PRESIDENCY UNIVERSITY

PART A – PROGRAM REGULATIONS

1. Vision & Mission of the University and the School / Department

1.1 Vision of the University

To be a Value-driven Global University, excelling beyond peers and creating professionals of integrity and character, having concern and care for society.

1.2 Mission of the University

- Commit to be an innovative and inclusive institution by seeking excellence in teaching, research and knowledge-transfer.
- Pursue Research and Development and its dissemination to the community, at large.
- Create, sustain and apply learning in an interdisciplinary environment with consideration for ethical, ecological and economic aspects of nation building.
- Provide knowledge-based technological support and services to the industry in its growth and development.
- To impart globally-applicable skill-sets to students through flexible course offerings and support industry's requirement and inculcate a spirit of new-venture creation.

1.3 Vision of Presidency School of Computer Science and Engineering

To be a value-based, practice-driven Presidency School of Computer Science and Engineering, committed to developing globally competent engineers, dedicated to developing cutting-edge technology to enhance the quality of life.

1.4 Mission of Presidency School of Computer Science and Engineering

- Cultivate a practice-driven environment with computing-based pedagogy, integrating theory and practice.
- Attract and nurture world-class faculty to excel in teaching and research in the realm of computing sciences.
- Establish state-of-the-art computing facilities for effective teaching and learning experiences.
- Promote interdisciplinary studies to nurture talent for global impact.
- Instill entrepreneurial and leadership skills to address social, environmental and community needs.

2. Preamble to the Program Regulations and Curriculum

This is the subset of Academic Regulations and it is to be followed as a requirement for the award of M.Tech degree.

The Curriculum is designed to take into the factors listed in the Choice Based Credit System (CBCS) with focus on Social Project Based Learning, Industrial Training, and Internship to enable the students to become eligible and fully equipped for employment in industries, choose higher studies or entrepreneurship.

In exercise of the powers conferred by and in discharge of duties assigned under the relevant provision(s) of the Act, Statutes and Academic Regulations of the University, the Academic Council hereby makes the following Regulations.

3. Short Title and Applicability

- a. These Regulations shall be called the Master of Technology Degree Program Regulations and Curriculum 2025-2027.
- b. These Regulations are subject to, and pursuant to the Academic Regulations.
- c. These Regulations shall be applicable to the ongoing Master of Technology Degree Programs of the 2025-2027 batch, and to all other Master of Technology Degree Programs which may be introduced in future.
- d. These Regulations shall supersede all the earlier Master of Technology Degree Program Regulations and Curriculum, along with all the amendments thereto.
- e. These Regulations shall come into force from the Academic Year 2024-2025.

4. Definitions

In these Regulations, unless the context otherwise requires:

- a. "Academic Calendar" means the schedule of academic and miscellaneous events as approved by the Vice Chancellor;
- b. "Academic Council" means the Academic Council of the University;
- c. "Academic Regulations" means the Academic Regulations, of the University;
- d. "Academic Term" means a Semester or Summer Term;
- e. "Act" means the Presidency University Act, 2013;
- f. "AICTE" means All India Council for Technical Education;
- g. "Basket" means a group of courses bundled together based on the nature/type of the course;
- h. "BOE" means the Board of Examinations of the University;
- i. "BOG" means the Board of Governors of the University;
- j. "BOM" means the Board of Management of the University;
- k. "BOS" means the Board of Studies of a particular Department/Program of Study of the University;
- l. "CGPA" means Cumulative Grade Point Average as defined in the Academic Regulations;
- m. "Clause" means the duly numbered Clause, with Sub-Clauses included, if any, of these Regulations;
- n. "COE" means the Controller of Examinations of the University;
- o. "Course In Charge" means the teacher/faculty member responsible for developing and organising the delivery of the Course;
- p. "Course Instructor" means the teacher/faculty member responsible for teaching and evaluation of a Course;
- q. "Course" means a specific subject usually identified by its Course-code and Course-title, with specified credits and syllabus/course-description, a set of references, taught by some teacher(s)/course-instructor(s) to a specific class (group of students) during a specific Academic Term;
- r. "Curriculum Structure" means the Curriculum governing a specific Degree Program offered by the University, and, includes the set of Baskets of Courses along with minimum credit requirements to be earned under each basket for a degree/degree

with specialization/minor/honours in addition to the relevant details of the Courses and Course catalogues (which describes the Course content and other important information about the Course). Any specific requirements for a particular program may be brought into the Curriculum structure of the specific program and relevant approvals should be taken from the BOS and Academic Council at that time.

- s. "DAC" means the Departmental Academic Committee of a concerned Department/Program of Study of the University;
- t. "Dean" means the Dean / Director of the concerned School;
- u. "Degree Program" includes all Degree Programs;
- v. "Department" means the Department offering the degree Program(s) / Course(s) / School offering the concerned Degree Programs / other Administrative Offices;
- w. "Discipline" means specialization or branch of M.Tech. Degree Program;
- x. "HOD" means the Head of the concerned Department;
- y. "L-T-P-C" means Lecture-Tutorial-Practical-Credit – refers to the teaching – learning periods and the credit associated;
- z. "MOOC" means Massive Open Online Courses;
- aa. "MOU" means the Memorandum of Understanding;
- bb. "NPTEL" means National Program on Technology Enhanced Learning;
- cc. "Parent Department" means the department that offers the Degree Program that a student undergoes;
- dd. "Program Head" means the administrative head of a particular Degree Program/s;
- ee. "Program Regulations" means the Master of Technology Degree Program Regulations and Curriculum, 2025-2027;
- ff. "Program" means the Masterr of Technology (M.Tech.) Degree Program;
- gg. "PSCS" means the Presidency School of of Computer Science and Engineering;
- hh. "Registrar" means the Registrar of the University;
- ii. "School" means a constituent institution of the University established for monitoring, supervising and guiding, teaching, training and research activities in broadly related fields of studies;
- jj. "Section" means the duly numbered Section, with Clauses included in that Section, of these Regulations;
- kk. "SGPA" means the Semester Grade Point Average as defined in the Academic Regulations;
- ll. "Statutes" means the Statutes of Presidency University;
- mm. "Sub-Clause" means the duly numbered Sub-Clause of these Program Regulations;
- nn. "Summer Term" means an additional Academic Term conducted during the summer break (typically in June-July) for a duration of about eight (08) calendar weeks, with a minimum of thirty (30) University teaching days;
- oo. "SWAYAM" means Study Webs of Active Learning for Young Aspiring Minds.
- pp. "UGC" means University Grant Commission;
- qq. "University" means Presidency University, Bengaluru; and
- rr. "Vice Chancellor" means the Vice Chancellor of the University.

5. Program Description

The Master of Technology Degree Program Regulations and Curriculum 2025-2027 are subject to, and, pursuant to the Academic Regulations. These Program Regulations shall be applicable to the following ongoing Master of Technology (M.Tech.) Degree Programs of 2025-2027 offered by the Presidency School of Engineering (PSOE):

1. Master of Technology in Computer Science and Engineering Specialization in Artificial Intelligence.M.Tech. (AIE)
2. Master of Technology in Computer Science and Engineering Specialization in Data Science.M.Tech. (DSC)

5.1 These Program Regulations shall be applicable to other similar programs, which may be introduced in future.

5.2 These Regulations may evolve and get amended or modified or changed through appropriate approvals from the Academic Council, from time to time, and shall be binding on all concerned.

5.3 The effect of periodic amendments or changes in the Program Regulations, on the students admitted in earlier years, shall be dealt with appropriately and carefully, so as to ensure that those students are not subjected to any unfair situation whatsoever, although they are required to conform to these revised Program Regulations, without any undue favour or considerations

6. Minimum and Maximum Duration

- 6.1 Master of Technology Degree Program is a Two-Year, Full-Time Semester based program. The minimum duration of the M.Tech. Program is four (02) years and each year comprises of two academic Semesters (Odd and Even Semesters) and hence the duration of the M.Tech. program is four (04) Semesters.
- 6.2 A student who for whatever reason is not able to complete the Program within the normal period or the minimum duration (number of years) prescribed for the Program, may be allowed a period of two years beyond the normal period to complete the mandatory minimum credits requirement as prescribed by the concerned Program Regulations and Curriculum. In general, the permissible maximum duration (number of years) for completion of Program is 'N' + 2 years, where 'N' stands for the normal or minimum duration (number of years) for completion of the concerned Program as prescribed by the concerned Program Regulations and Curriculum.
- 6.3 The time taken by the student to improve Grades/CGPA, and in case of temporary withdrawal/re-joining (Refer to Clause 16.1 of Academic Regulations), shall be counted in the permissible maximum duration for completion of a Program.
- 6.4 In exceptional circumstances, such as temporary withdrawal for medical exigencies where there is a prolonged hospitalization and/or treatment, as certified through hospital/medical records, women students requiring extended maternity break (certified by registered medical practitioner), and, outstanding sportspersons

representing the University/State/India requiring extended time to participate in National/International sports events, a further extension of one (01) year may be granted on the approval of the Academic Council.

- 6.5 The enrolment of the student who fails to complete the mandatory requirements for the award of the concerned Degree (refer Section 19.0 of Academic Regulations) in the prescribed maximum duration (Sub-Clauses 18.1 and 18.2 of Academic Regulations), shall stand terminated and no Degree shall be awarded.

7 Programme Educational Objectives (PEO)

After four years of successful completion of the program, the graduates shall be:

- PEO 01: To prepare graduates who will be successful professionals in industry, government, academia, research, entrepreneurial pursuit and consulting firms.
- PEO 02: To prepare graduates who will contribute to society as broadly educated, expressive, ethical and responsible citizens with proven expertise.
- PEO 03: To prepare graduates who will achieve peer recognition as individuals or in a team through demonstration of good analytical, research, design and implementation skills.
- PEO 04: To prepare graduates who will thrive to pursue life-long reflective learning to fulfil their goals.

8 Programme Outcomes (PO) and Programme Specific Outcomes (PSO)

8.1 Programme Outcomes (PO)

On successful completion of the Program, the students shall be able to:

- PO1: An ability to analysis, manage and supervise engineering systems and processes with the aid of appropriate advanced tools.
- PO2: An ability to design a system and process within constraints of health, safety, security, economics, manufacturability to meet desired needs.
- PO3: An ability to carry out research in the respective discipline and publish the findings.
- PO4: An ability to effectively communicate and transfer the knowledge/ skill to stakeholders.
- PO5: An ability to realize the impact of engineering solutions in a contemporary, global, economical, environmental, and societal context for sustainable development.

8.2 Program Specific Outcomes (PSOs):

On successful completion of the Program, the students shall be able to:

PSO 1:

Apply foundational and advanced data science methodologies to analyze, model, and extract meaningful insights from complex and large-scale datasets for solving real-world problems across multiple domains.

PSO 2:

Demonstrate proficiency in designing and deploying scalable, data-driven systems using appropriate tools, technologies, and platforms to support informed decision-making and innovation.

PSO 3:

Exhibit ethical and responsible data handling practices while ensuring data privacy, transparency, and fairness in analytics and machine learning applications for societal and industrial impact.

9 Admission Criteria (as per the concerned Statutory Body)

The University admissions shall be open to all persons irrespective of caste, class, creed, gender or nation. All admissions shall be made on the basis of merit in the qualifying examinations; provided that forty percent of the admissions in all Programs of the University shall be reserved for the students of Karnataka State and admissions shall be made through a Common Entrance Examination conducted by the State Government or its agency and seats shall be allotted as per the merit and reservation policy of the State Government from time to time. The admission criteria to the M.Tech. Program is listed in the following Sub-Clauses:

- Have a Bachelor's degree in engineering (B.E./B.Tech) from a recognized university.
- Have a minimum aggregate of 50% in your Bachelor's degree.
- Have a minimum aggregate of 45% in your Bachelor's degree if you belong to a reserved category.
- Have to submit score card from any state or central entrance exam or the Presidency University admission qualifying exam

10. Specific Regulations regarding Assessment and Evaluation (including the Assessment Details of NTCC Courses, Weightages of Continuous Assessment and End Term Examination for various Course Categories)

10.1 The academic performance evaluation of a student in a Course shall be according to the University Letter Grading System based on the class performance distribution in the Course.

10.2 Academic performance evaluation of every registered student in every Course registered by the student is carried out through various components of Assessments spread across the Semester. The nature of components of Continuous Assessments and the weightage given to each component of Continuous Assessments (refer Clause 8.8 of academic regulations) shall be clearly defined in the Course Plan for every Course, and approved by the DAC.

10.3 Format of the End-Term examination shall be specified in the Course Plan.

10.4 Grading is the process of rewarding the students for their overall performance in each Course. The University follows the system of Relative Grading with statistical approach to classify the students based on the relative performance of the students registered in the concerned Course except in the following cases:

- Non-Teaching Credit Courses (NTCC)

Absolute grading method may be adopted, where necessary with prior approval of concerned DAC.

Grading shall be done at the end of the Academic Term by considering the aggregate performance of the student in all components of Assessments prescribed for the Course. Letter Grades shall be awarded to a student based on her/his overall performance relative to the class performance distribution in the concerned Course. These Letter Grades not only indicate a qualitative assessment of the student's performance but also carry a quantitative (numeric) equivalent called the Grade Point.

10.5 Assessment Components and Weightage

Table 1: Assessment Components and Weightage for different category of Courses		
Nature of Course and Structure	Evaluation Component	Weightage
Lecture-based Course L component in the L-T-P Structure is predominant (more than 1) (Examples: 3-0-0; 3-0-2; 2-1-0; 2-0-2, 2-0-4 etc.)	Continuous Assessments	50%
	End Term Examination	50%
Lab/Practice-based Course P component in the L-T-P Structure is predominant (Examples: 0-0-4; 1-0-4; 1-0-2; etc.)	Continuous Assessments	50%
	End Term Examination	50%
Skill based Courses like Industry Internship, Capstone project, Research Dissertation, Integrative Studio, Interdisciplinary Project, Summer / Short Internship, Social Engagement / Field Projects, Portfolio, and such similar Non-Teaching Credit Courses, where the pedagogy does not lend itself to a typical L-T-P structure	Guidelines for the assessment components for the various types of Courses, with recommended weightages, shall be specified in the concerned Program Regulations and Curriculum / Course Plans, as applicable.	

The exact weightages of Evaluation Components shall be clearly specified in the concerned PRC and respective Course Plan.

Normally, for Practice/Skill based Courses, without a defined credit structure (L-P-C) [NTCC], but with assigned Credits (as defined in Clause 5.2 of the Academic Regulations), the method of evaluation shall be based only on Continuous Assessments. The various components of Continuous Assessments, the distribution of weightage among such components, and the method of evaluation/assessment, shall be as decided and indicated in the Course Plan/PRC. The same shall be approved by the respective DAC.

10.6 Minimum Performance Criteria:

10.6.1 Theory only Course and Lab/Practice Embedded Theory Course

A student shall satisfy the following minimum performance criteria to be eligible to earn the credits towards the concerned Course:

- a. A student must obtain a minimum of 30% of the total marks/weightage assigned to the End Term Examinations in the concerned Course.
- b. The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of the components of Continuous Assessments, Mid Term Examinations and End Term Examinations in the concerned Course.

10.6.2 Lab/Practice only Course and Project Based Courses

The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of all assessment components in the concerned Course.

- 10.6.3** A student who fails to meet the minimum performance criteria listed above in a Course shall be declared as "Fail" and given "F" Grade in the concerned Course. For theory Courses, the student shall have to re-appear in the "Make-Up Examinations" as scheduled by the University in any subsequent semester, or, re-appear in the End Term Examinations of the same Course when it is scheduled at the end of the following Semester or Summer Term, if offered. The marks obtained in the Continuous Assessments (other than the End Term Examination) shall be carried forward and be included in computing the final grade, if the student secures the minimum requirements (as per sub-clause 8.9.1 and 8.9.2 of academic regulations) in the "Make-Up Examinations" of the concerned Course. Further, the student has an option to re-register for the Course and clear the same in the summer term/ subsequent semester if he/she wishes to do so, provided the Course is offered.

11 Additional clarifications - Rules and Guidelines for Transfer of Credits from MOOC, etc. – Note: These are covered in Academic Regulations

The University allows students to acquire credits from other Indian or foreign institutions and/or Massive Open Online Course (MOOC) platforms, subject to prior approval. These

credits may be transferred and counted toward fulfilling the minimum credit requirements for the award of a degree. The process of transfer of credits is governed by the following rules and guidelines:

- 11.1** The transfer of credits shall be examined and recommended by the Equivalence Committee (Refer ANNEXURE B of academic regulations) and approved by the Dean - Academics.
- 11.2** Students may earn credits from other Indian or foreign Universities/Institutions with which the University has an MOU, and that MOU shall have specific provisions, rules and guidelines for transfer of credits. These transferred credits shall be counted towards the minimum credit requirements for the award of the degree.
- 11.3** Students may earn credits by registering for Online Courses offered by *Study Web of Active Learning by Young and Aspiring Minds* (SWAYAM) and *National Program on Technology Enhanced Learning* (NPTEL), or other such recognized Bodies/ Universities/Institutions as approved by the concerned BOS and Academic Council from time to time. The concerned School/Parent Department shall publish/include the approved list of Courses and the rules and guidelines governing such transfer of credits of the concerned Program from time to time. The Rules and Guidelines for the transfer of credits specifically from the Online Courses conducted by SWAYAM/ NPTEL/ other approved MOOCs are as stated in the following Sub-Clauses:
 - 11.3.1** A student may complete SWAYAM/NPTEL/other approved MOOCs as mentioned in Clause 11.3 (as per academic regulations) and transfer equivalent credits to partially or fully complete the mandatory credit requirements of Discipline Elective Courses and/or the mandatory credit requirements of Open Elective Courses as prescribed in the concerned Curriculum Structure. However, it is the sole responsibility of the student to complete the mandatory credit requirements of the Discipline Elective Courses and the Open Elective Courses as prescribed by the Curriculum Structure of the concerned Program.
 - 11.3.2** SWAYAM/NPTEL/ other approved MOOCs as mentioned in Clause 11.3 (as per academic regulations) shall be approved by the concerned Board of Studies and placed (as Annexures) in the concerned PRC.
 - 11.3.3** Parent Departments may release a list of SWAYAM/NPTEL/other approved MOOCs for Pre-Registration as per schedule in the Academic Calendar or through University Notification to this effect.
 - 11.3.4** Students may Pre-Register for the SWAYAM/NPTEL/other approved MOOCs in the respective Departments and register for the same Courses as per the schedule announced by respective Online Course Offering body/institute/ university.

- 11.3.5** A student shall request for transfer of credits only from such approved Courses as mentioned in Sub-Clause 11.3.2 above.
- 11.3.6** SWAYAM/NPTEL/other approved MOOCs Courses are considered for transfer of credits only if the concerned student has successfully completed the SWAYAM/NPTEL/other approved MOOCs and obtained a certificate of successful/satisfactory completion.
- 11.3.7** A student who has successfully completed the approved SWAYAM/NPTEL/ other approved MOOCs and wants to avail the provision of transfer of equivalent credits, must submit the original Certificate of Completion, or such similar authorized documents to the HOD concerned, with a written request for the transfer of the equivalent credits. On verification of the Certificates/Documents and approval by the HOD concerned, the Course(s) and equivalent Credits shall forwarded to the COE for processing of results of the concerned Academic Term.
- 11.3.8** The credit equivalence of the SWAYAM/NPTEL/other approved MOOCs are based on Course durations and/or as recommended by the Course offering body/institute/university. The Credit Equivalence mapped to SWAYAM/ NPTEL approved Courses based on Course durations for transfer of credits is summarised in Table shown below. The Grade will be calculated from the marks received by the Absolute Grading Table 8.11 in the academic regulations.

Table 2: Durations and Credit Equivalence for Transfer of Credits from SWAYAM-NPTEL/ other approved MOOC Courses		
Sl. No.	Course Duration	Credit Equivalence
1	4 Weeks	1 Credit
2	8 Weeks	2 Credits
3	12 Weeks	3 Credits

- 11.3.9** The maximum permissible number of credits that a student may request for credit transfer from MOOCs shall not exceed 20% of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree.
- 11.3.10** The University shall not reimburse any fees/expense; a student may incur for the SWAYAM/NPTEL/other approved MOOCs.
- 11.4** The maximum number of credits that can be transferred by a student shall be limited to forty percent (40%) of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the

concerned Degree. However, the grades obtained in the Courses transferred from other Institutions/MOOCs, as mentioned in this Section (11.0), shall not be included in the calculation of the CGPA.

PART B: PROGRAM STRUCTURE

12.0 Structure / Component with Credit Requirements Course Baskets & Minimum Basket wise Credit Requirements

The M.Tech. CSE Specialization in (Data Science) Program Structure (2025-2027) totalling 68credits. Table 3 summarizes the type of baskets, number of courses under each basket and the associated credits that are mandatorily required for the completion of the Degree.

Table 3: Summary of mandatory courses and minimum credit contribution from various baskets		
S.No	Baskets	Credit Contribution
1	SCHOOL CORE	32
2	PROGRAM CORE	15
3	DISCIPLINE ELECTIVE	15
4	OPEN ELECTIVE	06
	TOTAL CREDITS	Min. 68

In the entire Program, the practical and skill based course component contribute to an extent of approximately 61% out of the total credits of 68 for M.Tech. (Product Design and Development) program of twoyears' duration.

