#### 1. Vision & Mission of the University and the School / Department

#### 1.1 Vision of the University

To be a Value-driven Global University, excelling beyond peers and creating professionals of integrity and character, having concern and care for society.

#### 1.2 Mission of the University

- Commit to be an innovative and inclusive institution by seeking excellence in teaching, research and knowledge-transfer.
- Pursue Research and Development and its dissemination to the community, at large.
- Create, sustain and apply learning in an interdisciplinary environment with consideration for ethical, ecological and economic aspects of nation building.
- Provide knowledge-based technological support and services to the industry in its growth and development.
- To impart globally-applicable skill-sets to students through flexible course offerings and support industry's requirement and inculcate a spirit of new-venture creation.

#### **1.3 Vision of Presidency School of Computer Science and Engineering**

To be a value-based, practice-driven Presidency School of Computer Science and Engineering, committed to developing globally competent engineers, dedicated to developing cutting-edge technology to enhance the quality of life.

#### 1.4 Mission of Presidency School of Computer Science and Engineering

- Cultivate a practice-driven environment with computing-based pedagogy, integrating theory and practice.
- Attract and nurture world-class faculty to excel in teaching and research in the realm of computing sciences.
- Establish state-of-the-art computing facilities for effective teaching and learning experiences.
- Promote interdisciplinary studies to nurture talent for global impact.
- Instill entrepreneurial and leadership skills to address social, environmental and community needs.

#### 2. Preamble to the Program Regulations and Curriculum

This is the subset of Academic Regulations and it is to be followed as a requirement for the award of M.Tech degree.

The Curriculum is designed to take into the factors listed in the Choice Based Credit System (CBCS) with focus on Social Project Based Learning, Industrial Training, and Internship to enable the students to become eligible and fully equipped for employment in industries, choose higher studies or entrepreneurship.

In exercise of the powers conferred by and in discharge of duties assigned under the relevant provision(s) of the Act, Statutes and Academic Regulations of the University, the Academic Council hereby makes the following Regulations.

#### 3. Short Title and Applicability

- a. These Regulations shall be called the Master of Technology Degree Program Regulations and Curriculum 2025-2027.
- b. These Regulations are subject to, and pursuant to the Academic Regulations.
- c. These Regulations shall be applicable to the ongoing Master of Technology Degree Programs of the 2025-2027 batch, and to all other Master of Technology Degree Programs which may be introduced in future.
- d. These Regulations shall supersede all the earlier Master of Technology Degree Program Regulations and Curriculum, along with all the amendments thereto.
- e. These Regulations shall come into force from the Academic Year 2024-2025.

#### 4. Definitions

In these Regulations, unless the context otherwise requires:

- a. "Academic Calendar" means the schedule of academic and miscellaneous events as approved by the Vice Chancellor;
- b. "Academic Council" means the Academic Council of the University;
- c. "Academic Regulations" means the Academic Regulations, of the University;
- d. "Academic Term" means a Semester or Summer Term;
- e. "Act" means the Presidency University Act, 2013;
- f. "AICTE" means All India Council for Technical Education;
- *g.* "Basket" means a group of courses bundled together based on the nature/type of the course;
- *h.* "BOE" means the Board of Examinations of the University;
- i. "BOG" means the Board of Governors of the University;
- *j.* "BOM" means the Board of Management of the University;
- *k.* "BOS" means the Board of Studies of a particular Department/Program of Study of the University;
- *I.* "CGPA" means Cumulative Grade Point Average as defined in the Academic Regulations;
- *m.* "Clause" means the duly numbered Clause, with Sub-Clauses included, if any, of these Regulations;
- n. "COE" means the Controller of Examinations of the University;
- o. "Course In Charge" means the teacher/faculty member responsible for developing and organising the delivery of the Course;
- *p.* "Course Instructor" means the teacher/faculty member responsible for teaching and evaluation of a Course;

*q.* "Course" means a specific subject usually identified by its Course-code and Course-PU/AC-21.X/SOCSE04/AIE/2024-2026 Page 5

*title, with specified credits and syllabus/course-description, a set of references, taught by some teacher(s)/course-instructor(s) to a specific class (group of students) during a specific Academic Term;* 

- r. "Curriculum Structure" means the Curriculum governing a specific Degree Program offered by the University, and, includes the set of Baskets of Courses along with minimum credit requirements to be earned under each basket for a degree/degree with specialization/minor/honours in addition to the relevant details of the Courses and Course catalogues (which describes the Course content and other important information about the Course). Any specific requirements for a particular program may be brought into the Curriculum structure of the specific program and relevant approvals should be taken from the BOS and Academic Council at that time.
- s. "DAC" means the Departmental Academic Committee of a concerned Department/Program of Study of the University;
- t. "Dean" means the Dean / Director of the concerned School;
- u. "Degree Program" includes all Degree Programs;
- v. "Department" means the Department offering the degree Program(s) / Course(s) / School offering the concerned Degree Programs / other Administrative Offices;
- w. "Discipline" means specialization or branch of M.Tech. Degree Program;
- *x.* "HOD" means the Head of the concerned Department;
- *y.* "L-T-P-C" means Lecture-Tutorial-Practical-Credit refers to the teaching learning periods and the credit associated;
- z. "MOOC" means Massive Open Online Courses;
- aa. "MOU" means the Memorandum of Understanding;
- bb. "NPTEL" means National Program on Technology Enhanced Learning;
- cc. "Parent Department" means the department that offers the Degree Program that a student undergoes;
- dd. "Program Head" means the administrative head of a particular Degree Program/s;
- ee. "Program Regulations" means the Master of Technology Degree Program Regulations and Curriculum, 2025-2027;
- ff. "Program" means the Masterr of Technology (M.Tech.) Degree Program;
- gg. "PSCS" means the Presidency School of of Computer Science and Engineering;
- *hh.* "*Registrar*" *means the Registrar of the University;*
- *ii.* "School" means a constituent institution of the University established for monitoring, supervising and guiding, teaching, training and research activities in broadly related fields of studies;
- *jj.* "Section" means the duly numbered Section, with Clauses included in that Section, of these Regulations;
- *kk.* "SGPA" means the Semester Grade Point Average as defined in the Academic Regulations;
- *II.* "Statutes" means the Statutes of Presidency University;

mm."Sub-Clause" means the duly numbered Sub-Clause of these ProgramPU/AC-21.X/SOCSE04/AIE/2024-2026Page 6

#### Regulations;

- *nn.* "Summer Term" means an additional Academic Term conducted during the summer break (typically in June-July) for a duration of about eight (08) calendar weeks, with a minimum of thirty (30) University teaching days;
- oo. "SWAYAM" means Study Webs of Active Learning for Young Aspiring Minds.
- pp. "UGC" means University Grant Commission;
- qq. "University" means Presidency University, Bengaluru; and
- *rr.* "Vice Chancellor" means the Vice Chancellor of the University.

#### 5. Program Description

The Master of Technology Degree Program Regulations and Curriculum 2025-2027 are subject to, and, pursuant to the Academic Regulations. These Program Regulations shall be applicable to the following ongoing Master of Technology (M.Tech.) Degree Programs of 2025-2027 offered by the Presidency School of Engineering (PSOE):

- 1. Master of Technology in Computer Science and Engineering Specialization in Artificial Intelligence.M.Tech. (AIE)
- 2. Master of Technology in Computer Science and Engineering Specialization in Data Science.M.Tech. (DSC)

5.1 These Program Regulations shall be applicable to other similar programs, which may be introduced in future.

5.2 These Regulations may evolve and get amended or modified or changed through appropriate approvals from the Academic Council, from time to time, and shall be binding on all concerned.

5.3 The effect of periodic amendments or changes in the Program Regulations, on the students admitted in earlier years, shall be dealt with appropriately and carefully, so as to ensure that those students are not subjected to any unfair situation whatsoever, although they are required to conform to these revised Program Regulations, without any undue favour or considerations

#### 6. Minimum and Maximum Duration

- 6.1 Master of Technology Degree Program is a Two-Year, Full-Time Semester based program. The minimum duration of the M.Tech. Program is four (02) years and each year comprises of two academic Semesters (Odd and Even Semesters) and hence the duration of the M.Tech. program is four (04) Semesters.
- 6.2 A student who for whatever reason is not able to complete the Program within the normal period or the minimum duration (number of years) prescribed for the Program, may be allowed a period of two years beyond the normal period to complete the mandatory minimum credits requirement as prescribed by the

concerned Program Regulations and Curriculum. In general, the permissible maximum duration (number of years) for completion of Program is N' + 2 years, where N' stands for the normal or minimum duration (number of years) for completion of the concerned Program as prescribed by the concerned Program Regulations and Curriculum.

- 6.3 The time taken by the student to improve Grades/CGPA, and in case of temporary withdrawal/re-joining (Refer to Clause 16.1 of Academic Regulations), shall be counted in the permissible maximum duration for completion of a Program.
- 6.4 In exceptional circumstances, such as temporary withdrawal for medical exigencies where there is a prolonged hospitalization and/or treatment, as certified through hospital/medical records, women students requiring extended maternity break (certified by registered medical practitioner), and, outstanding sportspersons representing the University/State/India requiring extended time to participate in National/International sports events, a further extension of one (01) year may be granted on the approval of the Academic Council.
- 6.5 The enrolment of the student who fails to complete the mandatory requirements for the award of the concerned Degree (refer Section 19.0 of Academic Regulations) in the prescribed maximum duration (Sub-Clauses 18.1 and 18.2 of Academic Regulations), shall stand terminated and no Degree shall be awarded.

#### 7 Programme Educational Objectives (PEO)

After four years of successful completion of the program, the graduates shall be:

- PEO 01: To prepare graduates who will be successful professionals in industry, government, academia, research, entrepreneurial pursuit and consulting firms.
- PEO 02: To prepare graduates who will contribute to society as broadly educated, expressive, ethical and responsible citizens with proven expertise.
- PEO 03: To prepare graduates who will achieve peer recognition as individuals or in a team through demonstration of good analytical, research, design and implementation skills.
- PEO 04: To prepare graduates who will thrive to pursue life-long reflective learning to fulfil their goals.

#### 8 Programme Outcomes (PO) and Programme Specific Outcomes (PSO)

#### 8.1 Programme Outcomes (PO)

On successful completion of the Program, the students shall be able to:

PO1:An ability to analysis, manage and supervise engineering systems and processes with the aid of appropriate advanced tools.

PO2:An ability to design a system and process within constraints of health, safety, security, economics, manufacturability to meet desired needs.

PO3:An ability to carry out research in the respective discipline and publish the findings.

PO4:An ability to effectively communicate and transfer the knowledge/ skill to stakeholders.

PO5:An ability to realize the impact of engineering solutions in a contemporary, global, economical, environmental, and societal context for sustainable development.

