ENTREPRENEURIAL SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | On successful completion of this course the students shall be able to:<br>1] Summarize the basics concepts of heat transfer.<br>2) Employ thermal resistance concepts to develop micro electronic packages.<br>3] Analyze the heat transfer mechanism through heat sinks used in microprocessors.<br>4] Apply advanced cooling techniques to cool down micro electronic chips. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | INTRODUCTION TO HEAT TRANSFER | Case Study | Data collection. Programming & Data Analysis | 10. sessions | |
| Topics:<br>Theory: Basic definitions, Conduction, Convection, Laws governing, Thermal conductivity, Thermal Resistance, Composite Walls, Extended Surfaces. | | | | | |
| **Module 2** | MICRO-ELECTRONIC PACKAGING & HEAT SINKS | Case Study | Data collection. Programming & Data Analysis | 10. sessions | |

Topics:
Theory: Thermal Resistance network, series arrangement, parallel arrangement, thermal contact resistance, Thermal resistance of PCB's, General Resistance network, Thermal Interface Materials. Application: Importance of Packaging, Packaging Types, Package thermal resistance network, Package material parameters, Fins and Heat Sink equations, Fin thermal resistance, Effectiveness, Efficiency, Fins with varying Cross section, Heat sink manufacturing process.

| | | | | |
|---|---|---|---|---|
| **Module 3** | COOLING FANS & PUMPS | Case Study | Data collection. Programming & Data Analysis. | 13. sessions |

Topics:
Theory: Forced Convection, Mean velocity, Mean Temperature, Laminar and turbulent, Pumping
Power, Velocity profile and friction factor correlations,
Application: Types of fans & pumps, fan curve and system impedance curve, fan selection, plate –

| | | | | |
|---|---|---|---|---|
| **Module 4** | HEAT PIPE DESIGN AND DEVELOPMENT | Case Study | Data Programming & Analy | 13. sessions |

Topi
Theory: Types and applications, operating principles, working fluids, wick structures, control techniques, pressure balance, maximum capillary pressure, liquid and vapor pressure drops, Heat pipe design – fluid selection, wick selection, material selection, preliminary design considerations
Application: Heat pipe design procedure, determination of heat pipe diameter, design of heat pipe

**Targeted Application & Tools that can be used:**

**Application**

1. Advanced Computing Systems
2. Design and Development of Microprocessors and Microcontrollers
3. Design and Development of Cooling processor fans
4. Design and Development of micro liquid cooling systems for PCB's

**Tools**

1. MATLAB
2. Python
3. R Programming

| **Date of Approval by the Academic Council** | 18th Meeting of the Academic Council held on 03rd August, 2022 |

| | | | | | |
|---|---|---|---|---|---|
| **Course Code: MEC2006** | **Course Title: Safety Engineering**<br>**Type of Course: Open Elective/ Theory Only Course** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The Course is designed with an objective of giving an overview of study of Industrial Safety followed in industries such as various safety terms used, Fire Safety, Mechanical Safety, Electrical Safety, Chemical Safety followed by case studies to understand the industrial safety in detail. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of " **Safety Engineering**" and attain **ENTREPRENEURIAL SKILL** through Participative learning techniques. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>1. Understand the basic safety terms and international standards.<br>2. Identify the hazards and risk analysis around the work environment and industries.<br>3. Use the safe measures while performing work in and around the work area of the available laboratories. Able to recognize the sign boards and its application<br>4. Recognize the types of fires extinguishers and to demonstrate the portable extinguishers used for different classes of fires.<br>5. Report the case studies by sharing experience of the employees working in housekeeping, laboratories etc.<br>6. Recognize the chemical and electrical hazards for its prevention and control. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Safety | Case Study | Data Collection | 08 sessions | |
| Topics: Terms used: accident, safety, hazard, safe, safety devices, safety guard, security, precaution, caution, appliance, slip, trip, fall. Ladders and scaffolding. Unsafe acts, reason for accidents, MSDS (material safety data sheet), OSHA, WHO. Lockout and tag out procedures. Safe material handling and storage.<br>Case studies: Student should identify the unsafe acts near their surroundings like housekeeping, lab as well as industrial layouts, road safety, campus layout, safety signs. | | | | | |
| **Module 2** | Fire Safety | Term paper | Data Collection | 08 sessions | |
| Topics: Introduction, Class A, B, C, D and E fire. Fire triangle, Fire extinguishers, Fire hazard and analysis, prevention of fire. Fire protection and loss prevention, steps after occurrence of fire. Notice-first aid for burns, Portable fire extinguishers. Fire detection, fire alarm and firefighting systems. Safety sign boards, instruction on portable fire extinguishers. Case studies: demonstration of fire extinguishers, visit to local firefighting stations. Visit to fire accident sites to analyze the cause of fire and its prevention for future. | | | | | |

| | | | | |
|---|---|---|---|---|
| **Module 3** | Mechanical Safety | Case Study | Data Collection | 08 sessions |
| Topics: PPE, safety guards, safety while working with machine tools like lathe, drill press, power and band saws, grinding machines, safety during welding, forging and pressing. Safety while handling material, compressed gas cylinders, corrosive substance, waste drum and containers.<br>Case studies: Visit to machine shop, workshops, foundry lab and local industries to record the practical observation and report the same with relevant figures and comments. | | | | |
| **Module 4** | Electrical Safety | Assignment | Data Collection | 10 sessions |
| Topics: Introduction to electrical safety, Indian standards on electrical safety, Electric hazards, effect of electric current on human body, causes of electrical accidents, prevention of electric accidents, PPE used. Electric shock. Primary and secondary electric shocks, AC and DC current shocks. Safety precautions against shocks. Safety precautions in small and residential building installations. Safety procedures in electric plant. | | | | |
| **Module 5** | Chemical Safety | Case Study | Data Collection | 10 sessions |
| Topics: Introduction to Chemical safety, Labeling of chemicals, acid hoods. Handling of acids, eye ashers and showers. Safety thinking, accident investigation, safety policy of the company, safety, loss prevention and control, check list for LPG installations, safety precautions using CNG, fire prevention and safety audit, confined space entry, risk assessment.<br>Case studies: To visit chemical laboratory of the college and other chemical industries like LPG, CNG facilities and report. | | | | |
| **Targeted Application & Tools that can be used:**<br>**Job profiles like Safety Engineer etc** | | | | |
| **Text Book**<br>1. L M deshmukh, "Industrial Safety & Management". McGraw Hill Education (India) Private Limited, ISBN-13:978-0-07-061768-1.<br>2. S Rao, R K Jain & Sauja, "Electrical Safety, fire safety & safety management", Khanna Publishers, ISBN:978-81-7409-306-6. | | | | |