13. Minimum Total Credit Requirements of Award of Degree

As per the AICTE guidelines, a minimum of 68 credits is required for the award of a M.Tech. degree.

14. Other Specific Requirements for Award of Degree, if any, as prescribed by the Statutory Bodies,

- 14.1 The award of the Degree shall be recommended by the Board of Examinations and approved by the Academic Council and Board of Management of the University.
- 14.2 A student shall be declared to be eligible for the award of the concerned Degree if she/he:

**PRESIDENCY
UNIVERSITY**

- a. Fulfilled the Minimum Credit Requirements and the Minimum Credits requirements under various baskets;
- b. Secure a minimum CGPA of 5.0 in the concerned Program at the end of the Semester/Academic Term in which she/he completes all the requirements for the award of the Degree as specified in Sub-clause 19.2.1 a of Academic Regulations;
- c. No dues to the University, Departments, Hostels, Library, and any other such Centers/ Departments of the University; and
- d. No disciplinary action is pending against her/him.

PART C: CURRICULUM STRUCTURE

15. Curriculum Structure – Basket Wise Course List (not Semester Wise)

List of Courses Tabled – aligned to the Program Structure

(Course Code, Course Name, Credit Structure (LTPC), Contact Hours, Course Basket, Type of Skills etc., as applicable).

Type of Skill	Course Caters to
F - Foundation	GS - Gender Sensitization
S - Skill Development	ES - Environment and sustainability
EM - Employability	HP - Human values and Professional Ethics
EN – Entrepreneurship	

Table 3.1 : List of School Core (SC)									
S. No	Course Code	Course Name	L	T	P	C	Contact Hours	Type of Skills	Pre requisit e

5	DSC4004	Big Data Analytics Tools and Techniques	2	0	2	3	4	S	-
		Total No. of Credits	15						

16. Practical / Skill based Courses – Internships / Thesis / Dissertation / Capstone Project Work / Portfolio / Mini project

Practical / Skill based Courses like internship, project work, capstone project, research project / dissertation, and such similar courses, where the pedagogy does not lend itself to a typical L-T-P-C Structure as defined in Clause 5.1 of the Academic Regulations are simply assigned the number of Credits based on the quantum of work / effort required to fulfill the learning objectives and outcomes prescribed for the concerned Courses. Such courses are referred to as Non-Teaching Credit Courses (NTCC). These Courses are designed to provide students with hands-on experience and skills essential for their professional development. These courses aim to equip students with abilities in problem identification, root cause analysis, problem-solving, innovation, and design thinking through industry exposure and project-based learning. The expected outcomes are first level proficiency in problem solving and design thinking skills to better equip M.Tech. graduates for their professional careers. The method of evaluation and grading for the Practical / Skill based Courses shall be prescribed and approved by the concerned Departmental Academic Committee (refer Annexure A of the Academic Regulations). The same shall be prescribed in the Course Handout.

16.1 Internship

A student may undergo an Internship for a period of 12-14 weeks in an industry / company or academic / research institution during 3rd and 4th Semesters, subject to the following conditions:

16.1.1 The Internship shall be conducted in accordance with the Internship Policy prescribed by the University from time to time.

16.1.2 The selection criteria (minimum CGPA, pass in all Courses as on date, and any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Internship to a student;

16.1.3 The number of Internships available for the concerned Academic Term. Further, the available number of internships shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution providing the Internship, as stated in Sub-Clause 16.1.2 above.

16.1.4 A student may opt for Internship in an Industry / Company or academic / research institution of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the Internship on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Internship confirms to the University that the Internship shall be conducted in accordance with the Program Regulations and Internship Policy of the University.

16.1.5 A student selected for an Internship in an industry / company or academic / research institution shall adhere to all the rules and guidelines prescribed in the Internship Policy of the University.

16.2 Project Work

A student may opt to do a Project Work for a period of 12-15 weeks in an Industry / Company or academic / research institution or the University Department(s) as an equivalence of Internship during the 3rd and 4th Semester as applicable, subject to the following conditions:

16.2.1 The Project Work shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.

16.2.2 The student may do the project work in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 16.2.1). Provided further, that the Industry / Company or academic / research institution offering such project work confirms to the University that the project work will be conducted in accordance with the Program Regulations and requirements of the University.

16.3 Capstone Project

A student may undergo a Capstone Project for a period of 12-14 weeks in an industry / company or academic / research institution in the 4th Semester as applicable, subject to the following conditions:

16.3.1 The Capstone Project shall be conducted in accordance with the Capstone Project Policy prescribed by the University from time to time.

16.3.2 The selection criteria (minimum CGPA, pass in all Courses as on date, and any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Capstone Project to a student;

16.3.3 The number of Capstone Project available for the concerned Academic Term.

Further, the available number of Capstone Project shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution providing the Capstone Project, as stated in Sub-Clause 16.3.2 above.

16.3.4 A student may opt for Capstone Project in an Industry / Company or academic / research institution of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the I Capstone Project on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Capstone Project confirms to the University that the Capstone Project shall be conducted in accordance with the Program Regulations and Capstone project Policy of the University.

16.3.5 A student selected for a Capstone Project in an industry / company or academic / research institution shall adhere to all the rules and guidelines prescribed in the Capstone Project Policy of the University.

16.4 Research Project / Dissertation

A student may opt to do a Research Project / Dissertation for a period of 12-14 weeks in an Industry / Company or academic / research institution or the University Department(s) as an equivalence of Capstone Project, subject to the following conditions:

16.4.1 The Research Project / Dissertation shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.

The student may do the Research Project / Dissertation in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 18.4.1). Provided further, that the Industry / Company or academic / research institution offering such Research Project / Dissertation confirms to the University that the Research Project / Dissertation work will be conducted in accordance with the Program Regulations and requirements of the University.

UNIVERSITY**

I. Course Catalogues:

Each course shall have a course catalogue with the following details:

- i) Pre –Requisites of the course
- ii) Course Description
- iii) Course Outcome
- iv) Course Content
- iv) Reference Resources.

The Course Catalogues for the Courses offered in each basket are attached below:

Course Code: DSC4001	Course Title: Programming in Data Science		L-T-P-C	2	0	2	3
	Type of Course: Program Core						
	Theory and Laboratory Integrated						
Version No.	2.0						
Course Pre-requisites	--						
Anti-requisites	Python, R Programming Language						
Course Description	This course introduces the core concepts of Data Science followed by programming using Python and R. This course has theory and lab component which emphasizes on understanding and programming right from Basics to Visualization in Python and R. It helps the student to explore data by applying these concepts and also for effective problem solving, visualizing and analyzing.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Programming in Data Science and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques						
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Discuss about the process involved in Data Science CO2: Explore Data using Python Numpy and Pandas CO3: Demonstrate Data Visualization using Matplotlib CO4: Explore Data using R and Visualize using R Graphics						
Course Content:							
Module 1	Introduction to Data Science	Assignment	Case Studies				10 Sessions
	Topics: Introduction to Data Science — The field of Data Science – The various Data Science Disciplines, Connecting the Data Science Disciplines, Features of R , Data Science Techniques and Tools – Types of Data – Measures and Metrics – Descriptive Statistics – Inferential Statistics. Data Science Methodology - From Problem to Approach and From Requirements to Collection, From Understanding to Preparation and From Modeling to Evaluation, From Deployment to Feedback. Data Preprocessing - Data Quality Assessment, Feature Aggregation, Dimensionality Reduction, Feature Encoding. Predictive and descriptive analytics.						

Module 2	Data Exploration using Numpy and Pandas	Assignment	Programming		8 Sessions
Topics: Introduction to Python World, Motivation, Installation of NUMPY , Numpy Basics, Placeholders, Datatypes, Arrays, Basic Statistics, Copying, Slicing & Subsetting, Indexing, Flattening, Reshaping, Resizing, Sorting, Swapping, Dealing with Missing values. PANDAS - the PYTHON Data Analysis Library, Motivation, Installation of PANDAS, PANDAS Data Structure, Series, Dataframe, Loading the Data, Descriptive Statistics, Indexing & ReIndexing, Renaming, Iteration, Sorting, Statistical functions, for and while loop in R , Window functions, Aggregations. Number of Missing values in single variable . Groupby Operations, Merging/Joining, Concatenation, Time Series, Working with Categorical Data and Text Data.					
Module 3	I/O Tools and Visualization	Assignment	Mini Project		8 Sessions
Topics: I/O API Tools , CSV and Textual files, Reading data in CSV or text files, Using RegExp to parse txt files, Reading txt files into parts, Writing data in CSV, Reading and Writing HTML files, Reading data from XML, Reading and Writing data from excel file, JSON Data, Data inspection The Matplotlib library , Installation, A simple interactive chart, Adding elements to the chart, Adding a grid, Adding a legend, Converting the session to an html file, Saving your chart directly as an image, Handling date values, Chart typology, Line charts, Histograms, Bar charts, Horizontal Bar Charts, Multiseries bar charts, Pie chart. Preparing time series data .					
Module 4	Introduction to R	Assignment	Programming		10 Sessions
Topics: R Environment , Using R Studio, Vectors, List, Matrices, Arrays, Data Frames, Factors. Functions - Conditional Functions, User Defined Functions. Reading Data from files, Handling Missing Data, Installing Packages, R Graphics – Plot, Line, Scatter Plot, Pie Charts, Bars, Histogram, Box Plots, 3D Pie Charts, 3D Scatter Plot, Visualization with GG Plot. R Statistics – Dataset, Max & Min, Mean Median Mode, Subgroup Analyses, Probability Distributions, Pipes in R.					
List of Laboratory Tasks: Experiment No 1: Create a Numpy array and perform the following operations on it Level 1: Basic Statistics, Copying, Slicing & Subsetting, Indexing, Flattening, Reshaping, Resizing, Level 2: Sorting, Swapping, Dealing with Missing values Experiment No. 2: Create a PANDAS Data frame and perform the following operations on it Level 1: Descriptive Statistics, Indexing & ReIndexing, Renaming, Iteration, Sorting, Dealing with Missing Data Level 2: Statistical functions, Window functions, Aggregations Experiment No. 3: Create a PANDAS Data frame and perform the following operations on it Level 1: Group by Operations, Merging/Joining, Concatenation, Level 2: Time Series, Categorical Data and Text Data Experiment No. 4: Demonstrate Reading and Writing using IO API tools Level 1: CSV and EXCEL files, HTML and XML files, Level 2: HDF5 CPickle Experiment No. 5: Using Matplotlib, Visualize the Data					

	<p>Level 1: Visualize the data using Line Chart, Bar Charts, Pie Chart, Histograms, Bar chart, Horizontal Bar Chart</p> <p>Level 2: Visualize the data using Multiseries Bar Chart, Multiseries Stacked Bar Chart</p> <p>Experiment No. 6: Install R Studio and perform basic operations</p> <p>Level 1: Vectors, List, Matrices, Arrays, Data Frames, Factors,</p> <p>Level 2: Functions and handling Missing Data</p> <p>Experiment No. 7: Using R graphics perform the following</p> <p>Level 1: Plot, Line, Scatter Plot, Pie Charts, Bars, Histogram, Box Plots,</p> <p>Level 2: 3D Pie Charts, 3D Scatter Plot, GG Plot</p> <p>Experiment No. 8: Using R Statistics perform the following</p> <p>Level 1: Max & Min, Mean Median Mode, Subgroup Analyses,</p> <p>Level 2: Probability Distributions and Pipes</p>
	<p>Targeted Application & Tools that can be used:</p> <ul style="list-style-type: none"> • Data Exploration • Data Visualization • Data Analysis <p>Tools:</p> <ul style="list-style-type: none"> • Google Colab • Anaconda • R Studio
	Project work
	<ul style="list-style-type: none"> • A scenario will be given to the students to be developed as a series of Program/ Application. • On completion of Module 2 and Module 4, students will be asked to develop a Mini Project using Python and R.
	<p>Text Book</p> <p>T1. The essentials of Data Science, Knowledge Discovery Using R, Graham J Williams, CRC Press, 2017</p> <p>T2. PYTHON Data Analysis, APRESS Publications, Fabio Nelli, 2015</p>

	<p>Topics relevant to “SKILL DEVELOPMENT”: Data Exploration, Data Analysis and Visualization using Python and R Programming. for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.</p>

Course Code: DSC4002	Course Title: Data Analytics and Visualization	L-T-P-C	2	0	2	3
	Type of Course: Program Core Theory and Laboratory Integrated Course					
Version No.	2.0					
Course Pre-requisites	--					

Anti-requisites		NIL			
Course Description		The Course consists of two parts where first Part covers advanced analytics that covers topics necessary to give businesses greater insight into their data than they could ordinarily, and the Second Part covers data visualization concepts. Primary concepts include machine learning, data mining, predictive analytics, location analytics, big data analytics, and location intelligence. Visualization for Time series, Geolocated data, Correlations, connections, Hierarchies, networks, and interactivity.			
Course Objective		The objective of the course is to familiarize the learners with the concepts of Data Analytics and Visualization and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING techniques			
Course Out Comes		On successful completion of the course the students shall be able to: CO1: Analyze data by performing Exploratory Data Analysis. CO2: Apply techniques of Machine Learning to build Generalized Predictive Models. CO3: Explain basic concepts of Data Visualization. CO4: Apply principles of Data Visualizations to provide insights from data.			
Course Content:					
Module 1	Data Analytics	Assignment	Analysis, Data Collection		11 Sessions
	Topics: Characteristics and types of data, Types of Analytics, Location Analytics, Working with Geospatial Data, Feature Engineering and Selection, Dimensionality Reduction Techniques, Common challenges faced during analysis				
Module 2	Advanced Analytics	Case Study	Analysis, Data Collection, Programming		13 Sessions
	Topics: Statistical methods for Data Analytics, Advance topics in Supervised and Unsupervised Machine Learning: Cluster Analysis, Hyper-Parameter Tuning, Measuring Performance of the Models, Model Selection, Data Mining techniques.				
Module 3	Introduction to Data Visualization	Assignment	Analysis, Data Collection		9 Sessions
	Topics: Importance of analysis and visualization in the era of data abundance, Fundamentals of Data Visualization, Human Perception, Basic plotting techniques, Interaction concepts, Visualization techniques for Time Oriented data, Introduction to Data Visualization Tools				
Module 4	Application - Data Visualization	Case Study	Analysis, Data Collection, Programming		14 Sessions
	Topics: Designing effective Visualizations, Advanced Visualization Tools, Visualizing Geospatial Data, Document Visualization, Visualization Systems, Evaluating Visualizations, Visualization Benchmarking. Use cases of data visualization.				

	<p>List of Laboratory Tasks:</p> <p>Experiment No 1: Exploratory Data analysis</p> <p>Level 1: Demonstration of Tools to implement EDA</p> <p>Level 2: Use the Dataset to analyze and summarize data, analyze anomalies, analyze Outliers, and Missing Value Treatment</p> <p>Experiment No. 2: Dimensionality Reduction Techniques</p> <p>Level 1: Implement DR Technique(s)</p> <p>Experiment No. 3: Machine Learning Methods</p> <p>Level 1: Implement Supervised Learning Techniques for the given dataset</p> <p>Level 2: Implement Un-Supervised Learning Techniques for the given dataset and Cluster Analysis</p> <p>Experiment No. 4: Measure the Performance of the Models</p> <p>Level 1: Perform Model Selection</p> <p>Level 2: Regularize the model</p> <p>Experiment No. 5: Introduction to Data Visualization Tools</p> <p>Level 1: Implement Basic plotting techniques</p> <p>Experiment No. 6: Time Oriented data</p> <p>Level 1: Visualization techniques for Time Oriented data</p> <p>Experiment No. 7: Trees, Graphs, Networks</p> <p>Level 1: Visualization techniques for Trees, Graphs, Networks</p> <p>Experiment No. 8: Advanced Visualization Tools</p> <p>Level 1: Design effective Visualizations for the given scenario</p> <p>Level 2: Implement Visualizing of Geospatial Data and Document Visualization</p> <p>Experiment No. 9: Analyze Visualization Systems</p> <p>Level 1: Analyze Visualization Systems</p>
	<p>Targeted Application & Tools that can be used:</p> <p>Data visualization is the graphical representation of information and data. By using visual elements like charts, graphs, and maps, data visualization tools provide an accessible way to see and understand trends, outliers, and patterns in data. In the world of Big Data, data visualization tools</p>

	<p>and technologies are essential to analyze massive amounts of information and make data-driven decisions.</p> <p>Tools:</p> <ol style="list-style-type: none"> 1. R Programming 2. Python 3. Tableau 4. SAS 5. Excel 6. RapidMiner 7. IBM Cognos Analytics 8. Microsoft Power BI
	<p>Project work:</p>
	<p>After completion of each module a Data analysis or programming based Assignment/Assessment will be conducted.</p> <p>Mini Project:</p> <p>Perform exploratory data analysis on a given dataset and provide insights on the same.</p> <ol style="list-style-type: none"> 1. Crunchbase – Find business information about private and public companies. You can look up how many investments they had, who the founding members are, and if they had any mergers or acquisitions. 2. Glassdoor Research – Glassdoor offers data related to employment. You can, for example, figure out how much you can save by retaining employees. 3. Open Corporates – Open Corporates is the largest open database of companies and company data in the world. Used by banks and governments, they pride themselves on having the most accurate data. 4. FBI Uniform Crime Reporting – The Uniform Crime Reporting compiles statistical crime reports, publications, and data points from thousands of cities, universities, states, and federal law enforcement agencies. 5. Uppsala Conflict Data Program – The Uppsala Conflict Data Program (UCDP) provides data on organized crime and civil war around the world. 6. National Institute on Drug Abuse – The National Institute on Drug Abuse (NIDA) monitors the prevalence and trends regarding drug abuse in the United States. 7. DBpedia – DBpedia aims to make Wikipedia's information easily searchable via SPARQL queries or by downloading their information directly. For instance, you can search for NBA players born in the 80s, in cities with more than 1M inhabitants. 8. Google Trends – Google Trends allows you to look at what's going on in the world. It gives you data about what's becoming popular, and how much people are searching for a particular term. 9. Instagram API – Facebook allows you to use Instagram's API to quickly access comments, metadata, and metrics. 10. Comtrade – Official trade in goods and services data sets managed by the UN COMTRADE database. There are data visualization tools and an API and other extraction tools available. 11. Datahub – Stock Market – From gold prices, NASDAQ listings, to S&P 500 companies, you'll find it all on datahub.io 12. Global Financial Data – Global Financial Data gives you exactly what it says on the tin; data about the finances of the world. Ranges from real estate, global macro data, to market data. 13. IMF Data – The IMF, or International Monetary Fund, is an organization that aims to foster monetary collaboration between countries. You can find data on trade, government finance, and financial development.

	<p>14. The Atlas of Economic Complexity – The Atlas of Economic Complexity provides data about global trade dynamics over time. Want to know the quantity of textiles China exported to South Korea? Easy.</p> <p>15. World Bank – Not only does the World Bank provide financial data about countries, but it also provides data on education and health.</p> <p>16. Financial Times Data – Here you'll find cold, hard numbers about the different markets in the world. Data include fluctuations in currency, yield rates of bonds, and commodity prices.</p>

Course Code: DSC4000

Course Title: Statistics for Data Science

Type of Course: Program Core

L-T-P-C: 3-0-0-3

Total Hours: 45 Hours

Version No.: 1.0

Course Prerequisites:--

Course Description:

This course provides fundamental knowledge of statistics that underpins data science methodologies. It includes descriptive and inferential statistical methods, probability theory, hypothesis testing, regression, and multivariate analysis. The course focuses on data interpretation and statistical reasoning necessary for real-world data-driven decision-making.

Course Objectives:

- Understand the foundational concepts of descriptive and inferential statistics.
- Apply probability theory to model and analyze data uncertainty.
- Conduct hypothesis testing and regression analysis.
- Interpret statistical findings in the context of data science problems.

Course Outcomes (COs):

- CO1 (Understand): Understand and describe the fundamentals of descriptive statistics and data distributions.
- CO2 (Analyze): Analyze data using statistical techniques including probability and inferential methods.
- CO3 (Apply): Apply hypothesis testing and regression models for problem-solving.
- CO4 (Apply): Use multivariate statistical tools to model and interpret complex data sets.

Course Content (Total: 45 Hours)

Module 1: Descriptive Statistics and Data Visualization (CO1 – Understand) – 10 Hours

Topics: Data types and measurement scales, central tendency (mean, median, mode), dispersion (variance, standard deviation, IQR), data visualization (histograms, boxplots, scatterplots), correlation and covariance.

Module 2: Probability and Distributions (CO2 – Analyze) – 12 Hours

Topics: Basic probability rules, conditional probability, Bayes' theorem, random variables, probability distributions (Bernoulli, Binomial, Poisson, Normal), expectation and variance.

Module 3: Statistical Inference and Hypothesis Testing (CO3 – Apply) – 12 Hours

Topics: Sampling distributions, central limit theorem, confidence intervals, hypothesis testing (Z-test, t-test, Chi-square test, ANOVA), p-values, Type I and II errors.