#### 8.2 Program Specific Outcomes (PSOs):

On successful completion of the Program, the students shall be able to:

#### PSO 1:

Apply core and advanced concepts of Artificial Intelligence to design and develop intelligent solutions addressing complex, real-world challenges across interdisciplinary domains.

#### PSO 2:

Engage in independent research, innovation, and entrepreneurial pursuits in the field of intelligent systems, contributing to academic, industrial, and societal advancement. **PSO 3:** 

Demonstrate the ability to conceptualize and implement ethical, responsible, and socially beneficial AI applications, ensuring transparency, fairness, and accountability.

#### **9** Admission Criteria (as per the concerned Statutory Body)

The University admissions shall be open to all persons irrespective of caste, class, creed, gender or nation. All admissions shall be made on the basis of merit in the qualifying examinations; provided that forty percent of the admissions in all Programs of the University shall be reserved for the students of Karnataka State and admissions shall be made through a Common Entrance Examination conducted by the State Government or its agency and seats shall be allotted as per the merit and reservation policy of the State Government from time to time. The admission criteria to the M.Tech. Program is listed in the following Sub-Clauses:

- Have a Bachelor's degree in engineering (B.E./B.Tech) from a recognized university.
- > Have a minimum aggregate of 50% in your Bachelor's degree.
- Have a minimum aggregate of 45% in your Bachelor's degree if you belong to a reserved category.
- Have to submit score card from any state or central entrance exam or the Presidency University admission qualifying exam
- **10.** Specific Regulations regarding Assessment and Evaluation (including the Assessment Details of NTCC Courses, Weightages of Continuous Assessment and End Term Examination for various Course Categories)

- **10.1** The academic performance evaluation of a student in a Course shall be according to the University Letter Grading System based on the class performance distribution in the Course.
- **10.2** Academic performance evaluation of every registered student in every Course registered by the student is carried out through various components of Assessments spread across the Semester. The nature of components of Continuous Assessments and the weightage given to each component of Continuous Assessments (refer Clause 8.8 of academic regulations) shall be clearly defined in the Course Plan for every Course, and approved by the DAC.
  - **10.3** Format of the End-Term examination shall be specified in the Course Plan.
  - **10.4** Grading is the process of rewarding the students for their overall performance in each Course. The University follows the system of Relative Grading with statistical approach to classify the students based on the relative performance of the students registered in the concerned Course except in the following cases:
    - Non-Teaching Credit Courses (NTCC)

Absolute grading method may be adopted, where necessary with prior approval of concerned DAC.

Grading shall be done at the end of the Academic Term by considering the aggregate performance of the student in all components of Assessments prescribed for the Course. Letter Grades shall be awarded to a student based on her/his overall performance relative to the class performance distribution in the concerned Course. These Letter Grades not only indicate a qualitative assessment of the student's performance but also carry a quantitative (numeric) equivalent called the Grade Point.

Table 1: Assessment Components and Weightage for different categoryof Courses							
Nature of Course and Structure Component Weigh							
Lecture-based Course L component in the L-T-P Structure is	Continuous Assessments	50%					
predominant (more than 1) (Examples: 3-0-0; 3-0-2; 2-1-0; 2-0-2, 2-0- 4 etc.)	End Term Examination	50%					
Lab/Practice-based Course	Continuous Assessments	50%					

#### **10.5** Assessment Components and Weightage

P component in the L-T-P Structure is predominant (Examples: 0-0-4; 1-0-4; 1-0-2; etc.)	End Term Examination	50%
Skill based Courses like Industry Internship, Capstone project, Research Dissertation, Integrative Studio, Interdisciplinary Project, Summer / Short Internship, Social Engagement / Field Projects, Portfolio, and such similar Non- Teaching Credit Courses, where the pedagogy does not lend itself to a typical L- T-P structure	Guidelines for the a components for the types of Courses, w recommended weig be specified in the o Program Regulation Curriculum / Course applicable.	various ith htages, shall concerned is and

The exact weightages of Evaluation Components shall be clearly specified in the concerned PRC and respective Course Plan.

Normally, for Practice/Skill based Courses, without a defined credit structure (L– P–C) [NTCC], but with assigned Credits (as defined in Clause 5.2 of the Academic Regulations), the method of evaluation shall be based only on Continuous Assessments. The various components of Continuous Assessments, the distribution of weightage among such components, and the method of evaluation/assessment, shall be as decided and indicated in the Course Plan/PRC. The same shall be approved by the respective DAC.

#### 10.6 Minimum Performance Criteria:

#### 10.6.1 Theory only Course and Lab/Practice Embedded Theory Course

A student shall satisfy the following minimum performance criteria to be eligible to earn the credits towards the concerned Course:

- a. A student must obtain a minimum of 30% of the total marks/weightage assigned to the End Term Examinations in the concerned Course.
- b. The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of the components of Continuous Assessments, Mid Term Examinations and End Term Examinations in the concerned Course.

#### **10.6.2** Lab/Practice only Course and Project Based Courses

The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of all assessment components in the concerned Course.

**10.6.3** A student who fails to meet the minimum performance criteria listed above in a Course shall be declared as "Fail" and given "F" Grade in the concerned Course. For theory Courses, the student shall have to reappear in the "Make-Up Examinations" as scheduled by the University in any subsequent semester, or, re-appear in the End Term Examinations of the same Course when it is scheduled at the end of the following Semester or Summer Term, if offered. The marks obtained in the Continuous Assessments (other than the End Term Examination) shall be carried forward and be included in computing the final grade, if the student secures the minimum requirements (as per sub-clause 8.9.1 and 8.9.2 of academic regulations) in the "Make-Up Examinations" of the concerned Course. Further, the student has an option to re-register for the Course and clear the same in the summer term/ subsequent semester if he/she wishes to do so, provided the Course is offered.

### **11** Additional clarifications - Rules and Guidelines for Transfer of Credits from MOOC, etc. – Note: These are covered in Academic Regulations

The University allows students to acquire credits from other Indian or foreign institutions and/or Massive Open Online Course (MOOC) platforms, subject to prior approval. These credits may be transferred and counted toward fulfilling the minimum credit requirements for the award of a degree. The process of transfer of credits is governed by the following rules and guidelines:

- 11.1 The transfer of credits shall be examined and recommended by the Equivalence Committee (Refer ANNEXURE B of academic regulations) and approved by the Dean - Academics.
- **11.2** Students may earn credits from other Indian or foreign Universities/Institutions with which the University has an MOU, and that MOU shall have specific provisions, rules and guidelines for transfer of credits. These transferred credits shall be counted towards the minimum credit requirements for the award of the degree.
- **11.3** Students may earn credits by registering for Online Courses offered by *Study Web* of Active Learning by Young and Aspiring Minds (SWAYAM) and National Program on Technology Enhanced Learning (NPTEL), or other such recognized Bodies/ Universities/Institutions as approved by the concerned BOS and Academic Council from time to time. The concerned School/Parent Department shall publish/include the approved list of Courses and the rules and guidelines governing such transfer of credits of the concerned Program from time to time. The Rules and Guidelines for the transfer of credits specifically from the Online Courses conducted by SWAYAM/ NPTEL/ other approved MOOCs are as stated in the following Sub-Clauses:

- **11.3.1** A student may complete SWAYAM/NPTEL/other approved MOOCs as mentioned in Clause 11.3 (as per academic regulations) and transfer equivalent credits to partially or fully complete the mandatory credit requirements of Discipline Elective Courses and/or the mandatory credit curriculum Structure. However, it is the sole responsibility of the student to complete the mandatory credit requirements of the Discipline Elective Courses as prescribed by the Curriculum Structure of the Open Elective Courses as prescribed by the Curriculum Structure of the concerned Program.
- **11.3.2** SWAYAM/NPTEL/ other approved MOOCs as mentioned in Clause 11.3 (as per academic regulations) shall be approved by the concerned Board of Studies and placed (as Annexures) in the concerned PRC.
- **11.3.3** Parent Departments may release a list of SWAYAM/NPTEL/other approved MOOCs for Pre-Registration as per schedule in the Academic Calendar or through University Notification to this effect.
- **11.3.4** Students may Pre-Register for the SWAYAM/NPTEL/other approved MOOCs in the respective Departments and register for the same Courses as per the schedule announced by respective Online Course Offering body/institute/ university.
- **11.3.5** A student shall request for transfer of credits only from such approved Courses as mentioned in Sub-Clause 11.3.2 above.
- **11.3.6** SWAYAM/NPTEL/other approved MOOCs Courses are considered for transfer of credits only if the concerned student has successfully completed the SWAYAM/NPTEL/other approved MOOCs and obtained a certificate of successful/satisfactory completion.
- **11.3.7** A student who has successfully completed the approved SWAYAM/NPTEL/ other approved MOOCs and wants to avail the provision of transfer of equivalent credits, must submit the original Certificate of Completion, or such similar authorized documents to the HOD concerned, with a written request for the transfer of the equivalent credits. On verification of the Certificates/Documents and approval by the HOD concerned, the Course(s) and equivalent Credits shall forwarded to the COE for processing of results of the concerned Academic Term.
- 11.3.8 The credit equivalence of the SWAYAM/NPTEL/other approved MOOCs are based on Course durations and/or as recommended by the Course offering body/institute/university. The Credit Equivalence mapped to SWAYAM/ NPTEL approved Courses based on Course durations for

transfer of credits is summarised in Table shown below. The Grade will be calculated from the marks received by the Absolute Grading Table 8.11 in the academic regulations.

## Table 2: Durations and Credit Equivalence for Transfer ofCredits from SWAYAM-NPTEL/ other approved MOOC Courses

SI.	Course Duration	Credit Equivalence					
No.	course buración						
1	4 Weeks	1 Credit					
2	8 Weeks	2 Credits					
3	12 Weeks	3 Credits					

- **11.3.9** The maximum permissible number of credits that a student may request for credit transfer from MOOCs shall not exceed 20% of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree.
- **11.3.10** The University shall not reimburse any fees/expense; a student may incur for the SWAYAM/NPTEL/other approved MOOCs.
- **11.4** The maximum number of credits that can be transferred by a student shall be limited to forty percent (40%) of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree. However, the grades obtained in the Courses transferred from other Institutions/MOOCs, as mentioned in this Section (11.0), shall not be included in the calculation of the CGPA.

#### PART B: PROGRAM STRUCTURE

#### **12.0 Structure / Component with Credit Requirements Course Baskets &** Minimum Basket wise Credit Requirements

The M.Tech. CSE Specialization in (Artificial Intelligence) Program Structure (2025-2027) totalling 68credits. Table 3 summarizes the type of baskets, number of courses under each basket and the associated credits that are mandatorily required for the completion of the Degree.

Table	Table 3: Summary of mandatory courses and minimum credit         contribution from various baskets							
S.No	Baskets	Credit Contribution						
1	SCHOOL CORE	32						
2	PROGRAM CORE	15						
3	DISCIPLINE ELECTIVE	15						
4	OPEN ELECTIVE	06						
	TOTAL CREDITS	Min. 68						

In the entire Program, the practical and skill based course component contribute to an extent of approximately 61% out of the total credits of 68 for M.Tech. (Product Design and Development) program of twoyears' duration.

