12.	Specific Regulations regarding Assessment and Evaluation	
13.	Additional clarifications - Rules and Guidelines for Transfer of Credits from MOOC, etc.	
PART B: PROGRAM STRUCTURE		
14.	Structure / Component with Credit Requirements Course Baskets & Minimum Basket wise Credit Requirements	
15.	Minimum Total Credit Requirements of Award of Degree	
16.	Other Specific Requirements for Award of Degree, if any, as prescribed by the Statutory Bodies	
PART C: CURRICULUM STRUCTURE		
17.	Curriculum Structure – Basket Wise Course List	
18.	Practical / Skill based Courses – Internships / Thesis / Dissertation / Capstone Project Work / Portfolio / Mini project	
19.	List of Elective Courses under various Specializations / Stream Basket	
20.	List of Open Electives to be offered by the School / Department (Separately for ODD and EVEN Semesters).	
21.	List of MOOC Courses	

22.	Recommended Semester Wise Course Structure / Flow including the Program / Professional Elective Paths / Options	
23.	Course Catalogue of all Courses Listed including the Courses Offered by other School / Department and Discipline / Program Electives	

1. Vision & Mission of the University and the School / Department

1.1 Vision of the University

To be a Value-driven Global University, excelling beyond peers and creating professionals of integrity and character, having concern and care for society.

1.2 Mission of the University

- Commit to be an innovative and inclusive institution by seeking excellence in teaching, research and knowledge-transfer.
- Pursue Research and Development and its dissemination to the community, at large.
- Create, sustain and apply learning in an interdisciplinary environment with consideration for ethical, ecological and economic aspects of nation building.
- Provide knowledge-based technological support and services to the industry in its growth and development.
- To impart globally-applicable skill-sets to students through flexible course offerings and support industry's requirement and inculcate a spirit of new-venture creation.

1.3 Vision of Presidency School of Computer Science and Engineering

To be a value based, practice-driven School of Computer Science and Engineering, committed to developing globally-competent Engineers, dedicated to developing cutting-edge technology, towards enhancing Quality of Life.

1.4 Mission of Presidency School of Computer Science and Engineering

- Cultivate a practice-driven environment, with computing-based pedagogy, integrating theory and practice.
- Attract and nurture world-class faculty to excel in Teaching and Research, in the realm of Computing Sciences.
- Establish state-of-the-art computing facilities, for effective Teaching and Learning experiences.
- Promote Interdisciplinary Studies to nurture talent for global impact.
- Instill Entrepreneurial and Leadership Skills to address Social, Environmental and Community-needs.

2. Preamble to the Program Regulations and Curriculum

This is the subset of Academic Regulations and it is to be followed as a requirement for the award of B.Tech degree.

The Curriculum is designed to take into the factors listed in the Choice Based Credit System (CBCS) with focus on Social Project Based Learning, Industrial Training, and Internship to enable the students to become eligible and fully equipped for employment in industries, choose higher studies or entrepreneurship.

In exercise of the powers conferred by and in discharge of duties assigned under the relevant provision(s) of the Act, Statutes and Academic Regulations, the Academic Council hereby makes the following Regulations.

3. Short Title and Applicability

- a. These Regulations shall be called the Bachelor of Technology Degree Program Regulations and Curriculum 2025-2029.
- b. These Regulations are subject to, and pursuant to the Academic Regulations 2025.
- c. These Regulations shall be applicable to the ongoing Bachelor of Technology Degree Programs of the 2025-2029 batch, and to all other Bachelor of Technology Degree Programs which may be introduced in future.
- d. These Regulations shall supersede all the earlier Bachelor of Technology Degree Program Regulations and Curriculum, along with all the amendments thereto.
- e. These Regulations shall come into force from the Academic Year 2024-2025.

4. Definitions

In these Regulations, unless the context otherwise requires:

- a. *"Academic Calendar" means the schedule of academic and miscellaneous events as approved by the Vice Chancellor;*
- b. *"Academic Council" means the Academic Council of the University;*
- c. *"Academic Regulations" means the Academic Regulations, of the University;*
- d. *"Academic Term" means a Semester or Summer Term;*
- e. *"Act" means the Presidency University Act, 2013;*
- f. *"AICTE" means All India Council for Technical Education;*
- g. *"Basket" means a group of courses bundled together based on the nature/type of the course;*
- h. *"BOE" means the Board of Examinations of the University;*
- i. *"BOG" means the Board of Governors of the University;*
- j. *"BOM" means the Board of Management of the University;*
- k. *"BOS" means the Board of Studies of a particular Department/Program of Study of the University;*
- l. *"CGPA" means Cumulative Grade Point Average as defined in the Academic Regulations;*
- m. *"Clause" means the duly numbered Clause, with Sub-Clauses included, if any, of these Regulations;*
- n. *"COE" means the Controller of Examinations of the University;*
- o. *"Course In Charge" means the teacher/faculty member responsible for developing and organising the delivery of the Course;*
- p. *"Course Instructor" means the teacher/faculty member responsible for teaching and evaluation of a Course;*
- q. *"Course" means a specific subject usually identified by its Course-code and Course-title, with specified credits and syllabus/course-description, a set of references, taught by some teacher(s)/course-instructor(s) to a specific class (group of students) during a specific Academic Term;*
- r. *"Curriculum Structure" means the Curriculum governing a specific Degree Program offered by the University, and, includes the set of Baskets of Courses along with minimum credit requirements to be earned under each basket for a degree/degree with specialization/minor/honours in addition to the relevant details of the Courses and Course catalogues (which describes the Course content and other important information about the Course). Any specific requirements for a particular program may be brought into the Curriculum structure of the specific program and relevant approvals should be taken from the BOS and Academic Council at that time.*
- s. *"DAC" means the Departmental Academic Committee of a concerned Department/Program of*

Study of the University;

- t. *"Dean" means the Dean / Director of the concerned School;*
- u. *"Degree Program" includes all Degree Programs;*
- v. *"Department" means the Department offering the degree Program(s) / Course(s) / School offering the concerned Degree Programs / other Administrative Offices;*
- w. *"Discipline" means specialization or branch of B.Tech. Degree Program;*
- x. *"HOD" means the Head of the concerned Department;*
- y. *"L-T-P-C" means Lecture-Tutorial-Practical-Credit – refers to the teaching – learning periods and the credit associated;*
- z. *"MOOC" means Massive Open Online Courses;*
- aa. *"MOU" means the Memorandum of Understanding;*
- bb. *"NPTEL" means National Program on Technology Enhanced Learning;*
- cc. *"Parent Department" means the department that offers the Degree Program that a student undergoes;*
- dd. *"Program Head" means the administrative head of a particular Degree Program/s;*
- ee. *"Program Regulations" means the Bachelor of Technology Degree Program Regulations and Curriculum, 2022-2026;*
- ff. *"Program" means the Bachelor of Technology (B.Tech.) Degree Program;*
- gg. *"PSOE" means the Presidency School of Engineering;*
- hh. *"Registrar" means the Registrar of the University;*
- ii. *"School" means a constituent institution of the University established for monitoring, supervising and guiding, teaching, training and research activities in broadly related fields of studies;*
- jj. *"Section" means the duly numbered Section, with Clauses included in that Section, of these Regulations;*
- kk. *"SGPA" means the Semester Grade Point Average as defined in the Academic Regulations;*
- ll. *"Statutes" means the Statutes of Presidency University;*
- mm. *"Sub-Clause" means the duly numbered Sub-Clause of these Program Regulations;*
- nn. *"Summer Term" means an additional Academic Term conducted during the summer break (typically in June-July) for a duration of about eight (08) calendar weeks, with a minimum of thirty (30) University teaching days;*
- oo. *"SWAYAM" means Study Webs of Active Learning for Young Aspiring Minds.*
- pp. *"UGC" means University Grant Commission;*
- qq. *"University" means Presidency University, Bengaluru; and*
- rr. *"Vice Chancellor" means the Vice Chancellor of the University.*

5. Program Description

The Bachelor of Technology Degree Program Regulations and Curriculum 2022-2026 are subject to, and, pursuant to the Academic Regulations, 2021. These Program Regulations shall be applicable to the following ongoing Bachelor of Technology (B.Tech.) Degree Programs of 2022-2026 offered by the Presidency School of Computer Science and Engineering (PSCS):

1. Bachelor of Technology in Computer Science and Engineering, abbreviated as B.Tech. Computer Science and Engineering;
2. Bachelor of Technology in Computer Science and Technology (Big Data), abbreviated as B.Tech. Computer Science and Technology (Big Data);

3. Bachelor of Technology in Computer Science and Engineering (Block Chain), abbreviated as B.Tech. Computer Science and Engineering (Block Chain);
4. Bachelor of Technology in Computer Science and Technology (Dev Ops), abbreviated as B.Tech. Computer Science and Technology (Dev Ops);
5. Bachelor of Technology in Computer Science and Engineering (Cyber Security), abbreviated as B.Tech. Computer Science and Engineering (Cyber Security);
6. Bachelor of Technology in Computer Science and Engineering (Internet of Things), abbreviated as B.Tech. Computer Science and Engineering (Internet of Things);
7. Bachelor of Technology in Computer Science and Engineering (Data Science), abbreviated as B.Tech. Computer Science and Engineering (Data Science);
8. Bachelor of Technology in Computer Science and Technology (Artificial Intelligence and Machine Learning), abbreviated as B.Tech. Computer Science and Technology (Artificial Intelligence and Machine Learning);
9. Bachelor of Technology in Information Science and Technology, abbreviated as B.Tech. Information Science and Technology;
10. Bachelor of Technology in Computer Science and Information Technology, abbreviated as B.Tech. Computer Science and Information Technology;
11. Bachelor of Technology in Computer Science and Engineering (Networks), abbreviated as B.Tech. Computer Science and Engineering (Networks);
12. Bachelor of Technology in Computer Engineering (Artificial Intelligence and Machine Learning), abbreviated as B.Tech. Computer Engineering (Artificial Intelligence and Machine Learning);
13. Bachelor of Technology in Information Science and Engineering (Artificial Intelligence and Robotics), abbreviated as B.Tech. Information Science and Engineering (Artificial Intelligence and Robotics); and
14. Bachelor of Technology in Computer Science and Engineering (Artificial Intelligence and Machine Learning) abbreviated as B.Tech. Computer Science and Engineering (Artificial Intelligence and Machine Learning);
15. B. Tech Robotics and Artificial Intelligence
16. B. Tech Artificial Intelligence and Data Science

5.1 These Program Regulations shall be applicable to other similar programs, which may be introduced in future.

5.2 These Regulations may evolve and get amended or modified or changed through appropriate approvals from the Academic Council, from time to time, and shall be binding on all concerned.

5.3 The effect of periodic amendments or changes in the Program Regulations, on the students admitted in earlier years, shall be dealt with appropriately and carefully, so as to ensure that those students are not subjected to any unfair situation whatsoever, although they are required to conform to these revised Program Regulations, without any undue favour or considerations

6. Minimum and Maximum Duration

- 6.1 Bachelor of Technology Degree Program is a Four-Year, Full-Time Semester based program. The minimum duration of the B.Tech. Program is four (04) years and each year comprises of two academic Semesters (Odd and Even Semesters) and hence the duration of the B.Tech. program is eight (08) Semesters.
- 6.2 A student who for whatever reason is not able to complete the Program within the normal period or the minimum duration (number of years) prescribed for the Program, may be

- allowed a period of two years beyond the normal period to complete the mandatory minimum credits requirement as prescribed by the concerned Program Regulations and Curriculum. In general, the permissible maximum duration (number of years) for completion of Program is 'N' + 2 years, where 'N' stands for the normal or minimum duration (number of years) for completion of the concerned Program as prescribed by the concerned Program Regulations and Curriculum.
- 6.3 The time taken by the student to improve Grades/CGPA, and in case of temporary withdrawal/re-joining (Refer to Clause **Error! Reference source not found.** of Academic Regulations), shall be counted in the permissible maximum duration for completion of a Program.
 - 6.4 In exceptional circumstances, such as temporary withdrawal for medical exigencies where there is a prolonged hospitalization and/or treatment, as certified through hospital/medical records, women students requiring extended maternity break (certified by registered medical practitioner), and, outstanding sportspersons representing the University/State/India requiring extended time to participate in National/International sports events, a further extension of one (01) year may be granted on the approval of the Academic Council.
 - 6.5 The enrolment of the student who fails to complete the mandatory requirements for the award of the concerned Degree (refer Section 19. **Error! Reference source not found.** of Academic Regulations) in the prescribed maximum duration (Clauses 18.1 and 18.2 of Academic Regulations), shall stand terminated and no Degree shall be awarded.

7 Programme Educational Objectives (PEO)

After four years of successful completion of the program, the graduates shall be:

PEO1. Demonstrate as a Computer Engineering Professional.

PEO2. Engage in lifelong learning through research and professional development,

PEO3. Serve as a leader in the profession through consultancy, extension activities or entrepreneurship.

8 Programme Outcomes (PO) and Programme Specific Outcomes (PSO)

8.1 Programme Outcomes (PO)

On successful completion of the Program, the students shall be able to:

PO1: Engineering Knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization to develop to the solution of complex engineering problems.

PO2: Problem Analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development.

PO3: Design/Development of Solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required.

PO4: Conduct Investigations of Complex Problems: Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions.

PO5: Engineering Tool Usage: Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems.

PO6: The Engineer and The World: Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment.

PO7: Ethics: Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws.

PO8: Individual and Collaborative Team work: Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.

PO9: Communication: Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences

PO10: Project Management and Finance: Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.

PO11: Life-Long Learning: Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change.

8.2 Program Specific Outcomes (PSOs):

On successful completion of the Program, the students shall be able to:

PSO 1: Show a deep understanding of the principles of information science to explain essential concepts, solve computational problems using theory learnt, and create systems and applications that are both reliable and efficient.

PSO2: Utilize programming capabilities, software engineering tools, and subject knowledge to develop hands-on applications, supporting students in pursuing careers in software development, academic advancement, research, or entrepreneurial initiatives.

PSO3: Analyze and optimize information systems using appropriate methodologies to enhance performance and scalability.

9 Admission Criteria (as per the concerned Statutory Body)

The University admissions shall be open to all persons irrespective of caste, class, creed, gender or nation. All admissions shall be made on the basis of merit in the qualifying examinations; provided that forty percent of the admissions in all Programs of the University shall be reserved for the students of Karnataka State and admissions shall be made through a Common Entrance Examination conducted by the State Government or its agency and seats shall be allotted as per the merit and reservation policy of the State Government from time to time. The admission criteria to the B.Tech. Program is listed in the following Sub-Clauses:

- 9.1 An applicant who has successfully completed Pre-University course or Senior Secondary School course (+2) or equivalent such as (11+1), 'A' level in Senior School Leaving Certificate Course from a recognized university of India or outside or from Senior Secondary Board or equivalent, constituted or recognized by the Union or by the State Government of that Country for the purpose of issue of qualifying certificate on successful completion of the course, may

- apply for and be admitted into the Program.
- 9.2 Provided further, the applicant must have taken Physics and Mathematics as compulsory subjects in the Pre-University / Higher Secondary / (10+2) / (11+1) examination, along with either Chemistry / Biology / Electronics / Computer Science / Biotechnology subject, and, the applicant must have obtained a minimum of 45% of the total marks (40% in case of candidates belonging to the Reserved Category as classified by the Government of Karnataka) in these subjects taken together.
 - 9.3 The applicant must have appeared for Joint Entrance Examinations (JEE) Main / JEE (Advanced) / Karnataka CET / COMED-K, or any other State-level Engineering Entrance Examinations.
 - 9.4 Reservation for the SC / ST and other backward classes shall be made in accordance with the directives issued by the Government of Karnataka from time to time.
 - 9.5 Admissions are offered to Foreign Nationals and Indians living abroad in accordance with the rules applicable for such admission, issued from time to time, by the Government of India.
 - 9.6 Candidates must fulfil the medical standards required for admission as prescribed by the University.
 - 9.7 If, at any time after admission, it is found that a candidate had not in fact fulfilled all the requirements stipulated in the offer of admission, in any form whatsoever, including possible misinformation and any other falsification, the Registrar shall report the matter to the Board of Management (BOM), recommending revoking the admission of the candidate.
 - 9.8 The decision of the BOM regarding the admissions is final and binding.

10 Lateral Entry / Transfer Students requirements

10.1 Lateral Entry

The University admits students directly to the second year (3rd Semester) of the B.Tech. Degree program as per the provisions and/or regulations of the Government of Karnataka pertaining to the "Lateral Entry" scheme announced by the Government from time to time. Further, the general conditions and rules governing the provision of Lateral Entry to the B.Tech. Program of the University are listed in the following Sub-Clauses:

- 10.1.1 Admission to 2nd year (3rd Semester) of the B.Tech. Degree program shall be open to the candidates who are holders of a 3-year Diploma in Engineering (or equivalent qualification as recognized by the University), who have secured not less than forty-five percentage (45%) marks in the final year examination (5th and 6th Semesters of the Diploma Program) in the appropriate branch of Engineering. Provided that, in case of SC / ST and OBC candidates from Karnataka the minimum marks for eligibility shall be forty percent (40%).
- 10.1.2 Provided further that, candidates seeking Lateral Entry may be required to complete specified bridge Courses as prescribed by the University. Such bridge Courses, if any, shall not be included in the CGPA computations.
- 10.1.3 All the existing Regulations and Policies of the University shall be binding on all the students admitted to the Program through the provision of Lateral Entry.
- 10.1.4 The Course requirements prescribed for the 1st Year of the B.Tech. Program shall be waived for the student(s) admitted through Lateral Entry and the duration of the B.Tech.

Program for such students is three (03) years, commencing from the 3rd Semester (commencement of the 2nd Year) of the B.Tech. Program and culminating with the 8th Semester (end of the 4th Year) of the B.Tech. Program.

- 10.1.5 Provided that, if a Lateral Entry student misses any mandatory program specific courses that are typically offered in the 1st year (1st or 2nd semesters), then those courses must be cleared by the students as soon as possible, preferably during the Summer Term.
- 10.1.6 The existing Program Regulations of the concerned Program to which the student is admitted through the provision of Lateral Entry shall be binding on the student with effect from the 3rd Semester of the Program. i.e., the Program Structure and Curriculum from the 3rd to 8th Semesters of the Program concerned shall be binding on the student admitted through Lateral Entry. Further, any revisions / amendments made to the Program Regulations thereafter, shall be binding on all the students of the concerned Program.
- 10.1.7 All the Courses (and the corresponding number of Credits) prescribed for the 1st Year of the concerned B.Tech. Program shall be waived for the student(s) admitted to the concerned B.Tech. Program through Lateral Entry. Further, the *Minimum Credit Requirements* for the award of the B.Tech. Degree in the concerned Program shall be prescribed / calculated as follows:

The ***Minimum Credit Requirements*** for the award of the Bachelor of Technology (B.Tech.) Degree prescribed by the concerned Bachelor of Technology Degree Program Regulations and Curriculum, 2024-2028, minus the number of Credits prescribed / accepted by the Equivalence Committee for the 1st Year (1st and 2nd Semesters) of the B.Tech. Program.

For instance, if the *Minimum Credit Requirements* for the award of the Bachelor of Technology (B.Tech.) Degree as prescribed by the Regulations for B.Tech. (Information Science and Engineering) is "N" Credits, and, if the total credits prescribed in the 1st Year (total credits of the 1st and 2nd Semesters) of the Program concerned is "M" Credits, then the *Minimum Credit Requirements* for the award of the B.Tech. in Information Science and Engineering for a student who joins the Program through the provision of the Lateral Entry, shall be "N – M" Credits.

- 10.1.8 Further, no other waiver except the Courses prescribed for the 1st year of the B.Tech. Program of the University shall be permissible for students joining the B.Tech. Program through the provision of Lateral Entry.

10.2 Transfer of student(s) from another recognized University to the 2nd year (3rd Semester) of the B.Tech. Program of the University

A student who has completed the 1st Year (i.e., passed in all the Courses / Subjects prescribed for the 1st Year) of the B.Tech. / B.E. / B.S., Four-Year Degree Program from another recognized University, may be permitted to transfer to the 2nd Year (3rd Semester) of the B.Tech. Program of the University as per the rules and guidelines prescribed in the following Sub-Clauses:

The concerned student fulfils the criteria specified in Sub-Clauses 10.1.1, 10.1.2 and 10.1.3.

- 10.2.1** The student shall submit the Application for Transfer along with a non-refundable Application Fee (as prescribed by the University from time to time) to the University no later than July 10 of the concerned year for admission to the 2nd Year (3rd Semester) B.Tech. Program commencing on August 1 on the year concerned.
- 10.2.2** The student shall submit copies of the respective Marks Cards / Grade Sheets / Certificates along with the Application for Transfer.
- 10.2.3** The transfer may be provided on the condition that the Courses and Credits completed by the concerned student in the 1st Year of the B.Tech. / B.E. / B.S. Four Degree Program from the concerned University, are declared equivalent and acceptable by the Equivalence Committee constituted by the Vice Chancellor for this purpose. Further, the Equivalence Committee may also prescribe the Courses and Credits the concerned students shall have to mandatorily complete, if admitted to the 2nd Year of the B.Tech. Program of the University.
- 10.2.4** The Branch / Discipline allotted to the student concerned shall be the decision of the University and binding on the student.

11 Change of Branch / Discipline / Specialization

A student admitted to a particular Branch of the B.Tech. Program will normally continue studying in that Branch till the completion of the program. However, the University reserves the right to provide the option for a change of Branch, or not to provide the option for a change of Branch, at the end of 1st Year of the B.Tech. Program to eligible students in accordance with the following rules and guidelines: framed by the University from time to time.

- 11.1 Normally, only those students, who have passed all the Courses prescribed for the 1st Year of the B.Tech. Program and obtained a CGPA of not less than 6.50 at the end of the 2nd Semester, shall be eligible for consideration for a change of Branch.
- 11.2 Change of Branch, if provided, shall be made effective from the commencement of the 3rd Semester of the B.Tech. Program. There shall be no provision for change of Branch thereafter under any circumstances whatsoever.
- 11.3 The student provided with the change of Branch shall fully adhere to and comply with the Program Regulations of the concerned Branch of the B.Tech. Program, the Fee Policy pertaining to that Branch of the B.Tech. Program, and, all other rules pertaining to the changed Branch existing at the time.
- 11.4 Change of Branch once made shall be final and binding on the student. No student shall be permitted, under any circumstances, to refuse the change of Branch offered.

11.5 The eligible student may be allowed a change in Branch, strictly in order of *inter se* merit, subject to the conditions given below:

11.5.1 The actual number of students in the 3rd Semester in any particular Branch to which the transfer is to be made, should not exceed the intake fixed by the University for the concerned Branch;

11.5.2 The actual number of students in any Branch from which transfer is being sought does not fall below 75% of the total intake fixed by the University for the concerned Branch.

The process of change of Branch shall be completed within the first five days of Registration for the 3rd Semester of the B.Tech. Program.

12 Specific Regulations regarding Assessment and Evaluation (including the Assessment Details of NTCC Courses, Weightages of Continuous Assessment and End Term Examination for various Course Categories)

12.1 The academic performance evaluation of a student in a Course shall be according to the University Letter Grading System based on the class performance distribution in the Course.

12.2 Academic performance evaluation of every registered student in every Course registered by the student is carried out through various components of Assessments spread across the Semester. The nature of components of Continuous Assessments and the weightage given to each component of Continuous Assessments (refer Clause 12.5 of Academic Regulations) shall be clearly defined in the Course Plan for every Course, and approved by the DAC.

12.3 Format of the End-Term examination shall be specified in the Course Plan.

12.4 Grading is the process of rewarding the students for their overall performance in each Course. The University follows the system of Relative Grading with statistical approach to classify the students based on the relative performance of the students registered in the concerned Course except in the following cases:

- Non-Teaching Credit Courses (NTCC)
- Courses with a class strength less than 30

Absolute grading method may be adopted, where necessary with prior approval of concerned DAC.

Grading shall be done at the end of the Academic Term by considering the aggregate performance of the student in all components of Assessments prescribed for the Course. Letter Grades (Clause **Error! Reference source not found.** of Academic Regulations) shall be awarded to a student based on her/his overall performance relative to the class performance distribution in the concerned Course. These Letter Grades not only indicate a qualitative assessment of the student's performance but also carry a quantitative (numeric) equivalent called the Grade Point.

12.5 Assessment Components and Weightage

S.No	Credit Structure	Type	CA		Mid-Term		End-term		Project	Total	Exam Conducted by
			Theory	Practical	Theory	Practical	Theory	Practical			
1	3-0-0-3	Percentage	25%	-	25%	-	50%	-	-	100%	Mid-Term & End Term by CoE
		Marks	50	-	50	-	100	-	-	200	
2	2-0-2-3	Percentage	12.50%	12.50%	12.50%	12.50%	25%	25%	-	100%	Mid-Term & End Term by CoE
		Marks	25	25	25	25	50	50	-	200	
3	1-0-4-3	Percentage	-	25%	5%	20%	10%	40%	-	100%	Mid-Term & End Term by School
		Marks	-	25	5	20	10	40	-	100	
4	2-0-4-4	Percentage	12.50%	12.50%	10%	15%	20%	30%	-	100%	*Mid-Term & End Term by CoE
		Marks	25	25	20	30	40	60	-	200	
5	0-0-4-2	Percentage	-	50%	-	-	-	-	50%	100%	Project evaluated by IC in School level
		Marks	-	50	-	-	-	-	50	100	
6	0-0-2-1	Percentage	-	100%	-	-	-	-	-	100%	Only CA in School Level
		Marks	-	100	-	-	-	-	-	100	
7	3-0-2-4	Percentage	12.50%	12.50%	15%	10%	30%	20%	-	100%	Mid-Term & End Term by CoE
		Marks	25	25	30	20	60	40	-	200	
8	2-0-0-2	Percentage	25%	-	25%	-	50%	-	-	100%	Mid-Term & End Term by CoE
		Marks	50	-	50	-	100	-	-	200	

The exact weightages of Evaluation Components shall be clearly specified in the concerned PRC and respective Course Plan.

Normally, for Practice/Skill based Courses, without a defined credit structure (L-T-P) [NTCC], but with assigned Credits (as defined in Clause **Error! Reference source not found.** of the Academic Regulations), the method of evaluation shall be based only on Continuous Assessments. The various components of Continuous Assessments, the distribution of weightage among such components, and the method of evaluation/assessment, shall be as decided and indicated in the Course Plan/PRC. The same shall be approved by the respective DAC.

12.6 Minimum Performance Criteria:

12.6.1 Theory only Course and Lab/Practice Embedded Theory Course

A student shall satisfy the following minimum performance criteria to be eligible to earn the credits towards the concerned Course:

- A student must obtain a minimum of 30% of the total marks/weightage assigned to the End Term Examinations in the concerned Course.
- The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of the components of Continuous Assessments, Mid Term Examinations and End Term Examinations in the concerned Course.

12.6.2 Lab/Practice only Course and Project Based Courses

The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of all assessment components in the concerned Course.

- 12.6.3** A student who fails to meet the minimum performance criteria listed above in a Course shall be declared as "Fail" and given "F" Grade in the concerned Course. For theory Courses, the student shall have to re-appear in the "Make-Up Examinations" as scheduled by the University in any subsequent semester, or, re-appear in the End Term Examinations of the same Course when it is scheduled at the end of the following Semester or Summer Term, if offered. The marks obtained in the Continuous Assessments (other than the End Term Examination) shall be carried forward and be included in computing the final grade, if the student secures the minimum requirements (as per Clause 12.6.1, 12.6.2) in the "Make-Up Examinations" of the concerned Course. Further, the student has an option to re-

register for the Course and clear the same in the summer term/ subsequent semester if he/she wishes to do so, provided the Course is offered.

13 Additional clarifications - Rules and Guidelines for Transfer of Credits from MOOC, etc. – Note: These are covered in Academic Regulations

The University allows students to acquire credits from other Indian or foreign institutions and/or Massive Open Online Course (MOOC) platforms, subject to prior approval. These credits may be transferred and counted toward fulfilling the minimum credit requirements for the award of a degree. The process of transfer of credits is governed by the following rules and guidelines:

- 13.1** The transfer of credits shall be examined and recommended by the Equivalence Committee (Refer **Error! Reference source not found.**) and approved by the Dean - Academics.
- 13.2** Students may earn credits from other Indian or foreign Universities/Institutions with which the University has an MOU, and that MOU shall have specific provisions, rules and guidelines for transfer of credits. These transferred credits shall be counted towards the minimum credit requirements for the award of the degree.
- 13.3** Students may earn credits by registering for Online Courses offered by *Study Web of Active Learning by Young and Aspiring Minds (SWAYAM)* and *National Program on Technology Enhanced Learning (NPTEL)*, or other such recognized Bodies/ Universities/Institutions as approved by the concerned BOS and Academic Council from time to time. The concerned School/Parent Department shall publish/include the approved list of Courses and the rules and guidelines governing such transfer of credits of the concerned Program from time to time. The Rules and Guidelines for the transfer of credits specifically from the Online Courses conducted by SWAYAM/ NPTEL/ other approved MOOCs are as stated in the following Sub-Clauses:
 - 13.3.1** A student may complete SWAYAM/NPTEL/other approved MOOCs as mentioned in Clause 13.3 and transfer equivalent credits to partially or fully complete the mandatory credit requirements of Discipline Elective Courses and/or the mandatory credit requirements of Open Elective Courses as prescribed in the concerned Curriculum Structure. However, it is the sole responsibility of the student to complete the mandatory credit requirements of the Discipline Elective Courses and the Open Elective Courses as prescribed by the Curriculum Structure of the concerned Program.
 - 13.3.2** SWAYAM/NPTEL/ other approved MOOCs as mentioned in Clause 13.3 shall be approved by the concerned Board of Studies and placed (as Annexures) in the concerned PRC.
 - 13.3.3** Parent Departments may release a list of SWAYAM/NPTEL/other approved MOOCs for Pre-Registration as per schedule in the Academic Calendar or through University Notification to this effect.
 - 13.3.4** Students may Pre-Register for the SWAYAM/NPTEL/other approved MOOCs in the respective Departments and register for the same Courses as per the schedule announced by respective Online Course Offering body/institute/ university.
 - 13.3.5** A student shall request for transfer of credits only from such approved Courses as mentioned in Sub-Clause above.

- 13.3.6** SWAYAM/NPTEL/other approved MOOCs Courses are considered for transfer of credits only if the concerned student has successfully completed the SWAYAM/NPTEL/other approved MOOCs and obtained a certificate of successful/satisfactory completion.
- 13.3.7** A student who has successfully completed the approved SWAYAM/NPTEL/ other approved MOOCs and wants to avail the provision of transfer of equivalent credits, must submit the original Certificate of Completion, or such similar authorized documents to the HOD concerned, with a written request for the transfer of the equivalent credits. On verification of the Certificates/Documents and approval by the HOD concerned, the Course(s) and equivalent Credits shall forwarded to the COE for processing of results of the concerned Academic Term.
- 13.3.8** The credit equivalence of the SWAYAM/NPTEL/other approved MOOCs are based on Course durations and/or as recommended by the Course offering body/institute/university. The Credit Equivalence mapped to SWAYAM/ NPTEL approved Courses based on Course durations for transfer of credits is summarised in Table shown below. The Grade will be calculated from the marks received by the Absolute Grading Table **Error! Reference source not found..**

Sl. No.	Course Duration	Credit Equivalence
1	4 Weeks	1 Credit
2	8 Weeks	2 Credits
3	12 Weeks	3 Credits

- 13.3.9** The maximum permissible number of credits that a student may request for credit transfer from MOOCs shall not exceed 20% of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree.
- 13.3.10** The University shall not reimburse any fees/expense; a student may incur for the SWAYAM/NPTEL/other approved MOOCs.

13.4 The maximum number of credits that can be transferred by a student shall be limited to forty percent (40%) of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree. However, the grades obtained in the Courses transferred from other Institutions/MOOCs, as mentioned in this Section (13.0), shall not be included in the calculation of the CGPA

13.5 Mandatory Non-Credit Course Completion Requirements: All mandatory non-credit courses shall be satisfactorily completed by the student as part of the degree requirements. These courses will be evaluated and awarded letter grades based on the following criteria:

S (Satisfactorily Completed): Awarded when the student successfully completes all prescribed course requirements.

NC (Not Completed): Awarded when the student fails to meet the prescribed course requirements.

A student receiving an NC grade must reappear for and complete the course in accordance with the guidelines prescribed by the University.

In the case of non-taught and non-credited mandatory courses—where students are advised to undertake learning through MOOC platforms—there shall be a clearly defined Course Catalogue and a corresponding Course Plan. The Course Plan shall outline the assessment components, which will form the basis for evaluation.

14. Structure / Component with Credit Requirements Course Baskets & Minimum Basket wise Credit Requirements

The B.Tech. (Information Science and Engineering) Program Structure (2025-2029) totalling 162 credits. Table 7 summarizes the type of baskets, number of courses under each basket and the associated credits that are mandatorily required for the completion of the Degree.

S.No.	Baskets	Credit Contribution
1	Humanities and Social Sciences including Management Courses (HSMC)	10
2	Basic Science Courses (BSC)	26
3	Engineering Science Courses (ESC)	22
4	Professional Core Courses (PCC)	62
5	Professional Elective Courses (PEC)	18
6	Open Elective Courses (OEC)	6
7	Project Work (PRW)	16
8	Mandatory Courses (MAC)	0
	Total Credits	160 (Minimum)

In the entire Program, the practical and skill based course component contribute to an extent of approximately 57% out of the total credits of 160 for B.Tech. (Information Science and Engineering) program of four years' duration.

15. Minimum Total Credit Requirements of Award of Degree

As per the AICTE guidelines, a minimum of 160 credits is required for the award of a B.Tech. degree.

16. Other Specific Requirements for Award of Degree, if any, as prescribed by the Statutory Bodies,

- 16.1 The award of the Degree shall be recommended by the Board of Examinations and approved by the Academic Council and Board of Management of the University.
- 16.2 A student shall be declared to be eligible for the award of the concerned Degree if she/he:
 - a. Fulfilled the Minimum Credit Requirements and the Minimum Credits requirements under various baskets;
 - b. Secure a minimum CGPA of 4.50 in the concerned Program at the end of the Semester/Academic Term in which she/he completes all the requirements for the award of the Degree as specified in Sub-Clause a of Academic Regulations;

**PRESIDENCY
UNIVERSITY**

- c. No dues to the University, Departments, Hostels, Library, and any other such Centers/ Departments of the University; and
- d. No disciplinary action is pending against her/him.

3	CSE7300	Capstone Project	-	-	-	10
Total No. of Credits						16

Practical / Skill based Courses like internship, project work, capstone project, research project / dissertation, and such similar courses, where the pedagogy does not lend itself to a typical L-T-P-C Structure as defined in Clause 5.1 of the Academic Regulations, 2021, are simply assigned the number of Credits based on the quantum of work / effort required to fulfill the learning objectives and outcomes prescribed for the concerned Courses. Such courses are referred to as Non-Teaching Credit Courses (NTCC). These Courses are designed to provide students with hands-on experience and skills essential for their professional development. These courses aim to equip students with abilities in problem identification, root cause analysis, problem-solving, innovation, and design thinking through industry exposure and project-based learning. The expected outcomes are first level proficiency in problem solving and design thinking skills to better equip B.Tech. graduates for their professional careers. The method of evaluation and grading for the Practical / Skill based Courses shall be prescribed and approved by the concerned Departmental Academic Committee

(refer Annexure A of the Academic Regulations, 2021). The same shall be prescribed in the Course Handout.

18.1 Internship

A student may undergo an Internship for a period of 4-6 weeks in an industry / company or academic / research institution during the Semester Break between 4th and 5th Semesters or 6th and 7th Semesters, subject to the following conditions:

18.1.1 The Internship shall be in conducted in accordance with the Internship Policy prescribed by the University from time to time.

18.1.2 The selection criteria (minimum CGPA, pass in all Courses as on date, and any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Internship to a student;

18.1.3 The number of Internships available for the concerned Academic Term. Further, the available number of internships shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution providing the Internship, as stated in Sub-Clause 18.1.2 above.

18.1.4 A student may opt for Internship in an Industry / Company or academic / research institution of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the Internship on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Internship confirms to the University that the Internship shall be conducted in accordance with the Program Regulations and Internship Policy of the University.

18.1.5 A student selected for an Internship in an industry / company or academic / research institution shall adhere to all the rules and guidelines prescribed in the Internship Policy of the University.

18.2 Mini Project Work

A student may opt to do a Mini Project Work for a period of 6-8 weeks in an Industry / Company or academic / research institution or the University Department(s) during the 5th / 6th / 7th Semester as applicable, subject to the following conditions:

18.2.1 The Mini Project Work shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.

18.2.2 The student may do the mini project work in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 18.2.1). Provided further, that the Industry / Company or academic / research institution offering such mini project work confirms to the University that the mini project work will be conducted in accordance with the Program Regulations and requirements of the University.

18.3 Capstone Project

A student may undergo a Capstone Project for a period of 12-14 weeks in an industry / company or academic / research institution in the 7th / 8th Semester as applicable, subject to the following conditions:

18.3.1 The Capstone Project shall be conducted in accordance with the Capstone Project Policy prescribed by the University from time to time.

18.3.2 The selection criteria (minimum CGPA, pass in all Courses as on date, and any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Capstone Project to a student;

18.3.3 The number of Capstone Project available for the concerned Academic Term. Further, the available number of Capstone Project shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution providing the Capstone Project, as stated in Sub-Clause 18.3.2 above.

18.3.4 A student may opt for Capstone Project in an Industry / Company or academic / research institution of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the Capstone Project on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Capstone Project confirms to the University that the Capstone Project shall be conducted in accordance with the Program Regulations and Capstone Project Policy of the University.

18.3.5 A student selected for a Capstone Project in an industry / company or academic / research institution shall adhere to all the rules and guidelines prescribed in the Capstone Project Policy of the University.

18.4 Research Project / Dissertation

A student may opt to do a Research Project / Dissertation for a period of 12-14 weeks in an Industry / Company or academic / research institution or the University Department(s) as an equivalence of Capstone Project, subject to the following conditions:

18.4.1 The Research Project / Dissertation shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.

The student may do the Research Project / Dissertation in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 18.4.1). Provided further, that the Industry / Company or academic / research institution offering such Research Project / Dissertation confirms to the University that the Research Project / Dissertation work will be conducted in accordance with the Program Regulations and requirements of the University.

21. List of MOOC Courses

21.1 Presidency University students are given the opportunity to study abroad in International Universities through a selection process coordinated by the Office of International Affairs (OIA). Such selected students need to complete their credits for the semester that they are abroad in the following way:

- 21.1.1. The student needs to study and complete School Core and Program Core Courses in offline mode only.
- 21.1.2. Massive Open Online Course (MOOC) courses maybe given for Open Elective and Discipline Elective Courses. These courses need to be approved by the concerned BOS and Academic Council from time to time.
- 21.1.3. SWAYAM/NPTEL/ other approved MOOCs shall be approved by the concerned Board of Studies and placed in the concerned PRC.
- 21.1.4. Student shall register for these courses in the ERP of Presidency University.
- 21.1.5. For these MOOC courses faculty coordinators are identified. These faculty should have undergone similar MOOC courses and therefore should be familiar with the mode of class conduction, types of assessments and evaluation procedures.
- 21.1.6. Study materials shall be provided to the students as video lectures shared by the MOOCs Coordinator(s), or the students may access the approved MOOCs Portal directly. The mode of class conduction is determined by the MOOCs coordinator(s) as detailed in the Course Catalogue and Course Plan.
- 21.1.7. The question paper shall be prepared by the MOOCs coordinator(s).
- 21.1.8. Students write the exams in online mode. These exams are scheduled and conducted by the School.
- 21.1.9. Results are evaluated by School and given to the Office of the Controller of Examinations (CoE).
- 21.1.10. The details of the duration, credits and evaluation are given below:

Sl#	Duration	Credits	Evaluation
1.	12 weeks	3	Continuous Assessment –50 Marks Mid Term –50 Marks End Term-100 Marks
2.	8 weeks	2	Mid Term-50 Marks End Term-100 Marks
3	4 weeks	1	End Term-100 Marks

21.2 List of MOOC – B.Tech. (Information Science and Engineering)							
Table 3.9: MOOC Professional Elective Courses for B.Tech. (Information Science and Engineering) Duration is 4 weeks (01 credit) / 8 weeks (02 credits) / 12 weeks (03 credits)							
Sl.	Course Code	Course Name	L	T	P	C	Contact Hours

1	CSE3111	Artificial Intelligence: Search Methods for Problem Solving	3	0	0	3	3

23	CSE3213	C Programming and Assembly Language	1	0	0	1	1
24	CSE3214	Python for Data Science	1	0	0	1	1
25	CSE3215	Software Conceptual Design	1	0	0	1	1
26	CSE3117	Industrial Digital Transformation	3	0	0	3	3
27	CSE3118	Blockchain for Decision Makers	3	0	0	3	3
28	CSE3349	Technology for Lawyers	3	0	0	3	3
29	CSE3430	Deep Learning for Natural Language Processing	3	0	0	3	3
30	CSE3431	Machine Learning for Engineering and Science Applications	3	0	0	3	3

31	CSE3432	Algorithms in Computational Biology and Sequence Analysis	3	0	0	3	3
32	CSE3433	Introduction to Large Language Models (LLMs)	3	0	0	3	3
33	CSE3434	Quantum Algorithms and Cryptography	3	0	0	3	3

21.3 MOOC - Open Elective Courses for B. Tech. (Information Science and Engineering)

Table 3.10: MOOC Open Elective Courses							
Open Elective Courses Duration is 4 weeks (01 credit)/ 8 weeks (02 credits)/ 12 weeks (03 credits)							
Sl. No.	Course code	Course Name	L	T	P	C	
1	BBA2022	Supply Chain digitization	3	0	0	3	
2	BBA2021	E Business	3	0	0	3	
3	BBB2016	Business Analytics for Management Decisions	3	0	0	3	
4	BBB2015	Artificial Intelligence for Investments	3	0	0	3	
5	MEC3001 *	Design and Development of Product	1	0	0	1	
6	ENG3004 **	Perspectives of Neurolinguistics	1	0	0	1	
7	PPS4009 ***	Working in Contemporary Teams	1	0	0	1	
8	MGT3001	Data Analysis and Decision Making	3	0	0	3	
<i>Note :</i>							
* MEC3001 is offered to the students who had 1 credit shortage because of implementation of CBCS system during their 1st year.							
** ENG3004 is offered to the students who had 2 credits shortage along with the MEC3001 because of implementation of CBCS System during their 1st year.							
*** PPS4009 is offered to only International students in place of Interview Preparedness course of their batch mates.

23.Course Catalogue

Course Catalogue of all Courses Listed including the Courses Offered by other School / Department and Discipline / Programme Electives – Course Code, Course Name, Prerequisite, Anti-requisite, Course Description, Course Outcome, Course Content (with Blooms Level, CO, No. of Contact Hours), Reference Resources.

The Course Catalogues for the Courses offered in each basket are attached below:

Course Code: MAT2301	Course Title: Calculus and Differential Equations Type of Course: BSC – Theory	L-T- P- C	3	1	0	4
Version No.	2.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	The course focuses on the concepts of calculus and linear algebra with reference to specific engineering problems. The course is of both conceptual and analytical type in nature.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of “CALCULUS AND LINEAR ALGEBRA” and attain Skill Development through problem solving techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: 1) Comprehend the knowledge of applications of matrix principles. 2) Understand the concept of partial derivatives and their applications. 3) Apply the principles of integral calculus to evaluate integrals. 4) Adopt the various analytical methods to solve differential equations.					
Course Content:						
Module 1	Linear Algebra					16 Classes
	Review: Types of matrices, elementary transformations, Linear Algebra:					

Module 1	Electrical Conductivity Of Solids And Semiconducting Devices	Assignment	11 Sessions
Topics:	List at least 3 sets of Matrix Applications concerning the respective branch of Engineering and obtain the solution using C Programming Python.		
Law of mass action, junctions.	Classification of materials based on bandgap, Fermi energy and Fermi level, Fermi level in semiconductors, Select any one simple differential equation pertaining to the respective branch of engineering, identify the dependent and independent variable. Obtain the solution and compare the solution sets by varying the values of the dependent variable.		
Module 2	Quantum Mechanics	Assignment	11 Sessions
Topics:	Introduction, de-Broglie hypothesis, Heisenberg's uncertainty principle- statement and physical significance. Wave function properties and physical significance. Schrodinger's time independent wave equation. Probability density and normalization of wave function. Wave Function in Ket Notation: Matrix form of wave function, Identity operator, Determination of $ 0\rangle$ and $ 1\rangle$, Pauli Matrices and its operations on 0 and 1 states, Mention of Conjugate and Transpose, Unitary Matrix U, Examples: 2x2 Matrices and their multiplication (Inner Product), Probability, Orthogonality		
References:	Text Book: Sankara Rao, Introduction to Partial differential equations, Prentice Hall of India, edition, 2011. B. S. Grewal (2017). Higher Engineering Mathematics by 44th Edition, Khanna Publishers.		
Module 3	Quantum Computing	Term paper	12 Sessions
Topics:	Introduction to quantum computing, Moore's law & its end, Differences between classical and quantum computing, Concept of Qubit and its properties, Representation of qubit by Bloch sphere, Quantum Gates: Single Qubit Gates: Quantum Not Gate, Pauli Z Gate, Hadamard Gate, Phase Gate (or S Gate), T Gate. Multiple Qubit Gates: Controlled gate - CNOT Gate, (Discussion for 4 different input states). Representation of Swap gate, Controlled Z gate, Toffoli Gate. Engineering Mathematics, John Wiley and sons, Inc.10th Edition		
Module 4	Lasers And Optical Fibers	Term paper	11 Sessions
Topics:	Interactions of radiations with matter, expression for energy density of a system under thermal equilibrium in terms of Einstein's coefficients, conditions for LASER action using Einstein's coefficients, Characteristics of laser, conditions and requisites of laser, Principle of optical fibers, Numerical aperture and acceptance angle (Qualitative), Attenuation, Applications: Point to point communication with block diagram, application of optical fibers in endoscopy.		
E-resources/ Web links:	1. https://nptel.ac.in/courses/109104124/ 2. https://nptel.ac.in/courses/111106051/ 3. https://nptel.ac.in/courses/111102137/ 4. https://www.cuemath.com/learn/mathematics/algebra-vs-calculus/ 5. https://stanford.edu/~shervine/teaching/cs-229/refresher-algebra-calculus 6. https://math.hmc.edu/calculus/hms-mathematics-calculus-online-tutorials/linear-algebra/ 7. https://www.math.hkust.edu.hk/~maqlan/ma006-00671.html 8. https://www.scu.edu.au/study-at-scu/units/math1005/2022/		
Targeted Application & Tools that can be used:	1. Areas of application are optoelectronics industry, Solar panel technologies, quantum computing software, electronic devices using transistors and diodes, memory devices, endoscopy, SQUIDS in MRI, Advanced material characterizations using SEM and STM. 2. Origin, excel and Mat lab soft wares for programming and data analysis.		
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course			
Assessment Type	<p>relevant to SKILL DEVELOPMENT: The course focuses on the concepts of calculus and linear algebra with reference to specific engineering problems. The course is of both conceptual and analytical type. The lab sessions associated with the course are concerned with acquiring an ability to use the mathematical tools for solving engineering problems.</p> <ul style="list-style-type: none"> Midterm exam Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screen shot accessing digital resource.) Quiz End Term Exam Self-Learning <p>1. Prepare a comprehensive report on non-conventional energy resources in Karnataka and their pros and cons.</p>		

2. Write a report on importance of quantum entanglement in supercomputers.

Topics relevant to “SKILL DEVELOPMENT”: Fundamentals of materials, Lasers and optical fibers.

for Skill Development through Participative Learning Techniques. This is attained through the Assignment/ Presentation as mentioned in the assessment component in course handout.

