

PRESIDENCY SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

Program Regulations and Curriculum 2023-2027

**BACHELOR OF TECHNOLOGY (B.Tech.) in
COMPUTER SCIENCE AND TECHNOLOGY BIG DATA (CBD)**

based on Choice Based Credit System (CBCS) and Outcome Based Education (OBE)

Regulation Number: PU/AC-21.5/SoCSE2/CBD/2023-2027

**Resolution No. 5 of the 21st Meeting of the Academic Council held on 06th Sept 2023,
and ratified by the Board of Management in its 22nd Meeting held on 02nd Nov 2023.**

*(As amended up to the 26th Meeting of the Academic Council held on 25th July 2025,
and ratified by the Board of Management in its 27th Meeting held on 28th July 2025)*

September 2023

19.	List of Elective Courses under various Specializations / Stream Basket	26
20.	List of Open Electives to be offered by the School / Department (Separately for ODD and EVEN Semesters).	31
21.	List of MOOC (NPTEL) Courses	36
22.	Recommended Semester Wise Course Structure / Flow including the Program / Discipline Elective Paths / Options	36
23.	Course Catalogue of all Courses Listed including the Courses Offered by other School / Department and Discipline / Program Electives	41

PART A – PROGRAM REGULATIONS

1. Vision & Mission of the University and the School / Department

1.1 *Vision of the University*

To be a Value-driven Global University, excelling beyond peers and creating professionals of integrity and character, having concern and care for society.

1.2 *Mission of the University*

- Commit to be an innovative and inclusive institution by seeking excellence in teaching, research and knowledge-transfer.
- Pursue Research and Development and its dissemination to the community, at large.
- Create, sustain and apply learning in an interdisciplinary environment with consideration for ethical, ecological and economic aspects of nation building.
- Provide knowledge-based technological support and services to the industry in its growth and development.
- To impart globally-applicable skill-sets to students through flexible course offerings and support industry's requirement and inculcate a spirit of new-venture creation.

1.3 *Vision of Presidency School of Computer Science and Engineering*

To be a value-based, practice-driven Presidency School of Computer Science and Engineering, committed to developing globally competent engineers, dedicated to developing cutting-edge technology to enhance the quality of life.

1.4 *Mission of Presidency School of Computer Science and Engineering*

- Cultivate a practice-driven environment with computing-based pedagogy, integrating theory and practice.
- Attract and nurture world-class faculty to excel in teaching and research in the realm of computing sciences.
- Establish state-of-the-art computing facilities for effective teaching and learning experiences.
- Promote interdisciplinary studies to nurture talent for global impact.
- Instill entrepreneurial and leadership skills to address social, environmental and community needs.

2. Preamble to the Program Regulations and Curriculum

This is the subset of Academic Regulations and it is to be followed as a requirement for the award of B.Tech degree.

The Curriculum is designed to take into the factors listed in the Choice Based Credit System (CBCS) with focus on Social Project Based Learning, Industrial Training, and Internship to enable the students to become eligible and fully equipped for employment in industries, choose higher studies or entrepreneurship.

In exercise of the powers conferred by and in discharge of duties assigned under the relevant provision(s) of the Act, Statutes and Academic Regulations of the University, the Academic Council hereby makes the following Regulations.

3. Short Title and Applicability

- a. These Regulations shall be called the Bachelor of Technology Degree Program Regulations and Curriculum 2023-2027.
- b. These Regulations are subject to, and pursuant to the Academic Regulations.
- c. These Regulations shall be applicable to the ongoing Bachelor of Technology Degree Programs of the 2023-2027 batch, and to all other Bachelor of Technology Degree Programs which may be introduced in future.
- d. These Regulations shall supersede all the earlier Bachelor of Technology Degree Program Regulations and Curriculum, along with all the amendments thereto.
- e. These Regulations shall come into force from the Academic Year 2023-2024.

4. Definitions

In these Regulations, unless the context otherwise requires:

- a. *"Academic Calendar" means the schedule of academic and miscellaneous events as approved by the Vice Chancellor;*
- b. *"Academic Council" means the Academic Council of the University;*
- c. *"Academic Regulations" means the Academic Regulations, of the University;*
- d. *"Academic Term" means a Semester or Summer Term;*
- e. *"Act" means the Presidency University Act, 2013;*
- f. *"AICTE" means All India Council for Technical Education;*
- g. *"Basket" means a group of courses bundled together based on the nature/type of the course;*
- h. *"BOE" means the Board of Examinations of the University;*
- i. *"BOG" means the Board of Governors of the University;*
- j. *"BOM" means the Board of Management of the University;*
- k. *"BOS" means the Board of Studies of a particular Department/Program of Study of the University;*
- l. *"CGPA" means Cumulative Grade Point Average as defined in the Academic Regulations;*
- m. *"Clause" means the duly numbered Clause, with Sub-Clauses included, if any, of these Regulations;*
- n. *"COE" means the Controller of Examinations of the University;*
- o. *"Course In Charge" means the teacher/faculty member responsible for developing and organising the delivery of the Course;*
- p. *"Course Instructor" means the teacher/faculty member responsible for teaching and evaluation of a Course;*
- q. *"Course" means a specific subject usually identified by its Course-code and Course-title, with specified credits and syllabus/course-description, a set of references, taught by some teacher(s)/course-instructor(s) to a specific class (group of students) during a specific Academic Term;*
- r. *"Curriculum Structure" means the Curriculum governing a specific Degree Program offered by the University, and, includes the set of Baskets of Courses*

along with minimum credit requirements to be earned under each basket for a degree/degree with specialization/minor/honours in addition to the relevant details of the Courses and Course catalogues (which describes the Course content and other important information about the Course). Any specific requirements for a particular program may be brought into the Curriculum structure of the specific program and relevant approvals should be taken from the BOS and Academic Council at that time.

- s. "DAC" means the Departmental Academic Committee of a concerned Department/Program of Study of the University;*
- t. "Dean" means the Dean / Director of the concerned School;*
- u. "Degree Program" includes all Degree Programs;*
- v. "Department" means the Department offering the degree Program(s) / Course(s) / School offering the concerned Degree Programs / other Administrative Offices;*
- w. "Discipline" means specialization or branch of B.Tech. Degree Program;*
- x. "HOD" means the Head of the concerned Department;*
- y. "L-T-P-C" means Lecture-Tutorial-Practical-Credit – refers to the teaching – learning periods and the credit associated;*
- z. "MOOC" means Massive Open Online Courses;*
- aa. "MOU" means the Memorandum of Understanding;*
- bb. "NPTEL" means National Program on Technology Enhanced Learning;*
- cc. "Parent Department" means the department that offers the Degree Program that a student undergoes;*
- dd. "Program Head" means the administrative head of a particular Degree Program/s;*
- ee. "Program Regulations" means the Bachelor of Technology Degree Program Regulations and Curriculum, 2024-2028;*
- ff. "Program" means the Bachelor of Technology (B.Tech.) Degree Program;*
- gg. "PSCS" means the Presidency School of Computer Sciece and Engineering;*
- hh. "Registrar" means the Registrar of the University;*
- ii. "School" means a constituent institution of the University established for monitoring, supervising and guiding, teaching, training and research activities in broadly related fields of studies;*
- jj. "Section" means the duly numbered Section, with Clauses included in that Section, of these Regulations;*
- kk. "SGPA" means the Semester Grade Point Average as defined in the Academic Regulations;*
- ll. "Statutes" means the Statutes of Presidency University;*
- mm. "Sub-Clause" means the duly numbered Sub-Clause of these Program Regulations;*
- nn. "Summer Term" means an additional Academic Term conducted during the summer break (typically in June-July) for a duration of about eight (08) calendar weeks, with a minimum of thirty (30) University teaching days;*
- oo. "SWAYAM" means Study Webs of Active Learning for Young Aspiring Minds.*

*pp. "UGC" means University Grant Commission;
qq. "University" means Presidency University, Bengaluru; and
rr. "Vice Chancellor" means the Vice Chancellor of the University.*

5. Program Description

The Bachelor of Technology Degree Program Regulations and Curriculum 2023-2027 are subject to, and, pursuant to the Academic Regulations. These Program Regulations shall be applicable to the following ongoing Bachelor of Technology (B.Tech.) Degree Programs of 2023-2027 offered by the Presidency School of Computer Science and Engineering (PSCS):

1. Bachelor of Technology in Computer Science and Engineering, abbreviated as CSE
2. Bachelor of Technology in Computer Science and Technology (Big Data), abbreviated as CBD
3. Bachelor of Technology in Computer Science and Engineering (Block Chain), abbreviated as CBC
4. Bachelor of Technology in Computer Science and Technology (Dev Ops), abbreviated as CDV
5. Bachelor of Technology in Computer Science and Engineering (Cyber Security), abbreviated as CCS
6. Bachelor of Technology in Computer Science and Engineering (Internet of Things), abbreviated as CIT
7. Bachelor of Technology in Computer Science and Engineering (Data Science), abbreviated as CSD
8. Bachelor of Technology in Computer Science and Technology, abbreviated as CSG
9. Bachelor of Technology in Information Science and Technology, abbreviated as IST
10. Bachelor of Technology in Computer Science and Information Technology, abbreviated as CSI
11. Bachelor of Technology in Computer Science and Engineering (Networks), abbreviated as CSN
12. Bachelor of Technology in Computer Engineering, abbreviated as COM
13. Bachelor of Technology in Information Science and Engineering, abbreviated as ISE and
14. Bachelor of Technology in Computer Science and Engineering (Artificial Intelligence and Machine Learning) abbreviated as CAI

5.1 These Program Regulations shall be applicable to other similar programs, which may be introduced in future.

5.2 These Regulations may evolve and get amended or modified or changed through appropriate approvals from the Academic Council, from time to time, and shall be binding on all concerned.