Module 4: Regression and Multivariate Analysis (CO4 – Apply) – 11 Hours

Topics: Simple and multiple linear regression, assumptions, R-squared, residual analysis, logistic regression, multicollinearity, PCA (Principal Component Analysis), clustering basics.

Course Title: Data Mining and Predictive Analytics

Type of Course: Program Core (Integrated Theory and Laboratory)

L-T-P-C: 2-0-2-3

Total Hours: 30 Hours Theory + 30 Hours Lab = 60 Hours

Version No.: 1.0

Course Prerequisites: Basic Statistics and Programming

Anti-requisites: —

Course Description:

This course introduces fundamental concepts, techniques, and algorithms used in data mining and predictive analytics. Emphasis is placed on extracting meaningful patterns from data and applying predictive models for classification, regression, clustering, and association rule mining. The course integrates hands-on experience through labs and tools.

Course Objectives:

- Understand the foundations and applications of data mining.
- Explore different data preprocessing and transformation techniques.
- Apply classification, clustering, and association rule mining algorithms.
- Evaluate and interpret predictive models using appropriate metrics.

Course Outcomes (COs):

- **CO1 (Analyze):** Analyze data mining techniques and data preparation methods.
- **CO2 (Analyze):** Examine predictive modeling approaches for classification and regression tasks.
- **CO3 (Apply):** Apply clustering and association rule mining algorithms on datasets.
- **CO4 (Apply):** Implement data mining solutions using real-world datasets and tools.

Course Content (Total: 60 Hours)**Module 1: Introduction and Data Preprocessing (CO1 – Analyze) – 8 Theory Hours**

Topics: Data mining overview, knowledge discovery process, data types, data cleaning, transformation, normalization, feature selection, data integration.

Module 2: Classification and Regression (CO2 – Analyze) – 8 Theory Hours

Topics: Supervised learning overview, decision trees, Naïve Bayes, K-NN, SVM, logistic regression, performance metrics (confusion matrix, precision, recall, F1-score, ROC).

Module 3: Clustering and Association Rule Mining (CO3 – Apply) – 8 Theory Hours

Topics: K-means, hierarchical clustering, DBSCAN, evaluation of clusters, Apriori and FP-Growth algorithms, support, confidence, lift metrics.

Module 4: Predictive Analytics Tools and Applications (CO4 – Apply) – 6 Theory Hours

Topics: Predictive model deployment, cross-validation, overfitting, underfitting, time series basics, real-life applications in marketing, finance, healthcare.

Laboratory Experiments (15 Weeks / 30 Hours)

1. Data cleaning and preprocessing using Python or R.
2. Feature selection and transformation techniques.
3. Implement decision tree classifier and evaluate using metrics.
4. Apply Naïve Bayes and K-NN classifiers.
5. Perform logistic regression for binary classification.
6. Train and test SVM on real dataset.
7. Build a K-means clustering model and visualize clusters.
8. Implement hierarchical clustering and interpret dendrograms.
9. Apply DBSCAN for density-based clustering.
10. Extract association rules using Apriori algorithm.
11. Perform FP-Growth and analyze rule significance.
12. Cross-validation and hyperparameter tuning.
13. Build a predictive model on time series data.
14. Model deployment using Flask/Streamlit.
15. Mini project on end-to-end predictive analytics solution.

Course Code: DSC4004	Course Title: Big Data Analytics Tools and Techniques			L- T-P- C	2	0	2	3
	Type of Course: Program Core Theory and Lab Integrated Course							
Version No.	2.0							
Course Pre-requisites	--							
Anti-requisites	NIL							
Course Description	This course is designed to provide the fundamental knowledge to equip students being able to handle real-world big data problems including the three key resources of Big Data: people, organizations and sensor. With the advancement of IT storage, processing, computation and sensing technologies. It helps the students to interpret the operational concepts of computer technology as well as performance enhancement.							
Course Objective	The objective of the course is to familiarize the learners with the concepts of Big Data Analytics Tools and Techniques and attain EMPLOYABILITY SKILLS through EXPERIENTIAL LEARNING techniques							
Course Outcomes	On successful completion of the course the students shall be able to: CO1: Understand managing big data using Hadoop analytical tools and technologies CO2: Understand map-reduce analytics using Hadoop and related tools CO3: Preparing for data summarization, query, and analysis. CO4: Applying data modeling techniques to large data sets CO5: Building a complete business data analytic solution							
Course Content:								
Module 1	Introduction to Hadoop and HDFS	Assignment	Data Collection and Analysis					8 Sessions
	Topics: Meet Hadoop: Data, Data Storage and Analysis, Comparison with Other Systems: Relational Database Management Systems, Grid Computing, Volunteer Computing Hadoop Fundamentals Map Reduce A Weather Dataset: Data Format, Analyzing the Data with Unix Tools, Analyzing the Data with Hadoop: Map and Reduce, Java Map Reduce, Scaling Out: Data Flow, Combiner Functions, Running a Distributed Map Reduce Job, Hadoop Streaming , Characteristics of big data, Challenges in processing big data, Limitations of classical algorithms on big data The Hadoop Distributed File system: The Design of HDFS, HDFS Concepts: Blocks, Name nodes and Data nodes, HDFS Federation, HDFS High-Availability, The Command-Line Interface, Basic File system Operations, Hadoop File systems Interfaces, The Java Interface, Reading Data from a Hadoop URL, Reading Data Using the File System API, Writing Data, Directories, Querying the File system, Deleting Data, Data Flow: Anatomy of a File Read, Anatomy of a File Write, Using Hadoop archives, limitations.							
Module 2	YARN and Hadoop I/O	Assignment	Data Collection and Analysis					8 Sessions
	Topics:							

<p>YARN Anatomy of a YARN Application Run: Resource Requests, Application Lifespan, Building YARN Applications, YARN Compared to Map Reduce, Scheduling in YARN: The FIFO Scheduler, The Capacity Scheduler, The Fair Scheduler, Delay Scheduling, Dominant Resource Fairness</p> <p>Hadoop I/O: Data Integrity in HDFS, Local File System, Checksum File System, Compression and Input Splits, Using Compression in Map Reduce, Serialization, The Writable Interface, Writable Classes, Implementing a Custom Writable, Serialization Frameworks, File-Based Data Structures: Sequence File</p>					
Module 3	Map Reduce Applications	Case Study	Data analysis		8 Sessions
<p>Topics: Developing a Map Reduce Application: The Configuration API, Combining Resources, Variable Expansion, Setting Up the Development Environment, Managing Configuration, Generic Options Parser, Tool, and Tool Runner, Writing a Unit Test with MR Unit: Mapper, Reducer, Running Locally on Test Data, Running a Job in a Local Job Runner, Testing the Driver, Running on a Cluster, Packaging a Job, Launching a Job, The Map Reduce Web UI, Retrieving the Results, Debugging a Job, Hadoop Logs, Tuning a Job, Profiling Tasks, Map Reduce Workflows: Decomposing a Problem into Map Reduce Jobs, Job Control, Apache Oozie</p> <p>How Map Reduce Works: Anatomy of a Map Reduce Job Run, Job Submission, Job Initialization, Task Assignment, Task Execution, Progress and Status Updates, Job Completion, Failures: Task Failure, Application Master Failure, Node Manager Failure, Resource Manager Failure, Shuffle and Sort: The Map Side, The Reduce Side, Configuration Tuning, Task Execution: The Task Execution Environment, Speculative Execution, Output Committers</p>					
Module 4	Map Reduce Types and Formats, Flume	Case Study	Data analysis		10 Sessions
<p>Topics: Map Reduce Types, Input Formats: Input Splits and Records Text Input, Binary Input, Multiple Inputs, Database Input (and Output) Output Formats: Text Output, Binary Output, Multiple Outputs, Lazy Output, Database Output</p> <p>Flume Installing Flume, An Example, Transactions and Reliability, Batching, The HDFS Sink, Partitioning and Interceptors, File Formats, Distribution: Agent Tiers, Delivery Guarantees, Sink Groups, Integrating Flume with Applications, Component Catalog</p>					
Module 5	Hive, Pig, Spark Analytical Tools	Case Study	Data analysis		10 Sessions
<p>Topics: Hive Apache Hive with Hive Installation, Hive Data Types, Hive Table partitioning, Hive DDL commands, Hive DML commands, Hive sort by vs order by, Hive Joining tables</p> <p>Pig Installing and Running Pig, Execution Types, Running Pig Programs, Grunt, Pig Latin Editors, An Example: Generating Examples, Comparison with Databases, Pig Latin: Structure, Statements, Expressions, Types, Data Processing Operators: Loading and Storing Data, Filtering Data, Grouping and Joining Data, Sorting Data, Combining and Splitting Data.</p> <p>Spark An Example: Spark Applications, Jobs, Stages and Tasks, A Java Example, A Python Example, 20082020 / 31 Resilient Distributed Datasets: Creation, Transformations and Actions, Persistence, Serialization, Shared Variables, Broadcast Variables, Accumulators, Anatomy of a Spark Job Run, Job</p>					

	Submission, DAG Construction, Task Scheduling, Task Execution, Executors and Cluster Managers: Spark on YARN
	<p>List of Laboratory Tasks:</p> <ol style="list-style-type: none"> <p>(i) Perform setting up and Installing Hadoop in its two operating modes:</p> <ul style="list-style-type: none"> • Pseudo distributed, • Fully distributed. <p>(ii) Use web based tools to monitor your Hadoop setup.</p> <p>Level 1: Programming assignment to install the Hadoop environment tools.</p> <p>(i) Implement the following file management tasks in Hadoop:</p> <ul style="list-style-type: none"> • Adding files and directories • Retrieving files • Deleting files <p>(ii) Benchmark and stress test an Apache Hadoop cluster</p> <p>Level 1: Programming assignment to maintain the Hadoop Distributed File System.</p> <p>Run a basic Word Count Map Reduce program to understand Map Reduce Paradigm.</p> <ul style="list-style-type: none"> • Find the number of occurrence of each word appearing in the input file(s) • Performing a Map Reduce Job for word search count (look for specific keywords in a file) <p>Level 1: Programming scenario to use map reduce programming to perform the analysis.</p> <p>Level 2: Programming assignment to analyze the data for any given data file.</p> <p>Stop word elimination problem:</p> <p>Input:</p> <ul style="list-style-type: none"> • A large textual file containing one sentence per line • A small file containing a set of stop words (One stop word per line) <p>Output:</p> <p>A textual file containing the same sentences of the large input file without the words appearing in the small file.</p> <p>Write a Map Reduce program that mines weather data. Weather sensors collecting data every hour at many locations across the globe gather large volume of log data, which is a good candidate for analysis with Map Reduce, since it is semi structured and record-oriented. Data available at: https://github.com/tomwhite/hadoopbook/tree/master/input/ncdc/all.</p> <ul style="list-style-type: none"> • Find average, max and min temperature for each year in NCDC data set? • Filter the readings of a set based on value of the measurement, Output the line of input files associated with a temperature value greater than 30.0 and store it in a separate file. <p>Level 2: Programming assignment to analyze the social media data for business analytics.</p> <p>For Purchases.txt Dataset , instead of breaking the sales down by store, give us a sales breakdown by product category across all of our stores.</p> <ul style="list-style-type: none"> • What is the value of total sales for the following categories?

	<ul style="list-style-type: none"> i. Toys ii. Consumer Electronics <ul style="list-style-type: none"> Find the monetary value for the highest individual sale for each separate store What are the values for the following stores? <ul style="list-style-type: none"> i. Reno ii. Toledo iii. Chandler Find the total sales value across all the stores, and the total number of sales. <p>Level 2: Programming assignment to analyze and find the maximum sales, minimum sales and average sales in each store.</p> <p>7. Install and Run Pig then write Pig Latin scripts to sort, group, join, project, and filter your data.</p> <p>Level 1: Programming scenarios to perform the grouping, filtering and Joining.</p> <p>8. Write a Pig Latin scripts for finding TF-IDF value for book dataset (A corpus of eBooks available at: Project Gutenberg)</p> <p>Level 2: Programming Assignment to analyze the data from the given text file using Pig latin script.</p> <p>9. Install and Run Hive then use Hive to create, alter, and drop databases, tables, views, functions, and indexes.</p> <p>Level 1: Programming scenario to analyze the data from the given text file to perform SQL operations.</p> <p>10. Install, Deploy & configure Apache Spark Cluster. Run apache spark applications using Scala.</p> <p>Level 1: Programming scenario to analyze a dataset using spark.</p> <p>11. Data analytics using Apache Spark on Amazon food dataset, find all the pairs of items frequently reviewed together.</p> <p>Write a single Spark application that:</p> <ul style="list-style-type: none"> Transposes the original Amazon food dataset, obtaining a Pair RDD of the type: Counts the frequencies of all the pairs of products reviewed together; Writes on the output folder all the pairs of products that appear more than once and their frequencies. The pairs of products must be sorted by frequency. <p>Level 2: Programming assignment to analyze the data using spark.</p>
	<p>Targeted Application & Tools that can be used:</p> <ul style="list-style-type: none"> Business Analytical Applications Social media Data Analysis Predictive Analytics Government Sector for analyzing the data Improve the business through analytics <p>Tools: Hadoop Framework tools like map reduce, Hive, Hbase, Spark, Pig, Flume.</p>
	<p>Project work/Assignment:</p>
	<p>After completion of each module a programming based Assignment/Assessment will be conducted. A scenario will be given to the student to be developed as a data analysis application.</p>

	On completion of Module 5, student will be asked to develop a project for Data Analysis.
	<p>Text Book</p> <p>T1. Hadoop: The Definitive Guide Tom White O'Reilley Third Edition, 2012</p>
	<p>References</p> <p>R1.SPARK: The Definitive Guide MateiZaharia and Bill Chambers Oreilly 2018 R2.Apache Flume: Distributed Log Collection for Hadoop . 	<p>Topics relevant to “EMPLOYABILITY SKILLS”: Real time application development using Hadoop Ecosystem tools. for developing EMPLOYABILITY SKILLS through EXPERIENTIAL LEARNING techniques. This is attained through assessment component mentioned in course handout</p>

Course Code: DSC4011	Course Title: Data Science with Cloud Computing		L- T-P- C	3	0	0	3
	Type of Course: Discipline Elective Theory Only						
Version No.	2.0						
Course Pre-requisites	--						
Anti-requisites	NIL						
Course Description	This course introduces a new Transformative, more collaborative way of doing Data Science. It helps in understanding End to End Data pipelines, Ingesting Data in a serverless way and working our way through Data Exploration, Dashboards, and Streaming Data all the way to training and making an operational Machine Learning Model.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Data Science with Cloud Computing and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING techniques						
Course Outcomes	On successful completion of the course the students shall be able to: CO1.Define Data Science and its fundamentals and the process in Data Science. CO2.Explain the process of Ingesting Data into the Cloud Platform. CO3.Analyze real-world problems with Accuracy. CO4.Demonstrate the overall organization of Data and Storage.						
Course Content:							
Module 1	Making Better Decisions Based on Data	Assignment	Case Study				10 Sessions
	Topics: Many Similar Decisions, Role of Data Engineers, The Cloud Makes Data Engineers Possible, The NaN value, Series CRUD, Series Indexing, The Cloud Turbocharges Data science, Airline on Time Performance Data, Scheduling Monthly Downloads.						
Module 2	Creating Compelling Dashboards	Assignment	Case Study				10 Sessions
	Topics: Explain your Model with Dashboards, Loading Data into google Cloud SQL, Creating Google cloud Instance, Interacting with Google cloud Platform, Maximum Likelihood Estimation (MLE)						
Module 3	Streaming Data: Publication and Ingest	Assignment	Case Study				10 Sessions
	Topics:						

Designing the Event Feed, Time Correction, Apache Beam/Cloud Dataflow, Publishing an Event Stream to Cloud Pub/Sub, Real Time Stream processing, Interactive Data Exploration, Exploratory Data Analysis, Loading Flights Data into Big Query, Arrival Delay conditioned on Departure Delay, Evaluating the Model. Time Series Analysis				
Module 4	Cloud Dataproc	Assignment	Case Study	10 Sessions
Topics: Bayes Classifier on Cloud Dataproc, Map Reduce and Hadoop Eco System, Quantization using Spark SQL, Bayes Classification using Pig				
Targeted Applications & Tools that can be used: Targeted Industries like Banking, Transport, e-commerce, healthcare and many more are using data science to make optimal Decisions. The usage of data science helps in rising sales. It can explore historic data, make comparisons and analyses of the market and provide recommendations. Target Jobs Data Scientist, Data Architect, Data Engineer, Statistician. Tools: <ul style="list-style-type: none"> • Apache Spark • Jupyter • Weka 				
Project work/Assignment:				
Mini Project: Walmart Sales Forecasting in Cloud <ul style="list-style-type: none"> • Predict the sales across various departments in each store. • Predict the effect of markdowns on the sales during the holiday seasons. Term Assignments: Consider a Dataset on Bird communities that needs to be analyzed. The data has three columns, a date, a common name, and a count of the number of individuals. <ul style="list-style-type: none"> • Count the total number of individuals of each species that were seen in each data file. • Sort based on the total number of individuals.

	<p>Topics relevant to “EMPLOYABILITY SKILLS”: Data Extraction, Data wrangling for developing Employability Skills through Participative Learning techniques. This is attained through assessment component as mentioned in course handout.</p>

Course Code: DSC4012	Course Title: Data Security and Access Control			L- T-P- C	3	0	0	3
	Type of Course: Discipline Elective Theory Only							
Version No.	2.0							
Course Pre-requisites	--							
Anti-requisites	NIL							
Course Description	This course describes fundamental issues and problems in data security and provides technical solutions or facets to the problem of achieving data security. The course also deals with the security of statistical databases, discusses authorization systems, and covers the fundamental ideas of cryptography.							
Course Objective	The objective of the course is to familiarize the learners with the concepts of Data Security and Access Control and attain EMPLOYABILITY SKILLS through Participative Learning techniques.							
Course Outcomes	On successful completion of the course the students shall be able to: CO1: Describe the basic concepts of a Data Security CO2: Apply appropriate techniques for security Algorithms CO3: Explain the Access Controls mechanisms CO4: Simulate data security algorithms for achieving access control							
Course Content:								
Module 1	Fundamentals of Data Security	Assignment	Algorithms					8 Sessions
	Topics: Introduction to Data Security, Confidentiality, Integrity, Availability, Visibility, Automation, Monitoring, Models and Methodology, and The Security Problem in Computing. The Data Encryption Standard							
Module 2	Data Security Techniques	Assignment/ Case Study	Presentation					10 Sessions
	Topics: Introduction, data masking, data erasure, and backup storage, Anti-malware protection, viruses and other malicious code , Security in Key specified model, Security in Characteristic specified model, File Protection Mechanisms							
Module 3	Authorization Mechanisms in Data Security	Assignment/ Case Study	Coding					12 Sessions
	Topics: Introduction, concept of Un-decidability, Authorization Systems with Tractable Safety Problem, Authorization Systems with Tractable Safety Problem, Grammatical Authorization Systems, Threats in Network, Network Security Controls							

Module 4	An Overview of Data Security Tools, Data Security Policies	Assignment/ Case Study	Simulation of DS tools		8 Sessions
Topics: Introduction to tools available for Data Security, Demonstration of Security features in Linux platform, simulation using more than two computers, demonstration of data leakage during transmission, GDPR (General Data Protection Regulation), Comparative study with India regulation, Data Privacy Act, Role Based Access Control, Organizational Security policies .					
Targeted Applications & Tools that can be used: Anomaly Deduction, Inclusion Prevention Systems, Firewall, Email Security Tools: SAGE Mathematical Library package, VPN					
Assignment:					
Term Assignments: <ol style="list-style-type: none"> 1. Implement Cryptographic algorithms using SAGE 2. Comparative Study on Various Data Security Tools 3. Case Study on GDPR - General Data Protection Regulation 4. Identify Data Leakage in LINUX environment using Authorization Mechanisms 					
Text Book T1. Data Privacy and Security, David Solomon, Springer, T2. Principles of Data Security, Ernst L. Leiss, Plenum Press. New York And London

Certified Information Security Professional (CSIP) web portal Weblinks W1. https://presiuniv.knimbus.com/user#/home W2. https://www.datasunrise.com/professional-info/what-is-access-control/					
Topics relevant to "EMPLOYABILITY SKILLS": Email Security, Web Security, GDPR (General Data Protection Regulation), Grammatical Authorization Systems for developing Employability Skills through Participative Learning techniques . This is attained through assessment component mentioned in course handout.					