Course Code: MEC1006	Course Title: Engineering Graphics Type of Course: School Core & Theory Only	L- T- P- C	2	0	0	2
Version No.	1.2					
Course Pre-Requisites	NIL					
Anti-requisites	NIL					
Course Description	The course is designed with the objective of giving an overview of engineering graphics. It is introductory in nature and acquaints the students with the techniques used to create engineering drawings. The course emphasizes on projection of points, lines, planes and solids and isometric projections.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of “Engineering Graphics” and attain SKILL DEVELOPMENT through Problem solving methodologies.					

Course Outcome s	<p>On successful completion of this course the students shall be able to:</p> <p>(1) Demonstrate competency of Engineering Graphics as per BIS conventions and standards.</p> <p>(2) Comprehend the theory of projection for drawing projections of Points, Lines and Planes under different conditions.</p> <p>(3) Prepare multiview orthographic projections of Solids by visualizing them in different positions.</p> <p>(4) Prepare pictorial drawings using the principles of isometric projections to visualize objects in three dimensions.</p>				
	Course Content:				
Module 1	Introduction to Drawing	Assignment		Standard technical drawing	7 Sessions
	<p>Topics: Introduction, drawing instruments and their uses, relevant BIS conventions and standards, Lettering, Line conventions, dimensioning, Selection of drawing sheet size and scale. [02 Hours: Comprehension Level]</p>				
Module 2	Orthographic projections of	Assignment		Projection methods Analysis	7 Sessions
	Points, Straight Lines and Plane Surfaces				
	<p>Topics: Introduction, Definitions – Elements of projection and methods of projection, Planes of projection, reference line and conventions adopted. First angle and third angle projections. Projection of Points in all 4 quadrants. Projections of Straight Lines (located in first quadrant/first angle projection only): True and apparent lengths, true and apparent Inclinations to reference planes. (No application problems). Projection of Plane surfaces (First angle projection): Regular plane surfaces – triangle, square, rectangle, pentagon, hexagon and circle – in different positions inclined to both the planes using change of position method only. [10 Hours: Application Level]</p>				
Module 3	Orthographic Projections of Solids	Assignment		Multi-view drawing Analysis	8 Sessions
	<p>Topics: Introduction, Projection of right regular prisms, pyramids, cone, hexahedron and tetrahedron in different positions (Problems resting on HP only and First angle projection). [10 Hours: Application Level]</p>				

Module 4	Isometric Projections of Solids (Using isometric scale only)	Assignment	Spatial Visualization	8 Sessions
<p>Topics: Introduction, Isometric scale, Isometric projections of right regular prisms, cylinders, pyramids, cones and their frustums, spheres and hemispheres, hexahedron (cube), and combination of 2 solids, conversion of orthographic view to isometric projection of simple objects. [8 Hours: Application Level]</p>				
<p>Text Book: 1.N. D. Bhatt, “Engineering Drawing: Plane and Solid Geometry,” Charotar Publishing House Pvt. Ltd.</p>				
<p>References:</p> <ol style="list-style-type: none"> 1. K.R. Gopalakrishna, “Engineering Graphics”, Subhash Publishers, Bangalore. 2. D. M. Kulkarni, A. P. Rastogi, A. K. Sarkar, “Engineering Graphics with AutoCAD,” Prentice Hall. 3. D. A. Jolhe, “Engineering Drawing with Introduction to AutoCAD,” Tata McGraw Hill. <p>Web resources: https://nptel.ac.in/courses/112103019</p>				
<p>Topics relevant to “SKILL DEVELOPMENT”: Projection in first and third angle for SKILL DEVELOPMENT through Problem Solving methodologies. This is attained through the assessment component mentioned in the course handout.</p>				

Course Code: ENG1900	Course Name: English for Technical Communication	L- T- P- C	2	0	0	2
Version No.						

Course Pre-requisites	NIL			
Anti-requisites	NIL			
Course Description	<p>This course enhances the technical communication skills of BTech and BCA students, focusing on clarity, precision, and conciseness in academic and professional settings. Students will learn to differentiate between general and technical communication, analyze technical content, develop structured writing skills, and deliver effective presentations. Through interactive activities such as TED Talk analyses, report writing, and presentation practice, the course provides hands-on experience for real-world applications. By the end, students will be equipped to communicate complex technical information effectively in various professional contexts.</p>			
Course Outcomes	<p>On successful completion of the course the students shall be able to:</p> <ol style="list-style-type: none"> 1. Differentiate between general and technical communication. 2. Explain key reading comprehension techniques to enhance understanding of technical texts. 3. Write clear, concise, and well-structured technical reports and documents. 4. Deliver technical presentations and implement peer feedback for continuous improvement. 5. Explain ethical practices in digital communication for professional use. 			
Course Content: Theory				
Module 1	Technical communication	Quiz	Listening	6 Hours
<p>Introduction to Communication</p> <p>Technical vs. General Communication</p> <p>Characteristics of technical communication</p> <p>Importance of clarity, precision, and objectivity</p> <p>Activity:</p> <ul style="list-style-type: none"> • Watching TED Talks/videos to identify differences in technical and general vocabulary 				
Module 2	Technical Reading	Assignment	Reading	6 hours
<p>Reading Comprehension</p> <p>Note making & Notetaking</p> <p>Content Analysis</p> <p>Activity:</p> <ul style="list-style-type: none"> • Reading technical articles and answering comprehension questions • Note making techniques 				

Module 3	Technical Writing	Assignment	Writing	6 hours
<p>Paragraph Writing</p> <p>Structure of a paragraph (topic sentence, supporting details, coherence)</p> <p>Report Writing</p> <p>Structure of technical and project reports (Introduction, Methods, Results, Discussion)</p> <p>Activity:</p> <ul style="list-style-type: none"> • Writing a structured paragraph on a technical topic • Writing project reports 				
Module 4	Professional Presentation	Presentation	Speaking	6 Hours
<p>Introduction to Presentation Skills</p> <p>Preparing a Presentation</p> <ul style="list-style-type: none"> • Structuring content (Introduction, Body, Conclusion) • Designing effective slides (Text, visual aids, readability, and impact) <p>Delivering a Presentation</p> <ul style="list-style-type: none"> • Engagement techniques, Storytelling, narration, pitching ideas handling Q&A • Conviction, commitment, generating interest through enthusiasm <p>Demonstration & Practice</p> <ul style="list-style-type: none"> • Giving presentations on topics based on their academic interest • Evaluating and providing peer feedback <p>Activity:</p> <ul style="list-style-type: none"> • Analyze a real-world engineering issue and present solutions using a structured approach. 				
Module 5	Digital Communication and Ethics	Assignment	Digital Awareness	6 Hours
<ul style="list-style-type: none"> • Introduction to Digital Communication Platforms • Influence of Internet Slang, Emojis, and Memes on Language • Ethics in Digital Communication <p>Activity:</p> <ul style="list-style-type: none"> • Create a 100-word social media post for a technical topic, focusing on clarity and tone for a general audience. 				
<p>Targeted Application & Tools that can be used: ChatGPT, Deep seek, Gemini, YouTube, Instagram, Quill Bot, Grammarly, Padlet</p>

Topics Relevant to “employability”: Teamwork and Collaboration, Critical Thinking and Problem-Solving

Topics Relevant to “Human Values and Professional Ethics”: Critical reasoning, Inclusivity and Fairness

Course Code: CSE1500	Course Title: Computational Thinking using Python Type of Course: ESC - Theory	L- T-P- C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	The purpose of this course is to enable the students to develop python scripts using its basic programming features and also to familiarize the Python IDLE and other software's. This course develops analytical skills to enhance the programming abilities. The associated laboratory provides an opportunity to validate the concepts taught and enhances the ability to build real time applications.					
Course Object	The objective of the course is to familiarize the learners with the concepts of Programming in Python and attain Employability through Problem Solving Methodologies.					
Course Outcomes	On successful completion of this course the students shall be able to: Summarize the basic Concepts of python. Demonstrate proficiency in using data structures. Illustrate user-defined functions and exception handling. Identify the various python libraries.					
Course Content:						
Module 1	Basics of Python programming	Assignment	Programming	12 Classes		
Topics: Data types, operators and Expressions, Input and Output Statements. Control Structures – Selective and Repetitive structures						
Module 2	Indexed and Associative Data Structures	Simple applications	Programming	11 Classes		
Topics: Strings, Lists, Sets, Tuples, Dictionaries						
Module 3	Functions, Exception handling and libraries	Case study	Programming	12 Classes		
Topics: User defined functions, exception handling, Introduction to python built-in libraries						

Targeted Application & Tools that can be used:

Targeted Application: Web application development, AI, Operating systems Tools: Python IDLE, ANACONDA

Application Areas:

Web Development

Course Code: ECE2022	Course Title: Digital Design Type of Course: ESC - Theory	L- P- T-C	2	0	0	2
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	<p>The purpose of this course is to enable the students to appreciate the fundamentals of digital logic circuits and Boolean algebra focusing on both combinational and sequential logic circuits. The course emphasizes on minimization techniques for making canonical and low-cost digital circuit implementations. This course deals with analysis and design of digital electronic circuits. The course also creates a foundation for future courses which includes Computer Architecture, Microprocessors, Microcontrollers, and Embedded Systems etc.</p> <p>The course enhances the Design, Implementation and Programming abilities through laboratory tasks. The associated laboratory provides an opportunity to verify the theoretical knowledge.</p>					
Course Objective	The objective of the course is SKILL DEVELOPMENT of the student by using PARTICIPATIVE LEARNING techniques.					
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <p>Describe the concepts of number systems, Boolean algebra and logic gates.</p> <p>Apply minimization techniques to simplify Boolean expressions.</p> <p>Demonstrate the Combinational circuits for a given logic</p> <p>Demonstrate the Sequential and programmable logic circuits</p> <p>Implement various combinational and sequential logic circuits using gates.</p>					
Course Content:						

Module 1	Fundamentals of Number systems- Boolean algebra and digital logic	Application Assignment	Data Analysis task	10 classes
<p>Topics:</p> <p>Review of Number systems and logic gates, Number base conversions, Overview of Boolean functions and simplifications, two, three, four variable K-Maps- Don't care conditions- Both SOP and POS- Universal Gates (NAND & NOR) Implementations. Introduction to HDL.</p>				
Module 2	Boolean function simplification	Application Assignment	Data Analysis task	10 Classes
<p>Topics:</p> <p>Introduction to Combinational circuits, Analysis, Design procedure, Binary Adder and Subtractor, Magnitude comparator, Parity generator and checker, Multiplexers-Demultiplexers, Decoders, Encoders and Priority Encoders, HDL Models of combinational circuits.</p>				
Module 3	Combinational Logic circuits:	Application Assignment	Programming Task & Data Analysis task	10 Classes
<p>Topics:</p> <p>Introduction to sequential circuits, Storage elements: latches and flip flops, Characteristic tables and equations, excitation table, Analysis of clocked sequential circuits, Mealy & Moore Models of finite state machines - Registers & Counters. HDL Models of Sequential circuits.</p>				
<p>Text Book(s):</p> <p>Mano, M. Morris and Ciletti Michael D., "Digital Design", Pearson Education, 6th edition</p> <p>Thomas L. Floyd "DIGITAL LOGIC DESIGN", Pearson Education, fourth edition.</p>

Topics related to development of “**SKILL DEVELOPMENT**”: Adders, Multiplexers, Decoders / Encoders; Flip-Flops, Counters and Registers.

Course Code: DES1146	Course Title: Introduction to Design Thinking Type of Course: Theory	L-T-P-C	1	0	0	1
--------------------------------	---	----------------	---	---	---	---

Version No.	1.0			
Course Pre-requisites	NIL			
Anti-requisites	NIL			
Course Description	The course aims to introduce students to the fundamental principles and processes of Design Thinking and will learn to apply Design Thinking methodologies to real-world challenges. The course emphasizes empathy, creativity, and collaboration, equipping students with essential skills for successful engineering practice.			
Course Objective	This course is designed to develop and familiarize the learners with the concepts of creating thinking and attain Entrepreneurship by using Participative Learning techniques.			
Course Outcomes	On successful completion of the course the students shall be able to: 1) Understand the concept and importance of Design Thinking. 2) Differentiate between traditional problem-solving and Design Thinking. 3) Identify the core stages of the Design Thinking process.			
Course Content:	All assignments and projects must be developed using the reference materials available from the PU e-resource database – JSTOR, EBSCO, Library OPAC, NPTEL Videos, etc.			
Module 1	Introduction to Design Thinking	Visual journal, book of essays, context-specific assignment/project	Visual output generation, by Visual Journal and narrative development.	3 hours
	Topic 1) Definition and Introduction to Design Thinking 2) Understand the Design Thinking Process			
Module 2	Design Thinking in Action	Visual journal, book of essays, context-specific assignment/project	Visual output generation, by visual journal and narrative development.	12 hours
	Topics: 1) Introduction to the steps of Design Thinking Process 2) Understand use cases of Design thinking 3) Design Thinking and Research Tools pertaining to Consumer Tech. , Home Tech. , Personal Tech. , Auto Tech. or Extended Reality.			
	Targeted Application & Tools that can be used: 1) Design ideation tools like Miro , SCAMPER etc. 2) Research Tools for Human Centric Design using forecasting tools like WGSN 3) Feedback tools like Google Forms , etc. 4) Expert Lectures			
	Text Book

Anti-requisites	Design Thinking by Clarke, Rachel Ivy. Series: Library Futures, Vol. 4. Chicago: ALA Neal-Schuman. 2020. eBook., Database: eBook Collection (EBSCOhost)	Anti-requisites		
Course Description	<p>The laboratory provides an opportunity to validate the concepts taught and enhances the ability to use the concepts for technological applications. The laboratory tasks aim to develop following skills: An attitude of enquiry, confidence and ability to tackle new problems, ability to interpret events and results, observe and measure physical phenomena, select suitable equipment, instrument and materials, locate faults in systems.</p> <p>The Pocket Universal Methods of Design: 100 Ways to Research Complex Problems, Develop Innovative Ideas, and Design Effective Solutions by Bruce Harrington, Bella Martin. Minneapolis: Rockport Publishers. 2017. eBook., Database: eBook Collection (EBSCOhost)</p>			
Course Outcomes	<p>On successful completion of the course the students shall be able to</p> <p>CO1: To understand electrical and optical properties of materials</p> <p>CO2: Interpret the results of various experiments to verify the concepts used in optoelectronics and advanced devices.</p> <p>What Is Design Thinking and Why Is It Important? By Rim Razzouk and Valerie Shute - Review of Educational Research, Vol. 82, No. 3 (September 2012), pp. 330-348 (19 pages), Published by:</p>			
Course Objectives	<p>American Educational Research Association to familiarize the learners with the concepts of “Applied Physics for Computer Science Cluster” and attain Skill Development through Experiential Learning techniques</p>			
List of Laboratory Tasks	<p>Experiment No. 1: Experimental errors and uncertainty using excel</p> <p>Abductive Thinking and Sensemaking: The Drivers of Design Synthesis by John Kolko, Design Issues, Level 1: Calculation of accuracy and precision of a given data</p> <p>Level 2: propagation of errors in addition, subtraction, multiplication and division</p> <p>Experiment NO 2: To determine the wavelength of semiconductor diode Laser and to estimate the particle size of lycopodium powder using diffraction.</p> <p>Level 1: Determination of Wavelength of Laser</p> <p>Level 2: Finding the particle size of lycopodium powder.</p> <p>Experiment No. 3: To determine the proportionality of Hall Voltage, magnetic flux density and the polarity of Charge carrier.</p> <p>Level 1: To determine the proportionality of Hall Voltage and magnetic flux density</p> <p>Level 2: To determine the polarity of Charge carrier.</p> <p>Experiment No. 4: To study the I-V characteristics of a given zener diode in forward and reverse bias conditions.</p> <p>Level 1: To study I –V characteristics of the given Zener diode in reverse bias and to determine break down voltage.</p> <p>Level 2: To study I –V characteristics of the given Zener diode in forward bias and to determine knee voltage and forward resistance.</p>			

Experiment No. 5: To study input and output characteristics of a given Transistor.

Level 1: To determine the input resistance of a given transistor.

Level 2: To determine current transfer characteristics and transistor parameters of a given transistor.

Experiment No. 6: Determination of Fermi energy and Fermi temperature of a given metal and bimetallic wire.

Level 1: Determination of Fermi energy and Fermi temperature of given metal wire.

Level 2: Determination of Fermi energy and Fermi temperature of given bimetallic wire.

Experiment No. 7: To study the I-V characteristics and I-R characteristics of a solar cell as a function of the irradiance.

Level 1: To study the I-V characteristics

Level 2: I-R characteristics of a solar cell as a function of the irradiance.

Experiment No. 8: Calculate the numerical aperture and study the losses that occur in optical fiber cable. .

Level 1: Calculate the numerical aperture.

Level 2: study the losses that occur in optical fiber cable.

Experiment No. 9: Plotting I-V characteristics in forward and reverse bias for LEDs and Determination of knee voltage.

Level 1: Plotting I-V characteristics in forward and reverse bias for LEDs

Level 2: Determination of knee voltage.

Experiment No. 10: Determination of Stefan's constant and verification of Stefan-Boltzmann Law.

Level 1: Determination of Stefan's constant

Level 2: Verification of Stefan-Boltzmann Law.

Experiment No. 11: : Dielectric constant

Level 1: Determination of Dielectric constant of given material

Level 2: compare the obtain results with other materials

Experiment No. 12: determine the wavelength of monochromatic light, such as sodium light, using Newton's rings.

Level 1: Determination of wavelength

Level 2: determine the radius of curvature of the Plano-convex lens.

Targeted Application & Tools that can be used:

3. Areas of application are optoelectronics industry, Solar panel technologies, quantum computing software, electronic devices using transistors and diodes, memory devices, endoscopy, SQUIDS in MRI, Advanced material characterizations using SEM and STM.
4. Origin, excel and Mat lab soft wares for programming and data analysis.

Project work/Assignment: Mention the Type of Project /Assignment proposed for this course

Assessment Type

- Midterm exam
- Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screen shot accessing digital resource.)
- Quiz
- End Term Exam
- Self-Learning

1. Prepare a comprehensive report on non-conventional energy resources in Karnataka and their pros and cons.
2. Write a report on importance of quantum entanglement in supercomputers.

Course Code: PPS1025	Course Title: Industry Readiness Program – I Type of Course: Practical Only Course	L- T - P- C	0	0	2	0
Version No.	1.0					
Course Pre-requisites	<ul style="list-style-type: none"> • Students are expected to understand Basic English. • Students should have desire and enthusiasm to involve, participate and learn. 					
Anti-requisites	NIL					
Course Description	This course is designed to enable students to set SMART goals, form professional & personal ethics for success and learn various email writing techniques. The course will benefit learners in presenting themselves effectively through various activities and learning methodologies.					

Course Objective	The objective of the course is to familiarize the learners with the concepts of “Employability for Young Professionals” and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques.		
Course Out Comes	<p>On successful completion of this course the students shall be able to:</p> <p>CO 1 Define their career goals</p> <p>CO 2 Practice ethical habits for better career success</p> <p>CO3 Demonstrate effective email writing techniques</p>		
Course Content			
Module 1	Goal Setting & Grooming	Classroom activities	10 Hours
<p>Topics: SMART Goals, formal grooming through self-introduction activity</p> <p>Activity: Real world scenarios</p>			
Module 2	Habit Formation	Role plays	10 Hours
<p>Topics: Professional and Personal ethics for success and activity-based practice</p> <p>Activity: Students to present 2 min video on building professional ethics</p>			
Module 3	Email Etiquettes	Individual and group presentation	10 Hours
<p>Topics: Types of prompts to generate effective or desired results for email etiquettes</p> <p>Activity: Individual student presenting various search prompts</p>			
Faculty: L&D			
<p>Targeted Application & Tools that can be used:</p> <ol style="list-style-type: none"> 1. TED Talks 2. You Tube Links 3. Activities 			

Assignment proposed for this course

Assignment 1: SMART Goal

Assignment 2: AI tools for prompt search

Continuous Individual Assessment

Module 1: Presentation

Module 2: Activity based assessment

Module 3: Class assessment

The topics related to skill development:

Students acquire knowledge on SMART goals, implement grooming standards, practice ethical behavior in class and campus, acquire hands-on experience to use AI tools to get search prompts for desired email etiquettes.

Course Code: ECE2052	Course Title: Digital Design Lab Type of Course: Theory &Integrated Laboratory	L- T-P- C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	The purpose of this course is to enable the students to appreciate the fundamentals of digital logic circuits and Boolean algebra focusing on both combinational and sequential logic circuits. The course emphasizes on minimization techniques for making canonical and low-cost digital circuit implementations. This course deals with analysis and design of digital electronic circuits. The course also creates a foundation for future courses which includes Computer Architecture, Microprocessors, Microcontrollers, and Embedded Systems etc. The course enhances the Design, Implementation and Programming abilities through laboratory tasks. The associated laboratory provides an opportunity to verify the theoretical knowledge.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Digital Design and attain the SKILL DEVELOPMENT through EXPERIENTIAL LEARNING.					
Course Outcomes	On successful completion of this course the students shall be able to: <ul style="list-style-type: none"> i. Implement various universal gates and Boolean functions circuits using logic gates. ii. Implement various combinational and sequential logic circuits using logic gates. 					

Course Content:	
	<p>List of Laboratory Tasks:</p> <p>Experiment NO 1: Verify the Logic Gates truth table Level 1: By using Digital Logic Trainer kit Level 2: By using Analog devices like RPS, Volt meter, Resistors and ICs</p> <p>Experiment No. 2: Verify the Boolean Function and Rules Level 1: By using Digital Logic Trainer kit Level 2: By using Analog devices like RPS, Volt meter, Resistors and ICs</p> <p>Experiment No. 3: Design and Implementations of HA/FA Level 1: By using basic logic gates and Trainer Kit Level 2: By using Universal logic gates and Trainer Kit</p> <p>Experiment No. 4: Design and Implementations of HS/FS Level 1: By using basic logic gates and Trainer Kit Level 2: By using Universal logic gates and Trainer Kit</p> <p>Experiment No. 5: Design and Implementations of combinational logic circuit for specifications Level 1: Specifications given in the form of Truth table Level 2: Specification should be extracted from the given scenario</p> <p>Experiment No. 6: Study of Flip flops</p> <p>Experiment No. 7: Design and Implementations of sequential logic circuit for specifications Level 1: Specifications given in the form of Truth table Level 2: Specification should be extracted from the given scenario</p> <p>Experiment No.8: HDL coding for basic combinational logic circuits Level 1: Gate level Modeling Level 2: Behavioral Modeling</p> <p>Experiment No.9: HDL coding for basic sequential logic circuit Level 1: Gate level Modeling Level 2: Behavioral Modeling</p>
	<p>Targeted Application & Tools that can be used:</p> <p>Digital electronics is the foundation of all modern electronic devices such as cellular phones, MP3 players, laptop computers, digital cameras, high definition televisions, Home Automation, Communication in systems in industries</p> <p>Professionally Used Software: HDL/VHDL/Verilog HDL/ OOPS</p>

Topics relevant to "SKILL DEVELOPMENT": Adders, Multiplexers, Decoders / Encoders; Flip-Flops, Counters and Registers for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: MAT2402	Course Title: Probability and Statistics Type of Course:1] School Core	L-T- P- C	3	1	0	4
Version No.	1.0					
Course Pre-requisites	MAT2301					
Anti-requisites	NIL					
Course Description	The course introduces the concepts of probability theory and statistical analysis, covering how to collect, organize, interpret, and draw inferences from data using mathematical models to understand randomness and uncertainty, with applications across various fields like science, engineering, economics, and social sciences.					
Course Objective	The objective of the course is to equip students with the foundational knowledge of probability theory and statistical methods, enabling them to collect, analyze, interpret data, and make informed decisions based on the likelihood of events occurring in various situations, often applied across different fields like science, engineering, and business.					
Course Out Comes	On successful completion of the course the students shall be able to: CO1 - be able to compute conditional probabilities directly and using Bayes' theorem, and check for independence of events. CO2 - be able to set up and work with discrete & continuous random variables; in particular, to understand the Bernoulli, binomial, geometric, Poisson distributions, uniform, normal, and exponential distributions. CO3 - Identifying different types of data relationships (linear, polynomial, exponential, logarithmic). CO4 - be able to use specific significance tests, including z-test, t-test (one- and two-sample), and chi-squared test					
Course Content:						
Module 1	Basic Probability		(15 Classes)			
Probability of an Event, multiplication rule, combinations, permutations, Addition Law, Multiplication Law, Conditional Probability, Bayes's Theorem and Problems.						
Module 2	Random Variables and Bivariate Distributions	Assignment	(15 Classes)			
Random Variables (discrete and continuous), Probability Mass/Density Functions, Mathematical Expectations, discrete probability distributions - Binomial distribution, Poisson distribution, geometric distribution, Continuous uniform distribution - exponential distribution, normal distribution, gamma distribution. Bivariate distributions and their properties, distribution of sums and quotients, conditional densities, Bayes' rule.						
Module 3	Curve Fitting & Statistical Methods		(15 Classes)			
Curve Fitting (Straight Line ($y = a + bx$), Parabola ($y = a + bx + cx^2$), Exponential Curves ($y = ae^{bx}$, $y = ab^x$ and $y = ax^b$) Measures of Central tendency, Moments, skewness and Kurtosis, Correlation - Karl Pearson's coefficient of correlation and rank correlation (with & Without repetition, Multiple Correlation - Problems. Regression analysis - lines of regression, Multiple regression - Problems.						
Module 4	Joint Probability Distribution and Sampling Theory	Assignment	(15 Classes)			
Joint Probability distribution for two discrete random variables, expectation and covariance. Random sampling, sampling distributions, Standard Error, Type I & Type II errors, Testing of Hypothesis, Test of significance - Large sample test for single proportion, difference of proportions, single mean, difference of means, and difference of standard deviations, Test for single mean, difference of means and correlation coefficients, test for ratio of variances - Chi-square test for goodness of fit and independence of attributes.						

Targeted Application & Tools that can be used:

The contents of this course has direct applications in most of the core engineering courses for problem formulations, Problem Solution and system Design.

Tools Used: R software (Open Source)

Assignment:

Select any one simple differential equation pertaining to the respective branch of engineering, identify the dependent and independent variable – Obtain the solution and compare the solution sets by varying the values of the dependent variable.

Presidency University's Knimbus library URL is: presiuniv.knimbus.com

Topics relevant to SKILL DEVELOPMENT: The course focuses on the concepts of Vector calculus and Linear Algebra with reference to specific engineering problems. The course is of both conceptual and analytical type in nature through Problem Solving. This is attained through the assessment component mentioned in the course handout.

Course Code: CHE7601	Course Title: Environmental Science Type of Course: MAC- Theory	L- T- P- C	0	0	0	0
Version No.	2.0					
Course Pre-requisites	NIL					
Anti-Requisites	NIL					
Course Description	<p>This course emphasizes the need to conserve biodiversity and adopt a more sustainable lifestyle by utilizing resources in a responsible way. Topics covered include basic principles of ecosystem functions; biodiversity and its conservation; human population growth; water resources, pollution; climate change; energy resources, and sustainability; Sustaining human societies, policies, and education.</p> <p>This course is designed to cater to Environment and Sustainability</p>					
Course Objective	The objective of the course is to familiarize the learners with the concepts of “Environmental Science” and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques.					
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <ol style="list-style-type: none"> 1) Appreciate the historical context of human interactions with the environment and the need for eco-balance. 2) Describe basic knowledge about global climate change with particular reference to the Indian context. 3) Understand biodiversity and its conservation 4) Develop an understanding on types of pollution and ways to protect the environment 5) Learn about various strategies on Global environmental management systems 					
Course Content:						
Module 1	Humans and the Environment	Assignment	Data Collection	01 class		

Topics: The man-environment interaction: **Mastery of fire; Origin of agriculture; Emergence of city-states; Great ancient civilizations and the environment.**

Self-learning topics: Humans as hunter-gatherers; Industrial revolution and its impact on the environment; Environmental Ethics and emergence of environmentalism.

Module 2	Natural Resources and Sustainable Development	Assignment		03 Classes
-----------------	--	------------	--	-------------------

Topics:
 Overview of natural resources: Definition of resource; Classification of natural resources- biotic and abiotic, renewable and non-renewable. **Water resources:** Types of water resources- fresh water and marine resources;
Soil and mineral resources: Important minerals; Mineral exploitation Soil as a resource and its degradation.
Energy resources: Sources of energy and their classification, renewable and non-renewable sources of energy; Advantages and disadvantages.
Self-learning topics: Availability and use of water resources; Environmental impact of over-exploitation, issues and challenges.; Environmental problems due to extraction of minerals and use; Sustainable Development Goals (SDGs)- targets, indicators, and challenges for SDGs.

Module 3	Environmental Issues: Local, Regional and Global	Case study		02 Classes
-----------------	---	------------	--	-------------------

Topics:
Environmental Pollution: Types of Pollution- air, noise, water, soil, municipal solid waste, hazardous waste; Trans-boundary air pollution; Acid rain; Smog.
Land use and Land cover change: land degradation, deforestation, desertification, urbanization. Global change: Ozone layer depletion; Climate change
Self-learning topics: Environmental issues and scales

Module 4	Conservation of Biodiversity and Ecosystems	Assignment		02 Classes
-----------------	--	------------	--	-------------------

Topics:
Biodiversity-Introduction, types, Species interactions, Extinct, endemic, endangered and rare species, Threats to biodiversity: Natural and anthropogenic activities.
Self-learning topics: Mega-biodiversity, Hot-spots, Major conservation policies. Biodiversity loss: past and current trends, impact.

Module 5	Environmental Pollution and Health	Case study		03 Classes
-----------------	---	------------	--	-------------------

Topics:
 Pollution, Definition, point and nonpoint sources of pollution, **Air pollution-** sources, major air pollutants, health impacts of air pollution.
Water pollution- Pollution sources, adverse health impacts on human and aquatic life and mitigation, Water quality parameters and standards.
Soil pollution and solid waste- Soil pollutants and their sources, solid and hazardous waste, Impact on human health.
Self-learning topics: Noise pollution, Thermal and radioactive pollution.

Module 6	Climate Change: Impacts, Adaptation and Mitigation	Assignment/case		02 Classes
<p>Topics: Understanding climate change: Natural variations in climate; Projections of global climate change with special reference to temperature, rainfall and extreme events; Importance of 1.5 °C and 2.0 °C limits to global warming; Impacts</p>				

Vulnerability and adaptation to climate change: Observed impacts of climate change on ocean and land systems; Sea level rise, changes in marine and coastal ecosystems; Impacts on forests and natural ecosystems; Indigenous knowledge for adaptation to climate change.

Self-learning topics: Mitigation of climate change: Synergies between adaptation and mitigation measures; National and international policy instruments for mitigation.

Module 7	Environmental Management	Case study	Data analysis	02 Classes
<p>Topics: Environmental management system: ISO 14001; Environmental risk assessment Pollution control and management; Waste Management- Concept of 3R (Reduce, Recycle and Reuse) and sustainability.</p> <p>Self-learning topics: Environmental audit and impact assessment; Eco labeling /Eco mark scheme</p>				

Module 8	Environmental Treaties and Legislation	Case study	Data analysis	01 Classes
<p>Topics: Major International Environmental Agreements: Convention on Biological Diversity (CBD), Major Indian Environmental Legislations: Environmental Protection Act, Forest Conservation Act, Public awareness.</p> <p>Self-learning topics: Paris Agreement, Conference of the Parties (COP), India's status as a party to major conventions: Air (Prevention and Control of Pollution) Act, Water (Prevention and control of Pollution) Act, Wildlife Protection Act.</p>				

Targeted Application & Tools that can be used:

Application areas are Energy, Environment and sustainability

Tools: Statistical analysis of environmental pollutants using excel, origin etc.

Project work/Assignment:

Assessment Type

- **Midterm exam**
 - **Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screenshot accessing the digital resource.)**
 - **Lab evaluation/Assignment**
 - **End Term Exam**
 - **Self-learning**
- Assignment 1: Write a Statement of Environment report of your town/city/state/country**

Assignment 2: Individual students will carry out the analyses of polluted solid, liquid, and gaseous samples and propose suitable mitigation measures. A detailed and in-depth report needs to be submitted for each case. This may include preparation of reagents, sample preparation (extraction), chemical analysis carried out, instruments and tools used, data collected and processed, inferences made and conclusions arrived at. Necessary support is given in the form of lab manual and reference links to e-books.

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Code: CIV1200	Course Title: Foundations of Integrated Engineering Type of Course: Theory Only	L- T-P- C	2	0	0	2
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	This interdisciplinary course introduces first-year engineering students to foundational principles and practices across key engineering domains, emphasizing real-world problem-solving, sustainability, and ethical innovation. Students explore how civil, mechanical, electrical, and IT systems intersect with emerging technologies like IoT, AI, and geomatics to address global challenges. Through case studies, learners gain deeper understanding of smart infrastructure, prototyping mechanical/electronic systems, and securing IT solutions. Topics include bioinformatics for environmental monitoring, GIS-enabled urban planning, renewable energy integration, and cybersecurity fundamentals. The course cultivates a holistic understanding of engineering's role in sustainable development, safety, and ethical decision-making, preparing students to contribute meaningfully to multidisciplinary projects in a technology-driven world.					
Course Objective	The objective of the course is skill development of student by using Participative Learning techniques.					
Course Outcomes	On successful completion of this course the students shall be able to: <ol style="list-style-type: none"> 1] Recall key principles of Agile, DevOps, and bioinformatics used in interdisciplinary engineering contexts. 2] Explain the role of GIS, LiDAR, and sustainable materials in designing smart infrastructure and disaster management systems. 3] Describe core components of mechanical systems and their real-world applications. 4] Describe the functionality of IoT-enabled wearable devices, embedded systems, and renewable energy integration in smart grids. 5] List foundational IT concepts such as cloud computing architectures, cybersecurity threats, and blockchain applications. 					
Course Content:						
Module 1	Foundations of Engineering Practice	Assignment	Case studies	6 Sessions		
Real-world problem-solving using data logic and practical applications, Collaboration and Innovation through multi-domain project, Engineering Ethics & Environmental Impact Emerging Fields: Automation, and Introduction to bioinformatics and its application Sustainability & Safety: Circular economy principles, carbon footprint analysis.						
Module 2	Civil Engineering & Geomatics	Assignment	Article Review	6 Sessions		

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

<p>Smart Infrastructure & Geomatics: GIS mapping, LiDAR, drone surveys for urban planning, Geospatial data analysis for disaster management. Sustainable Construction: 3D-printed structures, self-healing concrete, Digital twins for infrastructure monitoring. Green Innovations: Net-zero energy buildings, rainwater harvesting systems.</p>				
Module 3	Mechanical Engineering in Action	Assignment & Quiz	Data Collection	6 Sessions
<p>Advanced Manufacturing: Collaborative robots (cobots), additive manufacturing and 3D printing, Reverse engineering and prototyping. Energy Systems: Solar/wind energy harvesting, piezoelectric applications. Biomechanics: Prosthetics design, ergonomic product lifecycle.</p>				
Module 4	Electrical & Electronics Engineering	Assignment & Quiz	Data Collection and visualization	6 Sessions
<p>Smart Devices & Systems: Embedded systems, Wearable technology, Edge computing and hardware platforms Energy Innovations: EV charging infrastructure, wireless power transfer, Smart grid integration with renewables.</p>				
Module 5	Fundamentals of IT	Assignment & Quiz	Case studies	6 Sessions
<p>Core IT Topics: Networking basics, Cloud computing Cybersecurity & Data: Encryption, phishing prevention, zero-trust models, Database management. Emerging Tech: Blockchain for supply chains, AI/ML basics, IoT integration with cloud platforms</p>				
<p>Targeted Application & Tools that can be used: Application Areas include Interdisciplinary problem-solving, Smart city planning, disaster management, Robotics prototyping, renewable energy systems, Wearable health tech, smart grids, Secure cloud systems. Tools: 3D Printers, Autocad, Tinkercad, ArcGIS / QGIS, Arduino/Raspberry Pi</p>

Course Code: CSE2200	Course Title: Program Solving Using C Type of Course: Theory	L- T-P-C	2	0	0	2
Version No.	1.0					

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Pre-requisites	NIL			
Anti-requisites	NIL			
Course Description	The course is designed to provide complete knowledge of C language. Students will be able to develop logics which will help them to create programs and applications in C. Also by learning the basic programming constructs they can easily switch over to any other language in future.			
Course Object	The objective of the course is to familiarize the learners with the concepts of Problem Solving Using C and attain Employability through Problem Solving Methodologies.			
Course Outcomes	On successful completion of this course the students shall be able to: <ol style="list-style-type: none"> 1. Write algorithms and to draw flowcharts for solving problems 2. Demonstrate knowledge and develop simple applications in C programming constructs 3. Develop and implement applications using arrays and strings 4. Decompose a problem into functions and develop modular reusable code 5. Solve applications in C using structures and Union 6. Design applications using Sequential and Random Access File Processing. 			
Course Content:				
Module 1	Introduction to C Language	Quiz	Problem Solving	6 Sessions
Topics: Introduction to Programming – Algorithms – Pseudo Code - Flow Chart – Compilation – Execution – Preprocessor Directives (#define, #include, #undef) - Overview of C – Constants, Variables and Data types – Operators and Expressions – Managing Input and Output Operations – Decision Making and Branching - Decision Making and Looping.				
Module 2	Introduction to Arrays and Strings	Quiz	Problem Solving	6 Sessions
Topics: Arrays: Introduction – One Dimensional Array – Initialization of One Dimensional Arrays – Example Programs – Sorting (Bubble Sort, Selection Sort) – Searching (Linear Search) - Two Dimensional Arrays – Initialization of Two Dimensional Arrays. Example Programs – Matrix operations. Strings: Introduction – Declaring and Initializing String Variables – Reading Strings from Terminal – Writing String to Screen – String Handling Functions.				
Module 3	Functions and Pointers	Quiz	Problem Solving	6 Sessions
Topics: Functions: Introduction – Need for User-defined functions – Elements of User-Defined Functions: declaration, definition and function call–Categories of Functions – Recursion. Pointers: Introduction – Declaring Pointer Variables – Initialization of Variables – Pointer Operators – Pointer Arithmetic – Arrays and Pointers – Parameter Passing: Pass by Value, Pass by Reference.				
Module 4	Structures and Union	Quiz	Problem Solving	6 Sessions

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

<p>Topics: Structures: Introduction – Defining a Structure – Declaring Structure Variable – Accessing Structure Members – Array of Structures – Arrays within Structures – Union: Introduction – Defining and Declaring Union – Difference Between Union and Structure.</p>				
Module 5	File handling	Case Study	Problem Solving	6 Sessions
<p>Topics: Files: Defining and Opening a File – Closing a File – Input / Output Operations on File – Random Access Files</p>				
<p>Text Book(s): 1. E. Balaguruswamy, “Programming in ANSI C”, 8th Edition, 2019, McGraw Hill Education, ISBN: 978-93-5316- 513-0.</p>

Course Code: ENG2501	Course Name: Advanced English Type of Course: HSMC	L- T- P- C	2	0	0	2
Version No.	1.3					
Course Pre-requisites	ENG1900					
Anti-requisites	NIL					
Course Description	The course emphasizes on technical communication at advanced level by exploring critical reading, technical presentation and review writing. The purpose of the course is to enable learners to review literature in any form or any technical article and deliver technical presentations. Extensive activities in practical sessions equip to express themselves in various forms of technical communications. Technical presentations and the module on career setting focus on learners’ area of interests and enhance their English language writing skills to communicate effectively.					

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Outcome	<p>On successful completion of the course the students shall be able to:</p> <ol style="list-style-type: none"> 1. Develop a critical and informed response reflectively, analytically, discursively, and creatively to their reading. 2. Communicate effectively, creatively, accurately and appropriately in their writing. 3. Deliver technical presentations 4. Design resume and create professional portfolio to find a suitable career 			
Course Content: Theory				
Module 1	Critical Reasoning and Writing	Writing Essays	Critical Reading	4 Classes
<p>Topics:</p> <ul style="list-style-type: none"> • A Catalog of Reading Strategies • The Myth of Multitasking • A Guide to Writing Essays Speculating about Causes or Effects • Is Google Making Us Stupid (Self Study) 				
Module 2	Technical Presentation	Presentation	Oral Skills	3 Classes
<p>Topics:</p> <ul style="list-style-type: none"> • Planning the presentation • Creating the presentation • Giving the presentation 				
Module 3	Writing Reviews	Prezi	Review Writing	4 Classes
<p>Topics:</p> <ul style="list-style-type: none"> • Review Writing • Short film reviews • Advanced English Grammar (Self Study) 				
Module 4	Starting your Career	Online Writing Lab	Writing Skills	4 Classes
<p>Topics:</p> <ul style="list-style-type: none"> • Preparing a Resume • Writing Effective Application Letter • Creating a Professional Portfolio 				
<p>Targeted Application & Tools that can be used: Writing reports, Review writing, Group Discussion, Dyadic interviews, Grammarly.com</p>				

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Project work/Assignment:

Academic Journal – Assignment

In Academic Journal (CIJ), students compile task and activities completed in each module and submit to the instructor at the middle and end of the semester.

Private University Estd. in Karnataka State by Act No. 41 of 2013

	active & passive components. Additionally, this course creates a foundation for the future courses such as Electrical machines, power system, power electronics Linear Integrated Circuits, Analog Communication and Digital Communication etc.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Basics of Electrical and Electronics Engineering and attain Skill Development through Participative Learning techniques.			
Course Outcomes	On successful completion of this course the students shall be able to: 1. Apply basic laws of Electrical Engineering to compute voltage, currents and other parameters in the circuits. 2. Discuss various fundamental parameters appearing in the characteristics of semiconductor devices and their applications. 3. Summarize the operations of different biasing configurations of BJTs and amplifiers. 4. Discuss the performance characteristics and applications of various electrical Machines.			
Course Content:				
Module 1	Introduction to Electrical Circuits	Assignment/ Quiz	Numerical solving Task	10 Sessions
DC Circuits: Concept of Circuit and Network, Types of elements, Network Reduction Techniques- Series and parallel connections of resistive networks, Star-to-Delta Transformations, Mesh Analysis, Nodal Analysis, Numerical examples. AC Circuits: Fundamentals of single phase circuits - Series RL, RC and R-L-C Circuits, Concept of active power, reactive power and Power factor, Numerical examples. Introduction to three phase system and relation between line and phase values in Star & Delta connection, Numerical examples.				
Module 2	Semiconductor and Diode applications	Assignment/ Quiz	Memory Recall based Quizzes	10 Sessions
Mass Action Law, Charge densities in a semiconductor, Types of SC, Junction diodes -Ideal and practical behaviour, Modelling the Diode Forward Characteristic, and Diode applications like rectifiers, Clipping and clamping circuits. Zener diode, characteristics and its applications like voltage regulator.				
Module 3	Transistors and its Applications	Assignment/ Quiz	Memory Recall-based Quizzes	10 Sessions
Transistor characteristics, Current components, BJT Configurations (CB, CC, CE configurations) and their current gains. Operating point, Biasing & stabilization techniques: Fixed Bias, Voltage divider bias and its stability factor and load line analysis. Single and multistage amplifier, Darlington pair. JFET (Construction, principal of Operation and Volt –Ampere characteristics). Pinch- off voltage, Comparison of BJT and FET. MOSFET (Construction, principal of Operation and symbol), MOSFET characteristics in Enhancement and Depletion modes.				
Module 4	Fundamentals of Electrical Machines	Assignment/ Quiz	Numerical solving Task	10 Sessions
Electrical Machines: Single phase transformers: principle of operation and EMF equation, Numerical examples. DC Motor: principle of operation, Back EMF, torque equation, Numerical examples. AC Motor: Principle operation of Induction Motors and its Applications. Special Machines: Introduction to special electrical machines and its applications.				
Targeted Application & Tools that can be used: Targeted Applications: Application Area includes all electrical and electronic circuits (power supply unit, regulator unit, embedded devices, hardware electronics etc.). The students will be able to join a profession which involves basics to high level of electronic circuit design. Professionally Used Software: Multisim/ P Spice Besides these software tools hardware equipment such as Multimeters, Function Generators, Power Supplies, Oscilloscopes etc., can be used to perform component/circuit testing and analysis..				
Project Work/ Assignment:				

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

- 1. Article review:** At the end, of course an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format.
- 2. Presentation:** There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.
- 3. Case Study:** - At the end of the course students will be given a 'real-world' application based circuits like Power Amplifier, Signal/Function Generator etc. as a case study. Students will be submitting a report which will include Circuit Diagrams, Design, Working Mechanism and Results etc. in appropriate format

Course Code: LAW7601	Course Title: Indian Constitution Type of Course: Theory	L-T-P-C	1	0	0	0
Version No.						
Course Prerequisites	NIL					
Anti-requisites	NIL					
Course Description	<p>The purpose of this course is to introduce the students to the theory, concepts and practice of Constitution of India which is the law of the land. Further, the course aims at acquainting the students with basic approaches and methodologies to analyse and decide on the ethical dilemma in the field of engineering. The course is both conceptual and analytical.</p> <p>The course develops critical thinking skills by augmenting the student's ability to comprehend the conceptual and legal framework of Constitution of India. Ethics and values are very beautifully weaved into the tapestry of the Indian Constitution. Therefore, the course provides an introduction to the essential theoretical basis of engineering ethics and its application through a range of industry relevant topics such as responsibility for safety and risks, responsibility of employers, rights of engineers etc.</p>					
Course Objective	<ol style="list-style-type: none"> 1. To introduce the students to the conceptual framework of Constitution of India and engineering ethics. 2. To enhance the practical knowledge on responsibility of engineering professionals as citizens of India. 3. To acquaint the student with the relevant contemporary issues surrounding constitutional values and professional ethics. 					

