## **PART A – PROGRAM REGULATIONS**

### **1. Vision & Mission of the University and the School / Department**

#### **1.1 Vision of the University**

To be a Value-driven Global University, excelling beyond peers and creating professionals of integrity and character, having concern and care for society.

#### **1.2 Mission of the University**

- Commit to be an innovative and inclusive institution by seeking excellence in teaching, research and knowledge-transfer.
- Pursue Research and Development and its dissemination to the community, at large.
- Create, sustain and apply learning in an interdisciplinary environment with consideration for ethical, ecological and economic aspects of nation building.
- Provide knowledge-based technological support and services to the industry in its growth and development.
- To impart globally-applicable skill-sets to students through flexible course offerings and support industry's requirement and inculcate a spirit of new-venture creation.

#### **1.3 Vision of Presidency School of Engineering**

To be a value based, practice-driven School of Engineering and Technology, committed to developing globally-competent Engineers, dedicated to transforming Society.

#### **1.4 Mission of Presidency School of Engineering**

- Cultivate a practice-driven environment with a contemporary Learning-pedagogy, integrating theory and practice.
- Attract and nurture world-class faculty to excel in Teaching and Research, in the field of Core Engineering.
- Establish state-of-the-art facilities for effective Teaching and Learning-experiences.
- Promote Interdisciplinary Studies to nurture talent and impart relevant skill-sets for global impact.
- Instil Entrepreneurial and Leadership Skills to address Social, Environmental, and Community-needs.

#### **1.5 Vision of Department of Mechanical Engineering**

To be a value-based, industry driven Mechanical Engineering Department committed to develop globally competent Mechanical Engineering professionals dedicated to transform the society.

#### **1.6 Mission of Department of Mechanical Engineering**

- Committed to inculcate application of Engineering knowledge, develop problem analysis and solving skills to be able to investigate complex engineering problems with modern tools.
- Create value-driven engineering professionals who are sensitive to societal concerns of environmental sustainability through ethical conduct.
- Develop excellent communication abilities with core skills of project management and team work.
- Imbibe passion for lifelong learning with individual growth path.
- Commitment towards excellence in Mechanical Engineering education through advancements in research and innovation.

- Design flexible course contents in disciplinary, interdisciplinary and research areas to enhance student's competitiveness.

## **2. Preamble to the Program Regulations and Curriculum**

This is the subset of Academic Regulations and it is to be followed as a requirement for the award of B.Tech degree.

The Curriculum is designed to take into the factors listed in the Choice Based Credit System (CBCS) with focus on Social Project Based Learning, Industrial Training, and Internship to enable the students to become eligible and fully equipped for employment in industries, choose higher studies or entrepreneurship.

In exercise of the powers conferred by and in discharge of duties assigned under the relevant provision(s) of the Act, Statutes and Academic Regulations, 2025 of the University, the Academic Council hereby makes the following Regulations.

## **3. Short Title and Applicability**

- a. These Regulations shall be called the Bachelor of Technology Degree Program Regulations and Curriculum 2024-2028.
- b. These Regulations are subject to, and pursuant to the Academic Regulations.
- c. These Regulations shall be applicable to the ongoing Bachelor of Technology Degree Programs of the 2024-2028 batch, and to all other Bachelor of Technology Degree Programs which may be introduced in future.
- d. These Regulations shall supersede all the earlier Bachelor of Technology Degree Program Regulations and Curriculum, along with all the amendments thereto.
- e. These Regulations shall come into force from the Academic Year 2024-2025.

## **4. Definitions**

*In these Regulations, unless the context otherwise requires:*

- a. *"Academic Calendar" means the schedule of academic and miscellaneous events as approved by the Vice Chancellor;*
- b. *"Academic Council" means the Academic Council of the University;*
- c. *"Academic Regulations" means the Academic Regulations, of the University;*
- d. *"Academic Term" means a Semester or Summer Term;*
- e. *"Act" means the Presidency University Act, 2013;*
- f. *"AICTE" means All India Council for Technical Education;*
- g. *"Basket" means a group of courses bundled together based on the nature/type of the course;*
- h. *"BOE" means the Board of Examinations of the University;*
- i. *"BOG" means the Board of Governors of the University;*
- j. *"BOM" means the Board of Management of the University;*
- k. *"BOS" means the Board of Studies of a particular Department/Program of Study of the University;*
- l. *"CGPA" means Cumulative Grade Point Average as defined in the Academic Regulations;*
- m. *"Clause" means the duly numbered Clause, with Sub-Clauses included, if any, of these Regulations;*
- n. *"COE" means the Controller of Examinations of the University;*
- o. *"Course In Charge" means the teacher/faculty member responsible for developing and organising the delivery of the Course;*

- p. "Course Instructor" means the teacher/faculty member responsible for teaching and evaluation of a Course;
- q. "Course" means a specific subject usually identified by its Course-code and Course-title, with specified credits and syllabus/course-description, a set of references, taught by some teacher(s)/course-instructor(s) to a specific class (group of students) during a specific Academic Term;
- r. "Curriculum Structure" means the Curriculum governing a specific Degree Program offered by the University, and, includes the set of Baskets of Courses along with minimum credit requirements to be earned under each basket for a degree/degree with specialization/minor/honours in addition to the relevant details of the Courses and Course catalogues (which describes the Course content and other important information about the Course). Any specific requirements for a particular program may be brought into the Curriculum structure of the specific program and relevant approvals should be taken from the BOS and Academic Council at that time.
- s. "DAC" means the Departmental Academic Committee of a concerned Department/Program of Study of the University;
- t. "Dean" means the Dean / Director of the concerned School;
- u. "Degree Program" includes all Degree Programs;
- v. "Department" means the Department offering the degree Program(s) / Course(s) / School offering the concerned Degree Programs / other Administrative Offices;
- w. "Discipline" means specialization or branch of B.Tech. Degree Program;
- x. "HOD" means the Head of the concerned Department;
- y. "L-T-P-C" means Lecture-Tutorial-Practical-Credit – refers to the teaching – learning periods and the credit associated;
- z. "MOOC" means Massive Open Online Courses;
- aa. "MOU" means the Memorandum of Understanding;
- bb. "NPTEL" means National Program on Technology Enhanced Learning;
- cc. "Parent Department" means the department that offers the Degree Program that a student undergoes;
- dd. "Program Head" means the administrative head of a particular Degree Program/s;
- ee. "Program Regulations" means the Bachelor of Technology Degree Program Regulations and Curriculum, 2024-2028;
- ff. "Program" means the Bachelor of Technology (B.Tech.) Degree Program;
- gg. "PSOE" means the Presidency School of Engineering;
- hh. "Registrar" means the Registrar of the University;
- ii. "School" means a constituent institution of the University established for monitoring, supervising and guiding, teaching, training and research activities in broadly related fields of studies;
- jj. "Section" means the duly numbered Section, with Clauses included in that Section, of these Regulations;
- kk. "SGPA" means the Semester Grade Point Average as defined in the Academic Regulations;
- ll. "Statutes" means the Statutes of Presidency University;
- mm. "Sub-Clause" means the duly numbered Sub-Clause of these Program Regulations;
- nn. "Summer Term" means an additional Academic Term conducted during the summer break (typically in June-July) for a duration of about eight (08) calendar weeks, with a

*minimum of thirty (30) University teaching days;*  
*oo. "SWAYAM" means Study Webs of Active Learning for Young Aspiring Minds.*  
*pp. "UGC" means University Grant Commission;*  
*qq. "University" means Presidency University, Bengaluru; and*  
*rr. "Vice Chancellor" means the Vice Chancellor of the University.*

## **5. Program Description**

The Bachelor of Technology Degree Program Regulations and Curriculum 2024-2028 are subject to, and, pursuant to the Academic Regulations. These Program Regulations shall be applicable to the following ongoing Bachelor of Technology (B.Tech.) Degree Programs of 2024-2028 offered by the Presidency School of Engineering (PSOE):

1. Bachelor of Technology in Civil Engineering, abbreviated as B.Tech. (Civil Engineering)
2. Bachelor of Technology in Electronics and Communication Engineering, abbreviated as B.Tech. (Electronics and Communication Engineering)
3. Bachelor of Technology in VLSI, abbreviated as B.Tech. (VLSI)
4. Bachelor of Technology in Electrical and Electronics Engineering, abbreviated as B.Tech. (Electrical and Electronics Engineering)
5. Bachelor of Technology in Mechanical Engineering, abbreviated as B.Tech. (Mechanical Engineering); and
6. Bachelor of Technology in Petroleum Engineering, abbreviated as B.Tech. (Petroleum Engineering)

5.1 These Program Regulations shall be applicable to other similar programs, which may be introduced in future.

5.2 These Regulations may evolve and get amended or modified or changed through appropriate approvals from the Academic Council, from time to time, and shall be binding on all concerned.

5.3 The effect of periodic amendments or changes in the Program Regulations, on the students admitted in earlier years, shall be dealt with appropriately and carefully, so as to ensure that those students are not subjected to any unfair situation whatsoever, although they are required to conform to these revised Program Regulations, without any undue favour or considerations

## **6. Minimum and Maximum Duration**

- 6.1 Bachelor of Technology Degree Program is a Four-Year, Full-Time Semester based program. The minimum duration of the B.Tech. Program is four (04) years and each year comprises of two academic Semesters (Odd and Even Semesters) and hence the duration of the B.Tech. program is eight (08) Semesters.
- 6.2 A student who for whatever reason is not able to complete the Program within the normal period or the minimum duration (number of years) prescribed for the Program, may be allowed a period of two years beyond the normal period to complete the mandatory minimum credits requirement as prescribed by the concerned Program Regulations and Curriculum. In general, the permissible maximum duration (number of years) for completion of Program is 'N' + 2 years, where 'N' stands for the normal or minimum duration (number of years) for completion of the concerned Program as prescribed by the concerned Program Regulations and Curriculum.

- 6.3 The time taken by the student to improve Grades/CGPA, and in case of temporary withdrawal/re-joining (Refer to Clause 16.1 of Academic Regulations), shall be counted in the permissible maximum duration for completion of a Program.
- 6.4 In exceptional circumstances, such as temporary withdrawal for medical exigencies where there is a prolonged hospitalization and/or treatment, as certified through hospital/medical records, women students requiring extended maternity break (certified by registered medical practitioner), and, outstanding sportspersons representing the University/State/India requiring extended time to participate in National/International sports events, a further extension of one (01) year may be granted on the approval of the Academic Council.
- 6.5 The enrolment of the student who fails to complete the mandatory requirements for the award of the concerned Degree (refer Section 19.0 of Academic Regulations) in the prescribed maximum duration (Sub-Clauses 18.1 and 18.2 of Academic Regulations), shall stand terminated and no Degree shall be awarded.

## **7 Programme Educational Objectives (PEO)**

After four years of successful completion of the program, the graduates shall be to:

- PEO1.** Demonstrate success as Mechanical Engineer with innovative skills and moral and ethical values.
- PEO2.** Engage in lifelong learning through research and professional development,
- PEO3.** Serve as a leader in the profession through consultancy, extension activities or entrepreneurship.

## **8 Programme Outcomes (PO) and Programme Specific Outcomes (PSO)**

### **8.1 Programme Outcomes (PO)**

On successful completion of the Program, the students shall be able to:

- PO1. Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2. Problem Analysis:** Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3. Design/Development of Solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4. Conduct Investigations of Complex Problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5. Modern Tool Usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

- PO6. The Engineer and Society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO7. Environment and Sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9. Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- PO11. Project Management and Finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- PO12. Life-Long Learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

## **8.2 Program Specific Outcomes (PSOs):**

On successful completion of the Program, the students shall be able to:

- PSO1: Employability:** Acquire technical and managerial skill that make them an employable graduate.
- PSO2: Research:** Acquire theoretical background of each course that they are capable of applying it for solving real-time (Physical) problems.
- PSO3: Entrepreneurship:** Acquire time management, strategic thinking, team work, and network through out their course study and project work enable them to be an entrepreneurship.
- PSO4: Philanthropist:** Get experienced through SIC (Social Immersion Course), social outreach, blood donation and other social activity during their 4 years of stay and enable them to be a philanthropist.

## **9 Admission Criteria (as per the concerned Statutory Body)**

The University admissions shall be open to all persons irrespective of caste, class, creed, gender or nation. All admissions shall be made on the basis of merit in the qualifying examinations; provided that forty percent of the admissions in all Programs of the University shall be reserved for the students of Karnataka State and admissions shall be made through a Common Entrance Examination conducted by the State Government or its agency and seats shall be allotted as per the merit and reservation policy of the State Government from time to time. The admission criteria to the B.Tech. Program is listed in the following Sub-Clauses:

- 9.1 An applicant who has successfully completed Pre-University course or Senior Secondary School course (+2) or equivalent such as (11+1), 'A' level in Senior School Leaving Certificate Course from a recognized university of India or outside or from

- Senior Secondary Board or equivalent, constituted or recognized by the Union or by the State Government of that Country for the purpose of issue of qualifying certificate on successful completion of the course, may apply for and be admitted into the Program.
- 9.2 Provided further, the applicant must have taken Physics and Mathematics as compulsory subjects in the Pre-University / Higher Secondary / (10+2) / (11+1) examination, along with either Chemistry / Biology / Electronics / Computer Science / Biotechnology subject, and, the applicant must have obtained a minimum of 45% of the total marks (40% in case of candidates belonging to the Reserved Category as classified by the Government of Karnataka) in these subjects taken together.
- 9.3 The applicant must have appeared for Joint Entrance Examinations (JEE) Main / JEE (Advanced) / Karnataka CET / COMED-K, or any other State-level Engineering Entrance Examinations.
- 9.4 Reservation for the SC / ST and other backward classes shall be made in accordance with the directives issued by the Government of Karnataka from time to time.
- 9.5 Admissions are offered to Foreign Nationals and Indians living abroad in accordance with the rules applicable for such admission, issued from time to time, by the Government of India.
- 9.6 Candidates must fulfil the medical standards required for admission as prescribed by the University.
- 9.7 If, at any time after admission, it is found that a candidate had not in fact fulfilled all the requirements stipulated in the offer of admission, in any form whatsoever, including possible misinformation and any other falsification, the Registrar shall report the matter to the Board of Management (BOM), recommending revoking the admission of the candidate.
- 9.8 The decision of the BOM regarding the admissions is final and binding.

## **10 Lateral Entry / Transfer Students requirements**

### **10.1 Lateral Entry**

The University admits students directly to the second year (3<sup>rd</sup> Semester) of the B.Tech. Degree program as per the provisions and/or regulations of the Government of Karnataka pertaining to the "Lateral Entry" scheme announced by the Government from time to time. Further, the general conditions and rules governing the provision of Lateral Entry to the B.Tech. Program of the University are listed in the following Sub-Clauses:

- 10.1.1 Admission to 2<sup>nd</sup> year (3<sup>rd</sup> Semester) of the B.Tech. Degree program shall be open to the candidates who are holders of a 3-year Diploma in Engineering (or equivalent qualification as recognized by the University), who have secured not less than forty-five percentage (45%) marks in the final year examination (5<sup>th</sup> and 6<sup>th</sup> Semesters of the Diploma Program) in the appropriate branch of Engineering. Provided that, in case of SC / ST and OBC candidates from Karnataka the minimum marks for eligibility shall be forty percent (40%).
- 10.1.2 Provided further that, candidates seeking Lateral Entry may be required to complete specified bridge Courses as prescribed by the University. Such bridge Courses, if any, shall not be included in the CGPA computations.

- 10.1.3 All the existing Regulations and Policies of the University shall be binding on all the students admitted to the Program through the provision of Lateral Entry.
- 10.1.4 The Course requirements prescribed for the 1<sup>st</sup> Year of the B.Tech. Program shall be waived for the student(s) admitted through Lateral Entry and the duration of the B.Tech. Program for such students is three (03) years, commencing from the 3<sup>rd</sup> Semester (commencement of the 2<sup>nd</sup> Year) of the B.Tech. Program and culminating with the 8<sup>th</sup> Semester (end of the 4<sup>th</sup> Year) of the B.Tech. Program.
- 10.1.5 Provided that, if a Lateral Entry student misses any mandatory program specific courses that are typically offered in the 1<sup>st</sup> year (1<sup>st</sup> or 2<sup>nd</sup> semesters), then those courses must be cleared by the students as soon as possible, preferably during the Summer Term.
- 10.1.6 The existing Program Regulations of the concerned Program to which the student is admitted through the provision of Lateral Entry shall be binding on the student with effect from the 3<sup>rd</sup> Semester of the Program. i.e., the Program Structure and Curriculum from the 3<sup>rd</sup> to 8<sup>th</sup> Semesters of the Program concerned shall be binding on the student admitted through Lateral Entry. Further, any revisions / amendments made to the Program Regulations thereafter, shall be binding on all the students of the concerned Program.
- 10.1.7 All the Courses (and the corresponding number of Credits) prescribed for the 1<sup>st</sup> Year of the concerned B.Tech. Program shall be waived for the student(s) admitted to the concerned B.Tech Program through Lateral Entry. Further, the *Minimum Credit Requirements* for the award of the B.Tech. Degree in the concerned Program shall be prescribed / calculated as follows:

The ***Minimum Credit Requirements*** for the award of the Bachelor of Technology (B.Tech.) Degree prescribed by the concerned Bachelor of Technology Degree Program Regulations and Curriculum, 2024-2028, minus the number of Credits prescribed / accepted by the Equivalence Committee for the 1<sup>st</sup> Year (1<sup>st</sup> and 2<sup>nd</sup> Semesters) of the B.Tech. Program.

For instance, if the *Minimum Credit Requirements* for the award of the Bachelor of Technology (B.Tech.) Degree as prescribed by the Regulations for B.Tech. (Mechanical Engineering) is "N" Credits, and, if the total credits prescribed in the 1<sup>st</sup> Year (total credits of the 1<sup>st</sup> and 2<sup>nd</sup> Semesters) of the Program concerned is "M" Credits, then the *Minimum Credit Requirements* for the award of the B.Tech. in Mechanical Engineering for a student who joins the Program through the provision of the Lateral Entry, shall be "N – M" Credits.

- 10.1.8 Further, no other waiver except the Courses prescribed for the 1<sup>st</sup> year of the B.Tech. Program of the University shall be permissible for students joining the B.Tech. Program through the provision of Lateral Entry.

## **10.2 Transfer of student(s) from another recognized University to the 2<sup>nd</sup> year (3<sup>rd</sup> Semester) of the B.Tech. Program of the University**

A student who has completed the 1<sup>st</sup> Year (i.e., passed in all the Courses / Subjects prescribed for the 1<sup>st</sup> Year) of the B.Tech. / B.E. / B.S., Four-Year Degree Program from another recognized University, may be permitted to transfer to the 2<sup>nd</sup> Year (3<sup>rd</sup> Semester) of the B.Tech. Program of the University as per the rules and guidelines prescribed in the following Sub-Clauses:

**10.2.1** The concerned student fulfils the criteria specified in Sub-Clauses 10.1.1, 10.1.2 and 10.1.3.

**10.2.2** The student shall submit the Application for Transfer along with a non-refundable Application Fee (as prescribed by the University from time to time) to the University no later than July 10 of the concerned year for admission to the 2<sup>nd</sup> Year (3<sup>rd</sup> Semester) B.Tech. Program commencing on August 1 on the year concerned.

**10.2.3** The student shall submit copies of the respective Marks Cards / Grade Sheets / Certificates along with the Application for Transfer.

**10.2.4** The transfer may be provided on the condition that the Courses and Credits completed by the concerned student in the 1<sup>st</sup> Year of the B.Tech. / B.E. / B.S. Four Degree Program from the concerned University, are declared equivalent and acceptable by the Equivalence Committee constituted by the Vice Chancellor for this purpose. Further, the Equivalence Committee may also prescribe the Courses and Credits the concerned students shall have to mandatorily complete, if admitted to the 2<sup>nd</sup> Year of the B.Tech. Program of the University.

**10.2.5** The Branch / Discipline allotted to the student concerned shall be the decision of the University and binding on the student.

## **11. Change of Branch / Discipline / Specialization**

A student admitted to a particular Branch of the B.Tech. Program will normally continue studying in that Branch till the completion of the program. However, the University reserves the right to provide the option for a change of Branch, or not to provide the option for a change of Branch, at the end of 1<sup>st</sup> Year of the B.Tech. Program to eligible students in accordance with the following rules and guidelines: framed by the University from time to time.

**11.1** Normally, only those students, who have passed all the Courses prescribed for the 1<sup>st</sup> Year of the B.Tech. Program and obtained a CGPA of not less than 6.50 at the end of the 2<sup>nd</sup> Semester, shall be eligible for consideration for a change of Branch.

- 11.2 Change of Branch, if provided, shall be made effective from the commencement of the 3<sup>rd</sup> Semester of the B.Tech. Program. There shall be no provision for change of Branch thereafter under any circumstances whatsoever.
- 11.3 The student provided with the change of Branch shall fully adhere to and comply with the Program Regulations of the concerned Branch of the B.Tech. Program, the Fee Policy pertaining to that Branch of the B.Tech. Program, and, all other rules pertaining to the changed Branch existing at the time.
- 11.4 Change of Branch once made shall be final and binding on the student. No student shall be permitted, under any circumstances, to refuse the change of Branch offered.
- 11.5 The eligible student may be allowed a change in Branch, strictly in order of *inter se* merit, subject to the conditions given below:
- 11.5.1 The actual number of students in the 3<sup>rd</sup> Semester in any particular Branch to which the transfer is to be made, should not exceed the intake fixed by the University for the concerned Branch;
- 11.5.2 The actual number of students in any Branch from which transfer is being sought does not fall below 75% of the total intake fixed by the University for the concerned Branch.

The process of change of Branch shall be completed within the first five days of Registration for the 3<sup>rd</sup> Semester of the B.Tech. Program.

## **12 Specific Regulations regarding Assessment and Evaluation (including the Assessment Details of NTCC Courses, Weightages of Continuous Assessment and End Term Examination for various Course Categories)**

- 12.1** The academic performance evaluation of a student in a Course shall be according to the University Letter Grading System based on the class performance distribution in the Course.
- 12.2** Academic performance evaluation of every registered student in every Course registered by the student is carried out through various components of Assessments spread across the Semester. The nature of components of Continuous Assessments and the weightage given to each component of Continuous Assessments (refer Clause 8.8 of academic regulations) shall be clearly defined in the Course Plan for every Course, and approved by the DAC.
- 12.3** Format of the End-Term examination shall be specified in the Course Plan.
- 12.4** Grading is the process of rewarding the students for their overall performance in each Course. The University follows the system of Relative Grading with statistical

approach to classify the students based on the relative performance of the students registered in the concerned Course except in the following cases:

- Non-Teaching Credit Courses (NTCC)
- Courses with a class strength less than 30

Absolute grading method may be adopted, where necessary with prior approval of concerned DAC.

Grading shall be done at the end of the Academic Term by considering the aggregate performance of the student in all components of Assessments prescribed for the Course. Letter Grades (Clause 8.10 of academic regulations) shall be awarded to a student based on her/his overall performance relative to the class performance distribution in the concerned Course. These Letter Grades not only indicate a qualitative assessment of the student's performance but also carry a quantitative (numeric) equivalent called the Grade Point.

## 12.5 Assessment Components and Weightage

| <b>Table 1: Assessment Components and Weightage for different category of Courses</b>   |  |                  |
|---|--|------------------|
| <b>Nature of Course and Structure</b>   | <b>Evaluation Component</b>  | <b>Weightage</b> |
| <b>Lecture-based Course</b><br>L component in the L-T-P Structure is predominant (more than 1)<br>amples: 3-0-0; 3-0-2; 2-1-0; 2-0-2, 2-0-4 etc.)   | Continuous Assessments   | 50%              |
|   | End Term Examination   | 50%              |
| <b>Lab/Practice-based Course</b><br>P component in the L-T-P Structure is predominant<br>amples: 0-0-4; 1-0-4; 1-0-2; etc.)   | Continuous Assessments   | 50%              |
|   | End Term Examination   | 50%              |
| <b>Skill based Courses</b> like Industry Internship, Capstone project, Research Dissertation, Integrative Studio, Interdisciplinary Project, Summer / Short Internship, Social Engagement / Field Projects, Portfolio, and such similar Non-Teaching Credit Courses, where the pedagogy does not lend itself to a typical L-T-P structure | delines for the assessment components for the various types of Courses, with recommended weightages, shall be specified in the concerned Program Regulations and Curriculum / Course Plans, as applicable. |                  |

The exact weightages of Evaluation Components shall be clearly specified in the concerned PRC and respective Course Plan.

Normally, for Practice/Skill based Courses, without a defined credit structure (L-T-P) [NTCC], but with assigned Credits (as defined in Clause 5.2 of the Academic Regulations), the method of evaluation shall be based only on Continuous Assessments. The various components of Continuous Assessments, the distribution of weightage among such components, and the method of evaluation/assessment, shall be as decided and indicated in the Course Plan/PRC. The same shall be approved by the respective DAC.

## **12.6 Minimum Performance Criteria:**

### **12.6.1 Theory only Course and Lab/Practice Embedded Theory Course**

A student shall satisfy the following minimum performance criteria to be eligible to earn the credits towards the concerned Course:

- a. A student must obtain a minimum of 30% of the total marks/weightage assigned to the End Term Examinations in the concerned Course.
- b. The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of the components of Continuous Assessments, Mid Term Examinations and End Term Examinations in the concerned Course.

### **12.6.2 Lab/Practice only Course and Project Based Courses**

The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of all assessment components in the concerned Course.

- 12.6.3** A student who fails to meet the minimum performance criteria listed above in a Course shall be declared as "Fail" and given "F" Grade in the concerned Course. For theory Courses, the student shall have to re-appear in the "Make-Up Examinations" as scheduled by the University in any subsequent semester, or, re-appear in the End Term Examinations of the same Course when it is scheduled at the end of the following Semester or Summer Term, if offered. The marks obtained in the Continuous Assessments (other than the End Term Examination) shall be carried forward and be included in computing the final grade, if the student secures the minimum requirements (as per sub-Clause 8.9.1 and 8.9.2 of academic regulations) in the "Make-Up Examinations" of the concerned Course. Further, the student has an option to re-register for the Course and clear the same in the summer term/ subsequent semester if he/she wishes to do so, provided the Course is offered.

## **13 Additional clarifications - Rules and Guidelines for Transfer of Credits from MOOC, etc. – Note: These are covered in Academic Regulations**

The University allows students to acquire credits from other Indian or foreign institutions and/or Massive Open Online Course (MOOC) platforms, subject to prior approval. These credits may be transferred and counted toward fulfilling the minimum credit requirements for the award of a degree. The process of transfer of credits is governed by the following rules and guidelines:

- 13.1** The transfer of credits shall be examined and recommended by the Equivalence Committee (Refer ANNEXURE B of academic regulations) and approved by the Dean - Academics.
- 13.2** Students may earn credits from other Indian or foreign Universities/Institutions with which the University has an MOU, and that MOU shall have specific provisions, rules and guidelines for transfer of credits. These transferred credits shall be counted towards the minimum credit requirements for the award of the degree.

**13.3** Students may earn credits by registering for Online Courses offered by *Study Web of Active Learning by Young and Aspiring Minds* (SWAYAM) and *National Program on Technology Enhanced Learning* (NPTEL), or other such recognized Bodies/Universities/Institutions as approved by the concerned BOS and Academic Council from time to time. The concerned School/Parent Department shall publish/include the approved list of Courses and the rules and guidelines governing such transfer of credits of the concerned Program from time to time. The Rules and Guidelines for the transfer of credits specifically from the Online Courses conducted by SWAYAM/NPTEL/ other approved MOOCs are as stated in the following Sub-Clauses:

- 13.3.1** A student may complete SWAYAM/NPTEL/other approved MOOCs as mentioned in Clause 13.3 (as per academic regulations) and transfer equivalent credits to partially or fully complete the mandatory credit requirements of Discipline Elective Courses and/or the mandatory credit requirements of Open Elective Courses as prescribed in the concerned Curriculum Structure. However, it is the sole responsibility of the student to complete the mandatory credit requirements of the Discipline Elective Courses and the Open Elective Courses as prescribed by the Curriculum Structure of the concerned Program.
- 13.3.2** SWAYAM/NPTEL/ other approved MOOCs as mentioned in Clause 13.3 (as per academic regulations) shall be approved by the concerned Board of Studies and placed (as Annexures) in the concerned PRC.
- 13.3.3** Parent Departments may release a list of SWAYAM/NPTEL/other approved MOOCs for Pre-Registration as per schedule in the Academic Calendar or through University Notification to this effect.
- 13.3.4** Students may Pre-Register for the SWAYAM/NPTEL/other approved MOOCs in the respective Departments and register for the same Courses as per the schedule announced by respective Online Course Offering body/institute/university.
- 13.3.5** A student shall request for transfer of credits only from such approved Courses as mentioned in Sub-Clause 13.3.2 above.
- 13.3.6** SWAYAM/NPTEL/other approved MOOCs Courses are considered for transfer of credits only if the concerned student has successfully completed the SWAYAM/NPTEL/other approved MOOCs and obtained a certificate of successful/satisfactory completion.
- 13.3.7** A student who has successfully completed the approved SWAYAM/NPTEL/ other approved MOOCs and wants to avail the provision of transfer of equivalent credits, must submit the original Certificate of Completion, or such similar authorized documents to the HOD concerned, with a written request for the transfer of the equivalent credits. On verification of the Certificates/Documents and approval by the HOD concerned, the Course(s) and equivalent Credits shall be forwarded to the COE for processing of results of the concerned Academic Term.

- 13.3.8** The credit equivalence of the SWAYAM/NPTEL/other approved MOOCs are based on Course durations and/or as recommended by the Course offering body/institute/university. The Credit Equivalence mapped to SWAYAM/NPTEL approved Courses based on Course durations for transfer of credits is summarised in Table shown below. The Grade will be calculated from the marks received by the Absolute Grading Table 8.11 in the academic regulations.

| <b>Table 2: Durations and Credit Equivalence for Transfer of Credits from SWAYAM-NPTEL/ other approved MOOC Courses</b> |                        |                           |
|---|------------------------|---------------------------|
| <b>Sl. No.</b>  | <b>Course Duration</b> | <b>Credit Equivalence</b> |
| 1   | 4 Weeks                | 1 Credit                  |
| 2   | 8 Weeks                | 2 Credits                 |
| 3   | 12 Weeks               | 3 Credits                 |

- 13.3.9** The maximum permissible number of credits that a student may request for credit transfer from MOOCs shall not exceed 20% of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree.
- 13.3.10** The University shall not reimburse any fees/expense; a student may incur for the SWAYAM/NPTEL/other approved MOOCs.
- 13.4** The maximum number of credits that can be transferred by a student shall be limited to forty percent (40%) of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree. However, the grades obtained in the Courses transferred from other Institutions/MOOCs, as mentioned in this Section (13.0), shall not be included in the calculation of the CGPA.

## PART B – PROGRAM STRUCTURE

### 14. Structure / Component with Credit Requirements Course Baskets & Minimum Basket wise Credit Requirements

The B.Tech. (Mechanical Engineering) Program Structure (2024-2028) totaling 160 credits. Table 3 summarizes the type of baskets, number of courses under each basket and the associated credits that are mandatorily required for the completion of the Degree.

| <b>Table 3: B.Tech. (Mechanical Engineering) 2024-2028: Summary of Mandatory Courses and Minimum Credit Contribution from various Baskets</b> |  |                            |
|---|--|----------------------------|
| <b>Sl. No.</b>  | <b>Baskets</b>   | <b>Credit Contribution</b> |
| 1   | Humanities and Social Sciences including Management Courses (HSMC) | 09                         |
| 2   | Basic Science Courses (BSC)  | 17                         |
| 3   | Engineering Science Courses (ESC)                                  | 15                         |
| 4   | Professional Core Courses (PCC)                                    | 70                         |
| 5   | Professional Elective Courses (PEC)                                | 24                         |
| 6   | Open Elective Courses (OEC)  | 9                          |
| 7   | Project Work (PRW)   | 16                         |
| 8   | Mandatory Courses (MAC)  | 0                          |
|   | <b>Total Credits</b>   | <b>160 (Minimum)</b>       |

In the entire Program, the practical and skill based course component contribute to an extent of approximately 71% out of the total credits of 160 for B.Tech. (Mechanical Engineering) program of four years' duration.

The curriculum structure is designed as per the CBCS and incorporating OBE Principles. The students are provided with utmost flexibility in selection of the courses of their choice.

A student will have to complete a minimum of 15 credits of Discipline Electives from a given specialization basket, to earn a specialization certificate in addition to the base degree to which he/she has taken admission

| Minor Group                     | Minimum Credits from each minor group for various programs |                    |
|---------------------------------|--|--------------------|
|                                 | MECHANICAL (MEC)   | MECHATRONICS (MCM) |
| General                         | 15   | 9                  |
| Additive Manufacturing          | 9  |                    |
| Thermal and Fluids Engineering  |  |                    |
| Manufacturing Technology Basket |  |                    |

|   |           |           |
|---|-----------|-----------|
| <b>Mechanical Engineering Design</b>                            |           |           |
| <b>Mechatronics Basket</b>                                      |           | <b>15</b> |
| <b>Total credits to be earned in discipline elective basket</b> | <b>24</b> | <b>24</b> |

**15. Minimum Total Credit Requirements of Award of Degree**

As per the AICTE guidelines, a minimum of 160 credits is required for the award of a B.Tech. degree.

**16. Other Specific Requirements for Award of Degree, if any, as prescribed by the Statutory Bodies,**

- 16.1 The award of the Degree shall be recommended by the Board of Examinations and approved by the Academic Council and Board of Management of the University.
- 16.2 A student shall be declared to be eligible for the award of the concerned Degree if she/he:
  - a. Fulfilled the Minimum Credit Requirements and the Minimum Credits requirements under various baskets;
  - b. Secure a minimum CGPA of 4.50 in the concerned Program at the end of the Semester/Academic Term in which she/he completes all the requirements for the award of the Degree as specified in Sub-Clause 19.2.1 of Academic Regulations;
  - c. No dues to the University, Departments, Hostels, Library, and any other such Centers/ Departments of the University; and
  - d. No disciplinary action is pending against her/him.

## PART C – CURRICULUM STRUCTURE

### 17. Curriculum Structure – Basket Wise Course List (not Semester Wise)

#### List of Courses Tabled – aligned to the Program Structure

(Course Code, Course Name, Credit Structure (LTPC), Contact Hours, Course Basket, Type of Skills etc., as applicable).

**Table 3.1: List of Humanities and Social Sciences including Management Courses (HSMC)**

| S.No                        | Course Code | Course Name  | L | T | P | C        |
|-----------------------------|-------------|--|---|---|---|----------|
| 1                           | ENG1002     | Technical English  | 1 | 0 | 2 | 2        |
| 2                           | PPS1001     | Introduction to soft skills  | 0 | 0 | 2 | 1        |
| 3                           | ENG2001     | Advanced English   | 1 | 0 | 2 | 2        |
| 4                           | PPS1012     | Enhancing Personality through Soft skill                             | 0 | 0 | 2 | 1        |

### **18. Practical / Skill based Courses – Internships / Thesis / Dissertation / Capstone Project Work / Portfolio / Mini project**

Practical / Skill based Courses like internship, project work, capstone project, research project / dissertation, and such similar courses, where the pedagogy does not lend itself to a typical L-T-P-C Structure as defined in Clause 5.1 of the Academic Regulations are simply assigned the number of Credits based on the quantum of work / effort required to fulfill the learning objectives and outcomes prescribed for the concerned Courses. Such courses are referred to as Non-Teaching Credit Courses (NTCC). These Courses are designed to provide students with hands-on experience and skills essential for their professional development. These courses aim to equip students with abilities in problem identification, root cause analysis, problem-solving, innovation, and design thinking through industry exposure and project-based learning. The expected outcomes are first level proficiency in problem solving and design thinking skills to better equip B.Tech. graduates for their professional careers. The method of evaluation and grading for the Practical / Skill based Courses shall be prescribed and approved by the concerned Departmental Academic Committee (refer Annexure A of the Academic Regulations). The same shall be prescribed in the Course Handout.

#### **18.1 Internship**

A student may undergo an Internship for a period of 4-6 weeks in an industry / company or academic / research institution during the Semester Break between 4<sup>th</sup> and 5<sup>th</sup> Semesters or 6<sup>th</sup> and 7<sup>th</sup> Semesters. Alternatively, he/she may complete a 12 to 14 week internship during a full semester (7<sup>th</sup> or 8<sup>th</sup> semester) subject to the following conditions:

**18.1.1** The Internship shall be conducted in accordance with the Internship Policy prescribed by the University from time to time.

**18.1.2** The selection criteria (minimum CGPA, pass in all Courses as on date, and any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Internship to a student;

**18.1.3** The number of Internships available for the concerned Academic Term. Further, the available number of internships shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution providing the Internship, as stated in Sub-Clause 18.1.2 above.

**18.1.4** A student may opt for Internship in an Industry / Company or academic /

research institution of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the Internship on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Internship confirms to the University that the Internship shall be conducted in accordance with the Program Regulations and Internship Policy of the University.

**18.1.5** A student selected for an Internship in an industry / company or academic / research institution shall adhere to all the rules and guidelines prescribed in the Internship Policy of the University.

## **18.2 Project Work**

A student may opt to do a Project Work for a period of 4-6 weeks in an Industry / Company or academic / research institution or the University Department(s) as an equivalence of Internship during the Semester Break between 4<sup>th</sup> and 5<sup>th</sup> Semesters or 6<sup>th</sup> and 7<sup>th</sup> Semesters or during the 5<sup>th</sup> / 6<sup>th</sup> / 7<sup>th</sup> Semester as applicable, subject to the following conditions:

**18.2.1** The Project Work shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.

**18.2.2** The student may do the project work in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 18.2.1). Provided further, that the Industry / Company or academic / research institution offering such project work confirms to the University that the project work will be conducted in accordance with the Program Regulations and requirements of the University.