5.3 The effect of periodic amendments or changes in the Program Regulations, on the students admitted in earlier years, shall be dealt with appropriately and carefully, so as to ensure that those students are not subjected to any unfair

situation whatsoever, although they are required to conform to these revised Program Regulations, without any undue favour or considerations

6. Minimum and Maximum Duration

- 6.1 Bachelor of Technology Degree Program is a Four-Year, Full-Time Semester based program. The minimum duration of the B.Tech. Program is four (04) years and each year comprises of two academic Semesters (Odd and Even Semesters) and hence the duration of the B.Tech. program is eight (08) Semesters.
- 6.2 A student who for whatever reason is not able to complete the Program within the normal period or the minimum duration (number of years) prescribed for the Program, may be allowed a period of two years beyond the normal period to complete the mandatory minimum credits requirement as prescribed by the concerned Program Regulations and Curriculum. In general, the permissible maximum duration (number of years) for completion of Program is 'N' + 2 years, where 'N' stands for the normal or minimum duration (number of years) for completion of the concerned Program as prescribed by the concerned Program Regulations and Curriculum.
- 6.3 The time taken by the student to improve Grades/CGPA, and in case of temporary withdrawal/re-joining (Refer to Clause:16.1. of Academic Regulations), shall be counted in the permissible maximum duration for completion of a Program.
- 6.4 In exceptional circumstances, such as temporary withdrawal for medical exigencies where there is a prolonged hospitalization and/or treatment, as certified through hospital/medical records, women students requiring extended maternity break (certified by registered medical practitioner), and, outstanding sportspersons representing the University/State/India requiring extended time to participate in National/International sports events, a further extension of one (01) year may be granted on the approval of the Academic Council.
- 6.5 The enrolment of the student who fails to complete the mandatory requirements for the award of the concerned Degree (refer Section: 19.0. of Academic Regulations) in the prescribed maximum duration (Clauses 18.1 and 18.2 of Academic Regulations), shall stand terminated and no Degree shall be awarded.

7 Programme Educational Objectives (PEO)

After four years of successful completion of the program, the graduates shall be able to:

PEO 01: Demonstrate success as Computer Science and Engineering with innovative skills, moral and ethical values.

PEO 02: Engage in lifelong learning through research and professional development.

PEO 03: Serve as a leader in the profession through consultancy, extension activities and/ or entrepreneurship

8 Programme Outcomes (PO) and Programme Specific Outcomes (PSO)

8.1 Programme Outcomes (PO)

On successful completion of the Program, the students shall be able to:

- PO1. Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2. Problem Analysis:** Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3. Design/Development of Solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4. Conduct Investigations of Complex Problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5. Modern Tool Usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- PO6. The Engineer and Society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO7. Environment and Sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9. Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and

receive clear instructions.

PO11. Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Life-Long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

8.2 Program Specific Outcomes (PSOs):

On successful completion of the Program, the students shall be able to:

PSO 01: Problem Analysis: Identify, formulate, research literature, and analyse complex engineering problems related to Software Engineering principles & practice, Programming, Big Data computing & analytics Substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PSO 02: Design/development of Solutions: Design solutions for complex engineering problems related to Software Engineering principles & practice, Programming, Big Data Computing & analytics and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PSO 03: Modern Tools Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities related to Software Engineering principles & practice, Programming, Big Data Computing & analytics with an understanding of the limitations.

9 Admission Criteria (as per the concerned Statutory Body)

The University admissions shall be open to all persons irrespective of caste, class, creed, gender or nation. All admissions shall be made on the basis of merit in the qualifying examinations; provided that forty percent of the admissions in all Programs of the University shall be reserved for the students of Karnataka State and admissions shall be made through a Common Entrance Examination conducted by the State Government or its agency and seats shall be allotted as per the merit and reservation policy of the State Government from time to time. The admission criteria to the B.Tech. Program is listed in the following Sub-Clauses:

- 9.1 An applicant who has successfully completed Pre-University course or Senior Secondary School course (+2) or equivalent such as (11+1), 'A' level in Senior School Leaving Certificate Course from a recognized university of India or outside or from Senior Secondary Board or equivalent, constituted

or recognized by the Union or by the State Government of that Country for the purpose of issue of qualifying certificate on successful completion of the course, may apply for and be admitted into the Program.

9.2 Provided further, the applicant must have taken Physics and Mathematics as compulsory subjects in the Pre-University / Higher Secondary / (10+2) / (11+1) examination, along with either Chemistry / Biology / Electronics / Computer Science / Biotechnology subject, and, the applicant must have obtained a minimum of 45% of the total marks (40% in case of candidates belonging to the Reserved Category as classified by the Government of Karnataka) in these subjects taken together.

9.3 The applicant must have appeared for Joint Entrance Examinations (JEE) Main / JEE (Advanced) / Karnataka CET / COMED-K, or any other State-level Engineering Entrance Examinations.

9.4 Reservation for the SC / ST and other backward classes shall be made in accordance with the directives issued by the Government of Karnataka from time to time.

9.5 Admissions are offered to Foreign Nationals and Indians living abroad in accordance with the rules applicable for such admission, issued from time to time, by the Government of India.

9.6 Candidates must fulfil the medical standards required for admission as prescribed by the University.

9.7 If, at any time after admission, it is found that a candidate had not in fact fulfilled all the requirements stipulated in the offer of admission, in any form whatsoever, including possible misinformation and any other falsification, the Registrar shall report the matter to the Board of Management (BOM), recommending revoking the admission of the candidate.

9.8 The decision of the BOM regarding the admissions is final and binding.

10 Lateral Entry / Transfer Students requirements

10.1 Lateral Entry

The University admits students directly to the second year (3rd Semester) of the B.Tech. /BE/BS Degree program as per the provisions and/or regulations of the Government of Karnataka pertaining to the "Lateral Entry" scheme announced by the Government from time to time. Further, the general conditions and rules governing the provision of Lateral Entry to the B.Tech. Program of the University are listed in the following Sub-Clauses:

10.1.1 Admission to 2nd year (3rd Semester) of the B.Tech. Degree program shall be open to the candidates who are holders of a 3-year Diploma in Engineering (or equivalent qualification as recognized by the University), who have secured not less than forty-five percentage (45%) marks in the final year examination (5th and 6th Semesters of the Diploma Program) in the appropriate branch of Engineering. Provided that, in case of SC / ST and OBC candidates from Karnataka the minimum marks for eligibility shall be forty percent (40%).

10.1.2 Provided further that, candidates seeking Lateral Entry may be required to complete specified bridge Courses as prescribed by the University. Such bridge Courses, if any, shall not be included in the CGPA computations.

10.1.3 All the existing Regulations and Policies of the University shall be binding on all the students admitted to the Program through the provision of Lateral Entry.

10.1.4 The Course requirements prescribed for the 1st Year of the B.Tech. Program shall be waived for the student(s) admitted through Lateral Entry and the duration of the B.Tech. Program for such students is three (03) years, commencing from the 3rd Semester (commencement of the 2nd Year) of the B.Tech. Program and culminating with the 8th Semester (end of the 4th Year) of the B.Tech. Program.

10.1.5 Provided that, if a Lateral Entry student misses any mandatory program specific courses that are typically offered in the 1st year (1st or 2nd semesters), then those courses must be cleared by the students as soon as possible, preferably during the Summer Term.

10.1.6 The existing Program Regulations of the concerned Program to which the student is admitted through the provision of Lateral Entry shall be binding on the student with effect from the 3rd Semester of the Program. i.e., the Program Structure and Curriculum from the 3rd to 8th Semesters of the Program concerned shall be binding on the student admitted through Lateral Entry. Further, any revisions / amendments made to the Program Regulations thereafter, shall be binding on all the students of the concerned Program.

10.1.7 All the Courses (and the corresponding number of Credits) prescribed for the 1st Year of the concerned B.Tech. Program shall be waived for the student(s) admitted to the concerned B.Tech Program through Lateral Entry. Further, the *Minimum Credit Requirements* for the award of the B.Tech. Degree in the concerned Program shall be prescribed / calculated as follows:

The **Minimum Credit Requirements** for the award of the Bachelor of Technology (B.Tech.) Degree prescribed by the concerned Bachelor of Technology Degree Program Regulations and Curriculum, 2024-2028, minus the number of Credits prescribed / accepted by the Equivalence Committee for the 1st Year (1st and 2nd Semesters) of the B.Tech. Program.