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

	4. To orient the students about the ethical concepts and frameworks enabling them to identify the codes and moral values relevant to the professional world.			
Course Outcomes	<p>On successful completion of this course the students shall be able:</p> <ol style="list-style-type: none"> To understand foundational Indian constitutional law concepts and values. To identify the different pillars of democracy and their functions. To analyse the role of the engineers' responsibility in ensuring safety of the society and the employer. 			
Module 1	Introduction to the Indian Constitution	Knowledge	Quiz	5 Classes
Course Content:	<p>Meaning of Constitution, Constitutional Law and Constitutionalism, India before and after adoption of Constitution, Preamble, Salient Features, Concept and Relevance of Fundamental Rights, Fundamental Duties and Directive Principles of State Policy in brief.</p>			
Module 2	Pillars of Democracy: Legislature Executive and Judiciary	Knowledge	Short Essay	5 Classes

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Federalism, Union and State Executive, Parliament and State Legislature, Union and State Judiciary, Amendment of the Constitution				
Module 3	Engineering Ethics	Analysis	Presentation on conceptual understanding and problem based scenarios	5 Classes
Scope & Aims of Engineering & Professional Ethics, Code of Ethics as defined in the website of Institution of Engineers (India), Profession, Professionalism, and Professional Responsibility, Conflicts of Interest, Engineering Standards, the impediments to Responsibility, IPRs (Intellectual Property Rights), Necessity of responsible experimentation ,Case Studies on Challenger, Chernobyl, and Boeing.				
Project work/Assignment: Quiz on Fundamental Rights, Short Essay on Judicial Activism in India, Problem based assignments of engineering ethics.				
Resources: <ol style="list-style-type: none">1. M.P. Jain, Indian Constitutional Law, 8th Edition, Lexis Nexis, 2022.2. M.W.Martin and R. Schinzinger, Ethics in Engineering, 4thEdition, McGraw Hill Education, 2015.

List of Practicals: Lab Sheet 1: 10 Sessions Program 1: Sum of Two Numbers Program 2: Find the Greatest of Three Numbers Program 3: Check Even or Odd using Conditional Operator Program 4: Print Multiplication Table using Loop Program 5: Count Digits in a Number using While Loop Program 6: Demonstration of Preprocessor Directives Program 7: Simple Calculator using Switch Case Lab Sheet 2: 10 Sessions Program 1: Check Whether a Number is Positive, Negative or Zero Program 2: Find the Sum of First N Natural Numbers Program 3: Check Whether a Number is Prime or Not Program 4: Find Factorial of a Number Program 5: Reverse a Number Program 6: Simple Number Guessing Game Lab Sheet 3: 10 Sessions Program 1: Linear Search in a One-Dimensional Array						

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Program 2: Bubble Sort on an Integer Array
Program 3: Matrix Addition (2D Arrays)
Program 4: Count Vowels in a String
Program 6: Selection Sort on an Array

Lab Sheet 4: 10 Sessions

Program 1: Sum of Two Numbers Using User-Defined Function
Program 2: Factorial Using Recursion
Program 3: Swap Two Numbers Using Call by Value (No Swap)
Program 4: Swap Two Numbers Using Call by Reference (With Swap)
Program 5: Pointer Basics - Access and Modify Variable via Pointer
Program 6: Accessing Array Elements Using Pointers

Lab Sheet 5: 10 Sessions

Program 1: Basic Structure Usage
Program 2: Input and Display Array of Structures
Program 3: Array Inside Structure (Student Marks)
Program 4: Structure with Nested Structures (Date of Birth)
Program 5: Union Example and Member Access

Lab Sheet 6: 10 Sessions

Program 1: Write to a File (Text Mode)
Program 2: Read from a File (Text Mode)
Program 3: Append Data to a File
Program 4: Count Characters, Words and Lines in a File
Program 5: Write and Read Structure to/from a Binary File
Program 6: Random Access in File (Update a Record)

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Code: CHE2501	Course Title: Chemistry of Smart Materials Type of Course: Theory - BSC	L-T-P-C	3	0	0	3
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	<p>The objective of the course is to introduce the students to concepts and applications of chemistry of smart materials. The course also aims to enhance the knowledge of smart materials associated with memory system, display devices, , sensors, energy devices and environment. It will also cultivate an ability to identify chemistry in each of smart engineered materials and interpret solutions for the challenges connected to memory, display, energy, smart, green and sustainable technologies. It targets to strengthen the fundamental concepts behind chemistry of smart materials and then builds an interface with their industrial applications.</p> <p>This course is designed to cater to Environment and Sustainability</p>					
Course Objective	The objective of the course is 'SKILL DEVELOPMENT' of the student by using Participative learning techniques.					
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <ol style="list-style-type: none"> 1. Relate the knowledge of chemistry to computational approaches to identify materials functionalities and properties 2. Recognize and interpret solutions for the challenges connected to memory, display, smart, green and sustainable technologies. 3. Explain the quality parameters of engineering materials associated with environment and sensors. 4. Interpret the knowledge of sustainable chemistry for E- waste management. 5. Analyse the importance of various electrochemical sources in energy systems. 					
Course Content:						
Module 1	Computational Chemistry	Assignment	Data Collection and analysis	09 classes		

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

<p>Topics: Fundamental particles of atom – their mass, charge and location – atomic number and mass number, Stabilizing interactions: Bonded and non-bonded interactions. Chemistry of weak interactions – van der Waals force and hydrogen bonding, Density functional theory. 3D co-ordinate generation for small molecules, geometry optimization by Molview. Chemical Databases: Chemoinformatics, MSDS Self- learning topics: Scope, cost and efficiency of computational modeling.</p>				
Module 2	Materials for Memory and Display Systems	Assignment	Data Collection and analysis	09 Classes
<p>Topics: Memory Systems : Introduction, classification of electronic memory devices- Transistor, capacitor, charge -transfer and Resistor, types of materials - organic, polymeric and hybrid materials, and applications, manufacturing of semiconductor chips. Display Systems: photo and electroactive materials , materials for display -Principle, Properties and applications: Liquid crystals for LCD-Liquid crystals display, Basics of LED: OLED-organic light emitting diode and light emitting electrochemical cells. Self- learning topics: Green computing: Biocomposite based memory devices</p>				
Module 3	Nanomaterials based Smart Sensors and Devices	Assignment	Data Collection and analysis	09 Classes
<p>Topics: Nanomaterials- Introduction, classification based on dimensionality, quantum confinement. Size dependent properties, Synthesis, Properties of CNT and Graphene and their application as Materials for data analysis and packaging -RFID and IONT. Sensors: Introduction, types, Principle and applications- electrochemical sensor: nanomaterials for sensing applications - Glucose, VOC sensing. Self-learning topics: Fullerene, biomolecules in sensing, Strain sensors</p>				
Module 4	Sustainable Materials and Development	Quiz/Seminar	Data Collection and analysis	09 Classes
<p>Topics: E waste: Introduction, E waste Hazards, E- waste management, Recovery of precious metal- Cu by Hydrometallurgy. Green Chemistry: Fundamentals and 12 principles with examples, Carbon footprint and sequestration Sustainable Chemistry: -Introduction to Biomaterials- PLA , polymers in bio-compatible and bio-degradable materials - Poly(3-hydroxybutyrate-co-3-hydroxyvalerate) PHBV, synthesis and applications in drug delivery. Self-learning topics: circular economy- case studies.</p>				

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Module 5	Energy Science	Quiz/Seminar	Data Collection and analysis	09 Classes
<p>Topics: Battery technology: Fundamentals of electrochemistry, Introduction to electrochemical storage devices: battery (Lithium-ion battery- LiMnO_2, LiCoO_2, metal air batteries- LiO_2) and supercapacitors-Introduction, Principle, Types - EDLC, pseudo and asymmetric capacitor.</p> <p>Photovoltaics: Solar cells - Construction and working principle; types- Inorganic, Organic and quantum dot sensitized (QDSSC's).</p> <p>Self-learning topics: Battery technology for e-mobility, Green hydrogen</p>				
<p>Targeted Application & Tools that can be used: Application areas are Data storage and analysis, logistics, Biomedicine, Energy, Environment and sustainability Tools: Molview, chemdraw, excel etc</p>				
<p>Project work/Assignment:</p>				
<p>Assessment Type</p> <ul style="list-style-type: none"> • Midterm exam • Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screenshot accessing the digital resource.) • Quiz/Student Seminar • End Term Exam • Self-learning

Experiment 5	handling chemicals and glassware safely and adhering to laboratory safety precautions.	Data Collection	Analysis and Interpretation
Conductometric titration	Determination of mixture of acids in Recycling process of E- waste.		
Experiment 6 Course Description	The laboratory course aims to develop experimental fundamental chemical principles to address chemistry-related problems in industry. The experiments are carefully designed to complement the theoretical concepts covered in lectures, providing hands-on experience to deepen understanding and reinforce learning.	Data Collection	Analysis and Interpretation
Experiment 7	Experiments designed to cater to Environmental and Sustainability	Data Collection	Analysis and Interpretation
Recovery of valuable metals (copper)	The objective of the course is to familiarize the learners with the concepts of "Chemistry of Smart Materials Lab" and attain SKILL		
Experiment 8	DEVELOPMENT through EXPERIENTIAL LEARNING techniques:	Data Collection	Analysis and Interpretation
Course Outcomes	On successful completion of the course, students shall be able to:		
(COs)	Estimation of iron in electronic devices using Std. Potassium permanganate solution.		
Experiment 9	Experiments for quantitative analysis	Data Collection	Analysis
Experiment 10	Flame photometric estimation of sodium (Battery Recycling, Optical Sensor) in domestic and industrial waste using laboratory techniques.	Data Collection	Analysis
Experiment 11	Synthesis of conducting polymer for gas sensors applications (Demonstration experiment).	Data Collection	Analysis
Experiment 12	CO4: classify laboratory techniques such as experimental synthesis, purification, recovery and analysis of nanomaterials (Demonstration experiment).	Data Collection	Analysis
Experiment 1	Recovery of valuable metals from e- waste by electroless method (Demonstration experiment).	Data Collection	Analysis and Interpretation
Any 8 experiments will be conducted out of 12			
Continuous Internal Assessment:			
Experiment 2	Determination of strength of strong acid in battery electrolyte using conductometric sensors.	Data Collection	Analysis and Interpretation
Experiment 3	Estimation of iron from e-waste using Electrochemical sensors.	Data Collection	Analysis and Interpretation

Anti-requisites	1. NIL					
Course Description	NIL					
Anti-requisites	NIL					
Course Description	This fundamental laboratory provides an opportunity to validate the concepts taught in the basics of electrical and electronics engineering and enhances the ability to visualize real system performance, using both hardware and simulation tools.					
Course Objective	The objective of the course is to familiarize the students with the concepts of Basics of Electrical and Electronics Engineering and attain Skill Development through connect and interface sensors with Arduino and Raspberry Pi boards, read Experiential Learning techniques.					
Basic skill sets required for the laboratory:	sensor data, and use it to control various output devices This course is suitable for beginners who are interested in exploring the world of electronics and developing practical applications using Arduino, Raspberry Pi					
	The students shall be able to develop: 1) An attitude of enquiry.					
Course Objective	The objective of the course is Employability Skills of student by using PARTICIPATIVE LEARNING techniques.					
Course Outcomes	<p>5) On successful completion of the course the students shall be able to</p> <p>6) Observe and measure physical phenomenon.</p> <p>7) Write Reports.</p> <p>8) Select suitable equipment, instrument and materials.</p> <p>9) Locate faults in systems.</p> <p>10) Manipulative skills for setting and handling equipment.</p> <p>11) The ability to follow standard test procedures.</p> <p>12) An awareness of the need to observe safety precautions.</p> <p>13) To judge magnitudes without actual measurement.</p> <p>14) Demonstrate the functioning of live projects carried out using Arduino and Raspberry Pi system.</p> <p>On successful completion of the course the students shall be able to:</p> <p>1. Apply Raspberry Pi system Engineering to compute voltage, currents, and other parameters in the circuits.</p>					
Course Content:	2. Demonstrate the working of electrical machines to observe performance characteristics.					
Course Out Comes	3. Demonstrate the working of electronic circuits to obtain the V-I Characteristics of various semiconductor devices.					
Module 1	4. Sketch the characteristics and waveforms relevant to standard electrical and electronic circuits	Interfacing Task and Analysis	3 Sessions			
Topics:	Introduction to Arduino, ESP and Node MCU Pin configuration and architecture, Device and platform features, Concept of digital and analog ports, Familiarizing with Arduino Interfacing Board, API's , Introduction to Embedded C and Arduino platform, Arduino Datatypes and variables, Arduino i/o Functions, Arduino Communications, Arduino IDE, Various Cloud Platforms.					
Course Content:	List of Laboratory Tasks: Experiment No 1: Verification of KVL and KCL for a given DC circuit. Level 1: Study and Verify KVL and KCL for the given electrical Circuit.

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Code: MAT2303	Course Title: Linear Algebra and Vector Calculus Type of Course: 1] School Core	L-T-P-C	3	1	0	4
Version No.	1.0					
Course Pre-requisites	MAT2301					
Anti-requisites	NIL					
Course Description	This course explores the fundamental concepts of vectors, matrices, and their operations within the context of calculus, including vector differentiation and integration, while applying these tools to solve problems related to linear systems, transformations, and geometric interpretations in higher dimensions, often with applications in fields like physics, engineering, and computer graphics; key topics include vector algebra, matrix operations, determinants, eigenvalues, eigenvectors, gradients, divergence, curl, line integrals, surface integrals, and the fundamental theorems of vector calculus like Green's Theorem, Stokes' Theorem, and the Divergence Theorem.					
Course Objective	The course is intended to develop computational proficiency involving procedures in Matrices, Linear Algebra and Vector Calculus which are useful to all engineering disciplines. This course is to equip students with the ability to understand and manipulate vectors in multidimensional space, apply matrix operations to solve systems of linear equations, and utilize concepts like gradients, divergence, and curl to analyze physical phenomena, all while developing a strong foundation for applying these tools in various scientific and engineering fields like physics, mechanics, and computer graphics.					
Course Out Comes	On successful completion of the course the students shall be able to: CO1 - Use matrix methods and certain techniques to solve the system of linear equations and to find eigen values, eigen vectors of a matrix to check whether it is diagonalizable. CO2 - Understand the abstract notions of vector space and dimensionality of it. CO3 - find the matrix representation of a linear transformation given bases of the relevant vector spaces. CO4 - Learn different notions of vector and scalar fields with their properties. Understanding the major theorems (Green's, Stokes', Gauss') and some applications of these theorems.					
Course Content:						
Module 1	Systems of Linear Equations					(15 Classes)
Systems of Linear Equations, Matrices and Elementary Row Operations, Echelon forms, Matrix operations, invertible matrices, Determinants and their properties, Cramer's Rule, LU-decomposition, Applications of Systems of Linear Equations.						
Module 2	Vector Space	Assignment				(15 Classes)
Linear Combinations and Linear Independence, Vectors in $n R^n$, Linear Combinations, Linear Independence Vector Spaces, Definition of a Vector Space, Subspaces, Basis and Dimension, Coordinates and Change of Basis, Orthogonal bases and orthogonal projections.						
Module 3	Linear Transformations					(15 lectures)

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Linear Transformations, Algebra of transformations, The Null Space and Range, Isomorphisms, Matrix Representation of Linear Transformations, Similarity Eigenvalues and Eigenvectors, Eigen values and Eigen vectors, Diagonalization.

Inner Product Spaces, The Dot Product on R^n and Inner Product Spaces, Orthonormal Bases, Orthogonal Complements, Application: Least Squares Approximation, Diagonalization of Symmetric Matrices, Application: Quadratic Forms.

Singular Value Decomposition: Singular values, computing singular value decomposition, and Introduction to principal component analysis.

Module 4	Vector Calculus	Assignment	(15 lectures)
-----------------	------------------------	-------------------	----------------------

Vector & Scalar Functions and Fields, Derivatives, Curve, Arc length, Curvature & Torsion, Gradient of Scalar Field, Directional Derivative, Divergence of a Vector Field, Curl of a Vector Field, Physical interpretation, solenoidal and irrotational vector fields. Problems.

Line Integrals, Path Independence of Line Integrals, Green's Theorem in the plane, Surface Integrals, Divergence Theorem of Gauss, Stokes's Theorem.

Targeted Application & Tools that can be used:

- Solve systems of linear equations using various methods including Gaussian and Gauss Jordan elimination and inverse matrices.
- Perform matrix algebra, invertibility, and the transpose and understand vector algebra in R^n .
- Determine relationship between coefficient matrix invertibility and solutions to a system of linear equations and the inverse matrices.
- Find eigenvalues and eigenvectors and use them in applications.
- Find the dimension of spaces such as those associated with matrices and linear transformations.
- Understand real vector spaces and subspaces and apply their properties.
- Compute inner products in a real vector space and compute angle and orthogonality in inner product spaces.
- Create orthogonal and orthonormal bases: Gram-Schmidt process and use bases and orthonormal bases to solve application problems.
- Prove basic results in linear algebra using appropriate proof-writing techniques such as linear independence of vectors; properties of subspaces; linearity, injectivity and surjectivity of functions; and properties of eigenvectors and eigenvalues.

Assignment:

Preparation of power-point slides, which include videos, animations, pictures, graphics for better understanding the applications of Linear Algebra and Vector Calculus to engineering applications – The faculty will allocate chapters/ parts of chapters to groups of students so that the entire syllabus of Linear Algebra and Vector Calculus is covered.

Course Description	<p>The objective of this course is to provide knowledge in data communications and computer networks, its organization and its implementation, and gain practical experience in the installation, monitoring, and troubleshooting of LAN systems.</p> <p>The associated laboratory is designed to implement and simulate various networks using Cisco packet tracer, NS2. All the lab exercises will focus on the fundamentals of creating multiple networks, topologies and analyzing the network traffics.</p>			
Course Objective	<p>The objective of the course is to familiarize the learners with the concepts of Data Communications and Computer Networks and attain Employability through Problem Solving Methodologies.</p>			
Course Outcomes	<p>On successful completion of the course, the students shall be able to:</p> <ol style="list-style-type: none"> 1] Illustrate the Basic Concepts Of Data Communication and Computer Networks. 2] Analyze the functionalities of the Data Link Layer. 3] Apply the Knowledge of IP Addressing and Routing Mechanisms in Computer Networks. 4] Demonstrate the working principles of the Transport layer and Application Layer. 			
Course Content:				
Module 1	Introduction and Physical Layer- CO1	Assignment	Problem Solving	10 Sessions
<p>Introduction to Computer Networks and Data communications, Network Components – Topologies, Transmission Media –Reference Models -OSI Model – TCP/IP Suite.</p> <p>Physical Layer -Analog and Digital Signals – Digital and Analog Signals – Transmission - Multiplexing and Spread Spectrum.</p>				

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Module 2	Reference Models and Data Link Layer – CO2	Assignment	Problem Solving	11 Sessions
<p>Data Link Layer - Error Detection and Correction – Parity, LRC, CRC, Hamming Code, Flow Control and Error Control, Stop and Wait, ARQ, Sliding Window, Multiple Access Protocols, CSMA/CD, CSMA/CA, IEEE 802.3, IEEE 802.11 Ethernet.</p>				
Module 3	Network Layer –CO3	Assignment	Problem Solving	12 Sessions
<p>Network Layer Services - Network Layer Services, Switching Techniques, IP Addressing methods- IPv4 IPV6 – Subnetting. Routing, - Distance Vector Routing – RIP-BGP-Link State Routing –OSPF-Multi cast Routing-MOSPF- DVMRP – Broad Cast Routing. EVPN-VXLAN, VPLS, ELAN.</p>				
Module 4	Transport and Application Layer -CO3	Assignment	Problem Solving	12 Sessions
<p>Transport Layers - Connection management – Flow control – Retransmission, UDP, TCP, congestion control, – Congestion avoidance (DECbit, RED) The Application Layer: Domain Name System (DNS), Domain Name Space, SSH, FTP, Electronic Mail (SMTP, POP3, IMAP, MIME) – HTTP – – SNMP, Web Services, Virtual Networking.</p>				
<p>Targeted Application & Tools that can be used: Cisco Packet Tracer, Wireshark, and NS2.</p> <p>Case Study/Assignment: Choose and analyze a network from any organization/Assignment proposed for this course in CO1-CO4</p> <p>Problem Solving: Choose and appropriate devices and implement various</p>

Course Code: CSE2252	Course Title: Data Communications and Computer Networks Lab					
	Type of Course: LAB	L- T-P- C	0	0	2	1

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Version No.	1.0
Course Pre-requisites	ECE2022
Anti-requisites	NIL
Course Description	<p>This lab-based course provides hands-on experience in the principles and practices of data communications and computer networking. It is designed to complement theoretical concepts covered in the associated lecture course. Through a series of structured experiments and practical exercises, students will gain proficiency in configuring, analyzing, and troubleshooting computer networks.</p> <p>Key topics include network topology design, IP addressing and subnetting, Ethernet and LAN technologies, routing and switching, TCP/IP protocol suite, and basic network security measures. Students will work with industry-standard tools and equipment, including routers, switches, protocol analyzers, and network simulation software such as Cisco Packet Tracer or Wireshark.</p>
Course Objective	<p>The objective of this lab course is to provide students with practical, hands-on experience in the configuration, operation, and troubleshooting of data communication systems and computer networks. Through guided experiments and real-world scenarios, students will reinforce theoretical knowledge, develop essential technical skills, and gain a deeper understanding of networking concepts, protocols, and devices used in modern communication systems.</p>
Course Outcomes	<p>On successful completion of the course, the students shall be able to:</p> <ol style="list-style-type: none">1. Design and configure basic network topologies using routers, switches, and end devices to meet specified requirements.2. Analyze and troubleshoot network connectivity and performance issues using tools such as Wireshark and network simulators.3. Demonstrate understanding of key networking protocols (e.g., TCP/IP, ARP, ICMP, DHCP) through practical implementation and observation.4. Apply IP addressing and subnetting techniques to efficiently allocate and manage network resources in various networking scenarios.

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Content:				
Module 1,2,3,4	Physical Layer, Network Layer, Transport Layer	Lab Assignment	Problem Solving	24 Sessions
<p>List of Laboratory Tasks:</p> <p>Lab sheet -1, M-1, 3 [2 Hours]</p> <p>Experiment No 1:</p> <p>Level 1: Study of basic network commands and network configuration commands.</p> <p>Lab sheet -2, M-1[2 Hours]</p> <p>Experiment No 1:</p> <p>Level 1: Identify and explore Network devices, models and cables. Introduction to Cisco packet tracer.</p> <p>Experiment No. 2:</p> <p>Level 2 – Create various network topologies using a cisco packet tracer.</p> <p>Lab sheet -3, M-2,3 [2 Hours]</p> <p>Experiment No. 1:</p> <p>Level 2 - Basic Configuration of switch/router using Cisco packet tracer.</p> <p>Experiment No. 2:</p> <p>Level 2 -Configure the privilege level password and user authentication in the switch/router.</p> <p>Lab sheet – 4, M-3 [2 Hours]</p> <p>Experiment No. 1:</p> <p>Level 2 - Configure the DHCP server and wireless router and check the connectivity</p>				

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Lab sheet – 5, M-3 [2 Hours]

Experiment No. 1:

Level 2 - Configure the static routing in the Cisco packet tracer.

Experiment No. 2:

Level 2 - Configure the dynamic routing protocol in the Cisco packet tracer.

Lab sheet – 6, M-4 [2 Hours]

Experiment No. 1: Configuration of DNS Server with Recursive & Integrative approach in Cisco packet tracer.

Lab sheet – 7, M-4 [2 Hours]

Experiment No. 1:

Configure the telnet protocol in the router using the Cisco packet tracer.

Lab sheet – 8, M-4[2 Hours]

Experiment No. 1:

Level1- Introduction to NS2 and basic TCL program.

Lab sheet – 9, M-4 [2 Hours]

Experiment No. 1:

Level 1: Simulate three node Point to point network using UDP in NS2.

Experiment No. 2:

Simulate transmission of Ping message using NS2.

Lab sheet – 10, M-4[2 Hours]

Experiment No. 1:

Simulate Ethernet LAN using N-node in NS2.

Experiment No. 2:

Simulate Ethernet LAN using N-node using multiple traffic in NS2

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Lab sheet –11, M-3,4 [2 Hours]

Experiment No. 1:

Level 1- Introduction to Wire Shark.

Experiment No. 2:

Level 2- Demonstration of packet analysis using wire shark.

Lab sheet –12, M-1,2,3 [2 Hours]

Experiment No. 1:

Level 2- Demonstration of switch and router configuration using real devices

Targeted Application & Tools that can be used: Cisco Packet Tracer, Wireshark, and NS2.

Case Study/Assignment: Choose and analyze a network from any organization/Assignment proposed for this course in CO1-CO4

Problem Solving: Choose and appropriate devices and implement various network concepts.

Programming: Simulation of any network using NS2.

Course Code: CSE2253	Course Title: Data Structures Type of Course: Theory	L-T-P-C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	This course introduces the fundamental concepts of data structures and to emphasize the importance of choosing an appropriate data structure and technique for program development .This course has theory and lab component which emphasizes on understanding the implementation and applications of data structures using Java programming language .With a good knowledge in the fundamental concepts of data structures and practical experience in implementing them, the student can be an effective designer, developer for new software applications.					
Course Objective	The objective of the course is SKILL DEVELOPMENT of student by using EXPERIENTIAL LEARNING techniques					
Course Out Comes	On successful completion of the course the students shall be able to: CO1 :Describe the concept of basic data structure, stacks, queues, and arrays and their operations. [Understand]					

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

	<p>CO2: Utilize linked lists for real-time scenarios. [Apply]</p> <p>CO3: Apply an appropriate non-linear data structure for a given scenario. [Apply]</p> <p>CO4: Demonstrate different searching and sorting techniques. [Apply]</p>			
Course Content:				
Module 1	Introduction to Data Structure and Linear Data Structure - Stacks and Queues	Assignment	Program activity	9 Hours
<p>Introduction -Introduction to Data Structures, Types and concept of Arrays .</p> <p>Stack -Concepts and representation, Stack operations, stack implementation using array and Applications of Stack.</p> <p>Queues -Representation of queue, Queue Operations, Queue implementation using array, Types of Queue and Applications of Queue.</p>				
Module 2	Linear Data Structure -Linked List	Assignment	Program activity	12 Hours
<p>Topics: Linked List - Singly Linked List, Operation on linear list using singly linked storage structures, Circular List, Applications of Linked list.</p> <p>Recursion - Recursive Definition and Processes.</p>				
Module 3	Non-linear Data Structures - Trees	Assignment	Program activity	12 Hours
<p>Topics: Trees - Introduction to Trees, Binary tree :Terminology and Properties, Use of Doubly Linked List, Binary tree traversals :Pre-Order traversal, In-Order traversal, Post - Order traversal , .Heaps , Expression Tree ,Red Black Tree - AVL Trees ,Binary Search Tree</p>				
Module 4	Non-linear Data Structures -	Assignment	Program activity	6 Hours

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

	Graphs and Hashing		
<p>Topics: Graphs: Basic Concept of Graph Theory and its Properties, Representation of Graphs . ADT, Elementary graph operations, Minimum Cost spanning trees, Shortest path and Transitive closure.</p> <p>Hashing: Introduction, Static Hashing, Dynamic Hashing</p>			
Module 5	Searching & Sorting	Assignment	Program activity
6 Hours			
<p>Topic: Sorting & Searching - Sequential and Binary Search, Sorting – Selection and Insertion sort, Quick sort, Merge Sort, Bubble sort.</p>			
<p>Targeted Application & Tools that can be used Use of PowerPoint software for lecture slides and use of Modern IDE like VS Code and Eclipse for lab programs to execute.</p>			
Project work/Assignment:			
<p>Assignment: Students should complete the lab programs by end of each practical session and module wise assignments before the deadline.</p>

List of Laboratory Tasks:						
Lab sheet -1						
Level 1: Prompt the user, read input and print messages. Programs using class, methods and objects						
Level 2: Programming Exercises on fundamental Data structure - Arrays based on Scenario.						
Lab sheet -2						
Level 1: Programming Exercises on Stack and its operations						
Level 2: Programming Exercises on Stack and its operations with condition						

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Lab sheet -3

Level 1: Programming on Stack application infix to postfix Conversion

Level 2: -

Lab sheet -4

Level 1: Programming on Stack application – Evaluation of postfix

Lab sheet -5

Level 1: Programming Exercises on Queues and its operations with conditions

Level 2: -

Lab sheet -6

Level 1: Programming Exercises on Linked list and its operations.

Level 2: Programming Exercises on Linked list and its operations with various positions

Lab sheet -7

Level 1: Programming Exercises on Circular Linked list and its operations.

Level 2: Programming Exercises on Circular Linked list and its operations with various positions

Lab sheet -8

Level 1: Programming Exercises on factorial of a number

Level 2: Programming the tower of Hanoi using recursion

Lab sheet -9

Level 1: -

Level 2: Programming the tower of Hanoi using recursion

Lab sheet -10

Level 1: Programming Exercise on Doubly linked list and its operations

Level 2: -

Lab sheet -11

Level 1: Program to Construct Binary Search Tree and Graph

Level 2: Program to traverse the Binary Search Tree in three ways)in-order, pre-order and post-order(and implement BFS and DFS

Lab sheet -12

Level 1: Program to Implement the Linear Search & Binary Search

Level 2: Program to Estimate the Time complexity of Linear Search

Lab sheet -13

Level 1: Program to Implement and Estimate the Time complexity of Selection Sort

Level 2: Program to Implement and Estimate the Time complexity of Insertion Sort

Lab sheet -14 (Beyond syllabus activity)

Level 1: Program to Construct AVL Tree

Level 2:

Lab sheet -15 (Beyond syllabus activity)

Level 1: Program to Construct RED BLACK Tree

Targeted Application & Tools that can be used

Use of PowerPoint software for lecture slides and use of Modern IDE like VS Code and Eclipse for lab programs to execute.

	and also for effective problem solving. The students interpret and understand the need for object oriented programming to build applications.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Problem-Solving using JAVA and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques			
Course Out Comes	<p>On successful completion of the course the students shall be able to:</p> <p>CO1: Describe the basic programming concepts. [Understand] CO2: Apply the concept of classes, objects and methods to solve problems. [Application] CO3: Apply the concept of arrays and strings. [Apply] CO4: Implement inheritance and polymorphism building secure applications. [Apply] CO5: Apply the concepts of interface and error handling mechanism. [Apply]</p>			
Course Content:				
Module 1	Basic Concepts of Programming and Java	Assignment	Problem Solving	9 Sessions
Topics: Introduction to Principles of Programming: Process of Problem Solving, Java program structure, Download Eclipse IDE to run Java programs, Sample program, Data types, Identifiers, Variables, Constants in java, Operators, Assignments and Expression, Basic Input/ Output functions, Control Statements: Branching and Looping.				
Module 2	Classes, objects, methods and Constructors	Assignment	Problem Solving	10 Sessions
Topics: Classes, Objects and Methods: Introduction to object Oriented Principles, defining a class, adding data members and methods to the class, access specifiers, instantiating objects, reference variable, accessing class members and methods. Static Polymorphism: Method overloading, constructors, constructor overloading, this keyword, static keyword, Nested classes, Accessing members in nested classes.				
Module 3	Arrays, String and String buffer	Assignment	Problem Solving	8 Sessions
Topics: Arrays: Defining an Array, Initializing & Accessing Array, Multi –Dimensional Array, Array of objects. String: Creation & Operation. String builder class, methods in String Buffer.				
Module 4	Inheritance and Polymorphism	Assignment	Problem Solving	10 Sessions
Topics: Inheritance: Defining a subclass, Types of Inheritance, super keyword. Dynamic Polymorphism: Method overriding. Final keyword: with data members, with member functions and with class. Abstract keyword: with data members, with member functions and with class, Exception handling.				
Module 5	Input & Output Operation in Java	Assignment	Problem Solving	8 Sessions
Input/output Operation in Java(java.io Package), Streams and the new I/O Capabilities, Understanding Streams, working with File Object, File I/O Basics, Reading and Writing to Files, Buffer and Buffer

Experiments:						
P1: Programming Exercises on Basic Concepts.						
LEVEL 1: Discuss about datatypes and variables.						
LEVEL 2: Demonstrate a simple java program						
P2: Programming Exercises on Basic Concepts.						
LEVEL 1: Discuss about datatypes and variables.						
LEVEL 2: Demonstrate a simple java program						
P3: Programming Exercises on operators, expressions based on a given scenario.						

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

LEVEL 1: Explain operators, expressions.

LEVEL 2: Demonstrate operators

P4: Programming Exercises Command Line Arguments based on a given scenario.

LEVEL 1: Explain command line arguments

LEVEL 2: Demonstrate command line arguments

P5: Programming Exercises on basic Input/ Output functions and Control Statements: Branching

LEVEL 1: Explain Input/ Output functions

LEVEL 2: Demonstrate Control Statements: Branching

P6: Programming Exercises on Control Statements: Looping

LEVEL 1: Explain various loops.

LEVEL 2: Demonstrate Control Statements: Looping

P7: Programming Exercises on Creating Objects, classes on a given scenario.

LEVEL 1: Illustrate class, object and methods.

LEVEL 2: Execute java program using class and objects

P8: Programming Exercises on Adding methods and Constructors to the class based on a given scenario.

LEVEL 1: Illustrate methods and constructors

LEVEL 2: Execute java program using methods and constructors

P9: Programming Exercises on methods based on a given scenario.

LEVEL 1: Illustrate method overloading

LEVEL 2: Apply method overloading for the given scenario.

P10: Programming Exercises on methods based on a given scenario.

LEVEL 1: Illustrate constructors overloading

LEVEL 2: Apply constructor overloading for the given scenario

P11: Programming Exercises on methods for static members based on a given scenario.

LEVEL 1: Benefits of usage static members

LEVEL 2: Usage of Static Members for the given scenario

P12: Programming Exercises on static methods based on a given scenario.

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

LEVEL 1: Benefits of usage static methods

LEVEL 2: Usage of Static Methods for the given scenario.

P13: Programming Exercises on nested Classes based on a given scenario.

LEVEL 1: Benefits of usage nested classes

LEVEL 2: Apply the concept of usage of nested classes for the given scenario

P14: Programming Exercises on Arrays and its built-in functions based on a given scenario.

LEVEL 1: Illustrate one dimensional arrays and its functions.

LEVEL 2: Demonstrate programs with single-dimensional arrays and operations.

P15: Programming Exercises on Arrays and its built-in functions based on a given scenario.

LEVEL 1: Illustrate multi dimensional arrays and its functions.

LEVEL 2: Demonstrate programs with multi-dimensional arrays and operations.

P16: Programming Exercises on String Class and its built-in functions based on a given scenario.

LEVEL 1: Explain about String class and String methods.

LEVEL 2: Execute simple java applications for String and StringBuffer operations

P17: Programming Exercises on String Buffer Class and its built-in functions based on a given scenario.

LEVEL 1: Explain about StringBuffer class and String methods.

LEVEL 2: Execute simple java applications for String and StringBuffer operations

P18: Programming Exercises on String Builders and its built-in functions based on a given scenario.

LEVEL 1: Explain about String Builders.

LEVEL 2: Execute java applications for String Builders

P19: Programming Exercises on single, multi level Inheritance and super keyword based on given scenario.

LEVEL 1: Explain single and multi level inheritance.

LEVEL 2: Demonstrate simple applications for the different types of inheritance

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

- P20: Programming Exercises hierarchical Inheritance and super keyword based on given scenario.
LEVEL 1: Explain hierarchical inheritance.
LEVEL 2: Demonstrate simple applications for hierarchical inheritance
- P21: Programming Exercises on Overriding.
LEVEL 1: Differentiate method overloading and method overriding.
LEVEL 2: Demonstrate simple program with dynamic method dispatch.
- P22: Programming Exercises on Final based on given scenario.
LEVEL 1: Implement programs using concept of final.
LEVEL 2: Use final keyword for the given problem
- P23: Programming Exercises on Abstract keyword based on given scenario.
LEVEL 1: Implement programs using concept of Abstract.
LEVEL 2: Use abstract keyword for the given problem
- P24: Programming Exercises on Interface based on a given scenario.
LEVEL 1: Differentiate abstract class about interface
LEVEL 2: Implement interfaces in the given problem
- P25: Programming Exercises on Exception Handling based on a given scenario.
LEVEL 1: Explain exception handling
LEVEL 2: Solve the given problem using exception handling mechanism.
- P26: Programming Exercises on Character Stream Classes based on a given scenario.
LEVEL 1: Explain Character Stream Classes
LEVEL 2: Solve the given problem using Character Stream Class.
- P27: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.
LEVEL 1: Explain Read/Write Operations with File Channel
LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.
- P28: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.
LEVEL 1: Explain Read/Write Operations with File Channel
LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.
- P29: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

P30: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

Targeted Application & Tools that can be used : JDK /Eclipse IDE/Visual Studio Code / net Beans IDE.

3. Method overloading, constructors
4. constructor overloading
5. this keyword
6. static keyword and Inner classes
7. Inheritance and Polymorphism.

for **Skill Development** through **Experiential Learning** techniques. This is attained through assessment component mentioned in course handout.

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Code: CSE2264	Course Title: Essentials of AI Type of Course: Engineering Sciences Core -Theory	L-T-P-C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	CSE1500					
Anti-requisites	NIL					
Course Description	<p>This course introduces the student to the basics of artificial intelligence. In this course, the student first learns the various search methods for problem-solving, followed by knowledge-based logic representations. After that, the student will learn about uncertainty in AI, as well as approaches to solve such challenges such as Naïve Bayes Classifier and Hidden Markov Models.</p> <p>Topics: Uninformed search, Heuristic search, Local search, Adversarial search, Constraint satisfaction, logic, First Order Resolution, Probability, Naïve Bayes Classifier, and Hidden Markov Model (HMM).</p>					
Course Objectives	The objective of the course is EMPLOYABILITY of student by using EXPERIENTIAL LEARNING techniques.					
Course Out Comes	<p>On successful completion of this course the students shall be able to:</p> <ol style="list-style-type: none"> 1. Explain different methods of searching, proving, and analysis in AI [Understand] 2. Implement various graphical and adversarial search algorithms. [Apply] 3. Prove, by resolution, different situations using First Order Logic [Apply] 4. Solve sequence labeling problems using HMM [Apply] 					
Course Content:						
Module 1	Search Methods for Problem-Solving	Problem-Solving Tests	NPTEL Assignments		No. of Sessions: 13	

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

<p>Introduction – State Space Search; General Formulation of Search Problems; Data Structures used in Searching. Uninformed Search Algorithms – Breadth First Search, Depth First Search, Uniform Cost Search, Generalized Uniform Cost Search (a.k.a Dijkstra’s Single-Source Shortest Path), Iterative Deepening Depth-First Search, Time and Space Complexity Analysis of Uninformed Search Algorithms. Heuristic Search Algorithms – Heuristics and Admissibility, Greedy Best-First Search, A* Search and weighted A* Search.</p>				
Module 2	Advanced Search Methods	Problem-Solving Tests	NPTEL Assignments	No. of Sessions: 12
<p>Local Search – Local Search, Hill Climbing, Genetic Algorithms, Gradient Descent. Adversarial Search – Minimax Search, Alpha-Beta Pruning, Ideal Ordering. Constraint Satisfaction – Constraint Satisfaction Problems Definitions and Examples – Map Colouring, N Queens, Cryptarithmic, Generalized CSP; Back-tracking Heuristics; Arc Consistency and Path Consistency</p>				
Module 3	Knowledge-Based Logic Representation	Automated Theorem Proving using FOL Resolution	NPTEL Assignments	No. of Sessions: 10
<p>Propositional Logic – Syntax and Semantics of Propositional Logic. Logical connectives. Inference Rules. Conjunctive and Disjunctive Normal Forms. First Order Logic – Syntax and Semantics of Propositional Logic. Logical connectives. Inference Rules. Conjunctive and Disjunctive Normal Forms. Resolution – Resolution Principle. Propositional and First Order Resolution. Applications for solving story problems using Resolution</p>				
Module 4	Uncertainty in AI	Representing problems as HMM	NPTEL Assignments	No. of Sessions: 06
<p>Probability – Probability Definitions. Conditional Probability. Bayes Theorem. Naïve Bayes Classifier. Using Naïve Bayes Classifier for Supervised Learning. Hidden Markov Models – Definition of HMM. Sequence Labeling and Markov Assumption. Sub-Problems in HMM and their solutions – Forward Probability and Viterbi Algorithm. Applications of Sequence Labeling in Natural Language Processing (Eg. Part-of-Speech Tagging). Introduction to Deep Learning – Artificial Neurons, Activation Functions, Multilayer Perceptron.</p>				
<p>Targeted Application & Tools that can be used:</p> <ol style="list-style-type: none"> 1. Implementation of a shortest-path finder using different search algorithms. 2. Implementation of a sequence labeler using Viterbi Algorithm. 				
<p>Project work/Assignment: Mention the Type of Project /Assignment proposed for this course</p> <ol style="list-style-type: none"> 1. Group project on one of the topics mentioned above (Eg. Adversarial search). 				
<p>Textbook(s):</p> <ol style="list-style-type: none"> 1. Stuart Russel and Peter Norvig. <i>Artificial Intelligence: A Modern Approach</i>. 4th Edition. Pearson Education. 2022. 2. Lavika Goel. <i>Artificial Intelligence: Concepts and Applications</i>. 1st Edition. Wiley. 2021.

<p>Course Out Comes</p>	<p>On successful completion of this course the students shall be able to:</p> <ol style="list-style-type: none"> 5. Explain different methods of searching, proving, and analysis in AI [Understand] 6. Implement various graphical and adversarial search algorithms. [Apply] 7. Prove, by resolution, different situations using First Order Logic [Apply] 8. Solve sequence labeling problems using HMM [Apply]
<p>Course Content: Sessions: 30 (60 hours) No. of</p>	
<p>NOTE: Each experiment will be run across TWO lab sessions. In the first lab session, the students will have to do a preliminary experiment (Eg. Implement an uninformed search algorithm like BFS). In the second lab session, they will have to test their solution using a given input which is read from a file.</p> <p>Experiment No. 1: File Handling Level 1: Read text files using Python Level 2: Parse text files using Python</p> <p>Experiment No. 2: Implementation of Graph Representations Level 1: Implement graph representations by taking input from the console Level 2: Implement graph representations by taking input from files.</p> <p>Experiment No. 3 & 4: Implementation of Uninformed Search Algorithms Level 1: Implement uninformed search algorithms – BFS and DFS – on unweighted graphs. Level 2: Implement uninformed search algorithms – Uniform Cost Search and Dijkstra’s SSSP – on weighted graphs</p>	

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Experiment No. 5: Implementation of Heuristic Search Algorithms

Level 1: Calculate the upper-bounds of admissible heuristics using Dijkstra's SSSP.
Level 2: Implement Greedy Best-First Search and A* Search Algorithms.

Experiment No. 6 & 7: Implementation of Adversarial Search

Level 1: Implement a Game Tree
Level 2: Perform Alpha-Beta Pruning and Ideal Ordering

Experiment No. 8 & 9: Implementation of a CSP Solver

Level 1: Implement a CSP solver to solve a cryptarithmic problem
Level 2: Implement a CSP solver for map colouring

Experiment No. 10: Using Python Packages for CSP

Level 1: Implement a CSP solver for Sudoku
Level 2: Implement a CSP solver for Addoku

Experiment No. 11: Implement a Family Tree Parser

Level 1: Perform logic programming using logpy.
Level 2: Implement a family tree parser

Experiment No. 12 & 13: Implement a Decision Maker

Level 1: Implement a Minesweeper solver
Level 2: Implement a Battleship solver

Experiment No. 14 & 15: Hidden Markov Model

Level 1: Implement a generic HMM
Level 2: Build a PoS Tagger using a HMM with the Brown Corpus and the Universal Dependencies Tagset.

