### **PART A - PROGRAM REGULATIONS**

### 1. Vision & Mission of the University and the School / Department

### 1.1 Vision of the University

To be a Value-driven Global University, excelling beyond peers and creating professionals of integrity and character, having concern and care for society.

### 1.2 Mission of the University

- Commit to be an innovative and inclusive institution by seeking excellence in teaching, research and knowledge-transfer.
- Pursue Research and Development and its dissemination to the community, at large.
- Create, sustain and apply learning in an interdisciplinary environment with consideration for ethical, ecological and economic aspects of nation building.
- Provide knowledge-based technological support and services to the industry in its growth and development.
- To impart globally-applicable skill-sets to students through flexible course offerings and support industry's requirement and inculcate a spirit of new-venture creation.

### 1.3 Vision of Presidency School of Computer Science and Engineering

To be a value-based, practice-driven Presidency School of Computer Science and Engineering, committed to developing globally competent engineers, dedicated to developing cutting-edge technology to enhance the quality of life.

### 1.4 Mission of Presidency School of Computer Science and Engineering

- Cultivate a practice-driven environment with computing-based pedagogy, integrating theory and practice.
- Attract and nurture world-class faculty to excel in teaching and research in the realm of computing sciences.
- Establish state-of-the-art computing facilities for effective teaching and learning experiences.
- Promote interdisciplinary studies to nurture talent for global impact.
- Instill entrepreneurial and leadership skills to address social, environmental and community needs.

### 2. Preamble to the Program Regulations and Curriculum

This is the subset of Academic Regulations and it is to be followed as a requirement for the award of M.Tech degree.

The Curriculum is designed to take into the factors listed in the Choice Based Credit System (CBCS) with focus on Social Project Based Learning, Industrial Training, and Internship to enable the students to become eligible and fully equipped for employment in industries, choose higher studies or entrepreneurship.

In exercise of the powers conferred by and in discharge of duties assigned under the relevant provision(s) of the Act, Statutes and Academic Regulations of the University, the Academic Council hereby makes the following Regulations.

### 3. Short Title and Applicability

- a. These Regulations shall be called the Master of Technology Degree Program Regulations and Curriculum 2023-2025.
- b. These Regulations are subject to, and pursuant to the Academic Regulations.

- c. These Regulations shall be applicable to the ongoing Master of Technology Degree Programs of the 2023-2025 batch, and to all other Master of Technology Degree Programs which may be introduced in future.
- d. These Regulations shall supersede all the earlier Master of Technology Degree Program Regulations and Curriculum, along with all the amendments thereto.
- e. These Regulations shall come into force from the Academic Year 2024-2025.

#### 4. Definitions

In these Regulations, unless the context otherwise requires:

- a. "Academic Calendar" means the schedule of academic and miscellaneous events as approved by the Vice Chancellor;
- b. "Academic Council" means the Academic Council of the University;
- c. "Academic Regulations" means the Academic Regulations, of the University;
- d. "Academic Term" means a Semester or Summer Term;
- e. "Act" means the Presidency University Act, 2013;
- f. "AICTE" means All India Council for Technical Education;
- g. "Basket" means a group of courses bundled together based on the nature/type of the course;
- h. "BOE" means the Board of Examinations of the University;
- i. "BOG" means the Board of Governors of the University;
- j. "BOM" means the Board of Management of the University;
- k. "BOS" means the Board of Studies of a particular Department/Program of Study of the University;
- I. "CGPA" means Cumulative Grade Point Average as defined in the Academic Regulations;
- m. "Clause" means the duly numbered Clause, with Sub-Clauses included, if any, of these Regulations;
- n. "COE" means the Controller of Examinations of the University;
- o. "Course In Charge" means the teacher/faculty member responsible for developing and organising the delivery of the Course;
- p. "Course Instructor" means the teacher/faculty member responsible for teaching and evaluation of a Course;
- q. "Course" means a specific subject usually identified by its Course-code and Course-title, with specified credits and syllabus/course-description, a set of references, taught by some teacher(s)/course-instructor(s) to a specific class (group of students) during a specific Academic Term;
- r. "Curriculum Structure" means the Curriculum governing a specific Degree Program offered by the University, and, includes the set of Baskets of Courses along with minimum credit requirements to be earned under each basket for a degree/degree with specialization/minor/honours in addition to the relevant details of the Courses and Course catalogues (which describes the Course content and other important information about the Course). Any specific requirements for a particular program may be brought into the Curriculum structure of the specific program and relevant approvals should be taken from the BOS and Academic Council at that time.
- s. "DAC" means the Departmental Academic Committee of a concerned Department/Program of Study of the University;
- t. "Dean" means the Dean / Director of the concerned School;
- u. "Degree Program" includes all Degree Programs;

- v. "Department" means the Department offering the degree Program(s) / Course(s) / School offering the concerned Degree Programs / other Administrative Offices;
- w. "Discipline" means specialization or branch of M.Tech. Degree Program;
- x. "HOD" means the Head of the concerned Department;
- y. "L-T-P-C" means Lecture-Tutorial-Practical-Credit refers to the teaching learning periods and the credit associated;
- z. "MOOC" means Massive Open Online Courses;
- aa. "MOU" means the Memorandum of Understanding;
- bb. "NPTEL" means National Program on Technology Enhanced Learning;
- cc. "Parent Department" means the department that offers the Degree Program that a student undergoes;
- dd. "Program Head" means the administrative head of a particular Degree Program/s;
- ee. "Program Regulations" means the Master of Technology Degree Program Regulations and Curriculum, 2023-2025;
- ff. "Program" means the Masterr of Technology (M.Tech.) Degree Program;
- gg. "PSCS" means the Presidency School of of Computer Science and Engineering;
- hh. "Registrar" means the Registrar of the University;
- ii. "School" means a constituent institution of the University established for monitoring, supervising and guiding, teaching, training and research activities in broadly related fields of studies;
- jj. "Section" means the duly numbered Section, with Clauses included in that Section, of these Regulations;
- kk. "SGPA" means the Semester Grade Point Average as defined in the Academic Regulations;
- II. "Statutes" means the Statutes of Presidency University;
- mm. "Sub-Clause" means the duly numbered Sub-Clause of these Program Regulations;
- nn. "Summer Term" means an additional Academic Term conducted during the summer break (typically in June-July) for a duration of about eight (08) calendar weeks, with a minimum of thirty (30) University teaching days;
- oo. "SWAYAM" means Study Webs of Active Learning for Young Aspiring Minds.
- pp. "UGC" means University Grant Commission;
- gg. "University" means Presidency University, Bengaluru; and
- rr. "Vice Chancellor" means the Vice Chancellor of the University.

### 5. Program Description

The Master of Technology Degree Program Regulations and Curriculum 2023-2025 are subject to, and, pursuant to the Academic Regulations. These Program Regulations shall be applicable to the following ongoing Master of Technology (M.Tech.) Degree Programs of 2023-2025 offered by the Presidency School of Engineering (PSOE):

- 1. Master of Technology in Computer Science and Engineering Specialization in Artificial Intelligence.M.Tech. (AIE)
- 2. Master of Technology in Computer Science and Engineering Specialization in Data Science.M.Tech. (DSC)

- 5.1 These Program Regulations shall be applicable to other similar programs, which may be introduced in future.
- 5.2 These Regulations may evolve and get amended or modified or changed through appropriate approvals from the Academic Council, from time to time, and shall be binding on all concerned.
- 5.3 The effect of periodic amendments or changes in the Program Regulations, on the students admitted in earlier years, shall be dealt with appropriately and carefully, so as to ensure that those students are not subjected to any unfair situation whatsoever, although they are required to conform to these revised Program Regulations, without any undue favour or considerations

### 6. Minimum and Maximum Duration

- 6.1 Master of Technology Degree Program is a Two-Year, Full-Time Semester based program. The minimum duration of the M.Tech. Program is four (02) years and each year comprises of two academic Semesters (Odd and Even Semesters) and hence the duration of the M.Tech. program is four (04) Semesters.
- 6.2 A student who for whatever reason is not able to complete the Program within the normal period or the minimum duration (number of years) prescribed for the Program, may be allowed a period of two years beyond the normal period to complete the mandatory minimum credits requirement as prescribed by the concerned Program Regulations and Curriculum. In general, the permissible maximum duration (number of years) for completion of Program is 'N' + 2 years, where 'N' stands for the normal or minimum duration (number of years) for completion of the concerned Program as prescribed by the concerned Program Regulations and Curriculum.
- 6.3 The time taken by the student to improve Grades/CGPA, and in case of temporary withdrawal/re-joining (Refer to Clause 16.1 of Academic Regulations), shall be counted in the permissible maximum duration for completion of a Program.
- 6.4 In exceptional circumstances, such as temporary withdrawal for medical exigencies where there is a prolonged hospitalization and/or treatment, as certified through hospital/medical records, women students requiring extended maternity break (certified by registered medical practitioner), and, outstanding sportspersons representing the University/State/India requiring extended time to participate in National/International sports events, a further extension of one (01) year may be granted on the approval of the Academic Council.
- 6.5 The enrolment of the student who fails to complete the mandatory requirements for the award of the concerned Degree (refer Section 19.0 of Academic Regulations) in the prescribed maximum duration (Sub-Clauses 18.1 and 18.2 of Academic Regulations), shall stand terminated and no Degree shall be awarded.

### 7 Programme Educational Objectives (PEO)

After four years of successful completion of the program, the graduates shall be:

PEO 01: To prepare graduates who will be successful professionals in industry, government, academia, research, entrepreneurial pursuit and consulting firms.

- PEO 02: To prepare graduates who will contribute to society as broadly educated, expressive, ethical and responsible citizens with proven expertise.
- PEO 03: To prepare graduates who will achieve peer recognition as individuals or in a team through demonstration of good analytical, research, design and implementation skills.
- PEO 04: To prepare graduates who will thrive to pursue life-long reflective learning to fulfil their goals.

### 8 Programme Outcomes (PO) and Programme Specific Outcomes (PSO)

### 8.1 Programme Outcomes (PO)

On successful completion of the Program, the students shall be able to:

PO1:An ability to analysis, manage and supervise engineering systems and processes with the aid of appropriate advanced tools.

PO2:An ability to design a system and process within constraints of health, safety, security, economics, manufacturability to meet desired needs.

PO3:An ability to carry out research in the respective discipline and publish the findings.

PO4:An ability to effectively communicate and transfer the knowledge/ skill to stakeholders.

PO5:An ability to realize the impact of engineering solutions in a contemporary, global, economical, environmental, and societal context for sustainable development.

### 8.2 Program Specific Outcomes (PSOs):

On successful completion of the Program, the students shall be able to:

#### **PSO 1:**

Apply foundational and advanced data science methodologies to analyze, model, and extract meaningful insights from complex and large-scale datasets for solving real-world problems across multiple domains.

### **PSO 2:**

Demonstrate proficiency in designing and deploying scalable, data-driven systems using appropriate tools, technologies, and platforms to support informed decision-making and innovation.

### **PSO 3:**

Exhibit ethical and responsible data handling practices while ensuring data privacy, transparency, and fairness in analytics and machine learning applications for societal and industrial impact.

### 9 Admission Criteria (as per the concerned Statutory Body)

The University admissions shall be open to all persons irrespective of caste, class, creed, gender or nation. All admissions shall be made on the basis of merit in the qualifying examinations; provided that forty percent of the admissions in all Programs of the University shall be reserved for the students of Karnataka State and admissions shall be made through a Common Entrance Examination conducted by the State Government or its agency and seats shall be allotted as per the merit and reservation policy of the State

Government from time to time. The admission criteria to the M.Tech. Program is listed in the following Sub-Clauses:

- ➤ Have a Bachelor's degree in engineering (B.E./B.Tech) from a recognized university.
- ➤ Have a minimum aggregate of 50% in your Bachelor's degree.
- ➤ Have a minimum aggregate of 45% in your Bachelor's degree if you belong to a reserved category.
- Have to submit score card from any state or central entrance exam or the Presidency University admission qualifying exam
- 10. Specific Regulations regarding Assessment and Evaluation (including the Assessment Details of NTCC Courses, Weightages of Continuous Assessment and End Term Examination for various Course Categories)
  - **10.1** The academic performance evaluation of a student in a Course shall be according to the University Letter Grading System based on the class performance distribution in the Course.
  - 10.2 Academic performance evaluation of every registered student in every Course registered by the student is carried out through various components of Assessments spread across the Semester. The nature of components of Continuous Assessments and the weightage given to each component of Continuous Assessments (refer Clause 8.8 of academic regulations) shall be clearly defined in the Course Plan for every Course, and approved by the DAC.
    - **10.3** Format of the End-Term examination shall be specified in the Course Plan.
    - **10.4** Grading is the process of rewarding the students for their overall performance in each Course. The University follows the system of Relative Grading with statistical approach to classify the students based on the relative performance of the students registered in the concerned Course except in the following cases:
      - Non-Teaching Credit Courses (NTCC)

Absolute grading method may be adopted, where necessary with prior approval of concerned DAC.

Grading shall be done at the end of the Academic Term by considering the aggregate performance of the student in all components of Assessments prescribed for the Course. Letter Grades shall be awarded to a student based on her/his overall performance relative to the class performance distribution in the concerned Course. These Letter Grades not only indicate a qualitative assessment of the student's performance but also carry a quantitative (numeric) equivalent called the Grade Point.