For instance, if the *Minimum Credit Requirements* for the award of the Bachelor of Technology (B.Tech.) Degree as prescribed by the Regulations for B.Tech. (Computer Science and Technology Big Data) is "N" Credits, and, if the total credits prescribed in the 1st Year (total credits of the 1st and 2nd Semesters) of the Program concerned is "M" Credits, then the *Minimum Credit Requirements* for the award of the B.Tech. in Computer Science and Technology Big Data for a student who joins the Program through the provision of the Lateral Entry, shall be "N – M" Credits.

10.1.8 Further, no other waiver except the Courses prescribed for the 1st year of the B.Tech. Program of the University shall be permissible for students joining the B.Tech. Program through the provision of Lateral Entry.

10.2 Transfer of student(s) from another recognized University to the 2nd year (3rd Semester) of the B.Tech. Program of the University

A student who has completed the 1st Year (i.e., passed in all the Courses / Subjects prescribed for the 1st Year) of the B.Tech.. Four-Year Degree Program from another recognized University, may be permitted to transfer to the 2nd Year (3rd Semester) of the B.Tech. Program of the University as per the rules and guidelines prescribed in the following Sub-Clauses:

10.2.1 The concerned student fulfils the criteria specified in Sub-Clauses 10.1.1, 10.1.2 and 10.1.3.

10.2.2 The student shall submit the Application for Transfer along with a non-refundable Application Fee (as prescribed by the University from time to time) to the University no later than July 10 of the concerned year for admission to the 2nd Year (3rd Semester) B.Tech. Program commencing on August 1 on the year concerned.

10.2.3 The student shall submit copies of the respective Marks Cards / Grade Sheets / Certificates along with the Application for Transfer.

10.2.4 The transfer may be provided on the condition that the Courses and Credits completed by the concerned student in the 1st Year of the B.Tech.. Four Degree Program from the concerned University, are declared equivalent and acceptable by the Equivalence Committee constituted by the Vice Chancellor for this purpose. Further, the Equivalence Committee may also prescribe the Courses and Credits the concerned students shall have to mandatorily complete, if admitted to the 2nd Year of the B.Tech. Program

of the University.

10.2.5 The Branch / Discipline allotted to the student concerned shall be the decision of the University and binding on the student.

11 Change of Branch / Discipline / Specialization

A student admitted to a particular Branch of the B.Tech. Program will normally continue studying in that Branch till the completion of the program. However, the University reserves the right to provide the option for a change of Branch, or not to provide the option for a change of Branch, at the end of 1st Year of the B.Tech. Program to eligible students in accordance with the following rules and guidelines: framed by the University from time to time.

- 11.1 Normally, only those students, who have passed all the Courses prescribed for the 1st Year of the B.Tech. Program and obtained a CGPA of not less than 6.50 at the end of the 2nd Semester, shall be eligible for consideration for a change of Branch.
- 11.2 Change of Branch, if provided, shall be made effective from the commencement of the 3rd Semester of the B.Tech. Program. There shall be no provision for change of Branch thereafter under any circumstances whatsoever.
- 11.3 The student provided with the change of Branch shall fully adhere to and comply with the Program Regulations of the concerned Branch of the B.Tech. Program, the Fee Policy pertaining to that Branch of the B.Tech. Program, and, all other rules pertaining to the changed Branch existing at the time.
- 11.4 Change of Branch once made shall be final and binding on the student. No student shall be permitted, under any circumstances, to refuse the change of Branch offered.
- 11.5 The eligible student may be allowed a change in Branch, strictly in order of *inter se* merit, subject to the conditions given below:
 - 11.5.1 The actual number of students in the 3rd Semester in any particular Branch to which the transfer is to be made, should not exceed the intake fixed by the University for the concerned Branch;

11.5.2 The actual number of students in any Branch from which transfer is being sought does not fall below 75% of the total intake fixed by the University for the concerned Branch.

The process of change of Branch shall be completed within the first five days of Registration for the 3rd Semester of the B.Tech. Program.

12 Specific Regulations regarding Assessment and Evaluation (including the Assessment Details of NTCC Courses, Weightages of Continuous Assessment and End Term Examination for various Course Categories)

12.1 The academic performance evaluation of a student in a Course shall be according to the University Letter Grading System based on the class performance distribution in the Course.

12.2 Academic performance evaluation of every registered student in every Course registered by the student is carried out through various components of Assessments spread across the Semester. The nature of components of Continuous Assessments and the weightage given to each component of Continuous Assessments (refer Clause 8.8 of academic regulation)) shall be clearly defined in the Course Plan for every Course, and approved by the DAC.

12.3 Format of the End-Term examination shall be specified in the Course Plan.

12.4 Grading is the process of rewarding the students for their overall performance in each Course. The University follows the system of Relative Grading with statistical approach to classify the students based on the relative performance of the students registered in the concerned Course except in the following cases:

- Non-Teaching Credit Courses (NTCC)
- Courses with a class strength less than 30

Absolute grading method may be adopted, where necessary with prior approval of concerned DAC.

Grading shall be done at the end of the Academic Term by considering the aggregate performance of the student in all components of Assessments prescribed for the Course. Letter Grades (Clause 8.10 of academic regulation) shall be awarded to a student based on her/his overall performance relative to the class performance distribution in the concerned Course. These Letter Grades not only indicate a qualitative assessment of the student's performance but also carry a quantitative (numeric) equivalent called the Grade Point.

12.5 Assessment Components and Weightage

Table 1: Assessment Components and Weightage for different category of Courses		
Nature of Course and Structure	Evaluation Component	Weightage
Lecture-based Course L component in the L-T-P Structure is predominant (more than 1) (Examples: 3-0-0; 3-0-2; 2-1-0; 2-0-2, 2-0-4 etc.)	Continuous Assessments	50%
	End Term Examination	50%
Lab/Practice-based Course P component in the L-T-P Structure is predominant (Examples: 0-0-4; 1-0-4; 1-0-2; etc.)	Continuous Assessments	75%
	End Term Examination	25%
Skill based Courses like Industry Internship, Capstone project, Research Dissertation, Integrative Studio, Interdisciplinary Project, Summer / Short Internship, Social Engagement / Field Projects, Portfolio, and such similar Non-Teaching Credit Courses, where the pedagogy does not lend itself to a typical L-T-P structure	Guidelines for the assessment components for the various types of Courses, with recommended weightages, shall be specified in the concerned Program Regulations and Curriculum / Course Plans, as applicable.	

*CSE3150-Front End Full stack development

CSE3151-Java Full Stack Development

CSE3152-.Net Full Stack development

The exact weightages of Evaluation Components shall be clearly specified in the concerned PRC and respective Course Plan.

Normally, for Practice/Skill based Courses, without a defined credit structure (L-T-P) [NTCC], but with assigned Credits (as defined in Clause 5.12 of the Academic Regulations), the method of evaluation shall be based only on Continuous Assessments. The various components of Continuous Assessments, the distribution of weightage among such components, and the method of evaluation/assessment, shall be as decided and indicated in the Course Plan/PRC. The same shall be approved by the respective DAC.

12.6 Minimum Performance Criteria:

12.6.1 Theory only Course and Lab/Practice Embedded Theory Course

A student shall satisfy the following minimum performance criteria to be eligible to earn the credits towards the concerned Course:

- a. A student must obtain a minimum of 30% of the total marks/weightage assigned to the End Term Examinations in the concerned Course.
- b. The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of the components of Continuous Assessments, Mid Term Examinations and End Term Examinations in the concerned Course.

12.6.2 Lab/Practice only Course and Project Based Courses

The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of all assessment components in the concerned Course.

- 12.6.3** A student who fails to meet the minimum performance criteria listed above in a Course shall be declared as "Fail" and given "F" Grade in the concerned Course. For theory Courses, the student shall have to re-appear in the "Make-Up Examinations" as scheduled by the University in any subsequent semester, or, re-appear in the End Term Examinations of the same Course when it is scheduled at the end of the following Semester or Summer Term, if offered. The marks obtained in the Continuous Assessments (other than the End Term Examination) shall be carried forward and be included in computing the final grade, if the student secures the minimum requirements (as per Sub-Clause 12.6.1 and 12.6.2 of academic regulation) in the "Make-Up Examinations" of the concerned Course. Further, the student has an option to re-register for the Course and clear the same in the summer term/ subsequent semester if he/she wishes to do so, provided the Course is offered.

13 Additional clarifications - Rules and Guidelines for Transfer of Credits from MOOC, etc. – Note: These are covered in Academic Regulations

The University allows students to acquire credits from other Indian or foreign institutions and/or Massive Open Online Course (MOOC) platforms, subject to prior approval. These credits may be transferred and counted toward fulfilling the minimum credit requirements for the award of a degree. The process of transfer of credits is governed by the following rules and guidelines:

- 13.1** The transfer of credits shall be examined and recommended by the Equivalence Committee (Refer **Error! Reference source not found.** of Academic Regulations) and approved by the Dean - Academics.
- 13.2** Students may earn credits from other Indian or foreign Universities/Institutions with which the University has an MOU, and that MOU shall have specific provisions, rules and guidelines for transfer of credits. These

transferred credits shall be counted towards the minimum credit requirements for the award of the degree.