Targeted Application & Tools that can be used:

3. Google Colab
4. Python IDEs like PyCharm

Project work/Assignment: Mention the Type of Project /Assignment proposed for this course

The course is a lab-based course with all the assessments centrally evaluated. Every experiment consists of **two sessions**. The first session involves exploring a solution to the problem. The second session involves solving a particular problem.

Course Code: CSE2257	Course Title: Computer Organization and Architecture	L-T- P- C	3-0-0-3
Version No.	2.0		
Course Pre-requisites	ECE2022		
Anti-requisites	NIL		
Course Description	This course introduces the core principles of computer architecture and organization from basic to intermediate level. This theory based course emphasizes on understanding the interaction between computer hardware and software. It equips the students with the intuition behind assembly-level instruction set architectures. It helps the students to interpret the operational concepts of computer technology as well as performance enhancement.		
Course Objective	The objective of the course is to familiarize the learners with the concepts of Computer Organization and Architecture and attain Skill Development through Participative Learning techniques.		
Course Outcomes	On successful completion of the course the students shall be able to:		

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

	<p>1] Describe the basic components of a computer, their interconnections, and instruction set architecture [Comprehension]</p> <p>2] Apply appropriate techniques to carry out selected arithmetic operations</p> <p>3] Explain the organization of memory and processor sub-system</p>			
Course Content:				
Module 1	Basic Structure of computers	Assignment	Data Analysis task	12 Classes
<p>Topics:</p> <p>Computer Types, Functional Units, Basic Operational concepts, Bus Structures, Computer systems RISC & CISC, Performance – Processor Clock, Basic Performance Equation, Clock Rate, Performance Measurement. Arithmetic Operations on Signed numbers. Instructions and Instruction Sequencing, Instruction formats, Memory Instructions.</p>				
Module 2	Instruction Set Architecture and Memory Unit	Assignment	Analysis, Data Collection	12 Classes
<p>Topics:</p> <p>Instruction Set Architecture: Addressing Modes, Stacks and Subroutines.</p> <p>Memory System: Memory Location and Addresses, Memory Operations, Semiconductor RAM Memories, Internal Organization of Memory chips, Cache memory mapping Techniques.</p>				
Module 3	Arithmetic and Input/output Design	Case Study	Data analysis task	10 Classes
<p>Topics:</p> <p>Arithmetic: Carry lookahead Adder, Signed-Operand Multiplication, Integer Division, and Floating point operations.</p> <p>Input/output Design: Accessing I/O Devices, I/O communication, Interrupt Hardware, Direct Memory Access, Buses, Interface Circuits</p>				
Module 4	BPU and Pipelining	Assignment	Analysis, Data Collection	11 Classes

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Topics: Basic Processing Unit: Fundamental Concepts, Single Bus organization, Control sequence, Execution of a Complete Instruction, Multiple Bus Organization. Pipelining: Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, Hazards.				
Targeted Application & Tools that can be used: Targeted employment sector is processor manufacturing and memory chip fabrication vendors like Intel, AMD, Motorola, NVidia, Samsung, Micron Technology, western Digital etc. Targeted job profiles include Memory circuit design and verification engineers, Physical system design engineer, System programmer, Fabrication engineer etc. Tools: Virtual Lab, IIT KGP Tejas – Java Based Architectural Simulator, IIT Delhi

Topics relevant to “SKILL DEVELOPMENT”: Generation of Computers, CISC and RISC processors, Bus Arbitration, Collaboration and Data collection for Term assignments and Case Studies for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: APT4002	Course Title: Introduction to Aptitude (Audited)	L- P- C	0	2	0
Version No.	1.0				
Course Pre-requisites	Students should know the basic Mathematics & aptitude along with understanding of English				
Anti-requisites	Nil				
Course Description	The objective of this course is to prepare the trainees to tackle the questions on various topics and various difficulty levels based on Quantitative Ability, and Logical Reasoning asked during the placement drives. There will be sufficient focus on building the fundamentals of all the topics, as well as on solving the higher order thinking questions. The focus of this course is to teach the students to not only get to the correct answers, but to get there faster than ever before, which will improve their employability factor.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Aptitude and attain Skill Development through Problem Solving techniques.				

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Outcomes	<p>On successful completion of the course the students shall be able to:</p> <p>CO1] Recall all the basic mathematical concepts they learnt in high school. CO2] Identify the principle concept needed in a question. CO3] Solve the quantitative and logical ability questions with the appropriate concept. CO4] Analyze the data given in complex problems. CO5] Rearrange the information to simplify the question</p>			
Course Content:				
Module 1	Quantitative Ability	Assignment	Bloom's Level : Application	12 Hours
Topics: Introduction to Aptitude, working of Tables, Squares, Cubes				
Module 2	Logical Reasoning	Assignment	Bloom's Level : Application	18 Hours
Topics: Linear & Circular Arrangement Puzzle, Coding & Decoding, Blood Relations, Directions, Ordering and Ranking, Clocks and Calendars, Number Series, Wrong number series, Visual Reasoning				
Targeted Application & Tools that can be used: Application area: Placement activities and Competitive examinations. Tools: LMS				
Text Book <ol style="list-style-type: none"> 1. Quantitative Aptitude by R S Aggarwal 2. Verbal & Non-Verbal Reasoning by R S Aggarwal

Topics relevant to Skill development: Quantitative and reasoning aptitude for Skill Development through Problem solving Techniques . This is attained through assessment component mentioned in course handout.				

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Code: CIV7601	Course Title: Universal Human Values and Ethics Type of Course: MAC course	L-T-P-C	-	-	-
Course Pre-requisites	NIL				
Anti-requisites	NIL				
Course Description	<p>The purpose of the course is to develop a holistic perspective in students' life. The course adopts a self-reflective methodology of teaching and is designed to equip the student to explore their role in all aspects of living as a part of the society. It presents a universal approach to value education by developing the right understanding of reality through the process of self-exploration.</p> <p>This self-exploration develops more confidence and commitment in students enabling them to critically evaluate their pre-conditioning and present beliefs. As an outcome of the holistic approach, the students will be able to practice the ethical conduct in the social and professional life. The prime focus throughout the course is toward affecting a qualitative transformation in the life of the student rather than just a transfer of information.</p> <p>This course is designed to cater to Human Values and Professional Ethics.</p>				
Course Objective	The objective of the course is 'SKILL DEVELOPMENT' of the student by using 'SELF-LEARNING' techniques				
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <p>CO.1 Recognize the importance of Value Education through the process of self-exploration</p> <p>CO.2 Explain the human being as the co-existence of the self and the body in harmony.</p> <p>CO.3 Describe the role of foundational values in building harmonious relationships.</p> <p>CO.4 Summarize the importance of a holistic perspective in developing ethical professional behavior.</p>				
Course Content:					
Module 1	Introduction to Value Education	Online Assessment	MCQ Quiz	5 Sessions	
Topics: Right Understanding, Relationship and Physical Facility (Holistic Development and the Role of Education), Understanding Value Education, Self-exploration as the Process for Value Education, Continuous Happiness and Prosperity – the Basic Human Aspirations, Happiness and Prosperity – Current Scenario, Method to Fulfil the Basic Human Aspirations.					
Module 2	Harmony in the Human Being	Online Assessment	MCQ Quiz	5 Sessions	
Topics:					

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

<p>Understanding Human being as the Co-existence of the Self and the Body, Distinguishing between the Needs of the Self and the Body, The Body as an Instrument of the Self, Understanding Harmony in the Self, Harmony of the Self with the Body, Programme to ensure self-regulation and Health</p>				
Module 3	Harmony in the Family and Society	Online Assessment	MCQ Quiz	5 Sessions
<p>Topics:</p> <p>Harmony in the Family – the Basic Unit of Human Interaction, 'Trust' – the Foundational Value in Relationship, 'Respect' – as the Right Evaluation, Other Feelings, Justice in Human-to-Human Relationship, Understanding Harmony in the Society, Vision for the Universal Human Order.</p>				
Module 4	Implications of the Holistic Understanding – A Look at Professional Ethics	Online Assessment	MCQ Quiz	5 Sessions
<p>Topics:</p> <p>Natural Acceptance of Human Values, Definitiveness of (Ethical) Human Conduct, A Basis for Humanistic Education, Humanistic Constitution and Universal Human Order, Competence in Professional Ethics, Holistic Technologies, Strategies for Transition towards Value-based Life and Profession</p>				
<p>Targeted Application & Tools that can be used:</p> <p>Application areas are Personal life, Education and Career, Workplace , Society and Environmental Responsibility</p> <p>Tools: Online Tools – NPTEL and Swayam.</p>

Course Code: MAT2404	Course Title: Discrete Mathematics Type of Course:1] School Core	L-T- P- C	3	1	0	4
Version No.	1.0					
Course Pre-requisites	MAT2303					

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Anti-requisites		NIL	
Course Description		The course explores the study of mathematical structures that are fundamentally discrete (not continuous), focusing on concepts like set theory, logic, graph theory, combinatorics, and number theory, with applications primarily in computer science fields like algorithms, software development, and cryptography; it covers topics such as propositional logic, proof techniques, relations, functions, counting principles, and basic graph algorithms, providing a foundation for analyzing discrete problems and structures within computer science.	
Course Objective		The main objective of the course is that students should learn a particular set of mathematical facts and how to apply them. It teaches students how to think logically and mathematically through five important themes: mathematical reasoning, combinatorial analysis, discrete structures, algorithmic thinking, and applications and modeling. A successful discrete mathematics course should carefully blend and balance all five themes.	
Course Outcomes		On successful completion of the course the students shall be able to: CO1 - Explain logical sentences through predicates, quantifiers and logical connectives. CO2 - Deploy the counting techniques to tackle combinatorial problems CO3 - Comprehend the basic principles of set theory and different types of relations. CO4 - Apply different types of structures of trees for developing programming skills	
Course Content:			
Module 1	Fundamentals of Logic		(10 Classes)
Basic Connectives and Truth Tables, Propositional Logic, Applications of Propositional Logic, Propositional Equivalences, Predicates and Quantifiers, Nested Quantifiers, Rules of Inference, Introduction to Proofs, Proof Methods and Strategy.			
Module 2	Principle of Counting	Assignment	(15 Classes)
The Well Ordering Principle – Mathematical Induction The Basics of Counting, Permutations and Combinations, Binomial Coefficients and Identities, Generalized Permutations and Combinations, Generating Permutations and Combinations Advanced Principle Counting: The Principle of Inclusion and Exclusion, Generalizations of the Principle, Derangements – Nothing is in its Right Place, Rook Polynomials.			
Module 3	Relations and Functions		(10 Classes)
Cartesian Products and Relations, Functions, One-to-One, Onto Functions. The Pigeon-hole Principle, Function Composition and Inverse Functions. Relations, Properties of Relations, Computer Recognition – Zero-One Matrices and Directed Graphs, Partial Orders, Lattice, Hasse Diagrams, Equivalence Relations and Partitions.			
Module 4	Recurrence Relations and Generating Functions		(10 Classes)
Homogeneous and inhomogeneous recurrences and their solutions - solving recurrences using generating functions - Repertoire method - Perturbation method - Convolutions - simple manipulations and tricks.			
Module 5	Graph Theory & Algorithms on Networks	Assignment	(15 Classes)
Definitions and basic results - Representation of a graph by a matrix and adjacency list - Trees - Cycles - Properties - Paths and connectedness - Sub graphs - Graph Isomorphism - Operations on graphs - Vertex and edge cuts - Vertex and edge connectivity, Euler and Hamilton Paths, Shortest-Paths.			

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Tree - Definitions, Properties, and Examples, Routed Trees, Binary search tree, Decision tree, spanning tree: BFS, DFS.

Algorithms on Networks - Shortest path algorithm- Dijkstra's algorithm, Minimal spanning tree- Kruskal algorithm and Prim's algorithm.

Targeted Application & Tools that can be used:

Discrete mathematics provides the mathematical foundations for many computer science courses including data structures, algorithms, database theory, automata theory, formal languages, compiler theory, computer security, and operating systems.

Assignment:

Assignment 1: Logic Equivalences and Predicate calculus.

Assignment 2: Equivalence Relations and Lattices

Assignment 3: Recurrence Relations

Topics relevant to SKILL DEVELOPMENT: The course focuses on the concepts of calculus and differential equation with reference to specific engineering problems. The course is of both conceptual and analytical type in nature through Problem solving. This is attained through the assessment component mentioned in course handout.

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Code: CSE2260	Course Title: Database Management Systems Type of Course: Theory	L-T-P-C	3	0	0	3
Version No.						
Course Pre-requisites	CSE2253					
Anti-requisites	NIL					
Course Description	This course introduces the foundational principles of database management systems, including data models, schemas, and architectures. This course provides a solid foundation on the relational model of data and the use of relational algebra. It develops skills in SQL for data definition, manipulation, and control, enabling students to construct and execute complex queries. The course also introduces the concept of object oriented and object relational databases and modern database technologies like NoSQL . The also course allows the students to gain insights into data storage structures and indexing strategies for optimizing query performance.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Database Management Systems and attain Employability through Problem Solving Methodologies .					
Course Out Comes	On successful completion of the course the students shall be able to: 1. Describe the fundamental elements of relational database management systems. [Understand] 2. Examine databases using SQL query processing and Optimization. [Apply] 3. Design simple database systems applying the normalization constraints and demonstrate the database transaction processing, recovery, and security. [Apply] 4. Interpret the concept of advanced databases and its applications. [Apply]					

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Content:				
Module 1	Introduction to Database Modelling and Relational Algebra (Understand)	Assignment	Problem Solving	10 Sessions
Topics: Introduction to Database: Schema, Instance, 3-shema architecture, physical and logical data independence, Data isolation problem in traditional file system, advantages of database over traditional file systems. Entity Relationship (ER) Model, ER Model to Relational Model, Examples on ER model. Relational Algebra with selection, projection, rename, set operations, Cartesian product, joins (inner and outer joins), and division operator. Examples on Relational Algebra Operations.				
Module 2	Fundamentals of SQL and Query Optimization (Apply)	Assignment	Programming	11 Sessions
Topics: SQL Database Querying, DDL, DML, Constraints, Operators, Set Operators, Aggregate Functions, Joins, Views, Procedures, Functions and Triggers. Database programming issues and techniques: Embedded SQL, Dynamic SQL; SQL / PSM and NoSQL. Query Optimization: Purpose, transformation of relational expressions, estimating cost and statistics of expression, choosing evaluation plans, linear and bushy plans, dynamic programming algorithms.				
Module 3	Relational Database Design & Transaction Management (Apply)	Assignment	Problem Solving	12 Sessions
Topics: Relational database design: Problems in schema design, redundancy and anomalies, Normal Forms based on Primary Keys-(1NF,2NF, 3NF), Boyce-Codd Normal Form, Multi valued Dependency (Fourth Normal Form), Join Dependencies (Fifth Normal Form), lossy and lossless decompositions, Database De-normalization. Transaction Management: The ACID Properties; Transactions and Schedules; Concurrent Execution of Transactions; Lock- Based Concurrency Control; Performance of locking; Transaction support in SQL; Introduction to crash recovery; 2PL, Serializability and Recoverability; Lock Management; The write-ahead log protocol; Check pointing; Recovering from a System Crash; Media Recovery; Other approaches and interaction with concurrency control.				
Module 4	Advanced DBMS Topics (Apply)	Assignment	Case Study	12 Sessions
Topics: Advanced topics: Object oriented database management systems, Deductive database management systems, Spatial database management systems, Temporal database management systems, Constraint database management systems. New database applications and architectures such as Data warehousing, Multimedia, Mobility, NoSQL, NativeXML databases (NXD), Document-oriented databases, Statistical databases.

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Pre-requisites	-
Anti-requisites	NIL
Course Description	The Database Management Systems (DBMS) Laboratory is designed to provide students with hands-on experience in database design, implementation, and management using SQL and database management tools such as MySQL. The lab complements theoretical concepts learned in database courses by allowing students to practice database creation, querying, and optimization techniques. The DBMS Lab enables students to develop industry-relevant skills in database management, preparing them for careers in software development, data engineering, and database administration.
Course Objective	The objective of the course is to familiarize the learners with the concepts of Database Management Systems and attain Employability through Problem Solving Methodologies.
Course Out Comes	On successful completion of the course the students shall be able to: 5. Demonstrate the database concepts, practice, and SQL queries. [Apply] 6. Design and implement database schemas while applying normalization techniques to optimize structure. [Apply] 7. Develop and implement stored procedures, triggers, and views for automation and efficiency. [Apply] 8. To Design and build database applications for real world problems. [Apply]
Course Content:	
<p>List of Laboratory Tasks: Create Employee, Student, Banking and Library databases and populate them with required data. Do the following experiments of different lab sheets on those databases.</p> <p>Labsheet-1 [3 Practical Sessions] Experiment No 1: [1 Session] 1. To study and implement the different language of Structured Query Language. Level 1: Perform operations using Data Definition Language and Data Manipulation Language commands including different variants of SELECT on Student DB. Level 2: Identify the given requirements; valid attributes and data types and Perform DDL and DML operations on a given scenario. [Banking Databases] Experiment No. 2: [2 Sessions] 2. To study and implement the concept of integrity constraints in SQL. Level 1: Create tables on Banking database using PRIMARY KEY, NOT NULL, UNIQUE, FOREIGN KEY and demonstrate the working of relational, logical, pattern matching, BETWEEN, IS NULL, IN and NOT IN Special Operators on Student Database. Level 2: Enforce different types of data and referential integrity constraints. Then try queries with special operators based on the student database. [Banking Database].</p> <p>Labsheet-2 [3 Practical Sessions] Experiment No. 3: [1 Session] 3. Implement complex queries in SQL. Level 1: Implement the conjugate of GROUP BY, ORDER BY and aggregate functions on Banking Database. Level 2: Implement MySQL DB queries on library database using appropriate clauses</p>	

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

and aggregate functions. Also order the data either in ascending and descending order using corresponding clause. [Library databases].

Experiment No. 4: [2 Session]

4. To study and implement different types of Set and Join Operations [2 Slots]
Level 1: Demonstrate different types of Set Operations (UNION, UNION ALL, INTERSECT, MINUS) and Join Operations (INNER JOINS, OUTER JOINS, CROSS JOIN, NATURAL JOIN) on two or more tables of Airline Database. Level 2: Use Set and Join operations to retrieve the data from two or more relations (tables) as per the given scenario. [Airline Database]

Labsheet-3 [2 Practical Sessions]

Experiment No. 5: [2 sessions]

5. To study and implement Views, and Procedures in MySQL DB.
Level 1: Implement MySQL Views, and Procedures in ORACLE DB on Employee database.
Level 2: Analyze the requirement and construct views, and Procedures on Mini Project Domain. [Banking Database]

Labsheet-4 [2 Practical Sessions]

Experiment No. 6: [2 Sessions]

6. To study and implement Functions, and Triggers in MySQL DB.
Level 1: Implement Oracle Functions and Triggers in Oracle on Employee database.
Level 2: Analyze the requirement and construct Functions and Triggers. [Supply chain Database]

Labsheet-5 [2 Practical Sessions]

Experiment No. 7: [2 Sessions]

7. To study and implement Functions, and Triggers in MySQL DB.
Level 1: Implement Oracle Functions and Triggers in Oracle on Employee database.
Level 2: Determine the requirement and construct Functions and Triggers. [Supply chain Database]

Labsheet-6 [4 Practical Sessions]

Experiment No. 8: [2 Sessions]

8. To implement the concept of forms and reports.
Level 1: Implement the concept of forms and reports.
Level 2: Examine the schema relationship.

Experiment No. 9: [2 Sessions]

9. Create the database using the given schema. (Flight Management)
Level 1: Implement a relational database based on the provided schema for the Flight Management system, including the creation of tables, relationships, and constraints.
Level 2: Demonstrate schema relationships by defining primary and foreign keys to ensure data integrity within the Flight Management database.

Labsheet-7 [4 Practical Sessions]

Experiment No. 10: [2 Sessions]

10. Create the database using the given schema. (Company database)
Level 1: Implement the database schema by defining tables, relationships, and constraints according to the given Company Database schema.

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Level 2: Demonstrate the schema's relationships and data integrity by creating and linking tables as per the specified requirements.

Experiment No. 11: [2 Sessions]

11. Create the database using the given schema. (Student Library)

Level 1: Implement forms and reports based on the provided Student Library database schema, ensuring effective data entry and reporting mechanisms.

Level 2: Demonstrate the schema relationships within the Student Library database, demonstrating how these relationships influence the creation and functionality of forms and reports.

Labsheet-8 [1 Sessions]

12. Design a mini project based on the databases such as Inventory Management System, University Management System, Hospital Management System, etc.

Level 1: Implement the real time database.

Level 2: Analyze the working of database in real time.

Targeted Application & Tools that can be used:

Application Area: Relational database systems for Business, Scientific and Engineering Applications. Tools/Simulator used: MySQL DB for student practice.

Also demonstration of ORACLE DB on object-relational database creation and JDBC connection.

Percentage of changes in this version: 50% of changes from earlier version. New topics are highlighted in italic.

3. Problem Solving: Constructing ER-Diagrams for a given real time requirements, Normalizing the databases, querying the databases using relational algebra.
4. Programming: Implementation of any given scenario using MySQL.

Course Description	This course introduces techniques for the design and analysis of efficient algorithms and methods of applications. This course discusses the classic approaches for algorithm design such as Divide and Conquer, Dynamic Programming, Greedy method. This course also describes other basic strategies searching solution space. The core concepts of analyzing algorithms and classifying them into various complexity classes is covered in the end.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Analysis of Algorithms and attain Skill Development through Problem Solving Methodologies.			
Course Out Comes	On successful completion of the course the students shall be able to: <ol style="list-style-type: none"> 1. Compute efficiency of a given algorithm.[Apply] 2. Apply divide and conquer technique for searching and sorting Problems.[Apply] 3. Apply the Dynamic Programming technique for a given problem. [Apply] 4. Apply greedy technique for solving a Problem.[Apply] 5. Demonstrate Back tracking technique and limitations of Algorithms.[Apply] 			
Course Content:				
Module 1	Introduction	Assignment	Simulation/Data Analysis	10 Sessions
Introduction, Asymptotic Notations and its properties, Best case, worst case and average case- Sequential search, Sorting; Mathematical analysis for Recursive and Non-recursive algorithms: Substitution method and Master's Theorem.				
Module 2	Divide-and-conquer	Assignment	Simulation/Data Analysis	08 Sessions
Introduction. Insertion Sort; Merge sort, Quick sort, Binary search.				
Module 3	Dynamic programming	Term paper/Assignment	Simulation/Data Analysis	10 Sessions
Introduction with examples, Principles of Memoization, 0-1 Knapsack Problem, Bellman-Ford algorithm, Floyd-Warshall's Algorithms. Chain Matrix Multiplication.				
Module 4	Greedy technique	Term paper/Assignment	Simulation/Data Analysis	09 Sessions
Introduction, Fractional Knapsack Problem, Minimal Spanning Tree: Prim's Algorithm and Kruskal's Algorithm, Single-source Shortest Path: Dijkstra's Algorithm				
Module 5	Complexity Classes	Term paper/Assignment	Simulation/Data Analysis	08 Sessions
Complexity Classes- P,NP- NP Hard and NP Complete - Boolean Satisfiability Problem (SAT). Branch and Bound: Knapsack problem; Backtracking, - N-Queens problem.

Course Pre-requisites	MAT2303			
Anti-requisites	NIL			
Course Description	Machine Learning algorithms are the key to develop intelligent systems such as Apple's Siri, Google's self-driving cars etc. This course introduces the concepts of the core machine learning techniques such as Regression learning, Bayesian learning, Ensemble learning, Perceptron learning, Unsupervised learning, Competitive learning, learning from Gaussian mixture models and learning to detect outliers. Course lectures cover both the theoretical foundations as well as the essential algorithms for the various learning methods. Lectures enable the students to develop intelligent systems for real life problems.			
Course Objectives	This course is designed to improve the learners ' <u>EMPLOYABILITY SKILLS</u> ' by using <u>EXPERIENTIAL LEARNING</u> techniques.			
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Apply advanced supervised machine learning methods for predictive modeling. [Apply] CO2: Employ advanced unsupervised learning algorithms for clustering, competitive learning and outlier detection [Apply] CO3: Build machine learning models with better predictive performance using Ensemble learning algorithms [Apply] CO4: Build predictive models using Perceptron learning algorithms [Apply]			
Course Content:				
Module 1	Supervised Learning	Participative Learning	Brainstorming session/Quiz	No. of Sessions L - 10
Topics: An overview of Machine Learning(ML); ML workflow; types of ML; Types of features, Feature Engineering -Data Imputation Methods; Regression - introduction; simple linear regression, loss functions; Polynomial Regression; Logistic Regression; Softmax Regression with cross entropy as cost function; Bayesian Learning - Bayes Theorem, estimating conditional probabilities for categorical and continuous features, Naïve Bayes for supervised learning; Bayesian Belief networks; Support Vector Machines - soft margin and kernel tricks.				
Module 2	Unsupervised Learning	Participative Learning	Brainstorming session/Quiz	No. of Sessions L-8
Topics: Unsupervised Learning - k Means clustering- simple and mini-batch; updating centroids incrementally; finding the optimal number of clusters using Elbow method ; Silhouette coefficient, drawbacks of kMeans, kMeans++ ; Divisive hierarchical clustering - bisecting k-means, clustering using Minimum Spanning Tree (MST), Density Based Spatial

Clustering - DBSCAN; Outlier Detection methods - Isolation Forest, Local Outlier Factor(LOF)				
Module 3	Ensemble Learning	Participative Learning	Brainstorming session/Quiz	No. of Sessions L-6
Topics: Ensemble Learning - using subset of instances - Bagging, Pasting, using subset of features -random patches and random subspaces method; Voting Classifier, Random Forest; Boosting - AdaBoost, Gradient Boosting, Stacking.				
Module 4	Perceptron Learning	Participative Learning	Brainstorming session/Quiz	No. of Sessions L-6
Topics: Perceptron Learning - from biological to artificial neurons, Perceptron, Linear Threshold Units, logical computations with Perceptron, common activation functions - sigmoid, tanh, relu and SoftMax, common loss functions, multi-layer Perceptron and the Backpropagation algorithm using Gradient Descent.				
Targeted Application & Tools that can be used: Students can be assigned a mini project to develop a machine learning application for real-life problems in various domains such as health care, business intelligence, environmental modeling, etc.

-------------------------	--

List of Laboratory Tasks: Experiment N0 1: Methods for handling missing values Level 1: Given a data set from UCI repository, implement the different ways of handling missing values in it using Scikit-learn library of Python Level 2: Implement one of these methods using a custom defined function in Python. Experiment No. 2: Data Visualization Level 1 : Perform Exploratory Data Analysis for a given data set by creating Scatter Plot, Pair Plot, Count Plot using Matplotlib and Seaborn Level 2: Create Heat Maps, Word Cloud Experiment No. 3: Regression learning Level 1: Given a data set from UCI repository, implement the simple linear regression algorithm and estimate the model's parameters and the performance metrics. Plot the learning curves. Level 2: Implement the polynomial regression algorithm. Compare the learning curves of Polynomial and Linear Regression. Experiment No.4: Logistic regression Level 1: Write custom code for generating the logistic/sigmoid plot for a given input Level 2 : Given a data set from UCI repository, implement the Logistic regression algorithm. Estimate the class probabilities for a given test data set. Plot and analyze the decision boundaries. Experiment No.5: Bayesian Learning Level 1: Given a data set from UCI repository, implement a classification model using the Bayesian algorithm Experiment No.6: Support Vector Machine (SVM)

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Level 1: Given data sets from UCI repository, implement a linear SVM based classification model.

Level 2: Given data sets from UCI repository, implement a non-linear SVM based classification model.

Experiment No. 7: Unsupervised Learning

Level 1: K-means - simple and mini-batch. Finding the optimal number of clusters using Elbow method and Silhouette Coefficient. Compare the inertia of both as k increases. Tuning the hyperparameter 'k' using GridSearchCV.

Level 2: Using clustering for Image segmentation and Preprocessing. Kmeans++

Experiment No. 8: Density Based Clustering

Level 1: Implement DBSCAN - clustering using the local density estimation.

Level 2: Perform hard and soft clustering for new instances.

Experiment No. 9: Ensemble Learning using Subset of Instances

Level 1: Implement Ensemble Learning algorithms such as Bagging, Pasting and Out-of Bag Evaluation

Level 2: Random Patches and Random Subspace Method

Experiment No. 10: Ensemble Learning using Subset of Features

Level 1: Apply ensemble learning techniques such as AdaBoost and Gradient Boosting

Level 2: Apply ensemble learning techniques such as Stacking

Experiment No. 11: Perceptron Learning

Level 1: Implement the Perceptron Classifier

Level 2: - An Image Classifier Using the Sequential API of Keras

Experiment No. 12: Outlier Detection

Level 1: Outlier Detection using Isolation Forest

Level 2: Outlier Detection using Local Outlier Factor

Targeted Application & Tools that can be used:

1. Execution of the ML algorithms will be done using the Google's cloud service namely "Colab", available at <https://colab.research.google.com/> or Jupyter Notebook.
2. The data sets will be from the benchmarking repositories such as UCI machine learning repository available at: <https://archive.ics.uci.edu/ml/index.php>
3. Laboratory tasks will be implemented using the libraries available in Python such as Scikit learn, matplotlib, seaborn, perceptron and the deep learning framework namely Keras.

Project work/Assignment:

Anti-requisites	NIL		
Course Description	<p>The objective of this course is to provide the fundamentals concepts of Software Engineering process and principles.</p> <p>The course covers software requirement engineering processes, system analysis, design, implementation and testing aspects of software system development.</p> <p>The course covers software quality, configuration management and maintenance.</p>		
Course Objectives	<p>The objective of the course is to familiarize the learners with the concepts of Software Engineering and attain Skill Development through Participative Learning techniques.</p>		
Course Out Comes	<p>On successful completion of this course the students shall be able to:</p> <ol style="list-style-type: none">1] Describe the Software Engineering principles, ethics and process models(Knowledge)2] Identify the requirements, analysis and appropriate design models for a given application(Comprehension)3] Understand the Agile Principles(Knowledge)		

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

	4] Apply an appropriate planning, scheduling, evaluation and maintenance principles involved in software(Application)			
Module 1	Introduction to Software Engineering and Process Models (Knowledge level)	Quiz		10 Hours
<p>Introduction: Need for Software Engineering, Professional Software Development, Software Engineering Ethics, Software Engineering Practice-Essence of Practice, General Principles Software Development Life Cycle</p> <p>Models: Waterfall Model – Classical Waterfall Model, Iterative Waterfall Model, Evolutionary model-Spiral, Prototyping</p>				
Module 2	Software Requirements, Analysis and Design (Comprehension level)	Assignment	Development of SRS documents for a given scenario	12 Hours
<p>Requirements Engineering: Eliciting requirements, Functional and non- Functional requirements, Software Requirements Specification (SRS), Requirement Analysis and validation. Requirements modelling- Introduction to Use Cases, Activity diagram and Swim lane diagram. CASE support in Software Life Cycle, Characteristics of CASE Tools, Architecture of a CASE Environment.</p> <p>Design: Design concepts, Architectural design, Component based design, User interface design.</p>				
Module 3	Agile Principles & Devops (Knowledge level)	Quiz		10 Hours
<p>Agile: Scrum Roles and activities, Sprint Agile software development methods - Scaling, User Stories, Agile estimation techniques, Product backlogs, Stake holder roles, Dynamic System Development Method.</p> <p>Devops: Introduction, definition, history, tools.</p>				
Module 4	Software Testing and Maintenance (Application Level)	Assignment	Apply the testing concepts using Programming	13 Hours
<p>Software Testing-verification and validation, Test Strategies - White Box Testing, Black box Testing. Automation Tools for Testing.</p> <p>Software Quality Assurance-Elements of software quality assurance, SQA Tasks, Goals and Metrics, Software configuration management- SCM process, SCM Tools (GitHub).</p>				

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Maintenance- Characteristics of Software Maintenance, Software Reverse Engineering, Software Maintenance Process Models.

Targeted Application & Tools that can be used: Selenium, GitHub, CASE Tools

Text Book

1. Roger S. Pressman, "Software Engineering – A Practitioner’s Approach", VII Edition, McGraw-Hill, 2017.
2. Bob Hughes, Mike Cotterell, Rajib Mall, "Software Project Management", VI Edition, McGraw-Hill, 2018.

References

1. Rajib Mall, "Fundamentals of Software Engineering", VI Edition, PHI learning private limited, 2015.

3. Agile Software Development Principles, Patterns and Practices.1st Edition, Wiley, 2002

Topics Relevant to "Skill Development: Balck box Testing, White box Testing, Automated Testing for Skill development through Participative Learning Techniques. This is attained through assessment mentioned in the course handout

Course Code: APT4004	Course Title: Aptitude Training-Intermediate Type of Course: Practical Only Course	L- T - P- C	0	0	2	0
Version No.	1.0					
Course Pre-requisites	Students should have the basic concepts of Quantitative aptitude along with its applications in real life problems.					
Anti-requisites	NIL					
Course Description	This is a skill-based training program for the students. This course is designed to enable the students to enhance their skills in Quantitative Aptitude.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Aptitude and attain Skill Development through Problem Solving techniques.					

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Out Comes	On successful completion of this course the students shall be able to: CO1: Recall all the basic mathematical concepts. CO2: Identify the principle concept needed in a question. CO3: Solve the quantitative and logical ability questions with the appropriate concept. CO4: Analyze the data given in complex problems.		
Course Content:			
Module 1	Quantitative Ability 1	Assignment	16 Hours
Topics: Number System, Percentage, Ratio and Proportion, Average, Mixture and Allegation, Time and Work, Profit and Loss			

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Module 2	Quantitative Ability 2	Assignment	14 Hours
<p>Topics: Time Speed and Distance, Boats and Streams, Simple Interest, Compound Interest, Probability, Permutation and Combination</p>			
<p>Targeted Application & Tools that can be used: Application area: Placement activities and Competitive examinations. Tools: LMS</p>			
Continuous Evaluation:			
<p>CA1 – Online Test CA2 – Online Test CA3 – Online Test Assignment</p>

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Code: FIN1002	Course Title: Essentials of Finance Type of Course: HSMC	L-T-P-C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	This course is designed to be accessible to all students, regardless of their prior financial knowledge.					
Anti-requisites						
Course Description	This course is designed to equip students with a foundational understanding of key financial concepts and principles . It will enable them to comprehend the core functions of finance , delve into the intricacies of financial management within organizations , and gain insights into the fundamental aspects of taxation . The course aims to develop students' abilities to interpret financial statements, evaluate investment opportunities, understand capital structure decisions , and navigate the basics of tax implications .					
Course Objective	Upon successful completion of this course, students will be able to: <ul style="list-style-type: none"> • Understand the basic forms of business organization and their financial implications. • Understand the fundamental principles and concepts that influence financial decision-making in various contexts. • Analyse and interpret financial statements to assess the financial health and performance of an organization. • Identify income under various heads of income as per Income Tax Act, 1961 and determine the tax liability. 					
Course Outcomes	List the course outcomes On successful completion of this course the students shall be able to: <ol style="list-style-type: none"> 5. Understand the basic concepts of finance and financial markets and organizations. 6. Apply and interpret financial information for business decision making. 7. Identify various heads of income and deduction under Income Tax Act, 1961. 					
Course Content:						
Module 1	Introduction to Finance	Assignment/ Quiz	Numerical solving Task	10 Sessions		
Definition and Scope of Finance, Areas of Finance: Corporate Finance, Investments, Financial Institutions, International Finance; Types of Financial Markets: Money Markets vs. Capital Markets, Primary vs. Secondary Markets; Forms of Business Organization and Financial Goals: Shareholder Wealth Maximization vs. Profit Maximization; Understanding Financial Statements: Balance Sheet and Income Statement- Simple Numerical.						
Module 2	Financial Management	Assignment/ Quiz	Numerical solving Task	18 Sessions		
Capital Budgeting Decisions: Payback Period, Net Present Value (NPV), Profitability Index (PI), Internal Rate of Return (IRR); Leverage- Basic Numerical; Capital Structure Decisions: Optimal Capital Structure, Trade-off Theory of Capital Structure; Cost of Capital: Equity, Debt, WACC; Dividend Policy: Factors influencing Dividend Policy.						
Module 3	Taxation	Assignment/ Quiz	Numerical solving Task	17 Sessions		
Principles of a Good Tax System: Equity, Certainty, Convenience, Economy; Direct vs. Indirect Taxes; Residential Status of an Individual- Basic Problems; Heads of Income; Salary, House Property- Basic Numerical; Deductions under Chapter VI-A; Computation of Taxable Income and Tax Liability; E-Filing procedure.						

Targeted Application & Tools that can be used:**Textbooks, PPT, Spreadsheet Software (e.g., Microsoft Excel), Official Website of Income Tax Department.****Project Work/ Assignment:**

- 1. Presentation:** There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.
- 2. Case Study:** - At the end of the course students will be given a 'real-world' cases like business models of successful companies or tax evasion by reputed companies on which they have to come up with detailed analysis and assessment.

Text Book(s):

- 7. Dr. Vinod K. Singhania & Dr. Monica Singhania.** (Latest Assessment Year Edition). *Students' Guide to Income Tax including GST.* Taxmann Publications.
- 8. Pandey, I. M.** (2025). *Financial Management.* Vikas Publishing House.

Reference Book (s):

- 7. Bhole, L.M., & Mahakud, J.** (Current Edition). *Financial Institutions and Markets: Structure, Growth and Innovations.* McGraw Hill Education India.
- 8. Mehrotra, H.C., & Goyal, S.P.** (Latest Assessment Year Edition). *Income Tax Law & Practice.* Sahitya Bhawan Publications.
- 9. Gordon, E., & Natarajan, K.** (Current Edition). *Financial Markets and Services.* Himalaya Publishing House.

Online Resources (e-books, notes, ppts, video lectures etc.):

7. <https://presidencyuniversity.linways.com>
8. https://onlinecourses.nptel.ac.in/noc24_ec01/preview
9. <https://www.incometax.gov.in/iec/foportal/>

Topics relevant to "SKILL DEVELOPMENT": This course is designed to provide practical financial skills through participative learning techniques. Students will engage in performing suitable calculations to determine financial parameters (e.g., time value of money, investment returns, tax liabilities) and analysing financial statements to assess organizational performance and make informed decisions.

Course Code: CSE2266	Course Title: Theory of Computation Type of Course: Theory Only	L- T-P- C	3	0	0	3
Version No.	2.0					
Course Pre-requisites	-					
Anti-requisites	NIL					
Course Description	The course deals with introduction of formal languages and the correspondence between language classes and the automata that recognize them. Topics include: Formal definitions of grammars and acceptors, Deterministic and Nondeterministic systems, Grammar ambiguity, finite state and push-down automata; normal forms; Turing machines and its relations with algorithms.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Theory of Computation as mentioned above and attain Skill Development through Problem Solving Methodologies.					
Course Outcomes	On successful completion of the course the students shall be able to: 1. Describe various components of Automata. (Knowledge) 2. Illustrate Finite Automata for the given Language. (Application) 3. Distinguish between Regular grammar and Context free grammar. (Comprehension) 4. Construct Push down Automata. (Application) 5. Construct Turing machine for a Language. (Application)					

Course Content:	 PRESIDENCY UNIVERSITY <small>Private University Estd. in Karnataka State by Act No. 41 of 2013</small>			
Module 1	Introduction to automata theory	Assignment	Problems on Strings and Language operations	6 classes
<p>Topics:</p> <p>Introduction to Automata Theory, Applications of Automata Theory, Alphabets, Strings, Languages & operations on languages, Representation of automata, Language recognizers, Finite State Machines (FSM): Deterministic FSM, Regular languages, Designing FSM, Nondeterministic FSMs</p>				
Module 2	Finite Automata	Assignment	Assignment Problems on DFA, NFA's	12 Sessions
<p>Topics:</p> <p>Basic concepts of Finite automata, DFA- definitions of DFA, Deterministic Accepters Transition Graphs and Languages and DFA's, Regular Languages, NFA- Definition of a Nondeterministic Acceptor, Languages and NFA's Why Non- determinism? Equivalence of Deterministic and Nondeterministic Finite Accepters, Reduction of the Number of States in Finite Automata.</p>				
Module 3	Regular Expressions & Context Free Grammar	Assignment	Problems on RE, CFG, PT, PL and Ambiguity	12 Sessions
<p>Topics:</p> <p>Formal Definition of a Regular Expression, Languages Associated with Regular Expressions, Languages, Regular Languages (RL) and Non-regular Languages: Closure properties of RLs, to show some languages are not RLs, Closure Properties of Regular Context Free Grammars-Examples of Context-Free Languages, Leftmost and Rightmost Derivations, Derivation Trees, Relation Between Sentential Forms and Derivation Trees, Ambiguity in Grammars and Languages: Ambiguous Grammars, Removing Ambiguity, Chomsky Normal Form, Gribiche Normal Form.</p>				
Module 4	Push down Automata	Assignment	Problems on pushdown Automaton	08 Sessions
<p>Topics:</p> <p>Definition of a Pushdown Automaton, Language Accepted by a Pushdown Automaton, Acceptance by Final State, Acceptance by Empty Stack, From Empty Stack to Final State, From Final State to Empty Stack Equivalence of PDA's and CFG's: From Grammars to Pushdown Automata.</p>				
Module 5	Turing Machine	Assignment	Problems on Turing Machine	07 Sessions
<p>Topics:</p> <p>Definition of a Turing Machine, Turing Machines as Language Accepters, Example Languages to construct Turing machine, Turing Machines as Transducers, Halting Programming Techniques for Turing Machines</p>				

Targeted Application & Tools that can be used:

Targeted Application:

1. Text Processing
2. Compilers
3. Text Editors
4. Robotics Applications
5. Artificial Intelligence

Tools:

1. JFLAP (Java Formal Language and Automata Package) Software simulation tool. It's interactive educational software written in Java to experiment topics in automata theory.
2. Turing machine Online simulators.

Text Book(s):

1. Peter Linz, "An introduction to Formal Languages and Automata", Jones and Bartlett Publications 6th Ed, 2018.

Reference(s):

1. Aho, Ullman and Hopcroft, "Theory of Computation", Pearson India 3rd Edition 2008.
2. Michael Sipser, "Theory of Computation", Cengage India 3rd Ed, 2014.

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Code:	Course Title: Information Retrieval	L- P- T-C	3	0	0	3
ISE2502	Type of Course: PCC - Theory					
Version No.	1					
Course Pre-requisites	CSE2253					
Anti-requisites	NIL					
Course Description	The course studies the theory, design and implementation of Text- based information systems. The Information Retrieval core concepts of the course include statistical characteristics of text, representation of information needs and documents. Topics Include Several important retrieval models (Basic IR Models, Boolean Model, TF-IDF (Term Frequency/Inverse Document Frequency) Weighting, Vector Model, Probabilistic Model, Latent Semantic Indexing Model, Neural Network Model). Retrieval Evaluation, Retrieval Metrics, Text Classification and Clustering algorithms, Web Retrieval and Crawling. Recommender Systems: Basics of Content-based Recommender Systems, Content-based Filtering, Collaborative Filtering, Matrix factorization models and neighborhood models.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Information Retrieval and attain SKILL DEVELOPMENT through Participative Learning techniques					
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Define basic concepts of information Retrieval. [Knowledge] CO2: Evaluate the effectiveness and efficiency of different information retrieval methods. [Application] CO3: Explain different indexing methodology requirements and the concept of web retrieval and crawling. [Comprehension] CO4: Classify different recommender system and its aspect. [Comprehension]					
Course Content:						
Module 1	Introduction to Information Retrieval	Assignment	Data collection	12 Sessions		
Information Retrieval – Early Developments – The IR Problem – The Users Task – Information versus Data Retrieval – The IR System – The Software Architecture of the IR System – The Retrieval and Ranking Processes						
Module 2	Modeling and Retrieval Evaluation	Assignment	Problem solving	12 Sessions		
Basic IR Models – Boolean Model – TF-IDF (Term Frequency/Inverse Document Frequency) Weighting – Vector Model – Probabilistic Model – Latent Semantic Indexing Model – Neural Network Model – Retrieval Evaluation – Retrieval Metrics – Precision and Recall – Reference Collection – User-based Evaluation – Relevance Feedback and Query Expansion – Explicit Relevance Feedback.						