#### 13. Minimum Total Credit Requirements of Award of Degree

As per the AICTE guidelines, a minimum of 68 credits is required for the award of a M.Tech. degree.

### 14. Other Specific Requirements for Award of Degree, if any, as prescribed by the Statutory Bodies,

- 14.1 The award of the Degree shall be recommended by the Board of Examinations and approved by the Academic Council and Board of Management of the University.
- 14.2 A student shall be declared to be eligible for the award of the concerned Degree if she/he:
  - a. Fulfilled the Minimum Credit Requirements and the Minimum Credits requirements under various baskets;
  - b. Secure a minimum CGPA of 5.0 in the concerned Program at the end of the Semester/Academic Term in which she/he completes all the requirements for the award of the Degree as specified in Sub-clause 19.2.1 a of Academic Regulations;

- c. No dues to the University, Departments, Hostels, Library, and any other such Centers/ Departments of the University; and
- d. No disciplinary action is pending against her/him.

15.Curriculum Structure – Basket Wise Course List (not Semester Wise) List of Courses Tabled – aligned to the Program Structure (Course Code, Course Name, Credit Structure (LTPC), Contact Hours, Course Basket, Type of Skills etc., as applicable).

#### Type of Skill

F - Foundation S - Skill Development EM – Employability EN – Entrepreneurshi P **Course Caters to** 

**GS - Gender Sensitization** 

ES - Environment and sustainability

**HP** - Human values and Professional Ethics

	Table 3.1 : List of School Core Courses (SC)

	Total No. of Credits					15			

#### 16.Practical / Skill based Courses – Internships / Thesis / Dissertation / Capstone Project Work / Portfolio / Mini project

Practical / Skill based Courses like internship, project work, capstone project, research project / dissertation, and such similar courses, where the pedagogy does not lend itself to a typical L-T-P-C Structure as defined in Clause 5.1 of the Academic Regulations are simply assigned the number of Credits based on the quantum of work / effort required to fulfill the learning objectives and outcomes prescribed for the concerned Courses. Such courses are referred to as Non-Teaching Credit Courses (NTCC). These Courses are designed to provide students with hands-on experience and skills essential for their professional development. These courses aim to equip students with abilities in problem identification, root cause analysis, problem-solving, innovation, and design thinking through industry exposure and project-based learning. The expected outcomes are first level proficiency in problem solving and design thinking skills to better equip M.Tech. graduates for their professional careers. The method of evaluation and grading for the Practical / Skill based Courses shall be prescribed and approved by the concerned Departmental Academic Committee (refer Annexure A of the Academic Regulations). The same shall be prescribed in the Course Handout.

#### 16.1 Internship

A student may undergo an Internship for a period of 12-14 weeks in an industry / company or academic / research institution during 3<sup>rd</sup> and 4<sup>th</sup> Semesters, subject to the following conditions:

- **16.1.1** The Internship shall be in conducted in accordance with the Internship Policy prescribed by the University from time to time.
- 16.1.2 The selection criteria (minimum CGPA, pass in all Courses as on date, and any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Internship to a student;
- 16.1.3 The number of Internships available for the concerned Academic Term. Further, the available number of internships shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution providing the

- **16.1.4** A student may opt for Internship in an Industry / Company or academic / research institution of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the Internship on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Internship confirms to the University that the Internship shall be conducted in accordance with the Program Regulations and Internship Policy of the University.
- **16.1.5** A student selected for an Internship in an industry / company or academic / research institution shall adhere to all the rules and guidelines prescribed in the Internship Policy of the University.

#### 16.2 Project Work

A student may opt to do a Project Work for a period of 12-15 weeks in an Industry / Company or academic / research institution or the University Department(s) as an equivalence of Internship during the  $3^{rd}$  and  $4^{th}$  Semester as applicable, subject to the following conditions:

- **16.2.1** The Project Work shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.
- 16.2.2 The student may do the project work in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 16.2.1). Provided further, that the Industry / Company or academic / research institution offering such project work confirms to the University that the project work will be conducted in accordance with the Program Regulations and requirements of the University.

#### 16.3 Capstone Project

A student may undergo a Capstone Project for a period of 12-14 weeks in an industry / company or academic / research institution in the 4th Semester as applicable, subject to the following conditions:

**16.3.1** The Capstone Project shall be in conducted in accordance with the Capstone Project Policy prescribed by the University from time to time.

**16.3.2** The selection criteria (minimum CGPA, pass in all Courses as on date, and<br/>PU/AC-21.X/SOCSE04/AIE/2024-2026Page 19

any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Capstone Project to a student;

- **16.3.3** The number of Capstone Project available for the concerned Academic Term. Further, the available number of Capstone Project shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution providing the Capstone Project, as stated in Sub-Clause 16.3.2 above.
- 16.3.4 A student may opt for Capstone Project in an Industry / Company or academic / research institution of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the I Capstone Project on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Capstone Project confirms to the University that the Capstone Project shall be conducted in accordance with the Program Regulations and Capstone project Policy of the University.
- **16.3.5** A student selected for a Capstone Project in an industry / company or academic / research institution shall adhere to all the rules and guidelines prescribed in the Capstone Project Policy of the University.

#### 16.4 Research Project / Dissertation

A student may opt to do a Research Project / Dissertation for a period of 12-14 weeks in an Industry / Company or academic / research institution or the University Department(s) as an equivalence of Capstone Project, subject to the following conditions:

**16.4.1** The Research Project / Dissertation shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.

The student may do the Research Project / Dissertation in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 18.4.1). Provided further, that the Industry / Company or academic / research institution offering such Research Project / Dissertation confirms to the University that the Research Project / Dissertation work will be conducted in accordance with the Program Regulations and requirements of the University.

Course Description	Students observe science and technology in action, develop an awareness of the method of scientific experimentation, and often get an opportunity to see, study and operate sophisticated and costly equipment. They also learn about the implementation of the principles of management they have learnt in class, when they observe multidisciplinary teams of experts from engineering, science, economics, operations research, and management deal with techno-economic problems at the micro and macro levels. Finally, it enables them to develop and refine their language, communication and inter-personal skills, both by its very nature, and by the various evaluation components, such as seminar, group discussion, project report preparation, etc. The broad-based core education, strong in mathematics and science and rich in analytical tools, provides the foundation necessary for the student to understand properly the nature of real-life problems. The students have options to pursue this course as either Project Work and Dissertation at the university, or Project Work in

	an Industry/ Company/ Research Laboratory, or Internship Program in an Industry/Company.
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Professional Practice and attain Employability Skills through Experiential Learning techniques.

#### Course Code: SEM7000

Course Title: Seminar Type of Course: L-T-P-C: 0-0-0-1 Version No.: 1.0 Course Pre-requisites: Nil Anti-requisites: Nil

#### **Course Description**

This course is designed to enhance the research aptitude, presentation skills, and domain knowledge of postgraduate students. Students are required to select a recent topic related to their specialization, perform an extensive literature survey, and prepare a seminar report. The seminar is to be presented before a committee comprising faculty members and peers. This process fosters critical thinking, self-directed learning, and effective communication skills, while also promoting collaborative learning and peer feedback.

#### **Course Objectives**

- To develop the ability to conduct independent literature reviews and identify key issues in a chosen domain.
- To improve students' oral and written communication skills for technical and academic settings.
- To encourage active participation in academic discussions and constructive feedback.

#### **Course Outcomes**

Upon successful completion of this course, students will be able to:

- 1. **(Understand)** Identify and comprehend emerging research areas relevant to their field.
- 2. **(Apply)** Apply analytical skills to review and synthesize information from multiple sources.
- 3. (Analyze) Organize and structure academic content logically for presentation.
- 4. **(Create)** Prepare technical documents (seminar report) adhering to standard formats.
- 5. **(Apply)** Deliver an effective oral presentation using appropriate tools and techniques.
- 6. (Evaluate) Critically respond to questions and feedback from peers and faculty.
- 7. **(Understand)** Recognize the importance of continuous learning and staying updated in their field of study.

Course Code: AIE4000	Course Title: KNOWLEDGE ENGINEERING AND EXPERT SYSTEM Type of Course: Program Core Theory Only	L- T- P- C	3	0	0	3	
Version No.	2.0						
Course Pre- requisites							
Anti-requisites	NIL						
Course Description	Knowledge engineering is a field within artificial intelligence that develops knowledge-based systems. Such systems are computer programs that contain large amounts of knowledge, rules and reasoning mechanisms to provide solutions to real-world problems. A major form of knowledge-based system is an expert system, one designed to emulate the reasoning processes of an expert practitioner. Topics includes: Introduction to Knowledge Engineering, Knowledge based Systems, Types of Knowledge-based systems, Knowledge acquisition, Knowledge representation and reasoning: Logic rules and representations, Semantic Networks, frames, Life cycle Methodologies, Uncertain Reasoning with confidence factor, Basic Structure and Architecture of Expert System. Tools used in Expert System.						
Course Objective	The objective of the course is to familiarize the le Knowledge Engineering and Expert Systems and atta Participative Learning techniques.					-

Course Code: AIE4001 Course Title: Artificial Intelligence Type of Course: Program Core (Integrated Theory and Laboratory) L-T-P-C: 2-0-2-3 Total Hours: 30 Hours Theory + 30 Hours Lab = 60 Hours Version No.: 1.0 Course Prerequisites: Nil

#### **Course Description:**

This course introduces students to the fundamental principles and techniques of Artificial Intelligence (AI). It covers problem-solving, knowledge representation, reasoning, and learning. Students will implement AI algorithms and apply them to various domains through practical lab experiments.

#### **Course Objectives:**

- Understand the core concepts of Artificial Intelligence and intelligent agents.
- Analyze and implement search strategies for problem-solving.
- Learn knowledge representation schemes and reasoning techniques.
- Apply AI techniques in practical, real-world applications.

#### Course Outcomes (COs):

- **CO1:** Analyze the foundational principles and scope of Artificial Intelligence.
- **CO2:** Analyze and compare search algorithms for AI-based problem-solving.
- CO3: Apply knowledge representation and inference techniques.
- CO4: Apply AI algorithms to real-world scenarios using programming.

#### **Course Content (Total: 60 Hours)**

### Module 1: Introduction to AI and Intelligent Agents (CO1 – Analyze) – 8 Theory Hours

Topics: History and evolution of AI, foundations and applications, AI techniques, Types of AI, Intelligent agents, environments, and agent structures.

**Module 2:** Problem Solving and Search (CO2 – Analyze) – 10 Theory Hours Topics: Problem formulation, uninformed search (BFS, DFS, DLS, IDS), informed search (Greedy, A\*), heuristic functions, constraint satisfaction problems.