## **18.3 Capstone Project**

A student may undergo a Capstone Project for a period of 12-14 weeks in an industry / company or academic / research institution in the 7<sup>th</sup> / 8<sup>th</sup> Semester as applicable, subject to the following conditions:

**18.3.1** The Capstone Project shall be conducted in accordance with the Capstone Project Policy prescribed by the University from time to time.

**18.3.2** The selection criteria (minimum CGPA, pass in all Courses as on date, and any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Capstone Project to a student;

**18.3.3** The number of Capstone Project available for the concerned Academic Term. Further, the available number of Capstone Project shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution providing the Capstone Project, as stated in Sub-Clause 18.3.2 above.

**18.3.4** A student may opt for Capstone Project in an Industry / Company or academic / research institution of her / his choice, subject to the condition that the

concerned student takes the responsibility to arrange the I Capstone Project on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Capstone Project confirms to the University that the Capstone Project shall be conducted in accordance with the Program Regulations and Capstone Project Policy of the University.

**18.3.5** A student selected for a Capstone Project in an industry / company or academic / research institution shall adhere to all the rules and guidelines prescribed in the Capstone Project Policy of the University.

#### **18.4 Research Project / Dissertation**

A student may opt to do a Research Project / Dissertation for a period of 12-14 weeks in an Industry / Company or academic / research institution or the University Department(s) as an equivalence of Capstone Project, subject to the following conditions:

**18.4.1** The Research Project / Dissertation shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.

The student may do the Research Project / Dissertation in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 18.4.1). Provided further, that the Industry / Company or academic / research institution offering such Research Project / Dissertation confirms to the University that the Research Project / Dissertation work will be conducted in accordance with the Program Regulations and requirements of the University.

## 21. List of MOOC (NPTEL) Courses

### 21.1 NPTEL - Discipline Elective Courses for B. Tech. (Mechanical Engineering)

| Sl. No. | Course ID  | Course Name                                  | Duration |
|---------|------------|--|----------|
| 1       | noc25-me04 | Advanced Robotics                            | 12 Weeks |
| 2       | noc25-me09 | Basics of Mechanical Engineering - 2         | 12 Weeks |
| 3       | noc25-me15 | Design of Mechanical Transmission Systems    | 12 Weeks |
| 4       | noc25-me19 | Engine system and performance                | 12 Weeks |
| 5       | noc25-me27 | Finite Element Modeling Of Welding Processes | 12 Weeks |

### 21.2 NPTEL - Open Elective Courses for B. Tech. (Mechanical Engineering)

| Sl. No. | Course ID  | Course Name                                     | Duration |
|---------|------------|---|----------|
| 1       | noc25-me57 | Nonlinear Vibration                             | 12 Weeks |
| 2       | noc25-me64 | Principles Of Industrial Engineering            | 12 Weeks |
| 3       | noc25-me67 | Product Design and Manufacturing                | 12 Weeks |
| 4       | noc25-me70 | Robotics: Basics and Selected Advanced Concepts | 12 Weeks |
| 5       | noc25-me73 | Strength Of Materials                           | 12 Weeks |

## 22. Recommended Semester Wise Course Structure

### 23. Course Catalogue

Course Catalogue of all Courses Listed including the Courses Offered by other School / Department and Discipline / Programme Electives – Course Code, Course Name, Prerequisite, Anti-requisite, Course Description, Course Outcome, Course Content (with Blooms Level, CO, No. of Contact Hours), Reference Resources.

#### Course Catalogues:

The Course Catalogues for the Courses offered by the department of Mechanical Engineering are shared below:

## Course Catalogues:

|   |   |                |                                |
|---|---|----------------|--------------------------------|
| <b>Course Code:</b><br><b>CHE1018</b>   | <b>Course Title: Environmental Science</b><br><b>Type of Course: School Core-</b><br><b>Theory and Lab</b>  | <b>L-T-P-C</b> | <b>1-0-2-0</b>                 |
| <b>Course Pre-requisites</b>  | NIL   |                |                                |
| <b>Anti-requisites</b>  | NIL   |                |                                |
| <b>Course Description</b>   | This course emphasizes the need to conserve biodiversity and adopt a more sustainable lifestyle by utilizing resources in a responsible way. Topics covered include basic principles of ecosystem functions; biodiversity and its conservation; human population growth; water resources, pollution; climate change; energy resources, and sustainability; Sustaining human societies, policies, and education.<br><b>This course is designed to cater to Environment and Sustainability</b>                                    |                |                                |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of "Environmental Science" and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques.  |                |                                |
| <b>Course Outcomes</b>  | On successful completion of this course the students shall be able to:<br>1) Appreciate the historical context of human interactions with the environment and the need for eco-balance.<br>2) Describe basic knowledge about global climate change with particular reference to the Indian context.<br>3) Understand biodiversity and its conservation<br>4) Develop an understanding on types of pollution and ways to protect the environment<br>5) Learn about various strategies on Global environmental management systems |                |                                |
| <b>Course Content:</b>  |   |                |                                |
| <b>Module 1</b>   | Humans and the Environment  | Assignment     | Data Collection<br>01 sessions |
| Topics: The man-environment interaction: Mastery of fire; Origin of agriculture; Emergence of city-states; Great ancient civilizations and the environment.<br><br><i>Self-learning topics:</i> Humans as hunter-gatherers; Industrial revolution and its impact on the environment; Environmental Ethics and emergence of environmentalism.  |   |                |                                |
| <b>Module 2</b>   | Natural Resources and Sustainable Development   | Assignment     | 03 sessions                    |
| <b>Topics:</b><br>Overview of natural resources: Definition of resource; Classification of natural resources- biotic and abiotic, renewable and non-renewable. <b>Water resources:</b> Types of water resources- fresh water and marine resources;<br><b>Soil and mineral resources:</b> Important minerals; Mineral exploitation Soil as a resource and its degradation.<br><b>Energy resources:</b> Sources of energy and their classification, renewable and non-renewable sources of energy; Advantages and disadvantages.<br><b>Self- learning topics:</b> Availability and use of water resources; Environmental impact of over-exploitation, issues and challenges.; Environmental problems due to extraction of minerals and use; Sustainable Development Goals (SDGs)- targets, indicators, and challenges for SDGs. |   |                |                                |

|  |   |                 |               |             |
|--|---|-----------------|---------------|-------------|
| <b>Module 3</b>  | Environmental Issues:<br>Local, Regional and Global | Case study      |               | 02 sessions |
| <p><b>Topics:</b><br/>Environmental Pollution: Types of Pollution- air, noise, water, soil, municipal solid waste, hazardous waste; Trans-boundary air pollution; Acid rain; Smog.</p> <p>Land use and Land cover change: land degradation, deforestation, desertification, urbanization. Global change: Ozone layer depletion; Climate change</p> <p><i>Self-learning topics:</i> Environmental issues and scales</p>   |   |                 |               |             |
| <b>Module 4</b>  | Conservation of Biodiversity and Ecosystems         | Assignment      |               | 02 sessions |
| <p><b>Topics:</b><br/><b>Biodiversity</b>-Introduction, types, Species interactions, Extinct, endemic, endangered and rare species, Threats to biodiversity: Natural and anthropogenic activities.<br/><b>Self-learning topics:</b> Mega-biodiversity, Hot-spots, Major conservation policies. Biodiversity loss: past and current trends, impact.</p>   |   |                 |               |             |
| <b>Module 5</b>  | Environmental Pollution and Health                  | Case study      |               | 03 sessions |
| <p><b>Topics:</b><br/>Pollution, Definition, point and nonpoint sources of pollution, <b>Air pollution</b>- sources, major air pollutants, health impacts of air pollution.</p> <p><b>Water pollution</b>- Pollution sources, adverse health impacts on human and aquatic life and mitigation, Water quality parameters and standards.</p> <p><b>Soil pollution and solid waste</b>- Soil pollutants and their sources, solid and hazardous waste, Impact on human health.</p> <p><b>Self-learning topics:</b> Noise pollution, Thermal and radioactive pollution.</p>   |   |                 |               |             |
| <b>Module 6</b>  | Climate Change: Impacts, Adaptation and Mitigation  | Assignment/case |               | 02 sessions |
| <p><b>Topics:</b><br/><b>Understanding climate change:</b> Natural variations in climate; Projections of global climate change with special reference to temperature, rainfall and extreme events; Importance of 1.5 °C and 2.0 °C limits to global warming; Impacts</p> <p><b>Vulnerability and adaptation to climate change:</b> Observed impacts of climate change on ocean and land systems; Sea level rise, changes in marine and coastal ecosystems; Impacts on forests and natural ecosystems; Indigenous knowledge for adaptation to climate change.</p> <p><b>Self-learning topics:</b> Mitigation of climate change: Synergies between adaptation and mitigation measures; National and international policy instruments for mitigation.</p> |   |                 |               |             |
| <b>Module 7</b>  | Environmental Management                            | Case study      | Data analysis | 02 sessions |
| <p><b>Topics:</b><br/>Environmental management system: ISO 14001; Environmental risk assessment Pollution control and management; Waste Management- Concept of 3R (Reduce, Recycle and Reuse) and sustainability.</p> <p><b>Self-learning topics:</b> Environmental audit and impact assessment; Eco labeling /Eco mark scheme</p>   |   |                 |               |             |
| <b>Module 8</b>  | Environmental Treaties and Legislation              | Case study      | Data analysis | 01 sessions |
| <p><b>Topics:</b><br/>Major International Environmental Agreements: Convention on Biological Diversity (CBD), Major Indian Environmental Legislations: Environmental Protection Act, Forest Conservation Act, Public awareness.</p>  |   |                 |               |             |

|  |
|--|
| <p><b>Self-learning topics:</b> Paris Agreement, Conference of the Parties (COP), India's status as a party to major conventions: Air (Prevention and Control of Pollution) Act, Water (Prevention and control of Pollution) Act, Wildlife Protection Act.</p>   |
| <p><b>List of laboratory tasks : Any eight experiments will be conducted</b></p> <ol style="list-style-type: none"> <li>1. Determination of total alkalinity of a water sample (knowledge)</li> <li>2. Estimation of water hardness by EDTA method and its removal (by zeolite/ ion exchange method) (Comprehensive)</li> <li>3. Estimation of copper from industrial effluents by colorimetric method (Comprehensive)</li> <li>4. Estimation of iron from industrial effluents by titrimetric method/potentiometric method (Comprehensive)</li> <li>5. Estimation of nickel from industrial effluents by titrimetric method (Comprehensive)</li> <li>6. Estimation of chloride in drinking water by titrimetric method (Comprehensive)</li> <li>7. Estimation of fluoride in ground water by colorimetric method (Comprehensive)</li> <li>8. Determination of calcium in aqueous solution (Comprehensive)</li> <li>9. Determination of Total Dissolved Salts, conductivity and pH of a water samples (Knowledge)</li> <li>10. Determination of Chemical oxygen demand in the industrial effluent. (Comprehensive)</li> <li>11. Biological oxygen demand of waste water sample (Comprehensive)</li> <li>12. Determination of dissolved oxygen of an industrial effluent (Comprehensive)</li> <li>13. Quality monitoring analysis of a soil sample (knowledge)</li> <li>14. Flame photometric estimation of Sodium and potassium (Application)</li> <li>15. Gas Chromatographic analysis of volatile organic compounds (Application)</li> </ol> |
| <p><b>Targeted Application &amp; Tools that can be used:</b><br/> Application areas are Energy, Environment and sustainability<br/> <b>Tools:</b> Statistical analysis of environmental pollutants using excel, origin etc.</p>  |
| <p><b>Project work/Assignment:</b></p> <p>Assessment Type</p> <ul style="list-style-type: none"> <li>• Midterm exam</li> <li>• Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screenshot accessing the digital resource.)</li> <li>• Lab evaluation/Assignment</li> <li>• End Term Exam</li> <li>• Self-learning</li> </ul> <p>Assignment 1: Write a Statement of Environment report of your town/city/state/country</p> <p><b>Assignment 2:</b> Individual students will carry out the analyses of polluted solid, liquid, and gaseous samples and propose suitable mitigation measures. A detailed and in-depth report needs to be submitted for each case. This may include preparation of reagents, sample preparation (extraction), chemical analysis carried out, instruments and tools used, data collected and processed, inferences made and conclusions arrived at. Necessary support is given in the form of lab manual and reference links to e-books.</p>   |

**Topics relevant to Skill Development:**

Industrial revolution and its impact on the environment, Environmental impact of over-exploitation of water resources, pollution and ill effects, lab experiments for Skills development through Problem solving Techniques. This is attained through assessment component mentioned in course handout.

All topics in theory component are relevant to Environment and Sustainability.

| <b>Course Description</b>   | This basic course on engineering science is designed to introduce students to the fields of civil, mechanical and petroleum engineering. Student will be exposed to various fields in civil engineering and different manufacturing techniques in addition to machinery for power production and consumption. Additionally, students will be getting an overview of various sectors of oil & gas industries. This course acquaints students to basics of Industry 4.0 and Construction 4.0. The course aims to enable students to appreciate the multidisciplinary nature of engineering design and operations in the current era with mechanization and digitization transforming every aspect of engineering. |                   |  |            |   |   |   |
| <b>Course Objective</b>   | The objective of the course is skill development of student by using Participative Learning techniques.   |                   |  |            |   |   |   |
| <b>Course Outcomes</b>  | On successful completion of this course the students shall be able to:<br>1] Recognize the significance of various disciplines in Civil Engineering<br>2] Discuss the recent evolutions in Civil Engineering<br>3] Explain various energies, energy generating machineries and energy consumption machineries<br>4] Describe the fundamental concept and terminology associated with the Petroleum Industry<br>5] Distinguish between conventional and modern manufacturing techniques.   |                   |  |            |   |   |   |
| <b>Course Content:</b>  |   |                   |  |            |   |   |   |
| <b>Module 1</b>   | Introduction to various fields in Civil Engineering   | Assignment        | Case studies on different Civil Engineering Projects | 6 Sessions |   |   |   |
| Topics: Introduction to Civil Engineering: Definition, scope and branches of Civil Engineering, Role of Civil Engineer, Overview of Infrastructure.   |   |                   |  |            |   |   |   |
| <b>Module 2</b>   | Current Trends and Evolution in Civil Engineering   | Assignment        | Article Review                                       | 6 Sessions |   |   |   |
| Topics: Mechanization in Construction, Application of Digital Technologies in Planning, Design, execution, monitoring and maintenance of Construction. Overview of Smart Cities.  |   |                   |  |            |   |   |   |
| <b>Module 3</b>   | Power Production and Consumption Machinery  | Assignment & Quiz | Data Collection                                      | 6 Sessions |   |   |   |
| Topics: Energy and its types, Engines and their applications, Pumps-Compressors and their applications.   |   |                   |  |            |   |   |   |
| <b>Module 4</b>   | Overview of Petroleum Engineering   | Assignment & Quiz | Article Review                                       | 6 Sessions |   |   |   |
| Overview of the Petroleum Industry, Importance of Petroleum Engineering, lifecycle of Petroleum products, Classifications of E&P activities: Key difference between Offshore and Onshore, Onshore facilities, offshore platforms, Digitization of petroleum engineering |   |                   |  |            |   |   |   |
| <b>Module 5</b>   | Industry 4.0  | Assignment & Quiz | Data Collection                                      | 6 Sessions |   |   |   |
| Topics: Conventional manufacturing process: Metal forming, metal removal and metal joining process.<br>Modern Manufacturing process: 3D Printing / Additive Manufacturing.  |   |                   |  |            |   |   |   |

|   |
|---|
| <p><b>Targeted Application &amp; Tools that can be used:</b></p> <p>Application Areas include design and implementation of Smart City projects, Infrastructure maintenance, Power production, IC engines, Electric vehicles, onshore and offshore exploration and production activities</p>   |
| <p><b>Project work/Assignment:</b></p> <p>Assignment 1: Collect data and prepare report on various Mega Projects in Civil Engineering</p> <p>Assignment 2: Review Articles on current evolutions in Civil Engineering.</p> <p>Assignment 3: Collect data related to renewable energy generation (Wind, Solar)</p> <p>Assignment 4: Prepare an energy consumption chart for a compressor or pumps.</p> <p>Assignment 5: Prepare a report on role of 3D printing across various industries.</p> <p>Assignment 6: Prepare an assignment on geopolitical influence on oil and gas industries.</p>   |

| <b>Course Description</b>   | This is a fundamental Course which is designed to know the use of basics of electrical and electronics engineering principles occurs in various fields of Engineering. The course emphasises on the characteristics and applications of electrical and electronic devices. The course also emphasizes on the working, analysis and design of electrical circuits using both active & passive components. Additionally, this course creates a foundation for the future courses such as Electrical machines, power system, power electronics Linear Integrated Circuits, Analog Communication and Digital Communication etc.<br>The associated laboratory provides an opportunity to validate the concepts taught and enhances the ability to visualize the real system performance, using both hardware and simulation tools.   |                  |                |         |             |   |   |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of Basics of Electrical and Electronics Engineering and attain <b>Skill Development</b> through <b>Experiential Learning</b> techniques.   |                  |                |         |             |   |   |
| <b>Course Outcomes</b>  | <b>On successful completion of this course the students shall be able to:</b><br>1. <b>Apply</b> basic laws of Electrical Engineering to compute voltage, currents and other parameters in the circuits.<br>2. <b>Discuss</b> the performance characteristics and applications of various electrical Machines.<br>3. <b>Discuss</b> various fundamental parameters appearing in the characteristics of semiconductor devices and their applications.<br>4. <b>Summarize</b> the operations of different biasing configurations of BJTs and amplifiers.<br>5. <b>Demonstrate</b> the working of electrical machines to observe performance characteristics<br>6. <b>Demonstrate</b> the working of electronic circuits to obtain the V-I Characteristics of various semiconductor devices.<br>7. <b>Sketch</b> the characteristics and waveforms relevant to standard electrical and electronic circuits |                  |                |         |             |   |   |
| <b>Course Content:</b>  |   |                  |                |         |             |   |   |
| <b>Module 1</b>   | Introduction to Electrical Circuits   | Assignment/ Quiz | merical Task   | solving | 13 Sessions |   |   |
| DC Circuits: Concept of Circuit and Network, Types of elements, Network Reduction Techniques- Series and parallel connections of resistive networks, Star-to-Delta Transformations, Mesh Analysis, Nodal Analysis, Numerical examples.<br>AC Circuits: Fundamentals of single phase circuits - Series RL, RC and R-L-C Circuits, Concept of active power, reactive power and Power factor, Numerical examples.<br>Introduction to three phase system and relation between line and phase values in Star & Delta connection, Numerical examples. |   |                  |                |         |             |   |   |
| <b>Module 2</b>   | Fundamentals of Electrical Machines   | Assignment/ Quiz | merical Task   | solving | 12 Sessions |   |   |
| Electrical Machines: Single phase transformers: principle of operation and EMF equation, Numerical examples. DC Motor: principle of operation, Back EMF, torque equation, Numerical examples. AC Motor: Principle operation of Induction Motors and its Applications.   |   |                  |                |         |             |   |   |

|   |                                      |                  |                             |             |
|---|--------------------------------------|------------------|-----------------------------|-------------|
| Special Machines: Introduction to special electrical machines and its applications.   |                                      |                  |                             |             |
| <b>Module 3</b>   | Semiconductor and Diode applications | Assignment/ Quiz | Memory Recall based Quizzes | 10 Sessions |
| Mass Action Law, Charge densities in a semiconductor, Types of SC, Junction diodes -Ideal and practical behaviour, Modelling the Diode Forward Characteristic, and Diode applications like rectifiers, Clipping and clamping circuits. Zener diode, characteristics and its applications like voltage regulator.  |                                      |                  |                             |             |
| <b>Module 4</b>   | Transistors and its Applications     | Assignment/ Quiz | Memory Recall-based Quizzes | 10 Sessions |
| <p>Transistor characteristics, Current components, BJT Configurations (CB, CC, CE configurations) and their current gains. Operating point, Biasing &amp; stabilization techniques: Fixed Bias, Voltage divider bias and its stability factor and load line analysis. Single and multistage amplifier, Darlington pair.</p> <p>JFET (Construction, principal of Operation and Volt –Ampere characteristics). Pinch- off voltage, Comparison of BJT and FET. MOSFET (Construction, principal of Operation and symbol), MOSFET characteristics in Enhancement and Depletion modes.</p> <p><b>List of Laboratory Tasks:</b></p> <p><b>Experiment No 1:</b> Verification of KVL and KCL for a given DC circuit.</p> <p><b>Level 1:</b> Study and Verify KVL and KCL for the given electrical Circuit.</p> <p><b>Level 2:</b> For the same circuit considered in level 1, perform the simulation using NI LabVIEW/Multisim/MATLAB.</p> <p><b>Experiment No 2:</b> Analyse AC series circuits – RL, RC and RLC .</p> <p><b>Level 1:</b> Conduct an experiment to perform and verify the impedance, current and power of Series RL and RC circuits</p> <p><b>Level 2:</b> Conduct an experiment to perform and verify the impedance and current of RLC series circuits.</p> <p><b>Experiment No 3:</b> Calculation of power and power factor of the given AC Circuit.</p> <p><b>Level 1:</b> Conduct an experiment to measure the power and power factor for given resistive load.</p> <p><b>Level 2:</b> Conduct an experiment to measure the power and power factor for given inductive load.</p> <p><b>Experiment No 4:</b> Perform the experiments on given Transformer.</p> <p><b>Level 1:</b> Verify the EMF equation of a transformer and compute the voltage transformation ratio.</p> <p><b>Level 2:</b> Study the effect of load on the secondary side of the transformer and verify the EMF equation under load conditions.</p> <p><b>Experiment No 5:</b> Load test on DC shunt motor</p> <p><b>Level 1:</b> Conduct load test on DC shunt motor and find its efficiency at different loads</p> <p><b>Level 2:</b> Conduct load test on DC shunt motor and plot the performance characteristics.</p> <p><b>Experiment 6:</b> Study of PN-Junction Diode Characteristics in Forward and Reverse Bias Conditions.</p> <p><b>Level 1:</b> Carry out an experiment to plot VI Characteristics and hence find the cut-in voltage on forward characteristics for the Silicon P-N Junction diode.</p> <p><b>Level 2:</b> Carry out an experiment to plot VI Characteristics of Zener diode and hence find the zener voltage on reverse characteristics for the Silicon P-N Junction zener diode.</p> <p><b>Experiment No. 7:</b> To observe the output waveform of half wave and full wave rectifier circuit and compute ripple factor and efficiency</p> <p><b>Level 1:</b> Identify the components required for a rectifier circuit, rig up the circuit, and sketch the output waveforms without filter.</p> <p><b>Level 2:</b> Rig up the rectifier circuit with RC filter, observe the output waveforms, determine the efficiency and ripple factor.</p> <p><b>Experiment 8:</b> To construct clipping and clamping circuits for different reference voltages and to verify the responses.</p> <p><b>Level 1:</b> Identify the components required for building a Clipper / Clamper circuit. Rig up the circuit according to the circuit diagram given and sketch the output waveform.</p> <p><b>Level 2:</b> Given a sinusoidal input of 10 V p-p, implement a positive / negative clipper with output clipped at 2 V.</p> <p><b>Experiment 9:</b> To calculate various parameters of emitter follower circuit using BJT</p> |                                      |                  |                             |             |

**Level 1:** Identify the components required to implement an emitter follower circuit. Rig up the circuit and observe the variations in output waveform with respect to the variations in input waveform.

**Level 2:** Determine the values of  $Z_{in}$  input impedance and  $Z_{out}$  output impedance for Emitter Follower.

**Experiment 10:** To Implement RC Coupled amplifier using a BJT and sketch the frequency response.

**Level 1:** Identify the components required to implement an RC coupled amplifier circuit. Rig up the circuit and sketch the frequency response.

**Level 2:** From the frequency response curve determine the value of the mid band gain and the bandwidth.

**Targeted Application & Tools that can be used:**

**Targeted Applications:** Application Area includes all electrical and electronic circuits (power supply unit, regulator unit, embedded devices, hardware electronics etc.). The students will be able to join a profession which involves basics to high level of electronic circuit design.

Professionally Used Software: Multisim/ P Spice

Besides these software tools hardware equipment such as Multimeters, Function Generators, Power Supplies, Oscilloscopes etc., can be used to perform component/circuit testing and analysis..

**Project Work/ Assignment:**

**1. Article review:** At the end, of course an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format.

**2. Presentation:** There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

**3. Case Study:** - At the end of the course students will be given a 'real-world' application based circuits like Power Amplifier, Signal/Function Generator etc. as a case study. Students will be submitting a report which will include Circuit Diagrams, Design, Working Mechanism and Results etc. in appropriate format

| <b>Anti-requisites</b>  | None  |                |               |             |   |   |
| <b>Course Description</b>   | The goal of this course is to provide a firm understanding of probability and statistics by means of a thorough treatment of descriptive statistics, probability and probability distributions keeping in mind the future courses having statistical, quantitative and probabilistic components. The course covers topics such as descriptive statistics, probability, rules for probability, random variables and probability distributions, standard discrete and continuous probability distributions. |                |               |             |   |   |
| <b>Course Objective</b>   | The objective of the course is to <b>familiarize the learners with the concepts of "Applied Statistics"</b> and attain <b>Skill Development Through Problem Solving techniques.</b>   |                |               |             |   |   |
| <b>Expected Outcome:</b>  | At the end of this course, students will be in a position to<br><br>1. Apply the techniques of descriptive statistics effectively<br>2. Interpret the ideas of probability and conditional probability<br>3. Demonstrate the knowledge of probability distributions<br>4. Compute statistical parameters, correlation and regression, probability and sampling distributions using R software.  |                |               |             |   |   |
| <b>Module 1</b>   | Descriptive Statistics  | Assignment     | Coding needed | 12sessions  |   |   |
| Introduction to Statistics, Data and statistical thinking, review of basic statistical parameters, Covariance, Correlation, Types of Measures of Correlation - Karl Pearson's Correlation Coefficient, Spearman Rank Correlation, linear regression, Multi linear regression .  |   |                |               |             |   |   |
| <b>Module 2</b>   | Probability   |                |               | 6 sessions  |   |   |
| Introduction to Probability, Probability of an event, Addition Principle, Multiplication law, Conditional Probability, Total Probability and Baye's theorem with examples   |   |                |               |             |   |   |
| <b>Module 3</b>   | Random Variables and Probability Distributions  |                | Coding needed | 15 sessions |   |   |
| Introduction to Random variables, Discrete Random Variables and Continuous Random Variables, Probability Distributions, Probability Mass Function and Probability Density Function, Various Probability distributions, Binomial, Negative Binominal (Self Study), Poisson, Normal and Exponential distributions   |   |                |               |             |   |   |
| <b>Module 4</b>   | Sampling Theory   |                | Coding needed | 12 sessions |   |   |
| Introduction to Sampling Theory, Population, Statistic, Parameter, Sampling Distribution, Standard Error. Testing of Hypothesis, Types of Errors, Critical Region, level of Significance. Difference between Parametric and Non-parametric Tests, Large Sample Tests: Z-Test for Single Mean and Difference of Means (Self Study), Small Sample Tests: Student's t-Test for Single Mean and Difference of Means, F-Test, Chi-Square Test. |   |                |               |             |   |   |
| <b>Targeted Application &amp; Tools that can be used:</b>   |   |                |               |             |   |   |

The objective of the course is to familiarize students with the theoretical concepts of probability and statistics and to equip them with basic statistical tools to tackle engineering and real-life problems.

Tools used: R Software / MS-Excel

**Topics relevant to SKILL DEVELOPMENT:** The goal of this course is to provide a firm understanding of probability and statistics by means of a thorough treatment of descriptive statistics, probability and probability distributions keeping in mind the future courses having statistical, quantitative and probabilistic components. The course covers topics such as descriptive statistics, probability, rules for probability, random variables and probability distributions, standard discrete and continuous probability distributions for **Skill Development through Problem Solving methodologies**. This is attained through assessment component mentioned in course handout.

| <b>Course Pre-requisites</b>  | NIL   |            |                 |                   |   |   |   |
| <b>Anti-requisites</b>  | NIL   |            |                 |                   |   |   |   |
| <b>Course Description</b>   | The course is designed to provide complete knowledge of C language. Students will be able to develop logics which will help them to create programs and applications in C. Also by learning the basic programming constructs they can easily switch over to any other language in future.   |            |                 |                   |   |   |   |
| <b>Course Object</b>  | The objective of the course is to familiarize the learners with the concepts of Problem Solving Using C and attain Employability through Problem Solving Methodologies.   |            |                 |                   |   |   |   |
| <b>Course Outcomes</b>  | <b>On successful completion of this course the students shall be able to:</b><br>1. Write algorithms and to draw flow charts for solving problems<br>2. Demonstrate knowledge and develop simple applications in C programming constructs<br>3. Develop and implement applications using arrays and strings<br>4. Decompose a problem into functions and develop modular reusable code<br>5. Solve applications in C using structures and Union<br>6. Design applications using Sequential and Random Access File Processing. |            |                 |                   |   |   |   |
| <b>Course Content:</b>  |   |            |                 |                   |   |   |   |
| <b>Module1</b>  | Introduction to C Language  | Quiz       | Problem Solving | <b>9 Sessions</b> |   |   |   |
| Topics: Introduction to Programming – Algorithms – Pseudo Code -Flow Chart – Compilation – Execution – Preprocessor Directives (#define, #include, #undef) - Overview of C – Constants, Variables and Data types – Operators and Expressions – Managing Input and Output Operations – Decision Making and Branching - Decision Making and Looping.  |   |            |                 |                   |   |   |   |
| <b>Module2</b>  | Introduction to Arrays and Strings  | Quiz       | Problem Solving | <b>9 Sessions</b> |   |   |   |
| Topics: <b>Arrays:</b> Introduction – One Dimensional Array – Initialization of One Dimensional Arrays – Example Programs –Sorting (Bubble Sort, Selection Sort) – Searching (Linear Search) - Two Dimensional Arrays – Initialization of Two Dimensional Arrays. Example Programs– Matrix operations. <b>Strings:</b> Introduction– Declaring and Initializing String Variables–Reading Strings from Terminal–Writing String to Screen– String Handling Functions. |   |            |                 |                   |   |   |   |
| <b>Module3</b>  | Functions and Pointers  | Quiz       | Problem Solving | <b>9 Sessions</b> |   |   |   |
| Topics: <b>Functions:</b> Introduction – Need for User-defined functions – Elements of User-Defined Functions: declaration, definition and function call–Categories of Functions – Recursion. <b>Pointers:</b> Introduction – Declaring Pointer Variables–Initialization of Variables –Pointer Operators–Pointer Arithmetic–Arrays and Pointers–Parameter Passing: Pass by Value, Pass by Reference.  |   |            |                 |                   |   |   |   |
| <b>Module4</b>  | Structures and Union  | Quiz       | Problem Solving | <b>9 Sessions</b> |   |   |   |
| Topics: <b>Structures:</b> Introduction–Defining a Structure–Declaring Structure Variable–Accessing Structure Members –Array of Structures –Arrays within Structures– <b>Union:</b> Introduction–Defining and Declaring Union–Difference Between Union and Structure.   |   |            |                 |                   |   |   |   |
| <b>Module5</b>  | File handling   | Case Study | Problem Solving | <b>9 Sessions</b> |   |   |   |
| Topics: Files: Defining and Opening a File –Closing a File–Input/ Output Operation File – Random Access Files   |   |            |                 |                   |   |   |   |

| <b>Topics relevant to SKILL DEVELOPMENT:</b> The course focuses on the concepts of calculus and linear algebra with reference to specific engineering problems. The course is of both conceptual and analytical type in nature. The lab sessions associated with the course are concerned with acquiring an ability to use the MATLAB software. for <b>Skill Development through Experiential Learning methodologies</b> . This is attained through assessment component mentioned in course handout.  |                        |            |  |             |             |

| <b>Course Description</b>   | This basic course in mechanical engineering is designed to acquaint students with an exposure to fundamentals of mechanical engineering. The very purpose of this course is to introduce the field of mechanical engineering through an exposition of its broader areas. This course provides insights into fundamental aspects of mechanical engineering. It also introduces the field of mechanical engineering through an exposition of its broader areas such as thermal energy, power transmission drives, manufacturing processes etc. |                      |  |          |            |          |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Elements of Mechanical Engineering</b> ” and attain <b>SKILL DEVELOPMENT</b> through Experiential learning techniques.  |                      |  |          |            |          |
| <b>Course Outcomes</b>  | <b>On successful completion of this course the students shall be able to:</b><br><br>CO1: Describe different types of energy resources, prime movers, refrigeration and air-conditioning system.<br>CO2: Explain various power transmission systems used in Mechanical Engineering.<br>CO3: Classify different metal cutting processes and machine tools used in industries.<br>CO4: Identify the different metal joining processes like Welding.  |                      |  |          |            |          |
| <b>Course Content:</b>  |  |                      |  |          |            |          |
| <b>Module 1</b>   | Thermal Engineering  | Assignmen<br>t       | Data Collection/any other such associated activity |          | 4 Sessions |          |
| Topics:<br>Steam formation and its properties, laws of thermodynamics (Numerical based on First Law), Types of Systems, Introduction to refrigerators and room air conditioning system. |  |                      |  |          |            |          |
| <b>Module 2</b>   | Prime Movers   | Assignmen<br>t       | Data Collection/any other such associated activity |          | 4 Sessions |          |
| Topics:<br>Introduction to different types of prime movers like IC engines (4-stroke) and Turbines (Water).   |  |                      |  |          |            |          |
| <b>Module 3</b>   | Mechanical Power Transmission Drives   | Assignmen<br>t- Quiz | Data Collection/any other such associated activity |          | 4 Sessions |          |
| Topics:<br>Classification of different power transmission systems.  |  |                      |  |          |            |          |
| <b>Module 4</b>   | Manufacturing Processes  | Assignmen<br>t -Quiz | Data Collection/any other such associated activity |          | 3 Sessions |          |
| Topics:<br>Introduction to Manufacturing processes deals with machines tools, welding (arc)   |  |                      |  |          |            |          |

| <b>List of Laboratory Tasks:</b>   |  |
|--|--|
| Experiment NO 1: Making of TWO / THREE welding models using Arc Welding technique.   | 4 Sessions   |
| Experiment No. 2: Making of TWO simple sheet metal models and joining using Soldering technique.   | 4 Sessions   |
| Experiment No. 3: Making of TWO fitting models.  | 4 Sessions   |
| Experiment No. 4: Plumbing, electrical wiring and other Life Skill techniques. Any TWO to be done. Targeted Application & Tools that can be used:  | 4 Sessions   |
| <b>Targeted Application &amp; Tools that can be used:</b><br>Application Area is Alternate energy resources – data collection related to renewable energy resources. IC engines. And Electric vehicles<br>Professionally Used Software: C programming/ Python/ MATLAB  |  |

| Course Description   | This course is designed to equip students to enhance their communication abilities in Listening, Speaking, Reading, and Writing. The curriculum covers interpersonal communication principles, the art of speech writing and delivery (including impromptu speaking), strategic approaches to critical reading, the identification of logical fallacies, and persuasive writing. Furthermore, the course will introduce students to the potential of AI tools and the techniques of prompt engineering to elevate their communication skills in the digital age. Upon course completion, students will be well-prepared to communicate effectively and critically in both academic and professional environments. |                         |                                |            |   |   |   |
| Course Outcomes  | On successful completion of the course the students shall be able to:<br>1. Recognize the elements of interpersonal and cross-cultural communication to address communication challenges effectively.<br>2. Demonstrate the ability to deliver structured and impromptu speeches using effective speaking techniques.<br>3. Interpret textual and visual materials using critical reading strategies to evaluate arguments, logic, and persuasion.<br>4. Produce persuasive and analytical essays using effective argumentation techniques and structured writing strategies.   |                         |                                |            |   |   |   |
| Course Content: Theory   |   |                         |                                |            |   |   |   |
| Module 1   | Foundations of Effective Communication  | Case Studies/ Role play | Cross-Cultural Competency      | 4 sessions |   |   |   |
| Topics: <ul style="list-style-type: none"><li>Fundamentals of Interpersonal Communication</li><li>Verbal, Non-verbal, and Paraverbal communication.</li><li>Cultural dimensions theory (Hofstede’s Cultural Dimensions).</li><li>Active Listening Techniques</li><li>Common Errors in Communication</li></ul>  |   |                         |                                |            |   |   |   |
| Module 2   | Mastering Speech Delivery   | JAM                     | Public Speaking Confidence     | 4 sessions |   |   |   |
| Topics: <ul style="list-style-type: none"><li>Introduction to Prompt Engineering</li><li>Speech Preparation and Organization</li><li>Techniques for Effective Impromptu Speaking</li><li>Practice Speech Delivery</li></ul>  |   |                         |                                |            |   |   |   |
| Module 3   | Critical Reading and Logical Analysis   | Worksheet               | Critical Thinking and Analysis | 4 sessions |   |   |   |
| Topics: <ul style="list-style-type: none"><li>Critical Reading Strategies: Contextualizing, Figurative Language, Evaluating Logic of an Argument, Recognizing Emotional Manipulation, Analysing Visuals</li><li>Recognizing Logical Fallacies: Slippery Slope, False Dilemma, Post Hoc, Hasty Generalization, Ad Hominem, Straw Man, Bandwagon, No True Scotsman, Red Herring, Appeal to Authority, Sunk Cost, Appeal to ignorance</li></ul> |   |                         |                                |            |   |   |   |
| Module 4   | Writing Effective Arguments   | Assignment              | Clear and Coherent Writing     | 3 sessions |   |   |   |