### 10.5 Assessment Components and Weightage

| Table 1: Assessment Components and Weightage for different category |             |           |  |  |  |
|---|-------------|-----------|--|--|--|
| of Courses  |             |           |  |  |  |
| Nature of Course and Structure                                      | Evaluation  | Weightage |  |  |  |
| Nature of Course and Structure                                      | Component   |           |  |  |  |
| Lecture-based Course  | Continuous  | 50%       |  |  |  |
| Lecture-based Course  | Assessments | 30%       |  |  |  |

| L component in the L-T-P Structure is predominant (more than 1) (Examples: 3-0-0; 3-0-2; 2-1-0; 2-0-2, 2-0-4 etc.)   | End Term<br>Examination  | 50%   |
|--|--|---|
| Lab/Practice-based Course P component in the L-T-P Structure is  | Continuous<br>Assessments  | 50%   |
| predominant  | End Term   | 50%   |
| (Examples: 0-0-4; 1-0-4; 1-0-2; etc.)  | Examination  | 30 70   |
| Skill based Courses like Industry Internship, Capstone project, Research Dissertation, Integrative Studio, Interdisciplinary Project, Summer / Short Internship, Social Engagement / Field Projects, Portfolio, and such similar Non- Teaching Credit Courses, where the pedagogy does not lend itself to a typical L- T-P structure | Guidelines for the a components for the types of Courses, w recommended weig be specified in the corogram Regulation Curriculum / Course applicable. | various<br>ith<br>htages, shall<br>concerned<br>s and |

The exact weightages of Evaluation Components shall be clearly specified in the concerned PRC and respective Course Plan.

Normally, for Practice/Skill based Courses, without a defined credit structure (L-P-C) [NTCC], but with assigned Credits (as defined in Clause 5.2 of the Academic Regulations), the method of evaluation shall be based only on Continuous Assessments. The various components of Continuous Assessments, the distribution of weightage among such components, and the method of evaluation/assessment, shall be as decided and indicated in the Course Plan/PRC. The same shall be approved by the respective DAC.

#### 10.6 Minimum Performance Criteria:

### 10.6.1 Theory only Course and Lab/Practice Embedded Theory Course

A student shall satisfy the following minimum performance criteria to be eligible to earn the credits towards the concerned Course:

- a. A student must obtain a minimum of 30% of the total marks/weightage assigned to the End Term Examinations in the concerned Course.
- b. The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of the components of Continuous Assessments, Mid Term Examinations and End Term Examinations in the concerned Course.

### 10.6.2 Lab/Practice only Course and Project Based Courses

The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of all assessment components in the concerned Course.

above in a Course shall be declared as "Fail" and given "F" Grade in the concerned Course. For theory Courses, the student shall have to reappear in the "Make-Up Examinations" as scheduled by the University in any subsequent semester, or, re-appear in the End Term Examinations of the same Course when it is scheduled at the end of the following Semester or Summer Term, if offered. The marks obtained in the Continuous Assessments (other than the End Term Examination) shall be carried forward and be included in computing the final grade, if the student secures the minimum requirements (as per sub-clause 8.9.1 and 8.9.2 of academic regulations) in the "Make-Up Examinations" of the concerned Course. Further, the student has an option to re-register for the Course and clear the same in the summer term/ subsequent semester if he/she wishes to do so, provided the Course is offered.

### 11 Additional clarifications - Rules and Guidelines for Transfer of Credits from MOOC, etc. - Note: These are covered in Academic Regulations

The University allows students to acquire credits from other Indian or foreign institutions and/or Massive Open Online Course (MOOC) platforms, subject to prior approval. These credits may be transferred and counted toward fulfilling the minimum credit requirements for the award of a degree. The process of transfer of credits is governed by the following rules and guidelines:

- **11.1** The transfer of credits shall be examined and recommended by the Equivalence Committee (Refer ANNEXURE B of academic regulations) and approved by the Dean Academics.
- **11.2** Students may earn credits from other Indian or foreign Universities/Institutions with which the University has an MOU, and that MOU shall have specific provisions, rules and guidelines for transfer of credits. These transferred credits shall be counted towards the minimum credit requirements for the award of the degree.
- 11.3 Students may earn credits by registering for Online Courses offered by Study Web of Active Learning by Young and Aspiring Minds (SWAYAM) and National Program on Technology Enhanced Learning (NPTEL), or other such recognized Bodies/ Universities/Institutions as approved by the concerned BOS and Academic Council from time to time. The concerned School/Parent Department shall publish/include the approved list of Courses and the rules and guidelines governing such transfer of credits of the concerned Program from time to time. The Rules and Guidelines for the transfer of credits specifically from the Online Courses conducted by SWAYAM/ NPTEL/ other approved MOOCs are as stated in the following Sub-Clauses:
  - 11.3.1 A student may complete SWAYAM/NPTEL/other approved MOOCs as mentioned in Clause 11.3 (as per academic regulations) and transfer equivalent credits to partially or fully complete the mandatory credit requirements of Discipline Elective Courses and/or the mandatory credit requirements of Open Elective Courses as prescribed in the concerned Curriculum Structure. However, it is the sole responsibility of the student to complete the mandatory credit requirements of the Discipline Elective

- Courses and the Open Elective Courses as prescribed by the Curriculum Structure of the concerned Program.
- **11.3.2** SWAYAM/NPTEL/ other approved MOOCs as mentioned in Clause 11.3 (as per academic regulations) shall be approved by the concerned Board of Studies and placed (as Annexures) in the concerned PRC.
- **11.3.3** Parent Departments may release a list of SWAYAM/NPTEL/other approved MOOCs for Pre-Registration as per schedule in the Academic Calendar or through University Notification to this effect.
- **11.3.4** Students may Pre-Register for the SWAYAM/NPTEL/other approved MOOCs in the respective Departments and register for the same Courses as per the schedule announced by respective Online Course Offering body/institute/ university.
- **11.3.5** A student shall request for transfer of credits only from such approved Courses as mentioned in Sub-Clause 11.3.2 above.
- **11.3.6** SWAYAM/NPTEL/other approved MOOCs Courses are considered for transfer of credits only if the concerned student has successfully completed the SWAYAM/NPTEL/other approved MOOCs and obtained a certificate of successful/satisfactory completion.
- 11.3.7 A student who has successfully completed the approved SWAYAM/NPTEL/ other approved MOOCs and wants to avail the provision of transfer of equivalent credits, must submit the original Certificate of Completion, or such similar authorized documents to the HOD concerned, with a written request for the transfer of the equivalent credits. On verification of the Certificates/Documents and approval by the HOD concerned, the Course(s) and equivalent Credits shall forwarded to the COE for processing of results of the concerned Academic Term.
- 11.3.8 The credit equivalence of the SWAYAM/NPTEL/other approved MOOCs are based on Course durations and/or as recommended by the Course offering body/institute/university. The Credit Equivalence mapped to SWAYAM/ NPTEL approved Courses based on Course durations for transfer of credits is summarised in Table shown below. The Grade will be calculated from the marks received by the Absolute Grading Table 8.11 in the academic regulations.

| Table 2: Durations and Credit Equivalence for Transfer of Credits from SWAYAM-NPTEL/ other approved MOOC Courses |          |           |  |  |  |  |  |
|--|----------|-----------|--|--|--|--|--|
| SI. No.  Course Duration Credit Equivalence  |          |           |  |  |  |  |  |
| 1  | 4 Weeks  | 1 Credit  |  |  |  |  |  |
| 2  | 8 Weeks  | 2 Credits |  |  |  |  |  |
| 3  | 12 Weeks | 3 Credits |  |  |  |  |  |

- 11.3.9 The maximum permissible number of credits that a student may request for credit transfer from MOOCs shall not exceed 20% of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree.
- **11.3.10** The University shall not reimburse any fees/expense; a student may incur for the SWAYAM/NPTEL/other approved MOOCs.
- 11.4 The maximum number of credits that can be transferred by a student shall be limited to forty percent (40%) of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree. However, the grades obtained in the Courses transferred from other Institutions/MOOCs, as mentioned in this Section (11.0), shall not be included in the calculation of the CGPA.

#### **PART B: PROGRAM STRUCTURE**

### 12.0 Structure / Component with Credit Requirements Course Baskets & Minimum Basket wise Credit Requirements

The M.Tech. CSE Specialization in (Data Science) Program Structure (2023-2025) totalling 68credits. Table 3 summarizes the type of baskets, number of courses under each basket and the associated credits that are mandatorily required for the completion of the Degree.

| Table | Table 3: Summary of mandatory courses and minimum credit contribution from various baskets |                        |  |  |  |  |  |  |
|-------|--|------------------------|--|--|--|--|--|--|
| S.No  | Baskets  | Credit<br>Contribution |  |  |  |  |  |  |
| 1     | SCHOOL CORE  | 32                     |  |  |  |  |  |  |
| 2     | PROGRAM CORE   | 15                     |  |  |  |  |  |  |
| 3     | DISCIPLINE ELECTIVE  | 15                     |  |  |  |  |  |  |
| 4     | OPEN ELECTIVE  | 06                     |  |  |  |  |  |  |
|       | TOTAL CREDITS  | Min. 68                |  |  |  |  |  |  |

In the entire Program, the practical and skill based course component contribute to an extent of approximately 61% out of the total credits of 68 for M.Tech. (Product Design and Development) program of twoyears' duration.

### 13. Minimum Total Credit Requirements of Award of Degree

As per the AICTE guidelines, a minimum of 68 credits is required for the award of a M.Tech. degree.

### 14. Other Specific Requirements for Award of Degree, if any, as prescribed by the Statutory Bodies,

- 14.1 The award of the Degree shall be recommended by the Board of Examinations and approved by the Academic Council and Board of Management of the University.
- 14.2 A student shall be declared to be eligible for the award of the concerned Degree if she/he:
  - a. Fulfilled the Minimum Credit Requirements and the Minimum Credits requirements under various baskets;
  - b. Secure a minimum CGPA of 5.0 in the concerned Program at the end of the Semester/Academic Term in which she/he completes all the requirements for the award of the Degree as specified in Sub-clause 19.2.1 a of Academic Regulations;
  - c. No dues to the University, Departments, Hostels, Library, and any other such Centers/ Departments of the University; and
  - d. No disciplinary action is pending against her/him.

### 16.Practical / Skill based Courses – Internships / Thesis / Dissertation / Capstone Project Work / Portfolio / Mini project

Practical / Skill based Courses like internship, project work, capstone project, research project / dissertation, and such similar courses, where the pedagogy does not lend itself to a typical L-T-P-C Structure as defined in Clause 5.1 of the Academic Regulations are simply assigned the number of Credits based on the quantum of work / effort required to fulfill the learning objectives and outcomes prescribed for the concerned Courses. Such courses are referred to as Non-Teaching Credit Courses (NTCC). These Courses are designed to provide students with hands-on experience and skills essential for their professional development. These courses aim to equip students with abilities in problem identification, root cause analysis, problem-solving, innovation, and design thinking through industry exposure and project-based learning. The expected outcomes are first level proficiency in problem solving and design thinking skills to better equip M.Tech. graduates for their professional careers. The method of evaluation and grading for the Practical / Skill based Courses shall be prescribed and approved by the concerned Departmental Academic Committee (refer Annexure A of the Academic Regulations). The same shall be prescribed in the Course Handout.

### 16.1 Internship

A student may undergo an Internship for a period of 12-14 weeks in an industry / company or academic / research institution during  $3^{rd}$  and  $4^{th}$  Semesters, subject to the following conditions:

- **16.1.1** The Internship shall be in conducted in accordance with the Internship Policy prescribed by the University from time to time.
- 16.1.2 The selection criteria (minimum CGPA, pass in all Courses as on date, and any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Internship to a student;
- **16.1.3** The number of Internships available for the concerned Academic Term. Further, the available number of internships shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution providing the Internship, as stated in Sub-Clause 16.1.2 above.
- 16.1.4 A student may opt for Internship in an Industry / Company or academic / research institution of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the Internship on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Internship confirms to the University that the Internship shall be conducted in accordance with the Program Regulations and Internship Policy of the University.
- **16.1.5** A student selected for an Internship in an industry / company or academic /

research institution shall adhere to all the rules and guidelines prescribed in the Internship Policy of the University.

### 16.2 Project Work

A student may opt to do a Project Work for a period of 12-15 weeks in an Industry / Company or academic / research institution or the University Department(s) as an equivalence of Internship during the  $3^{rd}$  and  $4^{th}$  Semester as applicable, subject to the following conditions:

- **16.2.1** The Project Work shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.
- 16.2.2 The student may do the project work in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 16.2.1). Provided further, that the Industry / Company or academic / research institution offering such project work confirms to the University that the project work will be conducted in accordance with the Program Regulations and requirements of the University.

### 16.3 Capstone Project

A student may undergo a Capstone Project for a period of 12-14 weeks in an industry / company or academic / research institution in the 4th Semester as applicable, subject to the following conditions:

- **16.3.1** The Capstone Project shall be in conducted in accordance with the Capstone Project Policy prescribed by the University from time to time.
- 16.3.2 The selection criteria (minimum CGPA, pass in all Courses as on date, and any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Capstone Project to a student;
- **16.3.3** The number of Capstone Project available for the concerned Academic Term. Further, the available number of Capstone Project shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution providing the Capstone Project, as stated in Sub-Clause 16.3.2 above.
- 16.3.4 A student may opt for Capstone Project in an Industry / Company or academic / research institution of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the I Capstone Project on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Capstone Project confirms to the University that the Capstone Project shall be conducted in accordance with the Program Regulations and Capstone project Policy of the University.

**16.3.5** A student selected for a Capstone Project in an industry / company or academic / research institution shall adhere to all the rules and guidelines prescribed in the Capstone Project Policy of the University.