13.3 Students may earn credits by registering for Online Courses offered by *Study Web of Active Learning by Young and Aspiring Minds (SWAYAM)* and *National Program on Technology Enhanced Learning (NPTEL)*, or other such recognized Bodies/ Universities/Institutions as approved by the concerned BOS and Academic Council from time to time. The concerned School/Parent Department shall publish/include the approved list of Courses and the rules and guidelines governing such transfer of credits of the concerned Program from time to time. The Rules and Guidelines for the transfer of credits specifically from the Online Courses conducted by SWAYAM/ NPTEL/ other approved MOOCs are as stated in the following Sub-Clauses:

- 13.3.1** A student may complete SWAYAM/NPTEL/other approved MOOCs as mentioned in Clause **Error! Reference source not found.** (as per of Academic Regulations) and transfer equivalent credits to partially or fully complete the mandatory credit requirements of Discipline Elective Courses and/or the mandatory credit requirements of Open Elective Courses as prescribed in the concerned Curriculum Structure. However, it is the sole responsibility of the student to complete the mandatory credit requirements of the Discipline Elective Courses and the Open Elective Courses as prescribed by the Curriculum Structure of the concerned Program.
- 13.3.2** SWAYAM/NPTEL/ other approved MOOCs as mentioned in Clause **Error! Reference source not found.** (as per of Academic Regulations) shall be approved by the concerned Board of Studies and placed (as Annexures) in the concerned PRC.
- 13.3.3** Parent Departments may release a list of SWAYAM/NPTEL/other approved MOOCs for Pre-Registration as per schedule in the Academic Calendar or through University Notification to this effect.
- 13.3.4** Students may Pre-Register for the SWAYAM/NPTEL/other approved MOOCs in the respective Departments and register for the same Courses as per the schedule announced by respective Online Course Offering body/institute/ university.
- 13.3.5** A student shall request for transfer of credits only from such approved Courses as mentioned in Sub-Clause **Error! Reference source not found.** above.
- 13.3.6** SWAYAM/NPTEL/other approved MOOCs Courses are considered for transfer of credits only if the concerned student has successfully completed the SWAYAM/NPTEL/other approved MOOCs and obtained a certificate of successful/satisfactory completion.
- 13.3.7** A student who has successfully completed the approved SWAYAM/NPTEL/ other approved MOOCs and wants to avail the provision of transfer of equivalent credits, must submit the original Certificate of Completion, or such similar authorized documents to

the HOD concerned, with a written request for the transfer of the equivalent credits. On verification of the Certificates/Documents and approval by the HOD concerned, the Course(s) and equivalent Credits shall be forwarded to the COE for processing of results of the concerned Academic Term.

13.3.8 The credit equivalence of the SWAYAM/NPTEL/other approved MOOCs are based on Course durations and/or as recommended by the Course offering body/institute/university. The Credit Equivalence mapped to SWAYAM/ NPTEL approved Courses based on Course durations for transfer of credits is summarised in Table shown below. The Grade will be calculated from the marks received by the Absolute Grading Table **Error! Reference source not found..** in the

Table 2: Durations and Credit Equivalence for Transfer of Credits from SWAYAM-NPTEL/ other approved MOOC Courses

Sl. No.	Course Duration	Credit Equivalence
1	4 Weeks	1 Credit
2	8 Weeks	2 Credits
3	12 Weeks	3 Credits

Academic Regulation.

13.3.9 The maximum permissible number of credits that a student may request for credit transfer from MOOCs shall not exceed 20% of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree.

13.3.10 The University shall not reimburse any fees/expense; a student may incur for the SWAYAM/NPTEL/other approved MOOCs.

13.4 The maximum number of credits that can be transferred by a student shall be limited to forty percent (40%) of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree. However, the grades obtained in the Courses transferred from other Institutions/MOOCs, as mentioned in this Section (13.**Error! Reference source not found.**), shall not be included in the calculation of the CGPA.

13.5 Mandatory Non-Credit Course Completion Requirements: All mandatory non-credit courses shall be satisfactorily completed by the student as part of the degree requirements. These courses will be evaluated and awarded letter grades based on the following criteria:

- S (Satisfactorily Completed): Awarded when the student successfully completes all prescribed course requirements.
- NC (Not Completed): Awarded when the student fails to meet the prescribed course requirements.

A student receiving an NC grade must reappear for and complete the course in accordance with the guidelines prescribed by the University.

In the case of non-taught and non-credited mandatory courses—where students are advised to undertake learning through MOOC platforms—there shall be a clearly defined Course Catalogue and a corresponding Course Plan. The Course Plan shall outline the assessment components, which will form the basis for evaluation.

PART B – PROGRAM STRUCTURE

14. Structure / Component with Credit Requirements Course Baskets & Minimum Basket wise Credit Requirements

The B.Tech. (Computer Science and Technology-Big Data) Program Structure (2023-2027) totalling 160 credits. Table 3 summarizes the type of baskets, number of courses under each basket and the associated credits that are mandatorily required for the completion of the Degree.

Table 3: B.Tech. (Computer Science and Technology Big Data) 2023-2027: Summary of Mandatory Courses and Minimum Credit Contribution from various Baskets		
Sl. N.o.	Baskets	Credit Contribution
1	School Core	68
2	Program Core	65
3	Discipline Elective	18
4	Open Elective	9
	Total Credits	160 (Minimum)

In the entire Program, the practical and skill based course component contribute to an extent of approximately 60% out of the total credits of 160 for B.Tech. (Computer Science and Technology Big Data) program of four years' duration.

15. Minimum Total Credit Requirements of Award of Degree

As per the AICTE guidelines, a minimum of 160 credits is required for the award of a B.Tech. degree.

PART C – CURRICULUM STRUCTURE

16. Other Specific Requirements for Award of Degree, if any, as prescribed by the Statutory Bodies,

16.1 The award of the Degree shall be recommended by the Board of Examinations and approved by the Academic Council and Board of Management of the University.

16.2 A student shall be declared to be eligible for the award of the concerned Degree if she/he:

- a. Fulfilled the Minimum Credit Requirements and the Minimum Credits requirements under various baskets;
- b. Secure a minimum CGPA of 4.50 in the concerned Program at the end of the Semester/Academic Term in which she/he completes all the requirements for the award of the Degree as specified in Sub-Clause 19.2.1 of Academic Regulations;
- c. No dues to the University, Departments, Hostels, Library, and any other such Centers/ Departments of the University; and
- d. No disciplinary action is pending against her/him.

17. Curriculum Structure – Basket Wise Course List (not Semester Wise)

18. Practical / Skill based Courses – Internships / Thesis / Dissertation / Capstone Project Work / Portfolio / Mini project

Practical / Skill based Courses like internship, project work, capstone project, research project / dissertation, and such similar courses, where the pedagogy does not lend itself to a typical L-T-P-C Structure as defined in Clause 5.1 of the Academic Regulations are simply assigned the number of Credits based on the quantum of work / effort required to fulfill the learning objectives and outcomes prescribed for the concerned Courses. Such courses are referred to as Non-Teaching Credit Courses (NTCC). These Courses are designed to provide students with hands-on experience and skills essential for their professional development. These courses aim to equip students with abilities in problem identification, root cause analysis, problem-solving, innovation, and design thinking through industry exposure and project-based learning. The expected outcomes are first level proficiency in problem solving and design thinking skills to better equip B.Tech. graduates for their professional careers. The method of evaluation and grading for the Practical / Skill based Courses shall be prescribed and approved by the concerned Departmental Academic Committee (refer Annexure A of the Academic Regulations). The same shall be prescribed in the Course Handout.

18.1 Internship / In-plant Training / Skill-based Program / International Immersion (IM) / Recognition of Prior Learning (RPL)

A student may undergo an Internship / In-plant Training / Skill-based Program / IM / RPL for a period minimum 04 weeks in an industry / company, government bodies, academic / research institution or recognized online platforms offering certified skill-based programs during the semester break between 4th and 5th semesters, subject to the following conditions:

- 18.1.1** The Internship / In-plant Training / Skill-based Program / IM / RPL shall be conducted in accordance with the Internship Policy prescribed by the University from time to time.
- 18.1.2** Internship: student shall undergo internship, either in industry / company, academic / research organizations, government bodies, or international institutions. The objective is to provide practical exposure, industry insights, and real-world experience relevant to the student's field of study.
- 18.1.3** In-plant Training: student shall undergo training / industrial exposure program aimed at providing with practical insights into real-world working environments. The training may be conducted by industries / companies on-campus or through student visits to industries / companies, government bodies / institutions, or technical organizations.
- 18.1.4** Skill-based Program: student shall undergo a certified skill-based program of 30 hours / 04 weeks. Skill-based program should cater to Skill-Enhancement, Practical Focus, and Career orientation, Complementary to Curriculum or Industry relevant.
- 18.1.5** International Immersion (IM): student shall undergo IM aimed at providing global exposure through collaborations with foreign universities, industries, or research institutions. The International Immersion may include industry visits, expert interactions, and cultural exchange activities, enhancing students' international outlook, communication skills, and professional readiness.
- 18.1.6** Recognition of Prior Learning (RPL): student who shall undergo any formally recognize relevant prior work experience, internships, or project-based learning that meet the internship learning outcomes, thereby allowing students to earn internship credit without repeating equivalent practical training.
- 18.1.7** The number of Internships available for the concerned Academic Term. Further, the available number of Internships / In-plant training / Skill-based Program / IM / RPL shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student and as per the selection criteria. Provided further, the student fulfils the criteria, as applicable, specified by the industry / company, government bodies, academic / research or through certified courses.
- 18.1.8** A student may opt for Internship / In-plant Training / IM / RPL in an industry / company, government bodies / academic / research institution, international bodies of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the Internship / In-plant Training / IM / RPL on her / his own. Provided further, that the industry

/ company, government bodies, academic / research institution national or international offering such Internship / Training confirms to the University that the Internship shall be conducted in accordance with the Program Regulations and Internship Policy of the University / Rubrics.