### Module 3: Knowledge Representation and Reasoning (CO3 – Apply) – 6 Theory Hours

Topics: Propositional and predicate logic, inference rules, semantic networks, frames, production rules, forward and backward chaining.

Module 4: Al Applications and Learning (CO4 – Apply) – 6 Theory Hours

Topics: Machine learning overview, rule-based systems, AI in NLP, robotics, computer vision, and expert systems.

#### Laboratory Experiments (15 Weeks / 30 Hours)

- 1. Implement intelligent agent simulation using Python.
- 2. Write a program to solve a problem using BFS and DFS.
- 3. Implement A\* algorithm for a route-finding problem.
- 4. Solve a constraint satisfaction problem (e.g., Sudoku).
- 5. Develop a knowledge base using propositional logic.
- 6. Implement forward chaining inference.
- 7. Implement backward chaining inference.
- 8. Simulate a rule-based expert system.
- 9. Create a semantic network for a given domain.
- 10. Build a chatbot using basic NLP libraries.
- 11. Image recognition using pre-trained models.

- 12. Build a simple AI game (e.g., Tic-Tac-Toe).
- 13. Implement decision tree classification.
- 14. Develop a face detection system using OpenCV.
- 15. Final integration of an AI-based mini project.

#### **Textbooks:**

- **T1:** Stuart Russell & Peter Norvig, *Artificial Intelligence: A Modern Approach*, 4th Edition, Pearson Education.
- **T2:** Elaine Rich, Kevin Knight, Shivashankar B Nair, *Artificial Intelligence*, McGraw Hill Education.

#### **Reference Books:**

- **R1:** George F. Luger, *Artificial Intelligence: Structures and Strategies for Complex Problem Solving*, Pearson Education.
- **R2:** Nils J. Nilsson, *The Quest for Artificial Intelligence*, Cambridge University Press.

Course Code: AIE4002	Course Title: Machine Learning AlgorithmsType of Course: Program Core Theory and Laboratory IntegratedL-T-P- C2023						
Version No.	2.0						
Course Pre- requisites							
Anti-requisites	NIL						
Course Description	This course provides a broad introduction to machine learning and statistical pattern recognition. Topics include: supervised learning (generative/discriminative learning, parametric/non-parametric learning, neural networks, support vector machines); unsupervised learning (clustering, dimensionality reduction, kernel methods); learning theory (bias/variance tradeoffs, practical advice); reinforcement learning and adaptive control.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Machine Learning Algorithms and attain Skill Development through Experiential Learning techniques.						
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Identify the characteristics of datasets and compare the trivial data for various applications. CO2: Understand and apply scaling up machine learning techniques. CO3: To design and implement various machine learning algorithms in a range of real-world applications.

Description	dev fun lear dat cou und net reco visi app	advanced branch of Machine Learning involved in the development and application of Artificial Neural Networks that function by simulating the working principle of human brain. Deep learning algorithms extract layered high-level representations of data in a way that maximizes performance on a given task. The course includes theory and lab components which emphasizes on understanding the implementation and application of deep neural networks in various prominent problem domains like speech recognition, sentiment analysis, recommendations, and computer vision etc. The course facilitates the students to interpret and appreciate the successful application of deep neural nets in various prediction and classification tasks of ML.							at p of ne al h er d

Level 1:	Programming assign o possibility to us	_	t a MLP with	

**Experiment No. 7:** Programming assignment to employ CNN in image classification from given dataset.

Level 1: Programming scenario to instantiate a CNN (with at least one convolutional layer) and train the neural network using the training data from CIFAR10 data. Choose appropriate hyperparameters for the training of the neural network. The network should be able to achieve a test accuracy of at least 50% within 10 training epochs.

Level 2: Programming scenario to build a CNN (with more than one convolutional layer) and train the neural network using the training data from CIFAR10 data. Choose appropriate hyperparameters for the training of the neural network. The network should be able to achieve a test accuracy of at least 50% within 10 training epochs. Continue to train further and examine training and testing performance. Report hyperparameters (learning rate, number of hidden layers, number of nodes in each hidden layer, batch size and number of epochs) of the Deep Neural Network. Also, explain the observations.

Experiment No. 8: Programming assignment to perform Sentence (text) Classification using Convolutional Neural Networks.

**Level 1:** Programming Scenarios to utilize CNN to categorize text data in given datasets like SST movie reviews.

**Level 2:** Programming Scenarios to utilize CNN to categorize text data in given datasets like SST and MR movie reviews.

Experiment No. 9: Programming assignment to apply Recurrent Neural Networks for sentiment analysis of text data.

Level 1: Programming scenario to build a model to perform sentiment analysis of IMDB movie reviews using. Reviews are categorized into two polarities: positive and negative.

Level 2: Programming scenario to build a model to perform sentiment analysis of IMDB movie reviews. Reviews are categorized into three polarities: positive, negative and neutral.

Experiment No. 10: Programming assignment to create a generative model for text, character-by-character using Recurrent neural networks.

Level 1: Programming scenario to implement a multi-layer Recurrent Neural Network like LSTM for training/sampling from character-level language models, which takes one text file as input and trains an RNN that learns to predict the next character in a sequence. The RNN can then be used to generate text character by character that will look like the original training data.

Level 2: Programming scenario to implement a multi-layer Recurrent Neural Network utilizing both LSTM and GRU in turns for training/sampling from character-level language models, which takes one text file as input and trains an RNN that learns to predict the next

character in a sequence. The RNN can then be used to generate text character by character that will look like the original training data. Train the model and use it to generate new text. Experiment No. 11: Programming assignment to implement RNN models for multivariate time series forecasting. Level 1: Programming scenario to implement a many-to-one Recurrent Neural Network for Stock Price forecasting, i.e. trained with a certain number of day's data, the model should predict the stock price of the next day. Level 2: Programming scenario to implement a many-to-one Recurrent Neural Network for Stock Price forecasting, i.e. trained with a certain number of day's data, the model should predict the stock price of the next day. Students are free to use RNN, GRU, or LSTM (or compare between) and any number of layers and architecture. In the testing, plot the ground truth and your predicted values for 100 days. Experiment No. 12: Programming assignment to implement Autoencoders and deep Boltzmann's machines. Level 1: Programming scenario to implement a basic recommender system using deep Boltzmann's machines. Level 2: Programming scenario to build a recommender system with Collaborative filtering algorithm using deep Boltzmann's machines, **Targeted Application & Tools that can be used:** Targeted employment sector is not restricted to any single domain. Today, ML and Dl have been employed for data analysis and improved business intelligence in every sector. Targeted job profiles include Data Analyst, Data Scientist, Data Engineer, Neuroinformatician, Bioinformatician, Image Recognition, Research Analyst, Full Stack Developer for Deep Learning, Natural Language Process Engineer, Business Analyst etc. Few of the top recruiters are Amazon, NVIDIA. Microsoft, IBM, Accenture, Facebook, Intel, Samsung, Lenovo, Adobe etc., among numerous others. **Tools**: Neural Designer, AutoML, AutoDL, Keras, TensorFlow, Torch, Google Colaboratory, Spider, Jupiter Notebook Project work/Assignment: Throughout the progression in each module, students will have to submit scenario based programming Assignments/Experiments as listed in "List of Lab Tasks". On completion of each module, students will be asked to develop a Mini Project, similar to the following: Music genre classification system This is one of the interesting deep learning project ideas. This is an excellent project to nurture and improve one's deep learning skills. The aim is to create a deep learning model that uses neural networks to classify the genre of music automatically. For this project, students will use an FMA (Free Music Archive)

dataset. FMA is an interactive library comprising high-quality and legal audio downloads. It is an open-source and easily accessible dataset. However, it is noteworthy that before one can use the model to classify audio files by genre, he/she will have to extract the relevant information from the audio samples (like spectrograms, MFCC, etc.)

# • Image Caption generator

This is one of the trending deep learning project ideas. This is a Python-based deep learning project that leverages Convolutional Neural Networks and LTSM (a type of Recurrent Neural Network) to build a deep learning model that can generate captions for an image. An Image caption generator combines both computer vision and natural language processing techniques to analyze and identify the context of an image and describe them accordingly in natural human languages (for example, English, Spanish, Danish, etc.). This project will strengthen one's knowledge of CNN and LSTM, and one will learn how to implement them in real-world applications as this.

## • Visual tracking system

A visual tracking system is designed to track and locate moving object(s) in a given time frame via a camera. It is a handy tool that has numerous applications such as security and surveillance, medical imaging, augmented reality, traffic control, video editing and communication, and human-computer interaction. This system uses a deep learning algorithm to analyze sequential video frames, after which it tracks the movement of target objects between the frames. The two core components of this visual tracking system are Target representation and localization

# • Traffic Signal Classification

The traffic sign classification project is useful for all autonomous vehicles. Machines are able to identify traffic signs from the image. Students can use the GTSRB dataset that contains 43 different traffic sign classes. This is a good project to understand image classification.

## Driver Drowsiness Detection

The driver drowsiness detection is a project which can detect whether a person is sleeping or not while driving. We can implement a model for drivers and it can also prevent accidents from happening.

## <u>Autocolouring old Black and white images</u>

The idea of this project is to make a model that is capable of colorizing old black and white

images to colorful images. Digital artists take a few hours to color the image but now

Deep Learning, it is possible to color an image within seconds.

Version No.	2.0
Course Pre- requisites	
Anti-requisites	NIL
Course Description	This course introduces a basics of Natural Language Processing methods with specific emphasis on modern applications. The course will cover pre-processing techniques of textual data like stemming, lemmatization, tokenization etc. Different word Vectorization Techniques like Bag of Words, TF-iDF etc. followed by basics of Probability for building language models. Basics of Neural Network, LSTM Recurrent Neural Network, Applications of NLP like Information Extraction, Emotion Extraction from text, sentiment analysis etc.
Course Objective	The objective of the course is to familiarize the learners with the concepts of <b>Natural</b> Language Processing and attain SKILL DEVELOPMENT through Experiential Learning techniques
Course Outcomes	On successful completion of this course the students shall be able to: CO1: Understanding the fundamentals of NLP techniques. CO2: Apply Language modelling techniques for predictions. CO3: Apply Deep learning Techniques to build NLP Model

	CO4: Outline the ap	olication of NL	P Techniques.							
Course Content:										
Module 1	pre-processing techniques	Assignment	Apply all the pre- processing techniques to the 14 Sessions corpus of your choice.							
	Topics: Introduction to Natural Language Processing, terminologies, empirical rules, why NLP is hard, why NLP is useful, Natural Language generation, NLP Processing pipeline, Corpus Cleaning techniques – word tokenization, sentence tokenization, word frequency distribution, stemming, lemmatization, dictionary, Part of Speech Tagging, optical character recognition, Textual Pre-Processing techniques – Stop words removal, regular expression, lower case, text standardization. Punctuation Mark Removal.									
Module 2	Language Model	Assignment	Build n-gram language model for future word predictions.							
	Markov Models Simple N-g Sampling Evaluating langua									
Module 3	Deep Learning technique for NLP models	esAssignment	Build model for spam detection using mail11 Sessions subject as Corpus							
	network, LSTM, Attentio	on Models,	ceptron, back Propagation, Recurrent Neural BERT (Bidirectional Encoder Representation gnition. Document summarization							
Module 4	Application of NLP	Assignment	Paper Review of State-of-the-ArtNLP 11 Sessions Technique

Course Description		The purpose of this course is to enable the students to appreciate the need for Robotic Process Automation and the course offers comprehensive knowledge and professional-level skills focused on developing and deploying software robots using UiPath Platforms. The course is both conceptual and Practical in nature and needs basic knowledge of Computer Programming. The course assumes no prior knowledge of RPA. It begins by refreshing basic programming skills and introducing basic RPA concepts. The course develops skills to identify task which can be automated and develop it with UiPath Studio. The course also enhances the programming abilities through assignments.