### 16.4 Research Project / Dissertation

A student may opt to do a Research Project / Dissertation for a period of 12-14 weeks in an Industry / Company or academic / research institution or the University Department(s) as an equivalence of Capstone Project, subject to the following conditions:

**16.4.1** The Research Project / Dissertation shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.

The student may do the Research Project / Dissertation in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 18.4.1). Provided further, that the Industry / Company or academic / research institution offering such Research Project / Dissertation confirms to the University that the Research Project / Dissertation work will be conducted in accordance with the Program Regulations and requirements of the University.

### I. Course Catalogues:

Each course shall have a course catalogue with the following details:

- i) Pre –Requisites of the course
- ii) Course Description
- iii) Course Outcome
- iv) Course Content
- iv) Reference Resources.

The Course Catalogues for the Courses offered in each basket are attached below:

| Course Code:<br>CSE 5006           | Course Title: KNOWLEDGE ENGINEERING AND EXPERT SYSTEM Type of Course: Program Core Theory Only  L- T- P- C 3 0 0 3   |  |  |  |  |  |  |  |
|------------------------------------|--|--|--|--|--|--|--|--|
| Version No. Course Pre- requisites | 2.0  |  |  |  |  |  |  |  |
| Anti-requisites                    | NIL NIL  |  |  |  |  |  |  |  |
| Course<br>Description              | Knowledge engineering is a field within artificial intelligence that develops knowledge-based systems. Such systems are computer programs that contain large amounts of knowledge, rules and reasoning mechanisms to provide solutions to real-world problems. A major form of knowledge-based system is an expert system, one designed to emulate the reasoning processes of an expert practitioner.  Topics includes: Introduction to Knowledge Engineering, Knowledge based Systems, Types of Knowledge-based systems, Knowledge acquisition, Knowledge representation and reasoning: Logic rules and representations, Semantic Networks, frames, Life cycle Methodologies, Uncertain Reasoning with confidence factor, Basic Structure and Architecture of Expert System. Tools used in Expert System. |  |  |  |  |  |  |  |
| Course<br>Objective                | The objective of the course is to familiarize the learners with the concepts of Knowledge Engineering and Expert Systems and attain Skill Development through Participative Learning techniques.   |  |  |  |  |  |  |  |
| Course<br>Outcomes                 | On successful completion of the course the students shall be able to: CO1.Explain the basic concepts in Knowledge Engineering and types of Knowledge based system. CO2.Discuss the process of acquiring the Knowledge from the human expert. CO3.Apply the logical rules, Semantic Networks and Frames for representing the knowledge. CO4.Life Cycle and Methodologies applied to support the development of Knowledge based Systems. CO5.Explain how expert system deal with uncertainty and describes architecture and tools used.  |  |  |  |  |  |  |  |
| Course Content:                    |  |  |  |  |  |  |  |  |
| Module 1                           | Introduction to Knowledge Engineering and Knowledge Base  Analysis  10 Sessions  |  |  |  |  |  |  |  |

Topics: Data, Information and Knowledge Skills of a Knowledge Engineering, Engineering, software engineering and knowledge engineering, Knowledge Engineering around the world. Introduction to Knowledge-Based Systems. Knowledge Module 2 Assignment Analysis, Data Collection **5 Sessions** Acquisition Topics: Knowledge Engineering life cycle, , Knowledge acquisition - knowledge acquired from a human expert - purpose and types of Interviews in obtaining knowledge. Knowledge Module 3 Representation and Problem-Solving Data analysis task 9 Sessions Reasoning Topics: Using knowledge - Logic, rules and representation- Developing rule-based systems, Conceptual Networks. Life Cycle and Assignment 9 Sessions **Module 4** Analysis Methodologies Topics: Need for methodologies- Blackboard architectures- Problem Solving Methods (PSMs)-GEMINI, POLITE, - The Hybrid Methodology (HyM)- Building a well-structured application using Aion BRE. Uncertain Reasoning Assignment Module 5 Analysis 10 Sessions and Expert System Topics: Uncertainty – Confidence factor- Expert System – Basic Structure, Architecture – Tools used Constructing Expert System, Rule-based system. Targeted Applications & Tools that can be used: After Completion of the course, student may get an opportunity to be a Knowledge engineer to design and develop Knowledge base with reference to Acquisition and to represent it. Expert System can be developed on real time application (To highlight a few) Medical Knowledge Automation, Chemical and Biological Synthesis, Mineral and Oil explorations, Planning and Scheduling. Space Defense, VLSI Design, Air traffic control, Equipment fault Diagnosis. Circuit Diagnosis and So on. Tools: Programming tools for building Expert System. OPS 5 **EMYCIN** KAS **TEIRESIAS** Project work/Assignment: Case Study Analysis: To Study, analyze and develop expert system on applications. Term Assignments:

- Comparative analysis on methods in Knowledge representations.
- A short survey on techniques used to build Knowledge base.
- Recent trends used in developing Expert System.

### **Text Book**

- T1. "An introduction to knowledge engineering", Simon Kendal, Malcolm creen, Springer, 2007.(with Recent version copyright)
- T2. "An Overview of Expert System " William B. Gevarter,Dept. of Commerce,U.S , NBS, Washignton,D.C.

**Topics relevant to "SKILL DEVELOPMENT"**: Converting from English to Predicate Logic, and logically prove statements using inference rules like first-order resolution, Uncertain Reasoning and Expert Systems for skill development through participative learning techniques. This is attained through the assessment components mentioned in the course handout.

| Course<br>Description  |                    | advanced branch of Machine Learning involved in the development and application of Artificial Neural Networks that function by simulating the working principle of human brain. Deep learning algorithms extract layered high-level representations of data in a way that maximizes performance on a given task. The course includes theory and lab components which emphasizes on understanding the implementation and application of deep neural networks in various prominent problem domains like speech recognition, sentiment analysis, recommendations, and computer vision etc. The course facilitates the students to interpret and appreciate the successful application of deep neural nets in various prediction and classification tasks of ML.  The objective of the course is to familiarize the learners with the concepts of  |  |   |                                      |                               |                                      |       |  |  |

### Topics:

Basics of Deep unsupervised learning, Auto encoders, Recommender systems, computer vision

### List of Laboratory Tasks:

Experiment No. 1: Programming assignment to implement a single layer feed forward neural network from scratch (Application: A basic neural network).

**Level 1:** Programming scenario to implement a basic single layer feed-forward neural network perceptron.

**Level 2:** Programming scenario to implement a basic single layer feed-forward neural network with a single hidden layer having ReLU activation function and sigmoid in the output layer.

**Experiment No. 2:** Programming assignment to build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets.

Level 1: Programming scenario to use the Backpropagation algorithm to build an ANN and run it on a dataset for few epochs.

Level 2: Programming scenario to use the Backpropagation algorithm to build an ANN and run it on a dataset for few epochs and interpret the accuracy, loss and other evaluation parameters.

Experiment No. 3: Programming assignment to build a multiple layer neural network with specific model parameters and hyperparameters on a given real life dataset.

Level 1: Programming assignment to implement a MLP with

- o possibility to use 2-4 layers
- o ReLU for the hidden layer
- o Sigmoid in the output layer
- o optimization via gradient descent (GD)

Level 2: Programming assignment to implement the neural network and add some more hyperparameters in the perceptron model

- o softmax output layer
- o optimization via stochastic gradient descent (SGD)
- o Gradient checking code (!!!)

Generate the confusion matrix

Experiment No. 4: Programming assignment to implement classification of linearly separable Data with a Deep neural network (Application: Binary classification).

**Level 1:** Programming scenarios to build a binary classifier with a deep ANN.

Level 2: Programming scenarios to build a binary classifier with a deep ANN

- Weight initialization with random noise (!!!) (use normal distribution with changing std. deviation for now)
- o implement dropout, *l*2 regularization
- o implement a different optimization scheme (RPROP, RMSPROP, ADAGRAD)
- o employ batch normalization

Experiment No. 5: Programming assignment to implement a basic Convolution Neural Network.

**Level 1:** Programming scenarios which use the concept of convolution and pooling to implement a CNN.

**Level 2:** Programming scenarios which use the concept of convolution and pooling to implement a CNN and also specify some parameters like number of filters, length of feature detector, stride etc.

**Experiment No. 6:** Programming assignment to perform image segmentation and object detection using CNNs.

**Level 1**: Programming assignment to instantiate a CNN (that uses FullyConnectedLayers) and train the neural network using the training data from MNIST data set.

**Level 2**: Programming assignment to instantiate a CNN (that uses FullyConnectedLayers) and train the neural network using the training data from MNIST data set. Choose appropriate hyper parameters for the training of the neural network. Plot the cost versus training iterations using different mini-batch sizes: 16; 64; 256; 1024. Record the test accuracy in percentage and total training time you spent in seconds. Implement Adam Optimizer. To obtain full marks, the network should be able to achieve a test accuracy of 90% or more across many different random seeds.

Experiment No. 7: Programming assignment to employ CNN in image classification from given dataset.

**Level 1**: Programming scenario to instantiate a CNN (with at least one convolutional layer) and train the neural network using the training data from CIFAR10 data. Choose appropriate hyperparameters for the training of the neural network. The network should be able to achieve a test accuracy of at least 50% within 10 training epochs.

**Level 2:** Programming scenario to build a CNN (with more than one convolutional layer) and train the neural network using the training data from CIFAR10 data. Choose appropriate hyperparameters for the training of the neural network. The network should be able to achieve a test accuracy of at least 50% within 10 training epochs. Continue to train further and examine training and testing performance. Report hyperparameters (learning rate, number of hidden layers, number of nodes in each hidden layer, batch size and number of epochs) of the Deep Neural Network. Also, explain the observations.

Experiment No. 8: Programming assignment to perform Sentence (text) Classification using Convolutional Neural Networks.

**Level 1:** Programming Scenarios to utilize CNN to categorize text data in given datasets like SST movie reviews.

**Level 2:** Programming Scenarios to utilize CNN to categorize text data in given datasets like SST and MR movie reviews.

Experiment No. 9: Programming assignment to apply Recurrent Neural Networks for sentiment analysis of text data.

**Level 1:** Programming scenario to build a model to perform sentiment analysis of IMDB movie reviews using. Reviews are categorized into two polarities: positive and negative.

**Level 2:** Programming scenario to build a model to perform sentiment analysis of IMDB movie reviews. Reviews are categorized into three polarities: positive, negative and neutral.

Experiment No. 10: Programming assignment to create a generative model for text, characterby-character using Recurrent neural networks.

**Level 1:** Programming scenario to implement a multi-layer Recurrent Neural Network like LSTM for training/sampling from character-level language models, which takes one text file as input and trains an RNN that learns to predict the next character in a sequence. The RNN can then be used to generate text character by character that will look like the original training data.

Level 2: Programming scenario to implement a multi-layer Recurrent Neural Network utilizing both LSTM and GRU in turns for training/sampling from character-level language models, which takes one text file as input and trains an RNN that learns to predict the next character in a sequence. The RNN can then be used to generate text character by character that will look like the original training data. Train the model and use it to generate new text.

Experiment No. 11: Programming assignment to implement RNN models for multivariate time series forecasting.

Level 1: Programming scenario to implement a many-to-one Recurrent Neural Network for Stock Price forecasting, i.e. trained with a certain number of day's data, the model should predict the stock price of the next day.

Level 2: Programming scenario to implement a many-to-one Recurrent Neural Network for Stock Price forecasting, i.e. trained with a certain number of day's data, the model should predict the stock price of the next day. Students are free to use RNN, GRU, or LSTM (or compare between) and any number of layers and architecture. In the testing, plot the ground truth and your predicted values for 100 days.

**Experiment No. 12:** Programming assignment to implement Autoencoders and deep Boltzmann's machines.

**Level 1:** Programming scenario to implement a basic recommender system using deep Boltzmann's machines.

**Level 2:** Programming scenario to build a recommender system with Collaborative filtering algorithm using deep Boltzmann's machines,

### Targeted Application & Tools that can be used:

Targeted employment sector is not restricted to any single domain. Today, ML and Dl have been employed for data analysis and improved business intelligence in every sector. Targeted

job profiles include Data Analyst, Data Scientist, Data Engineer, Neuroinformatician, Bioinformatician, Image Recognition, Research Analyst, Full Stack Developer for Deep Learning, Natural Language Process Engineer, Business Analyst etc. Few of the top recruiters are Amazon, NVIDIA. Microsoft, IBM, Accenture, Facebook, Intel, Samsung, Lenovo, Adobe etc., among numerous others.

**Tools**: Neural Designer, AutoML, AutoDL, Keras, TensorFlow, Torch, Google Colaboratory, Spider, Jupiter Notebook

**Project work/Assignment:** 

Throughout the progression in each module, students will have to submit scenario based programming Assignments/Experiments as listed in "List of Lab Tasks". On completion of each module, students will be asked to develop a Mini Project, similar to the following:

### • Music genre classification system

This is one of the interesting deep learning project ideas. This is an excellent project to nurture and improve one's deep learning skills. The aim is to create a deep learning model that uses neural networks to classify the genre of music automatically. For this project, students will use an FMA (Free Music Archive) dataset. FMA is an interactive library comprising high-quality and legal audio downloads. It is an open-source and easily accessible dataset.

However, it is noteworthy that before one can use the model to classify audio files by genre, he/she will have to extract the relevant information from the audio samples (like spectrograms, MFCC, etc.)

### • Image Caption generator

This is one of the trending deep learning project ideas. This is a Python-based deep learning project that leverages Convolutional Neural Networks and LTSM (a type of Recurrent Neural Network) to build a deep learning model that can generate captions for an image. An Image caption generator combines both computer vision and natural language processing techniques to analyze and identify the context of an image and describe them accordingly in natural human languages (for example, English, Spanish, Danish, etc.). This project will strengthen one's knowledge of CNN and LSTM, and one will learn how to implement them in real-world applications as this.