| **Course Code: MEC3071** | **Course Title: Hybrid Electric Vehicle Design**<br>**Type of Course: Open Elective & Theory only** | **L-P-C** | 3 | 0 | 3 |
| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course introduces the fundamental concepts, principles, analysis and design of hybrid and electric vehicles. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of " **Hybrid Electric Vehicle Design**" and attain **ENTREPRENEURIAL SKILL** through Participative learning techniques. | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>[1] Understand the basic concepts of Electric vehicles<br>[2] Outline the features of Hybrid Electric drive trains<br>[3] Summarize the concepts of energy storage solution<br>[4] Identify various energy management strategies | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Hybrid Electric Vehicles | Assignment | Demonstration through videos | 10 sessions | |
| Topics:<br>History of hybrid and electric vehicles, impact of modern drive-trains on energy supplies. Basics of vehicle performance, vehicle power transmission characteristics. | | | | | |
| **Module 2** | Hybrid Electric Drive-trains | Assignment | Simulation | 10 sessions | |
| Topics:<br>Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis. | | | | | |
| **Module 3** | Energy Storage Solution | Assignment | Seminar | 12 sessions | |
| Topics:<br>Cell Types (Lead Acid/Li/NiMH), Battery charging and discharging, calculation, Cell Selection and sizing, Battery lay outing design, Battery Pack Configuration, Battery Pack Construction, Battery selection criteria. | | | | | |
| **Module 4** | Energy Management Strategies | Assignment | Simulation | 12 Session | |
| Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, implementation issues of energy management strategies. | | | | | |
| **Targeted Application & Tools that can be used:**<br>Automobile Sectors and tools like MATLAB and Simulink can be used for demonstration | | | | | |
| **Text Books**<br>1. James Larminie, John Lowry, Electric Vehicle Technology Explained, Wiley, 2003. | | | | | |
| **References/Online contents** | | | | | |

|---|---|---|---|---|---|
| **Course Code: MEC2001** | **Course Title: Renewable Energy Systems**<br>**Type of Course: Open Elective - Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.1 | | | | |
| **Course Pre-requisites** | Nil | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The Course is designed with an objective of giving an overview of Different kinds of renewable energy sources and their applications. It covers Introduction of renewable energy sources, their advantages, potential, status of development, broad details of different renewable energy systems such as solar, wind, biomass, hydrogen etc; Renewable energy development policy, Renewable energy industries and future thrust areas in renewable energy development. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of " **: Renewable Energy Systems**" and attain **ENTREPRENEURIAL SKILL** through Problem solving methodologies. | | | | |
| **Course Outcomes** | **On successful completion of the course students shall be able to:**<br>C01. Identify the different types of non-conventional energy sources and compare with various conventional energy systems, their prospects and limitations.<br>C02. Describe the use of solar energy and the various components used in the energy production with respect to applications.<br>C03. Appreciate the need of Wind Energy and the various Biomass Energy sources and know their classifications with applications.<br>C04. Acquire the knowledge of fuel cells, with emphasis on hydrogen energy. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction | Assignment | Data collection & Analysis | 4 Session | |
| **Topics:**<br>**Introduction to Energy Sources** General, World Energy Futures, Energy consumption, Renewable Energy Sources, Renewable Energy Resources, Advantages, Prospects of Renewable Energy Sources.<br><br>**Assignment:** Prepare a comprehensive report on the 2021 energy mix in India. | | | | | |
| **Module 2** | Solar energy | Assignment | Data collection and data analysis /Case Study | 16 Session | |

**Topic:**

**Solar Radiation and its Measurement:** Definition Solar Constant, Beam and Diffused Radiation, Sun at Zenith, Air Mass, Solar Radiation Geometry, Different Solar angles, Day length, Local Solar Time, Solar radiation Measurements, Estimation of Average Solar Radiation.

**Solar Energy Collectors:** Physical Principles of the conversion of Solar Radiation into Heat, Flat Plate Collectors, Collector Efficiency, Concentrating Collector, Focusing type, Advantages and Disadvantages of both Flat plate and Concentrating type collectors.

**Solar Energy Storage:** Solar Energy Storage systems, Solar Pond,

**Applications of Solar Energy:** Solar Water Heating, Solar Thermal Electric Conversion, Solar Distillation, and Solar Cooking, Solar PV Systems, Solar PV application.

**Assignment** : Collect data related to renewable energy generation (Solar)

| | | | | |
|---|---|---|---|---|
| **Module 3** | Wind And Biomass Energy | Assignment | Data collection | 11 Sessions |

**Topics:**

**Wind Energy:** Origin of Winds, Nature of Winds, Basic Principles of Wind Energy Conversion, Basics Components of a WECS, Classification, Advantages and Disadvantages, Applications of Wind Energy.

**Biomass Energy:** Biomass Conversion Technologies, Bio gas generation, Classification of Biogas plants, Biomass as a source of Energy, Methods of obtaining Energy from Biomass.

**Assignment:** Prepare a report on recent Data collection related to wind energy across the world.

**Targeted Application & Tools that can be used:**
**Application Area is Alternate energy resources –** NTPC, ReNew , Tata Power, Suzlon, Acme Solar, Adani, Greenko.
**Professionally Used Software:** Ms- Excel, /Python FOR data collection, analysis and design of system

| | | | | | |
|---|---|---|---|---|---|
| **Course Code: MEC1003** | **Course Title: Engineering Drawing**<br>**Type of Course: Open Elective & lab based** | **L-P- C** | 1 | 4 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | MEC1006 | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The course is designed with the objective of giving an overview of engineering drawing with the help of software tools. It is introductory in nature and acquaints the students with the techniques used to create engineering drawings with computerized drafting tools. Computerized drafting provides accurate and easily modifiable graphic entities, easy data storage, easy retrieval facility and it enhances creativity. It will expose students to the concept of engineering drawing and teach them to draw different views of planes and solids in different orientations. The course will teach students to use AutoCAD to produce engineering drawings. They will learn to create drawing layouts, dimensioning, the theory of projection, orthographic projection of points, lines, planes and solids, isometric projection and be introduced to the development of surfaces. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of " **Engineering Drawing**" and attain **ENTREPRENEURIAL SKILL** through Experiential learning techniques . | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br>(1) Demonstrate competency using AutoCAD graphics software as per BIS conventions and standards.<br>(2) Comprehend the theory of projection for drawing projections of Points, Lines and Planes under different conditions.<br>(3) Prepare multiview orthographic projections of Solids by visualizing them in different positions.<br>(4) Prepare pictorial drawings using the principles of isometric projections to visualize objects in three dimensions. | | | | |
| **Course Content** | | | | | |
| **Module 1** | Introduction to Drawing | Assignment | Standard technical drawing | 02 Sessions | |
| Topics:<br>Introduction, drawing instruments and their uses, relevant BIS conventions and standards, Lettering, Line conventions, dimensioning, Selection of drawing sheet size and scale. | | | | | |
| **Module 2** | Orthographic projections of Points, Straight Lines and Plane Surfaces | Assignment | Projection methods Analysis | 10 Sessions | |
| Topics:<br>Introduction, Definitions – Elements of projection and methods of projection, Planes of projection, reference line and conventions adopted. First angle and third angle projections. Projection of Points in all 4 quadrants.<br>Projections of Straight Lines (located in first quadrant/first angle projection only): True and apparent lengths, true and apparent Inclinations to reference planes. (No application problems).<br>Projection of Plane surfaces (First angle projection): Regular plane surfaces – triangle, square, | | | | | |