Course Code: AIE4013 Course Title: Cloud Computing Type of Course: Program Core L-T-P-C: 3-0-0-3 Total Hours: 45 Hours Version No.: 1.0 Course Prerequisites: Nil Anti-requisites: —

## **Course Description:**

This course provides a comprehensive introduction to cloud computing, exploring the foundations, service models, deployment models, and key technologies. It includes discussion on virtualization, resource provisioning, cloud security, storage, and recent trends in cloud services. Students will also understand the impact and applications of cloud computing in modern IT infrastructure.

#### Course Objectives:

- Understand the key concepts and architecture of cloud computing.
- Explore various service and deployment models in cloud environments.
- Analyze virtualization and resource management in cloud platforms.
- Discuss issues related to cloud security, privacy, and performance.
- Evaluate different cloud platforms and services.

#### Course Outcomes (COs):

- **CO1 (Understand):** Describe fundamental concepts, architecture, and benefits of cloud computing.
- CO2 (Analyze): Compare cloud service models and deployment approaches.
- CO3 (Apply): Illustrate virtualization and resource provisioning techniques.

CO4 (Analyze): Examine cloud security concerns and evaluate real-world cloud platforms.

# **Course Content (Total: 45 Hours)**

**Module 1: Introduction to Cloud Computing (CO1 – Understand) – 11 Hours** Topics: Cloud characteristics, benefits and challenges, cloud architecture, evolution of cloud computing, cloud vs. traditional computing, NIST definition, role of networks in cloud computing.

**Module 2: Cloud Service and Deployment Models (CO2 – Analyze) – 11 Hours** Topics: IaaS, PaaS, SaaS – examples and use cases, public, private, hybrid, and community clouds, economics and ROI of cloud computing, service level agreements (SLAs).

**Module 3: Virtualization and Resource Management (CO3 – Apply) – 11 Hours** Topics: Virtualization techniques, hypervisors (VMware, KVM, Xen), virtual machine provisioning and migration, load balancing, autoscaling, containers and Docker. **Module 4: Cloud Security and Emerging Trends (CO4 – Analyze) – 12 Hours** Topics: Security and privacy issues, identity and access management, compliance standards (ISO, GDPR), multi-tenancy, cloud storage systems, introduction to edge computing and serverless computing, overview of AWS, Azure, and GCP.

Course Description	informatior informatior needs and Recommen retrieval is retrieved. 1	This Course studies the theory, design, implementation and evaluation of information retrieval systems. The focus is on the core concepts of Text- based information systems, statistical characteristics of text, representation of information needs and documents. Several important retrieval models, algorithms, and Recommender System. Also examined is how an effective information search and retrieval is interrelated with the organization and description of information to be retrieved. Throughout the course, current literature from the viewpoints of both research and practical retrieval technologies on the World Wide Web will be examined.						
Course Objective	Intelligent	The objective of the course is to familiarize the learners with the concepts of Intelligent Information Retrieval and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING techniques						
Course Outcomes	On successful completion of the course the students shall be able to: CO1: Define basic concepts of information Retrieval and Recommender System CO2: Evaluate the effectiveness and efficiency of different information retrieval methods CO3: Explain the standard methods for Web indexing and retrieval CO4: Develop Methods for implementing a recommender system

Course Code: AIE4016 Course Title: Internet of Things Type of Course: Program Core L-T-P-C: 3-0-0-3 Total Hours: 45 Hours Version No.: 1.0 Course Prerequisites: Nil Anti-requisites: —

#### **Course Description:**

This course provides a solid foundation in the principles and technologies of the Internet of Things (IoT). It covers IoT architecture, communication protocols, data acquisition, sensor integration, and applications across various domains. It also highlights challenges related to security, scalability, and interoperability in IoT systems.

#### Course Objectives:

- Understand the architecture and basic building blocks of IoT.
- Explore various communication protocols and standards used in IoT.
- Examine sensor technologies and data acquisition methods.
- Evaluate real-world IoT applications in various sectors.
- Discuss security and privacy issues in IoT networks.

# Course Outcomes (COs):

- CO1 (Understand): Describe IoT architecture, sensors, and device integration.
- **CO2 (Analyze):** Analyze IoT communication protocols and data processing techniques.
- **CO3 (Apply):** Apply IoT concepts in developing domain-specific applications.
- **CO4 (Analyze):** Evaluate IoT security mechanisms and implementation challenges.

# Course Content (Total: 45 Hours)

**Module 1: Introduction to IoT and Architecture (CO1 – Understand) – 11 Hours** Topics: Definition, characteristics, history of IoT, layered architecture, IoT enabling technologies, physical and virtual components, sensors and actuators, embedded systems, IoT design considerations.

## Module 2: IoT Communication Technologies (CO2 – Analyze) – 11 Hours

Topics: IoT network topologies, M2M, WSN, RFID, Bluetooth, Zigbee, NFC, LoRa, MQTT, CoAP, 6LoWPAN, communication models and APIs, IP addressing in IoT.

**Module 3: IoT Data Management and Applications (CO3 – Apply) – 11 Hours** Topics: Data acquisition, storage, and analytics in IoT, real-time data stream processing, cloud and edge computing for IoT, smart applications in healthcare, agriculture, home automation, smart cities.

## Module 4: IoT Security and Challenges (CO4 – Analyze) – 12 Hours

Topics: Security requirements in IoT, authentication and access control, cryptographic algorithms, secure communication protocols, privacy challenges, ethical considerations, scalability, interoperability issues.

Course Description		Machine learning has been emerged as a promising paradigm in the field of Computer science having applications in a wide variety of fields such as communication networks, bioinformatics, image processing, antenna design etc. Now a day's people from multiple discipline are interested in Machine learning due to its applicability in predicting behaviors of highly complex systems, which is otherwise difficult based on traditional optimization techniques in a time bound fashion. The goal of this course is to provide the mathematical prerequisite for starting any Machine learning course to the students coming from various engineering disciplines. This course does not require any prerequisite. The goal of the course is: 1. To introduce basic probability and statistics concepts. 2. To introduce basic Linear Algebra concepts. 3. To enable the students to understand Machine Learning/Deep

Course Code: AIE4019 Course Title: Green Computing and Sustainable IT Type of Course: Program Core L-T-P-C: 3-0-0-3 Total Hours: 45 Hours Version No.: 1.0 Course Prerequisites: Nil Anti-requisites: —

# **Course Description:**

This course provides an overview of sustainable computing practices and green technologies in IT. It introduces students to the environmental impact of computing resources and the principles of designing, operating, and managing sustainable IT infrastructures. Topics include energy efficiency, eco-labeling, green data centers, e-waste management, and policy compliance.

## **Course Objectives:**

- Understand the significance and need for sustainable computing.
- Explore green IT strategies, practices, and technologies.
- Analyze the environmental impact of hardware, software, and infrastructure.
- Learn green data center design, energy metrics, and life cycle assessment.
- Study regulatory and policy frameworks supporting green computing.

## **Course Outcomes (COs):**

- CO1 (Understand): Describe the principles and goals of green computing.
- **CO2 (Analyze):** Analyze the energy consumption and environmental impact of IT systems.
- **CO3 (Apply):** Apply sustainable practices in hardware, software, and data center design.
- CO4 (Analyze): Evaluate compliance frameworks and sustainability metrics.

# Course Content (Total: 45 Hours)

## Module 1: Introduction to Green Computing (CO1 – Understand) – 10 Hours

Topics: Definition, importance and goals, historical perspective, environmental concerns, carbon footprint, IT's contribution to environmental problems, green metrics and benchmarking.

Module 2: Sustainable IT Infrastructure (CO2 – Analyze) – 11 Hours

Topics: Green hardware – energy-efficient processors, peripherals, and devices, lifecycle analysis, green software development, power management features, virtualization, cloud computing, and its impact on sustainability.

## Module 3: Green Data Centers and Best Practices (CO3 – Apply) – 12 Hours

Topics: Data center efficiency, server consolidation, cooling and power optimization, LEED certification, energy usage metrics (PUE, DCiE), automation, and monitoring tools, green network design.

Module 4: Compliance and Environmental Standards (CO4 – Analyze) – 12 Hours

Topics: ISO 14001, Energy Star, EPEAT, RoHS, WEEE directives, policy initiatives, government regulations, corporate social responsibility, ethical issues, and global green IT initiatives.

#### Course Code: AIE4020

Course Title: Reinforcement Learning Type of Course: Program Core (Integrated Theory and Lab) L-T-P-C: 2-0-2-3 Total Hours: 30 Hours Theory + 30 Hours Lab (15 Weeks) Version No.: 1.0 Course Prerequisites: Machine Learning or equivalent knowledge

Anti-reguisites: -

#### **Course Description:**

This course introduces the core concepts, models, and algorithms of Reinforcement Learning (RL), including dynamic programming, Monte Carlo methods, and temporaldifference learning. Students will learn to model real-world problems using RL paradigms and apply algorithms using Python-based libraries. The course includes 15 weeks of lab exercises for hands-on implementation and simulation.

#### **Course Objectives:**

- Understand the fundamental principles of reinforcement learning.
- Learn various RL algorithms such as Q-learning, SARSA, and policy gradient methods.
- Explore applications of RL in control, robotics, and games.
- Implement RL models using Python and OpenAI Gym.
- Analyze the performance and convergence of RL algorithms.

#### Course Outcomes (COs):

- **CO1 (Understand):** Describe the foundational concepts and mathematical formulation of RL problems.
- CO2 (Analyze): Analyze the behavior and convergence of key RL algorithms.
  CO3 (Apply): Apply dynamic programming and TD learning to solve decision-
- making tasks.
  CO4 (Apply): Implement RL algorithms in practical scenarios using standard environments.

# **Course Content (Total: 60 Hours)**

# Module 1: Foundations of Reinforcement Learning (CO1 – Understand) – 8 Theory Hours

Topics: Agent-environment interaction, rewards, policies, value functions, Markov Decision Processes (MDP), Bellman equations.