### Visual tracking system

A visual tracking system is designed to track and locate moving object(s) in a given time frame via a camera. It is a handy tool that has numerous applications such as security and surveillance, medical imaging, augmented reality, traffic control, video editing and communication, and human-computer interaction. This system uses a deep learning algorithm to analyze sequential video frames, after which it tracks the movement of target objects between the frames. The two core components of this visual tracking system are Target representation and localization

### • Traffic Signal Classification

The traffic sign classification project is useful for all autonomous vehicles. Machines are able to identify traffic signs from the image. Students can use the GTSRB dataset that contains 43 different traffic sign classes. This is a good project to understand image classification.

### • Driver Drowsiness Detection

The driver drowsiness detection is a project which can detect whether a person is sleeping or not while driving. We can implement a model for drivers and it can also prevent accidents from happening.

### • Autocolouring old Black and white images

The idea of this project is to make a model that is capable of colorizing old black and

white

images to colorful images. Digital artists take a few hours to color the image but now with

Deep Learning, it is possible to color an image within seconds.

| Course<br>Description     |   | The Course consists of two parts where first Part covers advanced analytics that covers topics necessary to give businesses greater insight into their data than they could ordinarily, and the Second Part covers data visualization concepts. Primary concepts include machine learning, data mining, predictive analytics, location analytics, big data analytics, and location intelligence. Visualization for Time series, Geolocated data, Correlations, connections, Hierarchies, networks, and interactivity. |                      |  |                                    |                        |                     |                   |        |         |       |
| Course<br>Objective       | The objective of the course is to familiarize the learners with the concepts of <b>Data</b> Analytics and Visualization and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING techniques |   |                      |  |                                    |                        |                     |                   |        |         |       |

**Level 1:** Visualization techniques for Trees, Graphs, Networks

### **Experiment No. 8: Advanced Visualization Tools**

**Level 1:** Design effective Visualizations for the given scenario

Level 2: Implement Visualizing of Geospatial Data and Document Visualization

### **Experiment No. 9:** Analyze Visualization Systems

## **Level 1:** Analyze Visualization Systems

## Targeted Application & Tools that can be used:

Data visualization is the graphical representation of information and data. By using visual elements like charts, graphs, and maps, data visualization tools provide an accessible way to see and understand trends, outliers, and patterns in data. In the world of Big Data, data visualization tools and technologies are essential to analyze massive amounts of information and make data-driven decisions.

#### Tools:

- 1. R Programming
- 2. Python
- 3. Tableau
- 4. SAS
- 5. Excel
- 6. RapidMiner
- 7. IBM Cognos Analytics
- 8. Microsoft Power BI

#### Project work:

After completion of each module a Data analysis or programming based Assignment/Assessment will be conducted.

# Mini Project:

Perform exploratory data analysis on a given dataset and provide insights on the same.

- 1. Crunchbase Find business information about private and public companies. You can look up how many investments they had, who the founding members are, and if they had any mergers or acquisitions.
- **2. Glassdoor Research** Glassdoor offers data related to employment. You can, for example, figure out how much you can save by retaining employees.
- 3. Open Corporates Open Corporates is the largest open database of companies and company data in the world. Used by banks and governments, they pride themselves on having the most accurate data.
- 4. FBI Uniform Crime Reporting The Uniform Crime Reporting compiles statistical crime reports, publications, and data points from thousands of cities, universities, states, and federal law enforcement agencies.
- Uppsala Conflict Data Program The Uppsala Conflict Data Program (UCDP) provides data on organized crime and civil war around the world.
- 6. **National Institute on Drug Abuse** The National Institute on Drug Abuse (NIDA) monitors the prevalence and trends regarding drug abuse in the United States.
- 7. DBpedia DBpedia aims to make Wikipedia's information easily searchable via SPARQL queries or by downloading their information directly. For instance, you can search for NBA players born in the 80s, in cities with more than 1M inhabitants.
- 8. **Google Trends** Google Trends allows you to look at what's going on in the world. It gives you data about what's becoming popular, and how much people are searching for a particular term.

- Instagram API Facebook allows you to use Instagram's API to quickly access comments, metadata, and metrics.
- 10. **Comtrade** Official trade in goods and services data sets managed by the UN COMTRADE database. There are data visualization tools and an API and other extraction tools available.
- 11. Datahub Stock Market From gold prices, NASDAQ listings, to S&P 500 companies, you'll find it all on datahub.io
- 12. **Global Financial Data** Global Financial Data gives you exactly what it says on the tin; data about the finances of the world. Ranges from real estate, global macro data, to market data.
- 13. **IMF Data** The IMF, or International Monetary Fund, is an organization that aims to foster monetary collaboration between countries. You can find data on trade, government finance, and financial development.
- 14. **The Atlas of Economic Complexity** The Atlas of Economic Complexity provides data about global trade dynamics over time. Want to know the quantity of textiles China exported to South Korea? Easy.
- 15. World Bank Not only does the World Bank provide financial data about countries, but it also provides data on education and health.
- 16. **Financial Times Data** Here you'll find cold, hard numbers about the different markets in the world. Data include fluctuations in currency, yield rates of bonds, and commodity prices.

Introduction to Gazebo, Installation, Testing Gazebo with ROS interface, Simulation of differential drive robot using ROS technical requirements: Getting Started with Gazebo Simulator, Working with TurtleBot2 simulation, Creating a simulation of Chefbot.

Module 4 Advanced Automation Case Study Data Collection and and Orchestrator Team Project 10 Sessions

## Topics:

**Email Automation:** Introduction to Email Automation, Email Automation in UiPath Studio, Practice retrieving and sending emails

**Debugging and Exception Handling:** Exception Handling, Debugging Tools, Workflow Designs, Catching errors **Project Organization:** Project Organization, Process, Library, Robotic Enterprise Framework

Orchestrator: Introduction to Orchestrator, Processes, Robots in Orchestrator, Working with Orchestrator

Future Trends: Artificial Intelligence, Autonomous things, Digital Assistant, Computing

Targeted Application & Tools that can be used:

Targeted employment sector is service provider and control monitor like GE, Siemens, TCS etc. Targeted job profiles include digital domain and Service based indusrty etc.

### Tools:

UiPath Studio/StudioX

# Project work:

Project 1: Sales order entry Robot
Project 2: E-Mail auto responder Robot
Project 3: Disk Monitoring Robot

#### **Text Book**

Bayes Classifier on Cloud Dataproc, Map Reduce and Hadoop Eco System, Quantization using Spark SQL, Bayes Classification using Pig

# Targeted Applications & Tools that can be used:

Targeted Industries like Banking, Transport, e-commerce, healthcare and many more are using data science to make optimal Decisions. The usage of data science helps in rising sales. It can explore historic data, make comparisons and analyses of the market and provide recommendations.

Target Jobs Data Scientist, Data Architect, Data Engineer, Statistician.

#### **Tools:**

- Apache Spark
- Jupyter
- Weka

# **Project work/Assignment:**

# Mini Project:

## Walmart Sales Forecasting in Cloud

- Predict the sales across various departments in each store.
- Predict the effect of markdowns on the sales during the holiday seasons.

# Term Assignments:

Consider a Dataset on Bird communities that needs to be analyzed. The data has three columns, a date, a common name, and a count of the number of individuals.

- Count the total number of individuals of each species that were seen in each data file.
- Sort based on the total number of individuals.

| Course<br>Description         | This Course is designed to acquire the ability to deliver intelligent solutions to problems in a variety of domains and business applications such as natural language processing, text mining, robotics, reasoning and problem-solving in AI. The inclusion of AI in the cloud can lead to a more effective synthesis of data systems for identifying valuable information. This information can then be applied practically in business operations. AI in cloud computing can provide users with seamless data access. AI uses data to get things done, which makes it well-suited to cloud environments as they can hold large amounts of data.  Topics Includes: AI Cloud Services, Applications of AI, AI Chatbots, Types of Chatbots, Applications of Chatbot, Cloud platforms—Google cloud, Microsoft Azure, AWS, Developing AI Application using AWS sage maker  The objective of the course is to familiarize the learners with the concepts of |   |   |  |                        |       |          |            |          |  |

Topics: Explaining what a chatbot is, Describe common applications of chatbots, Identifying factors that drive the growing popularity of chatbots, two main systems in use that bots use to recognize intent and extract entities, Designing a chatbot conversation, Building Chatbots with Python, Developing Goal-Oriented Chatbots with Dialogflow, Building Text Transformers, Training Conversational Chatbots.

| Module 4 | Cloud-native AI application development | use case study | Create and deploy AI<br>Application using AWS<br>cloud platform |  | 10<br>Sessions |
|----------|---|----------------|---|--|----------------|
|----------|---|----------------|---|--|----------------|

Topics: MLOps: Train, test, and deploy Deep Learning models using containers on a cloud server

- Hands-on end-to-end cloud AI applications development and deployment using AWS Sage Maker, Training the AI Fashionista to Discern Fashions, Improving Fashionista AI 2.0 - Hands-on AI application development with APIs provided by the main cloud platforms, Object Detection and the Object Detection Hub API

# **Targeted Application & Tools that can be used:**

• Google Vertex AI is an integrated suite of machine learning tools and services for building and using ML models with AutoML or custom code. It offers both novices and experts the best workbench for the entire machine learning development lifecycle.

## **Project work:**

# Mini Project: Build a dynamic mobile chatbot powered with AI

- 1. Create Watson services with IBM Cloud.
- 2. Update the details in the back-end application.
- 3. Deploy the back-end application.
- 4. Set up IBM Cloud Functions.
- 5. Set up Watson Assistant.
- 6. Set up IBM Mobile Foundation Server and CLI.
- 7. Set up Google Cloud Anchors.
- 8. Configure the Android mobile app.
- 9. Build and run the Android mobile app.

| Course<br>Description     | human mind's remarkable ability to reason and learn in an environment of uncertainty and imprecision. Soft computing is based on biologically inspired methodologies such as genetics, evolution, ant behaviors, particle swarming, human nervous systems, etc. Soft computing is the only solution when we don't have any mathematical modeling of problem-solving (i.e., algorithm), needs a solution to a complex problem in real-time, and easily adapts with changing scenarios and is implemented with parallel computing. It has enormous applications in many application areas such as medical diagnosis, computer vision, handwritten character reconditions, pattern recognition, machine intelligence, weather forecasting, network optimization, VLSI design, etc. |                                       |   |  |                                      |              |                    |                  |        |
| Course<br>Objective       | The objective of the course is to familiarize the learners with the concepts of Soft  Computing and attain EMPLOYABILITY SKILLS through Problem Solving  Methodologies.   |                                       |   |  |                                      |              |                    |                  |        |

|----------|--------------|------------|------------|------|-------------|
| Module 4 | Computing    |            | Collection |      | 10 Sessions |

## Topics:

Evolutionary Computing: "History of Genetic Algorithm and Optimization working principle, The Schema Theorem, GA operators: Encoding, Crossover, Selection, Mutation, bit wise operation in GA etc. Introduction to ant colony optimization and particle swarm optimization. Integration of genetic algorithm with neural network and fuzzy logic.

### Targeted Application & Tools that can be used:

In recent times, engineers have very well accepted soft computing tools such as Fuzzy Computing, ANN, Neuro-Computing and Evolutionary Computing, etc., for carrying out various numerical simulation studies. In the last two decades, these tools independently and in hybrid forms have been successfully applied to varieties of problems. The main objective is to introduce students to the latest soft computing tools. The training of these tools will be helpful to develop rigorous applications in the engineering domain.

## Tools:

- MATLAB
- PYTHON
- C

# Project work/Assignment:

### Mini Project:

- Training of known/classified datasets representing some objects/pattern using various ANN learning methods including Perceptron, BPN, Adaline, Associative memory networks, Hopfield, kohenen networks.
- Classification of new input feature set/pattern based on training & learning
- Applying GA search to optimize the solutions. Implementation of the GA procedure.

Requirements for Ontology Languages, OWL Sub languages, Description of the OWL Language, Layering of OWL, Examples for OWL, OWL in OWL, Future Extensions, Building Classes from Other Classes, Restricting Properties of Classes.

SWOOGLE and FOAF: basics, architecture, usage and examples.

### Targeted Application & Tools that can be used:

Enterprise applications. A more concrete example is SAPPHIRE (Health care) or Situational Awareness and Preparedness for Public Health Incidences and Reasoning Engines which is a semantics-based health information system capable of tracking and evaluating situations and occurrences that may affect public health.

**Geographic information systems** bring together data from different sources and benefit therefore from ontological metadata which helps to connect the semantics of the data.

**Domain-specific ontologies** are extremely important in biomedical research, which requires named entity disambiguation of various biomedical terms and abbreviations that have the same string of characters but represent different biomedical concepts.

#### Tools:

- Protégé
- Neon Toolkit
- SWOOP
- Vitro

## **Project work:**

## Mini Project:

Ontology-Based Model for the "Ward-round" Process in Healthcare
 To design an ontology-based model that can fix information flow problems in the ward-round process of hospital unit. This can used to provide relevant information to the domain users according to their needs and demands. The domain users profiling and describes their roles, information demands with competencies: skills, qualifications and experiences. The ontology based model will be implemented in OWL language that can be used in an application to support ward-round activities for achieving effective patient's treatment process.