18.1.9 A student undergoing RPL must submit an application with supporting documents such as experience letters, project reports, employer feedback, certifications, a self-reflection report etc. Application must be submitted before the commencement of the internship semester.

18.1.10 A student selected for an Internship / In-plant Training / Skill-based Program / IM / RPL in an industry / company, government bodies, academic / research institution shall adhere to all the rules and guidelines prescribed in the Internship Policy of the University.

The performance will be assessed and grades awarded as per the university's academic grading policy. It may be included as a non-GPA course (Grade-based Satisfactorily Completed / Not Completed). The student must secure a minimum of 50% of the total marks to be declared as having successfully completed the course.

18.2 Mini Project

A student may opt to do a mini Project for a period of 6-8 weeks in an Industry / Company or academic / research institution or the University Department(s) during the Semester Break between 4th and 5th Semesters or 6th and 7th Semesters or during the 5th / 6th / 7th Semester as applicable, subject to the following conditions:

18.2.1 The Mini Project Work shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.

18.2.2 The student may do the project work in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 18.2.1). Provided further, that the Industry / Company or academic / research institution offering such project work confirms to the University that the project work will be conducted in accordance with the Program Regulations and requirements of the University.

18.3 Capstone Project

A student may undergo a Capstone Project for a period of 12-14 weeks in an industry / company or academic / research institution in the 7th / 8th Semester as applicable, subject to the following conditions:

18.3.1 The Capstone Project shall be conducted in accordance with the Capstone Project Policy prescribed by the University from time to time.

18.3.2 The selection criteria (minimum CGPA, pass in all Courses as on date, and any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Capstone Project to a student;

18.3.3 The number of Capstone Project available for the concerned Academic Term. Further, the available number of Capstone Project shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution providing the Capstone Project, as stated in Sub-Clause 18.3.2 above.

18.3.4 A student may opt for Capstone Project in an Industry / Company or academic / research institution of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the Capstone Project on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Capstone Project confirms to the University that the Capstone Project shall be conducted in accordance with the Program Regulations and Capstone Policy of the University.

18.3.5 A student selected for a Capstone Project in an industry / company or academic / research institution shall adhere to all the rules and guidelines prescribed in the Capstone Project Policy of the University.

18.4 Research Project / Dissertation

A student may opt to do a Research Project / Dissertation for a period of 12-14 weeks in an Industry / Company or academic / research institution or the University Department(s) as an equivalence of Capstone Project, subject to the following conditions:

18.4.1 The Research Project / Dissertation shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.

The student may do the Research Project / Dissertation in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 18.4.1). Provided further, that the Industry / Company or academic / research institution offering such Research Project / Dissertation confirms to the University that the Research Project / Dissertation work will be conducted in accordance with the Program Regulations and requirements of the University.

		"Total # of Credits to be earned from DE = 30"							

21. List of MOOC Courses

21.1 Presidency University students are given the opportunity to study abroad in International Universities through a selection process coordinated by the Office of International Affairs (OIA). Such selected students need to complete their credits for the

semester that they are abroad in the following way:

21.1.1 The student needs to study and complete School Core and Program in offline mode only. Core Courses

21.1.2 Massive Open Online Course (MOOC) courses maybe given for Open Elective and Discipline Elective Courses. These courses need to be approved by the concerned BOS and Academic Council from time to time.

21.1.3 SWAYAM/NPTEL/ other approved MOOCs shall be approved by the concerned Board of Studies and placed in the concerned PRC.

21.1.4 Student shall register for these courses in the ERP of Presidency University.

21.1.5 For these MOOC courses faculty coordinators are identified. These faculty should have undergone similar MOOC courses and therefore should be familiar with the mode of class conduction, types of assessments and evaluation procedures.

21.1.6 Study materials shall be provided to the students as video lectures shared by the MOOCs Coordinator(s), or the students may access the approved MOOCs Portal directly. The mode of class conduction is determined by the MOOCs coordinator(s) as detailed in the Course Catalogue and Course Plan.

21.1.7 The question paper shall be prepared by the MOOCs coordinator(s).

21.1.8 Students write the exams in online mode. These exams are scheduled and conducted by the School.

21.1.9 Results are evaluated by School and given to the Office of the Controller of Examinations (CoE).

21.1.10 The details of the duration, credits and evaluation are given below:

Sl#	Duration	Credits	Evaluation
1.	12 weeks	3	Continuous Assessment –50 Marks Mid Term –50 Marks End Term-100 Marks
2.	8 weeks	2	Mid Term-50 Marks End Term-100 Marks
3	4 weeks	1	End Term-100 Marks

21.2 MOOC - Discipline Elective Courses for B. Tech. Computer Science and Technology Big Data

Course Catalogue

Each course shall have a course catalogue with the following details:

- i) Pre –Requisites of the course
- ii) Course Description
- iii) Course Outcome
- iv) Course Content
- iv) Reference Resources.

The Course Catalogues for the Courses offered in each basket are attached below:

Course Code: MAT1001	Course Title: Calculus and Linear Algebra Type of Course: School Core Lab Integrated	L-T-P-C	2	1	2	4
Version No.	3.0					
Course Pre-requisites	Basic Concepts of Limits, Differentiation, Integration					
Anti-requisites	NIL					
Course Description	The course focuses on the concepts of calculus and linear algebra with reference to specific engineering problems. The course is of both conceptual and analytical type in nature. The lab sessions associated with the course are concerned with acquiring an ability to use the MATLAB software.					
Course Objective	The objective of the course is Skill Development of student by using Problem Solving Techniques.					
Course Outcomes	On successful completion of the course the students shall be able to: 1) Comprehend the knowledge of applications of matrix principles. 2) Understand the concept of partial derivatives and their applications. 3) Apply the principles of integral calculus to evaluate integrals. 4) Adopt the various analytical methods to solve differential equations. 5) Demonstrate the use of MATLAB software to deal with a variety of mathematical problems.					
Course Content:						
Module 1	Linear Algebra				10 Classes	
Review: Types of matrices, elementary transformations, rank of a matrix, normal form, Solution of systems of linear equations: (Homogenous and non-homogenous system) $AX = 0$ and $AX = B$ using rank method.						

<p>Linear Algebra: Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton theorem – Diagonalization of matrices – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms. Engineering Applications of Linear Algebra.</p>				
Module 2	Partial Derivatives			10 CLASSES
<p>Review: Differential calculus with single variable.</p>				
<p>Partial Derivatives: Homogeneous functions and Euler's theorem, Total derivative, Change of variables, Jacobians, Partial differentiation of implicit functions, Taylor's series for functions of two variables, Maxima and minima of functions of two variables, Lagrange's method of undetermined multipliers. Engineering Applications of partial derivatives.</p>				
Module 3	Advanced Integral calculus			12 Classes
<p>Review: Integral calculus for single integrals.</p>				
<p>Advanced Integral calculus: Beta and Gamma functions – interrelation-evaluation of integrals using gamma and beta functions; error function-properties. Multiple Integrals- Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves, evaluation of triple integrals-change of variables between Cartesian and cylindrical and spherical polar co-ordinates. Engineering applications of partial derivatives.</p>				
Module 4	Ordinary Differential Equations	Assignment	Programming	12 Classes
<p>Review: First order and first-degree Ordinary Differential Equations, Method of separation of variables, Homogeneous and Non-Homogeneous Equations reducible to Homogeneous form.</p>				
<p>Linear Differential Equations, Bernoulli's Differential Equation, Exact and Non-Exact Differential Equations, Higher order Differential Equation with constant coefficients and with right hand side of the form eax, $\sin ax$, $\cos ax$, $eaxf(x)$, $xnf(x)$ etc., Linear equations with variable coefficients such as Cauchy Equation and Lagrange's Equation, D-operators and Inverse D-operators, Method of Variation of Parameters. Engineering applications of differential equations.</p>				
<p>List of Laboratory Tasks: Introductory Task: Introduction to usage of the software and simple programming tasks. [3 Sessions]</p>				

Experiment NO 1: Solution of Simple differentiation with single variable and use of chain Rule.
Experiment No. 2: Solution based on application of Tailors' Series using software
Experiment No. 3: Application of Maxima and Minima condition using software.
Experiment No. 4 Computation of different functions for a specific problem
Experiment No. 5 Computation of Area under a curve.
Experiment No. 6 Solution of a set of simultaneous equations in matrix method
Experiment No. 7 Computation of Eigen Values and Eigen Vectors.
Experiment No. 8 Solution of Partial Differential equation
Experiment No. 9 solution using Cauchy Equation and Lagrange's Equation

Targeted Application & Tools that can be used:

The contents of this course has direct applications in most of the core engineering courses for problem formulations, Problem Solution and system Design.