Module 3	Indexing & Web-Retrieval	Term paper/Assignment	Data analysis	12 Sessions
<p>Indexing and Searching – Inverted Indexes – Sequential Searching – Multi-dimensional Indexing. The Web – Search Engine Architectures – Cluster based Architecture - Search Engine Ranking – Link based Ranking – Simple Ranking Functions, Evaluations – Search Engine Ranking – Applications of a Web Crawler.</p> <p style="text-align: center;">  PRESIDENCY UNIVERSITY Private University Estd. in Karnataka State by Act No. 41 of 2013 </p>				
Module 4	Recommender System	Term paper/Assignment	Problem solving	9 Sessions
<p>Recommender Systems Functions – Data and Knowledge Sources – Recommendation Techniques – Basics of Content-based Recommender Systems – High Level Architecture – Advantages and Drawbacks of Content-based Filtering – Collaborative Filtering – Matrix factorization models.</p>				
<p>Targeted Application & Tools that can be used:</p> <p>Information Retrieval System, Collaborative Filtering System, Feedback System, Evaluation Metrics</p>				
<p>Assignment:</p> <p>Group assignment, Quiz</p>

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Code: ISE2500	Course Title: Software Testing and Quality Assurance Type of Course: Theory	L- T-P- C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	CSE2271					
Anti-requisites	NIL					
Course Description	This course provides a comprehensive understanding of software testing strategies and quality assurance practices essential for delivering reliable and high-quality software products. Students will learn various testing techniques, software quality metrics, standards, and tools that support automation and continuous integration in the software development lifecycle.					
Course Objective	<p>To understand the principles and practices of software testing.</p> <p>To introduce various levels and types of testing strategies.</p> <p>To equip students with knowledge of quality assurance methodologies and standards.</p> <p>To provide hands-on knowledge of software testing tools and frameworks.</p>					
Course Outcomes	<p>On successful completion of the course, students will be able to:</p> <ol style="list-style-type: none"> 1. Design and implement effective software test strategies. 2. Analyze and evaluate testing coverage and effectiveness. 3. Apply QA practices, including reviews, audits, and process assessments. 4. Use automated testing tools for enhancing software reliability. 					
Course Content:						
Module 1	Introduction to Software Testing	Assignment				[11] Sessions
Topics: Software Development Life Cycle (SDLC) and Testing Life Cycle (STLC), Testing objectives and principles, Test levels: Unit, Integration, System, Acceptance, Test types: Functional, Non-functional, Regression, Smoke, and Sanity testing, Software Defect life cycle.						
Module 2	Test Design and Execution Techniques	Assignment				[12] Sessions
Topics: Black-box and White-box testing, Equivalence class partitioning, Boundary value analysis,						

Decision table, State transition, and Use case-based testing, Code coverage, Path testing, Mutation testing, Test case design and test data preparation.

Module 3	Software Quality Assurance (SQA)	Assignment	[11] Sessions
-----------------	---	-------------------	----------------------

Topics:

SQA fundamentals and importance, Reviews, Walkthroughs, and Audits, Quality metrics and defect prevention, Process models: CMMI, ISO 9001, Six Sigma, Software configuration management and version control.

Module 4	Test Automation and Tools		[11] Sessions
-----------------	----------------------------------	--	----------------------

Topics:

Automation Testing: Introduction and benefits, Selenium, JUnit, TestNG frameworks, Continuous Integration tools: Jenkins, GitLab CI/CD, Performance Testing using JMeter, Case studies and real-world QA practices.

Course Code: ISE2501	Course Title: Software Testing and Quality Assurance Lab Type of Course: Laboratory	L- T-P- C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	CSE2271					
Anti-requisites	NIL					
Course Description	This laboratory course offers hands-on practice in software testing techniques and tools to ensure software quality and reliability. Students will implement unit, integration, system, and regression tests, and gain experience with manual and automated testing tools. Emphasis is placed on testing strategies, test case development, defect tracking, and quality assurance practices.					
Course Objective	<p>To provide practical knowledge of software testing life cycle and strategies</p> <p>To enable test design and execution using black-box and white-box techniques</p> <p>To introduce automated testing tools for functional and performance testing</p> <p>To develop defect tracking, reporting, and quality assurance processes</p>					
Course Outcomes	<p>Upon successful completion, students will be able to:</p> <ol style="list-style-type: none"> 5. Design effective test cases for different levels of testing 6. Execute manual and automated test procedures 7. Analyze software quality through metrics and reports 8. Use software testing tools to automate and validate results 					
List of Laboratory Tasks						
Lab 1: Introduction to Software Testing Tools						
Objective: Understand basic tools and environment for testing						
Task: Explore tools like JUnit, Selenium, Bugzilla						
Activity: Set up testing environment for future labs						

Lab 2: Requirement Analysis and Test Case Design

Objective: Design test cases from software requirements

Task: Derive test scenarios and test cases from a sample SRS

Activity: Document test cases in standard format

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Lab 3: Black-Box Testing Techniques

Objective: Apply functional testing methods

Task: Perform equivalence partitioning and boundary value analysis

Activity: Design and execute test cases on login module

Lab 4: White-Box Testing Techniques

Objective: Explore code-based testing methods

Task: Perform statement and branch coverage testing

Activity: Generate test data for decision structures in Java/Python

Lab 5: Unit Testing with JUnit

Objective: Write and execute unit tests

Task: Create unit test cases using JUnit framework

Activity: Test Java functions and assert expected outputs

Lab 6: Integration Testing

Objective: Test interaction between modules

Task: Use stubs and drivers to simulate integration

Activity: Execute integration test cases on a student registration system

Lab 7: System and Acceptance Testing

Objective: Perform end-to-end testing

Task: Prepare test cases for system-level testing

Activity: Validate expected output on sample system software

Lab 8: Regression Testing

Objective: Validate unchanged functionality after changes

Task: Rerun previously passed test cases after updates

Activity: Identify regression defects and document reports

Lab 9: Automation with Selenium WebDriver

Objective: Automate web application testing

Task: Create scripts to test login and navigation

Activity: Validate elements and capture screenshots

Lab 10: Performance Testing using Apache JMeter

Objective: Simulate and evaluate system load

Task: Run load tests for concurrent users

Activity: Generate reports and interpret performance metrics

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Lab 11: Bug Reporting using Bugzilla

Objective: Track software defects

Task: Report and manage bugs in Bugzilla

Activity: Update bug status and assign severity

Lab 12: Test Management using TestLink

Objective: Manage and document testing activities

Task: Organize test plans, cases, and execution

Activity: Report test coverage and result summaries

Lab 13: Code Coverage Analysis

Objective: Measure code coverage using tools

Task: Use tools like JaCoCo or Coverage.py

Activity: Analyze coverage reports and improve test suite

Lab 14: Software Quality Metrics Calculation

Objective: Compute quality assurance metrics

Task: Calculate defect density, defect leakage, test effectiveness

Activity: Analyze metrics for project quality reporting

Lab 15: Capstone Project – Test a Web Application

Objective: Apply full testing lifecycle

Task: Plan, design, execute, and report tests

Activity: Submit complete test documentation for the selected app

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Code: CSE2258	Course Title: Web Technologies Type of Course: Program Core Theory	L-T- P- C	3	0	0	3
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	<p>This course highlights the comprehensive introduction to scripting languages that are used for creating web-based applications.</p> <p>The associated laboratory provides an opportunity to implement the concepts and enhance critical thinking and analytical skills.</p>					
Course Objective	<p>The objective of the course is to familiarize the learners with the concepts of Web Technology and attain Skill Development through Experiential Learning techniques.</p>					
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <p>CO1: Implement web-based application using client-side scripting languages. (Apply)</p> <p>CO2: Apply various constructs to enhance the appearance of a website. (Apply)</p> <p>CO3: Apply server-side scripting languages to develop a web page linked to a database. (Apply)</p>					
Course Content:						
Module 1	Introduction to XHTML	Quizzes and Assignments	Quizzes on various features of XHTML, simple applications			20 Sessions
	<p>Basics: Web, WWW, Web browsers, Web servers, Internet.</p> <p>XHTML: Origins and Evolution of HTML and XHTML: Basic Syntax, Standard XHTML Document Structure, Basic Text Markup, Images, Hypertext Links, Lists, Tables, Forms, Frames, Syntactic Differences between HTML and XHTML, Demonstration of applications using XHTML for Responsive web pages.</p>					

Module 2	Advanced CSS	Quizzes and assignments 	Comprehension based Quizzes and assignments; Application of CSS in designing webpages	20 Sessions
Advanced CSS: Layout, Normal Flow, Positioning Elements, Floating Elements, Constructing Multicolumn Layouts, Approaches to CSS Layout, Responsive Design, CSS Frameworks				

XML: Basics, Demonstration of applications using XML with XSLT.

Module 3	PHP – Application Level	Quizzes and assignments	Application of PHP in web designing	20 Sessions
-----------------	--------------------------------	-------------------------	-------------------------------------	--------------------

PHP: Introduction to server-side Development with PHP, Arrays, Superglobal Arrays, \$GET and \$ POST, \$_SERVER Array, \$_Files Array, Reading/Writing Files, PHP Classes and Objects, Object Oriented Design, Working with Databases, SQL, Database APIs, Managing a MySQL Database. Accessing MySQL in PHP, Applications.

Targeted Application & Tools that can be used: Xampp web server to be used to demonstrate PHP.

Project work/Assignment:

Assignments are given after completion of each module which the student need to submit within the stipulated deadline.

Topics related to development of “FOUNDATION”:

1. Web, WWW, Web browsers, Web servers, Internet.
2. CSS, PHP.
3. Designing the website for healthcare.

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

The objective of the course is to familiarize the learners with the concepts of Web Technology and attain Skill Development through Experiential Learning techniques.

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Code: CSE2259	Course Title: Web Technologies Lab Type of Course: Program core lab course	L-T-P-C	0	0	2	1
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	<p>This course highlights the comprehensive introduction to scripting languages that are used for creating web-based applications.</p> <p>The associated laboratory provides an opportunity to implement the concepts and enhance critical thinking and analytical skills.</p>					
Course Objective	<p>The objective of the course is to familiarize the learners with the concepts of Web Technology and attain Skill Development through Experiential Learning techniques.</p>					
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <p>CO1: Implement web-based application using client-side scripting languages. (Apply)</p> <p>CO2: Apply various constructs to enhance the appearance of a website. (Apply)</p> <p>CO3: Apply server-side scripting languages to develop a web page linked to a database. (Apply)</p>					

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

List of Laboratory Tasks:

Experiment No. 1: Demonstration of XHTML features

Level 1: Demonstration of various XHTML Tags (Level 1)

Level 2: Design and develop static web pages for an online Book store (Level 2).

Experiment No. 2: Application of CSS in web designing

Level 1: Design a document using XHTML and CSS to create a catalog of items for online electronic shopping.

Level 2: Create and save XML document for students' information and display the same using cascaded style sheet.

Experiment No. 3: Application of PHP in web designing.

Level 1: Write a PHP program to read the personal information of a person such as first name, last name, age, permanent address, and pin code entered by the user into a table created in MySQL. Read the same information from the database and display it on the front end.

Level 2: Using PHP develop a web page that accepts book information such as ISBN number, title, authors, edition, and publisher and store information submitted through the web page in MySQL database.

Experiment No. 4: Building a website.

Build a website for organizing an International Conference. The conference website must be able to collect the author's details and upload a file.

Targeted Application & Tools that can be used: Xampp web server to be used to demonstrate PHP.

Project work/Assignment:

Assignments are given after completion of each module which the student need to submit within the stipulated deadline.

Course Code: CSE2269	Course Title: Operating Systems	L-T- P- C	3	0	0	3
	Type of Course: Program Core and Theory Only					
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	This course introduces the concepts of operating system operations, operating system structure and its design and implementation. It covers the classical operating systems internal algorithms such as process scheduling, synchronization, deadlocks detection and recovery and memory management. The course also enhances the problem solving, systems programming ability and case studies.					

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Object	The objective of the course is to familiarize the learners with the concepts of Operating Systems and attain Employability through Problem Solving Methodologies .			
Course Out Comes	<p>On successful completion of the course the students shall be able to:</p> <ol style="list-style-type: none"> 1] Describe the fundamental concepts of operating Systems and case studies. [Knowledge] 2] Demonstrate various CPU scheduling algorithms. .[Application] 3] Apply various tools to handle synchronization problems.[Application] 4] Demonstrate deadlock detection and recovery methods [Application] 5] Illustrate various memory management techniques.[Application] 			
Course Content:				
Module 1	Introduction to Operating System	Assignment	Programming	9 Hours
<p>Topics:</p> <p>Introduction to OS , Operating-System Operations, Operating System Services, , System Calls and its types, Operating System Structure, System Program and its types, Linkers and Loaders, Overview of OS design and implementation, Open-source operating system</p>				
Module 2	Process Management	Assignment/Case Study	Programming/Simulation	11 Hours
<p>Topics:</p> <p>Process Concept, Operations on Processes, Inter Process Communication, Communication in client-server systems (sockets, RPC, Pipes), Introduction to threads - Multithreading Models, Thread Libraries, Threading Issues, Process Scheduling– Basic concepts, Scheduling Criteria, Scheduling Algorithms: FCFS, SJF, SRTF, RR and Priority.</p>				
Module 3	Process Synchronization and Deadlocks	Assignment	Programming	11 Hours
<p>Topics:</p> <p>The Critical-Section Problem- Peterson’s Solution, Synchronization hardware, Semaphores, Classic Problems of Synchronization with Semaphore Solution- Producer-Consumer Problem, Reader-Writer problems, Dining Philosopher’s Problem, . Introduction to Deadlocks, Necessary conditions for</p>				

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

<p>deadlock, Resource allocation Graph, Methods for handling deadlock: Deadlock Prevention and Implementation, Deadlock Avoidance and Implementation, Deadlock detection & Recovery from Deadlock.</p>				
Module 4	Memory Management	Assignment	Programming/Simulation	10 Hours
<p>Topics:</p> <p>Introduction to Memory Management, Basic hardware-Base and Limit Registers, Memory Management Unit(MMU), Dynamic loading and linking, Swapping, Contiguous and Non-Contiguous Memory Allocation, Segmentation, Paging - Structure of the Page Table – Virtual Memory and Demand Paging – Page Faults and Page Replacement Algorithms, Copy-on-write, Allocation of Frames, Thrashing</p> <p>Introduction to File system management: File System Interface (access methods, directory structures), File system implementation.</p>				
<p>Targeted Application:</p> <p>Application area is traffic management system, banking system, health care and many more systems where in there are resources and entities that use and manage the resources.</p>				
<p>Software Tools:</p> <p>Oracle Virtual Box/VMWare Virtualization software [Virtual Machine Managers]. Used to install and work on multiple guest Operating Systems on top of a host OS.</p> <p>Intel Processor identification utility: This software is used to explain about multi-core processors. It helps to identify the specifications of your Intel processor, like no of cores, Chipset information, technologies supported by the processor etc.</p>				
<p>Project work/Assignment</p>				
<p>Demonstrate process concepts in LINUX OS.</p> <p>Simulation of CPU scheduling algorithms.</p> <p>Develop program to demonstrate use of Semaphores in threads.</p> <p>Develop program to demonstrate use of deadlock avoidance algorithms.</p> <p>Develop program to demonstrate use of page replacement algorithms.</p> <p>Simulation of memory allocation strategies [first fit, best fit and worst fit].</p>				
<p>Text Book</p>

Course Code: CSE2270	Course Title: Operating Systems Lab Type of Course: Lab Only	L-T- P- C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	This laboratory course provides hands-on experience with the core concepts of operating systems through practical assignments, simulations, and case studies. It covers foundational aspects such as system calls, process and thread management, inter-process communication, synchronization, deadlocks, memory management, and file systems. Students will implement and simulate real-time OS components and scheduling algorithms, fostering deeper understanding of OS architecture and design. The lab also introduces modern OS tools, programming interfaces, and the basics of open-source OS environments.					
Course Object	The objective of the course is to familiarize the learners with the concepts of Operating Systems and attain Employability through Problem Solving Methodologies.					
Course Out Comes	On successful completion of the course the students shall be able to: 1] Demonstrate system-level programming using system calls and OS structures. [Apply]					

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

	<p>2] Simulate process scheduling and multithreading techniques. [Apply]</p> <p>3] Apply various tools to handle synchronization problems using semaphores and shared memory. [Apply]</p> <p>4] Demonstrate memory management and file system concepts using simulation or scripting. [Apply]</p>
Course Content:	
Targeted Application: Application area is traffic management system, banking system, health care and many more systems where in there are resources and entities that use and manage the resources.	
Software Tools: Oracle Virtual Box/VMWare Virtualization software [Virtual Machine Managers]. Used to install and work on multiple guest Operating systems on top of a host OS. Intel Processor identification utility: This software is used to explain about multi-core processors. It helps to identify the specifications of your Intel processor, like no of cores, Chipset information, technologies supported by the processor etc.	
List of Laboratory Tasks: Lab sheet -1 L1: Write a program to demonstrate the use of fork() and exec() system calls in process creation. L2: A system has limited memory and high-priority real-time processes. Design a scheduling algorithm that ensures responsiveness while preventing starvation. Lab sheet -2 L1: Implement First-Come-First-Serve (FCFS) process scheduling using C or Python. L2: You are designing a server that handles thousands of client connections. Compare multithreading and multiprocessing for this task and implement a basic server model. Lab sheet -3 L1: Implement Round Robin Scheduling with a fixed time quantum. L2: In a banking system, concurrent access to accounts leads to data corruption. Design a synchronization solution to avoid race conditions.	

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Lab sheet -4

L1: Write a program to create threads using Pthreads or Python's threading module.

L2: You're tasked with building a file access tracker in an OS. Implement a system to log file access patterns and identify frequent accesses.

Lab sheet -5

L1: Demonstrate inter-process communication (IPC) using pipes.

L2: A simulation tool needs to emulate process suspension and resumption. Design and implement such a mechanism using signals or condition variables.

Lab sheet -6

L1: Simulate the Producer-Consumer problem using semaphores.

L2: You're developing a system where sensor devices (producers) generate temperature readings, and data processors (consumers) store and process these readings. To prevent race conditions and ensure buffer safety, implement a synchronization mechanism using semaphores.

Lab sheet -7

L1: Implement Dining Philosophers Problem using threads and synchronization.

L2: In a multi-threaded cafeteria simulation, five philosophers sit around a circular table, each alternating between thinking and eating. To eat, a philosopher must hold two forks (represented by shared resources). Your task is to avoid deadlock and ensure no philosopher starves using thread synchronization techniques.

Lab sheet -8

L1: Write a program to simulate First Fit, Best Fit, and Worst Fit memory allocation strategies.

L2: A system with limited memory blocks needs to allocate memory to processes arriving with various size requests. Your task is to implement three classic memory allocation strategies—First Fit, Best Fit, and Worst Fit—to allocate memory to each process efficiently. Simulate and compare how memory gets allocated in each strategy.

Lab sheet -9

L1: Demonstrate paging using a simple page table simulation.

L2: A program has a logical address space divided into pages. The system's memory is divided into equal-sized frames. When a program executes, its pages are loaded into available frames in main memory. Simulate the address translation process using a page table and demonstrate how a logical address is converted to a physical address.

Lab sheet -10

L1: Write a program to simulate page replacement algorithms like FIFO and LRU.

L2: In a virtual memory system, a process accesses pages in a specific order. The memory can only hold a limited number of pages (frames). When a page is needed and the memory is full, a page replacement algorithm is used to decide which page to evict. Simulate and compare FIFO and LRU algorithms for a given page reference string.

Lab sheet -11

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

L1: Simulate file directory structure (single level/two level).

L2: A university campus computer lab has limited memory space available for each student login session. When students open files or run programs, memory pages are loaded into available memory frames. Due to the limited number of frames, some pages must be replaced when new ones are needed. The lab system uses page replacement algorithms to decide which pages to evict when memory is full..

Lab sheet -12

L1: Write a shell script to demonstrate file handling commands in Linux.

L2: Design a command-line mini shell that can run background and foreground processes and handle basic built-in commands like cd, pwd, exit.

Project work/Assignment

Demonstrate process concepts in LINUX OS.

Simulation of CPU scheduling algorithms.

Develop program to demonstrate use of Semaphores in threads.

Develop program to demonstrate use of deadlock avoidance algorithms.

Develop program to demonstrate use of page replacement algorithms.

Simulation of memory allocation strategies [first fit, best fit and worst fit].

Course Code: CSE7000	Course Title: Internship Type of Course:	L- T-P- C	-	-	-	2
Version No.	1.0					
Course Pre-requisites	Knowledge and Skills related to all the courses studied in previous semesters.					
Anti-requisites	NIL					
Course Description	Students observe science and technology in action, develop an awareness of the method of scientific experimentation, and often get an opportunity to see, study and operate sophisticated and costly equipment. They also learn about the implementation of the principles of management they have learnt in class, when they observe multidisciplinary teams of experts from engineering, science, economics, operations research, and management deal with techno-economic problems at the micro and macro levels. Finally, it enables them to develop and refine their language, communication and inter-personal skills, both by its very nature, and by the various evaluation components, such as seminar, group discussion, project report preparation, etc. The broad-based core education, strong in mathematics and science and rich in analytical tools, provides the foundation necessary for the student to understand properly the nature of real-life problems.					
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Professional Practice and attain Employability Skills through Experiential Learning techniques.					
Course Outcomes	On successful completion of this course the students shall be able to: <ol style="list-style-type: none"> 1. Identify the engineering problems related to local, regional, national or global needs. (Understand) 2. Apply appropriate techniques or modern tools for solving the intended problem. (Apply) 3. Design the experiments as per the standards and specifications. (Analyze) 4. Interpret the events and results for meaningful conclusions. (Evaluate)

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Code: CSE2502	Course Title: Cryptography and Network Security Type of Course: Theory	L- T-P- C	3	0	0	3
Version No.	2.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	The Course deals with the principles and practice of cryptography and network security, focusing in particular on the security aspects of the web and Internet					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Cryptography and Network Security above and attain Skill Development through Problem Solving methodologies.					
Course Outcomes	On successful completion of this course the students shall be able to: 1. Describe the basic concept of Cryptography 2. Classify different types of Cryptographic Algorithms 3. Solve Mathematical problems required for Cryptography 4. Illustrate Network Security concepts					
Course Content:						
Module 1	Introduction to Cryptography	Assignment	Recognize the techniques			7 Sessions

PRESIDENCY UNIVERSITY

Course Code: APT4006	Course Title: Logical and Critical Thinking <small>Private University, Estd. in Karnataka State by Act No. 41 of 2013</small>		L- T-P- C	0	0	2	0
	Type of Course: Audited						
Version No.	1.0						
Course Pre-requisites	Students should have the basic concepts of Logical reasoning and Critical thinking, along with its applications in real life problems.						
Anti-requisites	Nil						
Course Description	This is a skill-based training program for the engineering students (Undergraduate). This course is designed to enable the students to enhance their skills in Logical reasoning and Critical thinking.						
Course Objective	The objective of the course is to familiarize the learners with concepts in Logical reasoning and Critical thinking through problem solving techniques suitable for their career development.						
Course Outcomes	On successful completion of the course the students shall be able to:						
	CO1] Understand all the concepts.						
	CO2] Apply the concepts in problem solving (Bloom's taxonomy Level 3)						
	CO3] Analyze and structure the reasoning techniques and spatial visualization skills						
Course Content:							
Module 1	Logical Thinking	Assignment					16 Hours
	Topics:						
	Syllogisms, Cubes and Dices, Mirror and Water images, Paper cutting and Folding, Embedded figures & Completion of figures, Data Interpretation, Data sufficiency						
Module 2	Critical Thinking	Assignment					14 Hours
	Topics:						
	Analogy, Symbol and Notations, Statement and assumption, Cause of action, Statement and conclusion, Puzzles						
	Targeted Application & Tools that can be used:						
	Application area: Placement activities and Competitive examinations.						
	Tools: LMS						
Evaluation	Continuous Evaluation

Course Code: ISE2503	Course Title: Information Theory and Coding					
	Type of Course: PCC - Theory	L-P-C	3	0	0	3
Version No.	1.1					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	Information Theory is the science for measuring, preserving, transmitting, and estimating information in random data. It was initially proposed by Shannon as a mathematical theory of communication more than five decades ago. It provides the fundamental limits of performance for transmission of messages generated by a random source over a noisy communication channel. On the one hand, Information Theory has been the driving force behind the revolution in digital communication and has led to various practical data compression and error correcting codes that meet the fundamental theoretical limits of performance. On the other hand, over the years, techniques and concepts from Information Theory have found applications well beyond communication theory. In this course, we will introduce the basic notions and results of Information Theory, keeping in mind both its fundamental role in communication theory and its varied applications beyond communication theory. This course, and the follow-up advanced courses to be offered in the future, will be of interest to students from various backgrounds.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Information Theory and Coding and attain Employability through Problem Solving Methodologies.					

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Out Comes	<p>On successful completion of the course the students shall be able to:</p> <p>Calculate the entropy of Zero memory; Analyze Markov sources and Apply the properties of Entropy for a given source statistic.</p> <p>For the given source message, Determine the code words and Calculate coding efficiency using Shannon, Shannon-Fano, Huffman and Arithmetic coding algorithm for memoryless sources given the source statistics and LZ algorithm for sources with memory.</p> <p>Determine and Analyze the channel entropies, mutual information and the channel capacities for Discrete Memoryless Channels for the given channel diagram or channel matrix and to Discuss Shannon Hartley Law and Shannon's limit.</p> <p>For the given (n, k) Linear Block Codes and Binary Cyclic Codes Determine the code words, syndrome, error detecting & correcting capability of the code and the corrected received vector; Design a single error correcting Linear Block Code for the given message length.</p> <p>Evaluate the code words for a given (n, k, m) convolution encoder and Use Sequential search and Viterbi algorithm to decode the information from the given received vector and Discuss BCH, RS, Golay, shortened cyclic, burst error correcting, Burst and Random error correcting codes and Turbo codes.</p>	
Course Content:		
Module 1	Information Theory	12 Sessions
Topics:	<p>Introduction, Measure of information, Average information content (entropy) of symbols in long independent sequences, Information rate, Properties of entropy, Extension of discrete memory less (zero-memory) sources, Average information content (entropy) of symbols in long dependent sequences, Mark off statistical model for information source, Entropy and information rate of Mark off sources.</p>	
Module 2	Source Coding	12 Sessions
Topics:	<p>Properties of codes- Block codes, on-singular codes, Uniquely decodable codes. Instantaneous codes and Optimal codes, Prefix of a code, Test for instantaneous property, Construction of Instantaneous code, Decision tree, Kraft's inequality, Source coding theorem (Shannon's Noiseless coding theorem), Shannon's encoding algorithm, Shannon Fano Algorithm, Huffman minimum redundancy code (binary, ternary and quaternary), Code efficiency and redundancy, Extended Huffman Coding, Arithmetic Codes, Lempel – Ziv Algorithm.</p>	
Module 3	Channels and Mutual Information	12 Sessions
Topics:		

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Introduction, Discrete communication channels, Representation of a channel, Probability relations- Apriori, Posteriori entropy, Equivocation, Mutual information, Properties, Rate of information transmission over a discrete channel, Capacity of a discrete memoryless channel, Shannon's theorem on channel capacity (Shannon's second theorem), Special channels- Symmetric, Binary symmetric, Binary erasure, Noiseless, Deterministic and cascaded channels, Estimation of channel capacity by Muroga's method, Continuous channels, Shannon-Hartley theorem and its implications, Shannon's limit, Rate Distortion Theory.

Module 4	Linear Block Codes	9 Sessions
----------	--------------------	------------

Topics:
 Introduction to Fields and Vector Spaces, Types of errors, Examples, Methods of controlling errors, Types of codes, Linear Block Codes- Matrix description, Encoding circuit, Syndrome and error detection, Syndrome circuit, hamming weight, hamming distance, Minimum distance of a block code error detection and correction capabilities of a linear block code, Single error-correcting Hamming codes, Table lookup decoding using standard array, General decoder for a linear block code. Binary cyclic codes: Algebraic structures of cyclic codes, Encoding using (n-k) bit shift register, Syndrome calculation.

Topics relevant to development of "EMPLOYABILITY SKILL": Algebraic structures of cyclic codes, Encoding using (n-k) bit shift register, Syndrome calculation, for developing Employability Skills through Problem Solving Techniques. This is attained through assessment component mentioned in course handout.

Course Code: ISE2504	Course Title: Image Processing and Computer Vision Type of Course: Discipline Elective - Theory	L- T-P- C	3	0	0	3
Version No.	1.0					

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Pre-requisites	CSE2264		
Anti-requisites	NIL		
Course Description	<p>This course provides an introduction to the fundamental principles and techniques of digital image processing and computer vision. It emphasizes both theoretical foundations and practical applications including image enhancement, segmentation, feature extraction, object detection, and recognition, preparing students for real-world computer vision challenges in areas like robotics, medical imaging, and autonomous systems.</p>		
Course Objective	<p>To understand the fundamentals of digital images and image processing techniques.</p> <p>To explore computer vision algorithms for object detection, tracking, and classification.</p> <p>To implement practical solutions using modern image processing libraries and tools.</p> <p>To apply image and video analytics for real-time intelligent systems.</p>		
Course Outcomes	<p>On successful completion of the course, students will be able to:</p> <ol style="list-style-type: none"> 1. Apply image enhancement and transformation techniques. 2. Analyze and segment images using appropriate algorithms. 3. Extract, match, and classify features from image data. 4. Implement computer vision models for detection, tracking, and recognition. 		
Course Content:			
Module 1	Fundamentals of Digital Image Processing	Assignment	[8] Sessions
<p>Topics: Image formation and perception, ampling, quantization, and pixel relationships, Intensity transformations and histogram processing, Spatial filtering: smoothing and sharpening, Frequency domain processing using Fourier transforms.</p>			
Module 2	Image Segmentation and Morphological Processing	Assignment	[7] Sessions
<p>Topics: Thresholding, region growing, and watershed algorithms, Edge detection: Sobel, Prewitt, Canny, Morphological operations: dilation, erosion, opening, closing, Connected components labelling, Segmentation evaluation techniques.</p>			

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Module 3	Feature Extraction and Matching	Assignment		[7] Sessions
-----------------	--	------------	--	---------------------

Topics:

Texture and color features, Corner and blob detection: Harris, FAST, DoG, SIFT, SURF, Feature descriptors and matching (BRIEF, ORB, FLANN), Hough transform for lines, circles, Motion detection and optical flow.

Module 4	Object Detection, Recognition, and Vision Applications	Assignment		[8] Sessions
-----------------	---	------------	--	---------------------

Topics:

Object detection using Haar cascades and HOG, Face detection and facial recognition, Deep learning in vision: CNNs and YOLO, Video surveillance and real-time tracking, Applications: Medical imaging, AR/VR, Robotics, Self-driving vehicles.

Course Code	Computer Vision Title: Image Understanding (Elsevier) ISE2505 https://www.computer-vision-lab.com/journal/computer-vision-and-image-understanding					
	International Journal of Computer Vision (Springer) https://www.springer.com/journal/11263	L- T-P- C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	CSE2264 SWAYAM / NPTEL / MOOCs					
Anti-requisites	NIL					
Course Description	NPTEL – Computer Vision (IIT Hyderabad) – Prof. P.J. Narayanan https://nptel.ac.in/courses/106106210 Coursera – Introduction to Computer Vision (Georgia Tech) https://www.coursera.org/learn/computer-vision-basics edX – Fundamentals of Digital Image and Video Processing (Northwestern University) https://www.edx.org/course/digital-image-and-video-processing Udacity – Intro to Computer Vision with OpenCV and Python https://www.udacity.com/course/introduction-to-computer-vision-prod840					
Course Objective	To provide an introduction to computer vision, and enhancement To understand and implement key computer vision algorithms To apply feature extraction, segmentation, and classification techniques To develop small-scale vision-based applications using Python and OpenCV					
Course Outcomes	Upon successful completion, students will be able to: 9. Apply image transformation and enhancement operations 10. Implement segmentation and object detection techniques 11. Extract and match visual features from images 12. Build vision-based projects using OpenCV and CNN models					
List of Laboratory Tasks						
Lab 1: Read and Display Images using OpenCV Objective: Load and visualize images using OpenCV Task: Read image files and convert between color spaces Activity: Display images in grayscale, RGB, and HSV formats						
Lab 2: Image Enhancement Techniques Objective: Apply contrast and brightness enhancement						

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Task: Use histogram equalization and contrast stretching

Activity: Compare results on different image datasets

Lab 3: Perform Image Filtering and Smoothing

Objective: Reduce noise using filters

Task: Apply Gaussian, median, and bilateral filters

Activity: Observe effects of different kernels on noisy images

Lab 4: Edge Detection Techniques

Objective: Detect edges using gradient-based methods

Task: Use Sobel, Prewitt, and Canny edge detectors

Activity: Tune thresholds and visualize edge maps

Lab 5: Geometric Transformations of Images

Objective: Apply image transformation techniques

Task: Perform translation, rotation, scaling, and affine transformations

Activity: Warp an image using transformation matrices

Lab 6: Image Thresholding and Binarization

Objective: Segment images using intensity values

Task: Apply global, adaptive, and Otsu's thresholding

Activity: Visualize segmentation results and contours

Lab 7: Morphological Operations

Objective: Use structuring elements for shape-based processing

Task: Apply dilation, erosion, opening, and closing

Activity: Clean up binary images using morphological filters

Lab 8: Color-based Object Detection

Objective: Segment objects based on color

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Task: Use HSV color space for object detection

Activity: Detect colored objects (e.g., red ball) in real-time

Lab 9: Feature Detection using SIFT and ORB

Objective: Extract and match image features

Task: Use SIFT and ORB for keypoint detection

Activity: Match features between two images and draw correspondences

Lab 10: Object Tracking in Videos

Objective: Track moving objects in video streams

Task: Implement object tracking using meanshift or CSRT

Activity: Track objects with bounding boxes in webcam input

Lab 11: Face Detection using Haar Cascades

Objective: Detect faces in images and videos

Task: Load pre-trained Haar classifiers

Activity: Draw bounding boxes around detected faces

Lab 12: Image Classification using Pre-trained CNNs

Objective: Classify images using deep learning

Task: Use MobileNet, VGG, or ResNet for classification

Activity: Load and predict labels for input images

Lab 13: Implement Background Subtraction

Objective: Separate foreground from background in video

Task: Use frame differencing or background subtraction algorithms

Activity: Detect motion and isolate moving objects

Lab 14: Create an Image Stitching Pipeline

Objective: Stitch overlapping images into panoramas

PRESIDENCY UNIVERSITY

Course Objective	<p>The objective of the course is to familiarize the learners with the concepts of Competitive Programming and Problem Solving and attain Skill Development through Experiential Learning techniques.</p>						
<p>Module 1: Introduction to Competitive Programming</p> <p>Overview of Efficient Coding for Problem Solving and CP: Introduction to competitive programming (CP); revisit of complexity analysis; introduction to online platforms such as codechef, codeforces etc and online submission; constraints during CP, online testing process and common errors such as TLE; use of STL</p> <p>Module 2: Number Theory for Problem-Solving</p> <p>Use of Number Theory for problem-solving: reducing time/space complexity of brute force coding solution of Sieve Method, Inverse Module, Euclidian Method of factorization; efficient coding for Permutation Combination; XORing based and pattern-based solutions.</p> <p>Module 3: Optimizing Time & Space Using Sequential Storage</p> <p>Coding for Optimizing time and Space using Sequential Storage: two pointer approach; problem-solving using arrays and strings such as rotation on sorted arrays, duplicate removal, string</p>							

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

matching algorithms; Kadane's algo, stacks, priority-queues and hashing based efficient coding; median based problems and alternate solutions.

Module 4: Non-Linear Data Structures

Applying Non-Linear Data Structures for real-life problems: design of efficient solutions for problems such as finding loops in a linked list, memory efficient DLL, block reversal in LL; problem solving using trees and binary trees, Catalan numbers, applications of graphs, spanning tree and path algos for CP problems with reduced time/space complexity.

Module 5: Problem Solving using Advanced Topics

CP Problem Solving using Advanced Topics: concept of disjoint sets and their efficient representation, algorithmic approaches such as Greedy, Backtracking, Dynamic Programming and applying them for CP problems using bottom-up dynamic programming.

List of Laboratory Tasks:

1. You are given the finishing times of 'N' runners in a marathon. Write a program to find the runner who finished in the third position. **Focus:** Basic data structures (arrays), sorting algorithms (e.g., insertion sort, selection sort), and basic input/output.
2. In the same marathon, you are given the finishing times of 'N' runners and their bib numbers. Write a program to efficiently find the top 10 runners and their corresponding bib numbers. **Focus:** Efficient sorting algorithms (e.g., merge sort, quick sort), data structures like priority queues, and optimizing for large datasets.
3. A library maintains a list of books with their unique IDs. Write a program to check if a given book ID is present in the library. **Focus:** Searching algorithms (linear search), basic data structures (arrays or lists).
4. The library wants to implement a system to quickly find books by their titles. Suggest an efficient data structure (e.g., a hash table or a trie) and explain how to implement it to achieve fast book lookups. **Focus:** Understanding the trade-offs between different data structures, choosing the most appropriate data structure for a specific problem, and implementing efficient search operations.
5. An online store sells products with different prices. Write a program to calculate the total cost of a given list of products. **Focus:** Basic arithmetic operations, working with arrays or lists to store product prices.
6. The online store offers discounts based on the total purchase amount. Design an algorithm to efficiently calculate the final cost of an order, considering different discount rules (e.g., percentage discounts, fixed amount discounts, tiered discounts). **Focus:** Algorithmic design, conditional statements, handling complex scenarios with multiple rules, and potentially using dynamic programming techniques for optimization.
7. You are given two integers, 'a' and 'm'. Calculate 'a' raised to the power 'm' modulo a large prime number 'p'. **Focus:** Basic modular arithmetic operations (modular exponentiation), understanding the modulo operator.
8. In a secure communication system, you need to efficiently compute the modular exponentiation for very large values of 'm'. Implement and analyze the efficiency of the binary exponentiation algorithm for this task. **Focus:** Efficient algorithms for modular exponentiation (binary exponentiation), time complexity analysis, and understanding the importance of efficient algorithms in cryptography.

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

9. You have a deck of 'N' cards. Calculate the total number of possible hands of size 'K' that can be drawn from the deck. **Focus:** Basic combinatorics (combinations), factorial calculations.
10. In a card game, you need to calculate the probability of drawing certain combinations of cards (e.g., a pair, a three-of-a-kind) from a shuffled deck. Design an efficient algorithm to calculate these probabilities. **Focus:** Advanced combinatorics (permutations and combinations with repetitions), probability calculations, and optimizing calculations to avoid overflows.
11. You are given a network of devices represented as a graph. Determine if there is a path between two given devices in the network. **Focus:** Graph traversal algorithms (depth-first search or breadth-first search).
12. In a secure network, you need to detect and isolate compromised devices. Design an algorithm that efficiently identifies devices that exhibit anomalous behavior (e.g., unusual traffic patterns) using XOR-based techniques for data comparison and pattern matching. **Focus:** Applying XOR operations for data comparison and pattern recognition, understanding the properties of XOR (e.g., commutative, associative), and designing algorithms for network anomaly detection.
13. You are given an array representing the speeds of cars on a highway. Find the minimum time required for all cars to pass a certain point. **Focus:** Basic array traversal, finding the minimum element in an array.
14. In a more realistic scenario, cars have different lengths. Implement a two-pointer approach to simulate the movement of cars and determine the minimum time for all cars to pass a given point. **Focus:** Two-pointer technique, simulating real-world scenarios with arrays, optimizing time complexity.
15. Given a string, find the number of occurrences of a specific substring within the string. **Focus:** Basic string manipulation, string matching (brute-force approach).
16. Implement the KMP (Knuth-Morris-Pratt) string matching algorithm to efficiently find all occurrences of a given pattern within a large text document. **Focus:** Advanced string matching algorithms, understanding the concept of the "next" array in KMP, optimizing for large input sizes.
17. An online auction platform receives bids for different items. Implement a data structure (e.g., a priority queue) to efficiently track the highest bid for each item. **Focus:** Priority queues, insertion and extraction operations on priority queues, basic implementation of a priority queue using an array or a suitable library.
18. The auction platform needs to handle a large number of bids concurrently. Design and implement a system that efficiently processes bids, updates the highest bid for each item, and handles potential race conditions. **Focus:** Concurrent data structures and algorithms, thread safety, handling race conditions, optimizing for high-throughput scenarios.
19. A social network can be represented as a graph where users are nodes, and connections between users are edges. Write an algorithm to find if two given users are connected in the network. **Focus:** Graph traversal algorithms (depth-first search or breadth-first search), basic graph representation (adjacency list or adjacency matrix).
20. In a large social network, efficiently finding the shortest path between two users is crucial. Implement Dijkstra's algorithm to find the shortest paths between users in the network, considering edge weights (e.g., representing the strength of connections). **Focus:** Shortest path algorithms (Dijkstra's algorithm), graph algorithms with weighted edges, optimizing for large graphs.

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

21. A file system can be modeled as a tree structure. Implement a function to traverse the file system and print the names of all files and directories. **Focus:** Tree traversal algorithms (depth-first search or breadth-first search), basic tree representation (using nodes and pointers).
22. Design and implement a file system that supports efficient operations like creating directories, deleting files, and finding files based on their names or paths. Consider using a combination of tree structures and hash tables for efficient indexing and searching. **Focus:** Designing and implementing file system structures, using multiple data structures together, optimizing for common file system operations.
23. An online shopping cart can be represented as a tree, where each node represents an item or a category of items. Write an algorithm to calculate the total price of all items in the shopping cart. **Focus:** Tree traversal, calculating sums within a tree structure.
24. Implement a system that allows customers to apply discounts and coupons to their shopping carts. Consider using a combination of trees and other data structures (e.g., hash tables) to efficiently apply discounts and calculate the final price. **Focus:** Applying discounts and promotions to tree-like structures, efficient implementation of discount rules, optimizing for complex pricing scenarios.
25. In a social network, users can form groups. Given a list of friendships, determine if all users in a specific group are connected (directly or indirectly) through friendships. **Focus:** Disjoint set union (DSU) data structure, basic connectivity checks.
26. Design an efficient algorithm to find the minimum number of new friendships needed to connect all users in the social network into a single, connected component. **Focus:** Applying DSU for finding connected components, greedy algorithms, optimization for minimizing connections.
27. A treasure hunt involves a series of clues leading to the final treasure. Given a list of possible paths and their associated costs, find the cheapest path to reach the treasure. **Focus:** Greedy algorithms (e.g., Dijkstra's algorithm for shortest paths), basic graph representation.
28. In a more complex treasure hunt, there are time constraints associated with each path. Design an algorithm to find the fastest path to the treasure while considering both path costs and time constraints. **Focus:** Combining greedy approaches with other techniques (e.g., priority queues), handling multiple constraints, optimizing for time-critical scenarios.
29. In a simplified chess game with only rooks, determine the minimum number of moves required for a rook to reach a specific target square on an empty board. **Focus:** Breadth-first search (BFS) on a graph (the chessboard), basic graph traversal.
30. In a more realistic chess game with multiple pieces and obstacles, implement a minimax algorithm with alpha-beta pruning to determine the best move for a player. **Focus:** Game tree search, minimax algorithm, optimization techniques like alpha-beta pruning, handling complex game states.

Targeted Application & Tools that can be used:

1. C or C++ Compiler (g++): The standard compiler for CP. Familiarize students with compilation flags (e.g., -O2 for optimization).
2. IDE (Integrated Development Environment): Code:: Blocks, Visual Studio, CLion, or similar IDEs. These provide debugging capabilities, code completion, and other helpful features.

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

3. Online Judges (CodeChef, Codeforces, LeetCode, HackerRank): Essential for practicing and submitting solutions.
4. Debugger (gdb): Crucial for understanding code execution and finding bugs. Origin, excel and Mat lab soft wares for programming and data analysis.
5. Number Theory Libraries: Some libraries provide pre-built functions for number theory operations (though often it's better to implement them yourself for learning).
6. Wolfram Alpha: A useful tool for verifying number theory calculations and exploring concepts.
7. **String Libraries:** Familiarize students with the string manipulation functions available in C++.
8. **Graph Visualization Tools:** Tools like Graphviz can be helpful for visualizing graphs and understanding graph algorithms.
9. **DP Debugging Techniques:** Practice debugging DP solutions, as they can be complex. Visualizing the DP table can be helpful.

Assessment Type

- Midterm exam
- Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screen shot accessing digital resource.)
- Quiz
- End Term Exam
- Self-Learning

Course Code: APT4005	Course Title: Aptitude For Employability Type of Course: Practical Only	L- T-P-C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	Students should have the basic concepts of Quantitative aptitude, Verbal ability along with its applications in real life problems.					

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Anti-requisites	Nil				
Course Description	This course is designed to enable the students to enhance their skills in quantitative aptitude and verbal ability skills.				
Course Objective	The objective of the course is to familiarize the learners with concepts in Quantitative Aptitude and Verbal ability through problem solving techniques suitable for their career development.				
Course Outcomes	<p>On successful completion of the course the students shall be able to: CO1]</p> <p>Recall all the basic mathematical concepts</p> <p>CO2] Identify the principle concept needed in a question</p> <p>CO3] Solve the quantitative and logical ability questions with the appropriate concept.</p>				
Course Content:					
Module 1	Quantitative Ability	Lab-10hrs		Platform Assessment-10hrs	20 Hours
	Topics: Number System, Percentage, Ratio and Proportion, Average, Mixture and Allegation, Time and Work, Profit and Loss, Time Speed and Distance, Simple Interest and Compound Interest, Probability, Permutation and Combination.				
Module 2	Verbal Ability	Lab-5hrs		Platform Assessment-5hrs	10 Hours
	Topics: - Parts of Speech, Subject Verb Agreement, Spotting Error, Cloze Test, Verbal Analogies, Reading Comprehension, Idioms & Phrases, Para Jumbles				
	Targeted Application & Tools that can be used: Application area: Placement activities and Competitive examinations. Tools: LMS				
Evaluation	Continuous Evaluation <ul style="list-style-type: none"> • Topic wise evaluation

Course Code: PPS 3018	Course Title: Preparedness for Interview					
	Type of Course: Practical Only Course	L- T- P- C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	<p>Students are expected to understand Basic English.</p> <p>Students should have desire and enthusiasm to involve, participate and learn.</p>					
Anti-requisites	NIL					
Course Description	<p>This course is designed to enable students to understand soft skills concepts to be corporate ready. The modules are set to improve self-confidence, communicate effectively and Prepare for the Interview to assist in employability. It helps the students to get a glimpse of the acceptable corporate readiness and equip them with the fundamental necessities of being able to confidently deal with the highly competitive corporate environment and helps in crafting different types of resumes. The pedagogy used will be group discussions, flipped classrooms, continuous feedback, role-play and mentoring.</p>					

PRESIDENCY UNIVERSITY

Course Objective	The objective of the course is to familiarize the learners with the concepts of “Preparing for Interview” and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques.		
Course Out Comes	On successful completion of this course the students shall be able to: CO1: Develop professional Resumes CO2: Illustrate Resumes effectively CO3: Apply skills and knowledge learnt for active and effective Group Discussions and Interview		
Course Content:			
Module 1	Resume Building	Classroom activity	10 Hours
	Topics: Resume structure, use of templates, Do’s and Don'ts, ATS methods, Cover Letter and Video Resume Activity: Real world scenarios		
Module 2	Group Discussion	Mock G D	9 Hours
	Topics: -Group discussion as a placement process, GD techniques like Keyword. SPELT & POV of affected parties. Do & Don’t of GD, Case-lets and topics for GD, practice session and evaluation Activity:- Real world scenarios		
Module 3	Personal Interview	Grooming checks + Evaluation + Mock Interview+ Role Play	9 Hours
	Topics: Placement process, Different interview rounds, HR interviews, Interview questions and desired answers, Different types of interviews, Do’s and Don'ts. Activity: - Role Play & Real-world scenario		
Module 4	Recap/Revision /Feedback Session	Practice sessions	2 Hours
	Targeted Application & Tools that can be used: 1. TED Talks 2. You Tube Links 3. Role Play activities		
	Project work/Assignment: Mention the Type of Project /Assignment proposed for this course		
	Continuous Individual Assessment		

PRESIDENCY UNIVERSITY

The Topics related to Skill Development:

Art Of Presentation and Group Discussion for **Skill Development** through **Participative Learning** Tech- niques. This is attained through assessment Component mentioned in course handout.