**Developing a Map Reduce Application:** The Configuration API, Combining Resources, Variable Expansion, Setting Up the Development Environment, Managing Configuration, Generic Options Parser, Tool, and Tool Runner, Writing a Unit Test with MR Unit: Mapper, Reducer, Running Locally on Test Data, Running a Job in a Local Job Runner, Testing the Driver, Running on a Cluster, Packaging a Job, Launching a Job, The Map Reduce Web UI, Retrieving the Results, Debugging a Job, Hadoop Logs, Tuning a Job, Profiling Tasks, Map Reduce Workflows: Decomposing a Problem into Map Reduce Jobs, Job Control, Apache Oozie

How Map Reduce Works: Anatomy of a Map Reduce Job Run, Job Submission, Job Initialization, Task Assignment, Task Execution, Progress and Status Updates, Job Completion, Failures: Task Failure, Application Master Failure, Node Manager Failure, Resource Manager Failure, Shuffle and Sort: The Map Side, The Reduce Side, Configuration Tuning, Task Execution: The Task Execution Environment, Speculative Execution, Output Committers

| Module 4 | Map Reduce Types and Formats, Flume | Case Study | Data analysis |  | 10 Sessions |
|----------|-------------------------------------|------------|---------------|--|-------------|
|----------|-------------------------------------|------------|---------------|--|-------------|

# Topics:

Map Reduce Types, Input Formats: Input Splits and Records Text Input, Binary Input, Multiple Inputs, Database Input (and Output) Output Formats: Text Output, Binary Output, Multiple Outputs, Lazy Output, Database Output

**Flume** Installing Flume, An Example, Transactions and Reliability, Batching, The HDFS Sink, Partitioning and Interceptors, File Formats, Distribution: Agent Tiers, Delivery Guarantees, Sink Groups, Integrating Flume with Applications, Component Catalog

| Module 5 | Hive, Pig, Spark | Case Study | Data analysis  | 10 Sessions |
|----------|------------------|------------|----------------|-------------|
|          | Analytical Tools | case study | Data allalysis |             |

#### Topics:

**Hive** Apache Hive with Hive Installation, Hive Data Types, Hive Table partitioning, Hive DDL commands, Hive DML commands, Hive sort by vs order by, Hive Joining tables

**Pig** Installing and Running Pig, Execution Types, Running Pig Programs, Grunt, Pig Latin Editors, An Example: Generating Examples, Comparison with Databases, Pig Latin: Structure, Statements, Expressions, Types, Data Processing Operators: Loading and Storing Data, Filtering Data, Grouping and Joining Data, Sorting Data, Combining and Splitting Data.

**Spark** An Example: Spark Applications, Jobs, Stages and Tasks, A Java Example, A Python Example, 20082020 / 31 Resilient Distributed Datasets: Creation, Transformations and Actions, Persistence, Serialization, Shared Variables, Broadcast Variables, Accumulators, Anatomy of a Spark Job Run, Job Submission, DAG Construction, Task Scheduling, Task Execution, Executors and Cluster Managers: Spark on YARN

## **List of Laboratory Tasks:**

- 1. (i) Perform setting up and Installing Hadoop in its two operating modes:
  - Pseudo distributed,
  - Fully distributed.
  - (ii) Use web based tools to monitor your Hadoop setup.

**Level 1:** Programming assignment to install the Hadoop environment tools.

2. (i) Implement the following file management tasks in Hadoop:

- Adding files and directories
- Retrieving files
- Deleting files
- (ii) Benchmark and stress test an Apache Hadoop cluster
- **Level 1:** Programming assignment to maintain the Hadoop Distributed File System.
- 3. Run a basic Word Count Map Reduce program to understand Map Reduce Paradigm.
  - Find the number of occurrence of each word appearing in the input file(s)
  - Performing a Map Reduce Job for word search count (look for specific keywords in a

file)

- Level 1: Programming scenario to use map reduce programming to perform the analysis.
- Level 2: Programming assignment to analyze the data for any given data file.
- 4. Stop word elimination problem:

Input:

- A large textual file containing one sentence per line
- A small file containing a set of stop words (One stop word per line)

Output:

A textual file containing the same sentences of the large input file without the words appearing in the small file.

- 5. Write a Map Reduce program that mines weather data. Weather sensors collecting data every hour at many locations across the globe gather large volume of log data, which is a good candidate for analysis with Map Reduce, since it is semi structured and record-oriented. Data available at: <a href="https://github.com/tomwhite/hadoopbook/tree/master/input/ncdc/all">https://github.com/tomwhite/hadoopbook/tree/master/input/ncdc/all</a>.
  - Find average, max and min temperature for each year in NCDC data set?
- Filter the readings of a set based on value of the measurement, Output the line of input files associated with a temperature value greater than 30.0 and store it in a separate file.
  - Level 2: Programming assignment to analyze the social media data for business analytics.
- 6. For Purchases.txt Dataset, instead of breaking the sales down by store, give us a sales breakdown by product category across all of our stores.
  - What is the value of total sales for the following categories?
    - i.Toys
    - ii.Consumer Electronics
  - Find the monetary value for the highest individual sale for each separate store What are the values for the following stores?
    - i.Reno
    - ii.Toledo
    - iii. Chandler
  - Find the total sales value across all the stores, and the total number of sales.
- **Level 2:** Programming assignment to analyze and find the maximum sales, minimum sales and average sales in each store.
- 7. Install and Run Pig then write Pig Latin scripts to sort, group, join, project, and filter your data.
- Level 1: Programming scenarios to perform the grouping, filtering and Joining.

8. Write a Pig Latin scripts for finding TF-IDF value for book dataset (A corpus of eBooks available at: Project Gutenberg)

Level 2: Programming Assignment to analyze the data from the given text file using Pig latin script.

9. Install and Run Hive then use Hive to create, alter, and drop databases, tables, views, functions, and indexes.

**Level 1:** Programming scenario to analyze the data from the given text file to perform SQL operations.

- 10. Install, Deploy & configure Apache Spark Cluster. Run apache spark applications using Scala.

  Level 1: Programming scenario to analyze a dataset using spark.
- 11. Data analytics using Apache Spark on Amazon food dataset, find all the pairs of items frequently reviewed together.

Write a single Spark application that:

- Transposes the original Amazon food dataset, obtaining a Pair RDD of the type:
- Counts the frequencies of all the pairs of products reviewed together;
- Writes on the output folder all the pairs of products that appear more than once and their frequencies. The pairs of products must be sorted by frequency.

Level 2: Programming assignment to analyze the data using spark.

Targeted Application & Tools that can be used:

- Business Analytical Applications
- Social media Data Analysis
- Predictive Analytics
- Government Sector for analyzing the data
- Improve the business through analytics

Tools: Hadoop Framework tools like map reduce, Hive, Hbase, Spark, Pig, Flume.

Project work/Assignment:

After completion of each module a programming based Assignment/Assessment will be conducted. A scenario will be given to the student to be developed as a data analysis application. On completion of Module 5, student will be asked to develop a project for Data Analysis.

**Targeted Applications**: Time series analysis on economics, finance, natural sciences, health care and more

#### Tools:

- R package astsa (Applied Statistical Time Series Analysis)
- The package ITSM2000 ( https://extras.springer.com/ )

# Project work:

## Mini Project:

# Choose any suitable real time dataset and build time series forecast models.

**Example:** In the Air Passengers dataset set, go back 12 months in time and build the ARIMA forecast for the next 12 month. Investigate following questions

Is the series stationary? If not what sort of differencing is required?

What is the order of your best model?

What is the AIC of your model?

What is the order of the best model predicted by auto\_arima() method?

#### Topics:

Recommender Systems Functions – Data and Knowledge Sources – Recommendation Techniques – Basics of Content-based Recommender Systems – High-Level Architecture – Advantages and Drawbacks of Content-based Filtering – Collaborative Filtering – Matrix factorization models – Introduction to user-based recommender systems.

## Targeted Application & Tools that can be used:

- Information Retrieval Applications
- Machine Learning Applications

#### Tools:

- Bow Toolkit
- GATE
- Lemur
- MG
- Smart (System for the Mechanical Analysis and Retrieval of Text) Information Retrieval System is an information retrieval system **developed at Cornell University** in the 1960s.

Module 3 AI algorithms for Assignment Data Collection 10 Sessions

**Topics:** How algorithms are used in sensors, Algorithms of Artificial Intelligence in Sensors-Classification algorithms, Data clustering, Evolutionary algorithms in sensing, Data pattern recognition, Maintenance, and production scheduling, Artificial intelligence in predictive and proactive scheduling, Energy efficient scheduling, Stochastic models in artificial intelligence, Queuing theory-based approach, Project scheduling, Artificial intelligence in assembly line balancing, Disassembly line balancing.

| Module 4 | IOT Protocols and<br>Applications of AI in<br>IOT | Data Collection | 10 Sessions |
|----------|---|-----------------|-------------|
|          |   |                 |             |

Connectivity Protocols: 6LoWPAN, IEEE 802.15.4, Zigbee, Wireless, NFC, RFID. Communication/Transport Protocols: Bluetooth. Data Protocols: Message Queue Telemetry Transport (MQTT), Constrained Application Protocol (CoAP), Advanced Message Queuing Protocol (AMQP), Data Distribution service. Applications of AI in IOT- Case Study: Smart Retail, Drone Traffic Monitoring, Office Buildings.

Targeted Application & Tools that can be used:

Targeted employment sector is service provider and control monitor like GE, Siemens, TCS etc. Targeted job profiles include digital domain and Physical system design engineer, IOT engineer etc.

### Tools:

- Arduino IDE
- TinkerCad
- NodeMCU
- Tensor Flow and Keras

| Course<br>Description   | For both engineers and researchers in the field of Computer science, it is common to develop models of real-life situations and develop solutions based on those models. In this course, our objective is to give an idea regarding the application of probability theory in the modeling and analyzing different kinds of computer systems. We particularly focus on time complexity analysis of different algorithms, reliability analysis of networks, physical layer security as well as resource allocation in 5G and beyond. The target audience for this course is Masters and Ph.D., students.  The student should have basic Probability concepts as a pre-requisite.  With a good knowledge of different techniques of applying Probability theory in modeling/analyzing computer systems, the students will be able to develop efficient solutions for complex and challenging real-life problems. |   |       |                          |         |                    |                  |             |
| Course  |   |   |       |                          |         |                    |                  | ente        |
| <b>Objective</b>  |   | The objective of the course is to familiarize the learners with the concepts of Application of Probability theory in Computer Science |       |                          |         |                    |                  |             |
| 3   | and attain EMPLOYABILITY SKILLS through PROBLEM SOLVING   |   |       |                          |         |                    |                  |             |

Simple Applications of Decision Theory, Model Comparison, Markov decision process, value and policy iteration, off-policy and on-policy learning techniques (e.g., SARSA, Q-learning), Multi-arm Bandit problem (MAB), modeling resource allocation in 5G as MAB, Hidden Markov model (HMM), application of HMM in physical layer security.

# **Targeted Applications & Tools that can be used:**

Markov's inequality

Chernoff bound

# Project work

- -Performance analysis of the LRU stack model
- -Modeling multiprocessor systems and analyzing the reliability
- -Modeling handovers in wireless networks and performance analysis of handover algorithms.
- -A short survey on Monte Carlo simulation techniques.

| Course<br>Description   | This course provides an introduction to computer vision including fundamentals of image formation, camera imaging geometry, feature detection and matching, stereo, motion estimation and tracking, image classification and scene understanding. We'll explore methods for depth recovery from stereo images, camera calibration, automated alignment, tracking, boundary detection, and recognition. We'll use both classical machine learning and deep learning to approach these problems. The focus of the course is to develop the intuitions and mathematics of the methods in lecture, and then to learn about the difference between theory and practice in the projects. |              |                                       |       |             |     |  |

Stereo correspondence-Epipolar geometry, Fundamental matrix, Introduction to SLAM (Simultaneous Localization and Mapping).

## **Targeted Application & Tools that can be used:**

Computer Vision applications are **used for traffic sign detection, surveillance and recognition**. Vision techniques are applied to segment traffic signs from different traffic scenes (using image segmentation) and algorithms to recognize and classify traffic signs.

#### Tools:

MAT Lab/Open CV

## **Project work/Assignment:**

## **Project Work:**

- 1. Detect the faces of humans by mapping facial features from a video or an image. There are several steps involved in these projects, such as mapping features.
- 2. Hand gesture recognition is one of the critical topics for human-computer interaction. In this project, there are several tasks which are needed to be performed. This includes the hand region, which is to be extracted from the background, followed by segmenting the palms and fingers to detect finger movements.
- 3. Count the number of people passing through a specific scene. The applications of this project include civilian surveillance, pedestrian tracking, pedestrian counting, etc.
- 4. Design, implement and test on several regions on a set of images based on the segmentation algorithms.

Topics relevant to development of "EMPLOYABILITY SKILLS", "IMAGE SEGEMENTATION and DIMENSIONS of Image Processing- We compare IMAGE PROCESSING/ COMPUTER VISION jobs with Information Technology service oriented jobs then obviously there is relatively limited scope. But things are changing very fast as time is changing. Scope of image processing/computer vision jobs is increasing day to day.

# **Topics:**

Case study on YouTube Recommendation, case study on Netflix Recommendation system, Case study on Restaurant ratings given by the customer, Offline Evaluation, Online Evaluation, Goals of Evaluation design- Accuracy, Coverage, Confidence and Trust, Diversity, Robustness and Stability, Scalability Training and testing of Ratings, RMSE, MAE, Evaluating Ranking via Correlation, Utility, Received Operating Characteristics.

# Targeted Applications & Tools that can be used:

Targeted Application: Web application development, AI, Operating systems

Tools: Python IDLE, ANACONDA

# **Application Areas:**

- E-Commerce Application
- E-Learning Applications
- E-Business Services
- Artificial Intelligence and Machine Learning
- Enterprise-level/Business Applications

Professionally Used Software: Python, Spyder, Jupyter Notebook, Tensorflow (TFRS), Amazon Personalize.

# Project work

• A scenario will be given to the students to be developed as a series of Program/ Application.