| | | | | |
|---|---|---|---|---|
| rectangle, pentagon, hexagon and circle – in different positions inclined to both the planes using change of position method only. | | | | |
| **Module 3** | Orthographic Projections of Solids | Assignment | Multi-view drawing Analysis | 10 Sessions |
| **Topics:**<br>Introduction, Projection of right regular prisms, pyramids, cone, hexahedron and tetrahedron in different positions (Problems resting on HP only and First angle projection). | | | | |
| **Module 4** | Isometric Projections of Solids (Using isometric scale only) | Assignment | Spatial Visualization | 8 Sessions |
| **Topics:**<br>Introduction, Isometric scale, Isometric projections of right regular prisms, cylinders, pyramids, cones and their frustums, spheres and hemispheres, hexahedron (cube), and combination of 2 solids, conversion of orthographic view to isometric projection of simple objects. | | | | |
| **Targeted Application & Tools that can be used:**<br>Application Area is in understanding and interpreting an object in various positions and converting it into a technical drawing which can be universally accepted.<br>Professionally Used Software: AutoCAD | | | | |
| **Text Book:**<br>1.N. D. Bhatt, "Engineering Drawing: Plane and Solid Geometry," Charotar Publishing House Pvt. Ltd. | | | | |
| **References:**<br>1. K.R. Gopalakrishna, "Engineering Graphics", Subhash Publishers, Bangalore.<br>2. D. M. Kulkarni, A. P. Rastogi, A. K. |---|---|---|---|---|---|
| **Course Code: MEC2005** | **Course Title: Fundamentals of Aerospace Engineering**<br>**Type of Course: Open Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.1 | | | | |
| **Course Pre-requisites** | **NIL** | | | | |
| **Anti-requisites** | **NIL** | | | | |
| **Course Description** | The purpose of this course is to give an overview of the fundamentals of aerospace engineering. It will give an overview of the aircraft industry, discuss the different components of and different types of aircrafts, go into the mechanical, electrical, electronic and auxiliary systems in aircrafts, discuss aircraft engines, pressurization, cover the basic principles of flight and space flight, and discuss various aircraft maneuvers. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of " **Fundamentals of Aerospace Engineering**" and attain **ENTREPRENEURIAL SKILL** through Problem solving methodologies. | | | | |
| **Course Outcomes** | **On successful completion of the course the students shall be able to:**<br>CO 1: Solve problems based on the concepts of flowing gases and the standard atmosphere<br>CO 2: Apply the principles of basic aerodynamics to airfoils<br>CO 3: Determine the thrust and power requirements for level, unaccelerated flight of an aircraft<br>CO 4: Explain the criteria for longitudinal static stability for an airplane<br>CO 5: Apply the basics of space vehicle trajectories to simple missions<br>CO 6: Determine some propulsive characteristics of aircraft and rocket engines | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction | Assignment | | Data Analysis task | 10 Sessions |
| Topics:<br>Introduction, early developments, Sir George Cayley, Otto Lilienthal, Wilbur and Orville Wright. fundamental physical quantities of flowing gas, the source of all aerodynamic forces, equation of state for a perfect gas, anatomy of the airplane and a space vehicle, definition of altitude, the hydrostatic equation, geopotential and geometric altitudes, definition of the standard atmosphere, pressure, temperature and density altitudes. | | | | | |
| **Module 2** | Basic Aerodynamics | Assignment | | Programming task and simulation | 12 Sessions |
| Topics:<br>The continuity equation, incompressible and compressible flow, momentum equation, elementary thermodynamics, isentropic flow, energy equation, speed of sound, low-speed subsonic wind tunnels, introduction to airfoils, airfoil nomenclature, lift, drag and moment coefficients, airfoil data, infinite versus finite wings, pressure coefficient, obtaining lift coefficient from the pressure coefficient**.** | | | | | |
| **Module 3** | Airplane Performance, Stability and Control | Assignment | | Data Collection and Analysis | 12 Sessions |
| Topics:<br>The drag polar, equations of motion, thrust and power requirements for level, unaccelerated flight, thrust available and maximum velocity, power available and maximum velocity, definitions of stability and control, moments on the airplane, absolute angle of attack, criteria for longitudinal static stability. | | | | | |

| | | | | | |
|---|---|---|---|---|---|
| **Module 4** | Propulsion | Assignment | | Data Collection and Analysis | 10 Sessions |
| Topics:<br>Introduction, propeller, reciprocating engine, jet propulsion, turbojet engine, turbofan engine, ramjet engine, rocket engine, rocket propellants, rocket equation, rocket staging and propellant requirements for spacecraft trajectory maneuvers. | | | | | |
| **Targeted Application & Tools that can be used:**<br>Application Area is Indian Space Research Organization (ISRO), Hindustan Aeronautics Limited (HAL), DRDO, General Electric(GE), Bombardier and many others<br>Professionally Used Software: XFLR, Aeolus. | | | | | |
| **Textbooks**<br>T1 A. C. Kermode, Flight Without Formulae, Pearson Education, 10th Edition<br>T2 A. C. Kermode, Mechanics of Flight, Pearson Education, 5th Edition | | | | | |

| **Course Code:** **MEC3201** | **Course Title: Industry 4.0** **Type of Course: Open Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | Nil | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course provides students with an introduction to Industry 4.0, its building blocks, its applications and advantages compared to conventional production techniques. Learners get a deep insight into how intelligent processes, big data, and artificial intelligence can be used to build up the production of the future. Also enabling design principles that support companies in identifying and implementing various Industry 4.0 scenarios and the key technologies for smart factories. The course also discusses the Impact of Industry 4.0 on Society: Impact on Business, Government, People etc & also future framework of Industry 4.0. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of **"Industry 4.0"** and attain **ENTREPRENEURIAL SKILL** through Participative learning techniques | | | | |
| **Course Outcomes** | **On successful completion of this course the students shall be able to:**<br><br>(1) Understand the basic concepts of Industry 4.0 and scope for Indian Industry<br>(2) Demonstrate conceptual framework and road map of Industry 4.0<br>(3) Apply Industry 4.0 for various fields of application<br>(4) Understand the Impact to Industry 4.0 for various fields of application | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Industry 4.0 | Assignment | Case Study | 14 Sessions | |
| Topics:<br>Introduction, History, core idea of Industry 4.0,origin concept of industry 4.0,Industry 4.0 production system, current state of industry 4.0, Technologies of Industry 4.0 – Big Data – Artificial Intelligence (AI) – Industrial Internet of Things - Cyber Security – Cloud – Augmented Reality , How is India preparing for Industry 4.0 | | | | | |
| **Module 2** | Conceptual Framework for Industry 4.0 | Case Study | Simulation and data analysis task | 10 Sessions | |
| Topics:<br>Introduction, Main Concepts and Components of Industry 4.0, The Basic Characteristics of Industry 4.0, General framework, The Industry 4.0 Model Framework | | | | | |
| **Module 3** | Applications of Industry 4.0 | Assignment | Data Collection and Analysis | 10 Sessions | |
| Topics: | | | | | |