|   |   |            |
|---|---|------------|

| <b>Course Description</b>  | The course is designed with the objective of giving an overview of engineering drawing with the help of software tools. It is introductory in nature and acquaints the students with the techniques used to create engineering drawings with computerized drafting tools. Computerized drafting provides accurate and easily modifiable graphic entities, easy data storage, easy retrieval facility and it enhances creativity. It will expose students to the concept of engineering drawing and teach them to draw different views of planes and solids in different orientations. The course will teach students to use AutoCAD to produce engineering drawings. They will learn to create drawing layouts, dimensioning, the theory of projection, orthographic projection of points, lines, planes and solids, isometric projection and be introduced to the development of surfaces. |            |                             |             |   |   |   |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Engineering Graphics</b> ” and attain <b>SKILL DEVELOPMENT</b> through Problem solving methodologies.  |            |                             |             |   |   |   |
| <b>Course Outcomes</b>   | On successful completion of this course the students shall be able to:<br>(1) Demonstrate competency using AutoCAD graphics software as per BIS conventions and standards.<br>(2) Comprehend the theory of projection for drawing projections of Points, Lines and Planes under different conditions.<br>(3) Prepare multiview orthographic projections of Solids by visualizing them in different positions.<br>(4) Prepare pictorial drawings using the principles of isometric projections to visualize objects in three dimensions.   |            |                             |             |   |   |   |
| <b>Course Content</b>  |   |            |                             |             |   |   |   |
| <b>Module 1</b>  | Introduction to Drawing   | Assignment | Standard technical drawing  | 02 sessions |   |   |   |
| Topics:<br>Introduction, drawing instruments and their uses, relevant BIS conventions and standards, Lettering, Line conventions, dimensioning, Selection of drawing sheet size and scale.<br>[02 sessions : Comprehension Level]        |   |            |                             |             |   |   |   |
| <b>Module 2</b>  | Orthographic projections of Points, Straight Lines and Plane Surfaces   | Assignment | Projection methods Analysis | 10 sessions |   |   |   |
| Topics:<br>Introduction, Definitions – Elements of projection and methods of projection, Planes of projection, reference line and conventions adopted. First angle and third angle projections. Projection of Points in all 4 quadrants. |   |            |                             |             |   |   |   |

|   |  |            |                             |             |
|---|--|------------|-----------------------------|-------------|
| Projections of Straight Lines (located in first quadrant/first angle projection only): True and apparent lengths, true and apparent Inclinations to reference planes. (No application problems). Projection of Plane surfaces (First angle projection): Regular plane surfaces – triangle, square, rectangle, pentagon, hexagon and circle – in different positions inclined to both the planes using change of position method only. [10 sessions : Application Level] |  |            |                             |             |
| <b>Module 3</b>   | Orthographic Projections of Solids                           | Assignment | Multi-view drawing Analysis | 10 sessions |
| <b>Topics:</b><br>Introduction, Projection of right regular prisms, pyramids, cone, hexahedron and tetrahedron in different positions (Problems resting on HP only and First angle projection). [10 sessions : Application Level]   |  |            |                             |             |
| <b>Module 4</b>   | Isometric Projections of Solids (Using isometric scale only) | Assignment | Spatial Visualization       | 8 sessions  |
| <b>Topics:</b><br>Introduction, Isometric scale, Isometric projections of right regular prisms, cylinders, pyramids, cones and their frustums, spheres and hemispheres, hexahedron (cube), and combination of 2 solids, conversion of orthographic view to isometric projection of simple objects. [8 sessions : Application Level]   |  |            |                             |             |
| <b>Targeted Application &amp; Tools that can be used:</b><br>Application Area is in understanding and interpreting an object in various positions and converting it into a technical drawing which can be universally accepted.<br>Professionally Used Software: AutoCAD  |  |            |                             |             |

| <b>Course Code:</b><br><b>MEC2020</b>  | <b>Course Title:</b> <b>Material Science and Metallurgy</b><br><b>Type of Course:</b> <b>Professional core &amp; Theory only</b>   | <b>L-T-P-C</b> | 3-0-0-3 |
| <b>Version No.</b>   | 1  |                |         |
| <b>Course Pre-requisites</b>   | NIL  |                |         |
| <b>Anti-requisites</b>   | NIL  |                |         |
| <b>Course Description</b>  | Material Science and Metallurgy Course provides basic concepts in materials structure and its relation to properties and application to engineering problems. The Course includes structure of metallic, ceramic, and polymeric materials. The Course discusses the type of bonding and crystal structure their effect on the mechanical, electrical, and chemical properties of materials.  |                |         |
| <b>Course Out Comes</b>  | On successful completion of the course the students shall be able to:<br>CO1: Describe the crystal structure, crystal imperfections and diffusion process in solids<br>CO2: Explain phase diagrams and various heat treatment processes.<br>CO3: Classify various engineering materials and their applications.<br>CO4: Conduct Hardness, tensile, shear and compression tests of metallic specimens.<br>CO5: Identify the defects inside the body by using Non-Destructive testing methods. |                |         |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Material Science and Metallurgy</b> ” and attain <b>SKILL DEVELOPMENT</b> through Participative learning techniques.  |                |         |
| <b>Course Content:</b>   |  |                |         |
| <b>Module 1</b>  | Introduction to crystal structures and diffusion:  | 12 Sessions    |         |
| Topics:<br>Fundamental concepts, atomic structure, atomic bonding, crystal structure, defects and diffusion<br>[Remember Level]  |  |                |         |
| <b>Module 2</b>  | Phase diagram:   | 10 Sessions    |         |
| Topics:<br>Solidification, Phase Equilibria, Phase transformation, Iron carbon system, Numericals<br>[Understanding Level]   |  |                |         |
| <b>Module 3</b>  | Heat treatment:  | 10 sessions    |         |
| Topics:<br>TTT diagram, CC curve, Microstructures developed, Different Heat Treatment processes.<br>[Understanding Level]  |  |                |         |
| <b>Module 4</b>  | Engineering materials  | 13 Sessions    |         |
| Topics:<br>Properties and applications of alloy steels, tool steels, cast iron, copper and Al base alloy, Ni base alloys, Composites, ceramics, Polymers.<br>[Remember Level]  |  |                |         |
| <b>Targeted Application &amp; Tools that can be used:</b> Materials scientists work with diverse types of materials (e.g., metals, polymers, ceramics, liquid crystals, composites) for a broad range of applications (e.g., energy, construction, electronics, biotechnology, nanotechnology) employing modern processing and discovery principles (e.g., casting, additive manufacturing, coating, evaporation, plasma and radiation processing, artificial intelligence, and computer |  |                |         |

| <b>Module 1</b>  | Basic Concepts of Programming and Java  | Assignment | Problem Solving  | 15 Sessions (L3 + P12) |   |   |   |
| Topics: Introduction to Principles of Programming: Process of Problem Solving, Java program structure, Download Eclipse IDE to run Java programs, Sample program, Data types, Identifiers, Variables, Constants in java, Operators, Assignments and Expression, Basic Input/ Output functions, Control Statements: Branching and Looping.  |   |            |                  |                        |   |   |   |
| <b>Module 2</b>  | Classes, objects, methods and Constructors  | Assignment | Problem Solving  | 17 Sessions (L3 + P14) |   |   |   |
| Topics: Classes, Objects and Methods: Introduction to object Oriented Principles, defining a class, adding data members and methods to the class, access specifiers, instantiating objects, reference variable, accessing class members and methods.<br>Static Polymorphism: Method overloading, constructors, constructor overloading, this keyword, static keyword, Nested classes, Accessing members in nested classes. |   |            |                  |                        |   |   |   |
| <b>Module 3</b>  | Arrays, String and String buffer  | Assignment | Problem Solving  | 13 Sessions (L3 + P10) |   |   |   |
| Topics: Arrays: Defining an Array, Initializing & Accessing Array, Multi –Dimensional Array, Array of objects. String: Creation & Operation. String builder class, methods in String Buffer.   |   |            |                  |                        |   |   |   |
| <b>Module 4</b>  | Inheritance and Polymorphism  | Assignment | Problem Solving  | 17 Sessions (L3 + P14) |   |   |   |
| Topics: Inheritance: Defining a subclass, Types of Inheritance, super keyword. Dynamic Polymorphism: Method overriding. Final keyword: with data members, with member functions and with class. Abstract keyword: with data members, with member functions and with class, Exception handling.   |   |            |                  |                        |   |   |   |
| <b>Module 5</b>  | Input & Output Operation in Java  | Assignment | Problem Solving  | 13 Sessions (L3 + P10) |   |   |   |

Input/output Operation in Java(java.io Package), Streams and the new I/O Capabilities, Understanding Streams, working with File Object, File I/O Basics, Reading and Writing to Files, Buffer and Buffer Management, Read/Write Operations with File Channel, Serializing Objects, Observer and Observable Interfaces.

P1: Programming Exercises on Basic Concepts.

LEVEL 1: Discuss about datatypes and variables.

LEVEL 2: Demonstrate a simple java program

P2: Programming Exercises on Basic Concepts.

LEVEL 1: Discuss about datatypes and variables.

LEVEL 2: Demonstrate a simple java program

P3: Programming Exercises on operators, expressions based on a given scenario.

LEVEL 1: Explain operators, expressions.

LEVEL 2: Demonstrate operators

P4: Programming Exercises Command Line Arguments based on a given scenario.

LEVEL 1: Explain command line arguments

LEVEL 2: Demonstrate command line arguments

P5: Programming Exercises on basic Input/ Output functions and Control Statements: Branching

LEVEL 1: Explain Input/ Output functions

LEVEL 2: Demonstrate Control Statements: Branching

P6: Programming Exercises on Control Statements: Looping

LEVEL 1: Explain various loops.

LEVEL 2: Demonstrate Control Statements: Looping

P7: Programming Exercises on Creating Objects, classes on a given scenario.

LEVEL 1: Illustrate class, object and methods.

LEVEL 2: Execute java program using class and objects

P8: Programming Exercises on Adding methods and Constructors to the class based on a given scenario.

LEVEL 1: Illustrate methods and constructors

LEVEL 2: Execute java program using methods and constructors

P9: Programming Exercises on methods based on a given scenario.

LEVEL 1: Illustrate method overloading

LEVEL 2: Apply method overloading for the given scenario.

P10: Programming Exercises on methods based on a given scenario.

LEVEL 1: Illustrate constructors overloading

LEVEL 2: Apply constructor overloading for the given scenario

P11: Programming Exercises on methods for static members based on a given scenario.

LEVEL 1: Benefits of usage static members

LEVEL 2: Usage of Static Members for the given scenario

P12: Programming Exercises on static methods based on a given scenario.

LEVEL 1: Benefits of usage static methods

LEVEL 2: Usage of Static Methods for the given scenario.

P13: Programming Exercises on nested Classes based on a given scenario.

LEVEL 1: Benefits of usage nested classes

LEVEL 2: Apply the concept of usage of nested classes for the given scenario

P14: Programming Exercises on Arrays and its built-in functions based on a given scenario.

LEVEL 1: Illustrate one dimensional arrays and its functions.

LEVEL 2: Demonstrate programs with single-dimensional arrays and operations.

P15: Programming Exercises on Arrays and its built-in functions based on a given scenario.

LEVEL 1: Illustrate multi dimensional arrays and its functions.

LEVEL 2: Demonstrate programs with multi-dimensional arrays and operations.

P16: Programming Exercises on String Class and its built-in functions based on a given scenario.

LEVEL 1: Explain about String class and String methods.

LEVEL 2: Execute simple java applications for String and StringBuffer operations

P17: Programming Exercises on String Buffer Class and its built-in functions based on a given scenario.

LEVEL 1: Explain about StringBuffer class and String methods.

LEVEL 2: Execute simple java applications for String and StringBuffer operations

P18: Programming Exercises on String Builders and its built-in functions based on a given scenario.

LEVEL 1: Explain about String Builders.

LEVEL 2: Execute java applications for String Builders

P19: Programming Exercises on single, multi level Inheritance and super keyword based on given scenario.

LEVEL 1: Explain single and multi level inheritance.

LEVEL 2: Demonstrate simple applications for the different types of inheritance

P20: Programming Exercises hierarchical Inheritance and super keyword based on given scenario.

LEVEL 1: Explain hierarchical inheritance.

LEVEL 2: Demonstrate simple applications for hierarchical inheritance

P21: Programming Exercises on Overriding.

LEVEL 1: Differentiate method overloading and method overriding.

LEVEL 2: Demonstrate simple program with dynamic method dispatch.

P22: Programming Exercises on Final based on given scenario.

LEVEL 1: Implement programs using concept of final.

LEVEL 2: Use final keyword for the given problem

P23: Programming Exercises on Abstract keyword based on given scenario.

LEVEL 1: Implement programs using concept of Abstract.

LEVEL 2: Use abstract keyword for the given problem

P24: Programming Exercises on Interface based on a given scenario.

LEVEL 1: Differentiate abstract class about interface

LEVEL 2: Implement interfaces in the given problem

P25: Programming Exercises on Exception Handling based on a given scenario.

LEVEL 1: Explain exception handling

LEVEL 2: Solve the given problem using exception handling mechanism.

P26: Programming Exercises on Character Stream Classes based on a given scenario.

LEVEL 1: Explain Character Stream Classes

LEVEL 2: Solve the given problem using Character Stream Class.

P27: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

P28: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

P29: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

P30: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

| Course Description  | This course is designed to provide an in-depth understanding of Arduino microcontrollers and their application in various real time projects involving sensors. Throughout the course, students will learn the fundamentals of Arduino programming and gain hands-on experience with a wide range of sensors. Students will explore how to connect and interface sensors with Arduino boards, read sensor data, and use it to control various output devices This course is suitable for beginners who are interested in exploring the world of electronics and developing practical applications using Arduino and sensors. |          |                               |           |   |            |   |   |
| Course Objective  | The objective of the course is <b>Employability Skills</b> of student by using <b>PARTICIPATIVE LEARNING</b> techniques.   |          |                               |           |   |            |   |   |
| Course Outcomes   | <b>On successful completion of the course the students shall be able to</b><br>1. Explain the main features of the Arduino prototype board<br>2. Demonstrate the hardware interfacing of the peripherals to Arduino system.<br>3. Understand the types of sensors and its functions<br>4. Demonstrate the functioning of live projects carried out using Arduino system.   |          |                               |           |   |            |   |   |
| Course Content:   |  |          |                               |           |   |            |   |   |
| Module 1  | Basic concepts of Arduino  | Hands-on | Interfacing Task and Analysis |           |   | 4 Sessions |   |   |
| Topics:<br>Introduction to Arduino, Pin configuration and architecture, Device and platform features, Concept of digital and analog ports, Familiarizing with Arduino Interfacing Board, API's , Introduction to Embedded C and Arduino platform, Arduino Datatypes and variables, Arduino i/o Functions, Arduino Communications, Arduino IDE, Various Cloud Platforms. |  |          |                               |           |   |            |   |   |
| Module 2  | Sensory Devices  | Hands-on | Interfacing Task and Analysis |           |   | 4 Sessions |   |   |
| Arduino Sensors: Humidity Sensor, Temperature Sensor, Water Detector / Sensor, PIR Sensor, Ultrasonic Sensor, Connecting Switches and actuators, sensor interface with Arduino.<br>Introduction to 3D Printer: 3D Printer technology and its working Principles, Applications.<br>Introduction to online Simulators: Working with Tinkercad Simulator.                  |  |          |                               |           |   |            |   |   |
| Topics: Types of Arduino boards, sensors, 3D Printer  |  |          |                               |           |   |            |   |   |
| Targeted Application & Tools that can be used:  |  |          |                               |           |   |            |   |   |
| Application Area:   |  |          |                               |           |   |            |   |   |

|  |  |

| <b>Course Description</b>  | The primary objective of the course is to emphasize the concepts and applications of chemistry in Engineering. The course also aims to enhance the knowledge of chemical composition and properties of chemical molecules. The course cultivates an ability to identify chemistry in each and every piece of smart engineered products used in households and industry. It targets to strengthen the fundamental concepts of chemistry and then builds an interface with their industrial applications.<br><b>This course is designed to cater to Environment and Sustainability</b> |                  |                              |            |          |          |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of ' <b>Applied Chemistry</b> ' and attain ' <b>SKILL DEVELOPMENT</b> ' through <b>EXPERIENTIAL LEARNING</b> techniques.  |                  |                              |            |          |          |
| <b>Course Outcomes</b>   | On successful completion of this course the students shall be able to:<br>6) Identify the suitable polymers to replace the conventional materials<br>7) Summarize the importance of various electrochemical sources in energy systems<br>8) Describe the knowledge of electrochemistry principles for protection of different metals from corrosion.<br>9) Explain the fundamental principles in water treatment   |                  |                              |            |          |          |
| <b>Course Content:</b>   |  |                  |                              |            |          |          |
| <b>Module 1</b>  | Polymers   | Case study       | Data Collection and analysis | 4 sessions |          |          |
| Polymers: Introduction, Types of Polymerization, Thermoplastics & Thermosetting Polymers. Preparation, Properties, and Applications of the Teflon, PVC, Nylon and Phenol Formaldehyde; Elastomers: Classification; Natural Rubber, Vulcanization of Rubber, Synthetic Rubber and Inorganic Rubbers, Polymer Composites- Properties and Advantages, Synthesis and Applications of Kevlar, Conducting Polymers           |  |                  |                              |            |          |          |
| <b>Module 2</b>  | Battery Technology   | Assignment       | Data Collection              | 3 sessions |          |          |
| Basics of Electrochemical Energy Systems, Construction, Working Mechanism and Applications of Primary (Dry Cell) and Secondary (Lead-Acid) Batteries, Lithium Batteries: Primary and Secondary. Fuel Cells: Hydrogen-Oxygen, Methanol-Oxygen: Principle, Working and Their Applications  |  |                  |                              |            |          |          |
| <b>Module 3</b>  | Corrosion and its Control  | Case study       | Data analysis                | 3 sessions |          |          |
| Definition, Dry and Wet Corrosion, Electrochemical Theory of Corrosion, Types of Wet Corrosion –Differential Aeration, Galvanic, and Stress Corrosion Cracking. Factors that Enhance Corrosion and Choice of Parameters to Mitigate Corrosion. Corrosion Control – Anodic and Cathodic Coating, Cathodic Protection- Sacrificial Anodic Protection, Electro Plating of Chromium, Electroless Plating of Copper on PCBs |  |                  |                              |            |          |          |
| <b>Module 4</b>  | Water Technology   | Case study       | Data analysis                | 4 sessions |          |          |

Degree of Hardness, Numerical Problems on Hardness Domestic Treatment, Desalination Techniques, Boiler Feed Water, External and Internal Treatments, Waste Water Treatment, Rain Water Harvesting

**Laboratory experiments:**

1. Estimation of Fe (II) in Mohr's salt using Std. Potassium permanganate solution.
2. Estimation of Calcium in cement solution sample by rapid EDTA method.
3. Estimation of Copper by Iodometry.
4. Determination of Acid number of an oil.
5. Synthesis of polyaniline.
6. Determination of pKa value of weak acid using pH meter
7. Potentiometric estimation of FAS using Std. Potassium dichromate solution
8. Estimation of strength of acid mixture by conductometric titration
9. Estimation of Copper by colorimetric method
10. Determination of Viscosity co-efficient of a liquid using Ostwald's viscometer.

**Targeted Application & Tools that can be used:**

Application areas are Polymer, oil and gas, Boiler, automotive and mechanical industries

**Tools:** Statistical analysis of Corrosion in materials using tools like Design expert software (ANOVA, RSM, etc.)

**Project work/Assignment:**

Assessment Type

- Midterm exam
- Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screen shot accessing digital resource.)
- Quiz
- End Term Exam
- Self-Learning

**Assignment: 1:** Report writing on recycling plastic waste into plastic lumber

**Assignment 2:** Identify a corrosion problem encountered in your immediate surroundings and discuss your choice of mitigation

|   | 11  | Torsion test on metallic (Mild steel) specimens using a Torsion testing machine   |
|   | 12  | Fatigue Test on metallic (Mild steel) specimens using a fatigue testing machine.  |
| <b>Targeted Application &amp; Tools that can be used:</b> Destructive testing is undertaken in order to understand a specimen's performance or material behaviour, these procedures are carried out to the test specimen's failure. Destructive testing procedures can either follow specific standards or can be tailored to reproduce set service conditions in automobile, aerospace, construction industries etc. The standardized Nondestructive test methods are used in almost all industrial sectors, whether it concerns motor vehicles, airplanes, ships, machines or the quality assurance of buildings. |   |   |

| <b>Course Pre-requisites</b>   | Calculus and Differential Equations  |                   |                    |          |          |          |
| <b>Anti-requisites</b>   | <b>NIL</b>   |                   |                    |          |          |          |
| <b>Course Description</b>  | This course aims to introduce various transform techniques such as Laplace transform, Fourier transform and Z-transform in addition to expressing functions in terms of Fourier series. The course covers applications of Laplace transform to LCR circuits and solutions of different equations using Z-transform. The course also deals with the analytical methods for solving partial differential equations and the classical applications of partial differential equations. |                   |                    |          |          |          |
| <b>Course Objective</b>  | The objective of the course is to <b>familiarize the learners with the concepts of “Transform Techniques, Partial Differential Equations”</b> and attain <b>Skill Development through Problem Solving Techniques</b> .   |                   |                    |          |          |          |
| <b>Course Out Comes</b>  | On successful completion of the course the students shall be able to:<br>1. CO1 - Express functions in terms of uniformly convergent Fourier series.<br>2. CO2 - Apply Laplace transform technique to solve differential equations.<br>3. CO3 - Employ Z-transform techniques to solve difference equations.<br>4. CO4 - Solve a variety of partial differential equations analytically.   |                   |                    |          |          |          |
| <b>Course Content:</b>   |  |                   |                    |          |          |          |
| <b>Module 1</b>  | <b>Laplace Transforms</b>  |                   | <b>12 Sessions</b> |          |          |          |
| Definition and Laplace transform of elementary functions. Properties of Laplace transform, and Laplace transform of periodic function, unit-step function and Impulse function – related problems. Inverse Laplace transform of standard functions - problems, initial and final value theorem. Convolution theorem, solution of linear and simultaneous differential equations and LCR Circuit.   |  |                   |                    |          |          |          |
| <b>Module 2</b>  | <b>Fourier Series</b>  | <b>Assignment</b> | <b>8 Sessions</b>  |          |          |          |
| <b>Fourier Series:</b> Periodic functions, Dirichlet’s condition. Fourier series of periodic functions period $2\pi$ and arbitrary period. Half range Fourier series. Practical harmonic analysis.   |  |                   |                    |          |          |          |
| <b>Module 3</b>  | <b>Fourier Transforms and Z - Transforms</b>   |                   | <b>13 Sessions</b> |          |          |          |
| <b>Fourier Transforms:</b> Definitions, infinite Fourier transforms, Fourier sine and cosine transforms, inverse Fourier transforms, Problems.<br><b>Difference equations and Z-transforms:</b> Z-transforms – Basic definitions, Standard Z-transforms, Linearity property, Damping rule, Shifting rule, Initial value theorem, Final value theorem, Inverse Z-transforms. Difference equations – Basic definitions, Application of Z-transforms to solve difference equations.   |  |                   |                    |          |          |          |
| <b>Module 4</b>  | <b>Partial Differential Equations</b>  | <b>Assignment</b> | <b>12 Sessions</b> |          |          |          |
| Formation of PDE, Solution of non-homogeneous PDE by direct integration, Solution of homogeneous PDE involving derivative with respect to one independent variable only (Both types with given set of conditions) Method of separation of variables. (First and second order equations) Solution of Lagrange’s linear PDE. of the type $Pp + Qq = R$ .<br>Applications of PDE: Derivation of one-dimensional wave and heat equations. Various possible solutions of these by the method of separation of variables. D’Alembert’s solution of wave equation. Two-dimensional Laplace’s equation – various possible solutions. Solution of all these equations with specified boundary conditions (Boundary value problems). |  |                   |                    |          |          |          |
| Targeted Application & Tools that can be used:<br>The objective of the course is to familiarize students with a variety of numerical techniques and the theoretical concepts of probability and statistics to equip them with the necessary numerical approaches and basic statistical tools to tackle engineering and real-life problems.   |  |                   |                    |          |          |          |
| <b>Assignment:</b>   |  |                   |                    |          |          |          |

**3.** Newton-Raphson Methods, Gauss-Seidel Method, LU Decomposition, Trapezoidal Rule, Simpson's rule, Runge-Kutta 4<sup>th</sup> Order.

| <b>Course Description</b>  | This Course is designed to present the fundamental laws relating to the static and dynamic behaviour of fluids. It provides a basic knowledge in fluid properties and statics utilizing the principles developed in previous mechanics Courses and illustrates the basic fluid properties and fluid statics. Introduction to the fundamentals governing laws. The Course also discusses the basic concepts about Fundamentals of fluid kinematics, dimensional Analysis and flow through pipes and external surfaces. |            |                 |          |          |                    |          |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Fluid Mechanics and Machinery</b> ” and attain <b>SKILL DEVELOPMENT</b> through <b>Problem solving Methodologies</b> .   |            |                 |          |          |                    |          |
| <b>Course Outcomes</b>   | CO1 Summarize the basic properties of fluids.<br>CO2 Employ the concept of hydrostatics to various pressure measuring devices.<br>CO3 Apply equations of motion to different types of fluid flows.<br>CO4 Apply the principle of energy conservation to flow measuring devices.<br>CO5 Interpret various energy losses for fluid flow through pipes.  |            |                 |          |          |                    |          |
| <b>Course Content:</b>   |   |            |                 |          |          |                    |          |
| <b>Module 1</b>  | Introduction to Fluid Mechanics   | Assignment | Data collection |          |          | 8S + 2T sessions   |          |
| Topics:<br>Introduction to fluids and fluid mechanics, Concepts of velocity, acceleration, momentum, density, specific gravity, specific volume, viscosity, capillarity, surface tension, bulk modulus, compressibility.   |   |            |                 |          |          |                    |          |
| <b>Module 2</b>  | Fluid Statics   | Assignment | Mathematical    |          |          | 9S+ 2T sessions    |          |
| Topics:<br>Pascal Law and application, Hydrostatic Law and its application, Types of pressures, Conservation of momentum, Pressure Measuring devices – Manometers, Pressure acting on a inclined surface, Buoyancy, Archimedes Principle, Stability conditions for floating bodies.  |   |            |                 |          |          |                    |          |
| <b>Module 3</b>  | Fluid Kinematics  | Assignment | Mathematical    |          |          | 10 S + 5T sessions |          |
| Topics:<br>Definition of fluid kinematics, Velocity, acceleration, change in momentum, law of conservation of mass, types of flows, concept of turbulence, Reynolds number and its importance, Continuity equation (1D & 3D), Hagen Poiseulle’s equation, Velocity potential function and stream function and its significance in relevance to rotational and ir-rotational flows. |   |            |                 |          |          |                    |          |

|   |   |            |              |                   |
|---|---|------------|--------------|-------------------|
| <b>Module 4</b>   | Fluid Dynamics                                    | Assignment | Mathematical | 12S + 4T sessions |
| Introduction to Fluid dynamics, Conservation of energy, Energy balance equation (Bernoulli's Equation), Flow measuring devices, Boundary Layer theory and basic definitions, Compressible fluid flows.  |   |            |              |                   |
| <b>Module 5</b>   | Flow through pipes                                | Assignment | Mathematical | 6 S + 2T sessions |
| <p>Topics:<br/>Concept of friction, Losses during fluid flow- Major and Minor, Pumps and Compressors.</p> <p><b>Targeted Application &amp; Tools that can be used:</b><br/>Application Area is Geophysical phenomenon, Hydrology, Aerospace, Aerodynamics, Microfluidics, Pipe network, Turbo-machinery.<br/>Industries using above applications and tools – Siemens, Quest Global, Simulent consulting, Triveni Engineering, TATA, GE etc</p> <p><b>Textbook</b><br/>T1. | <b>Course Description</b>   | This course helps students to develop the understanding of various manufacturing process like casting, welding, metal forming and sheet metal work. To comprehend the concept and basic mechanics of metal cutting, working of standard machine tools such as lathe, milling, Drilling, shaping and allied machines, Grinding and allied machines and to understand the behavior of tool under different environment . |            |  |             |          |          |          |
| <b>Course Objective</b>   | The objective of the course is <b>skill development</b> of student by using <b>Participative Learning techniques</b>   |            |  |             |          |          |          |
| <b>Course Out Comes</b>   | On successful completion of the course the students shall be able to:<br>CO1:Classify metal casting process and its types,<br>CO2:Elucidate Metal joining process and its types.<br>CO3:Explain various metal forming and extrusion process.<br>CO4: Describe the nomenclature of cutting tools and tool life.<br>CO5: Discuss different machining operations using diverse machine tools                              |            |  |             |          |          |          |
| <b>Course Content:</b>  |  |            |  |             |          |          |          |
| <b>Module 1</b>   | Casting process  | Case Study | Compare and analyze the microstructure obtained in different casting process . | 12 sessions |          |          |          |
| Topics:<br>Casting Process: Sand Casting : Sand Mold – Type of patterns - Pattern Materials – Pattern allowances –Molding sand Properties and testing – Elements of Gating system-Principle of special casting processes : Shell - investment – Pressure die casting - Centrifugal Casting – Stir casting; Defects in Sand casting.   |  |            |  |             |          |          |          |
| <b>Module 2</b>   | joining process  | Assignment | Learning different welding process   | 12 sessions |          |          |          |
| Topics:<br>Joining Process: Classification of Welding process, Operating principle, basic equipment, merits and applications of: Fusion welding processes: Gas welding - Types – Flame characteristics; Manual metal arc welding – Gas Tungsten arc welding- Gas metal arc welding – Submerged arc welding –Electron beam welding: Operating principle and applications of Solid state welding: Friction welding and Friction Stir Welding; Brazing and soldering; Weld defects: types, causes and cure.  |  |            |  |             |          |          |          |
| <b>Module 3</b>   | Metal working and sheet metal process.   | Assignment | Simulate the open die forging process using Deform software.                   | 12 sessions |          |          |          |
| Topics:<br>Metal working process: Hot working and cold working of metals – Forging processes – Open, impression and closed die Forging – forging operations. Rolling of metals– Types of Rolling – Defects in rolled parts. Principle of rod and wire drawing – Tube drawing – Principles of Extrusion – Types – Hot and cold extrusion.<br>Sheet metal process: Sheet metal characteristics – shearing, bending and drawing operations – Stretch forming operations– Formability of sheet metal –Special forming processes-Working principle and applications – Hydro forming – Rubber pad forming – Metal |  |            |  |             |          |          |          |

|  |                               |            |                                       |             |
|--|-------------------------------|------------|---------------------------------------|-------------|
| spinning– Introduction of Explosive forming, magnetic pulse forming, peen forming.   |                               |            |                                       |             |
| Module 4   | Introduction to tools         | Assignment | Cutting tool nomenclature & Tool wear | 10 sessions |
| <b>Topics:</b><br>Mechanics of chip formation, single point cutting tool, forces in machining, Types of chip, cutting tools– nomenclature, orthogonal metal cutting, thermal aspects, cutting tool materials, tool wear, tool life, surface finish, cutting fluids and Machinability.  |                               |            |                                       |             |
| Module 4   | Introduction to Machine Tools | Assignment | Machine tools Operations              | 14 sessions |
| Lathe: Centre lathe, constructional features, specification, operations – taper turning methods. Milling Machine-Construction, types, operations, Gear generation method, construction of gear milling, hobbing Drilling Machine-constructional features, specification, operations, Shaper and planner Machine-Construction, operations. Grinding-Surface grinding, centreless grinding and internal grinding.  |                               |            |                                       |             |
| <b>Targeted Application &amp; Tools that can be used:</b><br>Casting is used in producing automobile engine, aircraft engine and other parts where higher order complexity is involved.<br>Joining is find its use in small products like electronic items to fabrication of large bridge structure.<br>Plastic deformation based is significantly used when small components is to be made in large numbers such as toys.<br>Sheet metal process is largely used in automobile and aerospace industry to make outer structure.<br>Machine tools are used in manufacturing industries to convert raw materials into finished products  |                               |            |                                       |             |
| <b>Project work/Assignment: Mention the Type of Project /Assignment proposed for this course</b>   |                               |            |                                       |             |
| <b>Case study:</b> Compare and analyze the microstructure (grain size) obtained in different casting process.<br><b>Assignment:</b> Simulate the open die forging process using Deform software.<br><b>Assignment:</b> Programming to calculate machining time on various machine tool in Python.  |                               |            |                                       |             |

| <b>Course Description</b>  | This course helps the students to experience the practical concepts in preparation of green sand moulds using single and multi-patterns, tests for analyzing the properties of green sand such as moisture content, clay content and permeability. It also includes manual forging operations involving preparation of square bar from cylindrical bar and bolt preparation. The students will have hands on experience of different welding operations which include arc welding, gas welding, the TIG and MIG welding processes.   |                |   |   |   |   |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Foundry Forging &amp; Welding Lab</b> ” and attain <b>SKILL DEVELOPMENT</b> through <b>Experiential learning techniques</b> .   |                |   |   |   |   |
| <b>Course Out Comes</b>  | After successful completion of the course the students shall be able to:<br>1. Prepare green sand molds using different patterns and produce casting.<br>2. Analyze different properties required in mold sand and core sand.<br>3. Demonstrate different forging operations<br>4. Demonstrate different welding operations  |                |   |   |   |   |

| <b>Anti-requisites</b>                | <b>NIL</b>   |                |                |             |                        |    |   |    |   |    |  |    |  |    |  |    |  |
| <b>Course Description</b>             | This is an introductory course where the flow behavior, fluid forces and analysis tools are introduced. The goals of the experiments include determination of forces generated when fluid flow takes place over a solid object, applications of the control volume approach, demonstration of the momentum and energy equations and engineering correlations. Intricate flow phenomena such as separations and transition to turbulence are demonstrated. Experimental setups such as flow through a tube, flow over a flat plate, wind tunnel and smoke tunnel are made available to the students. The lab experiments utilize U-tube manometer, stop watch and data acquisition. |                |                |             |                        |    |   |    |   |    |  |    |  |    |  |    |  |
| <b>Course Out Comes</b>               | On successful completion of the course the students shall be able to:<br>CO1: Analyze the pipe flow and flow measurements in various channels.<br>CO2: Explain the procedure of performance analysis of turbines and pumps in various operating conditions<br>CO3: Describe the basics quantities of fluid flow phenomena<br>CO4: Find the head losses in various fluid machineries  |                |                |             |                        |    |   |    |   |    |  |    |  |    |  |    |  |
| <b>Course Objective</b>               | The objective of the course is to familiarize the learners with the concepts of “ <b>Fluid Mechanics and Machineries</b> ” and attain <b>SKILL DEVELOPMENT</b> through <b>Experiential learning techniques</b> .   |                |                |             |                        |    |   |    |   |    |  |    |  |    |  |    |  |

| <b>Course Description</b>  | The Course is designed with an objective of giving an overview of science of measurement and its applications. This Course is aimed at teaching basic concepts of measurement sciences for mechanical engineering students.<br><br>The student can learn the art of measurement and calibration of instruments. The lab introduces the students with the theory and methods for conducting experimental work in the laboratory and calibration of various instruments.   |            |                    |          |             |          |          |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Metrology And Measurement</b> ” and attain <b>SKILL DEVELOPMENT</b> through <b>Participative learning techniques</b> .  |            |                    |          |             |          |          |
| <b>Course Out Comes</b>  | On successful completion of the course the students shall be able to:<br>1. Explain the purpose, parameters, and error sources in measurement systems, including accuracy, precision, and regression analysis.<br>2. Apply calibration principles, measurement techniques, and comparator-based systems for linear and angular measurements.<br>3. Analyze and design limits, fits, tolerances, and apply geometric dimensioning and tolerancing (GD&T) for manufacturing applications.<br>4. Utilize mechanical and surface metrology tools for assessing dimensional and surface characteristics of components.<br>5. Evaluate thermal and flow parameters using advanced measurement systems and transducers. |            |                    |          |             |          |          |
| <b>Course Content:</b>   |  |            |                    |          |             |          |          |
| <b>Module 1</b>  | Measurement Purpose and Parameters   | Assignment | Data Collection    |          | 8 sessions  |          |          |
| Topics:<br>Parameters: Geometry (straightness, flatness, roundness), displacement, force, speed, torque, flow, pressure, temperature, acceleration.<br>Definitions: Accuracy, precision, range, resolution, uncertainty, and error sources.<br>Regression analysis: Applications in measurement and data evaluation.         |  |            |                    |          |             |          |          |
| <b>Module 2</b>  | Measurement Principles   | Case Study | Lab based activity |          | 8 sessions  |          |          |
| Topics:<br>Structure and examples of measurement systems. Calibration principles: Importance and techniques. Linear measurements: Vernier calipers, micrometers, and slip gauges. Angular measurements: Sine bar, bevel protractor, and taper gauges. Comparators: Mechanical, electrical (LVDT), and pneumatic comparators. |  |            |                    |          |             |          |          |
| <b>Module 3</b>  | Limits, Fits, Tolerances, and GD&T   | Case Study | CMM study in lab   |          | 10 sessions |          |          |
| Topics:<br>Definitions: Tolerance zones, grades, and geometric tolerances. Hole and shaft systems: IT grades and applications in assembly. Taylor's principle of gauging and gauge design.<br>Geometric dimensioning and tolerancing (GD&T): Symbols, datums, and tolerances.  |  |            |                    |          |             |          |          |