## Module 2: Dynamic Programming and Monte Carlo Methods (CO2 – Analyze) – 8 Theory Hours

Topics: Policy evaluation, policy improvement, value iteration, Monte Carlo prediction and control, exploration vs. exploitation.

## Module 3: Temporal Difference Learning (CO3 – Apply) – 7 Theory Hours

Topics: TD prediction, SARSA, Q-learning, n-step bootstrapping, eligibility traces, offpolicy learning.

## **Module 4:** Advanced Methods and Applications (CO4 – Apply) – 7 Theory Hours Topics: Policy gradients, Actor-Critic methods, Deep Q-Networks (DQN), RL in robotics, games, NLP and finance.

## Laboratory Experiments (15 Weeks / 30 Hours)

- 1. Introduction to OpenAI Gym and environment setup.
- 2. Implement basic MDP environment and simulate agent behavior.
- 3. Policy evaluation using iterative methods.
- 4. Value iteration and policy iteration in grid world.
- 5. Monte Carlo prediction algorithm.
- 6. Monte Carlo control with  $\varepsilon$ -soft policies.
- 7. SARSA implementation on a cliff-walking environment.
- 8. Q-learning implementation and analysis.
- 9. N-step TD and eligibility traces.
- 10. Off-policy learning using Importance Sampling.
- 11. Policy Gradient with REINFORCE algorithm.
- 12. Actor-Critic implementation using PyTorch.
- 13. Deep Q-Network implementation.
- 14. RL for CartPole using OpenAI Gym.
- 15. Mini project on game-playing or robotic control task.

Course Code: AIE4021 Course Title: AI Ethics and Responsible AI Type of Course: Program Core (Integrated Theory and Lab) L-T-P-C: 2-0-2-3 Total Hours: 30 Hours Theory + 30 Hours Lab (15 Weeks) Version No.: 1.0 Course Prerequisites: Introduction to Artificial Intelligence Anti-requisites: —

## **Course Description:**

This course explores the ethical, social, and legal challenges posed by Artificial Intelligence. It emphasizes the development and deployment of responsible AI systems, highlighting fairness, transparency, accountability, and alignment with human values. Through theoretical discussions and practical case studies, students will develop critical thinking and implement tools to evaluate ethical AI models.

#### **Course Objectives:**

- Understand ethical implications and responsibilities in AI system development.
- Identify bias, discrimination, and privacy issues in data and AI algorithms.
- Study the global frameworks and regulations for responsible AI.
- Apply ethical principles in AI applications through toolkits and frameworks.
- Analyze real-world use cases and propose responsible AI solutions.

#### Course Outcomes (COs):

- **CO1 (Understand):** Explain key ethical principles and challenges in Al development.
- **CO2 (Analyze):** Analyze social and legal implications of biased or opaque Al systems.
- CO3 (Apply): Apply tools and frameworks for evaluating ethical AI.
- **CO4 (Apply):** Implement responsible design and deployment practices in Al systems.

## Course Content (Total: 60 Hours)

#### Module 1: Ethical Foundations in AI (CO1 – Understand) – 8 Theory Hours

Topics: History of AI ethics, human values and ethics in computing, key principles: fairness, accountability, transparency, interpretability, and responsibility.

**Module 2: Bias, Discrimination and Data Ethics (CO2 – Analyze) – 8 Theory Hours** Topics: Sources of bias in datasets, algorithmic bias, discrimination, fairness metrics, data privacy, informed consent, GDPR, and ethical data collection.

Module 3: Frameworks, Regulations and Governance (CO3 – Apply) – 7 Theory Hours

Topics: IEEE/EU/UN AI ethics frameworks, explainable AI (XAI), ethical audits, model interpretability tools (LIME, SHAP), AI risk management, compliance mechanisms.

**Module 4: Responsible AI in Practice (CO4 – Apply) – 7 Theory Hours** Topics: Ethical AI toolkit walkthrough, responsible design lifecycle, real-world applications (facial recognition, healthcare AI), corporate and governmental case studies.

# Laboratory Experiments (15 Weeks / 30 Hours)

- 1. Analyze an AI dataset for embedded bias.
- 2. Apply fairness metrics (e.g., statistical parity, equal opportunity).
- 3. Investigate algorithmic discrimination in classifiers.
- 4. Evaluate AI models using LIME and SHAP.
- 5. Conduct an ethical audit using open-source AI audit tools.
- 6. Study a case involving ethical failures in AI.
- 7. Redesign an AI pipeline to meet GDPR standards.
- 8. Use IBM AI Fairness 360 Toolkit for bias detection and mitigation.
- 9. Conduct model explainability exercise using SHAP.
- 10. Implement data minimization and privacy-enhancing techniques.
- 11. Apply ethical scorecard to an existing ML project.
- 12. Compare transparency levels in different AI systems.
- 13. Group discussion on regulation frameworks (EU AI Act, OECD guidelines).
- 14. Develop a responsible AI policy document for a startup.
- 15. Mini-project: Create an AI solution that meets ethical compliance.

Course Code: AIE4023 Course Title: Explainable AI

**Type of Course:** Program Core (Integrated Theory and Lab) L-T-P-C: 2-0-2-3 **Total Hours:** 60 (30 Theory + 30 Lab)

# **Course Description:**

Explainable AI (XAI) focuses on understanding, interpreting, and explaining the decisionmaking process of AI models. This course explores explainability methods, trust, fairness, interpretability tools, and model transparency. Students will implement techniques using XAI libraries such as LIME, SHAP, and others.

## Course Outcomes (COs):

- **CO1 (Understand):** Understand the need for explainability in AI systems.
- CO2 (Analyze): Analyze XAI algorithms for interpreting ML models.
- **CO3 (Apply):** Apply LIME, SHAP, and similar tools for local and global model explanations.
- **CO4 (Apply):** Implement explainability in high-stake domains like healthcare and finance.

# Modules (30 Hours Theory):

# Module 1: Introduction to Explainability (CO1 – Understand) – 8 Hours

Definition of XAI, importance of interpretability, black-box vs white-box models, key principles – transparency, trust, fairness, accountability.

## Module 2: XAI Algorithms and Techniques (CO2 – Analyze) – 8 Hours

Local vs global explanations, post-hoc vs ante-hoc explainability, model-specific vs modelagnostic methods, use cases.

## Module 3: Tools for Explainability (CO3 – Apply) – 7 Hours

LIME (Local Interpretable Model-agnostic Explanations), SHAP (SHapley Additive exPlanations), PDPs, ICE plots, Anchors.

## Module 4: Responsible XAI in Practice (CO4 – Apply) – 7 Hours

Bias in explanation tools, applications in healthcare, finance, justice, case studies, integrating XAI with ML pipelines.

## Laboratory Experiments (15 Weeks / 30 Hours):

- 1. Install and set up LIME and SHAP packages in Python.
- 2. Use LIME to interpret predictions of a classifier.
- 3. Visualize feature importance using SHAP.
- 4. Compare LIME vs SHAP explanations for same data.
- 5. Generate ICE and PDP plots for a regression model.
- 6. Case study: Explaining credit scoring decisions.
- 7. Visualize attention in NLP models (e.g., BERT).
- 8. Implement model fairness auditing.
- 9. XAI for healthcare diagnostic systems.
- 10. Build a transparent rule-based model using decision trees.
- 11. Apply XAI to image classification (CNN).
- 12. Develop explanation reports for black-box models.
- 13. Group discussion on regulatory requirements for explainability.
- 14. Review of Explainable AI in industry white papers.
- 15. Mini project: Explainability-driven model deployment.

#### Textbooks:

- T1: Christoph Molnar, Interpretable Machine Learning, 2022 Edition.

# Course Code: AIE4024

Course Title: Digital Twins

**Type of Course:** Program Core (Integrated Theory and Lab) **L-T-P-C:** 2-0-2-3

Total Hours: 60 (30 Theory + 30 Lab)

#### **Course Description:**

Digital Twin refers to the digital replication of real-world systems. This course introduces digital twin architecture, data modeling, synchronization, real-time analytics, and applications across smart cities, healthcare, and manufacturing.

#### Course Outcomes (COs):

- CO1 (Understand): Understand the architecture and principles of digital twins.
- **CO2 (Analyze):** Analyze synchronization, modeling and data communication.
- CO3 (Apply): Apply simulation platforms to build digital twins.
- **CO4 (Apply):** Apply digital twins to solve problems in industrial and smart systems.

#### Modules (30 Hours Theory):

#### Module 1: Digital Twin Architecture (CO1 – Understand) – 8 Hours

Definition, history, key components – physical entity, virtual model, data connection. Differences between simulations and twins.

Module 2: Data Acquisition & Synchronization (CO2 – Analyze) – 8 Hours

Sensors, IoT integration, cloud services, data pipelines, real-time communication using MQTT, OPC-UA, edge processing.

Module 3: Tools & Modeling Platforms (CO3 – Apply) – 7 Hours

MATLAB/Simulink, AnyLogic, Unity3D, TwinCAT, IoT platforms (AWS, Azure IoT). Case studies of implementation.

Module 4: Applications & Industry Use Cases (CO4 – Apply) – 7 Hours

Smart manufacturing, predictive maintenance, smart cities, energy grid optimization, healthcare diagnostics.

## Lab Experiments (15 Weeks / 30 Hours):

- 1. Setup a basic twin simulation using Simulink.
- 2. Connect IoT sensor stream to virtual dashboard.
- 3. Build a 3D twin model using Unity.
- 4. Real-time data feed and update loop demonstration.
- 5. Twin for HVAC system control.
- 6. Twin modeling in healthcare monitoring.
- 7. Predictive maintenance simulation.
- 8. Visualization of twin diagnostics.
- 9. Real-time dashboard using PowerBI/Node-RED.
- 10. Cloud-hosted digital twin example.
- 11. Twin system with rule-based triggers.
- 12. Twin for robotics with feedback.
- 13. Smart energy grid simulation.
- 14. Comparison between simulation and twin.
- 15. Mini-project in a domain of choice.

#### **Textbooks:**

- **T1:** Rajkumar Buyya, *Digital Twin Technologies and Applications*, Springer, 2023.
- **T2:** Jeroen van Meggelen, *Digital Twin: From IoT to AI*, Wiley, 2021.

# Course Code: AIE4025

Course Title: Quantum Computing

Type of Course: Program Core (Integrated Theory and Lab)

L-T-P-C: 2-0-2-3

Total Hours: 60 (30 Theory + 30 Lab)

## **Course Description:**

This course provides an introduction to quantum computing including quantum logic, qubits, quantum circuits, gates, and algorithms. Students learn programming via simulators and real quantum computers using IBM Qiskit or similar tools.

## Course Outcomes (COs):

- CO1 (Understand): Explain quantum principles and concepts like superposition and entanglement.
- CO2 (Analyze): Analyze and construct quantum circuits using basic gates.
- CO3 (Apply): Implement algorithms like Grover's and Deutsch-Jozsa.
- CO4 (Apply): Use IBM Qiskit or equivalent platforms for quantum experimentation.