| | | | | |
|---|---|---|---|---|
| Manufacturing – Healthcare – Education – Aerospace and Defense – Agriculture – Transportation and Logistics **.** | | | | |
| **Module 4** | Impact of Industry 4.0 | Assignment | Case Study | 10 Sessions |
| Topics:<br>Impact of Industry 4.0 on Society: Impact on Business, Government, People.Education 4.0 – Curriculum 4.0 – Faculty 4.0 – Skills required for Future - Framework for aligning Education with Industry 4.0 – Framework for achieving next ten years vision – Challenges | | | | |
| **Targeted Application & Tools that can be used:**<br><br>Application Area are wearables (Samsung, Apple), health (GE Healthcare), traffic monitoring ( Waze, google maps), fleet management, smart grid and energy saving (PowerGrid), agriculture, hospitality etc.<br><br>Professionally Used Software: Kinoma, Arduino, Device Hive, Riot etc. | | | | |

| | | | | | |
|---|---|---|---|---|---|
| **Course Code: MEC3200** | **Course Title: Sustainable Technologies and Practices**<br>**Type of Course: Open Elective & Theory only** | **L- P- C** | 3 | 0 | 3 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This open elective course aims to provide students with a comprehensive understanding of sustainability principles and their applications in the fields of computer science, mechanical engineering, and electronics. The course explores the challenges and opportunities associated with sustainability, equipping students with the knowledge and skills to develop and implement sustainable technologies and practices in their respective engineering disciplines. Through a combination of theoretical learning, case studies, and hands-on projects, students will gain a multidisciplinary perspective on sustainability and its relevance to the rapidly evolving technological landscape. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of " **"Sustainable Technologies and Practices"** and attain **ENTREPRENEURIAL SKILL** through Participative learning techniques | | | | |
| **Course Outcomes** | On successful completion of this course the students shall be able to:<br>1. Introduce students to the fundamental concepts and principles of sustainability and their significance in engineering disciplines.<br>2. Familiarize students with the latest sustainable technologies and practices in science and engineering.<br>3. Enable students to analyse the environmental, social, and economic impacts of engineering projects and propose sustainable alternatives.<br>4. Cultivate critical thinking and problem-solving skills to address sustainability challenges in engineering through project-based learning. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Introduction to Sustainability | Assignment | | 10 sessions | |
| Topics:<br>Definition of sustainability and its relevance to engineering, Global environmental challenges and the role of technology in addressing these, Ethical considerations and the social dimension of sustainability, Life cycle assessment (LCA) methodologies, Carbon footprint analysis and reduction strategies | | | | | |
| **Module 2** | Sustainable Computing | Case Study | Simulation and data analysis task | 09 sessions | |
| Topics:<br>Green computing and energy-efficient algorithms, Data center optimization and energy management | | | | | |

| | | | | |
|---|---|---|---|---|
| **Module 3** | Sustainable Mechanical Engineering | Assignment | Simulation and data analysis task | 08 sessions |
| Topics:<br>Renewable energy systems and their integration, Energy-efficient design principles, Sustainable manufacturing processes | | | | |
| **Module 4** | Sustainable Electronics engineering | Assignment | Simulation | 08 sessions |
| Topics:<br><br>Energy-efficient electronic devices and components, Energy harvesting and power management, Responsible electronic waste management | | | | |
| **Module 5** | Sustainable Project Management | Assignment | Simulation/Data Analysis | 06 sessions |
| Topics:<br><br>Sustainability assessment frameworks and tools, Sustainability project planning and decision making | | | | |

**Targeted Application & Tools that can be used:**

Contemporary issues: One contemporary issue in this course is the growing concern over e-waste management and the need for responsible disposal and recycling of electronic devices. Another issue is the increasing demand for energy-efficient computing systems and the development of green computing strategies to reduce the environmental impact of data centers and algorithms.

Professionally Used Software: SimaPro, GaBi, EnergyPlus

<table>
<tr><td>Course Code: EEE1001</td><td colspan="3">Course Title: Fundamentals of Electrical and Electronics Engineering<br>Type of Course: School Core Theory and Integrated lab.</td><td>L- P- C</td><td>3</td><td>2</td><td>4</td></tr>
<tr><td>Version No.</td><td colspan="7">1.0</td></tr>
<tr><td>Course Pre-requisites</td><td colspan="7">Basic Knowledge about various principles and laws, Simple mathematical calculations, identification of different electrical tools and accessories.</td></tr>
<tr><td>Anti-requisites</td><td colspan="7">Nil</td></tr>
<tr><td>Course Description</td><td colspan="7">This is a fundamental Course which is designed to know the use of basic of electrical engineering principles occurs in different occupation. The content will be taught and implemented with the aim of developing different types of skills in using different types of electrical testing and measuring instruments. This course also develops competence of trouble shooting by applying the knowledge gained in the laboratory.</td></tr>
<tr><td>Course Objective</td><td colspan="7">The objective of the course is to familiarize the learners with the concepts of Fundamentals of Electrical and Electronics Engineering and attain Skill Development through Experiential Learning techniques.</td></tr>
<tr><td>Course Out Comes</td><td colspan="7">On successful completion of the course the students shall be able to:<br>1. Describe the behavior of basic DC and AC circuits.<br>2. Identify the type of generators, motors and transformers required for<br>particular application.<br>3. Summarize the concepts of electrical measurements and instruments.<br>4. Explain the components of low voltage electrical installations and elementary<br>calculations for energy consumption</td></tr>
<tr><td>Course Content:</td><td colspan="7"></td></tr>
<tr><td>Module 1</td><td>Electrical Circuits</td><td colspan="3">Simulation</td><td colspan="3">7 Sessions</td></tr>
<tr><td colspan="8">Topics: DC Circuits: Basic Terminology and classification of elements, Concept of OC and SC, Series and Parallel Circuits, Concept of KVL and KCL. AC Circuits: AC Waveform Generation and its definitions, AC through pure Resistance, Inductance and Capacitance. AC through Series R-L, Concept of power triangle (Numerical Included RL Series circuit only).</td></tr>
<tr><td>Module 2</td><td>Electrical Machines:</td><td colspan="3">Quiz</td><td colspan="3">14 Sessions</td></tr>
<tr><td colspan="8">Topics:<br>DC Machines: Construction of DC Generator and motor, Operating Principle of Generator and Motor, EMF Equation of Generator, Significance of Back EMF and Torque Equation. Numerical on EMF Equation and Torque Equation, Classification and Applications of DC Machines.<br>AC Machines: Transformers: Construction and Working Principle, Types of transformers, EMF Equation, Turns and Transformation Ratio, (Numerical Problems on EMF equation and Turns Ratio). Three Phase Induction motors: Construction and Working Principle, Rotor speed and slip, (Numerical Problems on Rotor Speed and slip) Application of three phase IMs. Synchronous Generator (Alternator): Construction and Working Principle, Concept of Synchronous speed, EMF Equation. Applications of AC Machines.</td></tr>
</table>