|   |   |            |  |             |
|---|---|------------|--|-------------|
| Case studies: GD&T in industrial applications   |   |            |  |             |
| <b>Module 4</b>   | Mechanical and Surface Metrology                  | Assignment | Awareness of different software for surface texture. | 10 sessions |
| Topics:<br>Dimensional metrology: Form tester, CMM, and 3D scanning tools. Surface metrology: Surface roughness parameters and their significance. Tools for surface measurement: Stylus system, optical microscopes, and laser scanning. Process metrology: Tool wear, work piece quality, and process monitoring  |   |            |  |             |
| <b>Module 5</b>   | Thermal and Flow Measurements                     | Assignment | Lab based activity.                                  | 09 sessions |
| Topics:<br>Thermal measurement: Devices for measuring temperature, thermal conductivity, and diffusivity. Examples: Thermocouples, RTDs, thermistors, pyrometers.<br>Flow measurement: Obstruction methods, magnetic flow meters, and ultrasonic flow meters. Transducers: Types (strain gauges, displacement transducers), working principles, and industrial applications. Digital data acquisition: Interfacing transducers with electronic control systems. |   |            |  |             |
| <b>Targeted Applications :</b><br><br>Legal <b>Metrology</b> . Industrial <b>Metrology</b> . Aerospace. Construction. Communications. Energy. Health Care. | <b>Course Pre-requisites</b>   | Calculus & Differential Equations  |                   |          |          |          |                     |
| <b>Anti-requisites</b>   | NIL  |                   |          |          |          |                     |
| <b>Course Description</b>  | <p>Numerical methods contain solutions of system of linear equations, roots of non-linear equations, interpolation, numerical differentiation and integration. It plays an important role in solving various engineering sciences problems.</p> <p>Complex Variable is functions involving complex numbers as variables, exploring concepts like limits, continuity, differentiation, integration, and series within the complex plane, with a focus on key topics like Cauchy-Riemann equations, complex exponentials, contour integration, residues, and applications to solving real-world problems in physics and engineering.</p>   |                   |          |          |          |                     |
| <b>Course Objective</b>  | <p>Numerical methods is to provide approximate, yet accurate solutions to complex mathematical problems that are often difficult or impossible to solve analytically, by using computational techniques to generate solutions through iterative processes, especially when dealing with real-world scenarios involving large datasets or intricate equations.</p> <p>Complex variable is to study the techniques of complex variables and functions together with their derivatives, Contour integration and transformations. To study complex power series, classification of singularities, calculus of residues and its applications in the evaluation of integrals, and other concepts and properties.</p> |                   |          |          |          |                     |
| <b>Course Out Comes</b>  | <p>On successful completion of the course the students shall be able to:</p> <p>CO1 - Demonstrate the applications of numerical methods to find the roots of polynomial equations and eigen values of real symmetric matrices.</p> <p>CO2 - Interpret the fitted parameters and apply curve fitting techniques to real-world data analysis problems.</p> <p>CO3 - Apply various numerical methods for solving linear Ordinary &amp; Partial differential equations arising in engineering field.</p> <p>CO4 - Apply the Cauchy-Riemann equations to identify analytic functions.</p>   |                   |          |          |          |                     |
| <b>Course Content:</b>   |  |                   |          |          |          |                     |
| <b>Module 1</b>  | <b>Solution of Linear Systems of Equation</b>  |                   |          |          |          | <b>(10 Classes)</b> |
| Solution of algebraic and transcendental equations: Various types of errors - Bisection method, Regula-Falsi method, Newton-Raphson method, Graffe's method - Bairstow's method - Newton's method for solving $f(x,y) = 0$ and $g(x,y) = 0$ , secant method, Fixed point iteration method, Solution of linear system of equations, Gauss elimination method, Pivoting, Gauss Jordan method, Iterative methods of Gauss Jacobi and Gauss Seidel, Sufficient conditions for convergence - LU decomposition method, Eigenvalues of a matrix by Power method and Jacobi's method for symmetric matrices. |  |                   |          |          |          |                     |
| <b>Module 2</b>  | <b>Interpolation and Curve Fitting</b>   | <b>Assignment</b> |          |          |          | <b>(10 Classes)</b> |
| Newton's forward and backward interpolation, Divided difference method, Lagrange's method. Method of least squares to fit equations of the form $y = ax + b$ , $y = ax^2 + bx + c$ , $y = ae^{bx}$ , $y = ab^x$ and $y = ax^b$ .   |  |                   |          |          |          |                     |
| <b>Module 3</b>  | <b>Numerical Differentiation and Integration</b>   |                   |          |          |          | <b>(10 Classes)</b> |
| <p>Numerical differentiation, Numerical integration: Trapezoidal rule, Simpson's one-third rule, Simpson's three-eighth rule, Gaussian quadrature rule. Solution of ordinary differential equations: Taylor series method, modified Euler's method, Runge-Kutta method for 4th order.</p> <p>Euler's method - Taylor's method - Runge-Kutta method of fourth order - Numerical solution of Laplace equation - One-dimensional heat flow equation and wave equation by finite difference methods.</p>   |  |                   |          |          |          |                     |
| <b>Module 4</b>  | <b>Complex Variables</b>   | <b>Assignment</b> |          |          |          | <b>(15 Classes)</b> |
| Introduction, Cauchy-Riemann equations, analytic functions, harmonic functions, finding harmonic   |  |                   |          |          |          |                     |

|   |   |
|---|---|
| conjugate; Conformal mappings.<br>Complex Integration: Contour integrals, Cauchy-Goursat theorem (without proof), Cauchy Integral formula (without proof), Liouville's theorem and Maximum-Modulus theorem (without proof); Taylor's series, zeros of analytic functions, singularities, Laurent's series; Residues, Cauchy Residue theorem (without proof).  |   |
| Targeted Application & Tools that can be used:<br>Numerical methods are widely applied in various fields like engineering, physics, finance, and biology, primarily used to solve complex problems where analytical solutions are difficult or impossible to find, allowing for the approximation of solutions through computational algorithms.<br>Complex variable methods are applied to elliptical problems in fluid mechanics, and linear elasticity. The techniques presented for solving parabolic problems are the Laplace transform and separation of variables, illustrated for problems of heat flow and soil mechanics.   |   |
| <b>Assignment:</b>  |   |
| 1. Calculate its absolute and relative errors for different input values using a numerical method like the Taylor series approximation.<br>2. Given $\sin 45^\circ = 0.7071$ , $\sin 50^\circ = 0.7660$ , $\sin 55^\circ = 0.8192$ , $\sin 60^\circ = 0.8660$ find $\sin 57^\circ$ and $\sin 52^\circ$ using an appropriate interpolation formula.<br>3. Find the equation of the polynomial which passes through the points (4, -43), (7, 83), (9, 327), (12, 1053) using Newton's divided difference interpolation formula.   |   |

| <b>Course Description</b>   | The course is designed with an objective of giving an overview of the methods for analyzing the motion of mechanisms used in engineering applications. It includes the concepts and methods for determining the mobility and performing kinematic analysis of planar mechanisms. The course emphasizes on Kinematic links, Kinematic pairs, and Degree of Freedom of simple mechanisms, Kinematic chain, basic mechanisms and their Inversions. The velocity and acceleration analysis of basic mechanisms such as four bar mechanism, Slider – crank mechanism and their inversions are discussed using graphical methods. The course also discusses the concepts involved in the design and kinematic analysis of cam and follower pair, gears and gear trains, balancing, gyroscope and governors. |                  |                                      |          |                 |          |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Theory of Machines</b> ” and attain <b>SKILL DEVELOPMENT</b> through Problem solving methodologies.  |                  |                                      |          |                 |          |
| <b>Course Outcomes</b>  | On successful completion of this course the students shall be able to:<br>1)To help students comprehend the basic ideas of mechanism<br>2) To help students comprehend how cams, gears, and flywheels work.<br>3) To impart understanding of mechanism design and the dynamic loads that affect the mechanism.<br>4) Construct the velocity and acceleration profile of kinematic analysis on planar mechanisms<br>5)To give an insight on the concepts of balancing, vibration and speed governing devices   |                  |                                      |          |                 |          |
| <b>Course Content:</b>  |   |                  |                                      |          |                 |          |
| <b>Module 1</b>   | Introduction to Mechanisms and kinematics   | Assignm ent      | Programming Task, Data Analysis task |          | 09 sessions+03T |          |
| Topics:Introduction, mechanisms and machines, terminology, planar mechanism - Kinematic diagram and inversion, Mobility, Coincident joints, Grubler and Grashoff’s law, Four bar, single and double slider mechanisms and their inversions. |   |                  |                                      |          |                 |          |
| <b>Module 2</b>   | Velocity and Accelerations in Mechanisms  | Quiz             | Analytical thinking                  |          | 09 sessions+3T  |          |

|   |  |            |                              |                 |
|---|--|------------|------------------------------|-----------------|
| Velocity and acceleration in planar mechanisms - Relative velocity method, Coriolis component of acceleration, Kennedy's Theorem, Instantaneous Centre method.  |  |            |                              |                 |
| <b>Module 3</b>   | Kinematic analysis of Cams and Gears                     | Assignment | Data Collection and Analysis | 09 sessions+05T |
| <b>Topics:</b><br>.Cams: Types of cams – Types of followers – Definitions – Motions of the followers – Layout of cam profiles. Gear: terminology, fundamental of gearing, involute profile, interference and undercutting, minimum number of teeth, contact ratio - Gear trains: simple, compound and epicyclic problems  |  |            |                              |                 |
| <b>Module 4</b>   | Synthesis of planar mechanism and Dynamic Force Analysis | Assignment | Data Collection and Analysis | 09 sessions+05T |
| <b>Topics:</b> Two position and Three position synthesis of planar mechanism - Graphical and analytical methods - Freudenstein equation.<br>Introduction-D' Alembert's principle-static and inertial force analysis of reciprocating engine Equivalent dynamic system. Turning moment diagram-four stroke engine-multicylinder engine-design of flywheel of IC engine-design of flywheel rim- design of flywheel of punching press.   |  |            |                              |                 |
| <b>Module 5</b>   | Balancing and Vibration and Governors and Gyroscope      | Assignment | Data Collection and Analysis | 09 sessions+03T |
| Static and Dynamic Balancing of Rotating Masses, Balancing of Reciprocating Masses. Introduction to vibration - Terminologies - Single degree of freedom- damped and undamped-free and forced vibration – Vibration isolation and Transmissibility. Transverse vibrations of shafts – Whirling of shaft -Torsional vibration of single rotor and two rotors' systems.   |  |            |                              |                 |
| <b>Targeted Application &amp; Tools that can be used:</b><br>Application Area is collision of vehicles, aerospace, automobile kinematics and dynamics, vibration of machines. Professionally Used Software: MATLAB  |  |            |                              |                 |

| <b>Course Description</b>  | This course is well designed to provide a fundamental understanding of the behavior of materials under different loading conditions, both static and dynamic. These materials are part of engineering structures and machines. It focuses on developing the skills to model and analyse the behavior of structural and machine components subjected to various loading and support conditions based on the principles of equilibrium and material constitutional relationships. It includes mechanics of rigid and deformable bodies in equilibrium and extends the depth of meaning contained in the basic principles of equilibrium to three dimensional continuous media including torsion, bending stresses and deflections. |             |                  |             |   |   |   |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Mechanics of Solids</b> ” and attain <b>SKILL DEVELOPMENT</b> through Problem solving methodologies.  |             |                  |             |   |   |   |
| <b>Course Outcomes</b>   | CO1 Compute the Normal and temperature Stress and Strain in Mechanical components.<br>CO2 Estimate Principal stresses and strains and draw Mohr’s circle.<br>CO3 Resolve the Shearing and Bending forces and draw their diagrams.<br>CO4 Obtain the Bending and Shearing Stresses and draw their diagrams.<br>CO5 Illustrate twisting moment and Torsion in shafts<br>CO6 Evaluate Hoop stress in thin and thick cylinders<br>CO7 Predict deflection in beams by different techniques..  |             |                  |             |   |   |   |
| <b>Course Content:</b>   |  |             |                  |             |   |   |   |
| <b>Module 1</b>  | Simple Stresses and Strains  | Assignme nt | Data collection  | 13 sessions |   |   |   |
| Topics:<br>Brief Introduction, Stress and strain graphs and concepts, elastic constants, axial loads, statically indeterminate axially loaded members, thermal stress and strain. Numerical  |  |             |                  |             |   |   |   |
| <b>Module 2</b>  | Compound Stress and Strains<br>Shear Force and Bending Moment diagrams   | Assignme nt | Mathematical     | 13 sessions |   |   |   |
| Topics:<br>Stress at a point on different planes in 2-D, transformation of stresses, principal and maximum shear stresses, Mohr’s Circle. Numerical. Shear Force and Bending moment diagrams for cantilever, simply supported and overhanging beams with all types of loads. Numerical on SFD & BMD. |  |             |                  |             |   |   |   |
| <b>Module 3</b>  | Bending and Shear Stresses   | Assignme nt | Mathematical     | 10 sessions |   |   |   |
| Bending stresses in beams. Bending equation. Numerical. Shear stress distribution in beams. Numerical.   |  |             |                  |             |   |   |   |
| <b>Module 4</b>  | Torsion and Thin & Thick Cylinders   | Assignme nt | Mathematical     | 12 sessions |   |   |   |
| Topics: Torsion, angle of twist, Torsion Equation. Numerical. Introduction to thick and thin cylinders. Hoop stress and tangential stress. Numerical.  |  |             |                  |             |   |   |   |
| <b>Module 5</b>  | Deflection of Beams  | Assignme nt | Mathematical     | 12 sessions |   |   |   |

|  |   |
|--|---|
| Topics: Introduction to deflection of Beams and method of Integration, Macaulay's method and Moment area methods for solution.   |   |
| <b>Targeted Application &amp; Tools that can be used:</b><br><br>Application Area is Geophysical phenomenon, Aerospace, Aerodynamics, Microfluidics, Pipe network, Turbo-machinery.<br>Industries using above applications and tools – Siemens, Quest Global, TATA, Simulent consulting, Triveni Engineering, GE etc   |   |

| <b>Course Description</b>   | This course deals with the application of Thermodynamics - the science of applications of thermodynamics laws for different equipment. Different tools will be introduced to analyse energy systems from engines, power plants etc. The course is both conceptual and analytical in nature and needs basic knowledge of Mathematics. The course develops the critical thinking and analytical skills.  |                   |  |          |          |             |          |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Applied Thermodynamics</b> ” and attain <b>SKILL DEVELOPMENT</b> through Problem solving methodologies.   |                   |  |          |          |             |          |
| <b>Course Outcomes</b>  | On successful completion of this course the students shall be able to:<br>CO1. Apply the first law and second law of thermodynamics to analyses the reciprocating internal combustion engine.<br>CO2. Apply the first law and second law of thermodynamics to analyses the gas turbine and Jet propulsion.<br>CO3. Apply the first law and second law of thermodynamics to analyses the vapor power cycle.<br>CO4. Apply the first law and second law of thermodynamics to analyses the refrigeration cycle. |                   |  |          |          |             |          |
| <b>Course Content:</b>  |  |                   |  |          |          |             |          |
| <b>Module 1</b>   | Reciprocating Internal Combustion Engine   | Assign ment       | Data Collection/any other such associated activity |          |          | 15 sessions |          |
| Topics:<br>Air Standard cycles: Carnot, Otto, Diesel, Dual, P-V and T-S diagrams, Efficiencies and mean effective pressures, Comparison of Otto, Diesel and Dual cycles.  |  |                   |  |          |          |             |          |
| <b>Module 2</b>   | Gas turbine and Jet propulsion   | Assign ment       | Data Collection/any other such associated activity |          |          | 15 Sessions |          |
| Topics:<br>Classification of Gas turbines, Analysis of open cycle gas turbine cycle. Advantages and disadvantages of closed cycle. Methods to improve thermal efficiency. |  |                   |  |          |          |             |          |
| <b>Module 3</b>   | Vapour Power Cycles  | Assign ment- Quiz | Data Collection/any other such associated activity |          |          | 15 Sessions |          |
| Topics:   |  |                   |  |          |          |             |          |

|   |  |                   |  |             |
|---|--|-------------------|--|-------------|
| Carnot cycle, Rankine cycle, reheat cycle, regenerative cycle, steam cycles for nuclear power plant, back-pressure and extraction turbines and cogeneration.  |  |                   |  |             |
| <b>Module 4</b>   | Refrigeration Cycle                                | Assignment - Quiz | Data Collection/any other such associated activity | 15 Sessions |
| <p>Topics:</p> <p>Reversed Carnot cycle, Vapor compression refrigeration system; description, analysis, refrigerating effect, capacity, power required, units of refrigeration, COP, Refrigerants and their desirable properties, Air cycle refrigeration; Reversed Brayton cycle, Psychrometry.</p>  |  |                   |  |             |
| <p><b>Targeted Application &amp; Tools that can be used:</b></p> <p>Application Area is Alternate energy resources – data collection related to IC engines and Electric vehicles.</p> <p>Professionally Used Software: C programming/ Python/ MATLAB</p>  |  |                   |  |             |

| <b>Course Code:</b><br><b>MEC2516</b> | <b>Course Title:</b> Heat and Mass Transfer<br><b>Type of Course:</b> Program core & Theory only<br><b>L-T-P-C</b>  | 3-1-0-4 |
| <b>Version No.</b>                    | 1.0   |         |
| <b>Course Pre-requisites</b>          | MEC3226, MEC4003  |         |
| <b>Anti-requisites</b>                | NIL   |         |
| <b>Course Description</b>             | This Course provides an introduction to the fundamental concepts of heat transfer; Thermal conductivity steady-state and unsteady-state heat conduction multilayer conduction, heat transfer through a composite wall, critical insulation thickness, analytical and empirical relations for forced and free convection heat transfer; empirical relations used for pipe and tube flow, boundary layer and its thickness, heat exchanger analysis and design; to design and analyse the performance of heat exchangers and evaporators. The Course also involves Radiative heat transfer, Emissivity, Stefan Boltzmann constant, solar radiation and radiation properties of an environment, heat transfer between black surfaces, shape factor formula for open ends of cylinders and effective emissivity of finned surface, condensation and boiling, principles of mass transfer.   |         |
| <b>Course Out Comes</b>               | On successful completion of the course the students shall be able to:<br>CO1. Apply the concept of steady state conduction heat transfer in solids.<br>CO2. Employ the methods of lumped heat capacity to solve unsteady-state conduction problems.<br>CO3. Compute the heat transfer coefficient for natural and forced convection.<br>CO4. Apply the concept of radiation heat transfer between surfaces.<br>CO5. Compute the effectiveness of a specific heat exchanger.   |         |
| <b>Course Objective</b>               | The objective of the course is to familiarize the learners with the concepts of " <b>Heat and Mass Transfer</b> " and attain <b>SKILL DEVELOPMENT</b> through <b>Problem solving Methodologies</b> .  |         |
| <b>Course Content:</b>                | <p><b>Module 1</b> Conduction 15 sessions<br/>Topics: Introduction - basic modes of heat transfer and governing laws- conduction – general heat conduction equation in Cartesian – one dimensional steady state conduction with and without heat generation – concept of thermal resistance – concept of composite wall – overall heat transfer coefficient – critical thickness of insulation –problems.<br/>[Apply level]</p> <p><b>Module 2</b> Transient Conduction 8 sessions<br/>Topics: Unsteady state conduction in one dimension – significance of Biots and Fourier's number – classification and identification of the given transient case – lumped heat capacity system –problems.<br/>[Apply level]</p> <p><b>Module 3</b> Convection 15 sessions<br/>Topics: Newton's law – concept of boundary layer – significance of Prandtl number – boundary layer equations – flat plate heat transfer- laminar and turbulent flow – Reynolds analogy – empirical relations in forced convection – internal flow – boundary conditions – laminar flow – heat transfer coefficients – empirical correlations. Natural convection – heat transfer from vertical plate- empirical relation in free convection.<br/>[Apply level]</p> <p><b>Module 4</b> Radiation 15 sessions</p> |         |

|  |   |
|--|---|
| <p>Topics: Fundamentals of radiation – radiation spectrum – thermal radiation – concept of black body and grey body – monochromatic and total emissive power – absorptivity, reflectivity and transmissivity – laws of radiation – radiation between two surfaces – geometrical factors for simple configuration – radiation shields. [Apply level]</p> <p><b>Module 5 Heat exchangers</b> 8 Sessions</p> <p>Classification – log mean temperature difference – overall heat transfer coefficient – fouling and scaling of heat exchangers – LMTD and NTU method of performance evaluation of heat exchangers. Problems. [Apply level]</p> |   |
| <p><b>Targeted Application &amp; Tools that can be used:</b> Conductions Heat Transfer, convection heat transfer, radiation heat transfer, heat exchangers.</p>  |   |

| <b>Course Description</b>  | This course introduces the role of computers in engineering design focusing on computer-aided design (CAD) and solid modeling techniques. Through hands-on experience with CAD software, students will learn to create 3D models, prepare technical drawings, and use data exchange standards for design applications.  |                |          |          |          |          |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Computer Aided Engineering Drawing</b> ” and attain <b>SKILL DEVELOPMENT</b> through Experiential learning techniques.   |                |          |          |          |          |
| <b>Course Out Comes</b>  | Upon completion of this course, students will be able to:<br>1. Explain the role of computers in design processes and CAD standards for data exchange.<br>2. Create solid models and assemblies using industry-standard CAD software.<br>3. Interpret boundary and constructive solid geometry (CSG) models and apply them to technical drawings.   |                |          |          |          |          |
| <b>Course Content:</b>   | Module 1: Introduction to CAD and Standards<br>Role of computers in design, analysis, and manufacturing processes.<br>Overview of popular CAD software and input/output devices.<br>Exchange standards: IGES, DXF, STEP, STL, and their applications in CAD.-10 sessions<br>Module 2: Solid Modeling Techniques<br>Solid modeling techniques: Sweep (linear and curved) and Boolean operations.<br>Representation of solid models: Boundary and Constructive Solid Geometry (CSG).<br>Practical exercises: Creating and modifying solid models using CAD software.10 sessions<br><br>Module 3: Assemblies and Visualization<br>Creating assemblies from individual parts in CAD software.<br>Generating sectional, exploded, and detailed views for technical documentation.<br>Interpreting complex assembly drawings and visualizations.10 sessions |                |          |          |          |          |

| <b>Course Description</b>   | <p>The Course is designed with an objective of giving an overview of designing appropriate machine transmission components and their applications.</p> <p>This course offers a comprehensive understanding of the design principles of various machine elements. It integrates theoretical foundations and practical approaches to design components such as gears, springs, shafts, fasteners, brakes, and power screws. The course emphasizes creative problem-solving, safety considerations, fatigue life, and manufacturability while equipping learners with essential skills for contemporary engineering applications.</p> |            |                                   |             |   |   |   |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Design of machine elements</b> ” and attain <b>SKILL DEVELOPMENT</b> through <b>Problem solving Methodologies</b> .   |            |                                   |             |   |   |   |
| <b>Course Outcomes</b>  | On successful completion of this course the students shall be able to:<br>1. Analyse machine elements subjected to static and fatigue loads using appropriate failure theories.<br>2. Design transmission systems, such as, belts & chains, for efficient power transfer.<br>3. Design and analyse springs, fasteners, welded and bolted joints for various engineering applications.<br>4. Analyse and design shafts and bearings for strength, rigidity, and durability.<br>5. Design transmission systems, such as, gears, for optimal performance and reliability.   |            |                                   |             |   |   |   |
| <b>Course Content:</b>  |  |            |                                   |             |   |   |   |
| <b>Module 1</b>   | Introduction to Machine Design   | Assignment | Programming Task                  | 10 sessions |   |   |   |
| <p>Topics:</p> <p>Anatomy of machines: Functional dissection of mechanical systems such as motorcycles, washing machines, etc.</p> <p>Design considerations: Limits, fits, tolerances, and standardization.</p> <p>Material selection: Properties and suitability for machine elements.</p> <p>Friction, lubrication, and wear considerations.</p> <p>Static failure theories: Normal stress, shear stress, distortion energy theory, von Mises stress.</p> <p>Factor of safety: Selection and application.</p> <p>Stress concentration factors and their effects.</p> <p>Fatigue failure: Mean and alternating stresses, S-N curves, endurance strength.</p> <p>Failure criteria: Goodman, Gerber, and Soderberg lines.</p> <p>Practical problems on static and fatigue loading.</p> |  |            |                                   |             |   |   |   |
| <b>Module 2</b>   | Design of Belt and Chain Drives  | Case Study | Simulation and data analysis task | 12 sessions |   |   |   |
| <p>Topics:</p> <p>Types of belts and chains: Flat belts, V-belts, timing belts, and roller chains.</p> <p>Power transmission principles and efficiency analysis.</p>  |  |            |                                   |             |   |   |   |

|  |  |            |                          |             |
|--|--|------------|--------------------------|-------------|
| Selection criteria for belts and chains based on load and speed requirements.<br>Design considerations: Tension analysis, initial tension, and creep.<br>Comparative analysis of belt and chain drives.<br>Applications and case studies.  |  |            |                          |             |
| <b>Module 3</b>  | Design of Springs, Fasteners, and Joints | Assignment | Simulation/Data Analysis | 12 sessions |
| Topics:<br>Types of springs: Helical, compression, tension, torsional, and leaf springs.<br>Stresses and deflections in springs under static and fatigue loads.<br>Threaded fasteners: Bolted joint analysis, preloaded bolts, and thread design.<br>Riveted joints: Types and stress analysis.<br>Welded joints: Strength evaluation and design.<br>Practical design problems and case studies.   |  |            |                          |             |
| <b>Module 4</b>  | Design of Shafts and Bearings            | Assignment | Modelling                | 12 sessions |
| Topics:<br>Shafts: Design for strength and rigidity, solid and hollow shafts, combined bending, torsion, and axial loading.<br>Bearings: Types of bearings (sliding and rolling contact), bearing life estimation, and material selection.<br>Design considerations for keys and couplings: Stress analysis and application.<br>Case studies in shaft and bearing design.  |  |            |                          |             |
| <b>Module 5</b>  | Design of Gears                          | Assignment | Simulation/Data Analysis | 14 sessions |
| Topics:<br>Gears: Spur, helical, bevel, and worm gears – definitions, geometry, and material selection.<br>Stress analysis: Lewis equation, dynamic and wear loads.<br>Applications of gear in mechanical design.  |  |            |                          |             |
| <b>Targeted Application &amp; Tools that can be used:</b><br>Contemporary issues: Knowledge of DME can help students in becoming Design engineer, CAD release engineer, Dimensional engineer where various employability opportunities are available at all automotive industries, OEM's, Tier 1 and Tier 2 organizations<br>Professionally Used Software: SolidWorks & ANSYS for design, simulation, and analysis.  |  |            |                          |             |
| <b>Project work/Assignment:</b>  |  |            |                          |             |
| Project Assignment: Carry out a directional stress analysis on different stress concentration geometry.<br>Assignment: 1] Design and analyse a flat plate and a shaft under specified loads using hand calculations, 3D modelling software, and ANSYS for structural analysis; submit a detailed report with visualizations and results.<br>Assignment 2] Design a knuckle joint to sustain a load based on a unique student ID-derived formula. Compute dimensions using permissible stresses for tension, compression, and shear as determined by the given equations. Perform a detailed stress analysis and validate the design.   |  |            |                          |             |

| <b>Course Code: MEC2026</b>  | <b>Course Title: Mechatronics</b><br><b>Type of Course: Program core &amp; Theory only</b>   | <b>L-T-P-C</b> | 3-0-0-3 |
| <b>Version No.</b>   | 1.0  |                |         |
| <b>Course Pre-requisites</b>   | NIL  |                |         |
| <b>Anti-requisites</b>   | NIL  |                |         |
| <b>Course Description</b>  | The course is designed with an objective of giving an overview of designing mechatronic systems, which require integration of the mechanical and electrical engineering disciplines within a unified framework. The course includes: System modelling, Sensors and Transducers, Actuators, Digital logic, Microprocessors and Advanced application in Mechatronics. It deals with Hall and pitch sensors, DC motors, Stepper motors, Guide ways, Architecture of Microprocessor, Logic Gates and Pin diagrams. The course aims at learning the practical concepts in Mechatronics. It also includes Hydraulic and Pneumatic system along with the simulation software. |                |         |
| <b>Course Out Comes</b>  | On successful completion of the course the students shall be able to:<br>1] Describe the fundamentals of mechatronic system and its applications.<br>2] Identify the types of sensors, transducers and signal conditioning processes used in automated machines.<br>3] Recognize sequencing schedule for a specific process using various actuating systems.<br>4] Describe logic gates and working of controllers.  |                |         |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of " <b>Mechatronics</b> " and attain <b>SKILL DEVELOPMENT</b> through Participative learning techniques.   |                |         |
| <b>Course Content:</b>   |  |                |         |
| <b>Module 1</b>  | Introduction to Mechatronics   | 10 Sessions    |         |
| Topics: Multi-disciplinary Scenario, Origins, Evolution of Mechatronics, Elements of mechatronic system, system, measurement systems, control systems - open loop, closed loop systems, feedback and feed forward control systems, servomechanisms, advanced applications of mechatronic.  |  |                |         |
| <b>Module 2</b>  | Sensors Transducers and Signal Conditioning  | 15 Sessions    |         |
| Topics: Introduction and background, difference between transducer and sensor, transducers types, transduction principle, photoelectric transducers, thermistors, thermo devices, thermo couple, inductive transducers, capacitive transducers, pyro electric transducers, piezoelectric transducers, Hall-effect transducers, Fiber optic transducers. Light sensors, Thermal sensors, Touch sensors, Pressure sensors, Magnetic sensors. |  |                |         |
| <b>Module 3</b>  | Actuation Systems  | 10 Sessions    |         |
| Topics: Pneumatic and hydraulic systems, overview of components of hydraulic system, overview of components of pneumatic system, basic hydraulic circuits-single acting cylinder, double acting cylinder, sequencing circuit. Mechanical systems & Electrical systems-sequencing, all types of electrical motors. Sequencing of double and single acting cylinders.  |  |                |         |
| <b>Module 4</b>  | Digital Electronics, Microprocessors, and Controllers  | 10 Sessions    |         |
| Topics: Digital Electronics, Microprocessors, and Controllers:<br>Programmable logic controllers - Basic structure, programming and ladder diagram.  |  |                |         |

|   |   |

| <b>Course Description</b>  | The purpose of this course is to enable the students to understand various components of Production management, Production planning, Production scheduling and model production management tools. The course is both conceptual and analytical in nature.The course develops the analytical, critical thinking, and decision making skills. The course also enhances the problem solving abilities through assignments. |            |                                  |             |   |   |   |
| <b>Course Objective</b>  | This course is designed to improve the learners' EMPLOYABILITY SKILLS by using PROBLEM SOLVING Methodologies  |            |                                  |             |   |   |   |
| <b>Course Outcomes</b>   | On successful completion of this course the students shall be able to:<br><br>1) Recognize the importance of production management in industry.<br><br>2) Describe Facility location problems and aggregate planning.<br><br>3) Solve problems in sequencing and Scheduling in production environment.<br><br>4) Summarize the various modern production management tools.  |            |                                  |             |   |   |   |
| <b>Course Content:</b>   |   |            |                                  |             |   |   |   |
| <b>Module 1</b>  | Introduction to Production Management   | Assignment | Data Collection andAnalysis      | 10 sessions |   |   |   |
| Topics: Introduction, Production Management, Scope of Production Management, Production System, Types of Production Systems - Flow Shop, Job Shop, Batch Manufacturing and the Project, Benefits of Production Management, Productivity, Decisions of Production Management.   |   |            |                                  |             |   |   |   |
| <b>Module 2</b>  | Production Planning and Control   | Case Study | Simulation and dataanalysis task | 10 sessions |   |   |   |
| Topics: Characteristics of Production Planning and Control, Objectives of Production Planning and Control, Facility Location, Factors Influencing Plant Location, Single Facility Location Problem, Minimax Location Problem, Gravity Location Problem, Classification of Layout, Aggregate Planning, MRP Concept, MRP Calculations.   |   |            |                                  |             |   |   |   |
| <b>Module 3</b>  | Sequencing and Scheduling   | Assignment | Data Collection andAnalysis      | 12 sessions |   |   |   |
| Topics: Concept of Single Machine Scheduling - Shortest Processing Time (SPT) Rule to Minimize Mean FlowTime, Weighted Mean Flow Time, Earliest Due Date (EDD) Rule to Minimize Maximum Lateness, Introduction to Branch and Bound Technique to Minimize Mean Tardiness. Flow Shop Scheduling - Introduction, Johnson’s algorithm, Extension of Johnson’s Rule, Branch and Bound Technique, CDS Heuristic. |   |            |                                  |             |   |   |   |
| <b>Module 4</b>  | Modern Production Management Tools  | Case Study | Data collection and Programming  | 13 sessions |   |   |   |

Topics: Just-In-Time Manufacturing, Computer Integrated Manufacturing and Flexible Manufacturing System, Total Quality Management, Poka Yoke, Kaizen, Business Process Reengineering, Supply Chain Management, Lean Manufacturing, Quality Function Deployment.

#### **Targeted Application & Tools that can be used:**

Application Area include almost all manufacturing organizations (Automotive – Suzulki, Toyota, Hyundai, KIA, Ford etc.,) Processing industries (Petroleum – Reliance, Shell, HP etc., Cement industries – Dalmiya, UltraTech),

Professionally Used Software: DYNAMIC 3i Production Planning, IQMS, Fishbowl

#### **Project work/Assignment:**

Project: Assuming yourself as an entrepreneur, carryout the analysis facility location for your new project.

Assignment: 1] Consider a flow shop environment and use the suitable algorithms to solve the problem considered.