Course Code: DSC4015	Course Title: IOT Data Analytics Type of Course: Discipline Elective Theory Only	L- T-P- C	3	0	0	3
--------------------------------	-------------------------------------------------------------------------------------------------------	------------------	---	---	---	---

Version No.	2.0					
Course Pre-requisites	--					
Anti-requisites	NIL					
Course Description	This course helps in understanding the context of analytics in IoT data. Strategies to collect IoT data in order to enable analytics. Skills learnt will enable to understand the tradeoffs in streaming and batch processing. Data science techniques such as machine learning, deep learning, and forecasting are applied on IoT data. This course also teaches how to implement machine learning methods and ARIMA forecasting on IoT data. Deep learning will be described along with a way to get started experimenting with it on AWS.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of IoT Data Analytics and attain EMPLOYABILITY SKILLS through Problem Solving Methodologies.					
Course Outcomes	On successful completion of the course the students shall be able to: CO1: Discuss the challenges of IoT Analytics. CO2: Apply strategies and techniques to collect IoT data. CO3: Apply data science techniques on IoT data					
Course Content:						
Module 1	IoT analytics, challenges, devices and networking protocols	Assignment	Data Analysis task			12 Sessions
	Topics: Defining IoT Analytics and Challenges Defining IoT Analytics. IoT analytics challenges, Core IoT Functional Stack , Functional blocks of an IoT ecosystem IoT Devices and Networking Protocols IoT devices Networking basics IoT networking connectivity protocols IoT networking data messaging protocols Message Queue Telemetry Transport (MQTT) Hyper-Text Transport Protocol (HTTP) Data Distribution Service (DDS)					
Module 2	Data – Strategies, Techniques and Exploring IoT Data	Assignment	Analysis, Data Collection			12 Sessions
	Topics: Collecting All That Data - Strategies and Techniques Designing data processing for analytics Applying big data technology to storage Apache Spark for data processing Exploring IoT Data Exploring Data analytics tools					
Module 3	Data Science for IoT Analytics	Case Study	Data analysis task			13 Sessions
	Topics:					

	Feature engineering with IoT data Validation methods Understanding the bias–variance trade off Comparing different models to find the best fit Random Forest models Gradient Boosting Machines Anomaly detection, Forecasting, scaling issues .
	Targeted Application & Tools that can be used: Employment opportunities are available in Companies like Hexaware, Episteme, Randstad. Siemens, Accenture etc. as IoT Data Engineer Tools R Python Microsoft Azure Stream Analytics. AWS IoT Analytics. SAP Analytics Cloud. Oracle Stream Analytics and Oracle Edge Analytics.
	Project work
	Mini Project: Develop a IoT application for real time data analysis of manufacturing sector. The automated IoT Analytics should aid in using real time data to watch out for certain patterns and send alerts to the concerned departments. It should enable smart manufacturing.
	Text Book T1. “Analytics for the Internet of things (IoT)”, Andrew Minter, Packt, 2017
	References R1. WInternet of Things and Big Data Analytics for Smart Generation, Valentina E Balas, Springer Weblinks W1. https://presiuniv.knimbus.com/user#/home W2. https://www.orientsoftware.com/blog/iot-data-analytics/
	Topics relevant to “EMPLOYABILITY SKILLS”: Processing geospatial IoT Data, protocols Message Queue Telemetry Transport (MQTT) Hyper-Text Transport Protocol (HTTP) Constrained Application Protocol (CoAP) Data Distribution Service (DDS), Random Forest models Gradient Boosting Machines Anomaly detection for developing Employability Skills through Problem Solving methodologies . This is attained through assessment component mentioned in course handout.

Course Code: DSC4016	Course Title: Probabilistic graph Models Type of Course: Discipline Elective Theory Only	L- T-P- C	3	0	0	3
Version No.	2.0					

Course Pre-requisites		--			
Anti-requisites		NIL			
Course Description		Probabilistic graphical models are used to model stochasticity (uncertainty) in the world and are extremely popular in AI and machine learning. The course will cover two classes of graphical models: Bayesian belief networks (also called directed graphical models) and Markov Random Fields (undirected models). After introducing the two frameworks the course will focus on recent advances in inferences and learning with graphical models, including topics such as loopy belief propagation, variational approximations, conditional Markov random fields and others.			
Course Objective		The objective of the course is to familiarize the learners with the concepts of Probabilistic graph Models and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING techniques			
Course Outcomes		On successful completion of the course the students shall be able to: CO1: Apply key concepts of Statistics to solve problems. CO2: Analyze the properties of distributions encoded by graphs CO3: Illustrate Inference in graphic models CO4: Illustrate Learning in graphic models			
Course Content:					
Module 1	Fundamentals of Probability and Graph Theory	Assignment	Understanding all standard probability distributions		9 Sessions
	Topics: Fundamentals of Statistics and Probability, Conditional Probability, Conditional Independence, Joint Distributions, Baye's Theorem, Gaussians rule , Probability Distributions, Fundamentals of Graph Theory - Paths, Cliques, Sub-graphs, Cycles and Loops.				
Module 2	Graphical Models	Assignment	Construction of Markov chain model for real time problems		9 Sessions
	Topics: Directed Models: Bayesian Network; Undirected Models: Markov Random Fields; Parameterization of MRFs, Independencies, Duality and optimality, Non parametric Bayes hierarchical models.				
Module 3	Inference in Graphical Models	Assignment	Study about some problems based on Monte Carlo method		9 Sessions
	Topics: Inference in Graph Models, Variable Elimination; Belief Propagation, Sampling Methods: Markov Chain Monte Carlo, Convexity and optimization , Hidden Markov Model, Viterbi Algorithm.				
Module 4	Learning in Graphical Models	Assignment	Applications of Naïve Bayes Classifier		10 Sessions

	<p>Topics: Learning in Graph Models, Maximum Likelihood Estimation, Naïve Bayes Classifier, Conditional Random Fields, constrained optimization problem</p>
	<p>Targeted Application & Tools that can be used:</p> <p>Targeted employment sector is to acquire knowledge to analyze the given problem to frame Probabilistic graphical models which are a powerful framework for representing complex domains using probability distributions, with numerous applications in machine learning, computer vision, natural language processing and computational biology.</p> <p>Tools:</p> <ul style="list-style-type: none"> • Python • HUGIN Tool for Learning Bayesian Networks • MATLAB Toolbox for Bayesian net
	<p>Assignment:</p>
	<p>Term Assignments:</p> <ul style="list-style-type: none"> • Analysis and Application of Bayesian Network to real time problems <p>Understanding the given problem, analyze accordingly to apply Bayesian network and convert the problem in a Bayesian Network. The answering the required queries.</p> <ul style="list-style-type: none"> • A short survey of the Monte Carlo Method <p>Study and analyze few realistic problems to apply Monte Carlo Technique to answer the solution of the problem.</p> <ul style="list-style-type: none"> • A short survey of the Markov Chain & Hidden Markov Method <p>Study and analyze few realistic problems to convert into Markov chain & Hidden Markov to answer the required problem.</p>

Course Code: DSC4017	Course Title: Social Network Analysis		L- T-P- C	3	0	0	3
	Type of Course: Discipline Elective Theory Only						
Version No.		2.0					
Course Pre-requisites		--					
Anti-requisites		NIL					
Course Description		<p>The rapid growth of social media has given the mass consumers a powerful tool to create knowledge and propagate opinions. At the same time, social media has created an unprecedented opportunity for companies to engage real-time interactions with consumers. In addition, the size and richness of social media data has provided companies an unusually deep reservoir of consumer insights to transform the business and marketing operations.</p> <p>The social media analytics course will enable students to grasp the analytics tools to leverage social media data. The course will introduce tools such as engagement analytics, sentiment analysis, topic modeling, social network analysis, identification of influencers and evaluation of social media strategy.</p>					
Course Objective		The objective of the course is to familiarize the learners with the concepts of Social Network Analysis and attain EMPLOYABILITY SKILLS through PROBLEM SOLVING techniques					
Course Outcomes		<p>On successful completion of this course the students shall be able to:</p> <p>CO1: Interpret the social network landscape and appreciate the importance of analytics in business.</p> <p>CO2: Apply appropriate native analytics and measurement tools to analyze data in different social platforms</p> <p>CO3: Use Natural Language Processing for efficient mining of web data</p> <p>CO4: Demonstrate meaningful insights with actionable and strategic recommendations.</p>					
Course Content:							
Module 1	Network Science	Quiz/Assignment	Analysis				9 Sessions
	<p>Topics:</p> <p>Introduction to semantic web, limitation of current web, Central Measures, Community Analysis, CPM, Homophily and Triadic Closure, Affiliation Networks, Schelling model of Segregation, Current Social Media landscape, working environment, Getting analyzing and visualizing the data, Getting started with the toolset, Need for SMA, Applications of SMA in different areas. Connecting, Capturing and cleaning of Social Data. Social network analysis of social and behavioral sciences</p> <p>APIs in nutshell, Introduction to authenticate techniques, Parsing API outputs, Basic cleaning techniques. Exploring GitHub's API, Analyzing GitHub Interest Graphs, Computing Graph Centrality Measures.</p>						
Module 2	Analyzing Social graphs and Sentiment	Quiz	Project Development				10 Sessions

	Topics: Modeling and aggregating social network data, Exploring Facebook's Social Graph API, Open Graph Protocol, Analyzing Social Graph Connections, Mining your posts, Facebook Pages. Exploring Twitter's API, Analyzing Twitter using sentiment analysis, Frequency Analysis, Examining Patterns in Retweets.				
Module 3	Mining web pages	Assignment	Project Development		11 Sessions
	Topics: Scraping, Parsing and Crawling the Web: BFS in Web Crawling, Discovering Semantics by Decoding Syntax: NLP Illustrated Step-by-Step, Sentence Detection in Human Language Data, Document Summarization, Entity-Centric Analysis: A Paradigm Shift, Summarizing Human Language Data, Quality of Analytics for Processing Human Language Data, trust models based on subjective logic Campaigns and Consumer Reaction Analytics on YouTube: Structured and Unstructured, Scope and Process, Getting the data, Data pull, Data processing and Data analysis, Attack spectrum and counter measures.				
Module 4	Recommender Systems and SEO	Quiz	Group Discussion		8 Sessions
	Topics: Content-Based Recommendation and Collaborative Filtering, introduction to SEO, Keyword research Process, avoid negative SEO, Search Engines, Google PageRank, IBM HITS,				
	Targeted Application & Tools that can be used: The applications of Social Media Analytics have been seen in industrial sector, sports and games, local governments services, tourism and hospitality services, politics, social issues, disaster management, community development issues, commerce and business applications, fashion industry, agricultural activities, online media, medical and health related services as well as supplier chain services.				
	Tools: Google Colab or Jupyter Notebook(Anaconda).				
	Project work				
	On completion of all Modules, students will be given a Mini Project to build a deep learning model for a given application. Sample mini projects include: Twitter Summaries Twitter is famous for its character-limited posts. We can use this social media platform for an innovative summary-writing project. Consolidate the takeaways from a topic or reading discussed. Students should be able to understand the text, coherently organize the points and capture the central idea with 280 words, which is the character limit on Twitter. Hashtag activism Information and communication technologies provide a tremendous tool for spreading awareness and highlighting issues that may not be adequately represented in the mainstream media. Hashtag activism, in particular is concerned with driving social media traffic to oft-neglected topics. We can devise a project-based activity to teach our students about social justice, human rights, equality etc.

Course Code: DSC4002	Course Title: Data Analytics and Visualization			L-T-P-C	2	0	2	3
	Type of Course: Program Core Theory and Laboratory Integrated Course							
Version No.		2.0						
Course Pre-requisites		--						
Anti-requisites		NIL						
Course Description		The Course consists of two parts where first Part covers advanced analytics that covers topics necessary to give businesses greater insight into their data than they could ordinarily, and the Second Part covers data visualization concepts. Primary concepts include machine learning, data mining, predictive analytics, location analytics, big data analytics, and location intelligence. Visualization for Time series, Geolocated data, Correlations, connections, Hierarchies, networks, and interactivity.						
Course Objective		The objective of the course is to familiarize the learners with the concepts of Data Analytics and Visualization and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING techniques						
Course Out Comes		On successful completion of the course the students shall be able to: CO1: Analyze data by performing Exploratory Data Analysis. CO2: Apply techniques of Machine Learning to build Generalized Predictive Models. CO3: Explain basic concepts of Data Visualization. CO4: Apply principles of Data Visualizations to provide insights from data.						
Course Content:								
Module 1	Data Analytics	Assignment	Analysis, Data Collection		11 Sessions			
	Topics: Characteristics and types of data, Types of Analytics, Location Analytics, Working with Geospatial Data, Feature Engineering and Selection, Dimensionality Reduction Techniques, Common challenges faced during analysis							
Module 2	Advanced Analytics	Case Study	Analysis, Data Collection, Programming		13 Sessions			
	Topics: Statistical methods for Data Analytics, Advance topics in Supervised and Unsupervised Machine Learning: Cluster Analysis, Hyper-Parameter Tuning, Measuring Performance of the Models, Model Selection, Data Mining techniques.							
Module 3	Introduction to Data Visualization	Assignment	Analysis, Data Collection		9 Sessions			
	Topics:							

Importance of analysis and visualization in the era of data abundance, Fundamentals of Data Visualization, Human Perception, Basic plotting techniques, Interaction concepts, Visualization techniques for Time Oriented data, Introduction to Data Visualization Tools				
Module 4	Application - Data Visualization	Case Study	Analysis, Data Collection, Programming	14 Sessions
Topics: Designing effective Visualizations, Advanced Visualization Tools, Visualizing Geospatial Data, Document Visualization, Visualization Systems, Evaluating Visualizations, Visualization Benchmarking. Use cases of data visualization.				
List of Laboratory Tasks: Experiment No 1: Exploratory Data analysis Level 1: Demonstration of Tools to implement EDA Level 2: Use the Dataset to analyze and summarize data, analyze anomalies, analyze Outliers, and Missing Value Treatment Experiment No. 2: Dimensionality Reduction Techniques Level 1: Implement DR Technique(s) Experiment No. 3: Machine Learning Methods Level 1: Implement Supervised Learning Techniques for the given dataset Level 2: Implement Un-Supervised Learning Techniques for the given dataset and Cluster Analysis Experiment No. 4: Measure the Performance of the Models Level 1: Perform Model Selection Level 2: Regularize the model Experiment No. 5: Introduction to Data Visualization Tools Level 1: Implement Basic plotting techniques Experiment No. 6: Time Oriented data Level 1: Visualization techniques for Time Oriented data Experiment No. 7: Trees, Graphs, Networks Level 1: Visualization techniques for Trees, Graphs, Networks Experiment No. 8: Advanced Visualization Tools				

	<p>Level 1: Design effective Visualizations for the given scenario</p> <p>Level 2: Implement Visualizing of Geospatial Data and Document Visualization</p> <p>Experiment No. 9: Analyze Visualization Systems</p> <p>Level 1: Analyze Visualization Systems</p>
	<p>Targeted Application & Tools that can be used:</p> <p>Data visualization is the graphical representation of information and data. By using visual elements like charts, graphs, and maps, data visualization tools provide an accessible way to see and understand trends, outliers, and patterns in data. In the world of Big Data, data visualization tools and technologies are essential to analyze massive amounts of information and make data-driven decisions.</p> <p>Tools:</p> <ol style="list-style-type: none"> 2. R Programming 3. Python 4. Tableau 5. SAS 6. Excel 7. RapidMiner 8. IBM Cognos Analytics 9. Microsoft Power BI
	<p>Project work:</p>
	<p>After completion of each module a Data analysis or programming based Assignment/Assessment will be conducted.</p> <p>Mini Project:</p> <p>Perform exploratory data analysis on a given dataset and provide insights on the same.</p> <ol style="list-style-type: none"> 1. Crunchbase – Find business information about private and public companies. You can look up how many investments they had, who the founding members are, and if they had any mergers or acquisitions. 2. Glassdoor Research – Glassdoor offers data related to employment. You can, for example, figure out how much you can save by retaining employees. 3. Open Corporates – Open Corporates is the largest open database of companies and company data in the world. Used by banks and governments, they pride themselves on having the most accurate data. 4. FBI Uniform Crime Reporting – The Uniform Crime Reporting compiles statistical crime reports, publications, and data points from thousands of cities, universities, states, and federal law enforcement agencies. 5. Uppsala Conflict Data Program – The Uppsala Conflict Data Program (UCDP) provides data on organized crime and civil war around the world. 6. National Institute on Drug Abuse – The National Institute on Drug Abuse (NIDA) monitors the prevalence and trends regarding drug abuse in the United States.

	<p>7. DBpedia – DBpedia aims to make Wikipedia’s information easily searchable via SPARQL queries or by downloading their information directly. For instance, you can search for NBA players born in the 80s, in cities with more than 1M inhabitants.</p> <p>8. Google Trends – Google Trends allows you to look at what’s going on in the world. It gives you data about what’s becoming popular, and how much people are searching for a particular term.</p> <p>9. Instagram API – Facebook allows you to use Instagram’s API to quickly access comments, metadata, and metrics.</p> <p>10. Comtrade – Official trade in goods and services data sets managed by the UN COMTRADE database. There are data visualization tools and an API and other extraction tools available.</p> <p>11. Datahub – Stock Market – From gold prices, NASDAQ listings, to S&P 500 companies, you’ll find it all on datahub.io</p> <p>12. Global Financial Data – Global Financial Data gives you exactly what it says on the tin; data about the finances of the world. Ranges from real estate, global macro data, to market data.</p> <p>13. IMF Data – The IMF, or International Monetary Fund, is an organization that aims to foster monetary collaboration between countries. You can find data on trade, government finance, and financial development.</p> <p>14. The Atlas of Economic Complexity – The Atlas of Economic Complexity provides data about global trade dynamics over time. Want to know the quantity of textiles China exported to South Korea? Easy.</p> <p>15. World Bank – Not only does the World Bank provide financial data about countries, but it also provides data on education and health.</p> <p>16. Financial Times Data – Here you’ll find cold, hard numbers about the different markets in the world. Data include fluctuations in currency, yield rates of bonds, and commodity prices.</p>

Course Code: AIE4011	Course Title: Robotic Process Automation	L- T-P- C	3	0	0	3
--------------------------------	-------------------------------------------------	----------------------	---	---	---	---

	Type of Course: Discipline Elective Theory only							
Version No.		2.0						
Course Pre-requisites		--						
Anti-requisites		NIL						
Course Description		The purpose of this course is to enable the students to appreciate the need for Robotic Process Automation and the course offers comprehensive knowledge and professional-level skills focused on developing and deploying software robots using UiPath Platforms. The course is both conceptual and Practical in nature and needs basic knowledge of Computer Programming. The course assumes no prior knowledge of RPA. It begins by refreshing basic programming skills and introducing basic RPA concepts. The course develops skills to identify task which can be automated and develop it with UiPath Studio. The course also enhances the programming abilities through assignments.						
Course Objective		The objective of the course is to familiarize the learners with the concepts of Robotic Process Automation and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING techniques						
Course Outcomes		On successful completion of the course, the students shall be able to: CO1.Explain the concept of automation. CO2.Describe various programming constructs in RPA. CO3.Identify and understand different simulation drive robots. CO4.Apply automation to various concepts related to AI and ML algorithms.						
Course Content:								
Module 1	Introduction to Programming Concepts and RPA Basics	Assignment	Data Analysis					10 Sessions
	Topics: Programming Concepts Basics-1: Software applications, Introduction to Programming, Data and data structure, Algorithms, Sequence, and Flow, and Software Development Guidelines. Programming Concepts Basics-2: Compiler and execution, Scripting and Macro, Frameworks and Languages, Information Sharing Mechanism, Variables and Arguments, Files and File Types, Access Control. RPA Basics: Automation and RPA, Programming Constructs in RPA, Robots in RPA, RPA in Business and Technology.							
Module 2	RPA Advanced Concepts	Assignment	Build own bots					10 Sessions
	Topics: RPA Advanced Concepts: Setting up the Center of Excellence, RPA Project Methodology, The RPA Journey, RPA in the Emerging Ecosystem. Introduction to UiPath: The Basics of UiPath Studio Installation, The User Interface, the various steps involved in the automation projects, The installation of UiPath							

	extensions. UiPath, Arguments, Namespaces. Statements, Control Flow Statements in UiPath, Practical Exercise	Variables: Variables, Types of Variables, Variables in Control Flow: Control Flow & Universal		
Module 3	Simulation of differential drive robots	Assignment	Differential robots	10 Sessions
	Introduction to Gazebo, Installation, Testing Gazebo with ROS interface, Simulation of differential drive robot using ROS technical requirements: Getting Started with Gazebo Simulator, Working with TurtleBot2 simulation, Creating a simulation of Chefbot.			
Module 4	Advanced Automation and Orchestrator	Case Study	Data Collection and Team Project	10 Sessions
	Topics: Email Automation: Introduction to Email Automation, Email Automation in UiPath Studio, Practice retrieving and sending emails Debugging and Exception Handling: Exception Handling, Debugging Tools, Workflow Designs, Catching errors Project Organization: Project Organization, Process, Library, Robotic Enterprise Framework Orchestrator: Introduction to Orchestrator, Processes, Robots in Orchestrator, Working with Orchestrator Future Trends: Artificial Intelligence, Autonomous things, Digital Assistant, Computing			
	Targeted Application & Tools that can be used: Targeted employment sector is service provider and control monitor like GE, Siemens, TCS etc. Targeted job profiles include digital domain and Service based industry etc. Tools: <ul style="list-style-type: none"> UiPath Studio/StudioX 			
	Project work:			
	Project 1: Sales order entry Robot Project 2: E-Mail auto responder Robot Project 3: Disk Monitoring Robot			
	Text Book T1. "Robotic Process Automation using UiPath StudioX", Adeel Javed, Anum Sundrani, Nadia Malik, Sidney Madison Prescott, Apress, 2021

	Topics relevant to development of "EMPLOYABILITY SKILLS": Get introduced to RPA Studio and RPA developer Tools for developing Employability Skills through Participative Learning techniques. This is attained through assessment component mentioned in course handout.			