| | | | |
|---|---|---|---|
| **Module 3** | Electrical Measurements and Instrumentation | Simulation | 6 Sessions |
| Topics: Concept true value, measured value, types of errors and computation of errors, Energy meter, Types of sensors and transducers, Introduction to virtual instrumentation, Measurement of electrical and physical quantities using transducers and virtual instrumentation software, industrial instrumentation. | | | |
| **Module 4** | Electrical Installation | Assignment | 7 Sessions |
| Topics:Electrical Wiring Accessories, Types of Electrical wiring, Practice of Lamp Circuits, Different protective devices such as fuse, MCB, MCCB and ELCB. Purpose and, types of Earthing system. Energy Consumption calculations. | | | |

**List of Laboratory Tasks:**

**Experiment No 1:** Measurement of voltage, current in a circuit.

**Level 1:** Consider a simple circuit of your choice and perform the wiring & testing of voltage and current in the series combination & parallel combination of resistors on bread board set-up.

**Level 2:** For the same circuit considered in level 1, perform the simulation using ORCAD/Multisim/MATLAB.

**Experiment No 2:** Measurement Of -Voltage Calculate the Power & Power Factor of the Circuit

**Level 1:** Measure and calculate the electrical parameters by a bread board set up of a simple AC series R-L circuit at your choice.

**Level 2:** For the same circuit considered in level 1, perform the simulation using ORCAD/Multisim/MATLAB.

**Experiment No 3:** Testing a DC Generator under different loading conditions.

**Level 1:** Observe the voltage build up process of self-excited DC shunt generator

**Level 2:** Observe the fact that the shunt generator is having a fairly constant output voltage with variation in load.

**Experiment No 4:** Measurement of resistance in DC Circuits.

**Level 1:** Perform the measurement of resistance in a simple DC Circuit using a Multimeter.

**Level 2:** Perform the measurement of resistance in a simple DC Circuit using NI Lab View.

**Experiment No 5:** Study of various electrical tools and symbols.

**Level 1:** Identify different types of cables/wires and switches, fuses & fuse carriers, MCGB and ELCB, MCCB with ratings and usage.

**Level 2:** To prepare a pig tail joint using a single strand Copper Cable

**Experiment No 6:** Practice of simple Lamp Circuits

**Level 1:** Make a circuit with One lamp controlled by one switch with PVC surface conduit system and a provision of 2/3 Pin socket.

**Level 2:** Make a circuit for ceiling fan with regulator.

**Experiment No 7:** Practice of Special Lamp Circuits

**Level 1:** Control and practice the wiring for Fluorescent Lamp

**Level 2:** Control and practice the wiring for Mercury Vapour Lamp

**Experiment No 8:** Practice on Power Loads

**Level 1:** Connect the Inverter to power supply through 2/3 pin socket and 1-way switch (Back up)

**Level 2:** Connect and Control 1.5-ton capacity A/C equipment by MCB and stabilizer.

**Experiment No 9:** Practice Battery voltage measurement

**Level 1:** Connecting batteries in series and parallel and observing the output voltage using DMM **Level 2:** Measurement of current supplied by Battery using ammeter and Multimeter with rheostat as load

**Experiment No 10:** Demonstration on physical installation on Earthing.
**Level 1:** Demonstration on physical installation on Pipe Earthing.
**Level 2:** Demonstration on physical installation on Plate Earthing.

**Targeted Application & Tools that can be used:**
Troubleshooting various electrical appliances & ORCAD, MultiSim, MATLAB.

**Project work/Assignment: Mention the Type of Project /Assignment proposed for this course**

**Assignment No. 1:** Measure voltage, current and power in 1-phase circuit. (with resistive load) using ORCAD or MultiSim.
**Assignment No. 2:** Measure transformation ratio K of 1-phase transformer and also Connect single phase transformer and measure input & output quantities.
**Assignment No. 3:** Make a circuit for ceiling fan with regulator and Perform the energy consumption calculations of your house.

|---|---|---|---|---|---|
| **Course Code: MAT1001** | **Course Title: Calculus and Linear Algebra**<br>**Type of Course:1] School Core Lab Integrated** | **L- P- C** | **3** | **1** | **4** |
| **Version No.** | 2.0 | | | | |
| **Course Pre-requisites** | Basic Concepts of Limits, Differentiation, Integration | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | The course focuses on the concepts of calculus and linear algebra with reference to specific engineering problems. The course is of both conceptual and analytical type in nature. | | | | |
| **Course Objective** | The objective of the course is to **familiarize the learners with the concepts of "**CALCULUS AND LINEAR ALGEBRA" **and attain <u>Skill Development</u> through problem solving techniques**. | | | | |
| **Course Out Comes** | On successful completion of the course the students shall be able to:<br>1) Comprehend the knowledge of applications of matrix principles.<br>2) Understand the concept of partial derivatives and their applications.<br>3) Apply the principles of integral calculus to evaluate integrals.<br>4) Adopt the various analytical methods to solve differential equations. | | | | |
| **Course Content** | | | | | |
| **Module 1** | Linear Algebra | | | | 16 Sessions |
| Review: Types of matrices, elementary transformations,<br>**Linear Algebra:**<br>Echelon form, rank of a matrix, consistency and solution of system of linear equations - Gauss elimination method, Gauss-Jordan method.Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton theorem – Diagonalization of matrices – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms.<br>Engineering Applications of Linear Algebra. | | | | | |
| **Module 2** | Partial Derivatives | | | | 14 Sessions |
| Review: Differential calculus with single variable.<br>Differential Calculus:<br>Partial differentiation, Homogeneous functions and Euler's theorem, Total derivative, Change of variables, Jacobians, Partial differentiation of implicit functions, Taylor's series for functions of two variables, Maxima and minima of functions of two variables, Lagrange's method of undetermined multipliers.Engineering Applications of partial derivatives. | | | | | |
| **Module 3** | Integral calculus | | | | 12 Sessions |
| Review: Integral calculus for single integrals.<br>**Integral calculus:**<br>Multiple Integrals- Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves, evaluation of triple integrals-change of variables between Cartesian and cylindrical and spherical polar co-ordinates.<br>Beta and Gamma functions–inter-relation-evaluation of integrals using gamma and beta functions. Evaluate double & triple integrals. | | | | | |
| **Module 4** | Differential Equations | Assignment | | Programming | 16 sessions |
| Definition, types of differential equations, order and degree, Linear Differential Equations, Bernoulli's Differential Equation, Exact and Non - Exact Differential Equations. | | | | | |

Higher order Differential Equation with constant coefficients and with right hand side of the form eax, sinax, cosax, eaxf(x), xnf(x) etc., Linear equations with variable coefficients such as Cauchy Equation and Lagrange's Equation, Method of Variation of Parameters.
Engineering applications of differential equations.