Assignment 2: From your perspective, which are the modern tools of production management will have huge impact in the transition to industry 4.0 from current setting.

| <b>Course Description</b>   | It is a new state of the art facility for experimental design research the Design Lab is providing facilities for students to learn different courses related to Mechanical Vibrations, Kinematics of Machines, Design of Machine Elements, Dynamics of Machines etc., and the concepts are demonstrated for better understanding to explore towards research and industrial engineering design field.   |                |          |          |          |          |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of " <b>Mechanisms, Machines and Design Lab</b> " and attain <b>SKILL DEVELOPMENT</b> through Experiential learning techniques.   |                |          |          |          |          |
| <b>Course Outcomes</b>  | On successful completion of the course the students shall be able to:<br>1. To practically relate to concepts discussed in Design of Machine Elements, Mechanical Vibrations & Dynamics of Machines courses.<br>2. To identify forces and moments in mechanical system components and identify vibrations in machine elements and design appropriate damping methods.<br>3. To understand the working Principles of machine elements such as Governors, Gyroscopes and measure strain in various machine elements using strain gauges.<br>4. Perform the journal bearing experiments and record the observation. |                |          |          |          |          |
| <b>Course Content</b>   |  |                |          |          |          |          |

| <b>Course Description</b>      | This course covers key concepts and practical skills in computer-aided machine drawing, focusing on sheet metal design, mold design, technical drawing, and proficiency in advanced design techniques. It begins with an introduction to sheet metal design and progresses to advanced methods for creating complex parts and assemblies. The mold design section includes both basic and advanced topics, such as core/cavity design and material flow analysis. The technical drawing module emphasizes 2D drafting, detailing, and advanced techniques like exploded views. The course also includes rigorous practice sessions to enhance students' expertise in computer-aided drafting and design for real-world applications in machine drawing.   |                |   |   |   |   |
| <b>Course Out Comes</b>        | <ol style="list-style-type: none"> <li>1. Develop detailed machine components using computer-aided design tools, ensuring accuracy and adherence to engineering standards.</li> <li>2. Apply principles of sheet metal design to create machine parts with accurate flat patterns and ensure manufacturability.</li> <li>3. Design mold components with a focus on assembly integration and performance optimization for machine applications.</li> <li>4. Prepare precise 2D machine drawings with advanced annotations, bill of materials (BOM), and exploded views for effective communication of design intent.</li> </ol>  |                |   |   |   |   |
| <b>Course Content:</b>         | <p>Here's the syllabus with module topics:</p> <p>Module 01: Sheet Metal Design and Analysis-8 Sessions</p> <ul style="list-style-type: none"> <li>• Introduction to sheet metal design and manufacturing techniques.</li> <li>• Material properties and flat pattern creation.</li> <li>• Advanced methods for designing and assembling sheet metal parts.</li> </ul> <p>Module 02: Mold Design Fundamentals-8 Sessions</p> <ul style="list-style-type: none"> <li>• Basic concepts of mold design: core, cavity, and parting lines.</li> <li>• Types of molds and their applications.</li> <li>• Advanced techniques for designing mold components and optimizing performance.</li> </ul> <p>Module 03: Technical Drawing Tools and Techniques-8 Sessions</p> <ul style="list-style-type: none"> <li>• Fundamentals of 2D drawing creation, views, and detailing.</li> <li>• Annotation tools for dimensions, tolerances, and notes.</li> <li>• Advanced techniques for exploded views and BOM preparation.</li> </ul> <p>Module 04: Design and Assembly of Machine Components-8 Sessions</p> |                |   |   |   |   |

| <b>Course Description</b>  | The course is designed with the objective of giving an overview of the basics of finite element modelling of structures. It deals with the finite element formulation of one-dimensional problems, like trusses and beams, two dimensional problems with constant triangles, axisymmetric solids subjected to axisymmetric loading, two dimensional isoperimetric elements and time dependent problems.   |                |              |          |          |             |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Finite Element Analysis</b> ” and attain <b>SKILL DEVELOPMENT</b> through <b>participative</b> learning techniques.  |                |              |          |          |             |
| <b>Course Outcomes</b>   | <b>On successful completion of this course the students shall be able to:</b><br><br><b>CO1:</b> Apply the principle of variational techniques to different machine/structural elements.<br><b>CO2:</b> Analyze the structural integrity of a machine with rods and bars.<br><b>CO3:</b> Analyze the structural integrity of a concrete building with beams and columns.<br><b>CO4:</b> Analyze the structural integrity of a steel reinforced skywalk. |                |              |          |          |             |
| <b>Course Content:</b>   |   |                |              |          |          |             |
| <b>Module 1</b>  | Introduction to Finite Element Method   | Case Study     | Mathematical |          |          | 13 sessions |
| Topics:<br>General description of Finite Element Method – Historical development – Comparison with classical methods – Other numerical methods such as FDM, BEM, etc. - General procedure of FEM – Application software’s in FEM.<br>General field problems - GDE formulation - discrete and continuous models – approximate solution as a polynomial - minimization of residue – Weighted residual methods –Galerkin method - Variational formulation Ritz method - numerical problems. |   |                |              |          |          |             |
| <b>Module 2</b>  | Analysis of Bars  | Case Study     | Mathematical |          |          | 12 sessions |
| Topics:<br>II order problems - Bar Problem – Formulation for the whole domain computing element matrices - Assembly of element matrices – Application of B.Cs – solution – post processing   |   |                |              |          |          |             |

|   |                     |            |              |             |
|---|---------------------|------------|--------------|-------------|
| <b>Module 3</b>   | Analysis of Beams   | Case Study | Mathematical | 10 sessions |
| Topics:<br>(IV order problems) – B.Cs & loading conditions on to nodes – element matrices - solution and post processing of results – I Dimension problems such as Heat transfer problems, Vibration problems in bar and beams.   |                     |            |              |             |
| <b>Module 4</b>   | Analysis of Trusses | Case Study | Mathematical | 10 sessions |
| Topics:<br>Discretization: Geometrical approximations – Simplification through symmetry – Element shapes and behaviour – Choice of element types – Simplex - Complex and Multiplex elements – Selection of interpolation polynomials (shape functions) - Convergence requirements – Element shape and distortion – Location of nodes – Node and Element numbering, B.Cs & loading conditions on to nodes – element matrices - solution and post processing of results   |                     |            |              |             |
| <b>Targeted Application &amp; Tools that can be used:</b><br><b>Application</b> <ul style="list-style-type: none"> <li>Automation and Robotics</li> <li>Automobile design and fabrication</li> <li>Construction and housing</li> <li>Machine Design and Analysis</li> </ul> <b>Tools</b> <ul style="list-style-type: none"> <li>MATLAB</li> <li>Python</li> <li>Ansys</li> </ul>  |                     |            |              |             |

| <b>Course Description</b>  | Automobiles, missiles, machine tools, aero planes etc. extensively use fluid power technology. This course deals with the fundamental aspects of hydraulics and pneumatics, the two fields of relevance to fluid power engineering.   |            |   |                |   |             |   |   |
| <b>Course Objectives</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Hydraulics and Pneumatics</b> ” and attain <b>Skill Development</b> through Problem solving methodologies.   |            |   |                |   |             |   |   |
| <b>Course Out Comes</b>  | On successful completion of the course the students shall be able to:<br>1] Describe the fundamentals of Hydraulic Power Pumps, Actuators and Motors.<br>2] Explain control components in Hydraulic Systems.<br>3] Solve the numerical problems related to hydraulic efficiency of motors.<br>4] Describe the fundamentals of pneumatic system, Actuators, Valves, Pneumatic circuits and logic circuits. |            |   |                |   |             |   |   |
| <b>Course Content:</b>   |   |            |   |                |   |             |   |   |
| <b>Module 1</b>  | Introduction to Hydraulic System  | Assignment | Data collection   |                |   | 10 sessions |   |   |
| Topics: Introduction to Hydraulic Power and Pumps: Review of fluid mechanics, Pascal’s Law, structure of hydraulic control system. pumps: pumping theory, pump classification, gear pumps- external and internal type, vane pumps- simple, balanced, pressure compensated types, piston pumps- radial and axial (both swash plate and bent axis type), pump performances.<br>Hydraulic Actuators and Motors: Linear hydraulic actuators - single acting, double acting, tandem cylinder, telescopic rod cylinder, mechanics of hydraulic cylinder loading, cylinder cushioning, hydraulic rotary actuators, hydrostatic transmission – open and close circuit, performance of hydraulic motor. |   |            |   |                |   |             |   |   |
| <b>Module 2</b>  | Energy transfer in hydraulic actuators and motors   | Case study | Identify various valves considering a hydraulic system. |                |   | 12 sessions |   |   |
| Topics: Directional control valves (DCV), Constructional features, 2/2,3/2,4/2,4/3 DCV, Center configuration in 4/3 DCV- open, closed, tandem, regenerative, floating center configuration, Actuation of DCVs- manual, mechanical, solenoid, and indirect actuation, Relays for the solenoid operation, Check valve, Pilot check valve, Pressure control valves – Direct and Pilot operated types, Pressure reducing valve, Flow control valves- fixed throttle, and variable throttle, Throttle check valve, Pressure compensated flow control valve- relief and reducing types   |   |            |   |                |   |             |   |   |
| <b>Module 3</b>  | Introduction to Pneumatic   | Assignment | Data Collection   |                |   | 12 sessions |   |   |

|   |  |            |                 |             |
|---|--|------------|-----------------|-------------|
|   | System and its control   |            |                 |             |
| <p>Topics: Choice of working medium, Characteristics of compressed air, structure of pneumatic control system, supply, signal generators, signal processor, final control elements, actuators, production of compressed air – compressors – reciprocating and rotary type, preparation of compressed air – driers, filters, regulators, lubricators, distribution of compressed air – piping layout.</p> <p>Pneumatic memory valve, time delay valve. Pneumatic circuits and logic circuits: supply air and exhaust air throttling, will dependent circuits, travel dependent controls – types – construction – practical applications, cylinder sequencing circuits, travel step diagrams, practical examples involving two or three cylinders, use of logic functions in pneumatic manufacturing applications, practical examples involving the use of logic functions.</p> |  |            |                 |             |
| <b>Module 4</b>   | Electro-Pneumatic control  | Assignment | Data Collection | 11 sessions |
| <p>Topics: Principles-signal input and output pilot assisted solenoid control of directional control valves, use of relay and contactors. Control circuitry for simple single cylinder applications.</p>  |  |            |                 |             |
| <p><b>Targeted Application &amp; Tools that can be used:</b></p> <p>This course finds applications mainly in automobile, space, defense, medical, consumer goods etc. Job titles might include Hydraulic or Pneumatic Design engineer, Maintenance engineer, Quality engineer, Service Engineer, Application engineer.</p>  |  |            |                 |             |

| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Fundamentals of Automobile Engineering</b> ” and attain <b>SKILL DEVELOPMENT</b> through Participative learning Techniques.   |            |                        |   |   |             |   |
| <b>Course Description</b>   | This course provides a fundamental understanding of the various systems of a typical automobile. At the end of this course, the participant acquire fundamental knowledge of the various systems of an automobile and associate the functions of each system with its design and layout, depict the various systems using simple schematics, and apply concepts learnt in the field of automobile engineering. |            |                        |   |   |             |   |
| <b>Course Outcomes</b>  | Student will be able to<br>1) Identify the different parts of an automobile and it’s working<br>2) Understand the working of transmission and braking systems<br>3) Comprehend the working of steering and suspension systems  |            |                        |   |   |             |   |
| <b>Course Content:</b>  | Engine components and it’s principle parts, cooling and lubrication, various lubrication system used in I C engines transmission systems and brakes, types of braking system based on medium used to brake , suspension systems, functions of steering system, superchargers and turbochargers, fuels, fuel supply systems for si and ci engines, automotive emission control systems.                         |            |                        |   |   |             |   |
| <b>Module 1</b>   | ENGINE COMPONENTS AND IT’S PRINCIPLE PARTS   | Assignment | SI and CI engines      |   |   | 08 Sessions |   |
| Topics:<br>Spark Ignition (SI) & Compression Ignition (CI) engines, cylinder – arrangements and their relatives merits, Liners, Piston, connecting rod, crankshaft, valves, valve actuating mechanisms, valve and port timing diagrams.   |  |            |                        |   |   |             |   |
| <b>Module 2</b>   | Transmission System  | Case Study | Suspension system      |   |   | 08 Sessions |   |
| <b>Transmission system:</b> Definition and layout of Transmission System, requirements of transmission system, types of transmission system, units of transmission system, clutch and its types, gear box, propeller shaft, universal joints, axles and differentials, types of drives. |  |            |                        |   |   |             |   |
| <b>Module 3</b>   | Cooling, and Lubrication System  | Assignment | Systems of lubrication |   |   | 10 Sessions |   |
| <b>Topics</b>   |  |            |                        |   |   |             |   |

|  |                                |            |   |             |
|--|--------------------------------|------------|---|-------------|
| <b>Cooling system:</b> Definition and objective, types of cooling systems, working of water cooling system, methods of circulation of water: Thermo-syphon cooling, forced or pump cooling, thermostatic regulator cooling, pressurized water cooling, evaporative cooling.<br><b>Lubrication system:</b> Definition and objective, various lubrication system used in I C engines, wet sump lubrication system, dry sump lubrication system, mist lubrication system.   |                                |            |   |             |
| <b>Module 4</b>  | Braking and Steering System    | Assignment | Design and Fabrication of steering          | 9 Sessions  |
| <b>Topics</b><br><b>Braking and Steering system:</b> Requirements of Braking system. Types of braking system. Working principle of Disk and Drum brake, Hydraulic brake, Power brake and Air brake. Purpose of a steering system, functions of steering system, layout of steering system, types of steering gears: Steering mechanisms, Davis steering mechanisms, and Ackermann steering mechanism. Power steering, types of power steering.   |                                |            |   |             |
| <b>Module 5</b>  | Ignition and suspension system | Assignment | Design and Fabrication of Suspension system | 10 Sessions |
| <b>Ignition System:</b> Mechanical timed ignition system, Battery coil ignition system, Electronic Ignition.<br><b>Suspension System:</b> Introduction to Suspension, functions of suspension system, elements of suspension system, Telescopic suspension system, Mcpherson system, Shock absorbers.  |                                |            |   |             |

| <b>Course Description</b>             | This lab course introduces students to the practical application of Finite Element Analysis techniques using industry-standard software tools. The primary focus is on building and analyzing models to solve real-world engineering problems in structural mechanics, heat transfer, and vibrations. Students will gain hands-on experience in creating geometries, applying boundary conditions, meshing, and interpreting results to make data-driven design decisions.  |                |                |                    |                               |    |  |    |   |    |  |    |   |    |  |
| <b>Course Out Comes</b>               | On successful completion of the course the students shall be able to:<br>CO1: Develop a strong foundation in the principles and methodologies of Finite Element Analysis<br>CO2: Gain proficiency in using industry-standard FEA software for creating models, applying loads, and running simulations for structural, thermal, and vibrational analyses.<br>CO3: Enhance the ability to interpret simulation results, validate them against theoretical or experimental data, and apply these insights to optimize designs.<br>CO4: Apply FEA techniques to solve real-world engineering challenges, fostering critical thinking and effective decision-making in design and analysis processes. |                |                |                    |                               |    |  |    |   |    |  |    |   |    |  |

| <b>Course Pre-requisites</b>   | NIL   |                         |  |             |   |   |
| <b>Anti-requisites</b>   | NIL   |                         |  |             |   |   |
| <b>Course Description</b>  | This course introduces computer assisted modern manufacturing technologies. The course includes basics of automation, NC programming (manual and APT), concepts of group technology, Flexible Manufacturing system and CIM. This course relates to the important theoretical concepts, and the state-of-the-art technological developments in the area of modern manufacturing.   |                         |  |             |   |   |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Computer Integrated Manufacturing</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Participative learning techniques.   |                         |  |             |   |   |
| <b>Course Outcomes</b>   | <b>On successful completion of this course the students shall be able to:</b><br>1] Describe various types of automation and production concept<br>2] Distinguish various automated flow line and Assembly line.<br>3] Outline Flexible manufacture system and group technology.<br>4] Apply CNC Part Programming and inspection principles.<br>5] Explain the Computer aided process planning and concurrent engineering |                         |  |             |   |   |
| <b>Course Content:</b>   |   |                         |  |             |   |   |
| <b>Module 1</b>  | Introduction and Scope of CIM in Industry   | Assignment              | Automation                             | 08 sessions |   |   |
| Topics: Introduction, Evolution of CIM, CIM Hardware and software, Elements of CIM system, Types of automation, Manufacturing Systems, Types of Manufacturing Systems, , Machine Tools and related equipment”s, Computer monitoring and control, Manufacturing support systems, , Benefits of Computer integrated Manufacturing Systems. |   |                         |  |             |   |   |
| <b>Module 2</b>  | NC/ CNC Machine Tools   | Assignment & Case study | Machine tools                          | 09 sessions |   |   |
| Topics: General architecture of CNC Machine, Components of the CNC Systems: Machine Control Unit, CNC Driving system components: Hydraulic, Servo Motors, Stepper Motors, Feedback Devices: Encoder, Resolver, Induction Tachometers, Counting devices. Constructional Features of CNC Machines  |   |                         |  |             |   |   |
| <b>Module 3</b>  | Constructional Features of CNC Machines   | Seminar                 | CNC system                             | 10 sessions |   |   |
| Topics: Design considerations of CNC machines for improving machining accuracy, Structural Members, Slide ways, bearings, Re-circulating ball Screws, Spindle drives, Work holding devices and tool holding devices, Automatic tool changers   |   |                         |  |             |   |   |
| <b>Module 4</b>  | Adaptive Control  | Assignment              | Application of Adaptive Control System | 12 sessions |   |   |

|   |   |            |      |             |
|---|---|------------|------|-------------|
| Topics: Machining systems. Adaptive control optimization system, adaptive control constraint system, applications to machining processes, Benefits of Adaptive control Machining, Typical production planning and control system, Material planning systems, Capacity planning, Shop Floor Control, Automatic identification, Automated data collection systems   |   |            |      |             |
| <b>Module 5</b>   | Computer Aided & Concurrent Engineering           | Case study | CAPP | 06 sessions |
| Topics: Topics: Introduction of Process planning, Retrieval CAPP system, Generative CAPP system, Computer managed Process plan (CMPP), Advanced Process Planning, Concurrent Engineering.   |   |            |      |             |
| <b>Targeted Application &amp; Tools that can be used:</b><br>Application area: Manufacturing sector, Automobile and assembly sectors, military and aerospace sector.  |   |            |      |             |
| <b>Text Book</b><br>1] Mikell P Groover, "Automation, Production Systems and Computer-Integrated Manufacturing", Pearson Education.<br>2] CAD, CAM, CIM by P.Radhakrishnan and S.Subramanyan, New Age International Publishers.   |   |            |      |             |

| <b>Course Description</b>   | Smart Manufacturing is an amalgamation of Information Technology, Cloud Computing & traditional Mechanical, Production Engineering towards achieving excellence in manufacturing. Maximum results with minimum resources being used. concepts of Smart Manufacturing, how various technologies can be leveraged to achieve minimum breakdowns, First Time Right Production, 100% Delivery on Time with minimum turnaround time. Nine Pillars of Smart Manufacturing will be explained to the Students developments in Technology those are going to alter the Traditional Manufacturing scenario. The following topics may be broadly covered in the classroom. The practical will be in the form of Group Discussion based on Case Study. |            |   |                  |   |             |   |   |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Smart Manufacturing</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Participative learning techniques.  |            |   |                  |   |             |   |   |
| <b>Course Outcomes</b>  | <b>On successful completion of this course the students shall be able to:</b><br>1] Explain the different areas of Industrial Internet<br>2] Outline the designing industrial internet systems<br>3] Explain the security of the Industrial Internet<br>4] Outline the active part of industry 4.0<br>5] Explain the economic aspects and applications of day to day life smart factories  |            |   |                  |   |             |   |   |
| <b>Course Content:</b>  |  |            |   |                  |   |             |   |   |
| <b>Module 1</b>   | Introduction to the Industrial Internet  | Assignment | A report on use of IoT in common applications |                  |   | 10 sessions |   |   |
| Topics:<br>The Internet of Things: An overview; Horizontal and vertical aspects of the Internet of Things, What Is the Industrial Internet?, Innovation and the IoT, Intelligent Devices, Introduction to Industry 4.0 , Industry 4.0 Reference assembly line, lean Manufacturing |  |            |   |                  |   |             |   |   |
| <b>Module 2</b>   | Designing Industrial Internet Systems  | Case Study | On IIoT                                       |                  |   | 08 sessions |   |   |
| Topics:<br>The Concept of the IIoT, Modern Communication Protocols, Wireless Communication Technologies, Building Blocks of Industry 4.0, AI&ML   |  |            |   |                  |   |             |   |   |
| <b>Module 3</b>   | Securing the Industrial Internet   | Case Study | Report on system Security                     |                  |   | 08 sessions |   |   |
| Topics:   |  |            |   |                  |   |             |   |   |

|  |   |            |  |             |
|--|---|------------|--|-------------|
| Security in Manufacturing, PLC, Securing the OT, Network Level: Potential Security Issues, System Level: Potential Security Issues, Smart Factories in current trends and its impact   |   |            |  |             |
| <b>Module 4</b>  | Introducing Industry 4.0                          | Assignment | Industrial revolution  | 10 sessions |
| <p>Topics:</p> <p>Defining Industry 4.0, Why Industry 4.0 and Why Now?, Four Main Characteristics of Industry 4.0, The Value Chain, Industry 4.0 Design Principles, Building Blocks of Industry 4.0, Big Data and Analytics, Autonomous Robots, Simulation, The Industrial Internet of Things (IoT), Industry 4.0 Reference Architecture, Smart Manufacturing, Equipment, Redefine the Workforce, Products, Business Processes, Application Area is any manufacturing/processing industries</p>  |   |            |  |             |
| <b>Module 5</b>  | Smart Factories                                   | Case study | Identification of areas where Smart Manufacturing can flourish | 09 sessions |
| <p>Topics:</p> <p>Introducing the Smart Factory, Smart Factories in Action, Why Smart Manufacturing Is Important, Real-World Smart Factories, Siemens' Amberg Electronics Plant (EWA), Industry 4.0: The Way Forward, Adopt Smart Architectures and Technologies, Industry 4.0 Design Principles, design principles of Industry 4.0</p>  |   |            |  |             |
| <p><b>Targeted Application &amp; Tools that can be used:</b></p> <p>Application Area is any manufacturing/processing industries</p> <p>Professionally Used Software: PLC and IoT.</p>  |   |            |  |             |

| <b>Anti-requisites</b>   | NIL   |                |  |             |   |   |
| <b>Course Description</b>  | The Course is designed with an objective of giving an overview of study of materials at molecular level and its properties. The Course will also discuss specific applications of nanotechnology in electronic devices, biomedical fields, environmental solutions, and energy production. It also gives fundamental knowledge of nanoscience, in understanding current applications of nanotechnology, and in learning about future prospects in this field. |                |  |             |   |   |
| <b>Course Objectives</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Nanotechnology</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Participative learning techniques.  |                |  |             |   |   |
| <b>Course Out Comes</b>  | On successful completion of the course the students shall be able to:<br>1. Recognize the basic properties of Nano materials.<br>2. Distinguish between various Nano material perspectives applicable to Nano technology.<br>3. Summarize the effect of Nano fluids on the boiling heat transfer.<br>4. Identify the processing techniques involved in investigation of Nano technology.  |                |  |             |   |   |
| <b>Course Content:</b>   |   |                |  |             |   |   |
| <b>Module 1</b>  | Nanotechnology and over view  | Term paper     | Data Collection/any other such associated activity | 04 sessions |   |   |
| Topics: Introduction to Nanoscience & Nanotechnology. History of Nano materials, Natural & Man-made nanomaterials. Benefits of nanotechnology. Applications – latest trends  |   |                |  |             |   |   |
| <b>Module 2</b>  | Structure & Synthesis of Nanomaterials  | Term paper     | Data Collection/any other such associated activity | 14 sessions |   |   |
| Topics: Material class structure, Nano scale and dimensions, Top down method: Lithography, High energy ball milling, Electrodeposition. Bottom up Method: Sol-Gel Process, CVD, PVD, Self Assembly etc,<br>Synthetic nanomaterials: Carbon nanotube, fullerene, quantum dots, Graphene, metal & ceramic nanomaterials, composite Nanomaterials |   |                |  |             |   |   |
| <b>Module 3</b>  | Investigation techniques  | Term paper     | Data Collection/any other such associated activity | 10 sessions |   |   |
| Topics: Scanning probe microscopes, Electron microscopes – SEM, TEM, Optical microscopes, x ray photoelectron spectroscopy, Energy dispersive spectroscopy.  |   |                |  |             |   |   |
| <b>Module 4</b>  | Properties of Nanomaterials   | Assignmen t    | Data Collection/any other such associated activity | 10 sessions |   |   |
|  |   |                |  |             |   |   |

|  |  |                       |  |             |
|--|--|-----------------------|--|-------------|
| Topics: Mechanical property, Electrical property, Chemical property, Magnetic properties, Characterization of Nano materials.  |  |                       |  |             |
| <b>Module 5</b>  | Nanofluids & Composites  | Assignment/Case Study | Data Collection/any other such associated activity | 06 sessions |
| Topics: Introduction to Micro and Nano fluids. Properties of Nano fluids. Heat transfer in Nano fluids. Advance cooling device development using Nano fluids, Nano added Composites & Applications.  |  |                       |  |             |
| <b>Targeted Application &amp; Tools that can be used:</b><br><b>Material Characterization, Material Development etc</b>  |  |                       |  |             |
| <b>Text Book</b><br>1. T.Pradeep, "NANO: The Essentials: Understanding Nanoscience and Nanotechnology", McGraw Hill Education. (Not available in Library. Available online)  |  |                       |  |             |

| <b>Course Description</b>  | The Course is designed with an objective of giving an overview on Computer Aided Design and Manufacturing (CAD/CAM) systems, Flexible Manufacturing Systems (FMS), system hardware and general functions, material handling system, work holding systems, cutting tools and tool management, physical planning of system, software structure functions and description, cleaning and automated inspection, communications and computer networks for manufacturing, quantification of flexibility, human factors in manufacturing, justification of FMS, planning and operation of FMS. |            |  |                |   |             |   |   |
| <b>Course objectives</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Flexible Manufacturing Systems</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Participative learning techniques.   |            |  |                |   |             |   |   |
| <b>Course Outcomes</b>   | <b>On successful completion of this course the students shall be able to:</b><br>[1] Understand the function of NC, CNC and DNC machines<br>[2] Analyze the Quantitative aspects of FMS.<br>[3] Explain the Machine cell design and part families.<br>[4] Outline the various production control issues and tool management.<br>[5] Analyze the economic aspects and justification of FMS.   |            |  |                |   |             |   |   |
| <b>Course Content:</b>   |  |            |  |                |   |             |   |   |
| <b>Module 1</b>  | Introduction to manufacturing systems, Part programming  | Assignment | Programming simple machined components |                |   | 12 Session  |   |   |
| Topics:<br>Introduction to manufacturing system, Automation in production systems, types of automation, reason for automation, advantages and disadvantages, Costs involved in manufacturing, mathematical model of production performance, Computer controlled manufacturing systems. Review of NC, CNC, DNC, Adaptive control and robotics in manufacturing. Advantages, disadvantages and applications.<br>Part Programming: Manual and APT part programming for simple objects |  |            |  |                |   |             |   |   |
| <b>Module 2</b>  | Introduction to FMS, Group Technology and Cellular manufacturing   | Assignment | Solving numerical to form ideal cells  |                |   | 10 sessions |   |   |

|  |   |            |  |             |
|--|---|------------|--|-------------|
| <p>Topics:<br/>Flexibility, types of flexibility, types of FMS, FMS components, Quantitative analysis, advantages and disadvantages of FMS.<br/>Group Technology, part family, cell formation, simple cell formation techniques such as array-based method, similarity coefficient methods, and simple examples, scheduling in FMS.</p>                              |   |            |  |             |
| <b>Module 3</b>  | Material Handling systems, Production Planning and Control in FMS | Assignment | Justification of using FMS in manufacturing systems            | 10 sessions |
| <p>Introduction to material handling, principles of material handling, different material handling equipment such as industrial truck, conveyors etc. Application and selection of material handling equipment's, economics justification, simple examples.<br/>Production planning and Control in FMS<br/>Need for different PPC methods in FMS environment</p>     |   |            |  |             |
| <b>Module 4</b>  | Tooling and system planning in FMS                                | Case study | Control of cutting tools and its practices in Machine Shop Lab | 07 sessions |
| <p>Introduction to tool management, Tool magazine, Tool management, Fault sensing, Tool strategies, control of cutting tools and its practices, design of flexible fixtures, modular fixtures, economics of fixtures<br/>System planning in FMS, supervisory control in FMS, software system in FMS</p>  |   |            |  |             |
| <b>Module 5</b>  | Planning and implementation of FMS                                | Assignment | Behavioral issues in implementing FMS                          | 06 sessions |
| <p>Planning, integration, system configuration, FMS layout and implementation.<br/>Organizational and behavioral issues in the implementation of FMS, economic justification of FMS<br/>Toyota production systems, Lean manufacturing and Kanban system.<br/>Introduction to simulation of FMS and data base design for FMS.</p>                                     |   |            |  |             |
| <p><b>Targeted Application &amp; Tools that can be used:</b><br/>Application Area is manufacturing systems involved in shop floor, automobile assembly and manufacturing systems involving rapid product changes in design and variety (Toyota Production Systems, Bidadi)<br/>Professionally Used Software: For part programming, SEIMENS CNC PART PROGRAMMING.</p> |   |            |  |             |

| <b>Course Description</b>  | The purpose of this course is to enable the students to appreciate the need for influence the design of parts and part systems. Students will be introduced to the Design for Manufacturability (DFM) methodology, and will be motivated to understand infeasible or impractical designs. The course develops the critical thinking and analytical skills. The course also enhances the programming abilities through assignments. |            |                                 |             |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “: <b>Product Design for Manufacturing and Assembly</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Participative learning techniques.   |            |                                 |             |
| <b>Course Outcomes</b>   | On successful completion of this course the students shall be able to:<br>[1] Understand constraints of manufacturing processes that limit design possibilities with respect to cycle time, material handling, and other factory costs.<br>[2]Apply casting considerations in machining<br>[3]Apply principles of DFA to make efficient patterns and moulds<br>[4]Select proper materials and manufacturing processes Die casting  |            |                                 |             |
| <b>Course Content:</b>   |  |            |                                 |             |
| <b>Module 1</b>  | Material and process selection   | Assignment | Demonstration of the Experiment | 12 sessions |
| Topics:<br>Introduction, Advantages of applying DFMA, General requirements of early materials and process selection, Selection of Manufacturing processes, Selection of materials. Engineering Design features. – Dimensioning, Tolerances, General Tolerance, Geometric Tolerances, Assembly limits, achieving larger machining tolerances, Datum features. |  |            |                                 |             |
| <b>Module 2</b>  | Machining Considerations   | Assignment | Case study                      | 10 sessions |
| Topics:<br>Machining Considerations – Drills, Milling cutters, Drilling, Keyways, Dowels, Screws, Reduction in machining areas, Simplification by separation and amalgamation, work piece holding, surface grinding, Examples  |  |            |                                 |             |
| <b>Module 3</b>  | Casting Procedures   | Assignment | Design of molds using AutoCAD   | 12 sessions |
| Topics:<br>Pattern, Mould, parting line, cast holes, machined holes, identifying parting line, special sand cores, designing to obviate sand cores. Examples. Injection molding materials, Molding cycle, Systems, molds, machine size, cycle time, Cost estimation, Insert molding,   |  |            |                                 |             |
| <b>Module 4</b>  | Design for Die casting and Powder metal processing –   | Assignment | Seminar                         | 10 sessions |

|  |  |
|--|--|
| <b>Topics:</b><br>Die casting alloys, cycle, machines, dies, finishing, Assembly techniques, Design principles, Powder metallurgy processing, stages, compaction characteristics, Tooling, Sintering, Design guidelines  |  |
| Targeted Application & Tools that can be used:<br>Finding the various fits and tolerances of components experimentally using gauges and analyzing the same using Autodesk Invent software  |  |

| <b>Module 1</b>   | Introduction to Production Planning and Control   | Assignment | Industrial application | 07 sessions |   |   |   |
| Topics:<br>Objectives and benefits of planning and control-Functions of production control-Types of production-job- batch and continuous-Product development and design-Marketing aspect – Functional aspects-Operational aspect-Durability and dependability aspect aesthetic aspect. Profit consideration-Standardization, Simplification & specialization- Break even analysis-Economics of a new design<br><b>Assignment:</b> Break Even analysis                     |   |            |                        |             |   |   |   |
| <b>Module 2</b>   | Product Planning and Process Planning   | Assignment | Data analysis          | 08 sessions |   |   |   |
| Topics:<br>Product Planning-Extending the original product Information-Value Analysis-Problems in lack of product Planning-Process planning and routing-Pre requisite information needed for process Planning-Steps in process Planning-Quantity determination in batch Production-Machine capacity, Balancing-Analysis of process capabilities in a multi-product system.<br><b>Assignment:</b> Study on value analysis of product with respect to process capabilities. |   |            |                        |             |   |   |   |

|   |  |              |               |             |
|---|--|--------------|---------------|-------------|
| <b>Module 3</b>   | Production Scheduling                      | Assignment   | Data analysis | 10 sessions |
| Production Control Systems-Loading and scheduling-Master Scheduling-Scheduling rules-Gantt charts-Perpetual loading-Basic scheduling problems – Line of balance – Flow production scheduling-Batch production scheduling-Product sequencing – Production Control systems-Periodic batch control-Material requirement planning kanban – Dispatching-Progress reporting and expediting-Manufacturing lead time-Techniques for aligning completion times and due dates             |  |              |               |             |
| <b>Module 4</b>   | Inventory control and recent trends in PPC | Presentation | Data analysis | 10 sessions |
| Inventory control -Purpose of holding stock-Effect of demand on inventories-Ordering procedures. Two bin system -Ordering cycle system-Determination of Economic order quantity and economic lot size-ABC analysis-Recorder procedure-Introduction to computer integrated production planning systems-elements of JUST IN TIME SYSTEMS-Fundamentals of MRP II and ERP   |  |              |               |             |
| <b>Module 5</b>   | Quality Control Methods in PPC             | Presentation | Data analysis | 10 sessions |
| Quality process, the Juran trilogy, improvement strategies, types of problems, the PDSA Cycle, problem-solving methods, Kaizen, reengineering, six sigma, case studies. Statistical Process Control : Pareto diagram, process flow diagram, cause and effect diagram, check sheets, histograms, statistical fundamentals, Control charts, state of control, out of control process, control charts for variables, control charts for attributes, scatter diagrams, case studies |  |              |               |             |

| <b>Course Description</b>   | Students will be able to decide between the various trade-offs when selecting AM processes, devices and materials to suit particular engineering requirements. Students will have in-depth knowledge in latest trends and opportunities in AM, including distributed and direct digital manufacturing, mass customization, and how to commercialize their ideas. |                |                    |   |             |   |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Additive manufacturing &amp; Its Applications</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Participative learning techniques.  |                |                    |   |             |   |
| <b>Course Outcomes</b>  | <b>On successful completion of this course the students shall be able to:</b><br>CO1. Identify the different AM techniques.<br>CO2. Explain the Design considerations in AM.<br>CO3. Illustrate the post processing for AM parts.<br>CO4. Summarize the AM process selection and its applications.   |                |                    |   |             |   |
| <b>Course Content:</b>  |  |                |                    |   |             |   |
| <b>Module 1</b>   | Introduction to Manufacturing Process & Additive Manufacturing   | Assignment     | AM techniques      |   | 10 Sessions |   |
| Topics: Introduction to Manufacturing Technology: Introduction, Prototyping fundamentals, Historical development, Advantages of MT, Commonly used terms, process chain, modelling, Classification of Manufacturing process, Applications to various fields.<br>Introduction to Additive Manufacturing: Introduction to AM, AM evolution, Distinction between AM & CNC machining, Advantages of AM, AM process chain: Conceptualization, CAD, conversion to STL, Transfer to AM, STL file,Machine setup, build, removal and clean up, post processing. Classification of AM processes: Liquid polymer system, discrete particle system, molten material systems, and solid sheet system. |  |                |                    |   |             |   |
| <b>Module 2</b>   | Design of AM   | Case Study     | Design Tools of AM |   | 14 Sessions |   |
| Topics: Motivation, DFMA concepts and objectives, AM unique capabilities, Exploring design freedoms, Design tools for AM, Part Orientation, Removal of Supports, Hollowing out parts, Inclusion of Undercuts and Other Manufacturing Constraining Features, Interlocking Features, Reduction of Part Count in an Assembly, Identification of markings/ numbers etc.   |  |                |                    |   |             |   |

|   |   |            |                                  |             |
|---|---|------------|----------------------------------|-------------|
| <b>Module 3</b>   | Post Processing of AM parts                 | Assignment | Post processing of AM components | 10 Sessions |
| Topics: Support material removal, surface texture improvement, accuracy improvement, aesthetic improvement, preparation for use as a pattern,   |   |            |                                  |             |
| <b>Module 4</b>   | Processing selection of AM and Applications | Case Study | Future productions of AM         | 10 Sessions |
| Topics: Introduction, selection methods for a part, challenges of selection, example system for preliminary selection, production planning and control. AM Applications: Functional models, Pattern for investment and vacuum casting, Medical models, art models, Engineering analysis models, Rapid tooling, new materials development, Bi-metallic parts, Re-manufacturing. Application examples for Aerospace, defense, automobile, Bio-medical and general engineering industries  |   |            |                                  |             |
| <b>Targeted Application &amp; Tools that can be used:</b><br>Application Area include almost all manufacturing organizations (Automotive, Aerospace, Army, Medical equipment's etc.,)<br>Professionally Used Software: AutoCAD, Solid works   |   |            |                                  |             |

| <b>Course Description</b>   | The Course is designed with an objective of giving an overview of Micro and Nano manufacturing and their applications. This Course is aimed at teaching basic concepts of Micro and Nano manufacturing for mechanical engineering students. The course also enhances the knowledge of advanced technology applications through assignments.  |            |   |          |          |             |          |
| <b>Course Objectives</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Micro and Nano Manufacturing</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Participative learning techniques.   |            |   |          |          |             |          |
| <b>Course Outcomes</b>  | <b>On successful completion of this course the students shall be able to:</b><br>1. Get an awareness of different techniques used in micro and nano manufacturing.<br>2. Understand micro and nanofabrication techniques and other processing routes in micro and nano manufacturing.<br>3. Discuss about different techniques used in micro joining and the metrology tools in micro and nano manufacturing |            |   |          |          |             |          |
| <b>Course Content:</b>  |  |            |   |          |          |             |          |
| <b>Module 1</b>   | Overview of Micro and Nano Manufacturing   | Assignment | Applications of Micro and Nano machining                    |          |          | 10 sessions |          |
| Topics:<br>Introduction to Precision engineering, mIcro milling and micro drilling, Micro-electromechanical systems – merits and applications, Micro phenomenon in Electro-photography –applications. Introduction to Bulk micromachining, Surface micromachining steps.  |  |            |   |          |          |             |          |
| <b>Module 2</b>   | Micro/Nano machining and forming techniques  | Case Study | Nano plastic forming applications                           |          |          | 07 Sessions |          |
| Topics:<br>Introduction to mechanical micromachining, Micro drilling – process, tools and applications Micro turning- process, tools and applications, Diamond Micro turning – process, tools and applications.   |  |            |   |          |          |             |          |
| <b>Module 3</b>   | Micro and Nano Finishing Processes   | Assignment | Real time application of Micro and Nano Finishing Processes |          |          | 08 Sessions |          |
| Topics:<br>Introduction to Micro and Nano Finishing Processes, Magnetorheological Finishing (MRF) processes, Magnetorheological abrasive flow finishing processes (MRAFF) – process principle and applications, Force analysis of MRAFF process, Magnetorheological Jet finishing processes , Working principle |  |            |   |          |          |             |          |

|  |  |            |  |             |
|--|--|------------|--|-------------|
| and polishing performance of MR Jet Machine , Elastic Emission Machining (EEM) – machine description, applications.  |  |            |  |             |
| <b>Module 4</b>  | Micro and Nano Fabrication                                 | Assignment | Applications of Diamond technology and CNT | 08 Sessions |
| <p>Topics:</p> <p>Introduction to Micro Fabrication: basics, flowchart, basic chip making processes, Introduction to Nanofabrication, Nanofabrication using soft lithography – principle, applications – Examples (Field Effect Transistor, Elastic Stamp), Manipulative techniques – process principle, applications, Diamond - Properties and applications, CVD Diamond Technology, LIGA Process.</p>  |  |            |  |             |
| <b>Module 5</b>  | Micro and Nano measurement and characterization techniques | Assignment | Report on Nano metrology                   | 08 Sessions |
| <p>Topics:</p> <p>Introduction to micro and nano measurement, defining the scale, uncertainty, Scanning Electron Microscopy – description, principle, Scanning White-light Interferometry – Principle and application, Optical Microscopy</p>  |  |            |  |             |
| <p><b>Targeted Application &amp; Tools that can be used:</b></p> <p>Application Area is Aerospace and Space, Defense and Medical fields, Automobiles and special control systems, Energy sectors.</p> <p>Professionally Used Software: Nil.</p>  |  |            |  |             |

| <b>Course Description</b>   | The purpose of this course is to enable the students to understand underlying concepts in statistical quality control and to develop ability to apply those concepts to the design and management of quality control processes in industries. The course is both conceptual and analytical in nature. The course develops the analytical, critical thinking, and decision making skills. The course also enhances the problem solving abilities through assignments. |            |                              |                |          |             |          |          |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Statistics and Quality Control</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Problem solving methodologies.   |            |                              |                |          |             |          |          |
| <b>Course Outcomes</b>  | On successful completion of this course the students shall be able to:<br>1. Explains the basic concept of Quality, Quality tools<br>2. Analyze process capability and operating characteristic curves<br>3. Construct control charts and evaluate revised control limits<br>4. Describe Six sigma methodology to improve quality  |            |                              |                |          |             |          |          |
| <b>Course Content:</b>  |  |            |                              |                |          |             |          |          |
| <b>Module 1</b>   | Quality – An overview  | Assignment | Data Collection and Analysis |                |          | 6 sessions  |          |          |
| Topics:<br>Introduction and definition of quality, quality control, Cost of quality, 7 basic Quality control tools.   |  |            |                              |                |          |             |          |          |
| <b>Module 2</b>   | Data collection and measurement analysis.  | Case Study | data analysis task           |                |          | 15 sessions |          |          |
| Topics:<br>Type of data – variable and attributes, Data Sampling –Population and sampling, determining sample size, types of sampling, variation, types of variation- common cause, special cause, total variation.<br>statistical hypothetical test, practical examples.<br>Measurement system analysis- discrimination, accuracy, precision, Gauge R&R, Kappa analysis, Base lining- for discrete data- DPO, DPU, DPMO, using sigma value. For continuous date – Process Capability.<br>Data analysis using Minitab Software. |  |            |                              |                |          |             |          |          |
| <b>Module 3</b>   | Control Charts   | Assignment | Data Collection and Analysis |                |          | 14 sessions |          |          |
| Topics:   |  |            |                              |                |          |             |          |          |