On completion of Module 3 and Module 4, students will be asked to develop a Mini Project using Python

The Programming<br>principles, following | This course introduces the engineering of computer applications emphasize modern software engineering principles: object-oriented design, decomposite encapsulation, abstraction and testing by using Java Programming. This course theory and lab component which emphasizes on understanding the implementary and application of object-oriented programming paradigm. All along the course, discuss how OOP allows software engineers to develop complex software by makingh-level abstractions starting from very general classes down to more concectasses. The Programming methodology emphasizes on software engineer principles, following best practices in software development, which enables student to build real time applications with industry standards. |  |   |                                   |                 |  |                             |  |  |

Exception handling: Introduction to Exceptions, Difference between Exceptions & Errors, Types of Exception. Handling Exceptions: Use of try, catch, finally, throw, throws. User Defined Exceptions and Exception handling with method overriding.

Introduction to threads, life cycle of a thread, creating threads, extending the Thread Class, Implementing the "runnable" interface. Thread Priority, Thread synchronization, Intercommunication of Threads

Module 4 Generics, Collection Framework, JAR File Assignment Programming 8Sessions

Generics: Introduction, using wildcard, generic method, generic class hierarchies, erasure. Collections: Introduction to Collections, Classification of Collection, Interfaces that extends the collection interface.

Module 5 Graphic Programming & Assignment Mini Project 10Sessions

Swings: Introduction, Swing GUI Components and Layout Managers, Swing Menus. Java Bean: Introduction, Introspection, Persistence, JavaBeans API. Servlet: Lifecycle, Simple Servlet, Java Applets: Basics of applets, Graphics in applets, Displaying image in the applet, Event handling in the applet, Animation in the applet.

**List of Laboratory Tasks:** 

**Experiment N0 1:** Programming assignment with class, objects and basic control structures. (Application:

Build a basic menu driven application). RandomGenerator Program, The RollDice Program.

Level 1: Programming scenarios which use control structures to solve simple case scenarios.

**Level 2:** Programming assignment which will build menu driven application by identifying the class and its relevant methods.

Experiment No. 2: Programming assignment using Arrays and Strings.

Level 1: Programming scenarios which build single dimensional and multidimensional array, apply the different methods to operate on strings.

**Level 2:** Programming assignment which will manipulate the data stored in matrices and identify the appropriate usage String methods.

**Experiment No. 3:** Programming assignment using acm.graphics Package, GCanvas, Methods Common to All GObjects, Interfaces and Methods Defined by Them, The Bouncing Ball Program Example, The Geometry of the GLabel Class, The GArc Class.

Level 1: Programming scenarios which use the concept the Package and usage of Packages

Level 2: Programming assignment which build application which have Packages for different scenarios.

Experiment No. 4: Programming assignment using Exception Handling

Level 1: Programming assignment on building applications using built in Exceptions.

Level 2: Programming assignment on building application using user defined Exceptions.

**Experiment No. 5:** Programming assignment using Multithreading. (E.g.: Building an application which performs different arithmetic operations and sharing the resources using threads)

**Level 1**: Programming scenarios to build a thread, assign priority and use the thread methods to perform operations

Level 2: Programming scenarios for building synchronized applications.

**Experiment No. 6:** Programming assignment using Collections, Generics. Music store case study: Managing Large Amounts of Data, Principles of Design, Defining the Song Class, Defining the Album Class, Considering the Data Structures Needed, Reusing Data - Shallow Copy vs. Deep Copy. Jar File: Creating a Jar file.

Level 1: Programming scenarios which build applications Using Collections and Generics.

Level 2: Programming scenarios which help in understanding the need and scenarios to use Collections

**Experiment No. 7:** Programming assignment to build GUI Applications. Building Online Music Store.

Level 1: Programming Scenarios to build GUI for a given scenario using Swings concepts.

Level 2: Understanding and application of Swing and Graphics Concepts to build an Application

**Targeted Application & Tools that can be used:** Targeted Employment sector is Software application, product development Companies in IT sector and Non IT Sector. The skills include

- Platform independent Application Development
- Secure Application Development
- Data Mining
- Operating Systems.
- Database Management Systems
- Banking software
- Automobiles
- Mobile Applications

**Tools**: JDK (Java Development Tool kit), Integrated Development Environment (IDE), Apache NetBeans, Eclipse.

Project work: Mention the Type of Project

A scenario will be given to the student to be developed as a Java Application.

#### Topics:

Information presentation: Information presentation — Data type by task taxonomy, Challenges for Information Visualization -Information display factors—Analog vs digital presentation—Ubiquitous computing and augmented realities Ubiquitous computing applications research Design Focus: Ambient Wood — augmenting the physical Virtual and augmented reality Design Focus: Shared experience Design Focus: Applications of augmented reality Information and data visualization Design Focus: Getting the size right. Groupware — Goals of collaboration and participation, Design for Diversity

## Targeted Applications & Tools that can be used:

Targeted employment sector is Developing Mobile Apps and web Applications vendors like Amazon, Flip kart, Snap Deal, Byjus, eBay etc. Targeted job profiles include HCI Specialist, UX Design etc.

### Tools:

- Xampp Server
- Any Text Editor like notepad++

# **Case Study Analysis**

## Case Study Analysis:

• Students have to choose any of the Application it can be Mobile App or web Applications and they should relate with User Interface Design concepts in term of Guidelines and Principles of Interface Design etc. to evaluate design with respect to user perspective.

Applications of IoT Assignment

Module 4

10 Sessions

Analysis, Data Collection

## Topics:

**Overview of IoT applications:** Automotive and Transport, Smart factories, Smart buildings, Smart cities, Smart Utilities, Security and Surveillance, Retail, and Healthcare with suitable examples, Wearables.

**Building IoT Application:** Enabling and facilitating the students to take up existing problems and building the solution.

## Targeted Applications & Tools that can be used:

The targeted employment sector is service providers and control monitors like GE, Siemens, TCS etc. Targeted job profiles include digital domain and Physical system design engineer, IOT engineer, etc.

#### Tools:

- Arduino IDE
- TinkerCad
- NodeMCU
  Tensor Flow and Keras

## **Project work**

#### Mini Project:

• A mini project to demonstrate use of IOT tools, techniques and protocols to build and smart real time application.

#### **Text Book**

- T1. "Internet of Things (A Hands-on-Approach)", by Vijay Madisetti and Arshdeep Bahga, 1st Edition, VPT, 2014
- T2. "Industry 4.0: The Industrial Internet of Things", by Alasdair Gilchrist (Apress)

**Topics relevant to development of "SKILL DEVELOPMENT ": G**et introduced to AI programming and Interfacing of IOT devices for developing **SKILL DEVELOPMENT** through **Experiential Learning** techniques. This is attained through assessment component mentioned in course handout.

The **Matplotlib library**, Installation, A simple interactive chart, Adding elements to the chart, Adding a grid, Adding a legend, Converting the session to an html file, Saving your chart directly as an image, Handling date values, Chart typology, Line charts, Histograms, Bar charts, Horizontal Bar Charts, Multiseries bar charts, Multiseries stacked bar chart, Pie chart.

Module 4 Sci-kit Assignment Mini project 8 Sessions

# Topics:

**The Scikit learn library**, Machine learning, Supervised and Unsupervised learning, Supervised learning with Scikit learn, The iris flower dataset, KNN Classifier, Diabetes dataset, Linear Regression-the least square regression, SVMs, SVC, Non linear SVC, Plotting different SVM classifier using iris dataset.

# Targeted Application & Tools that can be used:

Targeted Application: Web application development, AI, Operating systems Tools: Python IDLE, ANACONDA

- Application Areas:
- Web Development
- Game Development
- Scientific and Numeric Applications
- Artificial Intelligence and Machine Learning
- Software Development
- Enterprise-level/Business Applications
- Education programs and training courses
- Operating Systems
- Web Scrapping Applications
- Image Processing and Graphic Design Applications

Professionally Used Software: Python IDLE, Spyder, Jupyter Notebook, Google Colab

# **Project work/Assignment:**

- After completion of each module a programming based Assignment/Assessment will be conducted.
- A scenario will be given to the students to be developed as a series of Program/Application.

On completion of Module 3 and Module 4, students will be asked to develop a Mini Project using Python.

## Text Book

T1. Charles Dierbach, "Introduction to Computer Science Using Python", Wiley India Edition, 2015.

# **Topics relevant to "SKILL DEVELOPMENT":**

Classification, Clustering and visualization of Charts for developing **SKILL DEVELOPMENT** through **Participative Learning Techniques**. This is attained through assessment component mentioned in course handout.

transmission, GDPR (General Data Protection Regulation), Comparative study with India regulation, Data Privacy Act, Role Based Access Control, Organizational Security policies.

## Targeted Applications & Tools that can be used:

Anomaly Deduction, Inclusion Prevention Systems, Firewall, Email Security **Tools:** 

SAGE Mathematical Library package, VPN

## **Assignment:**

## Term Assignments:

- 1. Implement Cryptographic algorithms using SAGE
- 2. Comparative Study on Various Data Security Tools
- 3. Case Study on GDPR General Data Protection Regulation
- 4. Identify Data Leakage in LINUX environment using Authorization Mechanisms

## **Text Book**

- T1. Data Privacy and Security, David Solomon, Springer,
- T2. Principles of Data Security, Ernst L. Leiss, Plenum Press. New York And London

## Targeted Application & Tools that can be used:

Employment opportunities are available in Companies like Hexaware, Episteme, Randstad. Siemens, Accenture etc. as IoT Data Engineer

Tools

R

Python

Microsoft Azure Stream Analytics.

AWS IoT Analytics.

SAP Analytics Cloud.

Oracle Stream Analytics and Oracle Edge Analytics.

## **Project work**

## Mini Project:

Develop a IoT application for real time data analysis of manufacturing sector. The automated IoT Analytics should aid in using real time data to watch out for certain patterns and send alerts to the concerned departments. It should enable smart manufacturing.

#### Topics:

Learning in Graph Models, Maximum Likelihood Estimation, Naïve Bayes Classifier, Conditional Random Fields, <mark>constrained optimization problem</mark>

## Targeted Application & Tools that can be used:

Targeted employment sector is to acquire knowledge to analyze the given problem to frame Probabilistic graphical models which are a powerful framework for representing complex domains using probability distributions, with numerous applications in machine learning, computer vision, natural language processing and computational biology.

#### Tools:

- Python
- HUGIN Tool for Learning Bayesian Networks
- MATLAB Toolbox for Bayesian net

#### **Assignment:**

#### Term Assignments:

Analysis and Application of Bayesian Network to real time problems

Understanding the given problem, analyze accordingly to apply Bayesian network and convert the problem in a Bayesian Network. The answering the required queries.

• A short survey of the Monte Carlo Method

Study and analyze few realistic problems to apply Monte Carlo Technique to answer the solution of the problem.

A short survey of the Markov Chain & Hidden Markov Method

Study and analyze few realistic problems to convert into Markov chain & Hidden Markov to answer the required problem.

decoding, Stability. UN supervised learning of clusters, winner-take-all learning, separability limitations, two basic feature mapping models, SOM algorithm, properties of feature mapping.

Targeted Application & Tools that can be used:

## **Application Area:**

Resource Allocation, Finance and Economics (Risk Analysis and Consumption Assessment), Fraud Detection, Image Segmentation, Dimensionality Reduction, Gene Expression Analysis, Recommender System, Image reconstruction, Large Scale Surveillance.

#### Tools:

Anaconda Navigator

Python Packages

## **Text Books**

- T1. Machine Learning by Tom Mitchell, McGraw-Hill Press
- T2. Pattern Recognition and Machine Learning by Christopher M. Bishop, Springer, 2006

| Description   |   |                                 | to create knowledge and propagate opinions. At the same time, social media has created an unprecedented opportunity for companies to engage real-time interactions with consumers. In addition, the size and richness of social media data has provided companies an unusually deep reservoir of consumer insights to transform the business and marketing operations.  The social media analytics course will enable students to grasp the analytics tools to leverage social media data. The course will introduce tools such as engagement analytics, sentiment analysis, topic modeling, social network analysis, identification of influencers and evaluation of social media strategy. |   |   |                                   |                  |                                |                                   |                       |

| Course<br>Description     | The course introduces the core intuitions behind Deep Learning, an advanced branch of Machine Learning involved in the development and application of Artificial Neural Networks that function by simulating the working principle of human brain. Deep learning algorithms extract layered high-level representations of data in a way that maximizes performance on a given task. The course includes theory and lab components which emphasizes on understanding the implementation and application of deep neural networks in various prominent problem domains like speech recognition, sentiment analysis, recommendations, and computer vision etc. The course facilitates the students to interpret and appreciate the successful application of deep neural nets in various prediction and classification tasks of ML. |   |  |                                     |         |     |          | nt  by  ag  y  es  ne  as  nt  se  ul |  |  |

|----------|-------------------------------|------------|-------------|-------------|

# Topics:

Basics of Deep unsupervised learning, Auto encoders, Recommender systems, <mark>computer vision</mark>

# **List of Laboratory Tasks:**

Experiment No. 1: Programming assignment to implement a single layer feed forward neural network from scratch (Application: A basic neural network).

**Level 1:** Programming scenario to implement a basic single layer feed-forward neural network perceptron.

**Level 2:** Programming scenario to implement a basic single layer feed-forward neural network with a single hidden layer having ReLU activation function and sigmoid in the output layer.

**Experiment No. 2:** Programming assignment to build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets.

Level 1: Programming scenario to use the Backpropagation algorithm to build an ANN and run it on a dataset for few epochs.

**Level 2:** Programming scenario to use the Backpropagation algorithm to build an ANN and run it on a dataset for few epochs and interpret the accuracy, loss and other evaluation parameters.