Targeted Application & Tools that can be used:
The contents of this course has direct applications in most of the core engineering courses for problem formulations, Problem Solution and system Design.
Tools Used: Python.

**Assignment:**

1. List at least 3 sets of Matrix Applications concerning the respective branch of Engineering and obtain the solution using C Programming/Python.
2. Select any one simple differential equation pertaining to the respective branch of engineering, identify the dependent and independent variable – Obtain the solution and compare the solution sets by varying the values of the dependent variable.

| **Catalogue prepared by** | Dr Veeresh A Sajjanara and Dr V Nagendramma |
| **Recommended by the Board of Studies on** | 13th BOS held on 04/01/2025 |
| **Date of Approval by the Academic Council** | 24th ACM held in 3rd August 2024 |

| | | | | | |
|---|---|---|---|---|---|
| **Course Code:** **MAT1003** | **Course Title: Applied Statistics** **Type of Course: School Core** | **L–P- C** | 1 | 2 | 2 |
| **Version No.** | 3.0 | | | | |
| **Course Pre-requisites** | None | | | | |
| **Anti-requisites** | None | | | | |
| **Course Description** | The goal of this course is to provide a firm understanding of probability and statistics by means of a thorough treatment of descriptive statistics, probability and probability distributions keeping in mind the future courses having statistical, quantitative and probabilistic components. The course covers topics such as descriptive statistics, probability, rules for probability, random variables and probability distributions, standard discrete and continuous probability distributions. | | | | |
| **Course Objective** | The objective of the course is to **familiarize the learners with the concepts of "**Applied Statistics" and attain **Skill Development Through Problem Solving techniques**. | | | | |
| **Expected Outcome:** | At the end of this course, students will be in a position to<br>1. apply the techniques of descriptive statistics effectively<br>2. interpret the ideas of probability and conditional probability<br>3. demonstrate the knowledge of probability distributions<br>4. Compute statistical parameters, correlation and regression, probability and sampling distributions using R software. | | | | |
| **Module 1** | Descriptive Statistics | Assignment | Coding needed | 10 Sessions | |
| Introduction to Statistics, Data and statistical thinking, review of basic statistical parameters, Covariance, Correlation, Types of Measures of Correlation - Karl Pearson's Correlation Coefficient, Spearman Rank Correlation, linear regression, Multi linear regression . | | | | | |
| **Module 2** | Probability | | | 6 Sessions | |
| Introduction to Probability, Probability of an event, Addition Principle, Multiplication law, Conditional Probability, Total Probability and Baye's theorem with examples | | | | | |
| **Module 3** | Random Variables and Probability Distributions | | Coding needed | 14 Sessions | |
| Introduction to Random variables, Discrete Random Variables and Continuous Random Variables, Probability Distributions, Probability Mass Function and Probability Density Function, Various Probability distributions, Binomial, Negative Binominal (Self Study), Poisson, Normal and Exponential distributions | | | | | |
| **Module 4** | Sampling Theory | | Coding needed | 15 Sessions | |
| Introduction to Sampling Theory, Population, Statistic, Parameter, Sampling Distribution, Standard Error. Testing of Hypothesis, Types of Errors, Critical Region, level of Significance. Difference between Parametric and Non-parametric Tests, Large Sample Tests: Z-Test for Single Mean and **Difference of Means (Self Study)**, Small Sample Tests: Student's t-Test for Single Mean and **Difference of Means,** F-Test, Chi-Square Test. | | | | | |
| | | | | | |
| **Targeted Application & Tools that can be used:** | | | | | |

The objective of the course is to familiarize students with the theoretical concepts of probability and statistics and to equip them with basic statistical tools to tackle engineering and real-life problems.
Tools used: R Software / MS-Excel

| | | | | | |
|---|---|---|---|---|---|
| **Course Code:** **MAT2003** | **Course Title:** **NUMERICAL METHODS FOR ENGINEERS** **Type of Course: School Core** | **L- P-C** | 1 | 2 | 2 |
| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | MAT1002 – Transform Techniques, Partial Differential Equations and Their Applications | | | | |
| **Anti-requisites** | **Nil** | | | | |
| **Course Description** | The course focuses on formulating and solving problems concerning real-world engineering applications numerically as well as statistically. This course provides an introduction to basic numerical methods to deal with algebraic and transcendental equations, system of equations, interpolation, differentiation and integration. This course also deals with numerical solution of ordinary differential equations by means of Taylor's series method, modified Euler's method and Runge-Kutta methods. | | | | |
| **Course Objective** | The objective of the course is to **familiarize the learners with the concepts of " NUMERICAL METHODS FOR ENGINEERS" and attain <u>Skill Development</u> Through <u>Problem Solving.</u>** | | | | |
| **Course Outcomes** | On successful completion of the course the students shall be able to:<br>1] Solve algebraic and transcendental equations numerically.<br>2] Adopt numerical techniques to differentiate and integrate functions.<br>3] Apply numerical methods to solve ordinary differential equations. | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Numerical solution of Algebraic and Transcendental Equations | | | 15 Sessions | |
| Algebraic and Transcendental Equations, Regula - Falsi method, Bisection method (Self study), Secant method, Newton-Raphson method, and NR method for non-linear Equations, Fixed-point iteration method.<br><br>System of Linear Equations: Introduction, LU decomposition method, Gauss-Jacobi method, Gauss-Seidel iteration method, Largest Eigen value and corresponding Eigen vector by Power method & Jacobi Method. | | | | | |
| **Module 2** | Numerical Interpolation, differentiation and Integration | | | 15 Sessions | |
| Numerical Interpolation: Newton's forward and backward interpolation method, Newton's divided difference method, Lagrange's method, numerical differentiation. Numerical integration: Trapezoidal rule, Simpson's one-third rule, Simpson's three-eighth rule, Weddle's Rule.<br>Area between the two curves. | | | | | |
| **Module 3** | Numerical solution of ODEs and PDEs | | | 15 Sessions | |
| Solution of ordinary differential equations: Initial Value problems: Taylor's series method, Picard's method, Euler's Method, Modified Euler's method, Runge-Kutta method, Milne's predictor-corrector formula. Adams -Bashforth method**,** Boundary value problems - Finite difference methods for ODE. Numerical solution for LCR & damped forced oscillatory equations. | | | | | |

Solution of partial differential equations: Schmidt Explicit Formula for Heat Equation, Crank-Nicolson method. Numerical solution to Wave, Laplace & Heat Equation.