| <b>Course Pre-requisites</b>  | NIL  |                |             |             |          |          |
| <b>Anti-requisites</b>  | NIL  |                |             |             |          |          |
| <b>Course Description</b>   | This course explores the integration of advanced manufacturing processes with the Internet of Things (IoT) to revolutionize production systems. Students will learn how digital technologies, such as automation, additive manufacturing, and cloud computing, are applied in modern manufacturing environments to enhance efficiency, flexibility, and product quality. The course emphasizes the role of IoT in enabling smart factories, real-time monitoring, predictive maintenance, and data-driven decision-making. |                |             |             |          |          |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of " <b>Digital Manufacturing and IOT</b> " and attain <b>EMPLOYABILITY SKILL</b> through <b>participative</b> learning techniques.   |                |             |             |          |          |
| <b>Course Outcomes</b>  | On successful completion of this course the students shall be able to:<br>CO1: Understand the principles of digital manufacturing and IoT.<br>CO2: Design and implement IoT-enabled manufacturing systems.<br>CO3: Analyze real-time data to optimize production processes.<br>CO4: Explore emerging trends and challenges in Industry 4.0.  |                |             |             |          |          |

| <b>Course Description</b>   | This course introduces the principles and practices of <b>Lean Manufacturing</b> , focusing on continuous improvement, waste reduction, and efficient production techniques. Students will learn how to implement Lean tools and strategies to optimize production processes, increase product quality, and reduce costs. The course covers key concepts such as value stream mapping, Kaizen, 5S, Kanban, and Six Sigma, which are essential for creating a culture of operational excellence in modern manufacturing environments. Through practical case studies and hands-on activities, students will understand how to apply Lean principles to achieve higher productivity and competitiveness. |            |                |          |             |          |          |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Lean Manufacturing</b> ” and attain <b>EMPLOYABILITY SKILL</b> through <b>participative</b> learning techniques.  |            |                |          |             |          |          |
| <b>Course Outcomes</b>  | <b>On successful completion of this course the students shall be able to:</b><br><b>CO1:</b> Understand the key principles and philosophy of Lean Manufacturing.<br><b>CO2:</b> Learn to identify and eliminate waste in production processes.<br><b>CO3:</b> Implement Lean tools such as Kaizen, 5S, and Value Stream Mapping.<br><b>CO4:</b> Develop skills to drive continuous improvement in manufacturing systems.   |            |                |          |             |          |          |
| <b>Course Content:</b>  |  |            |                |          |             |          |          |
| <b>Module 1</b>   | Introduction to Lean Manufacturing   | Case Study | Descriptive    |          | 13 sessions |          |          |
| Topics:<br>Overview of Lean Manufacturing and its Principles, History and Evolution of Lean Manufacturing, The Concept of Waste in Manufacturing (Muda), Core Principles: Value, Flow, Pull, and Perfection, Understanding Value Stream in Lean Context, Benefits and Challenges of Lean Manufacturing, Case Study: Lean Transformation in Industry                                 |  |            |                |          |             |          |          |
| <b>Module 2</b>   | Identifying and Reducing Waste   | Case Study | Descriptive    |          | 12 sessions |          |          |
| Topics:<br>Types of Waste (Muda) in Manufacturing, Identifying Non-Value-Added Activities, Waste Elimination through Just-in-Time (JIT), Overview of the Kaizen Philosophy and Practices, Using Kaizen Events for Waste Reduction, Value Stream Mapping (VSM) Introduction, Creating a Value Stream Map (Current State), Analyzing and Improving a Value Stream Map (Future State). |  |            |                |          |             |          |          |

| <b>Course Description</b>   | This course is intended to provide an overview of various Modern Manufacturing Processes such as Advanced Machining Processes, Advanced Casting Processes, Advanced Welding Processes, Advanced Metal Forming Processes, Lean Manufacturing, Industry 4.0 and related group technologies used in Industries. Also how these processes are used in smart manufacturing.   |                |   |   |             |   |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Modern Manufacturing Processes</b> ” and attain <b>EMPLOYABILITY SKILL</b> through <b>Participative learning techniques</b> .   |                |   |   |             |   |
| <b>Course Outcomes</b>  | <b>On successful completion of this course the students shall be able to:</b><br>(1) Distinguish the various methods of manufacturing processes.<br>(2) Discuss the principles, processes and applications of Advanced Machining & Casting Processes<br>(3) Discuss the principles, processes and applications of Advanced Welding & Metal Forming Processes<br>(4) Apply the various Lean Techniques & utilization of various technology that can be applied to industries for improving organizational performance |                |   |   |             |   |
| <b>Course Content:</b>  |  |                |   |   |             |   |
| <b>Module 1</b>   | Introduction to Manufacturing  | Assignment     |   |   | 10 Sessions |   |
| <b>Topics:</b><br>Introduction, Importance of Manufacturing Process, Manufacturing Process and 5 M’s, Classification of Manufacturing Processes, Selection of Manufacturing Process, Types of Production, Functions In Manufacturing, Organization and Information Processing In Manufacturing, Plant Layout. Types of Automation, Automated Assembly Systems, Designs For Automated Assembly, Types Of Automated Assembly Systems.   |  |                |   |   |             |   |
| <b>Module 2</b>   | Advanced Machining & Casting Processes   | Case Study     |   |   | 15 Sessions |   |
| <b>Topics:</b><br>Advanced Machining Processes: Abrasive Jet Machining (AJM), Ultrasonic Machining (USM), Water Jet Machining (WJM), Chemical Machining (CHM), Electro-Chemical Machining (ECM), Plasma Arc Machining (PAM), Electrical Discharge Machining (EDM), Electron Beam Machining (EBM), Laser Beam Machining (LBM).<br>CNC Turning & Milling: The Machine Control Unit for CNC, CNC Words, CNC Part Program, Numerical examples<br>Advanced Casting Processes: Metal mould casting, Continuous casting, Squeeze casting |  |                |   |   |             |   |

|  |   |            |             |
|--|---|------------|-------------|
| Vacuum mould casting, Evaporative pattern casting, Ceramic shell casting   |   |            |             |
| <b>Module 3</b>  | Advanced Welding & Metal Forming Processes        | Assignment | 12 Sessions |
| <b>Topics:</b><br>Advanced Welding Processes: Details of electron beam welding (EBW), laser beam welding (LBW), ultrasonic welding (USW)<br>Advanced Metal Forming Processes: Details of high energy rate forming (HERF) process, Electro-magnetic forming, explosive forming Electro-hydraulic forming, Stretch forming, Contour roll forming.  |   |            |             |
| <b>Module 4</b>  | Lean Manufacturing & Industry 4.0                 | Assignment | 8 Sessions  |
| <b>Topics:</b><br>Lean Manufacturing: Introduction. Toyota Production System, What is Lean? 3M's of Lean 5S's of Lean, Lean Manufacturing Principles. Lean Manufacturing Tools.<br>Industry 4.0: Introduction, Technologies of Industry 4.0, Application of Industry 4.0, Impact of Industry 4.0   |   |            |             |
| <b>Targeted Application &amp; Tools that can be used:</b> <ul style="list-style-type: none"> <li>• Creating smart factories where manufacturing technologies are upgraded and transformed by cyber-physical systems (CPSs), the Internet of Things (IoT), and cloud computing</li> <li>• Industry 4.0 combines embedded production system technologies with intelligent production processes to pave the way for a new technological age that will fundamentally transform industry value chains, production value chains, and business models.</li> </ul> |   |            |             |

| <b>Course Description</b>   | Robotics and stimulate their interests in science and engineering through the participation of the entire engineering design process. This course provides an overview of robot mechanisms, dynamics, and intelligent controls.  |                |                                      |             |          |          |
| <b>Course Out Comes</b>   | On successful completion of the course the students shall be able to:<br>1. Apply the concepts of inverse manipulator kinematics to a robot.<br>2. Apply the concepts of kinetics and kinematics to a robot.<br>3. Choose a suitable trajectory generation scheme for robot tasks.<br>4. Identify the types of sensors used in various applications. |                |                                      |             |          |          |
| <b>Course Content:</b>  |  |                |                                      |             |          |          |
| <b>Module 1</b>   | Industrial Robots and Their Applications   | Assignment     | Problem on DOF, Manipulator.         | 12 Sessions |          |          |
| Topics:<br>Introduction to robotics, classification of robots, workspace analysis, Manipulator Kinematics: Convention for affixing frames to links – DH Representation, Derivation of Direct kinematic equations for various types of robots. Inverse Manipulator Kinematics: Solvability, algebraic vs. geometric, Examples of inverse manipulator kinematics, repeatability and accuracy. |  |                |                                      |             |          |          |
| <b>Module 2</b>   | Kinematics of Robot  | Assignment     | Jacobians, rigid body, dynamic study | 12 Sessions |          |          |
| Topics:<br>Jacobians: Velocities and static forces: Linear and rotational velocity of rigid bodies, velocity propagation from link to link, jacobians, singularities, static forces in manipulators, jacobians in force domain, Cartesian transformation of velocities and static forces.   |  |                |                                      |             |          |          |
| <b>Module 3</b>   | Trajectory Planning  | Assignment     | Trajectory analysis                  | 12 Sessions |          |          |
| Trajectory Generation: General consideration in path description and generation, joint space schemes, collision free path planning, Robot programming.  |  |                |                                      |             |          |          |
| <b>Module 4</b>   | ROS  | Case Study     | Study different types of sensor      | 10 Sessions |          |          |

|  |   |

| <b>Course Description</b>   | The Modern-day control engineering is a relatively new field of study that gained a significant attention during 20th century with the advancement in technology. Control engineering has an essential role in a wide range of control systems, from simple household washing machines to high performance F-16 fighter aircraft. It seeks to understand physical systems, using mathematical modelling, in terms of inputs, outputs and various components with different behaviours; use control systems design tools to develop controllers for those systems; and implement controllers in physical systems employing available technology. A system can be mechanical, electrical, fluid and even biological and the mathematical modelling, analysis and controller design uses control theory in one or many of the time, frequency and complex S domains, depending on the nature of the design problem. |            |                                   |            |   |   |   |
| <b>Course Outcomes</b>  | <b>On successful completion of this course the students shall be able to:</b><br><br>1. Identify the type of control system, controllers, various test signals, compensators, stability, concepts, analogous systems and frequency response terminologies,<br>2. Develop mathematical models of mechanical, electrical, electro-mechanical and hydraulic control systems in order to obtain system response for given input test signals,<br>3. Obtain the transfer functions by applying block diagrams reduction techniques and signal flow graphs for different applications of control system.<br>4. Predict the stability of a control system by developing R-H criterion, bode and root locus plots.   |            |                                   |            |   |   |   |
| <b>Course Objectives:</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Control Engineering</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Participative learning techniques.  |            |                                   |            |   |   |   |
| <b>Course Content:</b>  |  |            |                                   |            |   |   |   |
| <b>Module 1</b>   | Introduction   | Assignment | Programming Task                  | 7 Sessions |   |   |   |
| Topics:<br>Concept of automatic controls, open and closed loop systems, concepts of feedback, requirement of an ideal control system. Types of controllers - Proportional, Integral, Proportional Integral, Proportional Integral Differential controllers. |  |            |                                   |            |   |   |   |
| <b>Module 2</b>   | Mathematical Models  | Case Study | Simulation and data analysis task | 9 Sessions |   |   |   |

|  |                                       |            |                          |             |
|--|---------------------------------------|------------|--------------------------|-------------|
| <p>Topics:<br/>Transfer function models, models of mechanical systems, models of electrical circuits, DC and AC motors in control systems, models of thermal systems, models of hydraulic systems. Analogous Systems: Force-voltage analogy and force – current analogy.</p>   |                                       |            |                          |             |
| <b>Module 3</b>  | Block Diagrams and Signal Flow Graphs | Assignment | Simulation task          | 8 Sessions  |
| <p>Topics:<br/>Transfer Functions definition, function, block representation of system elements, problems on reduction of block diagrams.</p>  |                                       |            |                          |             |
| <b>Module 4</b>  | Frequency Response Analysis           | Assignment | Simulation/Data Analysis | 10 Sessions |
| <p>Topics: Frequency Response Analysis using Bode Plots: Bode attenuation diagrams. Root Locus Plots: Definition of root loci, general rules for constructing root loci</p>  |                                       |            |                          |             |
| <b>Module 5</b>  | Series Feedback Compensation          | Assignment | Simulation/Data Analysis | 10 Sessions |
| <p>Topics: Series and feedback compensation, Introduction to state concepts, state equation of linear continuous data system. Matrix representation of state equations, controllability and observability, Kalman and Gilberts test.</p>   |                                       |            |                          |             |
| <p><b>Targeted Application &amp; Tools that can be used:</b><br/>Contemporary issues Professionally Used Software: Matlab.</p>   |                                       |            |                          |             |

**Topics relevant to “EMPLOYABILITY SKILLS”:** Frequency Response Analysis using Bode Plots, Bode attenuation diagrams and Root Locus Plots for developing **EMPLOYABILITY SKILLS** through **Participative Learning techniques**. This is attained through assessment component mentioned in course handout.

**Sample Thought provoking questions**

1. The root locus is a graphical representation in s-domain and it is symmetrical about the real axis. Because the open loop poles and zeros exist in the s-domain having the values either as real or as complex conjugate pairs. Calculate the angle of asymptotes and centroid for the given transfer function.
2. In order to obtain the desired performance of the system, we use compensating networks. Compensating networks are applied to the system in the form of feed forward path gain. Elucidate about Lag compensator with a neat sketch.

| <b>Course Description</b>   | This course provides an in-depth understanding of <b>Vehicle Health Monitoring, Maintenance, and Safety</b> . It covers modern diagnostic tools, sensor technologies, and data analytics to monitor vehicle health in real-time, focusing on predictive and preventive maintenance techniques to optimize performance and reduce breakdowns. Students will learn how to implement effective maintenance strategies, adhere to industry safety standards, and understand the integration of advanced technologies like IoT and AI for better diagnostics and safety.                    |            |                |          |          |             |          |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of <b>Vehicle Health Monitoring, Maintenance, and Safety”</b> and attain <b>EMPLOYABILITY SKILL</b> through <b>participative</b> learning techniques.   |            |                |          |          |             |          |
| <b>Course Outcomes</b>  | On successful completion of this course the students shall be able to:<br><br>CO1: Understand the principles and importance of vehicle health monitoring and how it contributes to vehicle performance and longevity.<br>CO2: Comprehend the role of diagnostic tools and sensors in detecting and analyzing vehicle issues.<br>CO3: Recognize the key safety standards and regulations applicable to vehicles, ensuring compliance with industry norms.<br>CO4: Comply with safety regulations and standards, ensuring vehicles meet industry safety requirements and best practices. |            |                |          |          |             |          |
| <b>Course Content:</b>  |  |            |                |          |          |             |          |
| <b>Module 1</b>   | Introduction to Vehicle Health Monitoring and Maintenance  | Case Study | Descriptive    |          |          | 13 sessions |          |
| Topics:<br>Overview of vehicle health monitoring systems, principles of predictive maintenance, types of vehicle sensors and diagnostic tools, introduction to vehicle data analytics, understanding vehicle diagnostics (OBD-II, CAN Bus), and case study on vehicle failure prevention. |  |            |                |          |          |             |          |
| <b>Module 2</b>   | Maintenance Strategies and Best Practices  | Case Study | Descriptive    |          |          | 12 sessions |          |
| Topics:<br>Preventive, predictive, and corrective maintenance strategies, maintenance scheduling, spare parts management, cost optimization, analyzing vehicle wear and tear, and   |  |            |                |          |          |             |          |

|  |  |            |             |             |

| <b>Course Description</b>   | This course provides an introduction to the fundamental principles, technologies, and applications of marine and aerial robotics. Students will explore the design, control, and operation of autonomous systems, including underwater vehicles (ROVs/AUVs) and drones (UAVs). The course covers topics such as robot kinematics, dynamics, sensor integration, control systems, and navigation strategies in complex environments. Emphasis is placed on the unique challenges associated with operating in water and air, such as buoyancy, drag, turbulence, and communication constraints. |            |                 |                |          |             |          |          |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of <b>"Marine and Aerial Robotics"</b> and attain <b>EMPLOYABILITY SKILL</b> through <b>Participative</b> learning techniques.  |            |                 |                |          |             |          |          |
| <b>Course Outcomes</b>  | CO1 Understand the fundamental principles of marine and aerial robotic systems.<br>CO2 Design and implement control strategies for robotic platforms in water and air.<br>CO3 Analyse and solve challenges related to sensing, navigation, and communication in dynamic environments.<br>CO4 Develop and evaluate solutions for applications in exploration, data collection, and autonomous operations.   |            |                 |                |          |             |          |          |

| <b>Course Description</b>  | This course provides an introduction to the fundamentals of mobile robotics, examining the basic principles of locomotion, kinematics, sensing, perception, and cognition that are key to the development of autonomous mobile robots. The course will give students an opportunity to design and fabricate a mobile robotic platform and program it to apply learned theoretical concepts. |                |                 |             |   |   |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Autonomous Mobile Robots</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Participative learning techniques..   |                |                 |             |   |   |
| <b>Course Out Comes</b>  | On successful completion of the course the students shall be able to:<br>1] Describe the fundamentals of mobile robots.<br>2] Identify the different principles of locomotion and kinematics.<br>3] Describe the different types sensing elements and perceptions.<br>4] Describe the cognition system to develop autonomous mobile robots.   |                |                 |             |   |   |
| <b>Course Content:</b>   |   |                |                 |             |   |   |
| <b>Module 1</b>  | Robot locomotion and Kinematics and Dynamics  | Assignment     | Data Collection | 08 Sessions |   |   |
| Topics: Types of locomotion, hopping robots, legged robots, wheeled robots, stability, maneuverability, controllability; Mobile robot kinematics and dynamics: Forward and inverse kinematics, holonomic and nonholonomic constraints, kinematic models of simple car and legged robots, dynamics simulation of mobile robots. |   |                |                 |             |   |   |
| <b>Module 2</b>  | Perception  | Case Study     | Data collection | 15 Sessions |   |   |
| Topics: Proprioceptive/Exteroceptive and passive/active sensors, performance measures of sensors, sensors for mobile robots like global positioning system (GPS), Doppler effect-based sensors, vision based sensors, uncertainty in sensing, filtering.   |   |                |                 |             |   |   |
| <b>Module 3</b>  | Localization  | Case Study     | Data collection | 12 Sessions |   |   |
| Topics: Odometric position estimation, belief representation, probabilistic mapping, Markov localization, Bayesian localization, Kalman localization, positioning beacon systems   |   |                |                 |             |   |   |
| <b>Module 4</b>  | Introduction to planning and navigation   | Assignment     | Data Collection | 10 sessions |   |   |
| Topics: path planning algorithms based on A-star, Dijkstra, Voronoi diagrams, probabilistic roadmaps (PRM), rapidly exploring random trees (RRT), Markov Decision Processes (MDP), stochastic dynamic programming (SDP)  |   |                |                 |             |   |   |
| <b>Targeted Application &amp; Tools that can be used:</b><br>Automation mobile robot is relevant in various industries including Automotive, Aerospace, Medical, Building, Consumer Goods and Packaging.   |   |                |                 |             |   |   |

| <b>Course Description</b>   | This course provides an overview of human robot interaction, non verbal interaction, sensors used, verbal interaction, applications of human robot interaction in several sectors. A wide scope is given to the area of Applications where in students understand how robotics can be applied in different industrial applications. |            |                              |             |   |   |   |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Human Robot Interaction</b> ” and attain <b>EMPLOYABILITY SKILLS</b> through <b>Participative Learning techniques</b> .  |            |                              |             |   |   |   |
| <b>Course Out Comes</b>   | <b>On successful completion of the course the students shall be able to:</b><br>1] Describe Robot, Robotics and Various Components of Robots.<br>2] List the major sensors used in robots for interaction<br>3] Explain how robots can manage non-verbal interaction<br>4] Explain the applications of Human Robot Interaction      |            |                              |             |   |   |   |
| <b>Course Content:</b>  |   |            |                              |             |   |   |   |
| <b>Module 1</b>   | Human Robot Interaction   | Assignment | Data Collection              | 12 Sessions |   |   |   |
| Topics:<br>Definition of Robot, types of robots, Robotics market and the future prospects, HRI as an interdisciplinary endeavor, evolution of HRI, Robot motions, Joints, Work volume, Sensors in Robotics for interaction– Sensors for Audio, Vision, Tactile sensors, Proximity and Range sensors, Actuators- Motors, Pneumatic actuators, speakers. Software.  |   |            |                              |             |   |   |   |
| <b>Module 2</b>   | Verbal Interaction  | Assignment | Data Collection              | 12 Sessions |   |   |   |
| Topics:<br>Verbal Interaction: Human-human verbal interaction, components of speech, Written text versus spoken language, Speech recognition, Basic principles of speech recognition, Practice in HRI, Voice-activity detection, Language understanding in HRI, Dialogue management, Basic principle, Practice in HRI, Speech production, TTS engines, Chat bots. |   |            |                              |             |   |   |   |
| <b>Module 3</b>   | Non Verbal Interaction  | Assignment | Data collection and Analysis | 10 Sessions |   |   |   |
| Nonverbal Interaction- Types of nonverbal interaction, Gaze and eye movement, Gesture, Mimicry and Imitation, Touch, Posture and movement, Interaction rhythm and timing. Nonverbal interaction in robots, Robot perception of nonverbal cues, generating nonverbal cues in robots.   |   |            |                              |             |   |   |   |
| <b>Module 4</b>   | Applications  | Case Study | Data collection and analysis | 10 Sessions |   |   |   |
| Applications of Human Robot Interaction- Service robots, Robots for learning, Robots for entertainment, Robots in Health care and therapy, Robots as personal assistants, Collaborative robots, robots in self driving cars, remotely operated robots.  |   |            |                              |             |   |   |   |
| <b>Targeted Application &amp; Tools that can be used:</b><br>Industrial applications of robots: Medical sector<br>Automation in industries.   |   |            |                              |             |   |   |   |
| <b>Text Book:</b>   |   |            |                              |             |   |   |   |

| <b>Course Description</b>   | This Course provides an introduction to Micro Electromechanical Systems (MEMS) with this comprehensive course, designed to equip you with the knowledge and hands-on skills to excel in this transformative field. Dive deep into the essential concepts, materials, and fabrication techniques that power MEMS technology, and explore how it is revolutionizing industries. From understanding foundational MEMS principles to mastering advanced sensor fabrication and characterization methods, this course offers a step-by-step guide to becoming proficient in MEMS applications. Engage with dynamic video content and develop practical skills in cleanroom protocols, micromachining. Learn to fabricate MEMS sensors, interface them with advanced techniques, and apply communication protocols to create innovative solutions. |             |                |         |
| <b>Course Out Comes</b>   | On successful completion of the course the students shall be able to:<br><b>CO1.</b> Appreciate the technologies related to Micro Electro Mechanical Systems.<br><b>CO2.</b> Understand design and fabrication processes involved with MEMS De- vices.<br><b>CO3.</b> Analyze the MEMS devices and develop suitable mathematical models.<br><b>CO4.</b> Know various application areas for MEMS device.  |             |                |         |
| <b>Course Objective</b>   | The objective of the course is tofamiliarize the learners with the concepts of“ <b>Micro Electro Mechanical Systems</b> ” and attain <b>EMPLOYABILITY SKILL</b> through <b>Participative Learning Techniques.</b>  |             |                |         |
| <b>Course Content:</b>  |  |             |                |         |
| <b>Module 1</b>   | Overview of MEMS and Microsystems  | 12 sessions |                |         |
| Topics: MEMS and Microsystem, Typical MEMS and Microsystems Products, Evolution of Microfabrication, Microsystems and Microelectronics, Multidisciplinary Nature of Microsystems, Miniaturization. Applications and Markets. [ Apply level] |  |             |                |         |
| <b>Module 2</b>   | Working Principles of Microsystems   | 12 sessions |                |         |
| Topics: Introduction, Microsensors, Micro actuation, MEMS with Micro actuators, Micro accelerometers, Microfluidics. [ Apply level]   |  |             |                |         |
| <b>Module 3</b>   | Engineering Mechanics for Microsystems Design  | 10 sessions |                |         |
| Topics: Introduction, Static Bending of Thin Plates, Mechanical Vibration, Thermo mechanics, Fracture Mechanics, Thin Film Mechanics, Overview on Finite Element Stress Analysis. [Apply level]   |  |             |                |         |
| <b>Module 4</b>   | Scaling Laws in Miniaturization  | 11 sessions |                |         |
| Topics: Introduction, Scaling in Geometry, Scaling in Rigid-Body Dynamics, Scaling in Electrostatic Forces, Scaling in Fluid Mechanics, Scaling in Heat Transfer. [Apply level]   |  |             |                |         |

| <b>Course Description</b>  | This course provides an overview of robot anatomy, motion control system and intelligent controls. A wide scope is given to the area of Applications where in students understand how robotics can be applied in different industrial applications. The course also enhances the practical applications of robots and automation through case studies.          |            |                              |             |          |          |          |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of <b>"Introduction to Robotics and Automation"</b> and attain <b>EMPLOYABILITY SKILLS</b> through <b>Participative Learning techniques.</b>   |            |                              |             |          |          |          |
| <b>Course Out Comes</b>  | On successful completion of the course the students shall be able to:<br>1] Describe Robot, Robotics and Various Components of Robots.<br>2] Describe various types of sensors, actuators and its applications in robotics.<br>3] Discuss different type of Automation and applications.<br>4] Describe the different types of Automated manufacturing systems. |            |                              |             |          |          |          |
| <b>Course Content:</b>   |   |            |                              |             |          |          |          |
| <b>Module 1</b>  | Introduction to Robotics  | Assignment | Data Collection              | 10 Sessions |          |          |          |
| Topics:<br>Definition of Robot, History of robotics, Robotics market and the future prospects, Robot Anatomy, Robot configurations: Polar, Cartesian, cylindrical and Jointed-arm configuration. Robot motions, Joints, Work volume, Robot drive systems, End effectors – Tools and grippers.  |   |            |                              |             |          |          |          |
| <b>Module 2</b>  | Robot Sensors and Machine vision system   | Assignment | Data Collection              | 12 Sessions |          |          |          |
| Topics:<br>Sensors in Robotics - Tactile sensors, Proximity and Range sensors, use of sensors in robotics. Machine Vision System: Introduction to Machine vision, the sensing and digitizing function in Machine vision, Image processing and analysis, Training and Vision systems. Machine Vision System: Introduction to Machine vision, the sensing and digitizing function in Machine vision. |   |            |                              |             |          |          |          |
| <b>Module 3</b>  | Introduction to Automation  | Assignment | Data collection and Analysis | 12 Sessions |          |          |          |
| History of Automation, Reasons for automation, Disadvantages of automation, Automation systems, Types of automation – Fixed, Programmable and Flexible automation, Automation strategies. Industrial Applications of Automation systems.   |   |            |                              |             |          |          |          |

|  |                                 |            |                              |             |
|--|---------------------------------|------------|------------------------------|-------------|
| <b>Module 4</b>  | Automated Manufacturing Systems | Case Study | Data collection and analysis | 10 Sessions |
| Components, classification and overview of manufacturing Systems, Flexible Manufacturing Systems (FMS), Types of FMS, Applications and benefits of FMS. Review of NC, CNC, DNC, Adaptive control and robotics in manufacturing. Advantages, disadvantages and applications.  |                                 |            |                              |             |
| <b>Targeted Application &amp; Tools that can be used:</b><br>Industrial applications of robots: Pick and place robots, welding and other industrial applications.<br>Automation in industries.   |                                 |            |                              |             |

| <b>Course Description</b>   | The Course is designed with an objective of giving an overview of Power generation plant and its technicalities. The Course deals with the components and layout of; thermal, nuclear, hydroelectric power plants, Site selection for various power plants, combined cycle power plants, Magneto Hydro Dynamics (MHD) systems. This Course also includes the economics of power generation, economic loading of power stations and technical aspects such as load curve analysis, load factor, diversity factor, power plant instrumentation, and controls.                  |            |                 |                |   |             |   |   |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Power Plant Engineering</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Problem solving methodologies.  |            |                 |                |   |             |   |   |
| <b>Course Out Comes</b>   | On successful completion of the course the students shall be able to:<br>CO1 Enlist the different types of load pattern such as industrial, urban traction load, power plants.<br>CO2 Prepare a Heat Balance Sheet for the steam power plant.<br>CO3 Analyze the steam cycles, reheat and regeneration cycles.<br>CO4 Sketch the flow diagram and performance study of diesel power plant, gas turbine power plant and nuclear power plant..<br>CO5 Explain the Renewable energy resources, Photovoltaic cell, Solar power plant, Wind turbines for power producing sectors. |            |                 |                |   |             |   |   |
| <b>Course Content:</b>  |  |            |                 |                |   |             |   |   |
| <b>Module 1</b>   | Economics of Power Generation  | Case Study | Data Collection |                |   | 8 Sessions  |   |   |
| <b>Topics:</b><br>Introduction, load distribution curves, Load factor, plant factor, Average load, reverse and Diversity factor, Plant use factor, Different Load pattern for various power plant.<br><b>Case Study:</b> Collect the data on any diesel engine power plant / home based electric system and perform load calculation. |  |            |                 |                |   |             |   |   |
| <b>Module 2</b>   | Steam power plant  | Assignment | Report          |                |   | 12 Sessions |   |   |

**Topics:**

Various types of steam generators, working principles of boiler, boiler plant, Water tube boiler and Fire tube boiler and their Accessories, boiler mountings, Economizers, Superheaters, Reheaters, and Air Preheaters, Working principle of steam power plant.

**Assignment:** Write a report on the various types of generator available for steam power production.

|                 |                                    |            |        |             |
|-----------------|------------------------------------|------------|--------|-------------|
| <b>Module 3</b> | Gas turbine and Diesel power plant | Assignment | Report | 10 Sessions |
|-----------------|------------------------------------|------------|--------|-------------|

**Topics:**

Working principle of GT power plant, open type and closed types, Components of GT Plants, Ideal gas turbine and actual gas turbine, Methods to improve the thermal efficiency of the plant

**Assignment:** Write a comparative report indicating differences in turbine design for gas and diesel power plant.

|                 |                                       |            |               |            |
|-----------------|---------------------------------------|------------|---------------|------------|
| <b>Module 4</b> | Nuclear and Hydroelectric Power Plant | Assignment | Data Analysis | 8 Sessions |
|-----------------|---------------------------------------|------------|---------------|------------|

**Topics:**

Basics, Fission reaction, flow diagram of the nuclear power plant, Parts of the nuclear power plant, working principle, Description of parts in the reactor, Boiling Water Reactor (BWR), Pressurized Water Reactor (PWR). Layout of Hydroelectric power plant, Types of Hydropower plants. Description of intake, penstock, trash rack, turbines, and generator.

**Assignment:** Collect the data from below website, clean the data, make a visualization using Excel / Tableau / Power BI and find the insights from it.

<https://www.kaggle.com/code/jonathanbouchet/nuclear-power-plant-geo-data>

|                 |                   |            |             |            |
|-----------------|-------------------|------------|-------------|------------|
| <b>Module 5</b> | Solar power plant | Assignment | Programming | 8 Sessions |
|-----------------|-------------------|------------|-------------|------------|

**Topics:**

Solar Radiation: Physics of Solar radiation, Global Beam and diffuse radiation, Fundamentals of Solar Cell: Solar PV basics, Solar PV Module, Solar Cell technologies, Crystalline cell, solar photovoltaic modules, Concentrators and PV Modules. Balance of Solar PV Systems: Battery technology, Batteries for PV systems, DC –DC converters, Charge Controllers, DC–AC inverters, Single phase, three phase, MPPT <https://www.kaggle.com/datasets/anderas/car-consume>.

**Targeted Application & Tools that can be used:**

Application in power plant handling and its control

**Professionally used software** – SQL, Excel, Tableau and Power BI

**Text Book**

1. P K Nag, "Power Plant Engineering", Fourth Edition, McGraw Hill Publications. .
2. A Textbook of Power Plant Engineering: Rajput, R.K. Laxmi Publication..

**Reference Books:**

| <b>Anti-requisites</b>   | NIL   |                |   |   |             |   |
| <b>Course Description</b>  | The Course is designed with an objective of giving an overview of different turbines and their applications. It deals with gas turbines, steam turbines, performance parameters, flow through cascades, different turbine stages, compounding of turbines, axial compressor stages, centrifugal compressor stages, axial fans and propellers, centrifugal fans and blowers, and wind turbines |                |   |   |             |   |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Turbomachinery</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Problem solving methodologies.  |                |   |   |             |   |
| <b>Course Outcomes</b>   | On successful completion of this course the students shall be able to:<br>CO1. Describe basic concepts of turbomachines and visualize dimensional analysis.<br>CO2. Discuss various energy transformation involved in turbomachines<br>CO3. Describe the working of Pelton, Francis and Kaplan Turbine along their performance parameters.  |                |   |   |             |   |
| <b>Course Content:</b>   |   |                |   |   |             |   |
| <b>Module 1</b>  | Basic terms and Dimensionless parameters and their significance   | Assignm ent    | Calculation of dimensionless number for various practical application.      |   | 10 Sessions |   |
| Topics:<br>Definition of turbo machine, parts of turbo machines, Comparison with positive displacement machines, Classification, Dimensionless parameters and their significance, Effect of Reynolds number, Unit and specific quantities, model studies, Effect of various shape and size effects on model and prototype. |   |                |   |   |             |   |
| <b>Module 2</b>  | Velocity Triangle and Energy Equation   | Assignm ent    | Data collection for different types of turbomachines in different industry. |   | 12 Sessions |   |
| Topics:<br>Euler’s energy equation, Alternate form of Euler’s energy equation, Components of energy transfer, Velocity triangle, Degree of Reaction, Velocity triangles for different values of degree of reaction, Isentropic efficiency, Effect of Isentropic efficiency in working of turbomachines.                    |   |                |   |   |             |   |

|   |   |                         |  |             |
|---|---|-------------------------|--|-------------|
| <b>Module 3</b>   | Hydraulic Turbines                                | Assignment              | Data Collection on use of different types of Hydraulic turbine in different application areas. | 10 Sessions |
| <p>Topics:</p> <p>Hydraulic Turbines: Classification, various efficiencies. Pelton turbine – velocity triangles, design parameters, Maximum efficiency. Francis turbine - velocity triangles, design parameters, Draft tubes- Types and functions. External components- Types and functions. Darrius turbines – velocity triangles, design parameters.</p>  |   |                         |  |             |
| <b>Module 4</b>   | Pumps   | Assignment & Case study | Data collection for different types of pumps in different industry.                            | 12 Sessions |
| <p>Topics:</p> <p>Need and methods of compounding, expression for maximum utilization factor, Axial fans and propellers, centrifugal fans and blowers. Centrifugal Pumps: Classification and parts of centrifugal pump, Reciprocating Pumps: Classification and parts of reciprocating pump, different heads and efficiencies of reciprocating pump, Minimum speed for starting the flow, different head, Different types of efficiencies of reciprocating pump.</p>  |   |                         |  |             |
| <p><b>Targeted Application &amp; Tools that can be used:</b></p> <p>Turbomachines is currently used in various areas like Wind turbine power plant, hydroelectric power plant Aviation sector.</p>  |   |                         |  |             |
| <p><b>Text books:</b></p> <p>1. B.K.Venkanna., “<i>Fundamentals of Turbomachinery</i>”, PHI, 4<sup>th</sup> edition, 2017.</p>  |   |                         |  |             |

| <b>Course Description</b>   | The Course is designed with an objective of giving an overview of Different kinds of renewable energy sources and their applications. It covers Introduction of renewable energy sources, their advantages, potential, status of development, broad details of different renewable energy systems such as solar, wind, biomass, hydrogen etc; Renewable energy development policy, Renewable energy industries and future thrust areas in renewable energy development.  |            |   |   |            |   |   |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Renewable Energy Systems</b> ” and attain <b>EMPLOYABILITY SKILL</b> through participative learning techniques.   |            |   |   |            |   |   |
| <b>Course Outcomes</b>  | <b>On successful completion of the course students shall be able to:</b><br>CO1. Identify the different types of non-conventional energy sources and compare with various conventional energy systems, their prospects and limitations.<br>CO2. Describe the use of solar energy and the various components used in the energy production with respect to applications.<br>CO3. Appreciate the need of Wind Energy and the various Biomass Energy sources and know their classifications with applications.<br>CO4. Acquire the knowledge of fuel cells, with emphasis on hydrogen energy. |            |   |   |            |   |   |
| <b>Course Content:</b>  |  |            |   |   |            |   |   |
| <b>Module 1</b>   | Introduction   | Assignment | Data collection & Analysis                    |   | 10 Session |   |   |
| <b>Topics:</b><br><b>Introduction to Energy Sources</b> General, World Energy Futures, Energy consumption, Renewable Energy Sources, Renewable Energy Resources, Advantages, Prospects of Renewable Energy Sources.<br><br><b>Assignment:</b> Prepare a comprehensive report on the 2021 energy mix in India. |  |            |   |   |            |   |   |
| <b>Module 2</b>   | Solar energy   | Assignment | Data collection and data analysis /Case Study |   | 16 Session |   |   |
| <b>Topic:</b><br><b>Solar Radiation and its Measurement:</b> Definition Solar Constant, Beam and Diffused Radiation, Sun at Zenith, Air Mass, Solar Radiation Geometry, Different Solar angles, Day length, Local Solar Time, Solar radiation Measurements, Estimation of Average Solar Radiation.            |  |            |   |   |            |   |   |

|  |   |            |                 |             |
|--|---|------------|-----------------|-------------|
| <b>Solar Energy Collectors:</b> Physical Principles of the conversion of Solar Radiation into Heat, Flat Plate Collectors, Collector Efficiency, Concentrating Collector, Focusing type, Advantages and Disadvantages of both Flat plate and Concentrating type collectors.<br><b>Solar Energy Storage:</b> Solar Energy Storage systems, Solar Pond,<br><b>Applications of Solar Energy:</b> Solar Water Heating, Solar Thermal Electric Conversion, Solar Distillation, and Solar Cooking, Solar PV Systems, Solar PV application.<br><b>Assignment :</b> Collect data related to renewable energy generation (Solar)  |   |            |                 |             |
| <b>Module 3</b>  | Wind And Biomass Energy                           | Assignment | Data collection | 16 Sessions |
| <b>Topics:</b><br><b>Wind Energy:</b> Origin of Winds, Nature of Winds, Basic Principles of Wind Energy Conversion, Basics Components of a WECS, Classification, Advantages and Disadvantages, Applications of Wind Energy.<br><b>Biomass Energy:</b> Biomass Conversion Technologies, Bio gas generation, Classification of Biogas plants, Biomass as a source of Energy, Methods of obtaining Energy from Biomass.<br><b>Assignment:</b> Prepare a report on recent Data collection related to wind energy across the world.   |   |            |                 |             |
| <b>Targeted Application &amp; Tools that can be used:</b><br><b>Application Area is Alternate energy resources –</b> NTPC, ReNew , Tata Power, Suzlon, Acme Solar, Adani, Greenko.<br><b>Professionally Used Software:</b> Ms- Excel, /Python FOR data collection, analysis and design of system   |   |            |                 |             |