Tools Used: MatLab, Zylink.

Assignment:

List at least 3 sets of Matrix Applications concerning the respective branch of Engineering and obtain the solution using MATLAB.

Select any one simple differential equation pertaining to the respective branch of engineering, identify the dependent and independent variable – Obtain the solution and compare the solution sets by varying the values of the dependent variable.

Topics relevant to development of Employability skills: Use of Matlab software.

Course Code: ECE100 1	Course Title: Elements of Electronics Engineering Type of Course: School Core Theory & Integrated Laboratory		L-T-P-C	3	0	2	4
Version No.	1.0						
Course Pre-requisites	NIL						
Anti-requisites	Nil						
Course Description	<p>The purpose of this course is to enable the students to learn the fundamental concepts of electronic devices and circuits. The course aims at nurturing the students with the fundamental principles of electronics engineering, prevailing in various engineering applications. The nature of the course is conceptual and analytical which imparts knowledge of electronic components and their behavior under various operating conditions. The course develops thinking skills of the students, encouraging their quest for knowledge about electronic devices and their usage in higher semester courses.</p> <p>The associated laboratory provides an opportunity to validate the concepts taught in theory classes and enable the students to work with basic electronic circuits using electronics components.</p>						
Course Objectives	<p>The objective of the course is to familiarize the learners with the concepts of Elements of Electronics Engineering and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING .</p>						
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <p>Identify various electrical and electronic components and basic electrical laws.</p> <p>Explain applications of Diodes and BJTs.</p> <p>Summarize the concepts of Digital Electronics and Communication Systems.</p> <p>Discuss the basic concepts of microprocessor and computer organization.</p> <p>Perform experiments to familiarize various Electrical & Electronic components and equipment.</p> <p>Verify Basic Electrical Circuit configurations and Laws.</p>						
Course Content :							
Module 1	Basic Electrical and Electronic Components	Assignment / Quiz	Identification of Practical electronic and electrical components / Memory Recall based Quizzes			10	Se

					s i o n s
<p>Topics:</p> <p>ELECTRICAL CIRCUITS AND LAWS: DC Circuits: Classification of Electrical Elements, Ohm's law, Series and Parallel Circuits, Kirchhoff's Voltage and Current laws, Power and Energy, Transformers and their types.</p> <p>ELECTRONIC MATERIALS AND COMPONENTS: Conductors, Insulators, Semi-Conductor Material, P-N Junction diode, Characteristics and Parameters, Ideal Diode approximations, DC load line.</p>					
Module 2	Applications of Diodes and Introduction to BJT	Assignment / Quiz		Simulation Task/ Memory Recall based Quizzes	1 2 s e s s i o n s
<p>Topics:</p> <p>RECTIFIERS: Half-wave rectifier, Two-diode Full-wave rectifier, Bridge rectifier, Capacitor filter circuit (only qualitative approach).</p> <p>ZENER DIODE: Zener diode, Zener Characteristics, Zener diode as a voltage regulator.</p> <p>BIPOLAR JUNCTION TRANSISTORS: BJT Construction and Operation, BJT Voltages and Currents, Common Base, Common Emitter Configuration and Characteristics, Current amplification Factor alpha and beta, DC Load line w.r.t. fixed bias circuit (Q-Point), AC Analysis.</p>					
Module 3	Digital Electronics and Communication System	Assignment / Quiz		Simulation Task / Memory Recall based Quizzes	1 3 s e s s i o n s

Topics:
NUMBER SYSTEMS: Decimal Number System, Binary Number System, Hexadecimal Number System, Conversions: Binary to and from Hexadecimal; Hexadecimal to and from Decimal;1's and 2's Complement of Binary Numbers, Binary Addition.
BOOLEAN ALGEBRA: Boolean Laws and Theorems, De Morgan's theorem. Digital Circuits: Logic gates, NOT Gate, AND Gate, OR Gate, XOR Gate, X-NOR Gate, NAND Gate, NOR Gate.
COMMUNICATION SYSTEM: Block diagram of communication system, Modulation: Definition of Modulation, Need of Modulation, Types of Modulation: Amplitude Modulation and Frequency Modulation (Waveforms only).

Module 4	Microprocessors and Computer Organization	Assignment / Quiz	Memory recall based Quizzes	10 sessions
----------	---	-------------------	-----------------------------	-------------

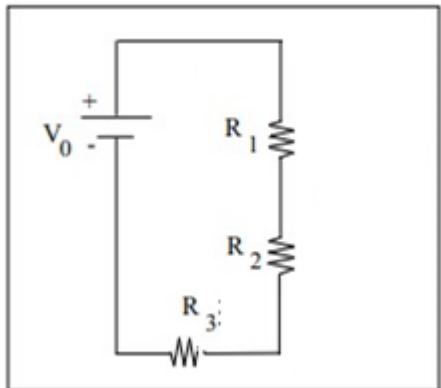

Topics:
INTEL 8085 MICROPROCESSOR: Basic Architecture and features of 8085 Microprocessor.
COMPUTER ORGANISATION: Basic structure of Computer Organisation describing the various Computer types, Functional Units, Basic Operational concepts, Bus Structures, Memory System: RAM and ROM.

List of Laboratory Tasks:
Experiment No. 1: Study of Resistors, Measuring instruments and DC Power Supply. Level 1: Identification of resistor values from color bands and verification with Multimeter. Level 2: Connecting a resistive circuit to a DC Power Supply and observing the input and output values using Voltmeters, Ammeters and hence calculate resistance values.
Experiment No. 2: Study of Reactive components, Multimeter, CRO and Function Generator. Level 1: Identification of various types of capacitive and inductive components and verification with Multimeter. Level 2: Connecting a reactive circuit to a function generator and observing the input and output waveform on CRO and calculation of Reactance and Impedance.
Experiment No. 3: Study of Ohm's Law. Level 1: Rig up the circuit and verify Ohm's Law. Level 2: Connect a 100Ω Resistor to a Voltage source of 0-5V. Plot a V- I graph by tabulating the Voltage Vs Current Values accordingly. Repeat the experiment for $1K\Omega$ resistor and compare the results.
Experiment No. 4: Study of Series and Parallel Resistor Connections. Level 1: Carry out the equivalent resistance of given four resistors 100Ω each connected in series and parallel combination using breadboard.

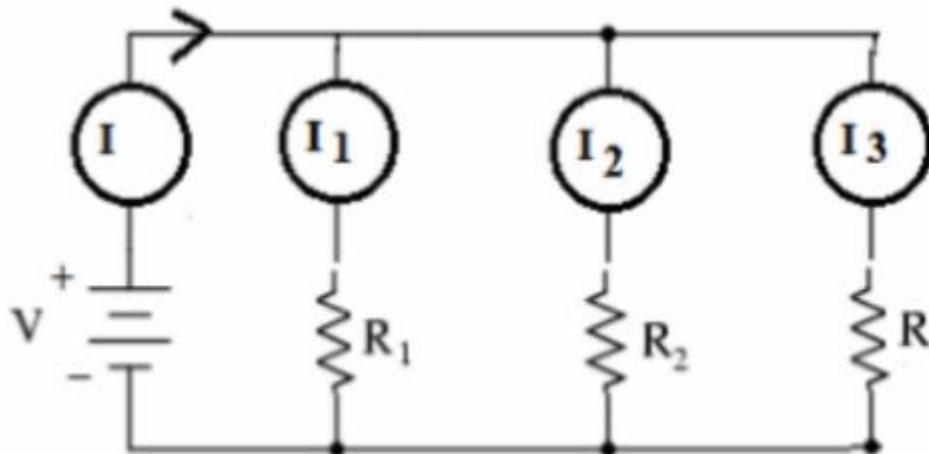

Level 2: Rig up a Current Divider Circuit and a Voltage Divider Circuit and verify the results.

Experiment No. 5: Study of Kirchhoff's Voltage Law and Kirchhoff's Current Law.

Level 1: Verify KV and KCL with circuit(a) and circuit(b) with #values.

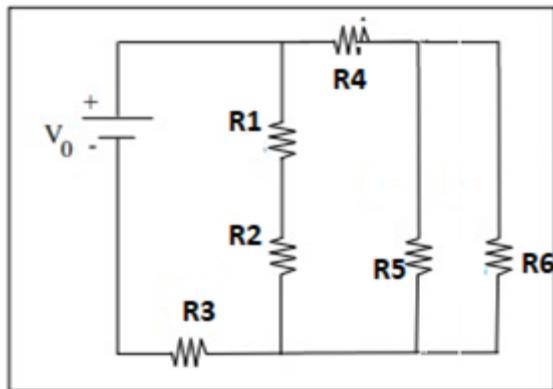

(a)

(b)

Level 2: Verify KCL with the help of given circuit having # values and carry out the equivalent resistance of the circuit by experimental and analytical methods.

Experiment No. 6: Study of PN-Junction Diode Characteristics in Forward and Reverse Bias Conditions.

Level 1:Carry out the experiment to find cut-in voltage on forward characteristics for Silicon P-N Junction diode.