**Targeted Application & Tools that can be used:**

The objective of the course is to familiarize students with a variety of numerical techniques and the theoretical concepts of probability and statistics so as to equip them with the necessary numerical approaches and basic statistical tools to tackle engineering and real-life problems.

**Assignment:**

1. Gauss-Jacobi iteration method.
2. Numerical differentiation.
3. Gaussian quadrature rule for numerical integration.
4. Taylor series method for ODEs.
5. Implicit and explicit schemes for PDEs.

| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | NIL | | | | |
| **Anti-requisites** | **NIL** | | | | |
| **Course Description** | This course provides basic scientific knowledge and understanding of how our world works from an environmental perspective. Topics covered include: basic principles of ecosystem function; biodiversity and its conservation; human population growth; water resources, solid waste management; water, air and soil pollution; climate change; energy resources, and sustainability.<br>This course caters to Environment and Sustainability. | | | | |
| **Course Objective** | The objective of the course is 'SKILL DEVELOPEMNT' of the student by using EXPERIENTIAL LEARNING techniques | | | | |
| **Course Outcomes** | On successful completion of this course the students shall be able to:<br>1) outline the need for eco-balance<br>2) Acquire basic knowledge about global climate change with particular reference to the Indian context.<br>3) Identify ways to protect the environment | | | | |
| **Course Content:** | | | | | |
| **Module 1** | Environment and Ecosystem | Assignment | Data Collection | 05 Sessions | |
| Topics:<br>Significance and need for environmental studies, Applications of environmental science in various engineering disciplines; Environmental ethics; Ecosystem, earth - life support system and ecosystem components; Energy flow in ecosystem; Biogeochemical cycles; Effect of human activities on these cycles. | | | | | |
| **Module 2** | Biodiversity | Assignment | Data Collection | 06 Sessions | |
| Topics:<br>Importance, types, factors affecting biodiversity; Species interaction - Extinct, endemic, endangered and rare species; mega-biodiversity; Hot-spots; Ecological succession; Genetically Modified crops; Threats and Conservation of biodiversity. | | | | | |
| **Module 3** | Sustaining Natural Resources | Case study | Data analysis | 07 Sessions | |
| Topics:<br>Food, soil conservation and pest management – Water resources: Water footprint and virtual water – Desalination – Energy resources-Renewable and non-renewable, efficiency and conservation. | | | | | |
| **Module 4** | vironmental pollution and challenges | Case study | ta analysis | 07 Sessions | |
| Topics:<br>Environmental hazards: Biological, Chemical, Nuclear, Biomedical, noise, e-waste; Risk and evaluation of hazards; Types of pollution: Air and water – Pollution sources, effects and mitigation. Water quality management; Solid waste management (land); Climate disruption, global warming and ozone depletion. | | | | | |
| **Module 5** | Human Population Change and Environment | signment | ta Collection | 05 Sessions | |

**Topics:**
Urban environmental problems; Consumerism and waste products; Promotion of economic development – Impact of population age structure – Women empowerment. Sustaining human societies: Economics, environment, policies and education.

**Targeted Application & Tools that can be used: Application areas are Energy, Environment and sustainability**

**Tools:** Statistical analysis of environmental pollutants using excel origin etc.

**Project work/Assignment:**

**Project Assignment:**
**Assessment Type:**

- Midterm exam
- Term Paper- ( review of digital/ e-resource from PU link given in references section -
  mandatory to submit screen shot accessing digital resource)
- Project Review-I and II
- Project work
- Project report
- End Term Exam
- Self-Learning

1. **Write a State of Environment (SoE) report of your town/city/state/country**
2. **A video recorded statement/presentation of their own ideas on environmental mitigation**
3. Individual students will carry out analysis of polluted solid, liquid and gaseous samples and propose suitable mitigation measure(s). A detailed and in-depth report needs to be submitted for each case. This may include preparation of reagents, sample preparation (extraction), chemical analysis carried out, instruments and tools used, data collected and processed, inferences made and conclusions arrived at. Necessary theory support be given in the form of reference links to ebooks (or details like page numbers), journals and websites. A plagiarism check report be submitted which may carry weightage in report evaluation.

2. William P. Cunningham and Mary Ann Cunningham (2017), Principles of Environmental Science: Inquiry & Applications, 8th Edition, McGraw-Hill Education, USA.

**Skill Sets**
All topics in theory component are relevant to Environment and Sustainability.

Lab/Project Skill sets

1. An attitude of enquiry.
2. Ability to interpret events and results.
3. Ability to work as a leader and as a member of a team.
4. Observe and measure physical phenomena.
5. Write reports.
6. Select suitable equipment, instrument and materials.
7. The ability to follow standard test procedures.
8. An awareness of the Professional Ethics.
9. Need to observe safety precautions.

| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course is designed to equip students to enhance their communication abilities in Listening, Speaking, Reading, and Writing. The curriculum covers interpersonal communication principles, the art of speech writing and delivery (including impromptu speaking), strategic approaches to critical reading, the identification of logical fallacies, and persuasive writing. Furthermore, the course will introduce students to the potential of AI tools and the techniques of prompt engineering to elevate their communication skills in the digital age. Upon course completion, students will be well-prepared to communicate effectively and critically in both academic and professional environments. | | | | |
| **Course Outcomes** | On successful completion of the course the students shall be able to:<br>1. Recognize the elements of interpersonal and cross-cultural communication to address communication challenges effectively.<br>2. Demonstrate the ability to deliver structured and impromptu speeches using effective speaking techniques.<br>3. Interpret textual and visual materials using critical reading strategies to evaluate arguments, logic, and persuasion.<br>4. Produce persuasive and analytical essays using effective argumentation techniques and structured writing strategies. | | | | |

**Course Content: Theory**

| **Module 1** | Foundations of Effective Communication | Case Studies/ Role play | Cross-Cultural Competency | 4 Sessions |
|---|---|---|---|---|

Topics:

- Fundamentals of Interpersonal Communication
- Verbal, Non-verbal, and Paraverbal communication.
- Cultural dimensions theory (Hofstede's Cultural Dimensions).
- Active Listening Techniques
- Common Errors in Communication

| **Module 2** | Mastering Speech Delivery | JAM | Public Speaking Confidence | 4 Sessions |
|---|---|---|---|---|

Topics:

- Introduction to Prompt Engineering
- Speech Preparation and Organization
- Techniques for Effective Impromptu Speaking
- Practice Speech Delivery

| **Module 3** | Critical Reading and Logical Analysis | Worksheet | Critical Thinking and Analysis | 4 Sessions |
|---|---|---|---|---|