| <b>Course Description</b>  | This Course is designed to teach engineering students the concepts of heat transfer and application of heat transfer principles to the design. This Course provides an introduction to the fundamental concepts of heat transfer; Thermal conductivity steady-state and unsteady-state heat conduction multilayer conduction, heat transfer through a composite wall, critical insulation thickness, analytical and empirical relations for forced and free convection heat transfer; empirical relations used for pipe and tube flow, boundary layer and its thickness, heat exchanger analysis and design; to design and analyse the performance of heat exchangers and evaporators. |            |                 |             |   |   |   |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Advanced Heat-Transfer</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Participative learning techniques.   |            |                 |             |   |   |   |
| <b>Course Outcomes</b>   | CO1] Apply the concept of steady state conduction heat transfer in solids.<br>CO2] Employ the methods of heat transfer with effective resistance.<br>CO3] Compute the heat transfer coefficient for natural and forced convection.<br>CO4] Apply the concept of radiation heat transfer between surfaces.<br>CO5] Compute the effectiveness of a specific heat exchanger.  |            |                 |             |   |   |   |
| <b>Course Content:</b>   |  |            |                 |             |   |   |   |
| <b>Module 1</b>  | Conducti on  | Assignment | Data collection | 12 Sessions |   |   |   |
| Topics:<br>Introduction - basic modes of heat transfer and governing laws– conduction – general heat conduction equation in Cartesian – one dimensional steady state conduction with and without heat generation – concept of thermal resistance – concept of composite wall – overall heat transfer coefficient – critical thickness of insulation – extended surface heat transfer – fin performance –effect of variable thermal conductivity- problems. Unsteady state conduction in one dimension, lumped heat capacity system . |  |            |                 |             |   |   |   |
| <b>Module 2</b>  | Convecti on  | Assignment | Mathematical    | 12 Sessions |   |   |   |
| Topics:<br>Newton’s law – concept of boundary layer – significance of Prandtl number – boundary layer equations – flat plate heat transfer– laminar and turbulent flow – Reynolds analogy – empirical  |  |            |                 |             |   |   |   |

|   |                     |            |              |             |
|---|---------------------|------------|--------------|-------------|
| relations in forced convection – internal flow – boundary conditions – laminar and turbulent flow<br>– heat transfer coefficients – empirical correlations. Natural convection.   |                     |            |              |             |
| <b>Module 3</b>   | Radiation           | Assignment | Mathematical | 10 Sessions |
| Topics:<br>Fundamentals of radiation – radiation spectrum – thermal radiation – concept of black body and grey body – monochromatic and total emissive power – absorptivity, reflectivity and transmissivity- laws of radiation – radiation between two surfaces – geometrical factors for simple configuration– radiation shields  |                     |            |              |             |
| <b>Module 4</b>   | Heat exchange<br>rs | Assignment | Mathematical | 12 Sessions |
| Topics:<br>Classification – log mean temperature difference – overall heat transfer coefficient – fouling and scaling of heat exchangers – LMTD and NTU method of performance evaluation of heat exchangers. Introduction to mass transfer – Fick’s law of diffusion - problems   |                     |            |              |             |
| <b>Targeted Application &amp; Tools that can be used:</b><br><br>Application Area is Geophysical phenomenon, Hydrology, Aerospace, Aerodynamics, Microfluidics, Pipe network, heat exchangers.<br>Industries using above applications and tools – Siemens, Quest Global, Simulent consulting, Triveni Engineering, TATA, GE etc   |                     |            |              |             |

| <b>Course Description</b>   | The course begins with the basics of thermodynamics and fluid mechanics, including types of flows. The next large block of lectures covers wave motion, and isentropic flows and effect of friction and heat transfer on ducts. The second half of the course deals with shock waves and its effect on various properties and concludes with another small block dealing with introduction of multi-dimensional flows.  |  |  |                  |            |             |          |          |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Compressible Fluid Flow</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Problem solving methodologies.   |  |  |                  |            |             |          |          |
| <b>Course Out Comes</b>   | On successful completion of the course the students shall be able to:<br>CO1 Define various thermodynamics and fluid flow properties and types of flows;<br>CO2 Analyze the assumptions and physical meaning of terms in the equations of motion for continuum flow;<br>CO3 Solve the governing equations for various flows including flow through ducts, normal and oblique shocks and its effect on various flow properties;<br>CO4 Solve the problems based on various shock waves, nozzle and diffuser, Rayleigh line and Fanno Curves;<br>CO5 Understand the concepts of the multi-dimensional flow. |  |  |                  |            |             |          |          |
| <b>Course Content:</b>  |   |  |  |                  |            |             |          |          |
| <b>Module 1</b>   | Basic   |  |  | Assignment       | Experiment | 5 Sessions  |          |          |
| <b>Topics:</b><br>Introduction, Thermodynamic properties like pressure, temperature, density, volume, equilibrium, ideal gas, 1st, 2nd, and 3rd laws of thermodynamics, enthalpy and entropy, various Fluid flows like laminar and turbulent, steady and unsteady, compressible and incompressible flows, Mach number.<br><b>Assignment:</b> Teal time temperatutre measurement using thermocouple                          |   |  |  |                  |            |             |          |          |
| <b>Module 2</b>   | Isentropic Flow and Wave Motion   |  |  | Assignment       | Analysis   | 20 Sessions |          |          |
| <b>Topics:</b><br>Comparison of isentropic and adiabatic process, Mach number variation, stagnation function, Mass flow rate, Impulse function, Flow through nozzle and diffuser, Wave propagation in elastic solid medium, sound waves, steep finite pressure waves and expansion waves.<br><b>Assignment:</b> Analyse an aerodynamics body under sub-sonic, sonic and supersonic flow condition by using Fluent software. |   |  |  |                  |            |             |          |          |

|   |   |            |               |             |
|---|---|------------|---------------|-------------|
| <b>Module 3</b>   | Shocks (Normal and Oblique)                                 | Assignment | Data Analysis | 11 Sessions |
| <b>Topics:</b><br>Development of shock waves, Governing equations, Prandtl-Meyer relation, Static pressure ratio, temperature ratio, density ratio, stagnation pressure ratio, change in entropy across the shock, strength of shock, Mach number for subsonic flow, introduction to oblique shock, its relation, Prandtl equation, Rankine-Hugoniot equation.<br><b>Assignment:</b> Obtain the fluid flow behavior of normal shock over various shaped-bodies using Ansys Fluent.  |   |            |               |             |
| <b>Module 4</b>   | Flow in constant area ducts with friction and heat transfer | Case study | report        | 7 Sessions  |
| <b>Topics:</b><br>Fanno Curves, Fanno Flow equations and its solutions, variation of flow properties, table and charts for Fanno flow, Rayleigh line, Fundamental equation, variation on flow properties, charts and tables for Rayleigh flow.<br><b>Assignment:</b> Write a brief report on below article related to flow in constant area duct.<br><a href="https://www.researchgate.net/publication/332798145_Fanno_Flow_AdiabaticFlow_in_a_Constant_Area_Duct_with_Friction">https://www.researchgate.net/publication/332798145_Fanno_Flow_AdiabaticFlow_in_a_Constant_Area_Duct_with_Friction</a>  |   |            |               |             |
| <b>Module 5</b>   | Introduction to Multidimensional Flow                       | Assignment | Study based   | 2 Sessions  |
| <b>Topics:</b><br>Continuity, momentum for Cartesian coordinates, Navier-stokes equation.<br><b>Assignment:</b> Derive a Navier Stokes equation for cylindrical body  |   |            |               |             |
| <b>Targeted Application &amp; Tools that can be used:</b><br>Application area mainly includes in Aerospace, aerodynamics of aircraft, Rocket propulsion, etc.<br>Tools used: MS Excel, ANSYS Fluent   |   |            |               |             |

| <b>Anti-requisites</b>  | NIL  |            |               |                  |          |          |          |          |
| <b>Course Description</b>   | The Course is designed with an objective of giving an overview of principles of Refrigeration and Air conditioning (R and AC), thermodynamic analysis of R and AC systems, load estimates and design of various R and AC systems for comfort and industrial applications. The Course also includes theoretical or experimental investigation of refrigeration and air-conditioning problems.   |            |               |                  |          |          |          |          |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Refrigeration &amp; Air Conditioning</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Problem solving methodologies.   |            |               |                  |          |          |          |          |
| <b>Course Out Comes</b>   | On successful completion of the course the students shall be able to:<br>1. Evaluate the performances of complex vapor compression systems.<br>2 Choose suitable components for refrigeration system.<br>3. Execute thermodynamic analysis of absorption refrigeration systems<br>4. Evaluate various psychrometric properties from measured values of barometric pressure, dry bulb and wet bulb temperatures.<br>5. Calculate the internal and external cooling loads on a building. |            |               |                  |          |          |          |          |
| <b>Course Content:</b>  |  |            |               |                  |          |          |          |          |
| <b>Module 1</b>   | Introduction   |            | Data Analysis | 10 Session       |          |          |          |          |
| Topics:<br>Basic concepts: unit of refrigeration and COP, refrigerators, heat pump, Carnot refrigerator, applications of refrigerators, vapor compression refrigeration, ideal cycle, effect of sub cooling of liquid, super heating of vapor, deviations of practical (actual cycle) from ideal cycle, construction and use of p-h chart problems.             |  |            |               |                  |          |          |          |          |
| <b>Module 2</b>   | Refrigerator Components  | Assignment | Data Analysis | 10 Session       |          |          |          |          |
| Topics: Compressors: classification, working, advantages and disadvantages; Condensers: classification, working Principles. Evaporators: classification, working Principles; Expansion devices: types, working principles. Refrigerants: Properties, nomenclature selection of refrigerants, effects of refrigerants on global warming, alternate refrigerants. |  |            |               |                  |          |          |          |          |
| <b>Module 3</b>   | Vapour Absorption Refrigeration  | Assignment | Data Analysis | 5 Session        |          |          |          |          |
| Topics: Vapor absorption refrigeration: description, working of NH3-Water, Li Br–water system, calculation of HCOP, Principle and operation of three fluid vapor absorption refrigeration systems.  |  |            |               |                  |          |          |          |          |
| <b>Module 4</b>   | Properties of Moist Air (Psychrometry)   | Assignment | Data Analysis | 6 Sessions       |          |          |          |          |
| Topics: Composition of moist air, Methods for estimating moist air properties, Methods for estimating moist air properties, Important psychrometric properties, Relations between   |  |            |               |                  |          |          |          |          |

psychrometric properties, Introduction to humidity ratio vs. dry-bulb temperature, psychrometric chart

|  |   |            |               |             |
|--|---|------------|---------------|-------------|
| <b>Module 5</b>  | Air Conditioning Systems  | Assignment | Data Analysis | 13 Sessions |
| Topics: Psychrometric properties and processes, sensible and latent heat loads, characterization, need for ventilation, consideration of Infiltration, load concepts of RSHF, ASHF, ESHF and ADP; concept of human comfort and effective temperature, comfort air conditioning, industrial air conditioning and Requirements, air conditioning load calculations.  |   |            |               |             |
| <b>Targeted Application &amp; Tools that can be used:</b><br>Application area includes HAVC systems<br>Tools used: MS Excel, Matlab  |   |            |               |             |

| <b>Course Description</b>  | This course is designed to introduce the world of alternate fuels. The course acquaints the learners about production of alternate fuels, their performance and emission characteristics when used with Diesel in IC Engine. Latest emission norms like BS-6 and its comparison with Euro norms will be done. This course also reviews all the basic principles of IC Engine working, fossil fuels production and its structure.                          |            |                    |             |          |          |          |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Alternate Fuels</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Participative learning techniques.   |            |                    |             |          |          |          |
| <b>Course Out Comes</b>  | On successful completion of the course the students shall be able to:<br>CO1-Understand basic concepts of Internal Combustion Engines and fossil fuels.<br>CO2-Understand the production methods of liquid and gaseous alternate fuels<br>CO3-Discuss combustion, performance and its emission characteristics of different conventional and alternate fuels.<br>CO4-Explain the National and International Emission Norms and Emission Control packages. |            |                    |             |          |          |          |
| <b>Course Content:</b>   |   |            |                    |             |          |          |          |
| <b>Module 1</b>  | Basics of Engines and Fuels   | Assignment | Data Analysis Task | 12 Sessions |          |          |          |
| Topics:<br><b>Basics of Heat engines.</b> Classification of IC engines, Nomenclature of engine components, working principle of four stroke Engines, Performance Parameters and their standards. Concept of theoretical Otto & Diesel cycles.<br><b>Conventional fuels:</b> Solid, liquid, gaseous fuels, Characteristics of Engine fuels, fuels from Petroleum products, Chemical Structure of Petroleum fuels. |   |            |                    |             |          |          |          |
| <b>Module 2</b>  | Liquid and Gaseous Alternate Fuels  | Assignment | Data Analysis Task | 10 Sessions |          |          |          |
| Topics:<br><b>Alternate fuels</b> – Types of alternate fuels, Liquid fuels- alcohols, Production of methanol, ethanol. Their usage in engines. Gaseous Fuels- Hydrogen, LPG, CNG - Production, properties, storage and handling. Their usage in engines.   |   |            |                    |             |          |          |          |
| <b>Module 3</b>  | Bio Fuels   | Assignment | Data Analysis Task | 14 Sessions |          |          |          |

|  |  |            |                    |             |
|--|--|------------|--------------------|-------------|
| <p>Topics:</p> <p>Types of biofuels. Use of biomass as an energy source. Pyrolysis and Gasification processes. Biogas - Production and properties. Indian and Chinese biogas plants. Performance and emission characteristics of biogas.</p> <p>Types of bio-diesels and their origin Need of bio-diesels, Trans-esterification method of production, Comparison of properties of bio-diesels v/s petro-diesel, Comparison of performance parameters and emission characteristics of bio-diesels v/s Petro diesel. Discussion on need for engine modifications to use biodiesels.</p>  |  |            |                    |             |
| <b>Module 4</b>  | Engine Emission norms in India and abroad                      | Assignment | Data Analysis Task | 10 Sessions |
| <p>Topics:</p> <p>Sources and types of emissions. Effects of release of Carbon Monoxide, Unburnt hydrocarbon, Oxides of Nitrogen, Smoke and Particulate matter to the atmosphere. Control of effects of Emission – EGR, and Catalytic converter Package, Indian Emission Norms- Bharath stage and Euro norms. Comparison of Bharath stage 6 and Euro 6.</p>  |  |            |                    |             |
| <p><b>Targeted Application &amp; Tools that can be used:</b></p> <p>Application area are Automobile sector, Indian Railways and power generation.</p> <p>Tools used: any CFD software</p>  |  |            |                    |             |

| <b>Course Description</b>   | The Course is designed with an objective of giving an overview of computational fluid dynamics (CFD), governing equations of fluid dynamics, mathematical behavior of partial differential equations, basic aspects of discretization, grids with appropriate transformations, and simple CFD techniques and their applications, numerical solutions of quasi-one-dimensional nozzle flows, numerical solution of a two-dimensional supersonic flow, incompressible Counter flow, and supersonic flow over a flat plate and advanced topics in CFD. |                |              |            |          |          |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Computational Fluid Dynamics</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Problem solving methodologies.  |                |              |            |          |          |
| <b>Course Outcomes</b>  | On successful completion of the course the students shall be able to:<br>CO1. Understand the fundamentals of CFD and deriving governing equations.<br>CO2. To give a basic understanding to the discretization of equations of mass, momentum and energy.<br>CO3. Apply different CFD techniques to diffusion problems.<br>CO4. Solving convection-diffusion problems and N-S equation.<br>CO5. Understand numerical grid generation and apply time integration and turbulence methods to complex flows   |                |              |            |          |          |
| <b>Course Content:</b>  |   |                |              |            |          |          |
| <b>Module 1</b>   | Introduction  |                |              | 6 sessions |          |          |
| Topics:<br>Introduction to CFD, Advantages, applications and the future of CFD, CFD solution procedure, problem setup processes, numerical solution, results report and visualization.  |   |                |              |            |          |          |
| <b>Module 2</b>   | Governing Equations for CFD   | Assignment     | Mathematical | 8 sessions |          |          |
| Conservation equation; mass; momentum and energy equations; convective forms of the equations and general description, Classification into various types of equation; parabolic elliptic and hyperbolic; boundary and initial conditions; over view of numerical methods. |   |                |              |            |          |          |

|  |  |            |              |             |
|--|--|------------|--------------|-------------|
| <b>Module 3</b>  | CFD mesh generation and techniques                   | Assignment | Mathematical | 13 sessions |
| Types of meshes, local mesh refinement, moving meshes, guidelines for mesh quality and mesh design, Discretization of governing equations: FDM, FVM, converting governing equations to algebraic equation, FDM, FVM and comparison of the finite difference and finite volume method, numerical solutions to algebraic equations, pressure velocity coupling.  |  |            |              |             |
| <b>Module 4</b>  | CFD solution analysis: Essentials                    | Assignment | Mathematical | 8 sessions  |
| Consistency, stability, convergence, accuracy Efficiency, case studies: channel flow and flow over a 90° bend.   |  |            |              |             |
| <b>Module 5</b>  | Practical guidelines for CFD simulation and analysis | Assignment | Mathematical | 10 sessions |
| Topics: Guidelines for boundary conditions, turbulence modelling, strategy for selecting turbulence modelling, near wall treatments, test case: assessment of two equation turbulence modelling Indoor air flow distribution, gas particle flow in a 90° bend, heat transfer coupled with fluid flow.  |  |            |              |             |
| <b>Targeted Application &amp; Tools that can be used:</b><br>Application Area is Geophysical phenomenon, Hydrology, Aerospace, Aerodynamics, Microfluidics, Pipe network, Turbo-machinery.<br>Industries using above applications and tools – Siemens, Quest Global, Simulent consulting, Triveni Engineering, TATA, GE etc  |  |            |              |             |

| <b>Course Description</b>  | This course intends to introduce the basic concepts required for the engineers to work in the field of solar energy technology, both industrial installations and research endeavours. The major focus is on the following topics: the apparent movement of the sun, irradiation prediction, intensity estimation on tilted plane, flat plate collectors, concentrating collectors of various kinds, thermal and photovoltaic routes of solar energy conversion. The course assumes basic knowledge in UG level thermodynamics, optics, semiconductor physics, heat transfer and engineering mathematics. The advanced UG ME students and the PG ME students intending to work in the solar energy field should opt for this course. |            |                       |                  |   |             |   |   |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Elements of Solar Energy Conversion</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Participative learning techniques.  |            |                       |                  |   |             |   |   |
| <b>Course Out Comes</b>  | On successful completion of the course the students shall be able to:<br>1] Recognize the significance of the principles of solar energy in the engineering context<br>2] Illustrate the fundamentals of solar energy conversion.<br>3] Explain the various devices for solar energy conversion  |            |                       |                  |   |             |   |   |
| <b>Course Content:</b>   |  |            |                       |                  |   |             |   |   |
| <b>Module 1</b>  | Solar Energy Measurements  | Assignment | Data Collection       |                  |   | 15 Sessions |   |   |
| <b>Topics:</b><br>- Basic concepts related to solar radiation, the sun, spectral distribution, sun- earth relationship,extraterrestrial radiation, revolution of earth, seasons, position of sun in the sky, position of sun with respect to the center of the earth<br>- Concept of time, equation of time, solar time, standard time, Role of atmosphere on solar radiation, air mass, terrestrial spectrum, prediction of solar radiation<br>- Diffuse and direct radiation, derivation of the relationships between angles<br>- Sign conventions, angle of incidence $\theta$ on a tilted plane, shading, sun-path diagram, overhangs, parallel rows of solar collectors, measurement of radiation<br>- Estimation of total irradiance on a tilted surface, radiation augmentation |  |            |                       |                  |   |             |   |   |
| <b>Module 2</b>  | Solar Collectors   | Assignment | Data Collection/Excel |                  |   | 15 Sessions |   |   |
| <b>Topics:</b><br>Flat plate collector, thermal analysis, heat removal factor  |  |            |                       |                  |   |             |   |   |

|   |  |            |        |             |
|---|--|------------|--------|-------------|
| Air heaters, thermal analysis of air heaters, overview of other thermal collectors, testing procedure<br>Single axis tracking, concentrating collectors, theoretical limit, classifications of concentrators<br>Parabolic trough collector, thermal analysis, compound parabolic concentrators, parabolic dish collector, central receiver tower<br><b>Assignment:</b> Study of solar collectors for Indian scenario  |  |            |        |             |
| <b>Module 3</b>   | Friction on Rigid Bodies                           | Assignment | Design | 15 Sessions |
| <b>Topics:</b><br>Non-thermal routes for solar energy conversion, Basics of photovoltaic effect, Electron-hole carrier formation and motion Band bending, photovoltaic generation, P-N junction diode, forward Bias, reverse bias Dark current, light-generated current, IV characteristic curve for P-N junction diodes, efficiency, effect of temperature intensity and spectrum, Comparative discussion on different solar conversion technologies in the state of the art form and the future directions<br><b>Assignment:</b> Design of PV system for one of the labs of Presidency University |  |            |        |             |
| <b>Targeted Application &amp; Tools that can be used:</b><br>Application in renewable energy industries<br><b>Professionally used software</b> – Excel  |  |            |        |             |

| <b>Course Description</b>  | This course will lead to an understanding of refrigeration and air-conditioning products, the components within these products, familiarity with selection parameters for the components and an appreciation of environmental impact of design choices. The course includes a case study to illustrate the process of design leading to a successful product in market.                                |                 |              |             |   |   |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Product Design in RAC</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Problem solving methodologies.  |                 |              |             |   |   |
| <b>Course Outcomes</b>   | On successful completion of this course the students shall able to<br>CO1] Analyse, evaluate and compare the performances of complex vapor compression systems.<br>CO2] Evaluate the various sources of heat load on buildings and perform a heat load estimate.<br>CO3] Design summer and winter air conditioning systems.<br>CO4] analyses different AC system i.e. railways, telecom cooling system |                 |              |             |   |   |
| <b>Course Content:</b>   |  |                 |              |             |   |   |
| <b>Module 1</b>  | Introduction   | Assignment      | Mathematical | 10 sessions |   |   |
| Topics:<br>Introduction to the design process in general and for Ref. & AC in particular. Applied Thermodynamics as a design tool. Refrigerants and their properties, energy efficiency and environmental considerations, Practical aspects□.            |  |                 |              |             |   |   |
| <b>Module 2</b>  | Ref. system Components & their types   | Assignment      | Mathematical | 10 sessions |   |   |
| Topics:<br>compressors, condensers, evaporators, expansion devices. Working principle of the components and unique feature   |  |                 |              |             |   |   |
| <b>Module 3</b>  | Selection of components  | Assignment      | Mathematical | 12 sessions |   |   |
| Topics:<br>election of components for an intended design. Balancing the diversity of design objectives and optimization. Appreciation of the diverting in operating parameters in real applications and incorporation of controls and safety components. |  |                 |              |             |   |   |
| <b>Module 4</b>  | Product design   | Assignment      | Mathematical | 12 sessions |   |   |

|  |                                       |
|--|---------------------------------------|
| <p>Topics:<br/>Product design - New product launch – Performance testing, reliability, safety, Case studies etc.</p>   |                                       |
| <p><b>Targeted Application &amp; Tools that can be used:</b></p> <p>Application Area is Refrigeration and Air Conditioning Industries, Aerospace, Data Center cooling. Industries using above applications and tools –such as Carrier, Trane, LG, Samsung, Voltas, Blue star, Emerson, Danfoss etc.</p>  |                                       |

| <b>Course Description</b>   | This Course includes: governing equations of motions using Newton’s laws of motion and energy principles, effective springs and masses, free and forced vibration with and without damping of linear systems with one and two degree of freedom, vibration isolation, modal analysis, and vibration problems in multi degrees of freedom systems. The associated laboratory provides an opportunity to validate the concepts Taught and enhances the ability to visualize the real system performance. |                |                                      |   |             |   |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Mechanical Vibrations</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Problem solving methodologies.  |                |                                      |   |             |   |
| <b>Course Outcomes</b>  | On successful completion of this course the students shall be able to:<br><br>1. Explain the basics concepts of single degree of freedom systems.<br>2. Predict the responses of damped single degree freedom system.<br>3. Solve numerical examples on vibration system under harmonic excitation.<br>4. Employ different methods to determine the natural frequencies of multi-degree freedom systems.   |                |                                      |   |             |   |
| <b>Course Content:</b>  |  |                |                                      |   |             |   |
| <b>Module 1</b>   | Free un-damped vibration of Single Degree of Freedom Systems   | Assignment     | Programming Task, Data Analysis task |   | 10 sessions |   |
| Topics:<br>Introduction, Basic concepts of vibration, Classification of Vibration, Characteristics of Simple Harmonic motion. Fourier series. Single degree freedom system, Free Vibration of an Undamped Translational System, Free Vibration of an Undamped Torsional System. Simple problems using MATLAB. |  |                |                                      |   |             |   |
| <b>Module 2</b>   | Free damped Vibration of Single-Degree-of-Freedom Systems  | Quiz           | Analytical thinking                  |   | 12 Sessions |   |
| Topics:<br>Types of damping, Free Vibration with Viscous Damping, Free Vibration with Coulomb Damping. Simple problems using MATLAB.  |  |                |                                      |   |             |   |
| <b>Module 3</b>   | Forced vibration of SDOFS  | Assignment     | Data Collection and Analysis         |   | 11 Sessions |   |

|  |   |            |                              |             |
|--|---|------------|------------------------------|-------------|
| <p>Topics:<br/>Response of an Undamped and damped System under Harmonic excitation, Response of a Damped System under the Harmonic Motion of the Base. Critical speed. Simple problems using MATLAB.</p>   |   |            |                              |             |
| <b>Module 4</b>  | Multi degree of freedom Systems                   | Assignment | Data Collection and Analysis | 12 Sessions |
| <p>Topics:<br/>Two-Degree-of-Freedom Systems, Continuous Systems - Longitudinal Vibration of a Bar, modal analysis, Holzer's method and Dunkerley's method-. Simple problems using MATLAB.</p>   |   |            |                              |             |
| <p><b>Targeted Application &amp; Tools that can be used:</b><br/>Application Area is suspension design of vehicles, aerospace, automobile kinematics and dynamics, vibration of machines.<br/>Professionally Used Software: MATLAB</p>   |   |            |                              |             |
| <p><b>Project work/Assignment:</b><br/>Project Assignment: Carry out half car model study of different chassis used in Automobiles in India<br/>Assignment 1: Collect the data for dampers of your vehicle. | <b>Course Description</b>  | The purpose of this course is to enable the students to appreciate the need for Strain gauge and Strain gauge Rosettes, Nature of light, 2-D & 3-Dimensional Photo elastic Analysis, Bire fringent coating and Introduction to holography. The course develops the critical thinking and analytical skills. The course also enhances the abilities through assignments.            |            |   |             |          |          |          |
| <b>Course Outcomes</b>   | <b>On successful completion of this course the students shall be able to:</b><br>[1] Explain the different types of strain gauges and its arrangement<br>[2]Compute the stress and strain behavior of mechanical components using electrical strain gauges<br>[3] Compute the Photo elastic analysis with various techniques<br>[4] Explain the principles of circular polariscope |            |   |             |          |          |          |
| <b>Course Objectives</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Experimental Stress Analysis</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Problem solving methodologies.   |            |   |             |          |          |          |
| <b>Module 1</b>  | Electrical Strain Resistance Gauges  | Assignment | Demonstration of the Experiment                       | 12 sessions |          |          |          |
| Topics:<br>Introduction, Strain sensitivity in metallic alloys, Gage construction, Adhesives and mounting techniques, Gage sensitivity and gage factor ,Performance’ Characteristics, Strain Gage circuits: Potentiometer, Wheatstone’s bridges,   |  |            |   |             |          |          |          |
| <b>Module 2</b>  | Strain Analysis:   | Assignment | Case study  | 08 sessions |          |          |          |
| Topics:<br>Two element, three element rectangular and delta rosettes, Correction for transverse strain effects, Stress gage, Plane shear gage, Stress intensity factor gage.   |  |            |   |             |          |          |          |
| <b>Module 3</b>  | Photoelastic Analysis and coatings   | Assignment | Analysis of Photo elastic Models using Ansys Software | 20 sessions |          |          |          |
| Topics:<br>Nature of light, Wave theory of light - optical interference, Stress optic law –effect of stressed model in plane and circular polariscopes, Isoclinics &Isochromatics, Fringe order determination Fringe multiplication techniques , Calibration photoelastic model materials Separation methods: Shear difference method, Analytical separation methods, Model to prototype scaling, Properties of 2D photoelastic model materials, and Materials for 2D photoelasticity. |  |            |   |             |          |          |          |

| <b>Course Description</b>   | This course introduces Product Lifecycle Management process and methods which aim to emphasize the importance of product data creation, processing, storage, transformation and reuse to aid in decision making process. The course covers wide range of industry oriented case studies on different aspects of product management to strengthen the belief of Product Lifecycle Management. The principal constituents of PLM covered are Product Lifecycle Process, Work flow, CPD, Engineering Change Management, Digital Manufacturing and PLM, PLM Strategy and Assessment. Entire course runs both on class room lectures and hands on training. This course is designed to give a holistic view on PLM. This course also incorporates training on PLM tool 'Teamcenter13' |            |                              |   |   |             |   |
| <b>Course Outcomes</b>  | On successful completion of this course the students shall be able to:<br>1] Describe different processes associated with Product Lifecycle.<br>2] Describe environment, drivers and PLM elements.<br>3] Deploy Engineering Change Management process.<br>4] Design Bill of Materials.<br>5] Deployment of Work flow on Team center.   |            |                              |   |   |             |   |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Product Lifecycle Management</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Experiential learning techniques   |            |                              |   |   |             |   |

| <b>Module 1</b>   | Introduction to Product Life Cycle Management (PLM)  | Assignment | Data Collection and Analysis |   |   | 8 sessions  |   |
| Topics:<br><b>Lecture:</b> Definition, PLM Lifecycle Model, Threads of PLM, Need for PLM, Opportunities and Benefits of PLM, Views, Components and Phases of PLM, PLM feasibility Study, PLM Visioning.<br><b>Hands-on:</b> Introduction to Teamcenter13, Perspective, Views, Navigation Pane, Primary, Secondary, Configure applications, Perspective and Views customization. |  |            |                              |   |   |             |   |
| <b>Module 2</b>   | PLM Concepts, Processes and Workflow   | Case Study | Data analysis task           |   |   | 10 sessions |   |
| Topics:<br>Characteristics of PLM, Environment Driving PLM, PLM Elements, Drivers of PLM, Conceptualization, Design, Development, Validation, Production, Support of PLM.<br><b>Collaborative Product Development:</b> Engineering Vaulting, Product Reuse, Smart Parts, Engineering Change Management.   |  |            |                              |   |   |             |   |

|  |   |            |                              |             |
|--|---|------------|------------------------------|-------------|
| <b>Hands-on:</b> My Teamcenter: Item creation, Item revision, Item configuration, Views of items, Item data reuse, Item data vaulting, Item data transformation.   |   |            |                              |             |
| <b>Module 3</b>  | Collaborative Product Development                         | Assignment | Data Collection and Analysis | 10 sessions |
| <p>Topics:<br/> Bill of Materials and Process Consistency, Design for Environment, Virtual Testing and Validation, Marketing Collateral.<br/> Hands-on: Change Management: ECN, ECR<br/> Structure Manager: BOM creation, BOM revision, Revision rules.<br/> Workflow Designer: Design</p>   |   |            |                              |             |
| <b>Module 4</b>  | Digital Manufacturing – PLM                               | Assignment | Case study/Data Analysis     | 10 sessions |
| <p>Topics: Digital Manufacturing, Benefits of Digital Manufacturing, Manufacturing the First-One, Ramp Up, Virtual Learning Curve, Manufacturing the Rest, Production Planning.<br/> <b>Hands-on:</b> Query Builder, Organization, Access Manager, BMIDE, Architecture 2T &amp; 4T</p>   |   |            |                              |             |
| <b>Module 5</b>  | Developing a PLM Strategy and Conducting a PLM Assessment | Assignment | Simulation/Data Analysis     | 08 sessions |
| Strategy, Impact of strategy, implementing a PLM strategy, PLM Initiatives to Support Corporate Objectives, Infrastructure Assessment, Assessment of Current Systems and Applications  |   |            |                              |             |
| <p><b>Targeted Application &amp; Tools that can be used:</b></p> <p>Application Area is in all IT industries who provide services for Product Lifecycle Management, Software Requirement: Team Center by Siemens.</p>  |   |            |                              |             |

| <b>Anti-requisites</b>   | NIL   |            |                                      |                |          |             |          |          |
| <b>Course Description</b>  | The purpose of this course is to enable the students to understand the importance of the behavior of components in 3-dimnesional environment and practical application of theory of elasticity. Using Elasticity in the design process enables to attain more efficient structure as it can provide accurate values for the stress, strains and Displacements even for structures of complicated geometries and loadings. |            |                                      |                |          |             |          |          |
| <b>Course Objectives</b>   | The objective of the course is to familiarize the learners with the concepts of " <b>Theory of Elasticity</b> " and attain <b>EMPLOYABILITY SKILL</b> through Participative learning techniques.  |            |                                      |                |          |             |          |          |
| <b>Course Outcomes</b>   | On successful completion of this course the students shall be able to:<br>(1) Solve problems related to elasticity<br>(2) Apply numerical methods to solve continuum problems.<br>(3) Apply different principles to solve the 3 dimensional problems.<br>(4) Reduce the computation effort by adopting the axisymmetric method.<br>(5) Solve the problem related to thermal loading.                                      |            |                                      |                |          |             |          |          |
| <b>Course Content:</b>   |   |            |                                      |                |          |             |          |          |
| <b>Module 1</b>  | Analysis of Stress:   | Assignment | Programming Task, Data Analysis task |                |          | 10 sessions |          |          |
| Topics:<br>Definition and notation of stress, Equations of equilibrium in differential form, Stress components on an arbitrary plane, Equality of cross shear, Stress invariants, Principal stresses |   |            |                                      |                |          |             |          |          |
| <b>Module 2</b>  | Analysis of Strain:   | Case Study | Simulation and data analysis task    |                |          | 10 sessions |          |          |
| Topics:<br>Strain invariants, Principal strains, Octahedral strains, Plane state of strain, Compatibility equations, Strain transformation. Principle of super position, Saint Venant principle.     |   |            |                                      |                |          |             |          |          |
| <b>Module 3</b>  | Plane Stress And Plane Strain Problems  | Assignment | Data Collection and Analysis         |                |          | 10 sessions |          |          |
| Topics:<br>Airy's stress function, Bi-harmonic equations, Polynomial solutions, Simple two-dimensional problems in Cartesian coordinates like bending of cantilever and simply supported beams, etc. |   |            |                                      |                |          |             |          |          |
| <b>Module 4</b>  | Polar Coordin ates &  | Assignment | Simulation/Data Analysis             |                |          | 15 sessions |          |          |

| <b>Course Description</b>  | The purpose of this course is to enable the students to learn the current state of the plasticity theory, and then to show the fascinating possibility of this promising branch of solid mechanics. Many applications in mechanics, material science and technology require a comprehensive understanding and reliable representation of the elastoplastic behavior observed in a large class of engineering materials. The course develops the critical thinking and analytical skills. The course also enhances the abilities through assignments.     |            |                |             |          |          |          |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Theory of Plasticity</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Participative learning techniques.   |            |                |             |          |          |          |
| <b>Course Outcomes</b>   | On successful completion of this course the students shall be able to:<br>(1) Understand the stress, deformation, deformation, relationship between stress and deformation and plastic deformation in solids.<br>(2) Understand plastic stress/deformation relationships and flow rules.<br>(3) Perform stress analysis in beams and bars including Material nonlinearity<br>(4) Analyze the performance of a material according to different efficiency theories for a given state of plastic strain and deformation of metals in engineering problems. |            |                |             |          |          |          |
| <b>Course Content:</b>   |  |            |                |             |          |          |          |
| <b>Module 1</b>  | Fundamentals of Elasticity   | Assignment | seminar        | 12 sessions |          |          |          |
| Topics:<br>Basics Concept of stress, stress invariants, principal Stresses, octahedral normal and sheartresses, spherical and deviatoric stress, stress transformation; concept of strain, engineering and natural strains, octahedral strain, deviator and spherical strain tensors, strain rate and strain rate tensor, cubical dilation, generalized Hooke’s law, numerical problems. |  |            |                |             |          |          |          |
| <b>Module 2</b>  | Permanent Deformation of Metals  | Assignment | Case Study     | 08 sessions |          |          |          |
| Topics:<br>Plastic Deformation of Metals: Crystalline structure in metals, mechanism of plastic deformation, factors affecting plastic deformation, strain hardening, recovery, re crystallization   |  |            |                |             |          |          |          |