Course Code: CSE7100	Course Title: Mini Project Type of Course:	L- T-P- C	0	0	0	4
Version No.	1.0					
Course Pre-requisites	Knowledge and Skills related to all the courses studied in previous semesters.					
Anti-requisites	NIL					
Course Description	<p>Students observe science and technology in action, develop an awareness of the method of scientific experimentation, and often get an opportunity to see, study and operate sophisticated and costly equipment. They also learn about the implementation of the principles of management they have learnt in class, when they observe multidisciplinary teams of experts from engineering, science, economics, operations research, and management deal with techno-economic problems at the micro and macro levels. Finally, it enables them to develop and refine their language, communication and inter-personal skills, both by its very nature, and by the various evaluation components, such as seminar, group discussion, project report preparation, etc. The broad-based core education, strong in mathematics and science and rich in analytical tools, provides the foundation necessary for the student to understand properly the nature of real-life problems. The students have options to pursue this course as either Project Work and Dissertation at the university, or Project Work in an Industry/ Company/ Research Laboratory, or Internship Program in an Industry/Company.</p>					
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Professional Practice and attain Employability Skills through Experiential Learning techniques.					
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <ol style="list-style-type: none"> 1. Identify the engineering problems related to local, regional, national or global needs. (Understand) 2. Apply appropriate techniques or modern tools for solving the intended problem. (Apply) 3. Design the experiments as per the standards and specifications. (Analyze) 4. Interpret the events and results for meaningful conclusions. (Evaluate) 5. Appraise project findings and communicate effectively through scholarly publications. (Create)

Course Content:			
Module 1	Introduction to Image Processing	Assignment 1	18[8L+10P] Sessions
<p>Topics:</p> <p>Fundamentals of digital images, pixel operations, image acquisition, sampling and quantization, basic image transformations. Understanding image histograms and intensity transformations.</p>			
Module 2	Image Enhancement and Restoration	Assignment 1	14[7L+7P] Sessions
<p>Topics:</p> <p>Spatial domain techniques, histogram equalization, smoothing and sharpening filters. Noise models, restoration techniques, and Wiener filtering in the frequency domain.</p>			
Module 3	Image Segmentation and Morphological Processing	Assignment 2	14[6L+8P] Sessions
<p>Topics:</p> <p>Edge detection, thresholding, region growing and splitting. Morphological operations for shape analysis and binary image processing.</p>			
Module 4	Image Analysis and Applications		14[6L+8P] Sessions
<p>Topics:</p> <p>Feature extraction, texture analysis, object recognition. Applications in biomedical imaging, satellite imagery, and computer vision systems</p>			
Project work/Assignment:			
Assignment 1 on (Module 1 and Module 2)			
Assignment 2 on (Module 3)			
List of Lab Tasks:			

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

1. Perform basic image operations like read, write, and display using OpenCV.
2. Implement image enhancement using histogram equalization.
3. Apply various smoothing and sharpening filters to an image.
4. Convert color images to grayscale and binary formats.
5. Perform geometric transformations: rotation, scaling, and translation.
6. Add Gaussian, salt-and-pepper noise and apply noise removal filters.
7. Implement edge detection using Sobel, Prewitt, and Canny methods.
8. Segment an image using thresholding and region-based techniques.
9. Perform morphological operations: erosion, dilation, opening, and closing.
10. Extract features using contour detection and bounding boxes.
11. Analyze texture patterns using GLCM (Gray Level Co-occurrence Matrix).
12. Object detection using color segmentation and contour properties.
13. Image classification using histogram features and a simple classifier.
14. Real-time video processing using webcam and OpenCV.
15. Mini-project: Build an end-to-end image processing pipeline for a selected application.

Course Code: CAI3401	Course Title: Big Data Analytics for AI Type of Course: Integrated	L - T - P - C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	CSE2264					
Anti-requisites	NIL					
Course Description	This course introduces students to the principles and technologies of big data analytics, with a particular emphasis on its role in AI systems. Students will learn how to process, store, and analyze massive volumes of data using distributed systems and scalable machine learning techniques. The course blends theoretical concepts with practical experience using industry-standard tools and platforms.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of course Big Data Analytics for AI to attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING TECHNIQUES .					
Course Outcomes	On successful completion of the course the students shall be able to: CO1: Understand core concepts of big data and its intersection with AI. CO2: Gain hands-on experience with big data tools like Hadoop, Spark, and NoSQL databases. CO3: Build and optimize data pipelines and machine learning models at scale. CO4: Explore real-world AI applications driven by big data analytics.					
Course Content:						
Module 1	Introduction to Big Data and AI	Participative Learning				No. of Classes L-5 P-5 2

PRESIDENCY UNIVERSITY

Introduction to Big Data and AI, Characteristics of Big Data (5Vs), Role of Big Data in AI applications, Overview of AI models driven by large-scale data				
Big Data Ecosystem and Architecture: Hadoop ecosystem overview, Spark vs. Hadoop, Lambda and Kappa architectures				
Module 2	Data Storage Systems	Participative Learning		No. of Classes L-5 P-5
Data Storage Systems: HDFS: Hadoop Distributed File System, NoSQL Databases: MongoDB, Cassandra, Data warehousing and lakes				
Module 3	Data Ingestion and Preprocessing	Experiential Learning		No. of Classes L-6 P-6
Data Ingestion and Preprocessing, ETL processes, Tools: Apache NiFi, Sqoop, Flume, Data cleaning and transformation techniques				
Distributed Computing with Hadoop and MapReduce, Hadoop architecture, Writing MapReduce jobs, Practical applications				
Module 4	Spark MLlib	Experiential Learning		No. of Classes L-7 P-6
Introduction to Apache Spark: Spark architecture and RDDs, Spark DataFrames and Datasets, Performance tuning basics				
Machine Learning with Spark MLlib, ML pipelines, Classification, regression, clustering, Model tuning and cross-validation				
List Of Laboratory Tasks:				
<p>Lab 1: Introduction to Hadoop and HDFS</p> <p>Objective: Understand the Hadoop architecture and HDFS storage system.</p> <p>Tasks:</p> <p>Set up a single-node Hadoop cluster.</p> <p>Upload and retrieve files from HDFS.</p> <p>Explore file distribution and block replication.</p> <p>Lab 2: MapReduce Programming</p> <p>Objective: Implement basic MapReduce jobs for large-scale data processing.</p> <p>Tasks:</p> <p>Write a word count MapReduce program in Java or Python.</p>				

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Analyze performance and test on a large dataset.

Modify the job to perform sorting or filtering.

Lab 3: NoSQL Databases with MongoDB/Cassandra

Objective: Explore document-based and column-family NoSQL databases.

Tasks:

Install MongoDB/Cassandra.

Create collections and insert/query documents.

Perform analytics queries (aggregation, indexing, etc.).

Lab 4: Apache Spark Basics

Objective: Use Spark for distributed data processing.

Tasks:

Set up Apache Spark on local or cloud environment.

Load and transform data using RDDs and DataFrames.

Perform word count and basic transformations.

Lab 5: Machine Learning with Spark MLlib

Objective: Apply scalable ML models using Spark MLlib.

Tasks:

Use logistic regression and decision trees on large datasets.

Build a pipeline for preprocessing and model training.

Evaluate model accuracy using cross-validation.

Topics relevant to SKILL DEVELOPMENT: Ethical decision-making in AI & data usage for Skill Development through Participative Learning techniques. This is attained through the Assignment/ Class Presentation/Group Discussion/Flipped Class as mentioned in the assessment component.

Course Code: CAI3402	Course Title: Optimization Techniques for Machine Learning Type of Course: Integrated	L- T- P- C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	CSE2264					
Anti-requisites	NIL					
Course Description	<p>This course introduces a range of machine learning models and optimization tools that are used to apply these models in practice. Course will introduce what lies behind the optimization tools often used as a black box as well as an understanding of the trade-offs of numerical accuracy and theoretical and empirical complexity.</p> <p>For the students with some optimization background this course will introduce a variety of applications arising in machine learning and statistics as well as novel optimization methods targeting these applications.</p>					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Optimization Techniques for Machine Learning and attain Skill Development through Participative Learning techniques.					
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <p>Describe fundamentals of Optimization Techniques [Remember].</p> <p>Explain Optimization Techniques for Machine learning. [Understand].</p> <p>Discuss Convex optimization models [Understand].</p> <p>Apply Methods for convex optimization [Apply].</p>					
Course Content:						
Module 1:	Optimization Basics	Quiz	Knowledge based Quiz	16[8L+8 P]Sessions		
<p>Topics: Introduction, The Basics of Optimization: Bivariate and Multivariate, Convex Objective Functions, Properties of Optimization in Machine Learning: Least-Square Classification, Support Vector Machines, Logistic Regression, Optimization Models for Binary Targets, Optimization Models for the Multiclass Setting, Coordinate Descent.</p>						

Module 2:	Optimization Solutions	Quiz	Comprehension based Quiz	15[8L+7 P]Sessions
<p>Topics: Introduction, Challenges in Gradient-Based Optimization: Momentum-Based Learning, RMSProp, Newton Method, Newton Methods in Machine Learning: Computationally Efficient Variations of Newton Method, The Subgradient Method, Proximal Gradient Method, Non-differentiable Optimization Functions: Designing Surrogate Loss Functions.</p>				
Module 3	Constrained Optimization	Assignment	Batch-wise Assignments	14[7L+7 P]Sessions
<p>Topics: Introduction, Primal Gradient Descent Methods: Primal Gradient Descent, Lagrangian Relaxation and Duality: Fundamentals of SVM Dual, Optimization Algorithms for the SVM Dual</p>				
Module 4:	Optimization in Computational Graphs	Assignment and Presentation	Batch-wise Assignment and Presentations	15[7L+8 P]Sessions
<p>Topics: Introduction, basics, Optimization in Directed Acyclic Graphs: Optimizations in Directed Acyclic Graphs, Broad Framework, Application: Node-to-Node derivations using Brute Force</p>				
<p>Targeted Application & Tools that can be used: Use of Matlab tool</p>				
<p>Project work/Assignment:</p> <p>Survey on Methods for convex optimization</p> <p>Survey on Machine learning models related to optimization</p>				
<p>Introduction to Optimization Problems using Python/Matlab.</p> <p>Implement Bivariate and Multivariate Optimization.</p> <p>Solve Least-Square Classification Problem.</p> <p>Implement Support Vector Machine (SVM) Optimization.</p> <p>Logistic Regression Model Optimization.</p> <p>Coordinate Descent Algorithm Implementation.</p> <p>Gradient Descent and Stochastic Gradient Descent Techniques.</p> <p>Implement Momentum-based Gradient Descent.</p> <p>RMSProp Optimization Method Application.</p> <p>Newton Method Implementation for Machine Learning.</p> <p>Subgradient Method for Non-differentiable Functions.</p> <p>Proximal Gradient Method Implementation.</p> <p>Solve Constrained Optimization Problems with Lagrangian Methods.</p> <p>Optimization in Directed Acyclic Graphs.</p>

Topics relevant to SKILL DEVELOPMENT: Concepts of Convex optimization models and Methods for convex optimization for Skill Development through Problem Solving methodologies. This is attained through assessment component mentioned in course handout.

Course Code: CAI3403	Course Title: Deep Reinforcement Learning Type of Course: Integrated	L-T- P-C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	CSE2264					
Anti-requisites	NIL					
Course Description	<p>For both engineers and researchers in the field of Computer science, it is common to develop models of real-life situations and develop solutions based on those models. It is of utmost importance to come up with innovative solutions for scenarios that are highly stochastic. The objective of this course, is to introduce different reinforcement learning techniques which is a promising paradigm for stochastic decision making in the forthcoming era. Starting from the basics of stochastic processes, this course introduces several RL techniques that are as per the industry standard.</p> <p>With a good knowledge in RL, the students will be able to develop efficient solutions for complex and challenging real-life problems that are highly stochastic in nature.</p>					

Course Objectives	This course is designed to improve the learners' EMPLOYABILITY SKILLS by using EXPERIENTIAL LEARNING techniques of 2013			
Course Out Comes	<p>On successful completion of the course the students shall be able to:</p> <ol style="list-style-type: none"> 1. Apply dynamic programming concepts to find an optimal policy in a gaming environment [Application] 2. Implement on-policy and off-policy Monte Carlo methods for finding an optimal policy in a reinforcement learning environment. [Application] 3. Apply Temporal Difference learning techniques to the Frozen Lake RL environment [Application] 4. Apply various exploration-exploitation strategies of the Multi-Armed Bandit (MAB) problem[Application] 			
Course Content:				
Module 1	Introduction to Reinforcement Learning	Assignment	Programming using the OpenAI Gym environment	No. of Classes L – 5 P – 6
<p>Topics : Elements of RL, Agent, environment Interface, Goals and rewards, RL platforms, Applications of RL, Markov decision process (MDP), RL environment as a MDP, Maths essentials of RL, Policy and its types, episodic and continuous tasks, return and discount factor, fundamental functions of RL – value and Q functions, model-based and model-free learning, types of RL environments, Solving MDP using Bellman Equation, Algorithms for optimal policy using Dynamic Programming -Value iteration and policy iteration, Example : Frozen Lake problem, Limitations and Scope</p>				
Module 2	Monte-Carlo(MC) methods	Assignment	Programming using the OpenAI Gym environment	No. of Classes L-5 P-6
<p>Topics: Monte Carlo methods, prediction and control tasks, Monte Carlo prediction : algorithm, types of MC prediction, examples , incremental mean updates, Monte Carlo Control : algorithm, on-policy MC control, MC with epsilon-greedy policy, off-policy MC control. Limitations of MC method.</p>				
Module 3	Temporal Difference(TD) Learning	Assignment/Quiz	Programming using the OpenAI Gym environment	No. of Classes L-7 P -6

PRESIDENCY UNIVERSITY

Topics: Temporal difference learning: TD Prediction, TD Control, On-policy TD control – SARSA, computing the optimal policy using SARSA, Off-policy TD control – Q learning, computing optimal policy using Q learning, Examples, Difference between SARSA and Q-learning, Comparison of DP, MC and TD methods.

Module 4	Multi-Armed Bandit (MAB) problem	Assignment	Programming using the OpenAI Gym environment	No. of Classes L-6 P -4
----------	----------------------------------	------------	--	----------------------------

Topics: Understanding the MAB problem, Various exploration strategies – epsilon-greedy, softmax exploration, upper confidence bound and Thompson sampling, Applications of MAB - finding the best advertisement banner for a web site, Contextual bandits, introduction to Deep Reinforcement Learning(DRL) Algorithm – Deep Q Network (DQN)

List of Lab Tasks:

- 1 .Software Setup :installalling Anaconda, OpenAI Gym and Universe.
Basic simulations of some gaming environments in Gym
2. Working with Gym environments to create agents with random policy
 - 2.1 Create the Frozen Lake GYM environment and explore the states, action, transition probability, reward functions and generating episodes.
 - 2.2 Create an agent for the Cart-Pole environment using a random policy and record the game
3. Finding the optimal policy for the agent using Dynamic Programming
 - 3.1 Compute the optimal policy for the Frozen Lake Environment using value iteration method
 - 3.2 Compute the optimal policy for the Frozen Lake Environment using policy iteration method
4. Implementing Monte Carlo prediction method using blackjack game
 - 4.1 Every-visit MC prediction
 - 4.2 First-visit MC prediction
5. Implementing on-policy MC control method using the epsilon-greedy policy for the blackjack game
6. Implementing Temporal Difference prediction for the Frozen lake environment for a random policy
7. Computing the optimal policy using on-policy TD control – SARSA
8. Computing the optimal policy using off-policy TD control – Q-learning
9. Multi-Armed Bandit problem
 - 9.1 Creating a MAB in Gym
 - 9.2 Compute the best arm using various exploration strategies such as epsilon-greedy and softmax exploration method.

10. Application of MAB – Finding the best advertisement banner for a web site using MAB

Private University Estd. in Karnataka State by Act No. 41 of 2013

Targeted Application & Tools that can be used :

Execution of the RL algorithms will be done using the environments provided by OpenAI's Gym and Gymnasium of Farama Foundation in "Colab", available at <https://colab.research.google.com/> or Jupyter Notebook.

Lab tasks will be implemented using the necessary libraries available in Python

Project work/Assignment: Mention the Type of Project /Assignment proposed for this course

Students can be given group assignments to develop different gaming environments and implement the RL algorithms

PRESIDENCY UNIVERSITY

Course Description	This course introduces students to the fundamentals of applying artificial intelligence techniques to cyber security. It covers threat detection, anomaly detection, malware classification, and the application of machine learning/deep learning methods in securing data and systems. It includes hands-on lab exercises to help students build AI models for real-world cyber security challenges.		
Course Objective	This course is designed to improve learners' employability skills by applying experiential learning techniques in cybersecurity and artificial intelligence.		
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <p>Apply AI techniques to detect and mitigate cyber threats.</p> <p>Analyze network and system data to uncover anomalies.</p> <p>Build intelligent systems to classify and predict malicious activity.</p> <p>Use tools and frameworks to develop cyber security solutions using machine learning.</p>		
Course Content:			
Module 1	Introduction to AI in Cyber Security	Assignment	18[8L+10P] Sessions
<p>Topics:</p> <p>Fundamentals of Cyber Security: CIA Triad, Threats & Vulnerabilities, Role of Artificial Intelligence in Cyber Security, Cyber Attack Lifecycle and Defense Mechanisms, Overview of Machine Learning and Deep Learning Techniques, Introduction to Data Sources: Network logs, system logs, NetFlow, and packet capture data, Overview of Threat Intelligence Platforms (TIPs),</p> <p>AI-based Cyber Security Use Cases in Industry, Challenges in Deploying AI for Cyber Defense (adversarial attacks, data imbalance, etc.).</p>			
Module 2	Anomaly and Intrusion Detection Systems	Assignment	14[7L+7P] Sessions
<p>Topics:</p> <p>Types of Intrusion Detection Systems (IDS): Signature-based vs. Anomaly-based, Dataset Exploration: KDDCup, NSL-KDD, CICIDS2017, Data Preprocessing: Feature Engineering, Label Encoding, Normalization, Supervised Learning for Intrusion Detection: SVM, Random Forest, Decision Trees, Unsupervised Learning: K-Means Clustering, Isolation Forests, Autoencoders,</p> <p>Model Evaluation: Confusion Matrix, ROC Curve, Precision/Recall, Real-time Detection Systems with Streaming Data (e.g., using Kafka or PySpark), Case Study: Building and Deploying a ML-based IDS.</p>

Anti-requisites	None			
Course Description	Responsible AI emphasizes transparency and explainability, ensuring that AI-driven decisions are understandable and justifiable. It also prioritizes security, reliability, and sustainability, aiming to create AI systems that are safe, efficient, and environmentally conscious. Ultimately, Responsible AI seeks to align technology with human values, promoting trust and ensuring that AI enhances rather than harms society.			
Course Objective	The objective of Responsible AI is to develop and deploy artificial intelligence in a way that is ethical, fair, transparent, and aligned with human values.			
Course Out Comes	<p>On successful completion of this course the students shall be able to:</p> <p>To state aspects of responsible AI such as fairness, accountability, bias, privacy etc.[Remember]</p> <p>To assess the fairness and ethics of AI models.[Understand]</p> <p>To enforce fairness in models and remove bias in data.[Understand]</p> <p>To preserve the privacy of individuals while learning from them and apply it to various domains.[Apply]</p>			
Course Content:				
Module 1	Introduction to Responsive AI (Remember)	Assignment		11 Sessions
	<p>Topics:</p> <p>Artificial Intelligence Fundamentals, definition of responsible AI, Importance of responsible AI, core principles of responsible AI, Regulations and Policies, challenges, Responsible AI in practice.</p>			
Module 2	Fairness and Bias (Understand)	Assignment		11 Sessions
	<p>Topics:</p> <p>Sources of Biases, Exploratory data analysis, limitation of a dataset, Preprocessing, in processing and postprocessing to remove bias, Group fairness and Individual fairness, Counterfactual fairness</p>			
Module 3	Interpretability and explainability, Ethics and Accountability (Understand)	Assignment		12 sessions

Assignment 1 on (Module 1 and Module 2)

Assignment 2 on (Module 3)

List of Lab Tasks:

Lab 1 – Implement a simple reflex agent in Python

Lab 2 – Design a goal-based agent with planning capability

Lab 3 – Simulate MDPs for agent decision-making

Lab 4 – Build a multi-agent gridworld simulation

Lab 5 – Agent communication using JSON messages

Lab 6 – Agent negotiation using basic game-theory

Lab 7 – Develop a smart assistant with agentic behavior

Lab 8 – Mini Project: Autonomous agent in a dynamic environment (e.g., a search-and-rescue sim)

Course Code: CAI3408	Course Title: Deep Neural Networks Type of Course: Integrated	L- T-P- C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	CSE2264					
Anti-requisites	NIL					
Course Description	This course introduces students to the concepts of deep neural networks and state of the art approaches to develop deep learning models. In this course students will be given an exposure to the details of neural networks as well as deep learning architectures and to develop end-to-end models for such tasks. It will help to design and develop an application-specific deep learning models and also provide the practical knowledge handling and analyzing end user realistic applications. Topics include Fundamental concepts of deep neural networks, Convolutional Neural Networks, Recurrent Network structures, Deep Unsupervised Learning, Generative Adversarial Networks and applications in various problem domains.					
Course Objective	This course is designed to improve the learners EMPLOYABILITY SKILLS by using EXPERIENTIAL LEARNING techniques.					
Course Outcomes	On successful completion of this course the students shall be able to: CO1: Explain the fundamentals of Neural Network. CO2: Apply Unsupervised Learning Networks for feature extraction. CO3: Apply CNN and its variants for suitable applications. CO4: Apply Recurrent Neural Network for their suitable applications.					
Course Content:						
Module 1	INTRODUCTION	Assignment				16[8L+8P] Sessions
Topics:						
Fundamentals of Neural Networks: Model of Artificial Neuron and Biological Neuron, Learning rules and various activation functions. Single layer Feed-forward networks. Multilayer Feed-						

forward networks. Back Propagation networks, Early Stopping, Bagging and Dropout - batch normalization, Regularization

Presidency University Estd. in Karnataka State by Act No. 41 of 2013

Module 2	UNSUPERVISED LEARNING NETWORKS	Assignment		16[8L+8P] Sessions
<p>Topics:</p> <p>Training Algorithms for Pattern Association-Auto associative Memory Network-Hetero associative Memory Network-Bidirectional Associative Memory (BAM)-Hopfield Networks- -Kohonen Self-Organizing Feature Maps-Learning Vector Quantization-Radial, Autoencoders, Boltzmann Machine, Generalized Adversarial Network.</p>				
Module 3	CONVOLUTIONAL NEURAL NETWORKS	Assignment		16[8L+8P] Sessions
<p>Topics:</p> <p>Convolutional Neural Networks-Deep Learning Neural Networks-Extreme Learning Machine Model-Convolutional Neural Networks: The Convolution Operation – Motivation – Pooling – Variants of the basic Convolution Function – Applications: Computer Vision, Image Generation, Image Compression.</p>				
Module-4	RECURRENT NEURAL NETWORKS	Assignment		12[6L+6P] Sessions
<p>Recurrent Neural Networks (RNN), Long Short-Term Memory (LSTM), Gated Recurrent Unit (GRU), Deep Recurrent Networks, Applications: Image Generation, Image Compression, Natural Language Processing.</p>				
<p>Project work/Assignment:</p>				
<p>Assignment 1 on (Module 1 and Module 2)</p> <p>Assignment 2 on (Module 3 and Module 4)</p>				
<p>List of Laboratory Tasks:</p> <p>Lab 1: Working with Deep Learning Frameworks</p> <p>Objective: Explore various Deep Learning Frameworks</p> <p>Tasks: Identify deep learning frameworks (Keras, Tensorflow, Matplotlib, etc)</p> <p>Activity: Practice with various methods available in DL Frameworks to develop a Model.</p> <p>Lab 2: Build a Basic Artificial Neural Network</p> <p>Objective: Create a ANN with DL frameworks.</p>				

Task: Identify suitable ANN Layers using Keras and Tensorflow

Activity: Design a basic Artificial Neural Networks using Keras with TensorFlow (pima-indians-diabetes)

Lab 3 and Lab 4: Build a Multi-Layer Feed Forward Network

Objective: Create a Multi-Layer Feed Forward Network for classification task.

Task: Identify suitable model for house price prediction.

Activity: Design a Multi-Layer Feed Forward Network for implementing classification and fine-tuning using House price.csv

Lab 5: Build an Auto-Encoder model

Objective: Create an Unsupervised Deep Learning Model.

Task: Create AutoEncoder network Output Translations.

Activity: implement an Encoder-Decoder Recurrent neural network model for Neural Machine Translation.

Lab 6: Build Generative Adversarial Networks.

Objective: Create an Unsupervised Deep Learning Model.

Task: Design GAN Architecture for Image generations.

Activity: Design a Age Prediction model by Applying Generative Adversarial

Lab 7: Build a Convolutional Neural Network

Objective: Create a CNN model.

Task: Build CNN architecture for Dog-Cat classification problem.

Activity: Implement a Convolution Neural Network (CNN) for dog/cat classification problem using keras

Lab 8 and Lab 9: Build a Time-Series Model

Objective: Create a RNN and LSTM Model

Task: Build RNN/LSTM Model for predicting time series data.

Activity Train a sentiment analysis model on IMDB dataset, use RNN layers with LSTM/GRU notes

Lab 10: Build a Gated Recurrent Unit architecture.

Objective: Create a Time Series Model.

Task: Build GRU Architecture for predicting time series data.

Activity: Implement a GRU architecture for language translations.

Lab 11 and Lab 12: Build a Transfer Learning Model.

Objective: Create a Seq2Seq Model

Task: Create Hugging-face API using Transfer learning model.

Activity: Implement Transfer Learning models for classification problems Exploring Hugging-face API

Course Pre-requisites	CSE2264					
Anti-requisites	NIL					
Course Description	This course introduces fundamental principles and practical aspects of speech signal processing. It covers techniques in speech analysis, recognition, and synthesis, enabling students to build interactive voice-based AI systems. Emphasis is placed on acoustic modeling, feature extraction, and the use of machine learning and deep learning models for speech applications.					
Course Objective	To understand the basic concepts and characteristics of speech signals. To explore feature extraction and pattern matching techniques used in ASR. To study the principles of speech synthesis and TTS systems. To provide hands-on experience with speech processing tools and APIs.					
Course Outcomes	On successful completion of this course, students will be able to: Analyze speech signals and extract key features.					4

PRESIDENCY UNIVERSITY

	Apply pattern recognition and machine learning methods for ASR. <small>Private University Estd. in Karnataka State by Act No. 41 of 2013</small> Design speech synthesis systems using classical and deep learning models. Develop real-time applications using speech APIs and open-source tools.			
Course Content:				
Module 1	Speech Signal Fundamentals	Assignment		18[8L+10P] Sessions
Topics: Human speech production and auditory perception, Speech signal representation: time and frequency domains, Preprocessing: sampling, quantization, windowing, pre-emphasis, Speech signal features: pitch, formants, energy, ZCR, Spectrogram and Short-Time Fourier Transform (STFT).				
Module 2	Feature Extraction & Modeling Techniques	Assignment		14[7L+7P] Sessions
Topics: MFCC, PLP, LPC, Delta features, DTW (Dynamic Time Warping), GMM-HMM based acoustic modelling, Viterbi decoding and alignment, Basics of phonetics and phoneme modelling				
Module 3	Automatic Speech Recognition (ASR)	Assignment		14[6L+8P] Sessions
Topics: Architecture of ASR systems, Language modeling: N-grams, smoothing, Deep learning for speech: DNN, CNN, LSTM, End-to-end models: CTC, Attention, Transformers, Tools: Kaldi, CMU Sphinx, DeepSpeech.				
Module 4	Speech Synthesis and TTS	Assignment		14[6L+8P] Sessions
Topics: Concatenative, Parametric, and Neural synthesis, TTS pipeline: text normalization, phoneme mapping, HMM-based synthesis, Tacotron and WaveNet architectures, APIs: Google TTS, Amazon Polly, Festival, eSpeak.				
List of Lab Tasks:				
Lab 1: Introduction to Speech Signal Processing Objective: Understand the nature of speech signals.				

Task: Record and visualize a speech waveform using a microphone and Python.

Activity: Capture audio input, analyze waveform, and visualize with matplotlib.

Lab 2: Time Domain Analysis of Speech Signals

Objective: Analyze speech features in the time domain.

Task: Compute Zero Crossing Rate (ZCR) and short-time energy of speech samples.

Activity: Implement ZCR and energy plots for different speech segments using Python.

Lab 3: Frequency Domain Analysis Using Spectrogram

Objective: Understand frequency components of speech.

Task: Apply Short-Time Fourier Transform (STFT) to speech signals.

Activity: Generate and interpret spectrograms using Librosa and Matplotlib.

Lab 4: Extraction of MFCC Features

Objective: Extract key speech features using MFCC.

Task: Extract and visualize MFCC features from recorded speech.

Activity: Use Librosa or python_speech_features to extract MFCCs.

Lab 5: Linear Predictive Coding (LPC)

Objective: Implement LPC-based feature extraction.

Task: Apply LPC to model the vocal tract.

Activity: Compute LPC coefficients and analyze spectral envelope.

Lab 6: Implement Dynamic Time Warping (DTW)

Objective: Understand time alignment of speech.

Task: Compare two speech signals using DTW.

Activity: Use fastdtw to align utterances of the same word.

Lab 7: Acoustic Modeling using GMM-HMM

Objective: Implement basic acoustic modeling.

Task: Train a GMM-HMM model for a simple digit recognition task.

Activity: Use hmmlearn or HTK for acoustic modeling.

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Lab 8: Viterbi Algorithm for Speech Alignment

Objective: Apply sequence decoding in speech.

Task: Use Viterbi decoding to find the best state path in an HMM.

Activity: Implement Viterbi algorithm in Python and visualize state paths.

Lab 9: Build a Simple ASR System using CMU Sphinx

Objective: Use open-source ASR toolkit.

Task: Set up CMU Sphinx and perform isolated word recognition.

Activity: Create language and acoustic models and test recognition.

Lab 10: Real-time Speech Recognition using DeepSpeech

Objective: Apply deep learning in ASR.

Task: Use Mozilla DeepSpeech to transcribe audio files.

Activity: Install DeepSpeech, load pre-trained model, and test transcription.

Lab 11: Evaluate ASR using Google Speech-to-Text API

Objective: Explore cloud-based speech recognition.

Task: Use Google Cloud API to transcribe different accents.

Activity: Send audio to API and analyze word error rate.

Lab 12: Introduction to Text-to-Speech (TTS) using Festival

Objective: Create basic speech synthesis output.

Task: Convert written text to speech using Festival.

Activity: Install Festival, input text, and generate synthesized speech.

Lab 13: Implement a Neural TTS system using Tacotron 2

Objective: Use deep learning for speech synthesis.

Task: Synthesize speech from text using Tacotron 2.

Activity: Use pre-trained Tacotron 2 model and generate speech samples.

Lab 14: Speech Synthesis using Google TTS and Amazon Polly

Objective: Use cloud-based TTS systems

Task: Convert sample sentences into speech using APIs.

Activity: Use Python SDKs to access TTS services and compare outputs.

Lab 15: Mini Project – Build a Voice Assistant

Objective: Integrate ASR and TTS.

Task: Build a simple voice-controlled assistant.

Activity: Combine speech recognition, intent detection, and speech synthesis using tools like SpeechRecognition + gTTS + Pyttsx3.

Course Code: CAI3410	Course Title: AI Chatbots without Programming Type of Course: Integrated	L- T-P- C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	CSE2264					
Anti-requisites	NIL					
Course Description	This course enables students to design and develop intelligent chatbots using no-code/low-code platforms. It covers the fundamentals of natural language processing, conversational AI, and chatbot design strategies. Students will gain hands-on experience building functional chatbots for domains such as customer service, education, and e-commerce using tools like Dialogflow, Chatfuel, Microsoft Power Virtual Agents, and other no-code frameworks.					
Course Objective	This course aims to democratize chatbot development by empowering students to create intelligent conversational agents without programming knowledge, using experiential learning on visual platforms.					
Course Outcomes	<p>Course Outcomes</p> <p>On successful completion of this course, students will be able to:</p> <p>Understand the architecture and functioning of AI-powered chatbots. (Understand)</p> <p>Design conversational flows using drag-and-drop tools. (Apply)</p> <p>Analyze user intent and train NLP models using no-code tools. (Analyze)</p> <p>Create and deploy domain-specific chatbots for real-world use cases. (Create)</p>					

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Content:				
Module 1	Introduction to Conversational AI and Chatbots	Assignment		18[8L+10P] Sessions
<p>Topics:</p> <p>History and evolution of chatbots, Types of chatbots: rule-based vs. AI-based, Components of chatbot architecture, Use cases across industries</p>				
Module 2	Designing Conversational Experiences	Assignment		14[7L+7P] Sessions
<p>Topics:</p> <p>Conversation design principles, User personas and intent mapping, Flowcharting and decision trees, Multilingual and accessibility considerations</p>				
Module 3	Building AI Chatbots on No-Code Platforms	Assignment		14[6L+8P] Sessions
<p>Topics:</p> <p>Overview of no-code tools: Dialogflow, Chatfuel, Landbot, Microsoft PVA, NLP basics: intents, entities, training phrases, Contexts and session handling, Integrations with messaging platforms (WhatsApp, Telegram, Web)</p>				
Module 4	Testing, Deployment, and Analytics	Assignment		14[6L+8P] Sessions
<p>Topics:</p> <p>Bot testing and improvement strategies, Connecting to APIs and databases, Deployment to websites and social media, Analyzing user behavior and feedback.</p>				
Project work/Assignment:				
<p>Design a customer support chatbot using Chatfuel or Dialogflow</p> <p>Develop a feedback collection chatbot for educational use</p> <p>Group project: Cross-platform chatbot for a chosen domain</p>				
List of Lab Tasks:				

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

- Lab 1: Introduction to chatbot interfaces and no-code tools
- Lab 2: Create a simple rule-based chatbot using Chatfuel
- Lab 3: Design a user flow using decision trees in Landbot
- Lab 4: Build an FAQ chatbot using Dialogflow intents and responses
- Lab 5: Implement intent recognition and entity extraction in Dialogflow
- Lab 6: Add context-based conversations in a Dialogflow chatbot
- Lab 7: Build a WhatsApp-integrated chatbot using Twilio
- Lab 8: Design a chatbot using Microsoft Power Virtual Agents
- Lab 9: Create multi-lingual responses and fallback messages
- Lab 10: Integrate a chatbot with Google Sheets to log user responses
- Lab 11: Embed a chatbot on a website using iframe or script
- Lab 12: Analyze user interaction logs for performance metrics
- Lab 13: Customize chatbot appearance and branding elements
- Lab 14: Develop a feedback chatbot with sentiment-based responses
- Lab 15: Final project: Design and deploy a fully functional domain-specific chatbot

Course Code: CAI3411	Course Title: Generative AI Type of Course: Integrated			L-T-P-C	2	0	2	3
Version No.	1.0							
Course Pre-requisites	CSE2264							
Anti-requisites	NIL							
Course Description	This course builds the foundational insight of understanding generative AI models and to explore various architectures, algorithms and practices of Gen AI skills to accelerate strategic decision making with data and deliver cutting-edge products faster with GenAI-augmented software development and leverage Gen AI tools to optimize workflows.							
Course Objective	The objective of the course is to familiarize the learners to explore the competence in benchmarking and comprehend the potential generative AI models and techniques to revolutionize industries and create prominent Gen AI tools to attain Employability Skills through Experiential Learning techniques.							
Course Out Comes	<p>On successful completion of the course the students shall be able to:</p> <p>CO 1: Infer the concepts of generative AI models and prompt engineering in tailoring customized outputs [Understand].</p> <p>CO 2: Demonstrate attention mechanism and transformers architecture with practical Applications. [Apply].</p> <p>CO 3: Practice advanced generative AI techniques using Langchain Python framework [Apply].</p> <p>CO 4: Solve real-time applications using multi-modal generative AI models [Apply].</p>							
Course Content:								
Module 1	Introduction to Generative AI	Participative Learning		Brainstorming session/Quiz	No. of classes L-6 P-8			
	Topics: Introduction to Generative models: Historical perspective and evolution, Applications, Types of Generative models for different data modalities, Large Language Models (LLMs) – Introduction, evolution, Generative pre-trained transformers (GPT) and							5

PRESIDENCY UNIVERSITY

	its variants, Google DeepMind's PaLM2, LLaMa and its series of models by Meta AI, Claude and its variants by Anthropic, Prompt Engineering basic prompting.				
Module 2	Text-based Generative models	Participative Learning		Fish bowl, Think-pair & share	No. of classes L-8 P-6
	Topics: Text-based Generative models: State-of-the Art models, RNN, LSTM, Transformer Architecture, Transformer based Generative models: BERT, GPT, Training and Fine tuning LLMs for Generative task, Open AI's Pre-trained transformers for Text Generation: ChatGPTs, Limitations of LLMs: Lack of context and Hallucination risks, Techniques to mitigate these limitations: chaining and retrieval augmentation, Workflow of an LLM application.				
Module 3	Introduction to Lang Chain	Experiential Learning		Implementation of Gen AI models using Langchain Framework	No. of classes L-8 P-8
	Topics: Introduction to Lang chain: Types, Components, Information retrieval using agents and tools in Lang chain, Retrieval Augmented Language Models (RaLM): Understanding Retrieval and vectors: Embeddings, Vector storage, Vector indexing, Vector Libraries, Vector Databases, Chatbot using memory and conversation buffer.				
Module 4	Generative models for other Data modalities	Project-based Learning		Multi-Modal Gen AI models for Realtime Applications	No. of classes L-8 P-8
	Topics: Generative Adversarial Networks (GAN): GAN Architecture, GAN variants, Neural Style transfer with GAN, Training GANs and common challenges, GAN applications in image and text generation, Variational Auto Encoders (VAEs) and its variants, Image generation models: Dall-E, MidJourney and stable diffusion: Architecture and components of stable diffusion, Text-to-image Generation, Parameter tuning, Image-to-image generation, Training custom models, In-Painting: Exchanging classes, Multi-modal generative models using Whisper for Audio: Speech-to-Text generation.				
	Project work/Assignment:				
	Certification course in Generative AI through Google Mini Project on (Module 3 and Module 4)				
	Targeted Application & Tools that can be used Open AI Generative AI models: GPT 3.5 Turbo, GPT 4.0 vision model, Dall-E 3.0, Lang Chain Framework in Python, Python IDE, Stable Diffusion, Gemini, Hugging Face,				
	List of Lab Tasks:				

	<p>Experiment No.1: Setting up Python IDE (Spyder) and OpenAI API key. Introduction to OpenAI playground and prompting</p> <p>Level 1: Document the installation and the process for generating models in OpenAI</p> <p>Level 2: Solve various GenAI models of OpenAI from Playground using prompts</p>
	<p>Experiment No.2: Text classification, summarization, sentiment analysis, chatbot application, code explanation with generating single and multiple response(S).</p> <p>Level 1: Practice the text generation model of OpenAI and Spyder IDE to implement various applications.</p>
	<p>Experiment No.3: Embeddings – for words, similarity between words, text embeddings, plagiarism check of documents</p> <p>Level 1: Use generating embeddings for words, text and documents</p> <p>Level 2: Apply the embeddings API to develop applications for plagiarism check</p>
	<p>Experiment No.4: Image generation using Dall E. Using GPT-Vision model for text to image generation and image-to-text.</p> <p>Level 1: Apply GPT-vision model for text-to-image generation and image-to-image</p>
	<p>Experiment No.5: Transformer based text and email classification</p> <p>Level 1: Develop transformer-based AI models for classifying text/email</p>
	<p>Experiment No.6: BERT for masked token generation</p> <p>Level 1: Develop BERT based model for generating masked tokens</p>
	<p>Experiment No.7: Creating applications using different types of LangChains – Simple Sequential, Sequential and map reduce</p> <p>Level 1: List the various types of chains in Langchain</p> <p>Level 2: Practice different types of chains using Spyder IDE and OpenAI</p>
	<p>Experiment No.8: Information retrieval using agents and tools in Langchain.</p> <p>Level 1: Use agents and tools with Langchain for information retrieval</p>
	<p>Experiment No.9: Custom Document loading and retrieval in LangChain using ChromaDB</p> <p>Level 1: Understand ChromeDb</p> <p>Level 2: Apply chromed with Langchain to generate information retrieval model from custom document</p>

PRESIDENCY UNIVERSITY

Course Code: CAI3412	Experiment No.10: Create a GPT like Chatbot using the memory component and RALM in LangChain Machine Learning for Finance Level 1: Show GPT like chatbot using memory component and retrieval augmented language model Type of Course: Integrated	Private University Estd. in Karnataka State by Act No. 41 of 2013 L- T-P- C	2	0	2	3
Version No.	1.0 Experiment No.11: Using action agents, human as a tool and plan and execute agents for information retrieval.					
Course Prerequisites	Level 1: Understand action agents and plan and execute agents					
Anti-requisites	Level 2: Use agents and tools for information retrieval None					
Course Description	Experiment No.12: Implement GAN for neural style transfer This course explores the intersection of machine learning and finance. Students will demonstrate a style transfer algorithm using generative models and develop an agent with the trading strategies using ML by applying different sizes of data on assessing both the technical aspects and the aesthetic outcomes.					
Course Objective	Experiment No.13: Text to image generation using Dall-e stable diffusion using prompts, portfolio optimization, and risk modeling. Students will gain practical knowledge to build ML-based financial systems using Python and related libraries. Level 1: List various image generation models Level 2: Use an image generation model to generate image from prompts					
Course Outcomes	On successful completion of this course the students shall be able to: Level 1: Apply stable diffusion to generate images from the financial prompts (Understand) Level 2: Apply supervised and unsupervised learning to model financial data. (Apply) Experiment No.15: Speech to text and multi-modal generative models using Whisper for Audio 3. Analyze risk and optimize portfolios using ML models. (Analyze) 4. Design and implement algorithmic trading strategies. (Create) Level 1: Identify the generative model for text, image and audio data Level 2: Use Langchain to create models for generating different data modalities. Ex: Audio to-text					
Course Content:	Audio to-text

<p>Version No.</p>	<p>1.0</p>	6				

Course Pre-requisites	CSE2264		
Anti-requisites	NIL		
Course Description	This course introduces the foundational concepts and applications of the Industrial Internet of Things (IIoT), emphasizing industrial automation, smart manufacturing, and predictive analytics. Students will gain hands-on experience with sensor integration, cloud platforms, and industrial communication protocols necessary for developing and managing IIoT systems.		
Course Objective	To provide practical skills and theoretical knowledge for designing, implementing, and managing Industrial IoT applications in real-world industrial and manufacturing environments.		
Course Outcomes	<p>On successful completion of the course, students will be able to:</p> <p>Understand the architecture and ecosystem of Industrial IoT systems.</p> <p>Integrate sensors and edge devices for real-time industrial data monitoring.</p> <p>Utilize cloud computing and analytics for IIoT-based applications.</p> <p>Apply communication protocols and security mechanisms relevant to industrial environments.</p>		
Course Content:			
Module 1	Introduction to Industrial IoT	Assignment	18[8L+10P] Sessions
<p>Topics:</p> <p>Fundamentals of IoT and IIoT: Definitions, history, evolution, IIoT vs. Consumer IoT, IIoT Architecture Layers: Perception, Network, Middleware, Application Industrial applications: Smart factories, Energy grids, Process automation Introduction to Industry 4.0 and its pillars (Cyber-Physical Systems, Big Data, Cloud Computing), Business benefits and ROI of IIoT deployment</p> <p>Challenges in IIoT: Scalability, legacy systems, interoperability, security, Standards and regulatory compliance in IIoT (ISA-95, ISO/IEC 30141).</p>			
Module 2	Devices and Communication Protocols	Assignment	14[7L+7P] Sessions
<p>Topics:</p> <p>Types of Sensors and Actuators: Environmental, Proximity, Motion, Flow, Vibration, Microcontrollers and Development Boards: Arduino, Raspberry Pi, ESP32, IIoT Gateways and Edge Devices: Intel NUC, Jetson Nano, Communication Technologies: Wired: Modbus RTU, CAN, Ethernet/IP, Wireless: Zigbee, LoRaWAN, Wi-Fi, NB-IoT, Bluetooth LE, Protocols for IIoT:MQTT: Publish-Subscribe Model, OPC-UA: Industrial interoperability and data exchange,</p>			

PRESIDENCY UNIVERSITY

CoAP, HTTP/HTTPS, Integration with SCADA and PLC Systems, Device provisioning and configuration management, Network Topologies and Addressing in IIoT environments.				
Module 3	IIoT Data Processing and Analytics	Assignment		14[6L+8P] Sessions
<p>Topics:</p> <p>Data Acquisition: Sampling rate, ADC/DAC, Signal conditioning, Local Storage: SQLite, Edge databases, Stream Processing: Apache Kafka, Apache Flink, Data Preprocessing: Noise reduction, outlier detection, filtering techniques, Introduction to Edge Computing and Fog Computing, Real-time vs. Batch Analytics: Predictive Analytics in Manufacturing: Predictive maintenance models, Failure prediction using historical data, Machine Learning for Sensor Data: Regression, Clustering, Classification, Anomaly Detection in Industrial Systems, Data Encryption and Access Control at Edge and Cloud, Security Threats: DDoS, firmware tampering, man-in-the-middle attacks, Best practices for data governance and GDPR compliance</p>				
Module 4	IIoT Cloud Integration and Applications			
<p>Overview of Cloud Computing Models (IaaS, PaaS, SaaS) in IIoT, IIoT Cloud Platforms:</p> <p>AWS IoT Core: Device Shadow, Rule Engine, Azure IoT Hub and IoT Central, Google Cloud IoT Core, Device-to-Cloud Communication Models, Storage Solutions: Amazon S3, Azure Blob Storage, InfluxDB, Visualization Tools: Grafana, Power BI, Google Data Studio, Case Studies: Digital Twin of a robotic arm, Smart HVAC system for energy optimization, Real-time supply chain visibility, Building Custom Dashboards and Alerts, Integration with ERP and MES Systems, Final Capstone Project: Design, simulate, and evaluate an end-to-end IIoT system, Include edge device, communication, cloud, analytics, and visualization.</p>				
Project work/Assignment:				
<p>Assignment 1: Sensor Data Acquisition and Visualization</p> <p>Assignment 2: Edge-Based Analytics for Predictive Maintenance</p> <p>Mini Project (Team-based): End-to-End IIoT System for a Smart Industry Scenario</p>				
<p>Setup Raspberry Pi/Arduino for IIoT applications.</p> <p>Interface DHT11, vibration, and ultrasonic sensors.</p> <p>Send sensor data via MQTT to a cloud broker.</p> <p>Create Node-RED dashboards for IIoT data.</p> <p>Build OPC-UA server and client communication.</p> <p>Log and visualize sensor data using Python.</p> <p>Apply edge analytics using Raspberry Pi and filtering techniques.</p> <p>Stream real-time data using Kafka.</p>				

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Integrate with AWS IoT Core for data monitoring.