Topics:

| | | | | |
|---|---|---|---|---|
| • Critical Reading Strategies: Contextualizing, Figurative Language, Evaluating Logic of an Argument, Recognizing Emotional Manipulation, Analysing Visuals<br>• Recognizing Logical Fallacies: Slippery Slope, False Dilemma, Post Hoc, Hasty Generalization, Ad Hominem, Straw Man, Bandwagon, No True Scotsman, Red Herring, Appeal to Authority, Sunk Cost, Appeal to ignorance | | | | |
| **Module 4** | Writing Effective Arguments | Assignment | Clear and Coherent Writing | 3 Sessions |
| Topics**:**<br>• Understanding Critical Writing<br>• Building Arguments (Pathos, Ethos, Logos)<br>• Techniques for Persuasion | | | | |
| **Course Content: Practical Sessions** | | | | |
| **Module 1** | Foundations of Effective Communication | | | 8 Sessions |
| **1. Interpersonal Communication**<br>Charades with a Twist/Tone and Emotion Experiment/Mixed Messages Challenge/Role Reversal Conversations/Observation Exercise<br>**2. Cross-cultural Communication**<br>Cultural Iceberg Analysis/Role-Play: Cross- Cultural Scenarios/Stereotypes vs Realities/Cross- /Cultural Negotiation Exercise/Cultural Sensitivity Case Studies<br>**3. Active Listening**<br>Bingo TEDx/Story Building/Listening for Key Details/Interactive Podcast Listening/Fact or Opinion<br>**4. Instagram/YouTube Vocabulary Activity** | | | | |
| Module 2 | Mastering Speech Delivery | | | 8 Sessions |
| 5. Speech Writing<br>6. Impromptu Speech<br>JAM /"Would You Rather" Explainer/Picture Prompt Speech/Reverse Speech Crafting | | | | |
| Module 3 | Critical Reading and Logical Analysis | | | 8 Sessions |
| 7. Critical Reading Strategies<br>Critical Reading Worksheet/Identifying Bias in News Articles<br>8. Recognizing Logical Fallacies<br>Debate Challenge with Fallacy Detection/ Fallacy Investigation with Podcasts or Social Media | | | | |
| Module 4 | Writing Effective Arguments | | | 6 Sessions |
| 9. Building Arguments<br>Causes or Effects/Appeal Mash-Up/Debates on Controversial Topics<br>10. Persuasive Writing<br>Creative Persuasive Writing/Opinion Writing | | | | |
| **Targeted Application & Tools that can be used:** Quizziz, Chatgpt, Gemini, Youtube, Instagram, Quillbot, Grammarly, Padlet | | | | |

| **Version No.** | 1.0 | | | | |
| **Course Pre-requisites** | Students are expected to understand Basic English. Students should have desire and enthusiasm to involve, participate and learn. | | | | |
| **Anti-requisites** | NIL | | | | |
| **Course Description** | This course is designed to develop effective communication skills and boost confidence levels. The activity-based modules cover the art of Questioning, how to ask questions, goal setting with emphasis on time and stress management, creating the first impression and introducing one self and finally culminating with the etiquettes of email writing. The pedagogy used will be group discussions, flipped classrooms, continuous feedback, role-play and mentoring. | | | | |
| **Course Objective** | The objective of the course is to familiarize the learners with the concepts of "Soft Skills for Engineers" and attain Skill Development through Experiential Learning techniques. | | | | |
| **Course Out Comes** | **On successful completion of this course the students shall be able to:**<br><br>CO1 **Employ** effective communication skills<br>CO2 **Practice** questioning techniques for better decision making<br>CO3 **Differentiate** individual strengths and weaknesses for self-awareness and stress management<br>CO4 **Recognise** the need to set SMART GOALS | | | | |
| **Course Content:** | | | | | |
| **Module 1** | of Questioning | e plays | | | 4 Sessions |
| **Topics:** Note Taking, Framing Open-ended and Close-ended questions, Funnel technique, Probing questions, Leading questions, Rhetorical questions, 5W1H Technique | | | | | |
| | cab Building | | | | Every Class |
| Dedicate 5-10minutes towards vocabulary building in every session | | | | | |
| **Module 2** | al Setting & Time Management | urnal + Outbound training | | | 8 Sessions |
| Goal Setting (SMART Goals), Time Management Matrix, Steps to managing time through outbound group activity, Making a schedule, Daily Plan and calendars (To Do List), Monitoring/charting daily activity | | | | | |
| **Module 3** | f-introduction and Creating an Impression | oming checks + Evaluation | | | 8 Sessions |
| **Topics:** Body Language, Grooming guidelines for boys/girls, Common mistakes in Grooming at workplace and social gathering, Etiquettes at work place & social gathering, SWOT – Self-awareness analysis, Self-introduction template, evaluation of self-introduction in class | | | | | |
| **Module 4** | nail Etiquette | dustry expert / Trainer | | | 4 Sessions |
| **Topics**: Dos and Don'ts of professional email etiquette, practice writing emails (activity) | | | | | |
| REVISION | cap & Summary | | | | 2 Sessions |
| Revision of all the modules, overall feedback from the students with regards to the syllabus. | | | | | |
| **Targeted Application & Tools that can be used**: LMS | | | | | |
| **Topics relevant to development of "SKILL":** Art of Questioning, Goal Setting & Time Management, Self-introduction and Creating an Impression, E-mail Etiquette for Skill Development through Participative Learning Techniques. This is attained through assessment component mentioned in course handout. | | | | | |

|---|---|---|---|---|---|---|
| **Course Code:** **PIP2001** | **Course Title:** **Capstone Project** **Type of Course:** **NTCC** | **L- T-P- C** | - | - | - | 4 |
| **Version No.** | **2.0** | | | | | |
| **Course Pre-requisites** | **Knowledge and Skills related to all the courses studied in previous semesters.** | | | | | |
| **Anti-requisites** | **NIL** | | | | | |
| **Course Description** | Students observe science and technology in action, develop an awareness of the method of scientific experimentation, and often get an opportunity to see, study and operate sophisticated and costly equipment. They also learn about the implementation of the principles of management they have learnt in class, when they observe multidisciplinary teams of experts from engineering, science, economics, operations research, and management deal with techno-economic problems at the micro and macro levels. Finally, it enables them to develop and refine their language, communication and inter-personal skills, both by its very nature, and by the various evaluation components, such as seminar, group discussion, project report preparation, etc. The broad-based core education, strong in mathematics and science and rich in analytical tools, provides the foundation necessary for the student to understand properly the nature of real-life problems. The students have options to pursue this course as either Project Work or Dissertation at the university, or Project Work in an Industry/ Company/ Research Laboratory, or Internship Program in an Industry/Company. | | | | | |
| **Course Objectives** | The objective of the course is to familiarize the learners with the concepts of Professional Practice and attain **Employability Skills** through **Experiential Learning** techniques. | | | | | |
| **Course Outcomes** | On successful completion of this course the students shall be able to:<br>1. Identify the engineering problems related to local, regional, national or global needs.<br>2. Apply appropriate techniques or modern tools for solving the intended problem.<br>3. Design the experiments as per the standards and specifications.<br>4. Interpret the events and results for meaningful conclusions.<br>5. Appraise project findings and communicate effectively through scholarly publications. | | | | | |