# Modules (30 Hours Theory):

Module 1: Basics of Quantum Computing (CO1 – Understand) – 8 Hours

Qubits, superposition, entanglement, quantum states, measurement, Bloch sphere.

Module 2: Quantum Logic & Circuits (CO2 - Analyze) - 8 Hours

Quantum gates – Pauli, Hadamard, CNOT, Toffoli, circuits, reversible logic.

Module 3: Quantum Algorithms (CO3 – Apply) – 7 Hours

Deutsch-Jozsa, Grover's Search, Quantum Fourier Transform (QFT), overview of Shor's Algorithm.

# Module 4: Quantum Platforms & Applications (CO4 – Apply) – 7 Hours

IBM Qiskit, circuit simulation, quantum teleportation, applications in cryptography, optimization.

# Lab Experiments (15 Weeks / 30 Hours):

- 1. Create and visualize single-qubit gates.
- 2. Implement Bell state.
- 3. Deutsch-Jozsa algorithm simulation.
- 4. Grover's search implementation.
- 5. Construct a reversible circuit.
- 6. Basic teleportation simulation.
- 7. Execute circuit on IBM quantum computer.
- 8. Study quantum measurement and noise.
- 9. Superdense coding protocol.
- 10. Compare classical vs quantum speed-up.
- 11. Use Qiskit Aqua for chemistry simulation.
- 12. Quantum circuit optimization.
- 13. Run hybrid quantum-classical workflow.
- 14. Explore QML (Quantum ML) basics.
- 15. Mini project using IBM Qiskit.

# Topics:

Bayes Classifier on Cloud Dataproc, Map Reduce and Hadoop Eco System, Quantization using Spark SQL, Bayes Classification using Pig

# **Targeted Applications & Tools that can be used:**

Targeted Industries like Banking, Transport, e-commerce, healthcare and many more are using data science to make optimal Decisions. The usage of data science helps in rising sales. It can explore historic data, make comparisons and analyses of the market and provide recommendations.

Target Jobs Data Scientist, Data Architect, Data Engineer, Statistician. **Tools:** 

- Apache Spark
- Jupyter
- Weka

# Project work/Assignment:

# Mini Project:

# Walmart Sales Forecasting in Cloud

- Predict the sales across various departments in each store.
- Predict the effect of markdowns on the sales during the holiday seasons.

# Term Assignments:

Consider a Dataset on Bird communities that needs to be analyzed. The data has three columns, a date, a common name, and a count of the number of individuals.

• Count the total number of individuals of each species that were seen in each data file.

• Sort based on the total number of individuals.

Course Code: DSC4017	Course Title: Social Network Analysis303Type of Course: Discipline Elective Theory OnlyL- T-P- C303					
Version No.	2.0					
Course Pre- requisites						
Anti-requisites	NIL					
Course Description	<ul> <li>The rapid growth of social media has given the mass consumers a powerful tool to create knowledge and propagate opinions. At the same time, social media has created an unprecedented opportunity for companies to engage real-time interactions with consumers. In addition, the size and richness of social media data has provided companies an unusually deep reservoir of consumer insights to transform the business and marketing operations.</li> <li>The social media analytics course will enable students to grasp the analytics tools to leverage social media data. The course will introduce tools such as engagement analytics, sentiment analysis, topic modeling, social network analysis, identification of influencers and evaluation of social media strategy.</li> </ul>					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Social Network Analysis and attain EMPLOYABILITY SKILLS through PROBLEM SOLVING techniques					
Course Outcomes	On successful completion of this course the students shall be able to: CO1: Interpret the social network landscape and appreciate the importance of analytics in business. CO2: Apply appropriate native analytics and measurement tools to analyze data in different social platforms CO3: Use Natural Language Processing for efficient mining of web data CO4: Demonstrate meaningful insights with actionable and strategic recommendations.

#### **Twitter Summaries**

Twitter is famous for its character-limited posts. We can use this social media platform for an innovative summary-writing project. Consolidate the takeaways from a topic or reading discussed. Students should be able to understand the text, coherently organize the points and capture the central idea with 280 words, which is the character limit on Twitter.

#### Hashtag activism

Information and communication technologies provide a tremendous tool for spreading awareness and highlighting issues that may not be adequately represented in the mainstream media. Hashtag activism, in particular is concerned with driving social media traffic to oft-neglected topics. We can devise a project-based activity to teach our students about social justice, human rights, equality etc.

In this course, our objective is to give an idea regarding the application of probability theory in the modeling and analyzing different kinds of computer systems. We particularly focus on time complexity analysis of different algorithms, reliability analysis of networks, physical layer security as well as resource allocation in 5G and beyond. The target audience for this course is Masters and Ph.D., students. The student should have basic Probability concepts as a pre-requisite. With a good knowledge of different techniques of applying Probability theory in modeling/analyzing computer systems, the students will be able to develop efficient solutions for complex and challenging real-life problems.

# Course Code: DSC4019

Course Title: Digital Image Processing

L-T-P-C: 2-0-2-3

Type of Course: Program Core

Total Hours: 30 Hours Theory + 15 Weeks Lab

# **Course Description:**

This course introduces fundamental techniques for digital image processing and analysis, including enhancement, transformation, segmentation, and recognition. It focuses on practical implementation using open-source tools such as OpenCV and Python.

# Course Objectives:

- To understand the fundamentals of image processing.
- To explore image enhancement, filtering, and segmentation techniques.
- To learn image compression and object recognition methods.

• To apply open-source libraries for real-time image processing applications.

# **Course Outcomes:**

- CO1 (Analyze): Analyze image representations and enhancement techniques.
- CO2 (Analyze): Analyze image segmentation and transformation techniques.
- CO3 (Apply): Apply filtering and compression algorithms.
- CO4 (Apply): Apply image classification using machine learning models.

# Modules:

Module 1 – Image Fundamentals and Enhancement (CO1) – 8 Hours

Digital image fundamentals – pixel operations, image representation, histogram

equalization, contrast enhancement, intensity transformation, color spaces.

Module 2 – Image Filtering and Transformation (CO2) – 7 Hours

Spatial domain filtering – smoothing and sharpening, frequency domain filtering – Fourier transform, convolution, edge detection – Sobel, Canny, Laplacian.

Module 3 - Segmentation and Compression (CO3) - 7 Hours

Segmentation - thresholding, clustering-based methods, region growing, edge-based

segmentation. Compression – lossless and lossy methods, run-length, Huffman coding, JPEG.

Module 4 – Object Detection and Machine Learning Applications (CO4) – 8 Hours Feature extraction – corners, blobs, SIFT, HOG, classification using k-NN, SVM, basics of CNNs for image recognition.

# Lab Experiments (15 Weeks)

- 1. Perform basic operations on images using OpenCV (read, write, resize, crop).
- 2. Histogram equalization and contrast adjustment.
- 3. Implement smoothing and sharpening filters.
- 4. Frequency domain filtering and edge detection.
- 5. Implement segmentation using thresholding and region growing.
- 6. Color space conversion and masking.
- 7. Morphological operations: erosion, dilation.
- 8. Image compression using RLE and Huffman coding.
- 9. Apply SIFT and HOG for feature extraction.
- 10. Object classification using k-NN.
- 11. Object classification using SVM.
- 12. Introduction to CNN for image classification.
- 13. Mini-project planning dataset selection.
- 14. Implementation of mini-project (phase 1).
- 15. Final implementation and demo.

Course Code: DSC4020 Course Title: Data Mining and Pattern Recognition

L-T-P-C: 2-0-2-3

Type of Course: Program Core

Total Hours: 30 Hours Theory + 15 Weeks Lab

# **Course Description:**

This course focuses on techniques and models used in data mining and pattern recognition. It emphasizes classification, clustering, association rule mining, and pattern discovery with practical applications using Python and data science libraries.

# **Course Objectives:**

- To understand core concepts of data mining and pattern recognition.
- To analyze data using clustering, classification, and pattern analysis techniques. •
- To apply data mining algorithms for real-world datasets.

• To implement models for association rules and pattern extraction.

# **Course Outcomes:**

- CO1 (Analyze): Analyze the data preprocessing and preparation techniques.
- CO2 (Analyze): Analyze classification and clustering algorithms.
- CO3 (Apply): Apply association rule mining and dimensionality reduction.
- **CO4 (Apply):** Apply pattern recognition techniques using supervised and unsupervised learning.

# Modules:

# Module 1 – Introduction and Data Preprocessing (CO1) – 8 Hours

Data mining tasks, KDD process, data types, cleaning, integration, normalization, transformation, reduction.

# Module 2 – Classification and Clustering (CO2) – 7 Hours

Classification: Decision Trees, k-NN, Naïve Bayes, model evaluation. Clustering: Kmeans, hierarchical clustering, DBSCAN.

## Module 3 - Association Rules and Feature Selection (CO3) - 7 Hours

Apriori and FP-Growth algorithms, support, confidence, lift. Dimensionality reduction – PCA, LDA.

# Module 4 – Pattern Recognition and Applications (CO4) – 8 Hours

Supervised vs unsupervised learning, SVM, ROC curves, case studies – fraud detection, recommendation systems.

# Lab Experiments (15 Weeks)

- 1. Data preprocessing cleaning, transformation.
- 2. Classification using Decision Trees.
- 3. Classification using k-NN.
- 4. Naïve Bayes classifier.
- 5. K-means clustering.
- 6. Hierarchical and DBSCAN clustering.
- 7. Association rule mining using Apriori.
- 8. FP-Growth algorithm.
- 9. Dimensionality reduction using PCA.
- 10. LDA-based feature selection.
- 11. Pattern classification using SVM.
- 12. Evaluate models using accuracy, precision, recall, F1-score.
- 13. ROC curve analysis.
- 14. Case study implementation fraud detection.
- 15. Final mini-project on pattern classification.

Course Code: DSC4021

Course Title: Graph Analytics and Network Science

L-T-P-C: 2-0-2-3

Type of Course: Program Core

Total Hours: 30 Hours Theory + 15 Weeks Lab

# **Course Description:**

This course explores the principles of graph theory and network science as applied to real-world problems in data science, social networks, biology, and web analytics. Students learn to model, analyze, and interpret network structures using computational tools. **Course Objectives:** 

- To understand graph models and their applications in data analytics.
- To analyze large-scale networks using centrality, connectivity, and clustering.
- To apply graph algorithms for community detection and shortest paths.
- To implement network analytics using Python libraries.

# Course Outcomes:

- CO1 (Analyze): Analyze graph structures and properties.
- CO2 (Analyze): Analyze metrics like centrality, clustering, and paths.
- CO3 (Apply): Apply graph algorithms in real-world networks.
- CO4 (Apply): Apply network analysis using tools like NetworkX.