Forecast sensor values using LSTM (predictive maintenance).

Detect anomalies in sensor data using Scikit-learn.

Connect multiple IIoT devices into a secure network.

Simulate a digital twin for a production line.

Develop a simple IIoT-based security alert system.

Capstone Project: Deploy an end-to-end IIoT prototype for a smart manufacturing scenario.

Course Code: CAI3414	Course Title: Smart Farming Type of Course: Integrated	L- T-P- C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	CSE2264					
Anti-requisites	NIL					
Course Description	This course introduces the interdisciplinary domain of Smart Farming, integrating IoT, AI, cloud computing, and sensor networks to enable precision agriculture. Students will learn how to design, develop, and deploy data-driven agricultural systems for real-time monitoring, crop management, and decision-making.					

PRESIDENCY UNIVERSITY

Course Objective	To provide practical and theoretical insights into the application of smart technologies in agriculture, with emphasis on sustainable practices, yield optimization, and automation.			
Course Outcomes	<p>On successful completion of this course, students will be able to:</p> <p>Understand the fundamentals of smart agriculture and its ecosystem.</p> <p>Apply IoT and sensors for environmental and crop monitoring.</p> <p>Analyze agricultural data for predictive insights using AI/ML.</p> <p>Design and deploy smart farming solutions using cloud and mobile platforms.</p>			
Course Content:				
Module 1	Introduction to Smart Farming and Precision Agriculture	Assignment		18[8L+10P] Sessions
<p>Topics:</p> <p>Evolution from traditional to precision agriculture, Components and architecture of Smart Farming systems, Applications: crop monitoring, irrigation control, pest detection, Overview of remote sensing and satellite-based agriculture, Soil health and weather data integration.</p>				
Module 2	IoT and Sensor Systems in Agriculture	Assignment		14[7L+7P] Sessions
<p>Topics:</p> <p>Sensor types: soil moisture, temperature, humidity, pH, NDVI, Microcontrollers: Arduino, ESP32, Raspberry Pi, Wireless communication protocols: LoRa, Zigbee, Wi-Fi, GSM, Energy harvesting and power management for field devices, Edge computing in agriculture.</p>				
Module 3	Data Analytics and AI in Agriculture	Assignment		14[6L+8P] Sessions
<p>Topics:</p> <p>Introduction to agri-data lifecycle, Data preprocessing and anomaly detection, AI/ML techniques: regression, classification, clustering for yield prediction and disease detection, Time series forecasting for rainfall, irrigation, and climate impact, Decision support systems and dashboards.</p>				
Module 4	Cloud, Mobile, and Drone Integration			
<p>Cloud platforms for agriculture: ThingSpeak, AWS IoT, Blynk, Azure IoT, Mobile app integration for farmer advisory systems, Role of drones in smart agriculture: aerial imaging, spraying, crop health assessment, Case studies: smart greenhouses, hydroponics, aquaponics, Capstone: End-to-end smart farming system design.</p>				

Project work/Assignment:

Assignment 1: Real-Time Crop and Soil Monitoring System

Assignment 2: Crop Yield Prediction using Machine Learning

Mini Project (Team-based): Smart Farm Automation System

List of Lab Tasks :

- Setup Arduino/ESP32 for collecting soil and climate data
- Interface with soil moisture, DHT11, and pH sensors
- Transmit data wirelessly using LoRa or Wi-Fi
- Real-time dashboard for field data (using Blynk/ThingSpeak)
- Predict crop yield using linear regression
- Train an image classifier for leaf disease detection
- Setup automated irrigation control system
- Use GPS for geotagging sensor data
- Drone-based simulation for crop monitoring
- Preprocess and visualize multivariate agri-data using Python
- Connect field devices to cloud platform (AWS IoT or Firebase)
- Alert system for low soil moisture via SMS/email
- Forecast rainfall using time series techniques
- Build a mobile-based decision support system (low-code platform)
- Capstone: Build and present a complete Smart Farm prototype

Course Code: CAI3415	Course Title: AI for Autonomous Systems Type of Course: Integrated	L- T-P- C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	CSE2264					
Anti-requisites	NIL					
Course Description	This course introduces the principles and technologies involved in developing intelligent autonomous systems using Artificial Intelligence. It focuses on perception, decision-making, control systems, and learning-based approaches to build real-time, autonomous agents such as self-driving vehicles, drones, and mobile robots.					
Course Objective	To equip students with knowledge and practical skills in using AI techniques to develop safe, adaptive, and intelligent autonomous systems that can sense, plan, and act in dynamic environments.					
Course Outcomes	On completion of this course, students will be able to: Understand the architectural components of autonomous systems. Apply computer vision and sensor fusion for environmental perception.					6

PRESIDENCY UNIVERSITY

Develop path planning and control strategies for autonomous navigation.
Implement learning-based models for real-time decision making.

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Content:				
Module 1	Introduction to Autonomous Systems	Assignment		18[8L+10P] Sessions
Definition and types of autonomous systems, Key components: perception, planning, control, learning, Applications: Self-driving cars, drones, mobile robots, AGVs, Architecture of an autonomous system: sensors, actuators, processors, ROS (Robot Operating System) overview, Ethical and safety concerns in autonomy.				
Module 2	Perception and Sensor Fusion	Assignment		14[7L+7P] Sessions
Topics: Sensor types: LiDAR, Radar, Ultrasonic, IMU, GPS, Cameras, Environment mapping: Occupancy grid, SLAM, Visual perception: Object detection (YOLO, SSD), semantic segmentation, Sensor fusion techniques: Kalman filter, EKF, particle filter, Case study: Lane detection using OpenCV				
Module 3	Planning and Navigation	Assignment		14[6L+8P] Sessions
Topics: Path planning algorithms: Dijkstra, A*, RRT, D*, Obstacle avoidance: Dynamic Window Approach, Potential Fields, Localization: Monte Carlo Localization, Graph-based SLAM, Trajectory generation and smoothing, Behavior trees and state machines for task execution, Indoor vs. outdoor navigation.				
Module 4	Learning-based Control and Decision Making			
Reinforcement learning: Q-learning, Deep Q-Networks, Policy-based learning and imitation learning, Decision making under uncertainty (Markov Decision Processes) Learning from simulation (Gazebo, CARLA, Webots), Edge AI deployment for low-latency inference, Case studies: Autonomous driving stack, warehouse robot planner.				
Project work/Assignment:				
Assignment 1: Object Detection and Lane Tracking System				
Assignment 2: Path Planning Simulator				
Mini Project (Team-based): Autonomous System Prototype				
List of Lab Tasks (15 Labs):				

Simulate a differential drive robot in ROS

Interface camera and distance sensors with Raspberry Pi

Perform object detection using pre-trained YOLOv5

Apply color-based segmentation for road/lane detection

Fuse GPS and IMU data using a Kalman filter

Build a simple SLAM model using GMapping or Cartographer

Implement obstacle avoidance using LiDAR data

Visualize path planning using A* on a grid map

Simulate autonomous vehicle in CARLA/Gazebo

Implement PID control for motor speed regulation

Train a reinforcement learning agent to navigate a maze

Deploy a TensorFlow Lite model for edge object recognition

Evaluate decision trees for robotic task selection

Use OpenCV to detect traffic signs and lights

Capstone: Build and test a mini autonomous robot prototype

Course Code: CAI3416	Course Title: Edge Computing Type of Course: Integrated	L- T-P- C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	CSE2264					
Anti-requisites	NIL					
Course Description	This course introduces the fundamentals of edge computing, an emerging paradigm that enables data processing and analytics at the network's edge. It covers system architecture, communication protocols, edge AI, and real-time applications with a hands-on approach using edge devices.					
Course Objective	To equip students with knowledge and skills in designing and deploying edge computing systems that offer low-latency, energy-efficient, and scalable solutions for real-time and distributed applications.					
Course Outcomes	<p>After successful completion, students will be able to:</p> <p>Explain the principles and architecture of edge computing systems.</p> <p>Develop and deploy applications on edge devices like Raspberry Pi, Jetson Nano, etc.</p> <p>Integrate edge computing with IoT, cloud, and AI systems.</p> <p>Analyze and optimize performance of edge-based applications.</p>					
Course Content:						
Module 1	Introduction to Edge Computing	Assignment				18[8L+10P] Sessions

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Topics:
Evolution from cloud to fog to edge, Edge computing architecture: core, edge, and device layers, Use cases: smart cities, industrial automation, healthcare, autonomous systems, Edge vs. Cloud: latency, bandwidth, privacy, scalability, Edge device overview: Raspberry Pi, Nvidia Jetson, Coral Dev Board

Module 2	Edge Devices and Communication	Assignment		14[7L+7P] Sessions
----------	--------------------------------	------------	--	--------------------

Topics:
Edge device setup and configuration, Operating systems: Raspbian, Ubuntu Core, Yocto, Edge and fog networking protocols: MQTT, CoAP, 6LoWPAN, Containerization with Docker at the edge, Device orchestration and provisioning, Energy and resource management in constrained devices.

Module 3	Edge AI and Analytics	Assignment		14[6L+8P] Sessions
----------	-----------------------	------------	--	--------------------

Topics:
Edge AI: Concepts and advantages, Lightweight ML frameworks: TensorFlow Lite, ONNX, OpenVINO, Model quantization and compression for deployment, Real-time data processing and event-based analytics, Case studies: object detection, audio classification, sensor fusion, Ethical considerations and security at the edge

Module 4	Edge-Cloud Integration and Applications			
----------	---	--	--	--

Edge-to-cloud communication pipelines, AWS Greengrass, Azure IoT Edge, Google Edge TPU, Microservices and serverless architecture on the edge, Industrial edge computing with OPC-UA and Modbus, Building dashboards for edge data insights, Capstone: End-to-end edge system for real-world application.

Project work/Assignment:

Assignment 1: IoT Data Stream Processing at the Edge
Assignment 2: Edge AI Inference Deployment
Mini Project (Team-based): Real-World Edge Solution

List of Lab Tasks :

- Setting up Raspberry Pi or Jetson Nano for edge deployment
- Installing and configuring Docker on an edge device
- Connecting sensors (camera, DHT11, ultrasonic) to edge devices
- Building and running MQTT-based data pipeline
- Collecting and visualizing data using Node-RED or Grafana

Edge inference using TensorFlow Lite object detection model

Deploying ONNX model for sensor-based classification

Streaming video analytics at the edge

Building a containerized AI service on the edge

Edge-to-cloud integration using AWS Greengrass or Azure IoT Edge

Monitoring resource usage on constrained devices

Detecting anomalies in time-series data at the edge

Designing a simple mobile dashboard to view edge insights

Security setup: HTTPS, authentication, and encryption

Capstone: Build a complete edge-to-cloud application prototype.

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Code: CAI3417	Course Title: Cognitive Computing Type of Course: Integrated	L- T-P- C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	CSE2264					
Anti-requisites	NIL					
Course Description	This course explores the interdisciplinary domain of Cognitive Computing, inspired by the human brain's capability to reason, learn, and interact naturally. Students will study the fundamentals of cognitive systems, natural language processing, machine learning, and AI-driven decision-making, with a focus on building intelligent applications using IBM Watson, transformers, and cognitive APIs.					
Course Objective	<ul style="list-style-type: none"> To understand the principles of cognitive systems and their architecture To explore the components of natural language understanding and reasoning To apply AI and ML models in cognitive tasks such as Q&A, dialogue, and speech To implement and evaluate real-world cognitive applications 					
Course Outcomes	<p>Upon successful completion, students will be able to:</p> <ul style="list-style-type: none"> Explain the structure and functioning of cognitive computing systems Apply NLP and ML techniques to build cognitive applications Use cognitive computing APIs for speech, vision, and language understanding Develop intelligent solutions using IBM Watson and other platforms 					
Course Content:						
Module 1	Introduction to Cognitive Computing	Assignment				18[8L+10P] Sessions
Topics:						

PRESIDENCY UNIVERSITY

Definition and evolution of cognitive computing, Cognitive architecture: perception, reasoning, learning, decision-making, Differences between traditional AI and cognitive systems, Applications in healthcare, finance, education, and law.				
Module 2	Machine Learning in Cognitive Systems	Assignment		14[7L+7P] Sessions
<p>Topics:</p> <p>Supervised, unsupervised, and reinforcement learning basics, Neural networks and deep learning, Introduction to cognitive frameworks (IBM Watson, Microsoft Azure AI, Google AI), Cognitive APIs for image, speech, and text processing</p>				
Module 3	Natural Language Processing and Understanding	Assignment		14[6L+8P] Sessions
<p>Topics:</p> <p>Language modeling, tokenization, stemming, lemmatization, Sentiment analysis, named entity recognition (NER), and summarization, Conversational AI: chatbots and voice assistants, Transformer models: BERT, GPT, and question answering systems.</p>				
Module 4	Building Cognitive Applications	Assignment		14[6L+8P] Sessions
<p>Topics:</p> <p>Knowledge representation and reasoning, Integrating cognitive APIs (speech-to-text, text-to-speech, visual recognition), Ethical considerations and trust in cognitive systems, Cognitive services deployment and case studies.</p>				
<p>List of Lab Tasks</p> <p>Lab 1: Introduction to Cognitive Computing Platforms Objective: Explore IBM Watson and Azure Cognitive Services Task: Register and configure accounts for cloud-based cognitive tools Activity: Build a simple "Hello Cognitive World" app</p> <hr/> <p>Lab 2: Sentiment Analysis using IBM Watson NLP API Objective: Analyze emotional tone of user-generated content Task: Use Watson's NLP API to detect sentiment Activity: Visualize sentiment trends in tweets or reviews</p> <hr/> <p>Lab 3: Named Entity Recognition using spaCy Objective: Extract key entities from text Task: Identify names, places, and organizations Activity: Highlight named entities using Python and spaCy</p>				

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Lab 4: Speech-to-Text using Google Cloud API

Objective: Convert speech input into text

Task: Use Google Cloud Speech API

Activity: Transcribe audio files with speaker diarization

Lab 5: Text-to-Speech using IBM Watson TTS

Objective: Generate human-like speech from text

Task: Convert user input to spoken voice

Activity: Play synthesized speech in a web app

Lab 6: Build a Visual Recognition App

Objective: Identify objects in images

Task: Use IBM Watson Visual Recognition API

Activity: Upload image and detect labels or tags

Lab 7: Design a Conversational Chatbot with Dialogflow

Objective: Implement intent-based conversation flow

Task: Create intents, entities, and responses

Activity: Deploy chatbot on a web interface

Lab 8: Question Answering with Transformers

Objective: Use BERT to answer questions based on context

Task: Load pre-trained model and context documents

Activity: Ask and receive accurate answers using Hugging Face

Lab 9: Create a Knowledge Graph using Neo4j

Objective: Represent relationships among entities

Task: Build and query knowledge graphs

Activity: Visualize connections in graph format

Lab 10: Sentiment Classification with LSTM

Objective: Classify text as positive/negative

Task: Train LSTM model for binary sentiment

Activity: Evaluate with accuracy and confusion matrix

Lab 11: Image Captioning with CNN-RNN Architecture

Objective: Generate captions for images

Task: Integrate image features and text generation

Activity: Display image and generate natural description

Lab 12: Facial Expression Recognition using OpenCV

Objective: Detect and classify facial emotions

Task: Use emotion classification models

Activity: Real-time expression detection from webcam

Lab 13: Design a Voice Assistant using Python

Objective: Enable basic voice interaction

Task: Use speech recognition and TTS

Activity: Query weather, date, and time via voice

Lab 14: Ethical Use of Cognitive Computing Tools

Objective: Understand ethical AI deployment

Task: Analyze bias and fairness in models

Activity: Present case studies on responsible AI

Lab 15: Capstone Project – Build a Multi-Modal Cognitive App

Objective: Integrate speech, vision, and language

Task: Develop a chatbot with voice and visual recognition

Activity: Demonstrate and document full application pipeline

Course Code: CAI3418	Course Title: Geospatial Data Analytics Type of Course: Integrated	L- T-P- C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	CSE2264					
Anti-requisites	NIL					
Course Description	This course introduces the fundamentals of geospatial data and spatial analysis using modern analytical tools and technologies. It focuses on acquiring, visualizing, processing, and analyzing geographic data to extract meaningful patterns. Applications include urban planning, environmental monitoring, remote sensing, and location-based services.					
Course Objective	To understand the fundamentals of geospatial data and coordinate systems To perform spatial data processing and analysis using GIS tools To visualize geospatial data using mapping libraries and dashboards To apply machine learning and statistical models to spatial datasets					
Course Outcomes	Upon successful completion of this course, students will be able to: Work with different types of geospatial data and formats Perform spatial analysis and geoprocessing Build visualizations using GIS platforms and Python libraries Apply geospatial techniques for problem-solving in real-world scenarios					
Course Content:						
Module 1	Introduction to Geospatial Data and GIS	Assignment				18[8L+10P]

<p>Topics:</p> <p>Basics of geospatial data: raster vs vector, Coordinate reference systems (CRS) and map projections, GIS architecture and components, Geospatial data sources: satellite, drone, GPS, open data.</p>						
<p>Course Code: MA1149</p>	<p>Course Title: Geospatial</p>	<p>Assignment</p>	<p>L- T-P- C</p>	<p>2</p>	<p>14[7L+7P] Sessions</p>	<p>3</p>
<p>Topics:</p>						
<p>Shapefiles, GeoJSON, and TIFF formats, Loading and manipulating geospatial data with GeoPandas, Map visualizations with Folium, Kepler.gl, and Plotly, Spatial joins, clipping, filtering, and reprojection</p>						
<p>Anti-Module 3</p>	<p>Spatial Analysis and Remote Sensing</p>	<p>Assignment</p>			<p>14[6L+8P] Sessions</p>	
<p>Course Description</p>	<p>This course provides an in-depth study of how artificial intelligence can be leveraged to optimize energy consumption across various domains such as smart buildings, industrial systems, smart grids, and renewable energy. Students will learn how to use machine learning and deep learning models to analyze remote sensing data, predict future usage, and automate control for improved efficiency and sustainability.</p>					
<p>Course 4 Module Objective</p>	<p>Applications and Machine Learning in Geospatial Analytics</p>	<p>Assignment</p>			<p>14[6L+8P] Sessions</p>	
<p>Course Outcomes</p>	<p>Course Outcomes</p> <p>On successful completion of this course, students will be able to:</p> <p>Spatial clustering and hotspot analysis, Geospatial ML: land cover classification, object detection, Time series and spatiotemporal data analysis, Case studies in disaster management, Understanding and optimize energy consumption systems and optimization methods. (Understand)</p>					
<p>List of Lab Tasks</p>	<p>Apply AI models to forecast and control energy usage. (Apply)</p> <p>Lab 1: Introduction to QGIS and Map Projections</p> <p>Objective: Understand GIS interface and coordinate systems</p> <p>Tasks: Load vector data and explore CRS (Analyze)</p> <p>Activity: Visualize administrative boundaries and reproject layers.</p> <p>Design intelligent energy optimization systems using modern AI tools. (Create)</p>					
<p>Lab 2: Handle Vector Data using GeoPandas</p>	<p>Course Content:</p> <p>Objective: Load and manipulate shapefiles in Python</p>					
<p>Module 1</p>	<p>Introduction to Energy Systems</p>	<p>Assignment</p>	<p>Introduction to Geospatial Data using GeoPandas</p>		<p>18[8L+10P] Sessions</p>	<p>7</p>

PRESIDENCY UNIVERSITY

	and	Private University Estd. in Karnataka State by Act No. 41 of 2013		
Lab 3: Perform Spatial Joins and Buffering	Optimization			
<p>Objective: Learn spatial joins and geoprocessing Tasks: Combine population and boundary datasets Basics of energy generation, transmission, and consumption, Key challenges in energy optimization, Overview of smart energy systems and IoT integration, Fundamentals of optimization: cost, usage, scheduling</p>				
Lab 4: Visualize Maps using Folium and Kepler.gl	Machine Learning for Energy Forecasting			
Module 2	Assignment		14[7L+7P] Sessions	
Lab 5: Work with Raster Data using Rasterio				
<p>Objective: Read and manipulate satellite imagery Energy datasets and data preprocessing, Regression techniques for load and usage prediction, Time-series modeling with ARIMA and LSTM, Evaluation metrics and model selection Activity: Display elevation or vegetation maps</p>				
Module 3	Deep Learning and Reinforcement Learning for Energy Control			
Lab 6: Calculate NDVI from Satellite Images	Assignment		14[6L+8P] Sessions	
<p>Objective: Perform vegetation index analysis Tasks: Use Red and NIR bands to compute NDVI Activity: Visualize vegetation cover changes</p>				
<p>Topics: Neural networks for pattern recognition in energy data, Deep learning for anomaly detection, Reinforcement learning for energy-efficient control systems, AI in smart HVAC and lighting systems Objective: Convert addresses to coordinates Tasks: Use Geopy and Google Maps API Activity: Geocode location list and map them</p>				
Module 4	Applications and Emerging Trends	Assignment		
Lab 8: Perform Land Use Classification using K-Means			14[6L+8P] Sessions	
<p>Objective: Apply clustering to satellite images Topics: Use unsupervised learning on raster data Activity: Classify urban vs green areas AI in smart homes and smart cities, Integration with renewable energy sources, Case studies: AI in smart grids, buildings, and industry, Future trends: Edge AI, Federated learning in energy networks Lab 9: Detect Change over Time in Remote Sensing Data Objective: Analyze temporal changes Tasks: Compare satellite images from different years Project work/Assignment: Activity: Detect urban expansion or deforestation</p>				
<p>Develop a forecasting model for household energy optimization, Implement an RL-based agent to control energy consumption in a simulated environment, Design a smart energy dashboard with real-time Band Dash Objective: Create an interactive geospatial dashboard Tasks: Combine charts and maps Activity: Display flood zones with demographic data</p>				
				7

PRESIDENCY UNIVERSITY

<p>Lab 11: Load and export and QGIS datasets (e.g., UC, Open E)</p> <p>Objective: Identify spatial patterns</p> <p>Lab 2: Clean and preprocess data for modeling</p> <p>Tasks: Use DBSCAN or Getis-Ord G* statistic</p> <p>Activity: Detect crime or disease hotspots</p> <p>Lab 3: Build a linear regression model for consumption forecasting</p> <p>Lab 4: Apply decision tree and random forest for energy classification</p> <p>Lab 5: Integrate GPS Data for Route Mapping</p> <p>Objective: Process and visualize GPS tracks</p> <p>Lab 6: Develop a deep learning (LSTM) model for energy prediction</p> <p>Tasks: Load GPX/CSV files and plot paths</p> <p>Activity: Analyze cycling or delivery routes</p> <p>Lab 7: Perform anomaly detection on smart meter data</p> <p>Lab 8: Develop a clustering model to group usage patterns</p> <p>Lab 9: Design a dashboard for visualizing real-time and historical energy data</p> <p>Objective: Model spatial relationships</p> <p>Tasks: Build a tree-based regression (SVM) for smart appliances</p> <p>Activity: Predict housing prices based on location</p> <p>Lab 11: Implement Q-learning for controlling a simulated thermostat</p> <p>Lab 12: Reinforcement learning for lighting system optimization</p> <p>Lab 14: Use Google Earth Engine for Remote Sensing Analysis</p> <p>Lab 13: Forecast solar energy generation using weather and usage data</p> <p>Objective: Access cloud-based satellite processing</p> <p>Tasks: Load and analyze Sentinel/Landsat data</p> <p>Activity: Monitor water bodies or land surface temperature</p> <p>Lab 15: Final capstone: Smart energy optimization prototype using AI</p>

GIScience & Remote Sensing Course Code:	Course Title : Bio Medical Informatics	L	P	-	2	0	2	3
CAI3420 SWAYAM / NPTEL	Type of Course : Integrated / MOOCs	-TC						
Version No. NPTEL – Introduction to GIS (IIT Roorkee)	1.0 https://nptel.ac.in/courses/105107120							
Course Pre-requisites	CSE2264 Coursera – Geospatial and Environmental Analysis (UC Davis) https://www.coursera.org/learn/environmental-analysis							
Anti-requisites	NIL edX – Geospatial Data Science and Applications (Tsinghua University) https://www.edx.org/course/geospatial-data-science							
Course Description	This course introduces students to Bio Medical Informatics. The focus is on understanding domain-specific data and AI methods applicable to healthcare. The course includes both theoretical and practical components that prepare students for real-world applications in the health sector. https://developers.google.com/earth-engine/tutorials							
Course Objective	The objective of the course is SKILL DEVELOPMENT of students using COURSE COURSERA – AI for Energy EXPERIENTIAL LEARNING techniques. edX – Data Science and Machine Learning for Energy Systems							
Course Out Comes	On successful completion of the course the students shall be able to: On successful completion of the course the students shall be able to: CO1: Describe the scope and importance of Bio Medical Informatics. [Understand] CO2: Identify and pre-process health-related data for analysis. [Apply] CO3: Build intelligent models to support medical diagnostics or analytics. [Apply] CO4: Evaluate AI models for performance and reliability in healthcare. [Analyze] CO5: Design ethical, efficient AI-based systems for healthcare applications. [Create]							
Course Content:								
Module 1	Introduction to Bio Medical Informatics	Assignment	Program activity			22 Hours		
This module introduces the fundamental concepts of Bio Medical Informatics, outlining its scope and significance in modern healthcare. Students will learn about the different types of biomedical data including structured, semi-structured, and unstructured formats. The role of information systems such as Electronic Health Records (EHRs) and medical standards like ICD, SNOMED CT, and HL7 will be discussed. The application of data science and AI in areas such as diagnostics, treatment planning, and clinical workflows will be explored through real-world use								

cases. This module sets the foundation for understanding how informatics bridges technology and medicine.

Module 2	Data collection, preprocessing techniques and AI model design	Assignment	Program activity	22 Hours
----------	---	------------	------------------	----------

In this module, the focus shifts to data acquisition and preprocessing techniques essential for biomedical data analysis. Students will explore various data collection methods used in healthcare, including clinical trials, IoT-based sensors, and surveys. Key topics include data cleaning, integration of heterogeneous sources, handling missing values, and feature engineering for biomedical signals and images. Privacy concerns and de-identification practices in patient data will also be addressed. Practical exposure to preprocessing tools and techniques will prepare students for effective data handling in real-world scenarios.

Module 3	Model training, validation, interpretation, and performance metric	Assignment	Program activity	18 Hours
----------	--	------------	------------------	----------

This module delves into the application of machine learning algorithms within the biomedical context. Students will implement supervised learning methods such as logistic regression, decision trees, and support vector machines, along with unsupervised techniques like clustering for patient stratification. Emphasis will be placed on performance evaluation using metrics tailored to healthcare (e.g., sensitivity, specificity, AUC). Techniques for improving model robustness, including cross-validation and model interpretability tools like SHAP and LIME, will be discussed. Real-life datasets will be used to build disease prediction models, offering insights into practical implementation challenges.

Module 4	Deployment, ethics in AI for healthcare, and case studies	Assignment	Program activity	13 Hours
----------	---	------------	------------------	----------

The final module focuses on deploying AI models in clinical environments and understanding the ethical, legal, and social implications of Bio Medical Informatics. Students will learn about lightweight deployment tools such as Flask and Streamlit for building user interfaces and dashboards. Case studies on clinical decision support systems (CDSS) will illustrate the integration of AI into healthcare systems. The module also explores recent trends such as personalized medicine, genomic data analysis, and the role of AI in epidemiology. Ethical dilemmas, bias mitigation, and fairness in AI applications are also critically examined to ensure responsible use of technology in healthcare.

List of Lab Tasks:

Lab Sheet 1: Introduction to healthcare datasets using Python; Data visualization using matplotlib and seaborn

Lab Sheet 2: Data cleaning techniques; Feature selection methods for health data

PRESIDENCY UNIVERSITY

Lab Sheet 3: Logistic regression for disease prediction; Evaluate with confusion matrix

Private University Estd. in Karnataka State by Act No. 41 of 2013

Lab Sheet 4: Decision trees and random forests; Cross-validation comparisons

Lab Sheet 5: Clustering with K-means; Hierarchical clustering

Lab Sheet 6: Time series forecasting with ARIMA; Anomaly detection

Lab Sheet 7: Genomic sequence preprocessing; Feature extraction

Lab Sheet 8: Medical image preprocessing; CNN classification (e.g., chest X-rays)

Lab Sheet 9: NLP on clinical notes; Named Entity Recognition

Lab Sheet 10: SHAP/LIME interpretability; Deployment with Flask/Streamlit

Lab Sheet 11: Dashboard design; Integration with cloud or mobile apps

Lab Sheet 12: Bias detection and mitigation

Lab Sheet 13: COVID-19 case study; Real-time data visualization

Targeted Application & Tools that can be used

Python, scikit-learn, pandas, matplotlib, seaborn, Jupyter, TensorFlow/PyTorch, Streamlit

Project work/Assignment:

Assignment: Assignments include module-wise exercises and real-world project implementation.

Course Content:				
Module 1	Fundamentals of Intelligent Systems in Healthcare	Assignment	Program activity	22 Hours
<p>This module introduces students to the fundamentals of intelligent systems and their significance in disease prediction and drug discovery. It covers knowledge-based systems, expert systems, and decision support systems with examples from clinical settings. Students learn how AI mimics human reasoning for healthcare applications and the use of knowledge engineering in rule-based diagnosis.</p>				
Module 2	Data-Driven Approaches in Disease Prediction	Assignment	Program activity	22 Hours
<p>The focus here is on data-driven intelligent systems using machine learning and deep learning. It covers data acquisition from clinical databases, molecular and drug databases, and preprocessing techniques suitable for biological data. Techniques for classifying disease patterns and identifying drug targets using AI are discussed.</p>				
Module 3	AI in Computational Drug Discovery	Assignment	Program activity	18 Hours
<p>This module delves into computational drug discovery, covering ligand-based and structure-based approaches. Students explore QSAR modeling, molecular docking, and neural networks for compound activity prediction. Ethical concerns and challenges in in-silico trials are also introduced.</p>				
Module 4	Integration and Applications in Clinical Workflows	Assignment	Program activity	13 Hours
<p>The final module addresses the integration of intelligent systems in clinical workflows and pharmaceutical research. Topics include AI-based platforms for precision medicine, clinical validation, regulatory compliance, and case studies on successful AI-driven drug discovery pipelines.</p>				
<p>List of Lab Tasks:</p> <p>Lab Sheet 1</p> <p>Level 1: Introduction to healthcare and molecular datasets</p> <p>Level 2: Data loading and exploration using Python (pandas, NumPy)</p> <p>Lab Sheet 2</p>				

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Level 1: Data cleaning and preprocessing (missing values, normalization)

Level 2: Feature selection for clinical and drug datasets

Lab Sheet 3

Level 1: Implementation of classification models (Logistic Regression, Decision Trees)

Level 2: Model evaluation using confusion matrix and ROC-AUC

Lab Sheet 4

Level 1: Application of deep learning models for disease prediction

Level 2: Hyperparameter tuning and performance comparison

Lab Sheet 5

Level 1: Introduction to molecular representations (SMILES, fingerprints)

Level 2: Compound similarity calculation and clustering

Lab Sheet 6

Level 1: QSAR modeling using regression techniques

Level 2: Interpretation of chemical descriptors and activity prediction

Lab Sheet 7

Level 1: Structure-based drug discovery: basics of molecular docking

Level 2: Running docking simulations using open-source tools (e.g., AutoDock)

Lab Sheet 8

Level 1: Development of a basic rule-based expert system for disease diagnosis

Level 2: Knowledge base and inference engine simulation

Lab Sheet 9

Level 1: Data visualization with seaborn and matplotlib

Level 2: Creating dashboards to visualize model predictions

Lab Sheet 10

Level 1: Ethical case study analysis in AI-driven healthcare

Level 2: Design of fairness-aware AI models for drug discovery

Lab Sheet 11–15

Capstone mini-project development based on real-world data

Includes problem definition, data handling, model building, evaluation, and report writing

Targeted Application & Tools that can be used

Python, scikit-learn, pandas, matplotlib, seaborn, Jupyter, TensorFlow/PyTorch, Streamlit

Version No.	1.0			
Course Pre-requisites	CSE2264			
Anti-requisites	NIL			
Course Description	This course focuses on applying artificial intelligence and deep learning to medical image analysis. Students will explore medical imaging modalities, preprocessing techniques, computer vision models, and deployment strategies. Emphasis is placed on real-world applications such as disease diagnosis, image segmentation, and anomaly detection.			
Course Objective	The objective of the course is SKILL DEVELOPMENT of students using EXPERIENTIAL LEARNING techniques..			
Course Out Comes	<p>On successful completion of the course the students shall be able to:</p> <p>CO1: Describe different medical imaging modalities and AI applications. [Understand]</p> <p>CO2: Preprocess and annotate medical images for AI pipelines. [Apply]</p> <p>CO3: Build and train computer vision models for disease detection. [Apply]</p> <p>CO4: Evaluate performance of AI models using imaging metrics. [Analyze]</p> <p>CO5: Design and deploy ethical and explainable AI solutions in medical imaging. [Create]</p>			
Course Content:				
Module 1	Medical Imaging Modalities and Preprocessing	Assignment	Program activity	22 Hours
This module covers the foundations of medical imaging modalities such as X-rays, CT, MRI, and ultrasound. Students are introduced to DICOM formats, imaging physics, and image acquisition principles. The importance of image preprocessing for AI applications is emphasized.				
Module 2	Deep Learning for Image Analysis	Assignment	Program activity	22 Hours
Focus is placed on computer vision and deep learning techniques in imaging. Key concepts include convolutional neural networks (CNNs), image segmentation, classification, and detection. Hands-on exercises include building image classification models for disease identification.				

PRESIDENCY UNIVERSITY

Module 3	Advanced Imaging Techniques and Evaluation	Assignment	Program activity	18 Hours
<p>Advanced topics such as 3D imaging, multi-modal fusion, and transfer learning are covered. Students also explore annotation tools, dataset creation, and model performance metrics like Dice coefficient and IoU.</p>				
Module 4	Deployment and Real-world Applications	Assignment	Program activity	13 Hours
<p>This module discusses AI deployment in radiology workflows, regulatory and ethical considerations, and real-world implementation. Use cases like tumor detection, fracture analysis, and pneumonia prediction are analyzed for impact and accuracy.</p>				
<p>List of Lab Tasks:</p> <p>Lab Sheet 1</p> <p>Level 1: Loading and visualizing medical images (DICOM, PNG, JPEG) using Python libraries (e.g., pydicom, OpenCV)</p> <p>Level 2: Image enhancement techniques such as histogram equalization, denoising, and contrast adjustment</p> <p>Lab Sheet 2</p> <p>Level 1: Image annotation using tools like Labellmg or CVAT</p> <p>Level 2: ROI (Region of Interest) extraction and mask creation for segmentation tasks</p> <p>Lab Sheet 3</p> <p>Level 1: Building a basic Convolutional Neural Network (CNN) for classifying binary medical images</p> <p>Level 2: Fine-tuning pretrained models (e.g., VGG16, ResNet) on a labeled medical image dataset</p> <p>Lab Sheet 4</p> <p>Level 1: Semantic segmentation using U-Net architecture</p> <p>Level 2: Evaluation using IoU and Dice coefficient</p> <p>Lab Sheet 5</p> <p>Level 1: Multi-class classification with medical datasets (e.g., chest X-ray with normal, pneumonia, COVID-19 labels)</p> <p>Level 2: Performance evaluation using confusion matrix, sensitivity, specificity, and ROC-AUC</p> <p>Lab Sheet 6</p> <p>Level 1: Heatmap generation for explainability using Grad-CAM</p> <p>Level 2: Visual interpretation of model decisions in medical diagnosis</p>				

PRESIDENCY UNIVERSITY

Web resources : Module 4 https://www.coursera.org/learn/medicine-ai-for-medical-diagnosis – AI for Medical Diagnosis by Deep Learning AI	Applications in Personalized Medicine	Assignment	Program activity	13 Hours
This module explores case studies in cancer genomics, pharmacogenomics, and population genomics. Ethical considerations, data privacy (e.g., HIPAA, GDPR), and the integration of AI into clinical workflows are discussed.				
https://nptel.ac.in/courses/106/106/106106213/ – Medical Image Computing, NPTEL List of Lab Tasks: https://www.kaggle.com/datasets – Public datasets for medical image classification and segmentation Lab Sheet 1 https://grand-challenge.org/ – AI challenges and annotated datasets for medical imaging research Level 1: Retrieve DNA and protein sequences from NCBI and Ensembl databases Level 2: Visualize and annotate genomic regions using the UCSC Genome Browser Topics relevant to development of “Skill Development :” Lab Sheet 2 Image preprocessing and augmentation techniques Level 1: Perform sequence alignment using BLAST (Basic Local Alignment Search Tool) Design and training of deep learning models for medical image classification and segmentation Level 2: Use BWA (Burrows-Wheeler Aligner) for short-read alignment; convert to SAM/BAM Evaluation of AI models using healthcare-specific metrics (e.g., sensitivity, specificity, IoU, Dice score) Lab Sheet 3 Interpretation of model predictions using explainability tools (e.g., Grad-CAM) Level 1: Variant calling from aligned reads using bcftools or GATK Building and deploying real-time diagnostic tools using Python, Streamlit, and cloud platforms Level 2: Annotate variants using tools like VEP (Variant Effect Predictor) or SnpEff Collaborative problem-solving through project-based learning with real medical datasets Lab Sheet 4 Topics relevant to development of “Environment and sustainability: Level 1: Preprocess microarray gene expression data (normalization, filtering) Level 2: Perform RNA-seq pipeline using FASTQ to aligned reads and read counts Use of AI to reduce redundant imaging procedures, minimizing patient exposure to radiation and resource use Lab Sheet 5 Energy-efficient model architectures and deployment practices to lower computational footprint in healthcare AI Level 1: Feature engineering: convert genomic data into machine learning-ready formats Level 2: Apply dimensionality reduction (PCA, t-SNE) on gene expression datasets				

PRESIDENCY UNIVERSITY

Early detection and screening with AI for genetic diseases for invasive follow-up procedures and Course Code: CSE2264 Level 1: Train a simple classifier (e.g., SVM, Decision Tree) to predict disease from gene expression data Level 2: Evaluate model performance using accuracy, precision, recall, and AUC	Private University Estd. in Karnataka State by Act No. 41 of 2013 Type of Course: Integrated -IC	2	2	8
Version of Lab Sheet 7	Use of paperless workflows and digital tools to support green healthcare initiatives			
Course Title	CSE2264 Cluster genomic samples using k-means and hierarchical clustering			
Requisites	Level 2: Visualize clusters using heatmaps and dendrograms			
Anti-requisites	NIL			
Capstone Project Description	Use genomic datasets to identify candidate biomarkers or predict disease risk; includes full workflow from data preprocessing to model evaluation and report presentation			
Targeted Application	Tools that data reuse meaningful insights for improving patient outcomes and supporting evidence-based decision-making.			
Data Repositories:	NCBI, Ensembl, 1000 Genomes Project, UCSC Genome Browser			
Course Objective Sequence Analysis:	The objective of the course is SKILL DEVELOPMENT of students using BLAST, BWA, SAMtools, FASTQC			
Variant Calling & Annotation:	bcftools, GATK, VEP, SnpEff			
Gene Expression Analysis:	DESeq2, edgeR (via R/Bioconductor), limma			
Machine Learning Libraries:	scikit-learn, TensorFlow, XGBoost			
Bioinformatics Libraries:	CO1: Describe clinical data sources, structures, and standards. [Understand] BioPython, Bioconductor (R), pyVCF CO2: Preprocess and integrate structured and unstructured clinical data.			
Visualization:	matplotlib, seaborn, pheatmap, genome browsers			
Web Platforms:	Galaxy, EMBL-EBI Tools			
Course Comes Environments:	CO3: Build analytical models for clinical decision support. [Apply] Jupyter Notebook, RStudio, Google Colab CO4: Evaluate model accuracy and interpret outputs using relevant metrics.			
Project work/Assignment:	[Analyze]			
Assignment: Assignment	CO5: Design data-driven solutions for real-world healthcare scenarios. [Create]			
Text Book Course Content:				
T1: Michael C. Schatz et al., Genomic Data Science, Cold Spring Harbor Lab Press, 2022				
T2: Jason H. Moore & Scott M. Williams, Introduction to Clinical Data and Coding Systems, Bioinformatics for Geneticists, Wiley, 2020	Assignment	Program activity		22 Hours
References	This course introduces electronic health records (EHRs), their components, and commonly used clinical coding systems like ICD, CPT, and LOINC. Students understand how structured and unstructured clinical data are generated and stored in hospitals and research environments.			
R1: R. Durbin et al., Biological Sequence Analysis, Cambridge University Press, 1998				
R2: Online resources from Coursera (e.g., Genomic Data Science Specialization by Johns Hopkins), NPTEL, and EMBL-EBI				9

PRESIDENCY UNIVERSITY

Web resources : Module 2 https://www.ncbi.nlm.nih.gov/	Clinical Data Processing and Integration NCBI Genomics Portal	Assignment Program activity	22 Hours s
<p> https://www.ensembl.org/ – Ensembl Genome Browser Focuses on data cleaning, missing value handling, temporal sequencing, and merging data from disparate hospital systems. Students explore preprocessing tools such as pandas and SQL, with https://galaxyproject.org/ – web-based bioinformatics analysis platform https://bioconductor.org/ – Open software for genomic data analysis </p>			
Module 3	Predictive Analytics and Risk Modeling	Assignment	Program activity 18 Hours
<p> Topics relevant to development of “Skill Development...” Students learn to develop and evaluate machine learning models for predicting hospital readmissions, disease progression, and patient risk scores. Survival analysis and calibration techniques are introduced. </p>			
Machine learning application Module 4 Development of predictive models using omics data	Variant analysis and functional annotation Visualization and Deployment in Clinical Workflows	Assignment	Program activity 13 Hours
<p> Project-based learning with publicly available datasets. Covers best practices for visualizing clinical KPIs, creating dashboards for hospital use, and regulatory requirements like HIPAA and HL7 compliance. Students build real-time reporting tools for clinical insights. </p>			
<p> Use of genomics to develop sustainable agriculture and precision nutrition List of Lab Tasks: Minimizing clinical trial waste through AI-based patient stratification Genetic screening for early disease detection to reduce long-term healthcare burden Lab Sheet 1 Efficient use of cloud computing for large-scale genomic data analysis Level 1: Explore the structure of synthetic electronic health records (EHRs) Level 2: Extract and visualize demographic information using SQL or pandas </p>			
<p> Lab Sheet 2 Level 1: Preprocess structured clinical data: handle missing values, outliers Level 2: Transform unstructured clinical notes using basic NLP (e.g., tokenization, stemming) </p>			
<p> Lab Sheet 3 Level 1: Join and merge multi-source clinical datasets (e.g., labs + diagnosis + medication) Level 2: Time-based filtering and patient cohort generation using temporal queries </p>			
<p> Lab Sheet 4 Level 1: Build a logistic regression model to predict hospital readmission Level 2: Evaluate model performance using confusion matrix and ROC curve </p>			
<p> Lab Sheet 5 Level 1: Perform survival analysis using Kaplan-Meier estimator Level 2: Cox proportional hazards model to analyze patient survival risk </p>			

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Lab Sheet 6

Level 1: Create a visual dashboard of patient metrics using tools like matplotlib or seaborn

Level 2: Build a real-time monitoring dashboard with Streamlit

Lab Sheet 7–10

Capstone Project: End-to-end clinical analytics project: data preprocessing, modeling, evaluation, and reporting using real-world or simulated data

Targeted Application & Tools that can be used

Data Repositories & Formats: MIMIC-III, eICU, FHIR, CSV, HL7

Programming & Data Handling: Python, SQL, pandas, NumPy

Data Visualization: matplotlib, seaborn, Plotly, Streamlit

Machine Learning Frameworks: scikit-learn, XGBoost

Survival Analysis: Lifelines (Python), R survival package

NLP for Clinical Text: spaCy, NLTK, SciSpacy

Dashboards & Reporting: Power BI, Streamlit, Tableau (optional)

Environment: Jupyter Notebook, Google Colab, Anaconda

Project work/Assignment:

Assignment: Assignments include module-wise exercises and real-world project implementation.