Course Code: AIE4012	Course Title: Machine Vision			L-T-P-C	3	0	0	3
	Type of Course: Discipline Elective Theory Only							
Version No.		1.0						
Course Pre-requisites		--						
Anti-requisites		NIL						
Course Description		This course provides an introduction to computer vision including fundamentals of image formation, camera imaging geometry, feature detection and matching, stereo, motion estimation and tracking, image classification and scene understanding. We'll explore methods for depth recovery from stereo images, camera calibration, automated alignment, tracking, boundary detection, and recognition. We'll use both classical machine learning and deep learning to approach these problems. The focus of the course is to develop the intuitions and mathematics of the methods in lecture, and then to learn about the difference between theory and practice in the projects.						
Course Objective		The objective of the course is to familiarize the learners with the concepts of Machine Vision and attain EMPLOYABILITY SKILLS through PROBLEM SOLVING techniques						
Course Outcomes		On successful completion of the course the students shall be able to: 1. Describe Image formation and Camera Models [Knowledge] 2. Classify techniques for Local feature extraction and tracking [Comprehension] 3. Apply the different category of calibration methods and dimension reconstruction approach for computer vision[Application]						
Course Content:								
Module 1	Basic Concept of Image Processing	Mini Project	Mapping Features	Facial				12 Classes
	Introduction to Image Processing-Basic mathematical concepts: Image enhancement: Grey level transforms, Spatial filtering. Extraction of special features: edge and corner detection. Morphological processing, Image transforms, Discrete Fourier Transform, Fast Fourier Transform. Frequency domain enhancement.							
Module 2	Image Segmentation	Mini Project	Hand recognition	gesture				14 Classes
	Image Segmentation Algorithms: contextual, non-contextual segmentation, texture segmentation.							

	Feature Detectors and Descriptors, Feature Matching-Object Recognition, The Use of Motion in Segmentation Optical Flow & Tracking Algorithms, Face detection (Viola Jones), Face Recognition.			
Module 3	Image Dimensions	Mini Project	Surveillance	14 Classes
	<p>2D and 3D feature-based alignment, Pose estimation, Geometric intrinsic calibration, - Camera Models and Calibration: Camera Projection Models – orthographic, affine, perspective, projective models.</p> <p>Projective Geometry, transformation of 2D and 3D, Internal Parameters, Lens Distortion Models, Calibration Methods – linear, direct, indirect and multi plane methods. Visual servo. Stereo correspondence-Epipolar geometry, Fundamental matrix, Introduction to SLAM (Simultaneous Localization and Mapping).</p>			
	<p>Targeted Application & Tools that can be used:</p> <p>Computer Vision applications are used for traffic sign detection, surveillance and recognition. Vision techniques are applied to segment traffic signs from different traffic scenes (using image segmentation) and algorithms to recognize and classify traffic signs.</p> <p>Tools:</p> <ul style="list-style-type: none"> • MAT Lab/Open CV 			
	Project work/Assignment:			
	<p>Project Work:</p> <ol style="list-style-type: none"> 1. Detect the faces of humans by mapping facial features from a video or an image. There are several steps involved in these projects, such as mapping features. 2. Hand gesture recognition is one of the critical topics for human-computer interaction. In this project, there are several tasks which are needed to be performed. This includes the hand region, which is to be extracted from the background, followed by segmenting the palms and fingers to detect finger movements. 3. Count the number of people passing through a specific scene. The applications of this project include civilian surveillance, pedestrian tracking, pedestrian counting, etc. 4. Design, implement and test on several regions on a set of images based on the segmentation algorithms. 			
	<p>Text Book</p> <ol style="list-style-type: none"> 1. R. C. Gonzalez, R. E. Woods, 'Digital Image Processing', Pearson, 2017 2. Introduction to Computer Vision and its Application, Richard Szelinski, 2021 			
	<p>References</p> <ol style="list-style-type: none"> 1. Emanuele Trucco and Alessandro Verri, "Introductory Techniques for 3-D Computer Vision", Prentice Hall, 1998. 2 Olivier Faugeras, "Three Dimensional Computer Vision", MIT Press, 1993. 3 Richard Szelinski, "Computer Vision: Algorithms and Applications", Springer, 2011. 4 Milan Sonka, Vaclav Hlavac and Roger Boyle, "Image Processing, Analysis and Machine Vision", Third Edition, CL Engineering, 2013. 5. 	6.Forsyth and Ponce, “Computer Vision – A Modern Approach”, Second Edition, Prentice Hall, 2011.
	Topics relevant to development of “ EMPLOYABILITY SKILLS ”, “ IMAGE SEGEMENTATION and DIMENSIONS of Image Processing- We compare IMAGE PROCESSING/ COMPUTER VISION jobs with Information Technology service oriented jobs then obviously there is relatively limited scope. But things are changing very fast as time is changing. Scope of image processing/computer vision jobs is increasing day to day.

Course Code: AIE4013

Course Title: Cloud Computing

Type of Course: Program Core

L-T-P-C: 3-0-0-3

Total Hours: 45 Hours

Version No.: 1.0

Course Prerequisites: Nil

Anti-requisites: —

Course Description:

This course provides a comprehensive introduction to cloud computing, exploring the foundations, service models, deployment models, and key technologies. It includes discussion on virtualization, resource provisioning, cloud security, storage, and recent trends in cloud services. Students will also understand the impact and applications of cloud computing in modern IT infrastructure.

Course Objectives:

- Understand the key concepts and architecture of cloud computing.
- Explore various service and deployment models in cloud environments.
- Analyze virtualization and resource management in cloud platforms.
- Discuss issues related to cloud security, privacy, and performance.
- Evaluate different cloud platforms and services.

Course Outcomes (COs):

- **CO1 (Understand):** Describe fundamental concepts, architecture, and benefits of cloud computing.
- **CO2 (Analyze):** Compare cloud service models and deployment approaches.
- **CO3 (Apply):** Illustrate virtualization and resource provisioning techniques.
- **CO4 (Analyze):** Examine cloud security concerns and evaluate real-world cloud platforms.

Course Content (Total: 45 Hours)

Module 1: Introduction to Cloud Computing (CO1 – Understand) – 11 Hours

Topics: Cloud characteristics, benefits and challenges, cloud architecture, evolution of cloud computing, cloud vs. traditional computing, NIST definition, role of networks in cloud computing.

Module 2: Cloud Service and Deployment Models (CO2 – Analyze) – 11 Hours

Topics: IaaS, PaaS, SaaS – examples and use cases, public, private, hybrid, and community clouds, economics and ROI of cloud computing, service level agreements (SLAs).

Module 3: Virtualization and Resource Management (CO3 – Apply) – 11 Hours

Topics: Virtualization techniques, hypervisors (VMware, KVM, Xen), virtual machine provisioning and migration, load balancing, autoscaling, containers and Docker.

Module 4: Cloud Security and Emerging Trends (CO4 – Analyze) – 12 Hours

Topics: Security and privacy issues, identity and access management, compliance standards (ISO, GDPR), multi-tenancy, cloud storage systems, introduction to edge computing and serverless computing, overview of AWS, Azure, and GCP.

Course Code: AIE 4014	Course Title: Ontology Engineering for the Semantic Web Type of Course: Discipline Elective Theory Only	L- T-P- C	3	0	0	3
Version No.	2.0					
Course Pre-requisites	--					
Anti-requisites	NIL					
Course Description	This course presents the basics of semantic web and Ontology engineering. This course consist of the detailed description RDF frameworks. This course is designed with theoretical material on ontology design, Description Logics, and developing ontologies using OWL. The course uses the Protege-OWL environment.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Ontology Engineering for the Semantic Web and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING techniques					
Course Outcomes	On successful completion of the course the students shall be able to: CO1. Understand the semantic web basics, architecture and technologies. CO2. Describe the semantic relationships among the data elements using Resource Description Framework (RDF)					

		CO3. Analyze the conventional web with semantic web. CO4. Able to design and implement real-world applications that “discovers” the data and/or other web services via the semantic web			
Course Content:					
Module 1	Introduction	Assignment	Analysis, Data Collection		9 Sessions
	Topics: Introduction to the Syntactic web and Semantic Web, Evolution of the Web, The visual and syntactic web, Levels of Semantics, Metadata for web information, The semantic web architecture and technologies, A Layered Approach , Semantic Modeling -Potential of semantic web solutions and challenges of adoption.				
Module 2	Ontological Engineering	Assignment	Analysis, Data Collection		9 Sessions
	Topics: Ontologies, Taxonomies, Topic Maps, Classifying Ontologies, Terminological aspects: concepts, terms, relations between them, Complex Objects, Subclasses and Sub properties, definitions, Upper Ontologies, Quality, Uses, Types of terminological resources for ontology building, Methods and methodologies for building ontologies, Multilingual Ontologies, methods for Ontology Learning, Constructing Ontologies Manually , Reusing Existing Ontologies , Ontology Evolution, Versioning.				
Module 3	Describing the Web Resources	Assignment	Data analysis task		9 Sessions
	Topics: RDF Overview, The basic elements of RDF, RDF triples, Fundamental rules of RDF Aggregation and distributed information, RDF tools, RDF and RDF Schema in RDF Schema , RDFS, , Need for RDFS, Core elements of RDFS, RDF Schema: Basic Ideas .				
Module 4	Web Ontology Language and Real-world examples	Case Study	Analysis, Data Collection		11 Sessions
	Topics: Requirements for Ontology Languages, OWL Sub languages, Description of the OWL Language, Layering of OWL, Examples for OWL, OWL in OWL, Future Extensions , Building Classes from Other Classes, Restricting Properties of Classes. SWOOGLE and FOAF: basics, architecture, usage and examples.				
	Targeted Application & Tools that can be used: Enterprise applications. A more concrete example is SAPPHIRE (Health care) or Situational Awareness and Preparedness for Public Health Incidences and Reasoning Engines which is a semantics-based health information system capable of tracking and evaluating situations and occurrences that may affect public health. Geographic information systems bring together data from different sources and benefit therefore from ontological metadata which helps to connect the semantics of the data.				

	<p>Domain-specific ontologies are extremely important in biomedical research, which requires named entity disambiguation of various biomedical terms and abbreviations that have the same string of characters but represent different biomedical concepts.</p> <p>Tools:</p> <ul style="list-style-type: none"> • Protégé • Neon Toolkit • SWOOP • Vitro
	<p>Project work:</p>
	<p>Mini Project:</p> <ul style="list-style-type: none"> • Ontology-Based Model for the “Ward-round” Process in Healthcare To design an ontology-based model that can fix information flow problems in the ward-round process of hospital unit. This can be used to provide relevant information to the domain users according to their needs and demands. The domain users profile and describes their roles, information demands with competencies: skills, qualifications and experiences. The ontology based model will be implemented in OWL language that can be used in an application to support ward-round activities for achieving effective patient’s treatment process.
	<p>Text Book/</p> <ol style="list-style-type: none"> 1. Grigoris Antoniou, Frank Van, “Semantic Web Primer”, MIT Press, 2008 2. Karin K. This is attained through assessment component mentioned in course handout.</p>

Course Code: AIE 4015	Course Title: Intelligent Information Retrieval			L-T- P- C	3	0	0	3
	Type of Course: Discipline Elective Theory Only							
Version No.	2.0							
Course Pre-requisites	CSE5005							
Anti-requisites	NIL							
Course Description	This Course studies the theory, design, implementation and evaluation of information retrieval systems. The focus is on the core concepts of Text- based information systems, statistical characteristics of text, representation of information needs and documents. Several important retrieval models, algorithms, and Recommender System. Also examined is how an effective information search and retrieval is interrelated with the organization and description of information to be retrieved. Throughout the course, current literature from the viewpoints of both research and practical retrieval technologies on the World Wide Web will be examined.							
Course Objective	The objective of the course is to familiarize the learners with the concepts of Intelligent Information Retrieval and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING techniques							
Course Outcomes	On successful completion of the course the students shall be able to: CO1: Define basic concepts of information Retrieval and Recommender System CO2: Evaluate the effectiveness and efficiency of different information retrieval methods CO3: Explain the standard methods for Web indexing and retrieval CO4: Develop Methods for implementing a recommender system							
Course Content:								
Module 1	INTRODUCTION	Assignment	Term Paper		8 Sessions			
	Topics: Information Retrieval – Early Developments – The IR Problem -Components of IR Model–User Interaction with IR model- The Users Task – Information versus Data Retrieval – The IR System – The Software Architecture of the IR System – The Retrieval and Ranking Processes – The Web – The e-Publishing Era – How the web changed Search – Practical Issues on the Web – How People Search.							
Module 2	MODELING AND RETRIEVAL EVALUATION	Assignment	Term Paper		12 Sessions			
	Topics: Basic IR Models – Boolean Model – TF-IDF (Term Frequency/Inverse Document Frequency) Weighting – Vector Model – Probabilistic Model – Latent Semantic Indexing Model – Neural Network Model –Set Theoretic-Fuzzy, Extended Boolean, Retrieval Evaluation – Retrieval Metrics – Precision and Recall – Reference Collection – User-based Evaluation.							

Module 3	WEB RETRIEVAL AND WEB CRAWLING	Assignment	Term Paper	10 Sessions
	Topics: The Web – Search Engine Architectures – Cluster based Architecture – Distributed Architectures – Search Engine Ranking – Link based Ranking – Simple Ranking Functions – Learning to Rank – Evaluations – Search Engine Ranking – Search Engine User Interaction – Browsing – Applications of a Web Crawler – Taxonomy – Architecture and Implementation – Difference between web scraping and web crawling.			
Module 4	RECOMMENDER SYSTEM	Assignment	Term Paper	10 Sessions
	Topics: Recommender Systems Functions – Data and Knowledge Sources – Recommendation Techniques – Basics of Content-based Recommender Systems – High-Level Architecture – Advantages and Drawbacks of Content-based Filtering – Collaborative Filtering – Matrix factorization models – Introduction to user-based recommender systems.			
	Targeted Application & Tools that can be used: <ul style="list-style-type: none"> Information Retrieval Applications Machine Learning Applications Tools: <ul style="list-style-type: none"> Bow Toolkit GATE Lemur MG Smart (System for the Mechanical Analysis and Retrieval of Text) Information Retrieval System is an information retrieval system developed at Cornell University in the 1960s.

Course Code: AIE4016

Course Title: Internet of Things

Type of Course: Program Core

L-T-P-C: 3-0-0-3

Total Hours: 45 Hours

Version No.: 1.0

Course Prerequisites: Nil

Anti-requisites: —

Course Description:

This course provides a solid foundation in the principles and technologies of the Internet of Things (IoT). It covers IoT architecture, communication protocols, data acquisition, sensor integration, and applications across various domains. It also highlights challenges related to security, scalability, and interoperability in IoT systems.

Course Objectives:

- Understand the architecture and basic building blocks of IoT.
- Explore various communication protocols and standards used in IoT.
- Examine sensor technologies and data acquisition methods.
- Evaluate real-world IoT applications in various sectors.
- Discuss security and privacy issues in IoT networks.

Course Outcomes (COs):

- **CO1 (Understand):** Describe IoT architecture, sensors, and device integration.
- **CO2 (Analyze):** Analyze IoT communication protocols and data processing techniques.
- **CO3 (Apply):** Apply IoT concepts in developing domain-specific applications.
- **CO4 (Analyze):** Evaluate IoT security mechanisms and implementation challenges.

Course Content (Total: 45 Hours)

Module 1: Introduction to IoT and Architecture (CO1 – Understand) – 11 Hours

Topics: Definition, characteristics, history of IoT, layered architecture, IoT enabling technologies, physical and virtual components, sensors and actuators, embedded systems, IoT design considerations.

Module 2: IoT Communication Technologies (CO2 – Analyze) – 11 Hours

Topics: IoT network topologies, M2M, WSN, RFID, Bluetooth, Zigbee, NFC, LoRa, MQTT, CoAP, 6LoWPAN, communication models and APIs, IP addressing in IoT.

Module 3: IoT Data Management and Applications (CO3 – Apply) – 11 Hours

Topics: Data acquisition, storage, and analytics in IoT, real-time data stream processing, cloud and edge computing for IoT, smart applications in healthcare, agriculture, home automation, smart cities.

Module 4: IoT Security and Challenges (CO4 – Analyze) – 12 Hours

Topics: Security requirements in IoT, authentication and access control, cryptographic algorithms, secure communication protocols, privacy challenges, ethical considerations, scalability, interoperability issues.

Course Code: AIE 4017	Course Title: Essentials for Machine Learning (ML) Type of Course: Discipline Elective Theory Only	L- T-P- C	3	0	0	3
Version No.		2.0				
Course Pre-requisites		NIL				
Anti-requisites		NIL				
Course Description		Machine learning has been emerged as a promising paradigm in the field of Computer science having applications in a wide variety of fields such as communication networks, bioinformatics, image processing, antenna design etc. Now a day’s people from multiple discipline are interested in Machine learning due to its applicability in predicting behaviors of highly complex systems, which is otherwise difficult based on traditional optimization techniques in a time bound fashion. The goal of this course				

		<p>is to provide the mathematical prerequisite for starting any Machine learning course to the students coming from various engineering disciplines. This course does not require any prerequisite. The goal of the course is:</p> <ol style="list-style-type: none"> 1. To introduce basic probability and statistics concepts. 2. To introduce basic Linear Algebra concepts. 3. To enable the students to understand Machine Learning/Deep learning concepts in future. 			
Course Objective		<p>The objective of the course is to familiarize the learners with the concepts of Essentials for Machine Learning (ML) and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING techniques</p>			
Course Outcomes		<p>On successful completion of this course the students shall be able to:</p> <p>CO1: Understand the basic concepts of Probability and Statistics.</p> <p>CO2: Understand the basic concepts of Linear Algebra.</p> <p>CO3: Peruse courses on Machine learning/Deep learning in future.</p>			
Course Content:					
Module 1	Probability	Assignment		Sample space and Events, Interpretation and axioms of Probability, Conditional Probability, Multiplication and total Probability rules, Independence, Bayes' theorem	08 Sessions
<p>Topics:</p> <p>Sample space and Events, Interpretation and axioms of Probability, Conditional Probability, Multiplication and total Probability rules, Independence, Bayes' theorem.</p>					
Module 2	Random variables	Assignment		Probability distribution, Probability mass function, Probability density function, Cumulative distribution function, Mean and variance of a random variable, Binomial, Poisson and Normal random variables, relation between them.	08 Sessions
<p>Topics:</p> <p>Probability distribution, Probability mass function, Probability density function, Cumulative distribution function, Mean and variance of a random variable, Binomial, Poisson and Normal random variables, relation between them.</p>					
Module 3	Introduction to Statistics	Assignment		Pie Chart, Bar chart, Box and whisker plot, Mean, Median, Mode, AM, GM, HM, Quartiles, Deciles,	08 Sessions

				Percentiles, Moments, Skewness, Kurtosis, Measures of Central tendency, Software demonstration.	
Topics: Pie Chart, Bar chart, Box and whisker plot, Mean, Median, Mode, AM, GM, HM, Box Plots, time sequences plots , Measures of Central tendency, Software demonstration.					
Module-4	Estimation Parameters	of Assignment		Point estimation, Sampling distribution, Central Limit Theorem, Unbiased estimators, Method of point estimation, Method of moments, method of maximum likelihood, confidence interval estimates of population parameter, student's t distribution, Testing of hypothesis, Chi square distribution, Degrees of freedom	06 Sessions
Topics: Point estimation, Sampling distribution, Central Limit Theorem, Unbiased estimators, Residual Analysis and model checking , method of maximum likelihood, confidence interval estimates of population parameter, student's t distribution, Testing of hypothesis, Chi square distribution, Degrees of freedom					
Module-5	Linear Algebra	Assignment		Scalar, Vector, Matrices and Tensors, Norms, Span, Eigen Value, Eigen Vector, The trace operator, Determinant, Proximity measure, Example: Principal Component Analysis.	06 Sessions
Topics: Scalar, Vector, Matrices and Tensors, Norms, Span, Eigen Value, Eigen Vector, The trace operator, Determinant, Example: Principal Component Analysis.					
	Project work/Assignment:				
	Software demonstration, Probability mass function, Independence, Bayes' theorem, Span, Eigen Value for developing Employability Skills through Participative Learning techniques . This is attained through assessment component mentioned in course handout.