# Modules:

### Module 1 - Graph Fundamentals and Representations (CO1) - 8 Hours

Graphs and their types, adjacency matrix and list, graph traversal (DFS, BFS), network data modeling.

#### Module 2 - Network Metrics and Structures (CO2) - 7 Hours

Degree, betweenness, closeness, eigenvector centrality, clustering coefficients, path lengths.

### Module 3 – Graph Algorithms and Applications (CO3) – 7 Hours

Shortest paths (Dijkstra, Bellman-Ford), connected components, community detection (modularity, Louvain method), page rank.

### Module 4 – Tools and Case Studies in Network Science (CO4) – 8 Hours

NetworkX, Gephi, Cytoscape for visual analysis. Applications in epidemiology, recommendation systems, web graphs, citation networks.

### Lab Experiments (15 Weeks)

- 1. Create and visualize graphs using NetworkX.
- 2. Implement BFS and DFS.
- 3. Compute degree and other centrality measures.
- 4. Apply clustering coefficient and shortest path algorithms.
- 5. Analyze real-world datasets social media graphs.
- 6. Apply PageRank algorithm.
- 7. Community detection using Louvain method.
- 8. Explore visualization using Gephi.
- 9. Citation network analysis.
- 10. Web graph and hyperlink structure.
- 11. Recommendation systems using link prediction.
- 12. Case study: Epidemic modeling using graphs.
- 13. Mini-project planning dataset exploration.
- 14. Implementation phase 1.
- 15. Final implementation and report submission.

## Course Code: DSC4022

Course Title: Geospatial Data Science

L-T-P-C: 2-0-2-3

Type of Course: Program Core

Total Hours: 30 Hours Theory + 15 Weeks Lab

## **Course Description:**

This course provides students with foundational and advanced knowledge of geospatial data science. Topics include geospatial data acquisition, storage, analysis, and visualization. It emphasizes the use of GIS software and Python for solving spatial problems.

## **Course Objectives:**

- To understand concepts of spatial data and GIS.
- To perform spatial analysis using Python and GIS tools.
- To explore satellite imagery and remote sensing data.
- To implement geospatial visualization and data-driven decision-making.

# **Course Outcomes:**

- CO1 (Analyze): Analyze geospatial data types, formats, and storage methods.
- CO2 (Analyze): Analyze spatial relationships and visualization techniques.
- CO3 (Apply): Apply spatial analytics using Python and open GIS tools.
- CO4 (Apply): Apply geospatial analysis to real-world case studies.

# Modules:

# Module 1 - Introduction to Geospatial Data (CO1) - 8 Hours

Types of spatial data – raster and vector, coordinate reference systems, GPS and GIS fundamentals, geospatial file formats (GeoJSON, Shapefile), data sources (OpenStreetMap, Landsat).

# Module 2 - Spatial Analysis Techniques (CO2) - 7 Hours

Map overlays, buffers, proximity analysis, spatial joins, point pattern analysis, geocoding, spatial interpolation.

# Module 3 - Geospatial Tools and Visualization (CO3) - 7 Hours

Use of Python libraries (GeoPandas, Shapely, Folium), QGIS overview, heat maps, choropleth maps, 3D maps, satellite data visualization.

### Module 4 - Applications and Case Studies (CO4) - 8 Hours

Disaster management, urban planning, environmental monitoring, location-based services, agriculture and health applications using geospatial insights.

### Lab Experiments (15 Weeks)

1. Introduction to GIS tools and dataset loading.

- 2. Coordinate system conversion.
- 3. Vector data manipulation using QGIS.
- 4. Raster data processing.
- 5. Spatial joins and querying.
- 6. Buffer and overlay analysis.
- 7. Visualizing maps using Folium.
- 8. Generating heatmaps with Python.
- 9. Working with satellite data.
- 10. Land use classification.
- 11. Distance and network analysis.
- 12. Case study: Urban development.
- 13. Mini project planning scenario selection.
- 14. Implementation of mini project phase 1.
- 15. Final project submission and demo.

# Course Code: DSC4023

Course Title: Marketing and Consumer Analytics

L-T-P-C: 3-0-0-3

Type of Course: Program Core

Total Hours: 45 Hours Theory

# **Course Description:**

This course focuses on analytical tools and techniques to understand, predict, and influence consumer behavior. It combines marketing theory with data analytics to drive decision-making and optimize strategies.

# Course Objectives:

- To introduce students to the fundamentals of marketing analytics.
- To enable the application of statistical and machine learning models to consumer data.
- To analyze consumer trends, segments, and preferences.
- To explore marketing campaign effectiveness and ROI.

### **Course Outcomes:**

- **CO1 (Analyze):** Analyze market structures and consumer segmentation using data.
- CO2 (Analyze): Analyze brand preferences and buying behavior patterns.
- CO3 (Apply): Apply predictive models to consumer and campaign data.

 CO4 (Apply): Apply analytics for pricing, churn prediction, and recommendation systems.

# Modules:

**Module 1 – Introduction to Marketing Analytics (CO1)** – 11 Hours Overview of marketing data and KPIs, customer lifecycle analytics, customer segmentation, marketing mix modeling, basic statistical tools in consumer behavior.

**Module 2 – Consumer Behavior and Segmentation (CO2)** – 11 Hours Buyer personas, RFM analysis, clustering techniques for consumer profiles, sentiment analysis, analysis of clickstream and transactional data.

## Module 3 – Predictive Analytics in Marketing (CO3) – 12 Hours

Regression techniques, decision trees, lift charts, marketing funnel analytics, ROI measurement, lead scoring and sales conversion.

### Module 4 – Advanced Topics in Consumer Analytics (CO4) – 11 Hours Churn analysis, price optimization models, recommender systems, omni-channel strategy, personalization using machine learning, ethical use of consumer data. Textbooks:

#### Course Code: DSC4024 Course Title: Multimodal Learning

L-T-P-C: 2-0-2-3

Type of Course: Program Core

Total Hours: 30 Hours Theory + 15 Weeks Lab

# **Course Description:**

This course covers foundational and advanced concepts in multimodal learning, where models are trained on and infer from multiple data modalities (e.g., text, image, audio). It explores architectures, fusion techniques, alignment strategies, and real-world applications in AI.

# Course Objectives:

- To understand the challenges of combining data from multiple modalities.
- To explore machine learning methods for multimodal representation learning.
- To implement models using fusion, alignment, and translation techniques.
- To apply multimodal systems to practical use cases.

# **Course Outcomes:**

- **CO1 (Analyze):** Analyze multimodal data structures and relationships.
- CO2 (Analyze): Analyze fusion strategies for learning from multiple modalities.
- **CO3 (Apply):** Apply machine learning models for multimodal alignment and translation.
- **CO4 (Apply):** Apply deep learning architectures to solve real-world multimodal tasks.

### Modules:

## Module 1 – Introduction to Multimodal Learning (CO1) – 8 Hours

Modalities overview (vision, audio, text), challenges of heterogeneous data, early vs late fusion, joint representations, multimodal applications (e.g., VQA, speech-to-text).

## Module 2 – Fusion and Representation Learning (CO2) – 7 Hours

Fusion strategies: concatenation, bilinear pooling, attention mechanisms. Shared representation learning, autoencoders, deep multimodal embeddings.

# Module 3 - Alignment and Translation (CO3) - 7 Hours

Alignment tasks – image-text alignment, cross-modal retrieval. Multimodal translation – captioning, speech recognition. Metric learning and triplet loss.

Module 4 - Advanced Architectures and Applications (CO4) - 8 Hours

Transformers for multimodal tasks, BERT-like models for text+image. Case studies – healthcare, robotics, social media analytics, emotion detection.

## Lab Experiments (15 Weeks)

- 1. Text and image preprocessing for multimodal input.
- 2. Fusion of tabular and image data.
- 3. Audio-visual dataset preparation.
- 4. Feature extraction using CNN and RNN.
- 5. Early vs late fusion implementations.
- 6. Image-caption alignment using attention.
- 7. Cross-modal retrieval.
- 8. Speech-to-text using pre-trained APIs.
- 9. Text-to-image generation using diffusion models.
- 10. Image classification with multimodal data.
- 11. Emotion detection using voice and facial cues.
- 12. Multimodal sentiment analysis.
- 13. Mini-project planning.
- 14. Mini-project implementation phase 1.
- 15. Final presentation and evaluation.

### Course Code: DSC4025

Course Title: Intelligent Decision Support Systems

L-T-P-C: 2-0-2-3

Type of Course: Program Core

Total Hours: 30 Hours Theory + 15 Weeks Lab

# **Course Description:**

This course focuses on building intelligent systems that assist in decision-making using artificial intelligence, machine learning, and expert systems. Topics include knowledgebased systems, inference mechanisms, decision analysis models, and real-world applications.

## **Course Objectives:**

- To understand the architecture of decision support systems.
- To apply AI methods for decision making.
- To evaluate multi-criteria decision analysis (MCDA).
- To develop intelligent support systems using real data.

# **Course Outcomes:**

- CO1 (Analyze): Analyze decision problems using intelligent systems principles.
- **CO2 (Analyze):** Analyze decision support models for structured and unstructured data.
- CO3 (Apply): Apply AI and ML tools in decision-making applications.
- **CO4 (Apply):** Apply expert system concepts in intelligent DSS development. **Modules:**

#### **Module 1 – Foundations of Decision Support Systems (CO1)** – 8 Hours Definition and scope of DSS, types of decisions, decision-making processes, DSS architecture and components, DSS vs. MIS, introduction to intelligent DSS.

### Module 2 - Knowledge-Based Decision Systems (CO2) - 7 Hours

Rule-based systems, inference engines, decision trees, fuzzy logic, uncertainty handling, introduction to expert systems, real-world applications.

### Module 3 - Machine Learning in Decision Support (CO3) - 7 Hours

Regression and classification for decision support, ensemble models, clustering for customer segmentation, neural networks in DSS, feature selection, predictive modeling.

**Module 4 – Multi-Criteria Decision Making and Advanced DSS (CO4)** – 8 Hours MCDA – AHP, TOPSIS, ELECTRE; real-time DSS, web-based DSS, recommendation

engines, DSS in healthcare, finance, and logistics.

# Lab Experiments (15 Weeks)

- 1. Explore DSS architecture through case study simulation.
- 2. Build a rule-based expert system using Python.
- 3. Design a decision tree classifier using scikit-learn.
- 4. Apply fuzzy logic to decision-making.
- 5. Develop a predictive model for customer churn.
- 6. Perform clustering for market segmentation.
- 7. Implement regression for price forecasting.
- 8. Integrate ML model in DSS dashboard.
- 9. Build a simple recommender system.
- 10. Apply AHP for decision ranking.

- 11. Apply TOPSIS to a real dataset.
- 12. Case study implementation (finance or healthcare).
- 13. Mini-project ideation and planning.
- 14. Mini-project development.
- 15. Mini-project presentation.