Private University Estd. in Karnataka State by Act No. 41 of 2013

- <https://physionet.org/about/mimic> – MIMIC-III Medical Information Mart for Intensive Care
- <https://www.hl7.org/> – Health Level Seven International (HL7 standards)
- <https://nptel.ac.in/courses/106/106/106106213> – NPTEL: Health Informatics and Analytics
- <https://www.coursera.org/learn/clinical-data-science> – Coursera: Clinical Data Science Specialization
- <https://streamlit.io/> – Streamlit: Rapid development of clinical data dashboards

Topics relevant to development of “Skill Development :”

- Handling and preprocessing large-scale clinical datasets (structured and unstructured)
- Using SQL and Python for real-world healthcare data analysis
- Developing predictive models for risk scoring and clinical decision support
- Conducting survival analysis and time-to-event modeling
- Visualizing healthcare data using professional dashboard tools
- Building real-time, interactive applications for clinical reporting and monitoring
- Applying NLP techniques for extracting information from clinical notes

Topics relevant to development of “Environment and sustainability:

- Promoting data-driven, paperless clinical workflows for sustainable healthcare management
- Reducing unnecessary diagnostic procedures through predictive analytics
- Enhancing resource optimization in hospitals via data-informed decision-making
- Supporting public health sustainability through early risk detection and preventive care models
- Minimizing environmental burden by deploying digital dashboards and remote monitoring systems

Course Code: CAI3425	Course Title : AI in Epidemiology and Public Health Analytics Type of Course :Integrated	L - P - -TC	2	0	2	3
Version No.	1.0					
Course Pre-requisites	CSE2264					

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Anti-requisites	NIL			
Course Description	This course explores how artificial intelligence can be applied in epidemiology and public health to understand, predict, and manage health outcomes at a population level. Students will gain skills in analyzing health indicators, working with public datasets, and developing AI-based models for forecasting outbreaks and informing health policy decisions			
Course Objective	The objective of the course is SKILL DEVELOPMENT of students using EXPERIENTIAL LEARNING techniques.			
Course Out Comes	<p>On successful completion of the course the students shall be able to:</p> <p>CO1: Explain the principles of epidemiology and population health data. [Understand]</p> <p>CO2: Preprocess and analyze large-scale public health datasets. [Apply]</p> <p>CO3: Develop AI models for outbreak prediction and risk estimation. [Apply]</p> <p>CO4: Evaluate model outcomes for public health decision-making. [Analyze]</p> <p>CO5: Design data-driven tools and dashboards for health policy and surveillance. [Create]</p>			
Course Content:				
Module 1	Foundations of Epidemiology and Health Indicators	Assignment	Program activity	22 Hours
Introduces the core concepts of epidemiology including incidence, prevalence, mortality, morbidity, and health surveillance systems. Students learn about the structure and utility of public health datasets such as NHANES, DHS, and WHO databases.				
Module 2	Public Health Data Analytics	Assignment	Program activity	22 Hours
Focuses on collecting, cleaning, and analyzing epidemiological data using statistical and AI tools. Students apply descriptive analytics and GIS-based visualizations to identify trends and disparities in population health.				
Module 3	AI Models for Population Health Forecasting	Assignment	Program activity	18 Hours

PRESIDENCY UNIVERSITY

Students build predictive models for disease outbreak forecasting, disease burden estimation, and vaccination coverage prediction using machine learning algorithms like decision trees, SIR models, and ensemble methods.

Module 4	Visualization and Ethical Implications in Public Health AI	Assignment	Program activity	13 Hours
----------	--	------------	------------------	----------

Students develop dashboards and visual reports to support public health decision-making. The module also explores privacy, fairness, and ethical issues in population-level AI applications.

List of Lab Tasks:

Lab Sheet 1

Level 1: Load and explore public health datasets (e.g., NHANES, DHS)

Level 2: Perform descriptive statistical analysis (mean, median, incidence rates)

Lab Sheet 2

Level 1: Clean and preprocess public health data using pandas

Level 2: Perform demographic segmentation and cohort analysis

Lab Sheet 3

Level 1: Visualize disease distribution geographically using plotly or geopandas

Level 2: Create choropleth maps and interactive visualizations

Lab Sheet 4

Level 1: Train a decision tree or logistic regression model to classify health risk groups

Level 2: Evaluate classification performance using ROC and precision-recall curves

Lab Sheet 5

Level 1: Apply time series forecasting (e.g., ARIMA) to model disease trends

Level 2: Compare model forecasts with actual data using RMSE

Lab Sheet 6

Level 1: Implement a simple SIR model to simulate disease spread

Level 2: Calibrate parameters to fit real-world outbreak data

Lab Sheet 7

Level 1: Build a public health dashboard using Streamlit

Level 2: Integrate multiple charts and summary statistics into an interactive interface

Lab Sheet 8–10

PRESIDENCY UNIVERSITY

Capstone Project: Design an AI-based early warning system or policy dashboard using historical epidemic or immunization data

Presidency University Estd. in Karnataka State by Act No. 41 of 2013

Targeted Application & Tools that can be used

Public Health Datasets: NHANES, DHS, WHO Global Health Observatory, India NFHS

Programming & Analysis: Python, pandas, NumPy, SciPy, statsmodels

Visualization: matplotlib, seaborn, plotly, geopandas, folium

AI/ML Frameworks: scikit-learn, XGBoost, Prophet, TensorFlow (optional)

Epidemiological Modeling: SIR/SEIR models using custom Python functions

Geospatial Mapping: QGIS (optional), plotly choropleths, mapbox

Dashboards & Reporting: Streamlit, Tableau (optional), Power BI

Environments: Jupyter Notebook, Google Colab, Anaconda

Project work/Assignment:

Assignment: Assignments include module-wise exercises and real-world project implementation.

PRESIDENCY UNIVERSITY

<https://www.healthdata.org/> Institute for Health Metrics and Evaluation (IHME)

Private University Estd. in Karnataka State by Act No. 41 of 2013

Topics relevant to development of “Skill Development :”

Epidemiological data cleaning, exploration, and statistical summarization

Application of machine learning for disease prediction and outbreak forecasting

Use of geospatial tools for mapping and hotspot analysis

Development of interactive public health dashboards using real datasets

Deployment of AI models for real-time public health monitoring

Communication of data-driven insights for policy formulation and community awareness

Topics relevant to development of “Environment and sustainability:

Early detection and mitigation of disease outbreaks to reduce public health burden

AI-based models to track the impact of climate change on health outcomes

Data-driven planning for sustainable healthcare infrastructure and resource allocation

Monitoring of environmental hazards (e.g., air/water pollution) and their epidemiological impact

Supporting sustainable development goals (SDGs) related to health and well-being (e.g., SDG 3, SDG 6, SDG 13)

Course Code: CAI3426	Course Title : Time Series Analysis for Patient Monitoring Type of Course :Integrated	L - P- -TC	2	0	2	3
Version No.	1.0					
Course Pre-requisites	CSE2264					
Anti-requisites	NIL					
Course Description	This course focuses on time series data generated from continuous patient monitoring systems such as ICU sensors, wearable devices, and medical records. Students will learn to preprocess, analyze, and forecast temporal data using classical and machine learning-based time series models to detect anomalies and predict patient conditions.					

PRESIDENCY UNIVERSITY

Course Objective	The objective of the course is SKILL DEVELOPMENT of students using EXPERIENTIAL LEARNING techniques. Act No. 41 of 2013			
Course Out Comes	<p>On successful completion of the course the students shall be able to:</p> <p>CO1: Explain the nature and components of time series data in healthcare. [Understand]</p> <p>CO2: Preprocess and extract meaningful features from patient monitoring data. [Apply]</p> <p>CO3: Build forecasting and anomaly detection models using time series techniques. [Apply]</p> <p>CO4: Evaluate the performance of time series models for clinical applications. [Analyze]</p> <p>CO5: Design intelligent patient monitoring solutions using real-time data streams. [Create]</p>			
Course Content:				
Module 1	Fundamentals of Healthcare Time Series Data	Assignment	Program activity	22 Hours
Introduces sources and structures of time series data in healthcare, such as vital signs, ECG, glucose levels, and ICU telemetry. Covers time series components (trend, seasonality, noise) and visualization techniques.				
Module 2	Time Series Preprocessing and Feature Engineering	Assignment	Program activity	22 Hours
Focuses on handling missing data, irregular sampling, outliers, normalization, resampling, and windowing. Techniques for extracting rolling statistics and domain-specific temporal features are covered.				
Module 3	Forecasting and Anomaly Detection Models	Assignment	Program activity	18 Hours
Students implement statistical models like ARIMA, SARIMA, and exponential smoothing, as well as ML-based approaches such as LSTM, GRU, and hybrid models. Emphasis is placed on model selection, tuning, and interpretability.				
Module 4	Deployment and Real-time Monitoring Applications	Assignment	Program activity	13 Hours

PRESIDENCY UNIVERSITY

Covers real-time patient monitoring frameworks, streaming data pipelines, alert systems, and dashboard integration using lightweight deployment tools (e.g., Streamlit, MQTT). Includes ethical and regulatory issues in monitoring.

List of Lab Tasks:

Lab Sheet 1

Level 1: Load and visualize patient time series data (e.g., heart rate, ECG)

Level 2: Decompose time series into trend, seasonality, and residuals

Lab Sheet 2

Level 1: Handle missing data using interpolation and imputation techniques

Level 2: Resample irregularly spaced data and smooth noisy signals

Lab Sheet 3

Level 1: Extract rolling statistics (mean, std) and domain-specific features (e.g., HRV)

Level 2: Apply time windowing techniques for model input preparation

Lab Sheet 4

Level 1: Build an ARIMA model for forecasting a physiological signal

Level 2: Evaluate model performance using MAE, RMSE, and residual plots

Lab Sheet 5

Level 1: Train an LSTM model for predicting vital signs

Level 2: Tune hyperparameters and visualize learning curves

Lab Sheet 6

Level 1: Detect anomalies in ICU data using Z-score and Isolation Forest

Level 2: Compare detection rates across different methods

Lab Sheet 7

Level 1: Create a real-time streaming simulation using stored sensor data

Level 2: Trigger alerts when predefined clinical thresholds are breached

Lab Sheet 8–10

Capstone Project: Develop an end-to-end patient monitoring pipeline (data ingestion, processing, forecasting, alerting, and visualization)

Targeted Application & Tools that can be used

Programming Languages & Libraries:

Python, pandas, NumPy, matplotlib, seaborn, statsmodels

PRESIDENCY UNIVERSITY

Time Series & Forecasting:

ARIMA, SARIMA, Holt-Winters, Prophet, Ets, scikit-learn, pmdarima

Deep Learning Models:

TensorFlow, Keras, LSTM, GRU, Autoencoders

Anomaly Detection:

Isolation Forest, Z-score, One-Class SVM

Data Visualization & Dashboards:

Plotly, Streamlit, Dash

Healthcare Datasets & Simulators:

MIMIC-III Waveform Database, PhysioNet, openICPSR vital sign data

Streaming & Real-time Tools (optional):

MQTT, Apache Kafka (for advanced setups), Flask for alerting interfaces

Development Environment:

Jupyter Notebook, Google Colab, VS Code

Project work/Assignment:

Assignment: Assignments include module-wise exercises and real-world project implementation.

Topics relevant to development of “Skill Development :”

Preprocessing and analyzing time series data from patient monitoring systems

Building forecasting models using ARIMA, LSTM, and hybrid techniques

Detecting anomalies in vital signs and physiological signals

Designing end-to-end data pipelines for real-time health monitoring

Developing interactive dashboards and alerting systems for clinical decision support

Hands-on experience with publicly available ICU and wearable sensor datasets

Topics relevant to development of “Environment and sustainability:

Reducing unnecessary hospital visits through continuous remote monitoring of patients

Promoting sustainable healthcare by enabling early detection and preventive interventions

Minimizing resource usage (e.g., tests, ICU beds) through AI-based forecasting and anomaly alerts

Supporting environmentally friendly healthcare models by integrating low-power wearable devices

Enhancing public health outcomes with minimal ecological impact via digital monitoring platforms

Course Code: CAI3427	Course Title: Language Models for Text Mining Type of Course: Integrated	L-T-P- C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	CSE2264					
Anti-requisites	NIL					
Course Description	<p>This course introduces the basics of Text Mining and Natural Language Processing. The course will teach students different concepts such as text mining, NLP, Sequence Labeling, etc.</p> <p>Topics: Text Mining, NLP, Tokenization, Lemmatization, Stemming, One-hot encoding, Language modelling, Bag-of-words, Term-document Matrix, Cosine similarity, Viterbi Algorithm, etc.</p>					

PRESIDENCY UNIVERSITY

Course Objectives	The objective of the course is EMPLOYABILITY of student by using EXPERIENTIAL LEARNING techniques.			
Course Out Comes	<p>On successful completion of this course the students shall be able to:</p> <p>Process text data to derive information from text. [Apply]</p> <p>Apply insights from textual information to real-world business. [Apply]</p> <p>Develop solutions for a particular NLP problem using different machine learning and deep learning techniques. [Apply]</p> <p>Utilize different NLP tools and packages. [Apply]</p>			
Course Content:				
Module 1	Text Mining	Adversarial Quiz Tests	Module Tests	No. of Sessions: 09
Introduction to Text Mining. Text Mining vs. NLP. Text Mining Algorithms. Steps in Text Mining - Extraction, Preprocessing, Analysis and Evaluation. Lexical Resource Creation (NEW) . Data collection. String Manipulation to Clean Data. Natural Language Processing. Research Paradigms in NLP. Sequential Data. Sequence Labeling (NEW) . Viterbi Algorithm (NEW) . Corpus. Building a HMM using a Corpus (NEW) . Unknown word handling (NEW) .				
Module 2	Text Preprocessing	Adversarial Quiz Tests	Module Tests	No. of sessions: 06
Introduction to Preprocessing. Tokenization. Stop Words Removal. Lemmatization and Stemming. PoS Tagging. Integer Encoding. Padding. One-Hot Encoding.				
Module 3	Text Representations	Adversarial Quiz Tests	Module Tests	No. of sessions: 08
Language Modeling. N-Gram Language Model. Bag-of-Words Model. Term-Document Matrix. Term Frequency. Inverse Document Frequency. TF-IDF. Cosine Similarity. Naive Bayes Classifier using Bag-of-Words. Topic Modeling. Latent Semantic Analysis. Singular Value Decomposition. Truncated SVD and Topic Vector. LDA Algorithm.				
Module 4	Natural Language Processing with Keras	Adversarial Quiz Tests	Module Tests	No. of Sessions: 06
Word Embeddings vs. One-Hot Encoding. Contextual Bag of Words (CBOW). Skipgram. Deep Learning for Document Classification.				
List of Lab Tasks:				
Experiment No. 1: File Handling				
Level 1: Read text files using Python and extract meaningful content.				
Level 2: Parse text files using Python to preprocess the data for NLP tasks.				

Experiment No. 2: Introduction to NLP Tools

Level 1: Install and use NLTK for basic text processing.

Level 2: Install and use SpaCy for tokenization, PoS tagging, and Named Entity Recognition.

Experiment No. 3: Corpus Cleaning Techniques

Level 1: Use NLTK for corpus cleaning techniques such as tokenization, stopword removal, and stemming.

Level 2: Prepare cleaned text data for downstream NLP tasks like classification or translation.

Experiment No. 4: Word Vector Usage

Level 1: Download and use pre-trained word vectors (e.g., Word2Vec, GloVe, or FastText).

Level 2: Compute similarity between two words, find the most similar word, and complete word analogies (e.g., king - man + woman = queen).

Experiment No. 5 & 6: Language Identification

Level 1: Build a simple language identifier using Bag-of-Words (BoW) features.

Level 2: Predict the language of a given text using the trained model.

Experiment No. 7 & 8: Lexical Simplification

Level 1: Implement a lexical simplifier to replace complex words with simpler alternatives.

Level 2: Generate a simplified version of a given word or sentence while preserving meaning.

Experiment No. 9 & 10: Sentiment Analysis

Level 1: Implement a basic sentiment classifier using a lexicon-based or machine learning approach.

Level 2: Compare the performance of an existing sentiment classifier (e.g., VADER, TextBlob, or a pre-trained Transformer model).

Experiment No. 11: Named Entity Recognition (NER)

Level 1: Extract named entities from a text using NLTK.

Level 2: Extract named entities using SpaCy and compare results.

Experiment No. 12 & 13: Implement a Hidden Markov Model (HMM)

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Level 1: Implement a generic HMM for sequence prediction.

Level 2: Calculate the forward probability of a given sequence using HMM.

Experiment No. 14: Linguistic HMM

Level 1: Develop a Hidden Markov Model (HMM) for NLP tasks such as PoS tagging.

Level 2: Evaluate the performance of the HMM on a specific NLP task (e.g., Named Entity Recognition or Chunking).

Experiment No. 15: Machine Translation

Level 1: Implement Machine Translation (MT) using a pre-trained model from Hugging Face Transformers.

Level 2: Evaluate the quality of MT output via Round-Trip Translation (translate text to another language and back to check accuracy).

Targeted Application & Tools that can be used:

Google Colab

Python IDEs like PyCharm

Project work/Assignment: Mention the Type of Project /Assignment proposed for this course

Group project on some NLP Task like text classification (Creating a Simple Text Classifier: Use Scikit-learn to classify positive vs. negative reviews from a dataset), sentiment analysis, etc.

<p>Topics: Main Features of TensorFlow, Keras basics, AI with Keras.</p>				
<p>Project work/Assignment:</p>				
<p>Assignment 1 on (Module 1 and Module 2) Assignment 2 on (Module 3)</p>				
<p>List of Lab Tasks:</p> <p>Lab 1: Working with Deep Learning Frameworks Objective: Explore various Deep Learning Frameworks Tasks: Identify deep learning frameworks (Keras, Tensorflow, Matplotlib, etc) Activity: Practice with various methods available in DL Frameworks to develop a Model.</p> <p>Lab 2: Build a Basic Artificial Neural Network Objective: Create a ANN with DL frameworks. Task: Identify suitable ANN Layers using Keras and Tensorflow. Activity: Design a basic Artificial Neural Networks using Keras with TensorFlow (pima-indians-diabetes)</p> <p>Lab 3: Build a MultiLayer Perceptron Objective: Create a MLP for classification task. Task: Identify suitable model for house price prediction. Activity: Design a MLP for implementing classification and fine-tuning using House price.csv</p> <p>Lab 4: Create a Tensor in TensorFlow using List or Numpy array. Objective: To understand how to create a tensor in TensorFlow using a Python list or NumPy array</p>				

Task: Create a simple tensor using both a Python list and a Numpy array in TensorFlow.

Activity: Create a tensor using a Python list and Numpy array

Lab 5: Apply math operations on tensor using various mathematical functions.

Objective: To learn how to apply mathematical operations on tensors using various TensorFlow mathematical functions.

Task: Perform basic mathematical operations (addition, subtraction, multiplication, division) and advanced functions (square, square root, exponential) on tensors.

Activity: Perform basic math operations: Add, Subtract, Multiply, Divide and Apply advanced math functions: Square, Square root, Exponential.

Lab 6: Connecting two tensors in dataset.

Objective: Combine two tensors using concatenation and stacking operations in TensorFlow.

Task: Combine two tensors using concatenation and stacking operations in TensorFlow

Activity: Concatenate them along a specific axis and Stack them along a new axis.

Lab 7: Building dataset from a file stored in a local drive

Objective: To learn how to build a dataset in TensorFlow from a file stored in a local drive.

Task: Load a dataset from a CSV file stored on the local drive and process it using TensorFlow

Activity: Load the file using TensorFlow's tf.data API and Process the dataset (e.g., convert it into tensors)

Lab 8: Loading Dataset from TensorFlow.dataset Library

Objective: To learn how to load a dataset from the tensorflow_datasets library and use it in machine learning models.

Task: Load a dataset from TensorFlow Datasets (tfds), preprocess it, and display sample data

Activity: Load a dataset (e.g., MNIST, CIFAR-10, IMDB Reviews) and Split the dataset into training and testing sets.

Lab 9: Build a Convolutional Neural Network

Objective: Create a CNN model.

Task: Build CNN architecture for Dog-Cat classification problem.

PRESIDENCY UNIVERSITY

Training and Testing:

Lab Sheet 10:

Object Detection using YOLOv5

Lab Sheet 11:

Image Segmentation using U-Net

Custom Object Detection using Faster R-CNN

Lab Sheet 12:

Implementing Vision Transformers for Image Classification

Generating Images using GANs (DCGAN, StyleGAN)

(Group Project)

Object Detection and Recognition:

Haar cascade object detection (e.g., face detection or object detection using pre-trained classifiers).

Feature-based object detection using techniques like Speeded-Up Robust Features (SURF) or Scale-Invariant Feature Transform (SIFT).

Deep learning-based object detection using Convolutional Neural Networks (CNNs) or You Only Look Once (YOLO) algorithm.

Optical Character Recognition (OCR):

Preprocessing of text images (e.g., binarization, noise removal, or skew correction).

Text localization using techniques like connected component analysis or Stroke Width Transform (SWT).

Character recognition using machine learning algorithms like Support Vector Machines (SVM) or Convolutional Neural Networks (CNNs).

Gesture Recognition:

Hand segmentation using techniques like background subtraction or skin color detection.

Feature extraction from hand regions (e.g., finger counting, hand shape descriptors).

Classification of gestures using machine learning algorithms (e.g., k-Nearest Neighbors or Support Vector Machines). Private University Estd. in Karnataka State by Act No. 41 of 2013

Tools/Software Required :

OpenCV 4

Python 3.7

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

Course Code: CSE3426	Course Title: Front-end Full Stack Development Course Type : Lab Integrated	L- T-P- C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	CSE2258					
Anti-requisites	NIL					
Course Description	This intermediate course enables students to perform front-end full stack development, with emphasis on employability skills. The course covers key technologies and architectures that enables the student to design and implement front-end. On successful completion of this course, the student shall be able to pursue a career in full-stack development. The students shall develop strong problem-solving skills as part of this course.					
Course Objectives	The objective of the course is to familiarize the learners with the concepts Front end Full Stack Development and attain Employability through experiential Learning techniques.					
Course Outcomes	On successful completion of the course the students shall be able to: 1] Describe the fundamentals of DevOps and Front-end full stack development. [Comprehension] 2] Illustrate a basic web design using HTML, CSS, Javascript. [Application] 3] Illustrate development of a responsive web. [Application] 4] Apply concepts of Angular.js to develop a web front-end. [Application]					
Course Content:						
Module 1	Fundamentals of DevOps	Project		Programming	04 Sessions	
	Topics: Introduction to Agile Methodology; Scrum Fundamentals; Scrum Roles, Artifacts and Rituals; DevOps – Architecture, Lifecycle, Workflow & Principles; DevOps Tools Overview – Jenkins, Docker, Kubernetes. Review of GIT source control.					
Module 2	Web Design & Development	Project		Programming	03 Sessions	
	Topics: HTML5 – Syntax, Attributes, Events, Web Forms 2.0, Web Storage, Canvas, Web Sockets; 1 CSS3 – Colors, Gradients, Text, Transform;					

PRESIDENCY UNIVERSITY

Assignment: Develop a website for managing HR policies of a department.

Private University Estd. in Karnataka, State by Act No. 41 of 2013

Module 3	Responsive web design	Project	Programming	08 Sessions
<p>Topics:</p> <p>BootStrap for Responsive Web Design; JavaScript – Core syntax, HTML DOM, objects, classes, Async; Ajax and jQuery Introduction</p> <p>Assignment: Design and develop a website that can actively keep track of entry-exit information of a housing society.</p>				
Module 4	Fundamentals of Angular.js	Project	Programming	15 Sessions
<p>Topics:</p> <p>Setting up Development & Build Environment: Node.js and NPM; Introduction to TypeScript; Working with OOP concepts with TypeScript; Angular Fundamentals; Angular CLI; Introduction to TypeScript; Debugging Angular applications; Components & Databinding in Depth; Angular Directives; Using Services & Dependency Injection; Angular Routing; Observables; Handling Forms in Angular Apps; Output transformation using Pipes; Making Http Requests; Authentication & Route Protection; Dynamic Components; Angular Modules & Optimizing Angular Apps; Deploying an Angular App; Angular Animations; Adding Offline Capabilities with Service Workers; Unit Testing in Angular Apps (Jasmine, Karma). Overview of React.js</p> <p>Assignment: Develop a software tool to do inventory management in a warehouse.</p>				
<p>Targeted Application & Tools that can be used:</p> <p>Application Area is to Design and Analyzing the efficiency of Algorithms. This fundamental course is used by all application developers.</p> <p>Professionally Used Software: GCC compiler.</p>				
<p>Text Book:</p> <p>T1. Fender, Young, “Front-end Fundamentals”, Leanpub, 2015</p> <p>T2. Northwood, Chris, “The Full Stack Developer: Your Essential Guide to the Everyday Skills Expected of a Modern Full Stack Web Developer”, APress, 2018</p>

Topics relevant to development of "Employability": DevOps Tools Overview – Jenkins, Docker, Kubernetes for developing Employability Skills through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE3427	Course Title: Java Full Stack Development Course Type: Lab Integrated	L- T-P- C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	CSE2258					
Anti-requisites						
Course Description	This advanced level course enables students to perform full stack development using Java, with emphasis on employability skills. The key technologies used for Full Stack development is based on either Java technology or .NET technology. In this course, the focus is on using Java, and the related technologies/tools like Java EE, Java Persistence, Hibernate, Maven, Spring Core, etc. On successful completion of this course, the student shall be able to pursue a career in full-stack development. The students shall develop strong problem-solving skills as part of this course.					
Course Objectives	This course is designed to improve the learners' EMPLOYABILITY SKILLS by using PROBLEM SOLVING Methodologies.					

PRESIDENCY UNIVERSITY

Course Outcomes	<p>On successful completion of the course the students shall be able to:</p> <p>Private University Estd. in Karnataka State by Act No. 41 of 2013</p> <p>1] Practice the use of Java for full stack development [Application]</p> <p>2] Show web applications using Java EE. [Application]</p> <p>3] Solve simple applications using Java Persistence and Hibernate [Application]</p> <p>4] Apply concepts of Spring to develop a Full Stack application. [Application]</p> <p>5] Employ automation tools like Maven, Selenium for Full Stack development. [Application]</p>				
Course Content:					
Module 1	Introduction	Project		Programming	03 Sessions
	<p>Topics:</p> <p>Review of Java; Advanced concepts of Java; Java generics; Java IO; New Features of Java. Unit Testing tools.</p>				
Module 2	Java EE Web Applications	Project		Programming	05 Sessions
	<p>Topics:</p> <p>Introduction to Eclipse & Tomcat; JSP Fundamentals; Reading HTML form Data with JSP; State Management with JSP; JSP Standard Tag Library - Core & Function Tags; Servlet API Fundamentals; ServletContext, Session, Cookies; Request Redirection Techniques; Building MVC App with Servlets & JSP; Complete App - Integrating JDBC with MVC App</p> <p>Assignment: Develop an application for managing HR policies of a department.</p>				
Module 3	Java Persistence using JPA and Hibernate	Project		Programming	06 Sessions
	<p>Topics:</p> <p>Fundamentals of Java Persistence with Hibernate; JPA for Object/Relational Mapping, Querying, Caching, Performance and Concurrency; First & Second Level Caching, Batch Fetching, Optimistic Locking & Versioning; Entity Relationships, Inheritance Mapping & Polymorphic Queries; Querying database using JPQL and Criteria API (JPA)</p> <p>Assignment: Design and develop a website that can actively keep track of entry-exit information of a housing society.</p>				
Module 4	Spring Core	Project		Programming	10 Sessions

PRESIDENCY UNIVERSITY

Private University Estd. in Karnataka State by Act No. 41 of 2013

<p>Topics:</p> <p>Spring Core, Spring MVC, Spring Boot REST API; Understanding Spring Framework; Using Spring MVC; Building a Database Web App with Spring and Hibernate o Spring AOP (Aspect Oriented Programming); Implementing Spring Security; Developing Spring REST API; Using Spring Boot for Rapid Development</p> <p>Assignment: Develop a software tool to do inventory management in a warehouse.</p>					
Module 5	Automation tools	Project		Programming	06 Sessions
<p>Topics:</p> <p>Introduction to Automation Tools; Apache Maven: Maven Fundamentals, Software Setup - Commandline and Eclipse, pom.xml and Directory Structure, Multi-Module Project Creation, Scopes, Dependency Management, Profiles; Functional/BDD Testing using Selenium, Selenium Fundamentals and IDE, Selenium WebDriver, Installation and Configuration, Locating WebElements, Driver Commands, WebElement Commands</p> <p>Assignment: Illustrate the use of automation tools in the development of a small software project.</p>					
<p>Targeted Application & Tools that can be used:</p> <p>Application Area is to Design and Analyzing the efficiency of Algorithms. This fundamental course is used by all application developers.</p> <p>Professionally Used Software: Eclipse, NetBeans, Hibernate, Selenium, Maven, GIT.</p>					
<p>Project work/Assignment:</p>					
<p>Problem Solving: Design of Algorithms and implementation of programs.</p> <p>Programming: Implementation of given scenario using Java.</p>					
<p>Text Book:</p> <p>T1. Fender, Young, "Front-end Fundamentals", Leanpub, 2015</p>

PRESIDENCY UNIVERSITY

Demonstrate a new system and with which a product can be made. (Apply).
 Private University Estd. in Karnataka State by Act No. 41 of 2013
 Classify common methods used to secure cyber-physical systems.
 (Understand)

Course Content:				
Module 1	Computational foundation of Cyber Physical Systems	Assignment		11 Sessions
Topics: Cyber Physical Systems in Real world, Basic Principle of Cyber Physical Systems, Industry 4.0, IIoT. Cyber Physical Systems Design Recommendations, CPS system requirements, Cyber Physical System Application, Case study of Cyber Physical Systems				
Module 2	Cyber Physical System Platforms	Assignment		12 Sessions
Topics: Hardware platforms for Cyber Physical Systems (Sensors/Actuators, Microprocessor/Microcontrollers), Wireless Technologies for Cyber Physical Systems. Cyber Physical System – Models and Dynamics Behaviours - Continuous Dynamics, Discrete dynamics, Hybrid Systems.				
Module 3	Concurrent Models of computation	Assignment		12 Sessions
Topics: Structure of Models, Synchronous Reactive models, Dataflow models of computation, Timed models of computation, Study of Embedded Systems vs Internet of Things vs Cyber Physical System: Design of Embedded Systems (I/O Units, Multitasking and Scheduling), Internet of Things Architecture, CPS Architecture				
Module-4	Security and Privacy in Cyber Physical Systems	Assignment		10 Sessions
Topics: Security and Privacy Issues in CPSs, Local Network Security for CPSs, Internet-Wide Secure Communication, Security and Privacy for Cloud-Interconnected CPSs, Case Study: Cybersecurity in Digital Manufacturing/Industry 4.0, Contemporary issues.				
Project work/Assignment:

Course Code:	Course Title: Embedded Systems For IoT		L-T-P-C	3	0	0	3
CIT3403	Type of Course: Theory						
Version No.							
Course Pre-requisites	CSE2252						
Anti-requisites	NIL						
Course Description	<p>This course provides an in-depth understanding of embedded systems and the Internet of Things (IoT), focusing on hardware architecture, programming, and real-world applications. Students will learn about microcontrollers, interfacing techniques, and embedded C programming. The course covers IoT concepts, including communication protocols, data acquisition, and cloud integration. Practical lab sessions will enable students to develop and implement IoT-based applications using platforms like Arduino and Raspberry Pi. By the end of the course, students will be able to design, build, and deploy smart embedded systems for applications in home automation, healthcare, agriculture, and industrial IoT.</p>						
Course Objective	<p>The objective of the course is to familiarize the learners with the concepts of Embedded System for IoT and attain Employability through Problem Solving Methodologies.</p>						
Course Out Comes	<p>On successful completion of the course the students shall be able to:</p> <ol style="list-style-type: none"> 1. To learn the internal architecture and programming of an embedded processor. 2. To introduce interfacing I/O devices to the processor. 3. To introduce the evolution of the Internet of Things (IoT). 4. To build a small low-cost embedded and IoT system using Arduino/RaspberryPi/ openplatform. 						
Course Content							
Module 1	8-BIT EMBEDDED PROCESSOR and EMBEDDED C PROGRAMMING	Assignment	Problem Solving	10 sessions			
<p>Microcontroller – Architecture – Instruction Set and Programming – Programming Parallel Ports – Timers and Serial Port – Interrupt Handling.</p>							

PRESIDENCY UNIVERSITY

EMBEDDED C PROGRAMMING – Memory And I/O Devices Interfacing – Programming Embedded Systems in C – Need For RTOS – Multiple Tasks and Processes – Context Switching – Priority Based Scheduling Policies				
Module 2	IOT AND ARDUINO PROGRAM MIN	Assignment	Problem Solving	10 sessions
Introduction to the Concept of IoT Devices – IoT Devices Versus Computers – IoT Configurations – Basic Components – Introduction to Arduino – Types of Arduino– Arduino Toolchain – Arduino Programming Structure – Sketches – Pins – Input/Output From Pins Using Sketches – Introduction to Arduino Shields – Integration of Sensors and Actuators with Arduino.				
Module 3	IoT Communication And Open Platforms	Assignment	Problem Solving	06 sessions
IoT Communication Models and APIs – IoT Communication Protocols – Bluetooth – WiFi – ZigBee– GPS – GSM modules – Open Platform (like Raspberry Pi) – Architecture – Programming –Interfacing – Accessing GPIO Pins – Sending and Receiving Signals Using GPIO Pins –Connecting to the Cloud.				
Module 4	APPLICATIONS DEVELOPMENT	Assignment	Problem Solving	04 sessions
Complete Design of Embedded Systems – Development of IoT Applications – Home Automation –Smart Agriculture – Smart Cities – Smart Healthcare				
Targeted Application & Tools that can be used:				
Text Book				
Muhammad Ali Mazidi, Janice Gillispie Mazidi, and Rolin D. McKinlay – The 8051 Microcontroller and Embedded Systems Using Assembly and C (2nd Edition, Pearson)				
Raj Kamal – Internet of Things: Architecture and Design Principles (McGraw Hill)				
Jonathan Valvano – Embedded Systems: Introduction to ARM Cortex-M Microcontrollers (CreateSpace)				
Michael Margolis – Arduino Cookbook (O’Reilly Media)				
Simon Monk – Programming the Raspberry Pi: Getting Started with Python (McGraw Hill)				
References

Topics relevant to “SKILL DEVELOPMENT”:

Embedded System for Employability through Problem Solving Methodologies. This is attained through the assessment component mentioned in the course handout.

Course Code: CCS3412	Course Title: Blockchain Security	L - T - P - C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	CSE2252					
Anti-requisites	NIL					
Course Description	This course explores the security challenges, risks, and solutions in blockchain technology, covering cryptographic principles, consensus mechanisms, and smart contract security. It addresses threats such as 51% attacks, Sybil attacks, and private key vulnerabilities, along with techniques for securing blockchain networks, transactions, and decentralized applications (DApps). Students will gain hands-on experience in auditing smart contracts, implementing security best practices, and understanding regulatory compliance. By the end, learners will be equipped to identify vulnerabilities, secure blockchain ecosystems, and design robust decentralized systems.					

PRESIDENCY UNIVERSITY

Course Objective	The objective of the course is to familiarize the learners with the concepts of security in blockchain to attain Skill Development through Participative Learning techniques.	
Course Outcomes	On successful completion of this course the students shall be able to: CO1: Define key blockchain security concepts, including cryptographic techniques and consensus mechanisms. [Remember] CO2: Explain common blockchain threats such as 51% attacks, Sybil attacks, and private key vulnerabilities. [Understand] CO3: Perform security best practices for securing blockchain transactions, smart contracts, and decentralized applications. [Apply]	
Course Content:		
Module 1	Introduction to Blockchain	15 hours
Topics: The history of blockchain and Bitcoin - Types of blockchain - Decentralization - Decentralization using blockchain - Methods of decentralization - Blockchain and full ecosystem decentralization		
Module 2	Symmetric Cryptography	13 hours
Topics: Introduction to Symmetric Cryptography - Cryptography - Confidentiality - Cryptographic primitives - Symmetric cryptography - Data Encryption Standard - Public Key Cryptography - Discrete logarithm problem in ECC - Hash functions - Financial markets and trading		
Module 3	Introducing Bitcoin	15 hours
Topics: Introducing Bitcoin - Digital keys and addresses – Blockchain - Bitcoin Network and Payments - Bitcoin Clients and APIs - Alternative Coins		
Assignment:		
<p>1. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link .</p> <p>2. Presentation: Group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.</p>

Topics related to development of "FOUNDATION": Introduction to blockchain security and bitcoin

Topics related to development of "EMPLOYABILITY": Bitcoin Network and Payments - Bitcoin Clients and APIs - Alternative Coins

Course Code: CCS3414	Course Title: Security In IOT Type of Course: Theory	L- C	T- 3	P- 0	- 0	3
Version No.	1.0					
Course Pre-requisites	CSE2252					
Anti-requisites	NIL					
Course Description	This course provides a comprehensive understanding of security challenges and solutions in the Internet of Things (IoT) and cloud computing environments. Students will explore IoT system design, hardware and software security, cryptographic approaches, cloud computing fundamentals, and security concepts related to virtualization. The course covers security threats specific to IoT devices and cloud					

PRESIDENCY UNIVERSITY

	<p>infrastructure along with countermeasures against cyberattacks, including system-specific vulnerabilities such as guest hopping, VM-based attacks, and hyper jacking. By the end of this course, students will gain practical knowledge of securing IoT ecosystems and cloud services while understanding emerging threats in these domains.</p>			
Course Objective	<p>To learn about the security issues in IoT and cloud computing. To learn about the cryptography solutions and issues in IoT. To learn about the security measures taken in IoT and Cloud systems to improve security.</p>			
Course Out Comes	<p>On completion of the course, student will be able to</p> <p>CO1 - Understand the fundamental security issues in Internet of things.</p> <p>CO2 - Demonstrate different Frameworks and Hardware Architecture of IoT Device.</p> <p>CO3 - Analyze different IoT Protocols and Layer Functioning. CO4 - Protect and secure the network connecting IoT devices to back-end systems on the internet.</p> <p>CO5 - Demonstrate different authentication mechanism such as digital certificates, biometrics, etc.</p>			
Course Content:				
Module 1	FUNDAMENTALS OF IoT ECOSYSTEM	Assignment	Theory	9 Sessions
<p>Topics:</p> <p>IoT security issues, how to design an IoT system, Hardware, software and network security related to IoT systems - Basics of cryptographic solutions to IoT systems.</p>				
Module 2	OVERVIEW OF CLOUD COMPUTING AND ITS SERVICES	Assignment	Programming activity	9 Sessions
<p>Topics:</p> <p>Cloud Computing Fundamental: Cloud computing definition, private, public and hybrid cloud. Cloud types; IaaS, PaaS, SaaS</p>				
Module 3	CHALLENGES IN CLOUD COMPUTING	Assignment	Programming activity	9 Sessions
<p>Topics:</p> <p>Benefits and challenges of cloud computing - Public vs. Private clouds, Role of virtualization in enabling the cloud.</p>				

PRESIDENCY UNIVERSITY

Module 4	SECURITY CONCEPTS IN CONTEXT TO IoT DEVICES	Assignment <small>Presidency University, Bid. in Karnataka State by</small>	Programming activity	9 Sessions
Topics: Security Concepts: Confidentiality, privacy, integrity, authentication, non-repudiation, Virtualization.				
Module 5	IoT SECURITY THREATS AND COUNTERMEASURES	Assignment	Programming activity	9 Sessions
Topics: System-Specific Attacks: Guest hopping, attacks on the VM (delete the VM, attack on the control of the VM, code or file injection into the virtualized file structure), VM migration attack, hyper jacking				
Targeted Application & Tools that can be used				
Project work/Assignment:				
Assignment:

Course Code: CIT3407	Course Title: IoT Data Analytics and Machine Learning University Estd. in Karnataka State by Act No. 41 of 2013 Type of Course: Theory	L-T-P- C	3	0	0	3
Version No.						
Course Pre-requisites	CSE2252					
Anti-requisites	NIL					
Course Description	This course provides an in-depth understanding of data analytics and machine learning techniques for IoT applications. Students will explore how IoT devices generate data, methods for data collection, processing, and real-time analytics. The course covers statistical analysis, feature engineering, and predictive modeling using machine learning techniques tailored for IoT environments. Additionally, students will learn about edge and cloud-based analytics, AI-driven decision-making, and anomaly detection for IoT security and efficiency.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of IOT Data Analytics and Machine Learning and attain Skill Development through Participative Learning techniques					
Course Out Comes	On successful completion of the course the students shall be able to: 1. Understand the fundamentals of IoT Analytics and Challenges 2. Understand and analyze IoT Devices and Networking Protocols 3. Understand exploring and visualizing data 4. Apply IoT Analytics for the Cloud					
Course Content						
Module 1	Defining IoT Analytics and Challenges and IoT Devices and Networking Protocols	Assignment	Problem Solving	12 Classes		
<p>Defining IoT Analytics and Challenges: Introduction to IoT, applications, IoT architectures, introduction to analytics, IoT analytics challenges</p> <p>IoT Devices and Networking Protocols: IoT devices, Networking basics, IoT networking connectivity protocols, IoT networking data messaging protocols, Analyzing data to infer protocol and device characteristics.</p>						

PRESIDENCY UNIVERSITY

Course Code: CIT2504	Course Title: AI and Deep Learning for IoT Private University Estd. in Karnataka State by Act No. 41 of 2013	L-T-P-C 3 0 0 3			
Version No. Module 2	Exploring IoT Data	Assignment	Problem Solving		12 Class es
Course Pre-requisites	CSE2252				
Prerequisites	Exploring and visualizing data, Techniques to understand data quality, Basic time series analysis, Statistical analysis.				
Course Description	This course explores the integration of Artificial Intelligence (AI) and Deep Learning (DL) with the Internet of Things (IoT), focusing on AI-driven data processing, decision-making, and automation in smart applications. Students will learn key concepts of machine learning, neural networks, edge AI, federated learning, and TinyML, along with deployment on IoT edge devices like Raspberry Pi and NVIDIA Jetson.				
Module 3	IoT Data Science for Analytics	Assignment	Problem Solving		Class es
Data Science for IoT	The course covers cloud-based AI real-time inference, energy efficiency, security challenges, and practical applications in smart agriculture, healthcare, and industrial IoT.				
Course Objective Module 4	The objective of the course is to familiarize the learners with the concepts of Wireless Communication for IoT and attain Skill Development through Participative Learning techniques	Assignment	Problem Solving		8 Class es
Course Outcomes	On successful completion of the course the students shall be able to: ML in Industrial IoT Big Data Analytics and Software Defined Networks: IIoT Analytics - Introduction, Machine Learning and the Concept of AIoT and their significance in modern Programming, Data Management with Hadoop.				
Targeted Application	2. Apply techniques to connect mobile devices to IoT gateways, bridging the gap between different networks.				
Text Book	3. Analyze sensor technologies in IoT and their academic foundations to showcase practical understanding. 4. Develop and Evaluate AIoT applications to address real-world challenges.				
References	1. Minter, Andrew, Analytics for the Internet of Things (IoT), Packt Publishing Ltd. July 2017, ISBN 9781787120730.

W3: edX – Data Analytics		Mobile University Estd. in Karnataka State by Act No. 41 of 2013		10
Topics relevant to Module 2	Industrial and Medical IoT for Skill development through Participative Learning techniques. This is attached through the assessment component mentioned in the course handout.	Assignment	Problem Solving	Classes
Connecting Mobile Devices to IoT Gateways Exploring the role of IoT gateways in bridging the gap between mobile devices and IoT networks. Techniques for establishing seamless connections between mobile devices and IoT gateways. Hands-on exercises demonstrating the setup and configuration of mobile-to-IoT connections.				
Module 3	Sensor Technologies and Academic Concepts	Assignment	Problem Solving	12 Classes
Sensor Technologies and Academic Concepts Comprehensive overview of sensor technologies commonly employed in IoT applications. In-depth exploration of various types of sensors and their academic underpinnings. Practical demonstrations and experiments showcasing the functionality and applications of sensors in IoT systems.				
Module 4	AIoT Application Development	Assignment	Problem Solving	11 Classes
AIoT Application Development Introduction to tools and platforms essential for building AIoT applications. Practical Aspects of AIoT applications, including: Smart Traffic Signal System for Color Blind Individuals Plant Health Analysis Smart Door Access Control System.