<p>Course Code: AIE 4018</p>	<p>Course Title: Recommender Systems with Machine Learning and AI</p> <p>Type of Course: Discipline Elective</p> <p>Theory Only</p>	<p>L- T-P- C</p>	<p>3-0-0-3</p>
<p>Version No.</p>	<p>2.0</p>		
<p>Course Pre-requisites</p>	<p>CSE5007</p>		
<p>Anti-requisites</p>	<p>NIL</p>		
<p>Course Description</p>	<p>This course helps us understand from the early days of collaborative filtering to bleeding-edge applications of deep neural networks and modern machine learning techniques for recommending the best items to every individual user.</p>		
<p>Course Objective</p>	<p>The objective of the course is to familiarize the learners with the concepts of Recommender Systems with Machine Learning and AI and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING techniques</p>		

Course Outcomes	On successful completion of this course, the students shall be able to: CO1. Define recommender systems CO2. Use content-based filtering using item attributes CO3. Build model-based methods including matrix factorization, SVD. CO4. Apply deep learning, AI, artificial and recursive neural networks, for session based recommendations. CO5. Analyse recommendation algorithms using various case studies.			
Course Content:				
Module 1	Introduction to Recommendation System	Assignment	Seminar	12 Sessions
	Topics: Introduction to Recommendation systems, Architecture of Recommendation systems, Basic models of Recommendation systems, Implicit Ratings, Explicit Ratings, Collaborative Filtering, Content-based Recommendation, Advantages and Disadvantages of Content-based recommendations. Knowledge-Based Recommender Systems, Hybrid Recommendation systems, Demographic Recommendation Systems, Applications of Recommendation systems, Advantages and Disadvantages of recommendation systems.			
Module 2	Content-Based Recommender Systems	Assignment	Mini Project	12 Sessions
	Topics: Introduction, Architecture of content-based recommendation, Basic components of Content-based systems, Learning User profiles and Filtering- KNN, case-based recommendation, Bayes Classifiers, Rule-based Classifiers, Decision tree classifier.			
Module 3	Model-Based Collaborative Filtering	Assignment	Mini project	12 Sessions
	Topics: Introduction to collaborative filtering, Decision and Regression Trees, Rule-based collaborative Filtering-Item-wise vs User-wise models, Item-based collaborative filtering, Naive Bayes Collaborative filtering, Basic matrix Factorization principle, and Singular Value Decomposition.			
Module 4	Hybrid Recommendation Systems	Assignment	Mini project	12 Sessions
	Topics: Introduction to Hybrid Recommendation systems, Losses faced by recommendation systems: Bayesian personalized rating (BPR), Weighted approximation rank-pairwise(WARP). Weighted Hybrids, Switching Hybrids, Cascade Hybrids, Meta-Level Hybrids, Mixed hybrids, Advantages and disadvantages of Hybrid Recommendation systems.			
Module 5	Application and Evaluation of RS	Assignment	Seminar	12 Sessions
	Topics: Case study on YouTube Recommendation, case study on Netflix Recommendation system, Case study on an restaurant ratings given by the customer, Offline Evaluation, Online Evaluation, Goals of Evaluation design- Accuracy, Coverage, Confidence and Trust, Diversity, Robustness and Stability, Scalability, Training and testing of Ratings, RMSE, MAE, Evaluating Ranking via Correlation, Utility, Receiver Operating Characteristics.			
	Targeted Applications & Tools that can be used:			

	<p>Targeted Application: Web application development, AI, Operating systems</p> <p>Tools: Python IDLE, ANACONDA</p> <p>Application Areas:</p> <ul style="list-style-type: none"> • E-Commerce Application • E-Learning Applications • E-Business Services • Artificial Intelligence and Machine Learning • Enterprise-level/Business Applications <p>Professionally Used Software: Python, Spyder, Jupyter Notebook, Tensorflow (TFRS), Amazon Personalize.</p>
	<p>Project work</p>
	<ul style="list-style-type: none"> • A scenario will be given to the students to be developed as a series of Program/ Application. <p>On completion of Module 3 and Module 4, students will be asked to develop a Mini Project using Python.</p>
	<p>Textbooks</p> <p>T1. Frank Kane - Building Recommender Systems with Machine Learning and AI, First Edition, 2018</p> <p>T2. Charu C. Aggarwal – Recommender Systems, Springer Publishing Company, 2016.</p>

Course Code: AIE4019

Course Title: Green Computing and Sustainable IT

Type of Course: Program Core

L-T-P-C: 3-0-0-3

Total Hours: 45 Hours

Version No.: 1.0

Course Prerequisites: Nil

Anti-requisites: —

Course Description:

This course provides an overview of sustainable computing practices and green technologies in IT. It introduces students to the environmental impact of computing resources and the principles of designing, operating, and managing sustainable IT infrastructures. Topics include energy efficiency, eco-labeling, green data centers, e-waste management, and policy compliance.

Course Objectives:

- Understand the significance and need for sustainable computing.
- Explore green IT strategies, practices, and technologies.
- Analyze the environmental impact of hardware, software, and infrastructure.
- Learn green data center design, energy metrics, and life cycle assessment.
- Study regulatory and policy frameworks supporting green computing.

Course Outcomes (COs):

- **CO1 (Understand):** Describe the principles and goals of green computing.
- **CO2 (Analyze):** Analyze the energy consumption and environmental impact of IT systems.
- **CO3 (Apply):** Apply sustainable practices in hardware, software, and data center design.
- **CO4 (Analyze):** Evaluate compliance frameworks and sustainability metrics.

Course Content (Total: 45 Hours)**Module 1: Introduction to Green Computing (CO1 – Understand) – 10 Hours**

Topics: Definition, importance and goals, historical perspective, environmental concerns, carbon footprint, IT's contribution to environmental problems, green metrics and benchmarking.

Module 2: Sustainable IT Infrastructure (CO2 – Analyze) – 11 Hours

Topics: Green hardware – energy-efficient processors, peripherals, and devices, lifecycle analysis, green software development, power management features, virtualization, cloud computing, and its impact on sustainability.

Module 3: Green Data Centers and Best Practices (CO3 – Apply) – 12 Hours

Topics: Data center efficiency, server consolidation, cooling and power optimization, LEED certification, energy usage metrics (PUE, DCiE), automation, and monitoring tools, green network design.

Module 4: Compliance and Environmental Standards (CO4 – Analyze) – 12 Hours

Topics: ISO 14001, Energy Star, EPEAT, RoHS, WEEE directives, policy initiatives, government regulations, corporate social responsibility, ethical issues, and global green IT initiatives.

Textbooks:

Course Code: AIE4020**Course Title:** Reinforcement Learning**Type of Course:** Program Core (Integrated Theory and Lab)**L-T-P-C:** 2-0-2-3**Total Hours:** 30 Hours Theory + 30 Hours Lab (15 Weeks)**Version No.:** 1.0**Course Prerequisites:** Machine Learning or equivalent knowledge**Anti-requisites:** —

Course Description:

This course introduces the core concepts, models, and algorithms of Reinforcement Learning (RL), including dynamic programming, Monte Carlo methods, and temporal-difference learning. Students will learn to model real-world problems using RL paradigms and apply algorithms using Python-based libraries. The course includes 15 weeks of lab exercises for hands-on implementation and simulation.

Course Objectives:

- Understand the fundamental principles of reinforcement learning.
- Learn various RL algorithms such as Q-learning, SARSA, and policy gradient methods.
- Explore applications of RL in control, robotics, and games.
- Implement RL models using Python and OpenAI Gym.
- Analyze the performance and convergence of RL algorithms.

Course Outcomes (COs):

- **CO1 (Understand):** Describe the foundational concepts and mathematical formulation of RL problems.
- **CO2 (Analyze):** Analyze the behavior and convergence of key RL algorithms.
- **CO3 (Apply):** Apply dynamic programming and TD learning to solve decision-making tasks.
- **CO4 (Apply):** Implement RL algorithms in practical scenarios using standard environments.

Course Content (Total: 60 Hours)**Module 1: Foundations of Reinforcement Learning (CO1 – Understand) – 8 Theory Hours**

Topics: Agent-environment interaction, rewards, policies, value functions, Markov Decision Processes (MDP), Bellman equations.

Module 2: Dynamic Programming and Monte Carlo Methods (CO2 – Analyze) – 8 Theory Hours

Topics: Policy evaluation, policy improvement, value iteration, Monte Carlo prediction and control, exploration vs. exploitation.

Module 3: Temporal Difference Learning (CO3 – Apply) – 7 Theory Hours

Topics: TD prediction, SARSA, Q-learning, n-step bootstrapping, eligibility traces, off-policy learning.

Module 4: Advanced Methods and Applications (CO4 – Apply) – 7 Theory Hours

Topics: Policy gradients, Actor-Critic methods, Deep Q-Networks (DQN), RL in robotics, games, NLP and finance.

Laboratory Experiments (15 Weeks / 30 Hours)

1. Introduction to OpenAI Gym and environment setup.
2. Implement basic MDP environment and simulate agent behavior.
3. Policy evaluation using iterative methods.
4. Value iteration and policy iteration in grid world.
5. Monte Carlo prediction algorithm.
6. Monte Carlo control with ϵ -soft policies.
7. SARSA implementation on a cliff-walking environment.
8. Q-learning implementation and analysis.
9. N-step TD and eligibility traces.
10. Off-policy learning using Importance Sampling.
11. Policy Gradient with REINFORCE algorithm.
12. Actor-Critic implementation using PyTorch.
13. Deep Q-Network implementation.
14. RL for CartPole using OpenAI Gym.
15. Mini project on game-playing or robotic control task.

Course Title: AI Ethics and Responsible AI

Type of Course: Program Core (Integrated Theory and Lab)

L-T-P-C: 2-0-2-3

Total Hours: 30 Hours Theory + 30 Hours Lab (15 Weeks)

Version No.: 1.0

Course Prerequisites: Introduction to Artificial Intelligence

Anti-requisites: —

Course Description:

This course explores the ethical, social, and legal challenges posed by Artificial Intelligence. It emphasizes the development and deployment of responsible AI systems, highlighting fairness, transparency, accountability, and alignment with human values. Through theoretical discussions and practical case studies, students will develop critical thinking and implement tools to evaluate ethical AI models.

Course Objectives:

- Understand ethical implications and responsibilities in AI system development.
- Identify bias, discrimination, and privacy issues in data and AI algorithms.
- Study the global frameworks and regulations for responsible AI.
- Apply ethical principles in AI applications through toolkits and frameworks.
- Analyze real-world use cases and propose responsible AI solutions.

Course Outcomes (COs):

- **CO1 (Understand):** Explain key ethical principles and challenges in AI development.
- **CO2 (Analyze):** Analyze social and legal implications of biased or opaque AI systems.
- **CO3 (Apply):** Apply tools and frameworks for evaluating ethical AI.
- **CO4 (Apply):** Implement responsible design and deployment practices in AI systems.

Course Content (Total: 60 Hours)

Module 1: Ethical Foundations in AI (CO1 – Understand) – 8 Theory Hours

Topics: History of AI ethics, human values and ethics in computing, key principles: fairness, accountability, transparency, interpretability, and responsibility.

Module 2: Bias, Discrimination and Data Ethics (CO2 – Analyze) – 8 Theory Hours

Topics: Sources of bias in datasets, algorithmic bias, discrimination, fairness metrics, data privacy, informed consent, GDPR, and ethical data collection.

Module 3: Frameworks, Regulations and Governance (CO3 – Apply) – 7 Theory Hours

Topics: IEEE/EU/UN AI ethics frameworks, explainable AI (XAI), ethical audits, model interpretability tools (LIME, SHAP), AI risk management, compliance mechanisms.

Module 4: Responsible AI in Practice (CO4 – Apply) – 7 Theory Hours

Topics: Ethical AI toolkit walkthrough, responsible design lifecycle, real-world applications (facial recognition, healthcare AI), corporate and governmental case studies.

Laboratory Experiments (15 Weeks / 30 Hours)

1. Analyze an AI dataset for embedded bias.

2. Apply fairness metrics (e.g., statistical parity, equal opportunity).
3. Investigate algorithmic discrimination in classifiers.
4. Evaluate AI models using LIME and SHAP.
5. Conduct an ethical audit using open-source AI audit tools.
6. Study a case involving ethical failures in AI.
7. Redesign an AI pipeline to meet GDPR standards.
8. Use IBM AI Fairness 360 Toolkit for bias detection and mitigation.
9. Conduct model explainability exercise using SHAP.
10. Implement data minimization and privacy-enhancing techniques.
11. Apply ethical scorecard to an existing ML project.
12. Compare transparency levels in different AI systems.
13. Group discussion on regulation frameworks (EU AI Act, OECD guidelines).
14. Develop a responsible AI policy document for a startup.
15. Mini-project: Create an AI solution that meets ethical compliance.

Course Code: AIE4023**Course Title:** Explainable AI**Type of Course:** Program Core (Integrated Theory and Lab)**L-T-P-C:** 2-0-2-3**Total Hours:** 60 (30 Theory + 30 Lab)

Course Description:

Explainable AI (XAI) focuses on understanding, interpreting, and explaining the decision-making process of AI models. This course explores explainability methods, trust, fairness, interpretability tools, and model transparency. Students will implement techniques using XAI libraries such as LIME, SHAP, and others.

Course Outcomes (COs):

- **CO1 (Understand):** Understand the need for explainability in AI systems.
- **CO2 (Analyze):** Analyze XAI algorithms for interpreting ML models.

- **CO3 (Apply):** Apply LIME, SHAP, and similar tools for local and global model explanations.
- **CO4 (Apply):** Implement explainability in high-stake domains like healthcare and finance.

Modules (30 Hours Theory):**Module 1: Introduction to Explainability (CO1 – Understand) – 8 Hours**

Definition of XAI, importance of interpretability, black-box vs white-box models, key principles – transparency, trust, fairness, accountability.

Module 2: XAI Algorithms and Techniques (CO2 – Analyze) – 8 Hours

Local vs global explanations, post-hoc vs ante-hoc explainability, model-specific vs model-agnostic methods, use cases.

Module 3: Tools for Explainability (CO3 – Apply) – 7 Hours

LIME (Local Interpretable Model-agnostic Explanations), SHAP (SHapley Additive exPlanations), PDPs, ICE plots, Anchors.

Module 4: Responsible XAI in Practice (CO4 – Apply) – 7 Hours

Bias in explanation tools, applications in healthcare, finance, justice, case studies, integrating XAI with ML pipelines.

Laboratory Experiments (15 Weeks / 30 Hours):

1. Install and set up LIME and SHAP packages in Python.
2. Use LIME to interpret predictions of a classifier.
3. Visualize feature importance using SHAP.
4. Compare LIME vs SHAP explanations for same data.
5. Generate ICE and PDP plots for a regression model.
6. Case study: Explaining credit scoring decisions.
7. Visualize attention in NLP models (e.g., BERT).
8. Implement model fairness auditing.
9. XAI for healthcare diagnostic systems.
10. Build a transparent rule-based model using decision trees.
11. Apply XAI to image classification (CNN).
12. Develop explanation reports for black-box models.
13. Group discussion on regulatory requirements for explainability.
14. Review of Explainable AI in industry white papers.
15. Mini project: Explainability-driven model deployment.

Textbooks:

Course Code: AIE4024

Course Title: Digital Twins

Type of Course: Program Core (Integrated Theory and Lab)

L-T-P-C: 2-0-2-3

Total Hours: 60 (30 Theory + 30 Lab)

Course Description:

Digital Twin refers to the digital replication of real-world systems. This course introduces digital twin architecture, data modeling, synchronization, real-time analytics, and applications across smart cities, healthcare, and manufacturing.

Course Outcomes (COs):

- **CO1 (Understand):** Understand the architecture and principles of digital twins.
- **CO2 (Analyze):** Analyze synchronization, modeling and data communication.
- **CO3 (Apply):** Apply simulation platforms to build digital twins.
- **CO4 (Apply):** Apply digital twins to solve problems in industrial and smart systems.

Modules (30 Hours Theory):

Module 1: Digital Twin Architecture (CO1 – Understand) – 8 Hours

Definition, history, key components – physical entity, virtual model, data connection. Differences between simulations and twins.

Module 2: Data Acquisition & Synchronization (CO2 – Analyze) – 8 Hours

Sensors, IoT integration, cloud services, data pipelines, real-time communication using MQTT, OPC-UA, edge processing.

Module 3: Tools & Modeling Platforms (CO3 – Apply) – 7 Hours

MATLAB/Simulink, AnyLogic, Unity3D, TwinCAT, IoT platforms (AWS, Azure IoT). Case studies of implementation.

Module 4: Applications & Industry Use Cases (CO4 – Apply) – 7 Hours

Smart manufacturing, predictive maintenance, smart cities, energy grid optimization, healthcare diagnostics.

Lab Experiments (15 Weeks / 30 Hours):

1. Setup a basic twin simulation using Simulink.
2. Connect IoT sensor stream to virtual dashboard.
3. Build a 3D twin model using Unity.
4. Real-time data feed and update loop demonstration.
5. Twin for HVAC system control.
6. Twin modeling in healthcare monitoring.
7. Predictive maintenance simulation.
8. Visualization of twin diagnostics.
9. Real-time dashboard using PowerBI/Node-RED.

10. Cloud-hosted digital twin example.
11. Twin system with rule-based triggers.
12. Twin for robotics with feedback.
13. Smart energy grid simulation.
14. Comparison between simulation and twin.
15. Mini-project in a domain of choice.

Textbooks:

Course Code: AIE4025

Course Title: Quantum Computing

Type of Course: Program Core (Integrated Theory and Lab)

L-T-P-C: 2-0-2-3

Total Hours: 60 (30 Theory + 30 Lab)

Course Description:

This course provides an introduction to quantum computing including quantum logic, qubits, quantum circuits, gates, and algorithms. Students learn programming via simulators and real quantum computers using IBM Qiskit or similar tools.

Course Outcomes (COs):

- **CO1 (Understand):** Explain quantum principles and concepts like superposition and entanglement.
- **CO2 (Analyze):** Analyze and construct quantum circuits using basic gates.
- **CO3 (Apply):** Implement algorithms like Grover's and Deutsch-Jozsa.
- **CO4 (Apply):** Use IBM Qiskit or equivalent platforms for quantum experimentation.

Modules (30 Hours Theory):

Module 1: Basics of Quantum Computing (CO1 – Understand) – 8 Hours

Qubits, superposition, entanglement, quantum states, measurement, Bloch sphere.

Module 2: Quantum Logic & Circuits (CO2 – Analyze) – 8 Hours

Quantum gates – Pauli, Hadamard, CNOT, Toffoli, circuits, reversible logic.

Module 3: Quantum Algorithms (CO3 – Apply) – 7 Hours

Deutsch-Jozsa, Grover's Search, Quantum Fourier Transform (QFT), overview of Shor's Algorithm.

Module 4: Quantum Platforms & Applications (CO4 – Apply) – 7 Hours

IBM Qiskit, circuit simulation, quantum teleportation, applications in cryptography, optimization.

Lab Experiments (15 Weeks / 30 Hours):

1. Create and visualize single-qubit gates.
2. Implement Bell state.
3. Deutsch-Jozsa algorithm simulation.
4. Grover's search implementation.
5. Construct a reversible circuit.
6. Basic teleportation simulation.
7. Execute circuit on IBM quantum computer.
8. Study quantum measurement and noise.
9. Superdense coding protocol.
10. Compare classical vs quantum speed-up.
11. Use Qiskit Aqua for chemistry simulation.
12. Quantum circuit optimization.
13. Run hybrid quantum-classical workflow.
14. Explore QML (Quantum ML) basics.
15. Mini project using IBM Qiskit.

Course Code: DSC4011	Course Title: Data Science with Cloud Computing Type of Course: Discipline Elective Theory Only	L- T-P- C	3	0	0	3
Version No.	2.0					
Course Pre-requisites	--					
Anti-requisites	NIL					
Course Description	This course introduces a new Transformative, more collaborative way of doing Data Science. It helps in understanding End to End Data pipelines, Ingesting Data in a serverless way and working our way through Data Exploration, Dashboards, and Streaming Data all the way to training and making an operational Machine Learning Model.					

Course Objective	The objective of the course is to familiarize the learners with the concepts of Data Science with Cloud Computing and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING techniques				
Course Outcomes	On successful completion of the course the students shall be able to: CO1.Define Data Science and its fundamentals and the process in Data Science. CO2.Explain the process of Ingesting Data into the Cloud Platform. CO3.Analyze real-world problems with Accuracy. CO4.Demonstrate the overall organization of Data and Storage.				
Course Content:					
Module 1	Making Better Decisions Based on Data	Assignment	Case Study		10 Sessions
	Topics: Many Similar Decisions, Role of Data Engineers, The Cloud Makes Data Engineers Possible, The NaN value, Series CRUD, Series Indexing , The Cloud Turbocharges Data science, Airline on Time Performance Data, Scheduling Monthly Downloads.				
Module 2	Creating Compelling Dashboards	Assignment	Case Study		10 Sessions
	Topics: Explain your Model with Dashboards, Loading Data into google Cloud SQL, Creating Google cloud Instance, Interacting with Google cloud Platform, Maximum Likelihood Estimation (MLE)				
Module 3	Streaming Data: Publication and Ingest	Assignment	Case Study		10 Sessions
	Topics: Designing the Event Feed, Time Correction, Apache Beam/Cloud Dataflow, Publishing an Event Stream to Cloud Pub/Sub, Real Time Stream processing, Interactive Data Exploration, Exploratory Data Analysis, Loading Flights Data into Big Query, Arrival Delay conditioned on Departure Delay, Evaluating the Model. Time Series Analysis				
Module 4	Cloud Dataproc	Assignment	Case Study		10 Sessions
	Topics: Bayes Classifier on Cloud Dataproc, Map Reduce and Hadoop Eco System, Quantization using Spark SQL, Bayes Classification using Pig				
	Targeted Applications & Tools that can be used: Targeted Industries like Banking, Transport, e-commerce, healthcare and many more are using data science to make optimal Decisions. The usage of data science helps in rising sales. It can				

	<p>explore historic data, make comparisons and analyses of the market and provide recommendations.</p> <p>Target Jobs Data Scientist, Data Architect, Data Engineer, Statistician.</p> <p>Tools:</p> <ul style="list-style-type: none"> • Apache Spark • Jupyter • Weka
	Project work/Assignment:
	<p>Mini Project:</p> <p>Walmart Sales Forecasting in Cloud</p> <ul style="list-style-type: none"> • Predict the sales across various departments in each store. • Predict the effect of markdowns on the sales during the holiday seasons. <p>Term Assignments:</p> <p>Consider a Dataset on Bird communities that needs to be analyzed. The data has three columns, a date, a common name, and a count of the number of individuals.</p> <ul style="list-style-type: none"> • Count the total number of individuals of each species that were seen in each data file. • Sort based on the total number of individuals.