Experiment No. 3: Programming assignment to build a multiple layer neural network with specific model parameters and hyperparameters on a given real life dataset.

Level 1: Programming assignment to implement a MLP with

- o possibility to use 2-4 layers
- o ReLU for the hidden layer
- Sigmoid in the output layer
- o optimization via gradient descent (GD)

Level 2: Programming assignment to implement the neural network and add some more hyperparameters in the perceptron model

- softmax output layer
- o optimization via stochastic gradient descent (SGD)
- o Gradient checking code (!!!)

Generate the confusion matrix

**Experiment No. 4:** Programming assignment to implement classification of linearly separable Data with a Deep neural network (Application: Binary classification).

**Level 1:** Programming scenarios to build a binary classifier with a deep ANN.

Level 2: Programming scenarios to build a binary classifier with a deep ANN

- Weight initialization with random noise (!!!) (use normal distribution with changing std. deviation for now)
- o implement dropout, *l*2 regularization
- o implement a different optimization scheme (RPROP, RMSPROP, ADAGRAD)
- employ batch normalization

Experiment No. 5: Programming assignment to implement a basic Convolution Neural Network.

**Level 1:** Programming scenarios which use the concept of convolution and pooling to implement a CNN.

**Level 2:** Programming scenarios which use the concept of convolution and pooling to implement a CNN and also specify some parameters like number of filters, length of feature detector, stride etc.

**Experiment No. 6:** Programming assignment to perform image segmentation and object detection using CNNs.

**Level 1**: Programming assignment to instantiate a CNN (that uses FullyConnectedLayers) and train the neural network using the training data from MNIST data set.

**Level 2**: Programming assignment to instantiate a CNN (that uses FullyConnectedLayers) and train the neural network using the training data from MNIST data set. Choose appropriate hyper parameters for the training of the neural network. Plot the cost versus training iterations using different mini-batch sizes: 16; 64; 256; 1024. Record the test accuracy in percentage and total training time you spent in seconds. Implement Adam Optimizer. To obtain full marks, the network should be able to achieve a test accuracy of 90% or more across many different random seeds.

Experiment No. 7: Programming assignment to employ CNN in image classification from given dataset.

**Level 1**: Programming scenario to instantiate a CNN (with at least one convolutional layer) and train the neural network using the training data from CIFAR10 data. Choose appropriate hyperparameters for the training of the neural network. The network should be able to achieve a test accuracy of at least 50% within 10 training epochs.

**Level 2:** Programming scenario to build a CNN (with more than one convolutional layer) and train the neural network using the training data from CIFAR10 data. Choose appropriate hyperparameters for the training of the neural network. The network should be able to achieve a test accuracy of at least 50% within 10 training epochs. Continue to train further and examine training and testing performance. Report hyperparameters (learning rate, number of hidden layers, number of nodes in each hidden layer, batch size and number of epochs) of the Deep Neural Network. Also, explain the observations.

Experiment No. 8: Programming assignment to perform Sentence (text) Classification using Convolutional Neural Networks.

**Level 1:** Programming Scenarios to utilize CNN to categorize text data in given datasets like SST movie reviews.

**Level 2:** Programming Scenarios to utilize CNN to categorize text data in given datasets like SST and MR movie reviews.

Experiment No. 9: Programming assignment to apply Recurrent Neural Networks for sentiment analysis of text data.

**Level 1:** Programming scenario to build a model to perform sentiment analysis of IMDB movie reviews using. Reviews are categorized into two polarities: positive and negative.

**Level 2:** Programming scenario to build a model to perform sentiment analysis of IMDB movie reviews. Reviews are categorized into three polarities: positive, negative and neutral.

Experiment No. 10: Programming assignment to create a generative model for text, characterby-character using Recurrent neural networks.

Level 1: Programming scenario to implement a multi-layer Recurrent Neural Network like LSTM for training/sampling from character-level language models, which takes one text file as input and trains an RNN that learns to predict the next character in a sequence. The RNN can then be used to generate text character by character that will look like the original training data.

Level 2: Programming scenario to implement a multi-layer Recurrent Neural Network utilizing both LSTM and GRU in turns for training/sampling from character-level language models, which takes one text file as input and trains an RNN that learns to predict the next character in a sequence. The RNN can then be used to generate text character by character that will look like the original training data. Train the model and use it to generate new text.

Experiment No. 11: Programming assignment to implement RNN models for multivariate time series forecasting.

**Level 1:** Programming scenario to implement a many-to-one Recurrent Neural Network for Stock Price forecasting, i.e. trained with a certain number of day's data, the model should predict the stock price of the next day.

Level 2: Programming scenario to implement a many-to-one Recurrent Neural Network for Stock Price forecasting, i.e. trained with a certain number of day's data, the model should predict the stock price of the next day. Students are free to use RNN, GRU, or LSTM (or compare between) and any number of layers and architecture. In the testing, plot the ground truth and your predicted values for 100 days.

Experiment No. 12: Programming assignment to implement Autoencoders and deep Boltzmann's machines.

Level 1: Programming scenario to implement a basic recommender system using deep Boltzmann's machines.

**Level 2:** Programming scenario to build a recommender system with Collaborative filtering algorithm using deep Boltzmann's machines,

# Targeted Application & Tools that can be used:

Targeted employment sector is not restricted to any single domain. Today, ML and Dl have been employed for data analysis and improved business intelligence in every sector. Targeted job profiles include Data Analyst, Data Scientist, Data Engineer, Neuroinformatician, Bioinformatician, Image Recognition, Research Analyst, Full Stack Developer for Deep Learning, Natural Language Process Engineer, Business Analyst etc. Few of the top recruiters are Amazon, NVIDIA. Microsoft, IBM, Accenture, Facebook, Intel, Samsung, Lenovo, Adobe etc., among numerous others.

**Tools**: Neural Designer, AutoML, AutoDL, Keras, TensorFlow, Torch, Google Colaboratory, Spider, Jupiter Notebook

**Project work/Assignment:** 

Throughout the progression in each module, students will have to submit scenario based programming Assignments/Experiments as listed in "List of Lab Tasks". On completion of each module, students will be asked to develop a Mini Project, similar to the following:

# • Music genre classification system

This is one of the interesting deep learning project ideas. This is an excellent project to nurture and improve one's deep learning skills. The aim is to create a deep learning model that uses neural networks to classify the genre of music automatically. For this project, students will use an FMA (Free Music Archive) dataset. FMA is an interactive library comprising high-quality and legal audio downloads. It is an open-source and easily accessible dataset.

However, it is noteworthy that before one can use the model to classify audio files by genre, he/she will have to extract the relevant information from the audio samples (like spectrograms, MFCC, etc.)

## • Image Caption generator

This is one of the trending deep learning project ideas. This is a Python-based deep learning project that leverages Convolutional Neural Networks and LTSM (a type of Recurrent Neural Network) to build a deep learning model that can generate captions for an image. An Image caption generator combines both computer vision and natural language processing techniques to analyze and identify the context of an image and describe them accordingly in natural human languages (for example, English, Spanish, Danish, etc.). This project will strengthen one's knowledge of CNN and LSTM, and one will learn how to implement them in real-world applications as this.

## • Visual tracking system

A visual tracking system is designed to track and locate moving object(s) in a given time frame via a camera. It is a handy tool that has numerous applications such as security and surveillance, medical imaging, augmented reality, traffic control, video editing and communication, and human-computer interaction. This system uses a deep learning algorithm to analyze sequential video frames, after which it tracks the movement of target objects between the frames. The two core components of this visual tracking system are Target representation and localization

# • Traffic Signal Classification

The traffic sign classification project is useful for all autonomous vehicles. Machines are able to identify traffic signs from the image. Students can use the GTSRB dataset that contains 43 different traffic sign classes. This is a good project to understand image classification.

## Driver Drowsiness Detection

The driver drowsiness detection is a project which can detect whether a person is sleeping or not while driving. We can implement a model for drivers and it can also prevent accidents from happening.

## • Autocolouring old Black and white images

The idea of this project is to make a model that is capable of colorizing old black and

white

with

images to colorful images. Digital artists take a few hours to color the image but now

Deep Learning, it is possible to color an image within seconds.

| Course<br>Description    | This course introduces a basics of Natural Language Processing methods with speemphasis on modern applications. The course will cover pre-processing technique textual data like stemming, lemmatization, tokenization etc. Different vectorization Techniques like Bag of Words, TF-iDF etc. followed by basic Probability for building language models. Basics of Neural Network, LSTM Recur Neural Network, Applications of NLP like Information Extraction, Emotion Extraction from text, sentiment analysis etc. |  |                |         |          |                             | ques of<br>word<br>sics of<br>current |           |         |

|---------------------------|---|
|                           | Type of Course: Program Core  |
|                           | Theory and Laboratory Integrated Course   |
| Version No.               | 2.0   |
| Course Pre-<br>requisites |   |
| Anti-requisites           | NIL   |
| Course<br>Description     | The Course consists of two parts where first Part covers advanced analytics that covers topics necessary to give businesses greater insight into their data than they could ordinarily, and the Second Part covers data visualization concepts. Primary concepts include machine learning, data mining, predictive analytics, location analytics, big data analytics, and location intelligence. Visualization for Time series, Geolocated data, Correlations, connections, Hierarchies, networks, and interactivity. |
| Course<br>Objective       | The objective of the course is to familiarize the learners with the concepts of <b>Data</b> Analytics and Visualization and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING techniques   |
| Course Out<br>Comes       | On successful completion of the course the students shall be able to: CO1: Analyze data by performing Exploratory Data Analysis. CO2: Apply techniques of Machine Learning to build Generalized Predictive Models. CO3: Explain basic concepts of Data Visualization. CO4: Apply principles of Data Visualizations to provide insights from data.   |

Level 1: Visualization techniques for Trees, Graphs, Networks

### **Experiment No. 8: Advanced Visualization Tools**

**Level 1:** Design effective Visualizations for the given scenario

Level 2: Implement Visualizing of Geospatial Data and Document Visualization

### **Experiment No. 9:** Analyze Visualization Systems

## **Level 1:** Analyze Visualization Systems

## Targeted Application & Tools that can be used:

Data visualization is the graphical representation of information and data. By using visual elements like charts, graphs, and maps, data visualization tools provide an accessible way to see and understand trends, outliers, and patterns in data. In the world of Big Data, data visualization tools and technologies are essential to analyze massive amounts of information and make data-driven decisions.

#### Tools:

- 2. R Programming
- 3. Python
- 4. Tableau
- 5. SAS
- 6. Excel
- 7. RapidMiner
- 8. IBM Cognos Analytics
- 9. Microsoft Power BI

#### Project work:

After completion of each module a Data analysis or programming based Assignment/Assessment will be conducted.

# Mini Project:

Perform exploratory data analysis on a given dataset and provide insights on the same.

- 1. Crunchbase Find business information about private and public companies. You can look up how many investments they had, who the founding members are, and if they had any mergers or acquisitions.
- **2. Glassdoor Research** Glassdoor offers data related to employment. You can, for example, figure out how much you can save by retaining employees.
- 3. Open Corporates Open Corporates is the largest open database of companies and company data in the world. Used by banks and governments, they pride themselves on having the most accurate data.
- 4. FBI Uniform Crime Reporting The Uniform Crime Reporting compiles statistical crime reports, publications, and data points from thousands of cities, universities, states, and federal law enforcement agencies.
- Uppsala Conflict Data Program The Uppsala Conflict Data Program (UCDP) provides data on organized crime and civil war around the world.
- 6. **National Institute on Drug Abuse** The National Institute on Drug Abuse (NIDA) monitors the prevalence and trends regarding drug abuse in the United States.
- 7. DBpedia DBpedia aims to make Wikipedia's information easily searchable via SPARQL queries or by downloading their information directly. For instance, you can search for NBA players born in the 80s, in cities with more than 1M inhabitants.
- 8. **Google Trends** Google Trends allows you to look at what's going on in the world. It gives you data about what's becoming popular, and how much people are searching for a particular term.