Level 2: Carry out experiment to plot VI Characteristics of Silicon P-N Junction Diode in both forward and reverse biased conditions for Si P-N Junction diode.

Experiment No. 7: Study of Bipolar Junction Transistor in different regions of operation.

Level 1:Carry out the experiment to understand the importance of active, cut off and saturation regions.

Level 2: Carry out the experiment to design and analyze the operation of transistor as switch.

Experiment No. 8: Study of basic Digital Logic Gates using Integrated Chips IC's: NOT, AND, OR, XOR, NAND and NOR Gates

Level 1:Carry out the experiment to study and verify the truth table of logic gates using Digital ICs.

Level 2:Implementation of operation of a basic Boolean expression using basic gates.

Experiment No. 9: Study of Computer Organization: Identification of Components on Motherboard: CPU: Processor Chips (Processor Socket), PCI, Parallel Ports, Universal Serial Bus: USB, I/O Connectors, RAM Slots.

Level 1:Carry out the experiment to familiarize a computer system layout and mark the positions of SMPS, Motherboard, FDD, HDD, CD / DVD drive and add on cards.

Level 2:Study of a Desktop PC and its assembling.

Targeted Application & Tools that can be used:

Student will be able to find career opportunities in various domains such as Analog Electronics, Digital Electronics, Microprocessors, VLSI Design, Telecommunication, Computers and Wireless Communication. The students will be able to join a profession which involves basics to high level of electronic circuit design.

Professionally Used Software: MultiSim/ PSpice

Besides these software tools hardware equipment such as Multimeters, Function Generators, Power Supplies, Oscilloscopes etc., can be used to perform component/circuit testing and analysis.

Topics relevant to "SKILL DEVELOPMENT": Electrical & Electronic component and laws, Fundamentals of Digital Electronics, Communication Systems, Microprocessors and Computer Organization for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: PHY1002	Course Title: Optoelectronics and Device Physics Type of Course: 1] School Core & Laboratory integrated			L-T-P-C	2-0-2-3
Version No.	1.0				
Course Pre-requisites	NIL				
Anti-requisites	NIL				
Course Description	<p>The purpose of this course is to enable the students to understand the fundamentals, working and applications of optoelectronic devices and to develop the basic abilities to appreciate the applications of advanced microscopy and quantum computers. The course develops the critical thinking, experimental and analytical skills. The associated laboratory provides an opportunity to validate the concepts taught and enhances the ability to use the concepts for technological applications. The laboratory tasks aim to develop following skills: An attitude of enquiry, confidence and ability to tackle new problems, ability to interpret events and results, observe and measure physical phenomena, select suitable equipment, instrument and materials, locate faults in systems.</p>				
Course Out Comes	<p>On successful completion of the course the students shall be able to:</p> <p>CO1: Describe the concepts of semiconductors, magnetic materials and superconductors.</p> <p>CO2: Apply the concept of materials in the working of optoelectronic and magnetic devices.</p> <p>CO3: Discuss the quantum concepts used in advanced microscopy and quantum computers.</p> <p>CO4: Explain the applications of lasers and optical fibers in various technological fields.</p> <p>CO5: Interpret the results of various experiments to verify the concepts used in optoelectronics and advanced devices. [Lab oriented].</p>				
Course Objective	<p>The objective of the course is to familiarize the learners with the concepts of “Optoelectronics and device physics” and attain Skill Development through Experiential Learning techniques</p>				
Course Content:					
Module 1	Fundamentals of Materials.	Assignment	Plotting of magnetization (M) v/s Magnetic field (H) for diamagnetic, paramagnetic and ferromagnetic materials using excel/ origin software.	No. of Classes: 07	
	Topics: Concept of energy bands, charge carriers, carrier concentration, concept of				

	Fermi level, Hall effect, Magnetic materials, Superconductors:			
Module 2	Advanced Devices and applications	Assignment	Data collection on efficiency of solar cells.	No. of Classes: 8
	Topics: p-n junctions, Zener diode, transistor characteristics, Optoelectronic devices:, Solar cells, I-V characteristics, and LEDs			
Module 3	Quantum concepts and Applications	Term paper	Seminar on quantum computers.	No. of classes: 8
	Topics: Planck's quantum theory, applications of Quantum theory: de-Broglie hypothesis, matter waves, properties. de-Broglie wavelength associated with an electron. Heisenberg's uncertainty principle. Schrodinger time independent wave equation. Particle in a box			
Module 4	Lasers and Optical fibers	Term paper	Case study on medical applications of Lasers.	No. of classes :07
	Topics: Interactions of radiations with matter, Characteristics of laser, conditions and requisites of laser, Modern day applications of laser: LIDAR, LASIK, Cutting, Welding and Drilling. Principle of optical fibers, Numerical aperture and acceptance angle (Qualitative), Attenuation, Applications: Point to point communication with block diagram, application of optical fibers in endoscopy.			
	List of Laboratory Tasks: Experiment No. 1: Experimental errors and uncertainty using excel Level 1: Calculation of accuracy and precision of a given data Level 2: propagation of errors in addition, subtraction, multiplication and division. Experiment NO 2: To determine the wavelength of semiconductor diode Laser and to estimate the particle size of lycopodium powder using diffraction. Level 1: Determination of Wavelength of Laser Level 2: Finding the particle size of lycopodium powder. Experiment No. 3: To determine the proportionality of Hall Voltage, magnetic flux density and the polarity of Charge carrier. Level 1: To determine the proportionality of Hall Voltage and magnetic flux density Level 2: To determine the polarity of Charge carrier. Experiment No. 4: To study the I-V characteristics of a given zener diode in forward and reverse bias conditions. Level 1: To study I –V characteristics of the given Zener diode in reverse bias and to determine break down voltage. Level 2: To study I –V characteristics of the given Zener diode in forward bias and to determine knee voltage and forward resistance. Experiment No. 5: To study input and output characteristics of a given Transistor. Level 1: To determine the input resistance of a given transistor.			

<p>Level 2: To determine current transfer characteristics and transistor parameters of a given transistor.</p> <p>Experiment No. 6: Determination of Fermi energy and Fermi temperature of a given metal and bimetallic wire.</p> <p>Level 1: Determination of Fermi energy and Fermi temperature of given metal wire.</p> <p>Level 2: Determination of Fermi energy and Fermi temperature of given bimetallic wire.</p> <p>Experiment No. 7: To study the current vs voltage characteristics of CdS photo-resistor at constant irradiance and To measure the photo-current as a function of the irradiance at constant voltage.</p> <p>Level 1 To study the current vs voltage characteristics of CdS photo-resistor at constant irradiance.</p> <p>Level 2: To measure the photo-current as a function of the irradiance at constant voltage.</p> <p>Experiment No. 8: To study the I-V characteristics and I-R characteristics of a solar cell as a function of the irradiance.</p> <p>Level 1: To study the I-V characteristics</p> <p>Level 2: I-R characteristics of a solar cell as a function of the irradiance.</p> <p>Experiment No. 9: Calculate the numerical aperture and study the losses that occur in optical fiber cable..</p> <p>Level 1: Calculate the numerical aperture.</p> <p>Level 2: study the losses that occur in optical fiber cable.</p> <p>Experiment No. 10: To determine the magnetic susceptibility of a given diamagnetic and paramagnetic substances using Quincke's method.</p> <p>Level 1: To determine the magnetic susceptibility of a given diamagnetic substance.</p> <p>Level 2: To determine the magnetic susceptibility of a given paramagnetic substance.</p> <p>Experiment No. 11: Plotting I-V characteristics in forward and reverse bias for LEDs and Determination of knee voltage.</p> <p>Level 1: Plotting I-V characteristics in forward and reverse bias for LEDs</p> <p>Level 2: Determination of knee voltage.</p> <p>Experiment No. 12: Determination of Stefan's constant and verification of Stefan-Boltzmann Law.</p> <p>Level 1: Determination of Stefan's constant</p> <p>Level 2: Verification of Stefan-Boltzmann Law.</p>
<p>Targeted Application & Tools that can be used:</p> <p>Areas of application are optoelectronics industry, Solar panel technologies, quantum computing software, electronic devices using transistors and diodes, memory devices, endoscopy, SQUIDS in MRI, Advanced material characterizations using SEM and STM.</p> <p>Origin, excel and Mat lab soft wares for programming and data analysis.</p>
<p>Project work/Assignment: Mention the Type of Project /Assignment proposed for this course</p>

	<p>Assessment Type Midterm exam Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screen shot accessing digital resource.) Quiz End Term Exam Self-Learning</p> <p>1. Prepare a comprehensive report on non-conventional energy resources in Karnataka and their pros and cons. 2. Write a report on importance of quantum entanglement in supercomputers.</p>
	<p>Text Book Engineering Physics by Avadhanalu, Revised edition, S. Chand Publications, 2018.</p>
	<p>References:</p> <ol style="list-style-type: none"> 1. Elementary Solid state Physics: Principles and Applications by M.A. Omar, 1st Edition, Pearson Publications, 2002. 2. Course Content :				
Module 1	Basic Electrical and Electronic Components	Assignment / Quiz	Identification of Practical electronic and electrical components / Memory Recall based Quizzes	10 Sessions
<p>Topics:</p> <p>ELECTRICAL CIRCUITS AND LAWS: DC Circuits: Classification of Electrical Elements, Ohm's law, Series and Parallel Circuits, Kirchhoff's Voltage and Current laws, Power and Energy, Transformers and their types.</p> <p>ELECTRONIC MATERIALS AND COMPONENTS: Conductors, Insulators, Semi-Conductor Material, P-N Junction diode, Characteristics and Parameters, Ideal Diode approximations, DC load line.</p>				
Module 2	Applications of Diodes and Introduction to BJT	Assignment / Quiz	Simulation Task/ Memory Recall based Quizzes	12 Sessions