	<p>Topics relevant to “ EMPLOYABILITY SKILLS ”: Data Extraction, Data wrangling for developing Employability Skills through Participative Learning techniques. This is attained through assessment component as mentioned in course handout.</p>

Course Code: DSC 4012	Course Title: Data Security and Access Control	L- T-P- C				
	Type of Course: Discipline Elective		3	0	0	3

	Theory Only							
Version No.	2.0							
Course Pre-requisites	--							
Anti-requisites	NIL							
Course Description	This course describes fundamental issues and problems in data security and provides technical solutions or facets to the problem of achieving data security. The course also deals with the security of statistical databases, discusses authorization systems, and covers the fundamental ideas of cryptography.							
Course Objective	The objective of the course is to familiarize the learners with the concepts of Data Security and Access Control and attain EMPLOYABILITY SKILLS through Participative Learning techniques.							
Course Outcomes	On successful completion of the course the students shall be able to: CO1: Describe the basic concepts of a Data Security CO2: Apply appropriate techniques for security Algorithms CO3: Explain the Access Controls mechanisms CO4: Simulate data security algorithms for achieving access control							
Course Content:								
Module 1	Fundamentals of Data Security	Assignment	Algorithms		8 Sessions			
	Topics: Introduction to Data Security, Confidentiality, Integrity, Availability, Visibility, Automation, Monitoring, Models and Methodology, and The Security Problem in Computing. The Data Encryption Standard							
Module 2	Data Security Techniques	Assignment/ Case Study	Presentation		10 Sessions			
	Topics: Introduction, data masking, data erasure, and backup storage, Anti-malware protection, viruses and other malicious code , Security in Key specified model, Security in Characteristic specified model, File Protection Mechanisms							
Module 3	Authorization Mechanisms in Data Security	Assignment/ Case Study	Coding		12 Sessions			
	Topics: Introduction, concept of Un-decidability, Authorization Systems with Tractable Safety Problem, Authorization Systems with Tractable Safety Problem, Grammatical Authorization Systems, Threats in Network, Network Security Controls							
Module 4	An Overview of Data Security Tools, Data Security Policies	Assignment/ Case Study	Simulation of DS tools		8 Sessions			

	<p>Topics: Introduction to tools available for Data Security, Demonstration of Security features in Linux platform, simulation using more than two computers, demonstration of data leakage during transmission, GDPR (General Data Protection Regulation), Comparative study with India regulation, Data Privacy Act, Role Based Access Control, Organizational Security policies.</p>
	<p>Targeted Applications & Tools that can be used: Anomaly Deduction, Inclusion Prevention Systems, Firewall, Email Security</p> <p>Tools: SAGE Mathematical Library package, VPN</p>
	<p>Assignment:</p>
	<p>Term Assignments:</p> <ol style="list-style-type: none"> 1. Implement Cryptographic algorithms using SAGE 2. Comparative Study on Various Data Security Tools 3. Case Study on GDPR - General Data Protection Regulation 4. Identify Data Leakage in LINUX environment using Authorization Mechanisms
	<p>Text Book T1. Data Privacy and Security, David Solomon, Springer, T2. Principles of Data Security, Ernst L. Leiss, Plenum Press. New York And London</p>

	<p>Topics relevant to “EMPLOYABILITY SKILLS”: Email Security, Web Security, GDPR (General Data Protection Regulation), Grammatical Authorization Systems for developing Employability Skills through Participative Learning techniques. This is attained through assessment component mentioned in course handout.</p>

Course Code: DSC 4013	Course Title: Soft Computing		3	0	0	3
	Type of Course: Discipline Elective Theory Only	L- T-P- C				
Version No.	2.0					
Course Pre-requisites	--					

Anti-requisites	NIL			
Course Description	Soft computing is an emerging approach in computing that mimics the human mind's remarkable ability to reason and learn in an environment of uncertainty and imprecision. Soft computing is based on biologically inspired methodologies such as genetics, evolution, ant behaviors, particle swarming, human nervous systems, etc. Soft computing is the only solution when we don't have any mathematical modeling of problem-solving (i.e., algorithm), needs a solution to a complex problem in real-time, and easily adapts with changing scenarios and is implemented with parallel computing. It has enormous applications in many application areas such as medical diagnosis, computer vision, handwritten character reconditions, pattern recognition, machine intelligence, weather forecasting, network optimization, VLSI design, etc.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Soft Computing and attain EMPLOYABILITY SKILLS through Problem Solving Methodologies .			
Course Outcomes	On successful completion of the course the students shall be able to: CO1: Define the concept and applications of Soft Computing. CO2: Discuss Fuzzy logic concepts and its applications. CO3: Demonstrate Artificial Neural Networks concepts and its applications. CO4: Apply Evolutionary algorithms and hybrid soft computing techniques.			
Course Content:				
Module 1	Introduction Computing	Soft Assignment	Analysis	9 Sessions
	Topics: Introduction to Soft Computing: Concept of computing systems, "Soft" computing versus "Hard" computing, Characteristics of Soft computing, Applications of Soft computing techniques, Elements of soft Computing .			
Module 2	Fuzzy Logic	Assignment	Analysis, Data Collection	12 Sessions
	Topics: Fuzzy Logic: Introduction to Fuzzy logic. Fuzzy sets and membership functions. Operations on Fuzzy sets. Fuzzy relations, rules, propositions, implications and inferences. Defuzzification techniques. Fuzzy logic controller design, Predicate logic, Fuzzy decision making .			
Module 3	Neural Networks	Case Study	Analysis, Data Collection	10 Sessions
	Topics: Neural Network: Neural Networks, Supervised and Unsupervised Learning. Single Layer Perceptron, Multilayer Perceptron, Backpropagation Learning, Network rules and various learning activation functions, Introduction to Associative memory, Adaptive resonance theory and self-organizing map, Recent Applications .			

Neural Networks as Associative Memories: Hopfield Networks, Bidirectional Associative Memory. Topologically Organized Neural Networks: Competitive Learning, Kohonen Maps.				
Module 4	Evolutionary Computing	Assignment	Analysis, Data Collection	10 Sessions
<p>Topics: Evolutionary Computing: "History of Genetic Algorithm and Optimization working principle, The Schema Theorem, GA operators: Encoding, Crossover, Selection, Mutation, bit wise operation in GA etc. Introduction to ant colony optimization and particle swarm optimization. Integration of genetic algorithm with neural network and fuzzy logic.</p>				
<p>Targeted Application & Tools that can be used:</p> <p>In recent times, engineers have very well accepted soft computing tools such as Fuzzy Computing, ANN, Neuro-Computing and Evolutionary Computing, etc., for carrying out various numerical simulation studies. In the last two decades, these tools independently and in hybrid forms have been successfully applied to varieties of problems. The main objective is to introduce students to the latest soft computing tools. The training of these tools will be helpful to develop rigorous applications in the engineering domain.</p> <p>Tools:</p> <ul style="list-style-type: none"> • MATLAB • PYTHON • C 				
Project work/Assignment:				
<p>Mini Project:</p> <ul style="list-style-type: none"> • Training of known/classified datasets representing some objects/pattern using various ANN learning methods including Perceptron, BPN, Adaline, Associative memory networks, Hopfield, kohonen networks. • Classification of new input feature set/pattern based on training & learning • Applying GA search to optimize the solutions. Implementation of the GA procedure.

Topics relevant to “ EMPLOYABILITY SKILLS ”: Solving real world problems with uncertainty using Nature Inspired Algorithms for developing Employability Skills through Problem Solving Methodologies . This is attained through assessment component mentioned in course handout

Course Code: DSC4014	Course Title: Time Series Analysis and Forecasting			L- T-P- C	3	0	0	3
	Type of Course: Discipline Elective Theory Only							
Version No.	2.0							
Course Pre-requisites	CSE5007							
Anti-requisites	NIL							
Course Description	The course will provide a basic introduction to time series analysis. This theory based course covers topics in time series analysis and some statistical techniques on forecasting. Time series regression, exploratory data analysis, AR models, Seasonal Models, GARCH Models and Box-Jenkins approach are the major topics covering in this course. R and RStudio will be required for this class.							
Course Objective	The objective of the course is to familiarize the learners with the concepts of Time Series Analysis and Forecasting and attain EMPLOYABILITY SKILLS through PROBLEM SOLVING techniques							
Course Outcomes	On successful completion of the course the students shall be able to CO1.Select appropriate model, to fit parameter values and make concise decisions based on forecasts obtained CO2.Demonstrate an understanding of the principles behind modern forecasting techniques. CO3.Apply concepts to real time series data using packages.							
Course Content:								
Module 1	Introduction	Assignment	Data Analysis task					9 Sessions
	Topics: Background for time series analysis , Examples of Time Series, Objectives of Time Series Analysis, Characteristics of Time Series, Time Series Techniques , Approaches used for time series forecasting, ETS (Error, Trend, Seasonality) models to make forecasts, Decomposition method, Case study on decomposition method, Model forecast theory, Model forecast hands-on, stochastic process.							
Module 2	Time Series Regression and Exploratory Data Analysis	Assignment	Data analysis					10 Sessions
	Topics: Time series pipeline , Classical Regression in the Time Series Context, Exploratory Data Analysis, Stationary Models and the Autocorrelation Function, Detrending and De-seasonalizing Smoothing, Introduction to Time Series Analysis with R,							
Module 3	AR models	Assignment	Data analysis					10 Sessions
	Topics: Models for Stationary Time Series, Models for Non-Stationary Time Series, Identification, Forecasting, ARIMA (Autoregressive, Integrated, Moving Average) models, AR model , and MA model .							

Module 4	Additional models, Spectral Analysis and packages	Case Study	Data analysis	10 Sessions
Topics: Seasonal Models, Time Series Regression Models, GARCH Models, Seabird Model . Preparing model using ITSM, Time series using astsa, ARIMA models is to use sarima from astsa Preparing model using LSTM for weather forecasting using ARIMA.				
Targeted Application & Tools that can be used: Targeted Applications: Time series analysis on economics, finance, natural sciences, health care and more Tools: <ul style="list-style-type: none"> R package astsa (Applied Statistical Time Series Analysis) The package ITSM2000 (https://extras.springer.com/) 				
Project work:				
Mini Project: Choose any suitable real time dataset and build time series forecast models. Example: In the Air Passengers dataset set, go back 12 months in time and build the ARIMA forecast for the next 12 month. Investigate following questions Is the series stationary? If not what sort of differencing is required? What is the order of your best model? What is the AIC of your model? What is the order of the best model predicted by auto_arima() method?

Course Code: DSC 4015	Course Title: IOT Data Analytics			L- T-P- C	3	0	0	3
	Type of Course: Discipline Elective Theory Only							
Version No.	2.0							
Course Pre-requisites	--							
Anti-requisites	NIL							
Course Description	This course helps in understanding the context of analytics in IoT data. Strategies to collect IoT data in order to enable analytics. Skills learnt will enable to understand the tradeoffs in streaming and batch processing. Data science techniques such as machine learning, deep learning, and forecasting are applied on IoT data. This course also teaches how to implement machine learning methods and ARIMA forecasting on IoT data. Deep learning will be described along with a way to get started experimenting with it on AWS.							
Course Objective	The objective of the course is to familiarize the learners with the concepts of IoT Data Analytics and attain EMPLOYABILITY SKILLS through Problem Solving Methodologies .							
Course Outcomes	On successful completion of the course the students shall be able to: CO1: Discuss the challenges of IoT Analytics. CO2: Apply strategies and techniques to collect IoT data. CO3: Apply data science techniques on IoT data							
Course Content:								
Module 1	IoT analytics, challenges, devices and networking protocols	Assignment	Data Analysis task					12 Sessions
	Topics: Defining IoT Analytics and Challenges Defining IoT Analytics. IoT analytics challenges, Core IoT Functional Stack , Functional blocks of an IoT ecosystem IoT Devices and Networking Protocols IoT devices Networking basics IoT networking connectivity protocols IoT networking data messaging protocols Message Queue Telemetry Transport (MQTT) Hyper-Text Transport Protocol (HTTP) Data Distribution Service (DDS)							
Module 2	Data – Strategies, Techniques and Exploring IoT Data	Assignment	Analysis, Data Collection					12 Sessions
	Topics: Collecting All That Data - Strategies and Techniques Designing data processing for analytics Applying big data technology to storage Apache Spark for data processing Exploring IoT Data Exploring. Data analytics tools							
Module 3	Data Science for IoT Analytics	Case Study	Data analysis task					13 Sessions

	Topics: Feature engineering with IoT data Validation methods Understanding the bias–variance trade off Comparing different models to find the best fit Random Forest models Gradient Boosting Machines Anomaly detection, Forecasting, scaling issues .
	Targeted Application & Tools that can be used: Employment opportunities are available in Companies like Hexaware, Episteme, Randstad. Siemens, Accenture etc. as IoT Data Engineer Tools R Python Microsoft Azure Stream Analytics. AWS IoT Analytics. SAP Analytics Cloud. Oracle Stream Analytics and Oracle Edge Analytics.
	Project work
	Mini Project: Develop a IoT application for real time data analysis of manufacturing sector. The automated IoT Analytics should aid in using real time data to watch out for certain patterns and send alerts to the concerned departments. It should enable smart manufacturing.
	Text Book T1. “Analytics for the Internet of things (IoT)”, Andrew Minter, Packt, 2017

	Topics relevant to “EMPLOYABILITY SKILLS”: Processing geospatial IoT Data, protocols Message Queue Telemetry Transport (MQTT) Hyper-Text Transport Protocol (HTTP) Constrained Application Protocol (CoAP) Data Distribution Service (DDS), Random Forest models Gradient Boosting Machines Anomaly detection for developing Employability Skills through Problem Solving methodologies . This is attained through assessment component mentioned in course handout.

Course Code: DSC 4016	Course Title: Probabilistic graph Models Type of Course: Discipline Elective Theory Only	L- T-P- C	3	0	0	3
Version No.	2.0					

Course Pre-requisites		--			
Anti-requisites		NIL			
Course Description		Probabilistic graphical models are used to model stochasticity (uncertainty) in the world and are extremely popular in AI and machine learning. The course will cover two classes of graphical models: Bayesian belief networks (also called directed graphical models) and Markov Random Fields (undirected models). After introducing the two frameworks the course will focus on recent advances in inferences and learning with graphical models, including topics such as loopy belief propagation, variational approximations, conditional Markov random fields and others.			
Course Objective		The objective of the course is to familiarize the learners with the concepts of Probabilistic graph Models and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING techniques			
Course Outcomes		On successful completion of the course the students shall be able to: CO1: Apply key concepts of Statistics to solve problems. CO2: Analyze the properties of distributions encoded by graphs CO3: Illustrate Inference in graphic models CO4: Illustrate Learning in graphic models			
Course Content:					
Module 1	Fundamentals of Probability and Graph Theory	Assignment	Understanding all standard probability distributions		9 Sessions
	Topics: Fundamentals of Statistics and Probability, Conditional Probability, Conditional Independence, Joint Distributions, Baye's Theorem, Gaussians rule , Probability Distributions, Fundamentals of Graph Theory - Paths, Cliques, Sub-graphs, Cycles and Loops.				
Module 2	Graphical Models	Assignment	Construction of Markov chain model for real time problems		9 Sessions
	Topics: Directed Models: Bayesian Network; Undirected Models: Markov Random Fields; Parameterization of MRFs, Independencies, Duality and optimality, Non parametric Bayes hierarchical models.				
Module 3	Inference in Graphical Models	Assignment	Study about some problems based on Monte Carlo method		9 Sessions
	Topics: Inference in Graph Models, Variable Elimination; Belief Propagation, Sampling Methods: Markov Chain Monte Carlo, Convexity and optimization , Hidden Markov Model, Viterbi Algorithm.				
Module 4	Learning in Graphical Models	Assignment	Applications of Naïve Bayes Classifier		10 Sessions

	<p>Topics:</p> <p>Learning in Graph Models, Maximum Likelihood Estimation, Naïve Bayes Classifier, Conditional Random Fields, constrained optimization problem</p>
	<p>Targeted Application & Tools that can be used:</p> <p>Targeted employment sector is to acquire knowledge to analyze the given problem to frame Probabilistic graphical models which are a powerful framework for representing complex domains using probability distributions, with numerous applications in machine learning, computer vision, natural language processing and computational biology.</p> <p>Tools:</p> <ul style="list-style-type: none"> • Python • HUGIN Tool for Learning Bayesian Networks • MATLAB Toolbox for Bayesian net
	<p>Assignment:</p>
	<p>Term Assignments:</p> <ul style="list-style-type: none"> • Analysis and Application of Bayesian Network to real time problems <p>Understanding the given problem, analyze accordingly to apply Bayesian network and convert the problem in a Bayesian Network. The answering the required queries.</p> <ul style="list-style-type: none"> • A short survey of the Monte Carlo Method <p>Study and analyze few realistic problems to apply Monte Carlo Technique to answer the solution of the problem.</p> <ul style="list-style-type: none"> • A short survey of the Markov Chain & Hidden Markov Method <p>Study and analyze few realistic problems to convert into Markov chain & Hidden Markov to answer the required problem.</p>
	<p>Text books(s)</p> <p>T1. S. Lauritzen. Graphical Models. Oxford University Press, 1996. T2. David J.C. Mackay. Information theory, inference, and learning algorithms. 	Topics relevant to development of “EMPLOYABILITY SKILLS”: Conditional Independence, Markov Random Fields; Parameterization of MRFs, Independencies,, Metropolis Hastings Algorithm, Hidden Markov Model, Viterbi Algorithm for developing Employability Skills through Participative Learning techniques. This is attained through assessment component mentioned in course handout
--	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Course Code: DSC4017	Course Title: Social Network Analysis		3	0	0	3
	Type of Course: Discipline Elective Theory Only	L- T-P- C				
Version No.		2.0				
Course Pre-requisites		--				
Anti-requisites		NIL				
Course Description		<p>The rapid growth of social media has given the mass consumers a powerful tool to create knowledge and propagate opinions. At the same time, social media has created an unprecedented opportunity for companies to engage real-time interactions with consumers. In addition, the size and richness of social media data has provided companies an unusually deep reservoir of consumer insights to transform the business and marketing operations.</p> <p>The social media analytics course will enable students to grasp the analytics tools to leverage social media data. The course will introduce tools such as engagement analytics, sentiment analysis, topic modeling, social network analysis, identification of influencers and evaluation of social media strategy.</p>				
Course Objective		The objective of the course is to familiarize the learners with the concepts of Social Network Analysis and attain EMPLOYABILITY SKILLS through PROBLEM SOLVING techniques				
Course Outcomes		<p>On successful completion of this course the students shall be able to:</p> <p>CO1: Interpret the social network landscape and appreciate the importance of analytics in business.</p> <p>CO2: Apply appropriate native analytics and measurement tools to analyze data in different social platforms</p> <p>CO3: Use Natural Language Processing for efficient mining of web data</p> <p>CO4: Demonstrate meaningful insights with actionable and strategic recommendations.</p>				
Course Content:						
Module 1	Network Science	Quiz/Assignment	Analysis			9 Sessions
	<p>Topics:</p> <p>Introduction to semantic web, limitation of current web, Central Measures, Community Analysis, CPM, Homophily and Triadic Closure, Affiliation Networks, Schelling model of Segregation, Current Social Media landscape, working environment, Getting analyzing and visualizing the data, Getting</p>					

	<p>started with the toolset, Need for SMA, Applications of SMA in different areas. Connecting, Capturing and cleaning of Social Data. Social network analysis of social and behavioral sciences</p> <p>APIs in nutshell, Introduction to authenticate techniques, Parsing API outputs, Basic cleaning techniques. Exploring GitHub's API, Analyzing GitHub Interest Graphs, Computing Graph Centrality Measures.</p>				
Module 2	Analyzing Social graphs and Sentiment	Quiz	Project Development		10 Sessions
	<p>Topics: Modeling and aggregating social network data, Exploring Facebook's Social Graph API, Open Graph Protocol, Analyzing Social Graph Connections, Mining your posts, Facebook Pages. Exploring Twitter's API, Analyzing Twitter using sentiment analysis, Frequency Analysis, Examining Patterns in Retweets.</p>				
Module 3	Mining web pages	Assignment	Project Development		11 Sessions
	<p>Topics: Scraping, Parsing and Crawling the Web: BFS in Web Crawling, Discovering Semantics by Decoding Syntax: NLP Illustrated Step-by-Step, Sentence Detection in Human Language Data, Document Summarization, Entity-Centric Analysis: A Paradigm Shift, Summarizing Human Language Data, Quality of Analytics for Processing Human Language Data, trust models based on subjective logic Campaigns and Consumer Reaction Analytics on YouTube: Structured and Unstructured, Scope and Process, Getting the data, Data pull, Data processing and Data analysis, Attack spectrum and counter measures.</p>				
Module 4	Recommender Systems and SEO	Quiz	Group Discussion		8 Sessions
	<p>Topics: Content-Based Recommendation and Collaborative Filtering, introduction to SEO, Keyword research Process, avoid negative SEO, Search Engines, Google PageRank, IBM HITS,</p>				
	<p>Targeted Application & Tools that can be used: The applications of Social Media Analytics have been seen in industrial sector, sports and games, local governments services, tourism and hospitality services, politics, social issues, disaster management, community development issues, commerce and business applications, fashion industry, agricultural activities, online media, medical and health related services as well as supplier chain services.</p> <p>Tools: Google Colab or Jupyter Notebook(Anaconda).</p>				
	Project work				
	<p>On completion of all Modules, students will be given a Mini Project to build a deep learning model for a given application. Sample mini projects include:</p> <p>Twitter Summaries Twitter is famous for its character-limited posts. We can use this social media platform for an innovative summary-writing project. Consolidate the takeaways from a topic or reading discussed. Students should be able to understand the text, coherently organize the points and capture the central idea with 280 words, which is the character limit on Twitter.</p> <p>Hashtag activism</p>				

	Information and communication technologies provide a tremendous tool for spreading awareness and highlighting issues that may not be adequately represented in the mainstream media. Hashtag activism, in particular is concerned with driving social media traffic to oft-neglected topics. We can devise a project-based activity to teach our students about social justice, human rights, equality etc.