- Instagram API Facebook allows you to use Instagram's API to quickly access comments, metadata, and metrics.
- 10. **Comtrade** Official trade in goods and services data sets managed by the UN COMTRADE database. There are data visualization tools and an API and other extraction tools available.
- 11. Datahub Stock Market From gold prices, NASDAQ listings, to S&P 500 companies, you'll find it all on datahub.io
- 12. **Global Financial Data** Global Financial Data gives you exactly what it says on the tin; data about the finances of the world. Ranges from real estate, global macro data, to market data.
- 13. IMF Data The IMF, or International Monetary Fund, is an organization that aims to foster monetary collaboration between countries. You can find data on trade, government finance, and financial development.
- 14. **The Atlas of Economic Complexity** The Atlas of Economic Complexity provides data about global trade dynamics over time. Want to know the quantity of textiles China exported to South Korea? Easy.
- 15. World Bank Not only does the World Bank provide financial data about countries, but it also provides data on education and health.
- 16. **Financial Times Data** Here you'll find cold, hard numbers about the different markets in the world. Data include fluctuations in currency, yield rates of bonds, and commodity prices.

directly as an image, Handling date values, Chart typology, Line charts, Histograms, Bar charts, Horizontal Bar Charts, Multiseries bar charts, Pie chart. Preparing time series data. Introduction to R **Module 4** Assignment Programming 10 Sessions Topics: **R Environment**, Using R Studio, Vectors, List, Matrices, Arrays, Data Frames, Factors. Functions -Conditional Functions, User Defined Functions. Reading Data from files, Handling Missing Data, Installing Packages, R Graphics – Plot, Line, Scatter Plot, Pie Charts, Bars, Histogram, Box Plots, 3D Pie Charts, 3D Scatter Plot, Visualization with GG Plot. R Statistics – Dataset, Max & Min, Mean Median Mode, Subgroup Analyses, Probability Distributions, Pipes in R. **List of Laboratory Tasks:** Experiment No 1: Create a Numpy array and perform the following operations on it Level 1: Basic Statistics, Copying, Slicing & Subsetting, Indexing, Flattening, Reshaping, Resizing, Level 2: Sorting, Swapping, Dealing with Missing values Experiment No. 2: Create a PANDAS Data frame and perform the following operations on Level 1: Descriptive Statistics, Indexing & ReIndexing, Renaming, Iteration, Sorting, Dealing with Missing Data Level 2: Statistical functions, Window functions, Aggregations Experiment No. 3: Create a PANDAS Data frame and perform the following operations on Level 1: Group by Operations, Merging/Joining, Concatenation, Level 2: Time Series, Categorical Data and Text Data Experiment No. 4: Demonstrate Reading and Writing using IO API tools Level 1: CSV and EXCEL files, HTML and XML files, Level 2: HDF5 CPickle Experiment No. 5: Using Matplotlib, Visualize the Data Level 1: Visualize the data using Line Chart, Bar Charts, Pie Chart, Histograms, Bar chart, Horizontal Bar Chart Level 2: Visualize the data using Multiseries Bar Chart, Multiseries Stacked Bar Chart Experiment No. 6: Install R Studio and perform basic operations Level 1: Vectors, List, Matrices, Arrays, Data Frames, Factors, Level 2: Functions and handling Missing Data Experiment No. 7: Using R graphics perform the following Level 1: Plot, Line, Scatter Plot, Pie Charts, Bars, Histogram, Box Plots, Level 2: 3D Pie Charts, 3D Scatter Plot, GG Plot Experiment No. 8: Using R Statistics perform the following Level 1: Max & Min, Mean Median Mode, Subgroup Analyses, Level 2: Probability Distributions and Pipes Targeted Application & Tools that can be used: **Data Exploration** 

- Data Visualization
- Data Analysis

#### Tools:

- Google Colab
- Anaconda
- R Studio

# Project work

A scenario will be given to the students to be developed as a series of Program/ Application.

On completion of Module 2 and Module 4, students will be asked to develop a Mini Project using Python and R.

| Course<br>Description     |        | The course introduces the core intuitions behind Deep Learning, an advanced branch of Machine Learning involved in the development and application of Artificial Neural Networks that function by simulating the working principle of human brain. Deep learning algorithms extract layered high-level representations of data in a way that maximizes performance on a given task. The course includes theory and lab components which emphasizes on understanding the implementation and application of deep neural networks in various prominent problem domains like speech recognition, sentiment analysis, recommendations, and computer vision etc. The course facilitates the students to interpret and appreciate the successful application of deep neural nets in various prediction and classification tasks of ML. |  |  |                                |                                     |       |  |  |

Experiment No. 3: Programming assignment to build a multiple layer neural network with specific model parameters and hyperparameters on a given real life dataset.

Level 1: Programming assignment to implement a MLP with

- o possibility to use 2-4 layers
- o ReLU for the hidden layer
- Sigmoid in the output layer
- o optimization via gradient descent (GD)

Level 2: Programming assignment to implement the neural network and add some more hyperparameters in the perceptron model

- o softmax output layer
- o optimization via stochastic gradient descent (SGD)
- o Gradient checking code (!!!)

Generate the confusion matrix

Experiment No. 4: Programming assignment to implement classification of linearly separable Data with a Deep neural network (Application: Binary classification).

Level 1: Programming scenarios to build a binary classifier with a deep ANN.

Level 2: Programming scenarios to build a binary classifier with a deep ANN

- Weight initialization with random noise (!!!) (use normal distribution with changing std. deviation for now)
- o implement dropout, *l*2 regularization
- o implement a different optimization scheme (RPROP, RMSPROP, ADAGRAD)
- employ batch normalization

**Experiment No. 5:** Programming assignment to implement a basic Convolution Neural Network.

**Level 1:** Programming scenarios which use the concept of convolution and pooling to implement a CNN.

**Level 2:** Programming scenarios which use the concept of convolution and pooling to implement a CNN and also specify some parameters like number of filters, length of feature detector, stride etc.

Experiment No. 6: Programming assignment to perform image segmentation and object detection using CNNs.

**Level 1**: Programming assignment to instantiate a CNN (that uses FullyConnectedLayers) and train the neural network using the training data from MNIST data set.

Level 2: Programming assignment to instantiate a CNN (that uses FullyConnectedLayers) and train the neural network using the training data from MNIST data set. Choose appropriate hyper parameters for the training of the neural network. Plot the cost versus training iterations using different mini-batch sizes: 16; 64; 256; 1024. Record the test accuracy in percentage and total training time you spent in seconds. Implement Adam Optimizer. To obtain full marks, the network should be able to achieve a test accuracy of 90% or more across many different random seeds.

**Experiment No. 7:** Programming assignment to employ CNN in image classification from given dataset.

Level 1: Programming scenario to instantiate a CNN (with at least one convolutional layer) and train the neural network using the training data from CIFAR10 data. Choose appropriate hyperparameters for the training of the neural network. The network should be able to achieve a test accuracy of at least 50% within 10 training epochs.

**Level 2:** Programming scenario to build a CNN (with more than one convolutional layer) and train the neural network using the training data from CIFAR10 data. Choose appropriate hyperparameters for the training of the neural network. The network should be able to achieve a test accuracy of at least 50% within 10 training epochs. Continue to train further and examine training and testing performance. Report hyperparameters (learning rate, number of hidden layers, number of nodes in each hidden layer, batch size and number of epochs) of the Deep Neural Network. Also, explain the observations.

Experiment No. 8: Programming assignment to perform Sentence (text) Classification using Convolutional Neural Networks.

Level 1: Programming Scenarios to utilize CNN to categorize text data in given datasets like SST movie reviews.

Level 2: Programming Scenarios to utilize CNN to categorize text data in given datasets like SST and MR movie reviews.

Experiment No. 9: Programming assignment to apply Recurrent Neural Networks for sentiment analysis of text data.

**Level 1:** Programming scenario to build a model to perform sentiment analysis of IMDB movie reviews using. Reviews are categorized into two polarities: positive and negative.

**Level 2:** Programming scenario to build a model to perform sentiment analysis of IMDB movie reviews. Reviews are categorized into three polarities: positive, negative and neutral.

Experiment No. 10: Programming assignment to create a generative model for text, characterby-character using Recurrent neural networks.

Level 1: Programming scenario to implement a multi-layer Recurrent Neural Network like LSTM for training/sampling from character-level language models, which takes one text file as input and trains an RNN that learns to predict the next character in a sequence. The RNN can then be used to generate text character by character that will look like the original training data.

Level 2: Programming scenario to implement a multi-layer Recurrent Neural Network utilizing both LSTM and GRU in turns for training/sampling from character-level language models, which takes one text file as input and trains an RNN that learns to predict the next character in a sequence. The RNN can then be used to generate text character by character that will look like the original training data. Train the model and use it to generate new text.

Experiment No. 11: Programming assignment to implement RNN models for multivariate time series forecasting.

Level 1: Programming scenario to implement a many-to-one Recurrent Neural Network for Stock Price forecasting, i.e. trained with a certain number of day's data, the model should predict the stock price of the next day.

Level 2: Programming scenario to implement a many-to-one Recurrent Neural Network for Stock Price forecasting, i.e. trained with a certain number of day's data, the model should predict the stock price of the next day. Students are free to use RNN, GRU, or LSTM (or compare between) and any number of layers and architecture. In the testing, plot the ground truth and your predicted values for 100 days.

**Experiment No. 12:** Programming assignment to implement Autoencoders and deep Boltzmann's machines.

**Level 1:** Programming scenario to implement a basic recommender system using deep Boltzmann's machines.

**Level 2:** Programming scenario to build a recommender system with Collaborative filtering algorithm using deep Boltzmann's machines,

# Targeted Application & Tools that can be used:

Targeted employment sector is not restricted to any single domain. Today, ML and Dl have been employed for data analysis and improved business intelligence in every sector. Targeted job profiles include Data Analyst, Data Scientist, Data Engineer, Neuroinformatician, Bioinformatician, Image Recognition, Research Analyst, Full Stack Developer for Deep Learning, Natural Language Process Engineer, Business Analyst etc. Few of the top recruiters are Amazon, NVIDIA. Microsoft, IBM, Accenture, Facebook, Intel, Samsung, Lenovo, Adobe etc., among numerous others.

**Tools**: Neural Designer, AutoML, AutoDL, Keras, TensorFlow, Torch, Google Colaboratory, Spider, Jupiter Notebook

# **Project work/Assignment:**

Throughout the progression in each module, students will have to submit scenario based programming Assignments/Experiments as listed in "List of Lab Tasks". On completion of each module, students will be asked to develop a Mini Project, similar to the following:

# • Music genre classification system

This is one of the interesting deep learning project ideas. This is an excellent project to nurture and improve one's deep learning skills. The aim is to create a deep learning model that uses neural networks to classify the genre of music automatically. For this project, students will use an FMA (Free Music Archive) dataset. FMA is an interactive library comprising high-quality and legal audio downloads. It is an open-source and easily accessible dataset.

However, it is noteworthy that before one can use the model to classify audio files by genre, he/she will have to extract the relevant information from the audio samples (like spectrograms, MFCC, etc.)

# • Image Caption generator

This is one of the trending deep learning project ideas. This is a Python-based deep learning project that leverages Convolutional Neural Networks and LTSM (a type of Recurrent Neural Network) to build a deep learning model that can generate captions for an image. An Image caption generator combines both computer vision and natural language processing techniques to analyze and identify the context of an image and describe them accordingly in natural human languages (for example, English,

Spanish, Danish, etc.). This project will strengthen one's knowledge of CNN and LSTM, and one will learn how to implement them in real-world applications as this.

# • Visual tracking system

A visual tracking system is designed to track and locate moving object(s) in a given time frame via a camera. It is a handy tool that has numerous applications such as security and surveillance, medical imaging, augmented reality, traffic control, video editing and communication, and human-computer interaction. This system uses a deep learning algorithm to analyze sequential video frames, after which it tracks the movement of target objects between the frames. The two core components of this visual tracking system are Target representation and localization

# • Traffic Signal Classification

The traffic sign classification project is useful for all autonomous vehicles. Machines are able to identify traffic signs from the image. Students can use the GTSRB dataset that contains 43 different traffic sign classes. This is a good project to understand image classification.

# • Driver Drowsiness Detection

The driver drowsiness detection is a project which can detect whether a person is sleeping or not while driving. We can implement a model for drivers and it can also prevent accidents from happening.

# • Autocolouring old Black and white images

The idea of this project is to make a model that is capable of colorizing old black and

white

with

images to colorful images. Digital artists take a few hours to color the image but now

Deep Learning, it is possible to color an image within seconds.

Course Title: Seminar - I

**Type of Course:** L-T-P-C: 0-0-0-1

Version No.: 1.0

Course Pre-requisites: Nil

Anti-requisites: Nil

## **Course Description**

This course is designed to enhance the research aptitude, presentation skills, and domain knowledge of postgraduate students. Students are required to select a recent topic related to their specialization, perform an extensive literature survey, and prepare a seminar report. The seminar is to be presented before a committee comprising faculty members and peers. This process fosters critical thinking, self-directed learning, and effective communication skills, while also promoting collaborative learning and peer feedback.

## **Course Objectives**

- To develop the ability to conduct independent literature reviews and identify key issues in a chosen domain.
- To improve students' oral and written communication skills for technical and academic settings.
- To encourage active participation in academic discussions and constructive feedback.

### **Course Outcomes**

Upon successful completion of this course, students will be able to:

- 1. **(Understand)** Identify and comprehend emerging research areas relevant to their field.
- 2. **(Apply)** Apply analytical skills to review and synthesize information from multiple sources.
- 3. (Analyze) Organize and structure academic content logically for presentation.
- 4. **(Create)** Prepare technical documents (seminar report) adhering to standard formats.
- 5. **(Apply)** Deliver an effective oral presentation using appropriate tools and techniques.
- 6. (Evaluate) Critically respond to questions and feedback from peers and faculty.
- 7. **(Understand)** Recognize the importance of continuous learning and staying updated in their field of study.

Course Code: SEM5002 Course Title: Seminar – II

**Type of Course:** L-T-P-C: 0-0-0-1

Version No.: 1.0

Course Pre-requisites: --Anti-requisites: Nil

### **Course Description**

Seminar–II aims to further deepen the students' research orientation and domain expertise through an advanced-level presentation. Students are expected to explore a specific research problem or recent technological advancement aligned with their dissertation work. This includes critical evaluation of literature, identification of research gaps, and articulation of research objectives. The seminar emphasizes precision in scientific communication, research ethics, and the ability to engage in scholarly discourse with clarity and confidence.

## **Course Objectives**

- To enhance the depth of understanding in a focused research area.
- To build competence in formulating and communicating advanced technical ideas.
- To develop academic and professional presentation capabilities for conferences or pre-thesis discussions.

### **Course Outcomes**

Upon successful completion of this course, students will be able to:

- 1. **(Understand)** Identify a specific research problem and contextualize it within the broader academic framework.
- 2. **(Analyze)** Critically review and synthesize high-impact literature to define research gaps.
- 3. **(Apply)** Develop a well-structured seminar report aligned with research methodology principles.
- 4. **(Create)** Present a coherent and persuasive argument related to a chosen research direction.
- 5. **(Evaluate)** Respond analytically to queries and peer reviews with a research-oriented mindset.
- 6. **(Create)** Demonstrate improved academic writing and oral communication for professional contexts.
- 7. **(Understand)** Reflect on feedback for refining research direction and lifelong scholarly development.