|   |  |            |                                  |             |
|---|--|------------|----------------------------------|-------------|
| and grain growth, flow figures or Luder's cubes. Yield Criteria: Introduction, yield or plasticity conditions, Von Mises and Tresca criterion, geometrical representation   |  |            |                                  |             |
| <b>Module 3</b>   | Stress Strain Relations:                                     | Assignment | Analysis using suitable software | 12 sessions |
| <p>Topics:</p> <p>Idealised stress-strain diagrams for different material models, empirical equations, Levy-VonMises equation, Prandtl-Reuss and Saint Venant theory, and experimental verification of Saint Venant's theory of plastic flow. Concept of plastic potential, maximum work hypothesis,</p>  |  |            |                                  |             |
| <b>Module 4</b>   | Bending of Beams, Torsion of Bars and Slip Line Field Theory | Assignment | Experimental Investigation       | 12 sessions |
| <p>Topics:</p> <p>Beams: Stages of plastic yielding, analysis of stresses, linear and nonlinear stress strain curve, problems.</p> <p>Torsion of various shaped bars - Pure torsion of prismatic bars - Prandtl's membrane analogy - Torsion of thin walled tubes and hollow shafts.</p>  |  |            |                                  |             |
| <p><b>Targeted Application &amp; Tools that can be used:</b></p> <p>Application Area is NAL, ISRO Bangalore Analysis of Structural members like beams, bars, plates and trusses Professionally Used Software: <b>Ansys Software, Abacus.</b></p>  |  |            |                                  |             |

| <b>Course Description</b>   | The purpose of this course is to enable the students to appreciate the need for lubrication and bearings in mechanical power transmission system. The course is both conceptual and analytical in nature and needs fair knowledge of Mathematical and computing. The course develops the critical thinking and analytical skills. The course also enhances the programming abilities through assignments. |            |   |             |   |   |   |
| <b>Course objectives</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Tribology and bearing design</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Problem solving methodologies.  |            |   |             |   |   |   |
| <b>Course Outcomes</b>  | On successful completion of this course the students shall be able to:<br>1) Select different bearing suitable for particular application.<br>2) Interpret Reynolds’s equation for fluid film lubrication.<br>3) Understand hydrodynamic lubrication in full film lubricated bearing.<br>4) Select appropriate material and lubricant for bearing in particular application.                              |            |   |             |   |   |   |
| <b>Course Content:</b>  |   |            |   |             |   |   |   |
| <b>Module 1</b>   | Rolling contact Bearing   | Quiz       | Critical thinking task                              | 12 sessions |   |   |   |
| Topics:<br>Types of bearing, rolling contact bearing and sliding contact bearing, selection of rolling contact bearing from manufacturer’s catalogue, load-life relationship, bearing failure causes and remedies.  |   |            |   |             |   |   |   |
| <b>Module 2</b>   | Sliding contact bearing   | Quiz       | Critical thinking task                              | 12 Sessions |   |   |   |
| Topics:<br>Basic mode of lubrication, Petroff’s equation, Mckee’s investigation, Reynolds’s equation for fluid film lubrication, hydrostatic step bearing, bearing design-selection of parameters.  |   |            |   |             |   |   |   |
| <b>Module 3</b>   | Hydrodynamic journal bearing  | Assignment | Computing and data interpretation task using MATLAB | 08 Sessions |   |   |   |
| Topics:<br>Derivation of Reynolds’s equation, physical significance of each term of Reynolds’s equation, standard reduced form of Reynolds’s equation.  |   |            |   |             |   |   |   |
| <b>Module 4</b>   | Bearing material and lubricants   | Assignment | Data collection and Analysis                        | 12 Sessions |   |   |   |
| Topics: Bearing materials: Introduction, material characteristics, metallic and non-metallic bearing materials, properties of common bearing material.<br>Lubricants: Basic chemistry of lubricants, different types of lubricants, properties of lubricants. |   |            |   |             |   |   |   |
| <b>Targeted Application &amp; Tools that can be used:</b>   |   |            |   |             |   |   |   |

| <b>Course Description</b>   | The objective of this course is to introduce the mathematical and physical principles of fracture mechanics and their applications to engineering design to develop the ability in students to compute the stress intensity factor, strain energy release rate, and the stress and strain fields around a crack tip for linear and nonlinear materials. It will also expand the students' knowledge on experimental methods to determine the fracture toughness and develop the students understanding on the design principle of materials and structures using fracture mechanics approaches. |            |                                   |   |   |             |   |
| <b>Course objectives</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Fracture Mechanics</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Participative learning techniques.  |            |                                   |   |   |             |   |
| <b>Course Outcomes</b>  | On successful completion of this course the students shall be able to:<br>1. Identify the basic fracture and fatigue mechanisms<br>2. Understand crack resistance and energy release rate for crack criticality.<br>3. Apply Linear Elastic Fracture Mechanics on brittle materials.<br>4. Understand the relationship between crack tip opening displacement, SIF, ERR and application of such parameters for ductile and brittle materials<br>5. Determine the critical values of parameters at crack tip using experimental techniques   |            |                                   |   |   |             |   |
| <b>Course Content:</b>  |   |            |                                   |   |   |             |   |
| <b>Module 1</b>   | Introduction  | Assignment | Programming Task,                 |   |   | 10 sessions |   |
| Topics:<br>Introduction to Fracture Mechanics: Stress-Strain Curve, Elements of dislocation theory, Historical perspective, Stress Concentration effect of flaws, Fracture Mechanics approach to design, Effect of material properties on fracture, Cleavage, Brittle and Ductile fracture, ductile brittle transition, modes of fracture failure, Fatigue and stress corrosion crack growth, Damage tolerance. |   |            |                                   |   |   |             |   |
| <b>Module 2</b>   | Linear Elastic Fracture Mechanics   | Case Study | Simulation and data analysis task |   |   | 10 sessions |   |
| Topics:<br>An atomic view of fracture, Griffith Energy Balance, Energy release rate, instability and the R Curves, compliance, tearing modulus, Stress and Displacement field in isotropic elastic materials.   |   |            |                                   |   |   |             |   |
| <b>Module 3</b>   | Elastic-Plastic Fracture Mechanics  | Assignment | Data Collection and Analysis      |   |   | 15 sessions |   |
| Topics:<br>Crack tip deformation and plastic zone size, plane stress vs plane strain, effective crack length, Irwin plastic zone correction, Dugdale approach, effect of plate thickness.   |   |            |                                   |   |   |             |   |

|   |  |            |                          |             |
|---|--|------------|--------------------------|-------------|
| J Contour Integral: Relevance and scope, J as a path-independent line integral, J as a stress intensity parameter, Stress-Strain relations, J-Controlled fracture, Laboratory measurement of J, Crack Tip Opening Displacement (CTOD), Relationship between CTOD, K and G, Equivalence between CTOD and J, Determination CTOD from strip yield model, HRR Singularity   |  |            |                          |             |
| <b>Module 4</b>   | Fatigue Fracture   | Assignment | Simulation/Data Analysis | 10 sessions |
| <p>Topics: Introduction to fatigue, factors affecting fatigue performance, fatigue loading, constant and variable amplitude loading, some characteristics of fatigue crack, Paris Law</p> <p>Numerical modelling by using k-e equations.</p> <p><b>Targeted Application &amp; Tools that can be used:</b></p> <p>Application Area is Fracture Data collection, Automobile &amp; Aerospace companies such as Boeing, Airbus, and Lockheed Martin etc.</p> <p>Professionally Used Software: Matlab, SolidWorks &amp; Ansys.</p> <p><b>Text Book (s) :</b></p> <p>T1: Anderson T.L., Fracture Mechanics Fundamentals and Applications, CRC Press, Second edition, 1994</p> <p>T2: Kumar Prashant, Elements of Fracture Mechanics, Wheelers Publishing Co. | <b>Course Description</b>   | Introduction to composite Materials, Fiber Reinforced Plastic Processing, Applications and Mechanics of Fiber Reinforced Plastics, Characteristics of Fiber-Reinforced lamina, Laminated structure, Metal Matrix Composites, Fabrication Process for MMC's and Study Properties of MMC's, Micromechanics and Macro-mechanics of lamina and Failure theories.   |            |                  |             |          |          |          |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of " <b>Mechanics of Composite Materials</b> " and attain <b>EMPLOYABILITY SKILLS</b> through Problem Solving methodologies   |            |                  |             |          |          |          |
| <b>Course Out Comes</b>   | On successful completion of the course the students shall be able to:<br>1. Describe the various techniques of manufacturing metal matrix and fiber reinforced composites.<br>2. Compute the Various Elastic Properties Using the Micromechanics Principle.<br>3. Compute the Various Elastic Properties Using the Macromechanics Principle.<br>4. Describe the Various Failure Theories and Methods Involved in Recycling of Composite Materials. |            |                  |             |          |          |          |
| <b>Course Content:</b>  |  |            |                  |             |          |          |          |
| <b>Module 1</b>   | Introduction to Composite Materials:   | Assignment | Data Collection  | 08 Sessions |          |          |          |
| <b>Introduction to Composite Materials:</b><br>Definition and classification of composite materials: Polymer Matrix Composites, Metal Matrix Composites, Ceramic Matrix Composites, Carbon-Carbon Composites. Reinforcements and Matrix Materials.<br><b>Manufacturing Techniques of Composites:</b><br><b>Fiber Reinforced Plastic (FRP) Processing:</b> Layup and curing, fabricating process, open and closed mould process, Hand layup method, filament winding, pultrusion, pulforming, thermo-forming, injection molding, blow molding.<br><b>Fabrication Process for Metal Matrix Composites (MMC's):</b> Powder metallurgy technique, liquid metallurgy technique and secondary processing, special fabrication techniques. |  |            |                  |             |          |          |          |
| <b>Module 2</b>   | <b>Micromechanics of Composites:</b>   | Case Study | Data collection  | 15 Sessions |          |          |          |
| Density, Mechanical Properties; Prediction of Elastic Constants, Micromechanical Approach, Halpin-Tsai Equations, Transverse Stresses. Thermal Properties; Expression for Thermal Expansion Coefficients of Composites, Expression for Thermal Conductivity of Composites. Mechanics of Load Transfer from Matrix to Fiber; Load transfer in Particulate Composites.  |  |            |                  |             |          |          |          |
| <b>Module 3</b>   | <b>Macromechanics of Composites:</b>   | Case Study | Data collection  | 12 Sessions |          |          |          |

|   |   |            |                 |             |
|---|---|------------|-----------------|-------------|
| Elastic Constants of an Isotropic Material, Elastic Constants of a Lamina, Relationship between Engineering Constants and Reduced Stiffnesses and Compliances, Variation of Lamina Properties with Orientation, Analysis of Laminated Composites, Stresses and Strains in Laminate Composites, Inter-laminar Stresses and Edge Effects. Numerical Problems.   |   |            |                 |             |
| <b>Module 4</b>   | Monotonic Strength and Fracture         | Assignment | Data Collection | 10 sessions |
| Tensile and Compressive strength of Unidirectional Fiber Composites. Fracture Modes in Composites; Single and Multiple Fracture, Debonding, Fiber Pullout and Delamination Fracture. Strength of an Orthotropic Lamina; Maximum Stress Theory, Maximum Strain Criterion, Tsai-Hill Criterion, Tsi -Wu tensor theory. Comparison of Failure Theories.<br><b>Failure Analysis and Design of Laminates:</b><br>Special cases of Laminates; Symmetric Laminates, Cross-ply laminates, Angle ply Laminates, antisymmetric Laminates, Balanced Laminate.  |   |            |                 |             |

| <b>Course Pre-requisites</b>   | NIL   |                |                             |             |   |   |
| <b>Anti-requisites</b>   | NIL   |                |                             |             |   |   |
| <b>Course Description</b>  | The course is designed with the objective of giving an overview of engineering drawing with the help of software tools. It is introductory in nature and acquaints the students with the techniques used to create engineering drawings with computerized drafting tools. Computerized drafting provides accurate and easily modifiable graphic entities, easy data storage, easy retrieval facility and it enhances creativity. It will expose students to the concept of engineering drawing and teach them to draw different views of planes and solids in different orientations. The course will teach students to use AutoCAD to produce engineering drawings. They will learn to create drawing layouts, dimensioning, the theory of projection, orthographic projection of points, lines, planes and solids, isometric projection and be introduced to the development of surfaces. |                |                             |             |   |   |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Engineering Drawing</b> ” and attain <b>ENTREPRENEURIAL SKILL</b> through Experiential learning techniques .   |                |                             |             |   |   |
| <b>Course Outcomes</b>   | <b>On successful completion of this course the students shall be able to:</b><br>(1) Demonstrate competency using AutoCAD graphics software as per BIS conventions and standards.<br>(2) Comprehend the theory of projection for drawing projections of Points, Lines and Planes under different conditions.<br>(3) Prepare multiview orthographic projections of Solids by visualizing them in different positions.<br>(4) Prepare pictorial drawings using the principles of isometric projections to visualize objects in three dimensions.  |                |                             |             |   |   |
| <b>Course Content</b>  |   |                |                             |             |   |   |
| <b>Module 1</b>  | Introduction to Drawing   | Assignment     | Standard technical drawing  | 02 Sessions |   |   |
| Topics:<br>Introduction, drawing instruments and their uses, relevant BIS conventions and standards, Lettering, Line conventions, dimensioning, Selection of drawing sheet size and scale.   |   |                |                             |             |   |   |
| <b>Module 2</b>  | Orthographic projections of Points, Straight Lines and Plane Surfaces   | Assignment     | Projection methods Analysis | 20 Sessions |   |   |
| Topics:<br>Introduction, Definitions – Elements of projection and methods of projection, Planes of projection, reference line and conventions adopted. First angle and third angle projections. Projection of Points in all 4 quadrants. |   |                |                             |             |   |   |

|   |   |            |                             |             |
|---|---|------------|-----------------------------|-------------|
| Projections of Straight Lines (located in first quadrant/first angle projection only): True and apparent lengths, true and apparent Inclinations to reference planes. (No application problems). Projection of Plane surfaces (First angle projection): Regular plane surfaces – triangle, square, rectangle, pentagon, hexagon and circle – in different positions inclined to both the planes using change of position method only.                         |   |            |                             |             |
| <b>Module 3</b>   | Orthographic Projections of Solids                              | Assignment | Multi-view drawing Analysis | 15 Sessions |
| <b>Topics:</b><br>Introduction, Projection of right regular prisms, pyramids, cone, hexahedron and tetrahedron in different positions (Problems resting on HP only and First angle projection).   |   |            |                             |             |
| <b>Module 4</b>   | Isometric Projections of Solids (Using isometric scale only)    | Assignment | Spatial Visualization       | 8 Sessions  |
| <b>Topics:</b><br>Introduction, Isometric scale, Isometric projections of right regular prisms, cylinders, pyramids, cones and their frustums, spheres and hemispheres, hexahedron (cube), and combination of 2 solids, conversion of orthographic view to isometric projection of simple objects.  |   |            |                             |             |
| <b>Targeted Application &amp; Tools that can be used:</b><br>Application Area is in understanding and interpreting an object in various positions and converting it into a technical drawing which can be universally accepted.<br>Professionally Used Software: AutoCAD  |   |            |                             |             |
| <b>Text Book:</b><br>1.N. D. Bhatt, "Engineering Drawing: Plane and Solid Geometry," Charotar Publishing House Pvt. Ltd.  |   |            |                             |             |

| <b>Course Description</b>  | The purpose of this course is to enable the students to understand components of supply chain management, operational challenges in managing global supply chains and to develop the basic abilities in modelling supply chain. The course is both conceptual and analytical in nature. The course develops the analytical, critical thinking, and decision making skills. The course also enhances the problem solving abilities through assignments.  |            |                                   |   |             |   |   |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Supply Chain Management</b> ” and attain <b>ENTREPRENEURIAL SKILL</b> through Participative learning techniques.   |            |                                   |   |             |   |   |
| <b>Course Outcomes</b>   | <b>On successful completion of this course the students shall be able to:</b><br>(1) Summarize the drivers and their role in the performance of Supply Chain.<br>2) Construct Supply Chain Network according to the requirement of any particular type of product.<br>3] Solve forecasting and inventory related issues in Supply Chain in practice.<br>4] Estimate transportation requirements of global product in real life.<br>5] Interpret the impact of future technologies in Supply Chain Management. |            |                                   |   |             |   |   |
| <b>Course Content:</b>   |   |            |                                   |   |             |   |   |
| <b>Module 1</b>  | Introduction to SCM   | Assignment | Data Collection and Analysis      |   | 10 Sessions |   |   |
| Topics: Understanding Supply Chain – Objectives, Importance and Decision phases in Supply Chain, Process and Cycle view, Examples of Supply Chain., Supply Chain Drivers – Various drivers, Framework for structuring drivers, Supply Chain Performance – Achieving strategic fit.   |   |            |                                   |   |             |   |   |
| <b>Module 2</b>  | Designing the Supply chain Network  | Case Study | Simulation and data analysis task |   | 10 Sessions |   |   |
| Topics: Designing distribution network – The Role of Distribution in the Supply Chain, Factors Influencing Distribution Network Design. Network Design In The Supply Chain - The Role of Network Design in the Supply Chain, Framework for Network Design Decisions and Making Network Design Decisions in Practice. Designing Global Supply Chain Networks. |   |            |                                   |   |             |   |   |

|  |  |            |                                 |             |
|--|--|------------|---------------------------------|-------------|
| <b>Module 3</b>  | Planning and Coordinating Demand and Supply    | Assignment | Data Collection and Analysis    | 10 Sessions |
| Topics: Demand forecasting, Aggregate Planning in Supply Chain, Coordination in Supply Chain. Managing economies of scale in a supply chain: Cycle inventory, Managing Uncertainty In A Supply Chain: Safety Inventory, Determining The Optimal Level of Product Availability.   |  |            |                                 |             |
| <b>Module 4</b>  | Designing and Planning Transportation Networks | Case Study | Data collection and Programming | 08 Sessions |
| Topics: Transportation In a Supply Chain - The Role of Transportation in a Supply Chain, Modes of Transportation and Their Performance, The Role of IT in Transportation. The Role of Sourcing in a Supply Chain, Third- and Fourth-Party Logistics Providers, Supplier Selection—Auctions and Negotiations.   |  |            |                                 |             |
| <b>Module 5</b>  | Future Technologies in Supply Chain            | Assignment | Simulation and Analysis         | 07 Sessions |
| Topics: Information Technology In a Supply Chain, The Supply Chain IT Framework. The Future Technologies in the Supply Chain – AI, Additive Manufacturing, Driverless Vehicles, IoT, Block Chain Technologies, Wearable Devices.   |  |            |                                 |             |
| <b>Targeted Application &amp; Tools that can be used:</b><br><br>Application Area include almost all manufacturing organizations (Automotive – Hyundai, KIA, Ford etc.,) Processing industries (Petroleum – Reliance, Shell, HP etc.,), service industries like Banking, Hospital, etc. and E-commerce platforms like Amazon, Flipkart etc.<br><br>Professionally Used Software: SAP SCM, E2Open, Oracle SCM   |  |            |                                 |             |

| <b>Course Description</b>  | Six Sigma is a methodology of implementing a highly successful project, or producing a high-quality product or service, using techniques and principles that ensure excellence. The Six Sigma methodology incorporates many years of studying best practices in business and its goal is ultimately the creation of a nearly error-free business environment. This course will give a complete overview of the Six Sigma process and prepare to be a Six Sigma team member.                  |            |                 |          |             |          |          |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Six Sigma for Professionals</b> ” and attain <b>ENTREPRENEURIAL SKILL</b> through Participative learning techniques.  |            |                 |          |             |          |          |
| <b>Course Outcomes</b>   | <b>On successful completion of this course the students shall be able to:</b><br>1] Define the problem statement through customer analysis in terms of time, budget, and resource requirements.<br>2] Summarize a detailed process map by gathering baseline data.<br>3] Complete a root cause verification analysis by the help of inferential statistics and hypothesis testing.<br>4] Devise a preliminary implementation plan, update standard work procedures and write an action plan. |            |                 |          |             |          |          |

| <b>Course Description</b>   | The purpose of this course is to give an overview of the fundamentals of aerospace engineering. It will give an overview of the aircraft industry, discuss the different components of and different types of aircrafts, go into the mechanical, electrical, electronic and auxiliary systems in aircrafts, discuss aircraft engines, pressurization, cover the basic principles of flight and space flight, and discuss various aircraft maneuvers.   |            |                                 |             |   |   |   |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Fundamentals of Aerospace Engineering</b> ” and attain <b>ENTREPRENEURIAL SKILL</b> through Problem solving methodologies.  |            |                                 |             |   |   |   |
| <b>Course Outcomes</b>  | <b>On successful completion of the course the students shall be able to:</b><br>CO 1: Solve problems based on the concepts of flowing gases and the standard atmosphere<br>CO 2: Apply the principles of basic aerodynamics to airfoils<br>CO 3: Determine the thrust and power requirements for level, unaccelerated flight of an aircraft<br>CO 4: Explain the criteria for longitudinal static stability for an airplane<br>CO 5: Apply the basics of space vehicle trajectories to simple missions<br>CO 6: Determine some propulsive characteristics of aircraft and rocket engines |            |                                 |             |   |   |   |
| <b>Course Content:</b>  |  |            |                                 |             |   |   |   |
| <b>Module 1</b>   | Introduction   | Assignment | Data Analysis task              | 10 Sessions |   |   |   |
| Topics:<br>Introduction, early developments, Sir George Cayley, Otto Lilienthal, Wilbur and Orville Wright. fundamental physical quantities of flowing gas, the source of all aerodynamic forces, equation of state for a perfect gas, anatomy of the airplane and a space vehicle, definition of altitude, the hydrostatic equation, geopotential and geometric altitudes, definition of the standard atmosphere, pressure, temperature and density altitudes. |  |            |                                 |             |   |   |   |
| <b>Module 2</b>   | Basic Aerodynamics   | Assignment | Programming task and simulation | 15 Sessions |   |   |   |
| Topics:<br>The continuity equation, incompressible and compressible flow, momentum equation, elementary thermodynamics, isentropic flow, energy equation, speed of sound, low-speed subsonic wind tunnels, introduction to airfoils, airfoil nomenclature, lift, drag and moment coefficients, airfoil data, infinite versus finite wings, pressure coefficient, obtaining lift coefficient from the pressure coefficient.                                      |  |            |                                 |             |   |   |   |

|   |   |            |                              |             |
|---|---|------------|------------------------------|-------------|
| <b>Module 3</b>   | Airplane Performance, Stability and Control                     | Assignment | Data Collection and Analysis | 10 Sessions |
| <p>Topics:</p> <p>The drag polar, equations of motion, thrust and power requirements for level, unaccelerated flight, thrust available and maximum velocity, power available and maximum velocity, definitions of stability and control, moments on the airplane, absolute angle of attack, criteria for longitudinal static stability.</p> |   |            |                              |             |
| <b>Module 4</b>   | Propulsion  | Assignment | Data Collection and Analysis | 10 Sessions |
| <p>Topics:</p> <p>Introduction, propeller, reciprocating engine, jet propulsion, turbojet engine, turbofan engine, ramjet engine, rocket engine, rocket propellants, rocket equation, rocket staging and propellant requirements for spacecraft trajectory maneuvers.</p>   |   |            |                              |             |
| <p><b>Targeted Application &amp; Tools that can be used:</b></p> <p>Application Area is Indian Space Research Organization (ISRO), Hindustan Aeronautics Limited (HAL), DRDO, General Electric(GE), Bombardier and many others</p> <p>Professionally Used Software: XFLR, Aeolus.</p>   |   |            |                              |             |

| <b>Version No.</b>   | 1.0  |            |                 |             |   |   |   |
| <b>Course Pre-requisites</b>   | NIL  |            |                 |             |   |   |   |
| <b>Anti-requisites</b>   | NIL  |            |                 |             |   |   |   |
| <b>Course Description</b>  | The Course is designed with an objective of giving an overview of study of Industrial Safety followed in industries such as various safety terms used, Fire Safety, Mechanical Safety, Electrical Safety, Chemical Safety followed by case studies to understand the industrial safety in detail.  |            |                 |             |   |   |   |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Safety Engineering</b> ” and attain <b>ENTREPRENEURIAL SKILL</b> through Participative learning techniques.   |            |                 |             |   |   |   |
| <b>Course Out Comes</b>  | On successful completion of the course the students shall be able to:<br>1. Understand the basic safety terms and international standards.<br>2. Identify the hazards and risk analysis around the work environment and industries.<br>3. Use the safe measures while performing work in and around the work area of the available laboratories. Able to recognize the sign boards and its application<br>4. Recognize the types of fires extinguishers and to demonstrate the portable extinguishers used for different classes of fires.<br>5. Report the case studies by sharing experience of the employees working in housekeeping, laboratories etc.<br>6. Recognize the chemical and electrical hazards for its prevention and control. |            |                 |             |   |   |   |
| <b>Course Content:</b>   |  |            |                 |             |   |   |   |
| <b>Module 1</b>  | Introduction to Safety   | Case Study | Data Collection | 10 sessions |   |   |   |
| Topics: Terms used: accident, safety, hazard, safe, safety devices, safety guard, security, precaution, caution, appliance, slip, trip, fall. Ladders and scaffolding. Unsafe acts, reason for accidents, MSDS (material safety data sheet), OSHA, WHO. Lockout and tag out procedures. Safe material handling and storage.<br>Case studies: Student should identify the unsafe acts near their surroundings like housekeeping, lab as well as industrial layouts, road safety, campus layout, safety signs. |  |            |                 |             |   |   |   |
| <b>Module 2</b>  | Fire Safety  | Term paper | Data Collection | 10 sessions |   |   |   |
| Topics: Introduction, Class A, B, C, D and E fire. Fire triangle, Fire extinguishers, Fire hazard and analysis, prevention of fire. Fire protection and loss prevention, steps after occurrence of fire. Notice-first aid for burns, Portable fire extinguishers. Fire detection, fire alarm and firefighting systems. Safety sign boards, instruction on portable fire  |  |            |                 |             |   |   |   |

|  |                   |            |                 |             |
|--|-------------------|------------|-----------------|-------------|
| extinguishers. Case studies: demonstration of fire extinguishers, visit to local firefighting stations. Visit to fire accident sites to analyze the cause of fire and its prevention for future.   |                   |            |                 |             |
| <b>Module 3</b>  | Mechanical Safety | Case Study | Data Collection | 10 sessions |
| <p>Topics: PPE, safety guards, safety while working with machine tools like lathe, drill press, power and band saws, grinding machines, safety during welding, forging and pressing. Safety while handling material, compressed gas cylinders, corrosive substance, waste drum and containers.</p> <p>Case studies: Visit to machine shop, workshops, foundry lab and local industries to record the practical observation and report the same with relevant figures and comments.</p>   |                   |            |                 |             |
| <b>Module 4</b>  | Electrical Safety | Assignment | Data Collection | 08 sessions |
| <p>Topics: Introduction to electrical safety, Indian standards on electrical safety, Electric hazards, effect of electric current on human body, causes of electrical accidents, prevention of electric accidents, PPE used. Electric shock. Primary and secondary electric shocks, AC and DC current shocks. Safety precautions against shocks. Safety precautions in small and residential building installations. Safety procedures in electric plant.</p>  |                   |            |                 |             |
| <b>Module 5</b>  | Chemical Safety   | Case Study | Data Collection | 07 sessions |
| <p>Topics: Introduction to Chemical safety, Labeling of chemicals, acid hoods. Handling of acids, eye washers and showers. Safety thinking, accident investigation, safety policy of the company, safety, loss prevention and control, check list for LPG installations, safety precautions using CNG, fire prevention and safety audit, confined space entry, risk assessment.</p> <p>Case studies: To visit chemical laboratory of the college and other chemical industries like LPG, CNG facilities and report.</p>  |                   |            |                 |             |
| <p><b>Targeted Application &amp; Tools that can be used:</b><br/> <b>Job profiles like Safety Engineer etc</b></p>   |                   |            |                 |             |

| <b>Course Description</b>  | Students will be able to Understand the fundamentals of various Additive Manufacturing Technologies for application to various industrial needs. Able to convert part file into STL format. Able to understand the method of manufacturing of liquid based, powder based and solid based techniques. Understand the manufacturing procedure of a prototype using FDM technique.   |                |   |   |             |   |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Additive Manufacturing</b> ” and attain <b>EMPLOYABILITY SKILL</b> through Participative learning techniques.  |                |   |   |             |   |
| <b>Course Outcomes</b>   | <b>On successful completion of this course the students shall be able to:</b><br>1] Understand the fundamentals of Manufacturing Processes.<br>2] Understand the classifications of Manufacturing Process and methodologies of manufacturing for industrial applications.<br>3] Understand the fundamentals of Additive Manufacturing and its importance in Industrial Applications.<br>4] Understand the classifications of Additive Manufacturing and methodology of manufacturing the products using various technologies and study their applications, advantages and limitations.<br>5] Understand the methodology to manufacture the products using FDM technologies and study their applications, advantages and case studies. |                |   |   |             |   |
| <b>Course Content:</b>   |   |                |   |   |             |   |
| <b>Module 1</b>  | Introduction to Manufacturing Technology  | Assign ment    | Identify the Major manufacturing Technologies and report the manufacturing capabilities |   | 10 Sessions |   |
| Topics:<br>Introduction to Manufacturing Technology: Introduction, Prototyping fundamentals, Historical development, Advantages of MT, Commonly used terms, process chain, modelling, Classification of Manufacturing process, Applications to various fields.             |   |                |   |   |             |   |
| <b>Module 2</b>  | Manufacturing Processes   | Assign ment    | Literature review   |   | 12 Sessions |   |
| Topics:<br>Manufacturing Processes: Working methodologies of different Manufacturing processes like Casting Process, Machining process, Joining process, Forming process, Machine tools, Cutting tools, Material Specifications, applications, advantages and limitations. |   |                |   |   |             |   |
| <b>Module 3</b>  | Introduction to Additive  | Assign ment    | Identify the Major manufactures in India for 3D   |   | 12 Sessions |   |

|  |   |            |  |             |

| <b>Course Description</b>  | This open elective course aims to provide students with a comprehensive understanding of sustainability principles and their applications in the fields of computer science, mechanical engineering, and electronics. The course explores the challenges and opportunities associated with sustainability, equipping students with the knowledge and skills to develop and implement sustainable technologies and practices in their respective engineering disciplines. Through a combination of theoretical learning, case studies, and hands-on projects, students will gain a multidisciplinary perspective on sustainability and its relevance to the rapidly evolving technological landscape. |                |                                   |   |   |             |
| <b>Course Objective</b>  | The objective of the course is to familiarize the learners with the concepts of “ <b>Sustainable Technologies and Practices</b> ” and attain <b>ENTREPRENEURIAL SKILL</b> through Participative learning techniques  |                |                                   |   |   |             |
| <b>Course Outcomes</b>   | On successful completion of this course the students shall be able to:<br>1. Introduce students to the fundamental concepts and principles of sustainability and their significance in engineering disciplines.<br>2. Familiarize students with the latest sustainable technologies and practices in science and engineering.<br>3. Enable students to analyse the environmental, social, and economic impacts of engineering projects and propose sustainable alternatives.<br>4. Cultivate critical thinking and problem-solving skills to address sustainability challenges in engineering through project-based learning.  |                |                                   |   |   |             |
| <b>Course Content:</b>   |  |                |                                   |   |   |             |
| <b>Module 1</b>  | Introduction to Sustainability   | Assignment     |                                   |   |   | 10 sessions |
| Topics:<br>Definition of sustainability and its relevance to engineering, Global environmental challenges and the role of technology in addressing these, Ethical considerations and the social dimension of sustainability, Life cycle assessment (LCA) methodologies, Carbon footprint analysis and reduction strategies |  |                |                                   |   |   |             |
| <b>Module 2</b>  | Sustainable Computing  | Case Study     | Simulation and data analysis task |   |   | 10 sessions |
| Topics:<br>Green computing and energy-efficient algorithms, Data center optimization and energy management   |  |                |                                   |   |   |             |
| <b>Module 3</b>  | Sustainable Mechanical Engineering   | Assignment     | Simulation and data analysis task |   |   | 10 sessions |
| Topics:  |  |                |                                   |   |   |             |

|   |   |            |                          |             |
|---|---|------------|--------------------------|-------------|
| Renewable energy systems and their integration, Energy-efficient design principles, Sustainable manufacturing processes   |   |            |                          |             |
| <b>Module 4</b>   | Sustainable Electronics engineering               | Assignment | Simulation               | 08 sessions |
| Topics:<br>Energy-efficient electronic devices and components, Energy harvesting and power management, Responsible electronic waste management  |   |            |                          |             |
| <b>Module 5</b>   | Sustainable Project Management                    | Assignment | Simulation/Data Analysis | 07 sessions |
| Topics:<br>Sustainability assessment frameworks and tools, Sustainability project planning and decision making  |   |            |                          |             |
| <b>Targeted Application &amp; Tools that can be used:</b><br>Contemporary issues: One contemporary issue in this course is the growing concern over e-waste management and the need for responsible disposal and recycling of electronic devices. Another issue is the increasing demand for energy-efficient computing systems and the development of green computing strategies to reduce the environmental impact of data centers and algorithms. Professionally Used Software: SimaPro, GaBi, EnergyPlus  |   |            |                          |             |

| <b>Course Description</b>   | This course provides students with an introduction to Industry 4.0, its building blocks, its applications and advantages compared to conventional production techniques. Learners get a deep insight into how intelligent processes, big data, and artificial intelligence can be used to build up the production of the future. Also enabling design principles that support companies in identifying and implementing various Industry 4.0 scenarios and the key technologies for smart factories. The course also discusses the Impact of Industry 4.0 on Society: Impact on Business, Government, People etc & also future framework of Industry 4.0. |            |                                   |             |   |   |   |
| <b>Course Objective</b>   | The objective of the course is to familiarize the learners with the concepts of “ <b>Industry 4.0</b> ” and attain <b>ENTREPRENEURIAL SKILL</b> through Participative learning techniques   |            |                                   |             |   |   |   |
| <b>Course Outcomes</b>  | <b>On successful completion of this course the students shall be able to:</b><br>(1) Understand the basic concepts of Industry 4.0 and scope for Indian Industry<br>(2) Demonstrate conceptual framework and road map of Industry 4.0<br>(3) Apply Industry 4.0 for various fields of application<br>(4) Understand the Impact to Industry 4.0 for various fields of application  |            |                                   |             |   |   |   |
| <b>Course Content:</b>  |   |            |                                   |             |   |   |   |
| <b>Module 1</b>   | Introduction to Industry 4.0  | Assignment | Case Study                        | 12 Sessions |   |   |   |
| Topics:<br>Introduction, History, core idea of Industry 4.0,origin concept of industry 4.0,Industry 4.0 production system, current state of industry 4.0, Technologies of Industry 4.0 – Big Data – Artificial Intelligence (AI) – Industrial Internet of Things - Cyber Security – Cloud – Augmented Reality , How is India preparing for Industry 4.0 |   |            |                                   |             |   |   |   |
| <b>Module 2</b>   | Conceptual Framework for Industry 4.0   | Case Study | Simulation and data analysis task | 10 Sessions |   |   |   |
| Topics:<br>Introduction, Main Concepts and Components of Industry 4.0, The Basic Characteristics of Industry 4.0, General framework, The Industry 4.0 Model Framework   |   |            |                                   |             |   |   |   |
| <b>Module 3</b>   | Applications of Industry 4.0  | Assignment | Data Collection and Analysis      | 10 Sessions |   |   |   |
| Topics:   |   |            |                                   |             |   |   |   |

|   |  |            |            |             |
|---|--|------------|------------|-------------|
| Manufacturing – Healthcare – Education – Aerospace and Defense – Agriculture – Transportation and Logistics.  |  |            |            |             |
| <b>Module 4</b>   | Impact of Industry 4.0                 | Assignment | Case Study | 13 Sessions |
| <p>Topics:</p> <p>Impact of Industry 4.0 on Society: Impact on Business, Government, People. Education 4.0 – Curriculum 4.0 – Faculty 4.0 – Skills required for Future - Framework for aligning Education with Industry 4.0 – Framework for achieving next ten years vision – Challenges</p>  |  |            |            |             |
| <p><b>Targeted Application &amp; Tools that can be used:</b></p> <p>Application Area are wearables (Samsung, Apple), health (GE Healthcare), traffic monitoring (Waze, google maps), fleet management, smart grid and energy saving (PowerGrid), agriculture, hospitality etc.</p> <p>Professionally Used Software: Kinoma, Arduino, Device Hive, Riot etc.</p>   |  |            |            |             |

|---|--|------------------|---|---|---|----|
| <b>Course Code:</b><br><b>MEC7300</b>           | <b>Course Title: Capstone Project</b><br><b>Type of Course: NTCC</b>   | <b>L- T-P- C</b> | - | - | - | 10 |
| <b>Version No.</b>                              | <b>2.0</b>   |                  |   |   |   |    |
| <b>Course Pre-requisites</b>                    | <b>Knowledge and Skills related to all the courses studied in previous semesters.</b>  |                  |   |   |   |    |
| <b>Anti-requisites</b>                          | <b>NIL</b>   |                  |   |   |   |    |
| <b>Course Description</b>                       | Students observe science and technology in action, develop an awareness of the method of scientific experimentation, and often get an opportunity to see, study and operate sophisticated and costly equipment. They also learn about the implementation of the principles of management they have learnt in class, when they observe multidisciplinary teams of experts from engineering, science, economics, operations research, and management deal with techno-economic problems at the micro and macro levels. Finally, it enables them to develop and refine their language, communication and inter-personal skills, both by its very nature, and by the various evaluation components, such as seminar, group discussion, project report preparation, etc. The broad-based core education, strong in mathematics and science and rich in analytical tools, provides the foundation necessary for the student to understand properly the nature of real-life problems. The students have options to pursue this course as either Project Work or Dissertation at the university, or Project Work in an Industry/ Company/ Research Laboratory, or Internship Program in an Industry/Company. |                  |   |   |   |    |
| <b>Course Objectives</b>                        | The objective of the course is to familiarize the learners with the concepts of Professional Practice and attain <b>Employability Skills</b> through <b>Experiential Learning</b> techniques.  |                  |   |   |   |    |
| <b>Course Outcomes</b>                          | On successful completion of this course the students shall be able to:<br>1. Identify the engineering problems related to local, regional, national or global needs.<br>2. Apply appropriate techniques or modern tools for solving the intended problem.<br>3. Design the experiments as per the standards and specifications.<br>4. Interpret the events and results for meaningful conclusions.<br>5. Appraise project findings and communicate effectively through scholarly publications.   |                  |   |   |   |    |