	Topics relevant to “EMPLOYABILITY SKILLS: Recommender Systems and SEO for developing Employability Skills through PROBLEM SOLVING techniques. This is attained through assessment component mentioned in course handout

Course Code: DSC4018	Course Title: Application of Probability theory in Computer Science Type of Course: Theory Course	L- T-P- C	3	0	0	3
Version No.	2.0					
Course Pre-requisites	--					
Anti-requisites	NIL					
Course Description	<p>For both engineers and researchers in the field of Computer science, it is common to develop models of real-life situations and develop solutions based on those models. In this course, our objective is to give an idea regarding the application of probability theory in the modeling and analyzing different kinds of computer systems. We particularly focus on time complexity analysis of different algorithms, reliability analysis of networks, physical layer security as well as resource allocation in 5G and beyond. The target audience for this course is Masters and Ph.D., students.</p> <p>The student should have basic Probability concepts as a pre-requisite. With a good knowledge of different techniques of applying Probability theory in modeling/analyzing computer systems, the students will be able to develop efficient solutions for complex and challenging real-life problems.</p>					
Course Objective	<p>The objective of the course is to familiarize the learners with the concepts of Application of Probability theory in Computer Science and attain EMPLOYABILITY SKILLS through PROBLEM SOLVING techniques</p>					

Course Outcomes		On successful completion of this course the students shall be able to: CO1: Develop mathematical models for various computer systems. CO2: Apply an appropriate probability concept to analyze the system. CO3: Apply appropriate Reinforcement learning techniques to solve complex real-life problems. CO4: Apply statistical Inference concepts to estimate parameters which are unknown to the model.			
Course Content:					
Module 1	Review on Basic Concepts	Assignment		Basic Probability Concepts	12 Sessions
	Topics: Basic probability concepts, Conditional probability, Expectation, random variables, Law of Large Numbers, well-known distributions, order statistics, and a basic idea of hypothesis testing, Central Limit Theorem. Applications in reliability analysis of VLSI chips, performance analysis of telephone network and binary communication channels, and application in the cognitive radio network.				
Module 2	Stochastic processes	Assignment		Markov process	12 Sessions
	Topics: Markov chain, Random Walks, Generating Functions, Birth-death process, application in modeling the behavior of wireless channels, memory interference problem, performance analysis of medium access protocols, analyzing the time complexity in the implementation of two stacks using a single array.				
Module 3	Reinforcement learning	Assignment		Understanding different Reinforcement learning techniques	12 Sessions
	Topics: Simple Applications of Decision Theory, Model Comparison, Markov decision process, value and policy iteration, off-policy and on-policy learning techniques (e.g., SARSA, Q-learning), Multi-arm Bandit problem (MAB), modeling resource allocation in 5G as MAB, Hidden Markov model (HMM), application of HMM in physical layer security.				
	Targeted Applications & Tools that can be used: Markov's inequality Chernoff bound				
	Project work				
	-Performance analysis of the LRU stack model -Modeling multiprocessor systems and analyzing the reliability -Modeling handovers in wireless networks and performance analysis of handover algorithms. -A short survey on Monte Carlo simulation techniques.				
	REFERENCE MATERIALS: Text Book(s): T1. Kishore S. Trivedi, "Probability and Statistics with Reliability, Queuing, and Computer Science Applications", PHI.

Course Title: Digital Image Processing

L-T-P-C: 2-0-2-3

Type of Course: Program Core

Total Hours: 30 Hours Theory + 15 Weeks Lab

Course Description:

This course introduces fundamental techniques for digital image processing and analysis, including enhancement, transformation, segmentation, and recognition. It focuses on practical implementation using open-source tools such as OpenCV and Python.

Course Objectives:

- To understand the fundamentals of image processing.
- To explore image enhancement, filtering, and segmentation techniques.
- To learn image compression and object recognition methods.
- To apply open-source libraries for real-time image processing applications.

Course Outcomes:

- **CO1 (Analyze):** Analyze image representations and enhancement techniques.
- **CO2 (Analyze):** Analyze image segmentation and transformation techniques.
- **CO3 (Apply):** Apply filtering and compression algorithms.
- **CO4 (Apply):** Apply image classification using machine learning models.

Modules:

Module 1 – Image Fundamentals and Enhancement (CO1) – 8 Hours

Digital image fundamentals – pixel operations, image representation, histogram equalization, contrast enhancement, intensity transformation, color spaces.

Module 2 – Image Filtering and Transformation (CO2) – 7 Hours

Spatial domain filtering – smoothing and sharpening, frequency domain filtering – Fourier transform, convolution, edge detection – Sobel, Canny, Laplacian.

Module 3 – Segmentation and Compression (CO3) – 7 Hours

Segmentation – thresholding, clustering-based methods, region growing, edge-based segmentation. Compression – lossless and lossy methods, run-length, Huffman coding, JPEG.

Module 4 – Object Detection and Machine Learning Applications (CO4) – 8 Hours

Feature extraction – corners, blobs, SIFT, HOG, classification using k-NN, SVM, basics of CNNs for image recognition.

Lab Experiments (15 Weeks)

1. Perform basic operations on images using OpenCV (read, write, resize, crop).
2. Histogram equalization and contrast adjustment.
3. Implement smoothing and sharpening filters.
4. Frequency domain filtering and edge detection.
5. Implement segmentation using thresholding and region growing.
6. Color space conversion and masking.
7. Morphological operations: erosion, dilation.
8. Image compression using RLE and Huffman coding.
9. Apply SIFT and HOG for feature extraction.
10. Object classification using k-NN.
11. Object classification using SVM.
12. Introduction to CNN for image classification.
13. Mini-project planning – dataset selection.
14. Implementation of mini-project (phase 1).
15. Final implementation and demo.

Course Code: DSC4020**Course Title:** Data Mining and Pattern Recognition**L-T-P-C:** 2-0-2-3**Type of Course:** Program Core**Total Hours:** 30 Hours Theory + 15 Weeks Lab**Course Description:**

This course focuses on techniques and models used in data mining and pattern recognition. It emphasizes classification, clustering, association rule mining, and pattern discovery with practical applications using Python and data science libraries.

Course Objectives:

- To understand core concepts of data mining and pattern recognition.
- To analyze data using clustering, classification, and pattern analysis techniques.
- To apply data mining algorithms for real-world datasets.
- To implement models for association rules and pattern extraction.

Course Outcomes:

- **CO1 (Analyze):** Analyze the data preprocessing and preparation techniques.
- **CO2 (Analyze):** Analyze classification and clustering algorithms.
- **CO3 (Apply):** Apply association rule mining and dimensionality reduction.

- **CO4 (Apply):** Apply pattern recognition techniques using supervised and unsupervised learning.

Modules:

Module 1 – Introduction and Data Preprocessing (CO1) – 8 Hours

Data mining tasks, KDD process, data types, cleaning, integration, normalization, transformation, reduction.

Module 2 – Classification and Clustering (CO2) – 7 Hours

Classification: Decision Trees, k-NN, Naïve Bayes, model evaluation. Clustering: K-means, hierarchical clustering, DBSCAN.

Module 3 – Association Rules and Feature Selection (CO3) – 7 Hours

Apriori and FP-Growth algorithms, support, confidence, lift. Dimensionality reduction – PCA, LDA.

Module 4 – Pattern Recognition and Applications (CO4) – 8 Hours

Supervised vs unsupervised learning, SVM, ROC curves, case studies – fraud detection, recommendation systems.

Lab Experiments (15 Weeks)

1. Data preprocessing – cleaning, transformation.
2. Classification using Decision Trees.
3. Classification using k-NN.
4. Naïve Bayes classifier.
5. K-means clustering.
6. Hierarchical and DBSCAN clustering.
7. Association rule mining using Apriori.
8. FP-Growth algorithm.
9. Dimensionality reduction using PCA.
10. LDA-based feature selection.
11. Pattern classification using SVM.
12. Evaluate models using accuracy, precision, recall, F1-score.
13. ROC curve analysis.
14. Case study implementation – fraud detection.
15. Final mini-project on pattern classification.

Course Title: Graph Analytics and Network Science

L-T-P-C: 2-0-2-3

Type of Course: Program Core

Total Hours: 30 Hours Theory + 15 Weeks Lab

**Course Description:**

This course explores the principles of graph theory and network science as applied to real-world problems in data science, social networks, biology, and web analytics. Students learn to model, analyze, and interpret network structures using computational tools.

Course Objectives:

- To understand graph models and their applications in data analytics.
- To analyze large-scale networks using centrality, connectivity, and clustering.
- To apply graph algorithms for community detection and shortest paths.
- To implement network analytics using Python libraries.

Course Outcomes:

- **CO1 (Analyze):** Analyze graph structures and properties.
- **CO2 (Analyze):** Analyze metrics like centrality, clustering, and paths.
- **CO3 (Apply):** Apply graph algorithms in real-world networks.
- **CO4 (Apply):** Apply network analysis using tools like NetworkX.

Modules:**Module 1 – Graph Fundamentals and Representations (CO1) – 8 Hours**

Graphs and their types, adjacency matrix and list, graph traversal (DFS, BFS), network data modeling.

Module 2 – Network Metrics and Structures (CO2) – 7 Hours

Degree, betweenness, closeness, eigenvector centrality, clustering coefficients, path lengths.

Module 3 – Graph Algorithms and Applications (CO3) – 7 Hours

Shortest paths (Dijkstra, Bellman-Ford), connected components, community detection (modularity, Louvain method), page rank.

Module 4 – Tools and Case Studies in Network Science (CO4) – 8 Hours

NetworkX, Gephi, Cytoscape for visual analysis. Applications in epidemiology, recommendation systems, web graphs, citation networks.

Lab Experiments (15 Weeks)

1. Create and visualize graphs using NetworkX.
2. Implement BFS and DFS.
3. Compute degree and other centrality measures.
4. Apply clustering coefficient and shortest path algorithms.
5. Analyze real-world datasets – social media graphs.
6. Apply PageRank algorithm.
7. Community detection using Louvain method.
8. Explore visualization using Gephi.
9. Citation network analysis.
10. Web graph and hyperlink structure.
11. Recommendation systems using link prediction.
12. Case study: Epidemic modeling using graphs.
13. Mini-project planning – dataset exploration.
14. Implementation phase 1.
15. Final implementation and report submission.

Course Code: DSC4022

Course Title: Geospatial Data Science

L-T-P-C: 2-0-2-3

Type of Course: Program Core

Total Hours: 30 Hours Theory + 15 Weeks Lab

Course Description:

This course provides students with foundational and advanced knowledge of geospatial data science. Topics include geospatial data acquisition, storage, analysis, and visualization. It emphasizes the use of GIS software and Python for solving spatial problems.

Course Objectives:

- To understand concepts of spatial data and GIS.
- To perform spatial analysis using Python and GIS tools.
- To explore satellite imagery and remote sensing data.
- To implement geospatial visualization and data-driven decision-making.

Course Outcomes:

- **CO1 (Analyze):** Analyze geospatial data types, formats, and storage methods.
- **CO2 (Analyze):** Analyze spatial relationships and visualization techniques.
- **CO3 (Apply):** Apply spatial analytics using Python and open GIS tools.
- **CO4 (Apply):** Apply geospatial analysis to real-world case studies.

Modules:

Module 1 – Introduction to Geospatial Data (CO1) – 8 Hours

Types of spatial data – raster and vector, coordinate reference systems, GPS and GIS fundamentals, geospatial file formats (GeoJSON, Shapefile), data sources (OpenStreetMap, Landsat).

Module 2 – Spatial Analysis Techniques (CO2) – 7 Hours

Map overlays, buffers, proximity analysis, spatial joins, point pattern analysis, geocoding, spatial interpolation.

Module 3 – Geospatial Tools and Visualization (CO3) – 7 Hours

Use of Python libraries (GeoPandas, Shapely, Folium), QGIS overview, heat maps, choropleth maps, 3D maps, satellite data visualization.

Module 4 – Applications and Case Studies (CO4) – 8 Hours

Disaster management, urban planning, environmental monitoring, location-based services, agriculture and health applications using geospatial insights.

Lab Experiments (15 Weeks)

1. Introduction to GIS tools and dataset loading.
2. Coordinate system conversion.
3. Vector data manipulation using QGIS.
4. Raster data processing.
5. Spatial joins and querying.
6. Buffer and overlay analysis.

7. Visualizing maps using Folium.
8. Generating heatmaps with Python.
9. Working with satellite data.
10. Land use classification.
11. Distance and network analysis.
12. Case study: Urban development.
13. Mini project planning – scenario selection.
14. Implementation of mini project – phase 1.
15. Final project submission and demo.

Course Title: Marketing and Consumer Analytics

L-T-P-C: 3-0-0-3

Type of Course: Program Core

Total Hours: 45 Hours Theory

Course Description:

This course focuses on analytical tools and techniques to understand, predict, and influence consumer behavior. It combines marketing theory with data analytics to drive decision-making and optimize strategies.

Course Objectives:

- To introduce students to the fundamentals of marketing analytics.
- To enable the application of statistical and machine learning models to consumer data.
- To analyze consumer trends, segments, and preferences.
- To explore marketing campaign effectiveness and ROI.

Course Outcomes:

- **CO1 (Analyze):** Analyze market structures and consumer segmentation using data.
- **CO2 (Analyze):** Analyze brand preferences and buying behavior patterns.
- **CO3 (Apply):** Apply predictive models to consumer and campaign data.
- **CO4 (Apply):** Apply analytics for pricing, churn prediction, and recommendation systems.

Modules:

**Module 1 – Introduction to Marketing Analytics (CO1) – 11 Hours**

Overview of marketing data and KPIs, customer lifecycle analytics, customer segmentation, marketing mix modeling, basic statistical tools in consumer behavior.

Module 2 – Consumer Behavior and Segmentation (CO2) – 11 Hours

Buyer personas, RFM analysis, clustering techniques for consumer profiles, sentiment analysis, analysis of clickstream and transactional data.

Module 3 – Predictive Analytics in Marketing (CO3) – 12 Hours

Regression techniques, decision trees, lift charts, marketing funnel analytics, ROI measurement, lead scoring and sales conversion.

Module 4 – Advanced Topics in Consumer Analytics (CO4) – 11 Hours

Churn analysis, price optimization models, recommender systems, omni-channel strategy, personalization using machine learning, ethical use of consumer data.

Course Title: Multimodal Learning

L-T-P-C: 2-0-2-3

Type of Course: Program Core

Total Hours: 30 Hours Theory + 15 Weeks Lab

Course Description:

This course covers foundational and advanced concepts in multimodal learning, where models are trained on and infer from multiple data modalities (e.g., text, image, audio). It explores architectures, fusion techniques, alignment strategies, and real-world applications in AI.

Course Objectives:

- To understand the challenges of combining data from multiple modalities.
- To explore machine learning methods for multimodal representation learning.
- To implement models using fusion, alignment, and translation techniques.
- To apply multimodal systems to practical use cases.

Course Outcomes:

- **CO1 (Analyze):** Analyze multimodal data structures and relationships.
- **CO2 (Analyze):** Analyze fusion strategies for learning from multiple modalities.

- **CO3 (Apply):** Apply machine learning models for multimodal alignment and translation.
- **CO4 (Apply):** Apply deep learning architectures to solve real-world multimodal tasks.

Modules:

Module 1 – Introduction to Multimodal Learning (CO1) – 8 Hours

Modalities overview (vision, audio, text), challenges of heterogeneous data, early vs late fusion, joint representations, multimodal applications (e.g., VQA, speech-to-text).

Module 2 – Fusion and Representation Learning (CO2) – 7 Hours

Fusion strategies: concatenation, bilinear pooling, attention mechanisms. Shared representation learning, autoencoders, deep multimodal embeddings.

Module 3 – Alignment and Translation (CO3) – 7 Hours

Alignment tasks – image-text alignment, cross-modal retrieval. Multimodal translation – captioning, speech recognition. Metric learning and triplet loss.

Module 4 – Advanced Architectures and Applications (CO4) – 8 Hours

Transformers for multimodal tasks, BERT-like models for text+image. Case studies – healthcare, robotics, social media analytics, emotion detection.

Lab Experiments (15 Weeks)

1. Text and image preprocessing for multimodal input.
2. Fusion of tabular and image data.
3. Audio-visual dataset preparation.
4. Feature extraction using CNN and RNN.
5. Early vs late fusion implementations.
6. Image-caption alignment using attention.
7. Cross-modal retrieval.
8. Speech-to-text using pre-trained APIs.
9. Text-to-image generation using diffusion models.
10. Image classification with multimodal data.
11. Emotion detection using voice and facial cues.
12. Multimodal sentiment analysis.
13. Mini-project planning.
14. Mini-project implementation – phase 1.
15. Final presentation and evaluation.

Course Title: Intelligent Decision Support Systems

L-T-P-C: 2-0-2-3

Type of Course: Program Core

Total Hours: 30 Hours Theory + 15 Weeks Lab

Course Description:

This course focuses on building intelligent systems that assist in decision-making using artificial intelligence, machine learning, and expert systems. Topics include knowledge-based systems, inference mechanisms, decision analysis models, and real-world applications.

Course Objectives:

- To understand the architecture of decision support systems.
- To apply AI methods for decision making.
- To evaluate multi-criteria decision analysis (MCDA).
- To develop intelligent support systems using real data.

Course Outcomes:

- **CO1 (Analyze):** Analyze decision problems using intelligent systems principles.
- **CO2 (Analyze):** Analyze decision support models for structured and unstructured data.
- **CO3 (Apply):** Apply AI and ML tools in decision-making applications.
- **CO4 (Apply):** Apply expert system concepts in intelligent DSS development.

Modules:

Module 1 – Foundations of Decision Support Systems (CO1) – 8 Hours

Definition and scope of DSS, types of decisions, decision-making processes, DSS architecture and components, DSS vs. MIS, introduction to intelligent DSS.

Module 2 – Knowledge-Based Decision Systems (CO2) – 7 Hours

Rule-based systems, inference engines, decision trees, fuzzy logic, uncertainty handling, introduction to expert systems, real-world applications.

Module 3 – Machine Learning in Decision Support (CO3) – 7 Hours

Regression and classification for decision support, ensemble models, clustering for customer segmentation, neural networks in DSS, feature selection, predictive modeling.

Module 4 – Multi-Criteria Decision Making and Advanced DSS (CO4) – 8 Hours

MCDA – AHP, TOPSIS, ELECTRE; real-time DSS, web-based DSS, recommendation engines, DSS in healthcare, finance, and logistics.

Lab Experiments (15 Weeks)

1. Explore DSS architecture through case study simulation.
2. Build a rule-based expert system using Python.
3. Design a decision tree classifier using scikit-learn.
4. Apply fuzzy logic to decision-making.
5. Develop a predictive model for customer churn.
6. Perform clustering for market segmentation.
7. Implement regression for price forecasting.
8. Integrate ML model in DSS dashboard.
9. Build a simple recommender system.
10. Apply AHP for decision ranking.
11. Apply TOPSIS to a real dataset.
12. Case study implementation (finance or healthcare).
13. Mini-project ideation and planning.
14. Mini-project development.

15. Mini-project presentation.