<p>Topics:</p> <p>RECTIFIERS: Half-wave rectifier, Two-diode Full-wave rectifier, Bridge rectifier, Capacitor filter circuit (only qualitative approach).</p> <p>ZENER DIODE: Zener diode, Zener Characteristics, Zener diode as a voltage regulator.</p> <p>BIPOLAR JUNCTION TRANSISTORS: BJT Construction and Operation, BJT Voltages and Currents, Common Base, Common Emitter Configuration and Characteristics, Current amplification Factor alpha and beta, DC Load line w.r.t. fixed bias circuit (Q-Point), AC Analysis.</p>				
Module 3	Digital Electronics and Communication System	Assignment / Quiz	Simulation Task / Memory Recall based Quizzes	13 Sessions
<p>Topics:</p> <p>NUMBER SYSTEMS: Decimal Number System, Binary Number System, Hexadecimal Number System, Conversions: Binary to and from Hexadecimal; Hexadecimal to and from Decimal; 1's and 2's Complement of Binary Numbers, Binary Addition.</p> <p>BOOLEAN ALGEBRA: Boolean Laws and Theorems, De Morgan's theorem. Digital Circuits: Logic gates, NOT Gate, AND Gate, OR Gate, XOR Gate, X-NOR Gate, NAND Gate, NOR Gate.</p> <p>COMMUNICATION SYSTEM: Block diagram of communication system, Modulation: Definition of Modulation, Need of Modulation, Types of Modulation: Amplitude Modulation and Frequency Modulation (Waveforms only).</p>				
Module 4	Microprocessors and Computer Organization	Assignment / Quiz	Memory recall based Quizzes	10 Sessions
<p>Topics:</p> <p>INTEL 8085 MICROPROCESSOR: Basic Architecture and features of 8085 Microprocessor.</p> <p>COMPUTER ORGANISATION: Basic structure of Computer Organisation describing the various Computer types, Functional Units, Basic Operational concepts, Bus Structures, Memory System: RAM and ROM.</p>				
<p>List of Laboratory Tasks:</p> <p>Experiment No. 1: Study of Resistors, Measuring instruments and DC Power Supply.</p> <p>Level 1: Identification of resistor values from color bands and verification with Multimeter.</p> <p>Level 2: Connecting a resistive circuit to a DC Power Supply and observing the input and output values using Voltmeters, Ammeters and hence calculate resistance values.</p> <p>Experiment No. 2: Study of Reactive components, Multimeter, CRO and Function Generator.</p> <p>Level 1: Identification of various types of capacitive and inductive components and verification with Multimeter.</p> <p>Level 2: Connecting a reactive circuit to a function generator and observing the input and output waveform on CRO and calculation of Reactance and Impedance.</p> <p>Experiment No. 3: Study of Ohm's Law.</p> <p>Level 1: Rig up the circuit and verify Ohm's Law.</p> <p>Level 2: Connect a 100Ω Resistor to a Voltage source of 0-5V. Plot a V- I graph by tabulating the Voltage Vs Current Values accordingly. Repeat the experiment for $1K\Omega$ resistor and compare the results.</p>				

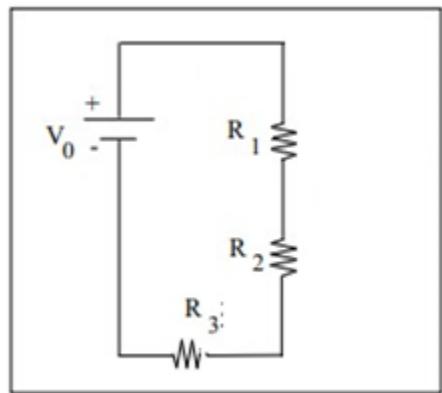

Experiment No. 4: Study of Series and Parallel Resistor Connections.

Level 1: Carry out the equivalent resistance of given four resistors 100Ω each connected in series and parallel combination using breadboard.

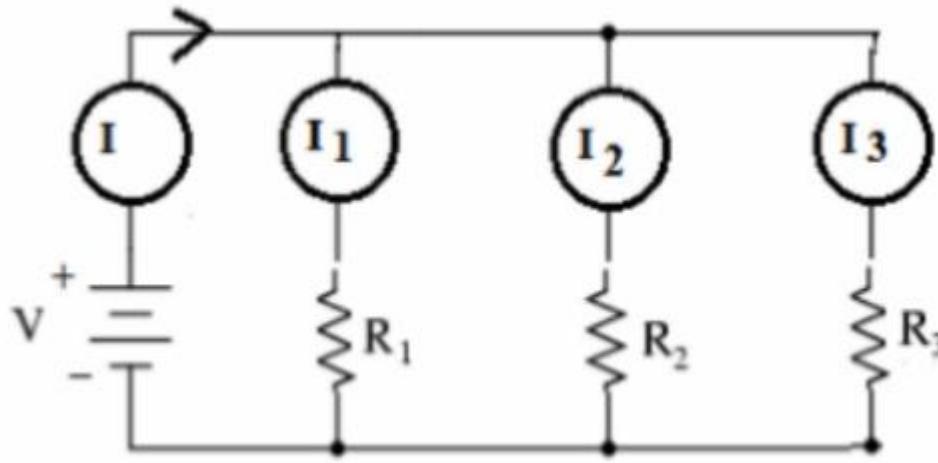

Level 2: Rig up a Current Divider Circuit and a Voltage Divider Circuit and verify the results.

Experiment No. 5: Study of Kirchhoff's Voltage Law and Kirchhoff's Current Law.

Level 1: Verify KVLand KCL with circuit(a) and circuit(b) with #values.

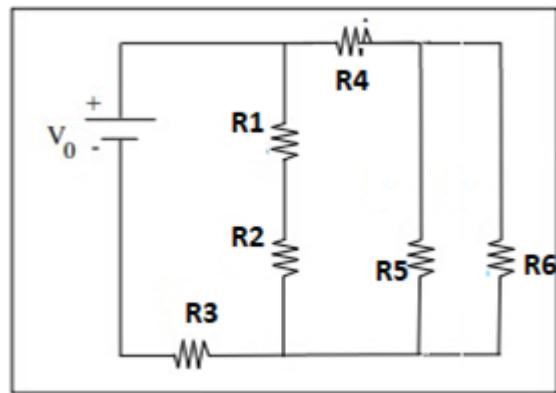

(a)

(b)

Level 2: Verify KCL with the help of given circuit having # values and carry out the equivalent resistance of the circuit by experimental and analytical methods.

Experiment No. 6: Study of PN-Junction Diode Characteristics in Forward and Reverse Bias Conditions.

Level 1: Carry out the experiment to find cut-in voltage on forward characteristics for Silicon P-N Junction diode.

Level 2: Carry out experiment to plot VI Characteristics of Silicon P-N Junction Diode in both forward and reverse biased conditions for Si P-N Junction diode.

Experiment No. 7: Study of Bipolar Junction Transistor in different regions of operation.

Level 1: Carry out the experiment to understand the importance of active, cut off and saturation regions.

Level 2: Carry out the experiment to design and analyze the operation of transistor as switch.

Experiment No. 8: Study of basic Digital Logic Gates using Integrated Chips IC's: NOT, AND, OR, XOR, NAND and NOR Gates

Level 1: Carry out the experiment to study and verify the truth table of logic gates using Digital ICs.

Level 2: Implementation of operation of a basic Boolean expression using basic gates.

Experiment No. 9: Study of Computer Organization: Identification of Components on Motherboard:
CPU: Processor Chips (Processor Socket), PCI, Parallel Ports, Universal Serial Bus: USB, I/O Connectors, RAM Slots.

Level 1: Carry out the experiment to familiarize a computer system layout and mark the positions of SMPS, Motherboard, FDD, HDD, CD / DVD drive and add on cards.

Level 2: Study of a Desktop PC and its assembling.

Targeted Application & Tools that can be used:

Student will be able to find career opportunities in various domains such as Analog Electronics, Digital Electronics, Microprocessors, VLSI Design, Telecommunication, Computers and Wireless Communication. The students will be able to join a profession which involves basics to high level of electronic circuit design.

Professionally Used Software: MultiSim/ PSpice

Besides these software tools hardware equipment such as Multimeters, Function Generators, Power Supplies, Oscilloscopes etc., can be used to perform component/circuit testing and analysis.

Topics relevant to "SKILL DEVELOPMENT": Electrical & Electronic component and laws, Fundamentals of Digital Electronics, Communication Systems, Microprocessors and Computer Organization for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: ENG1002	Course Title: Technical English Type of Course:1] School Core 2] Laboratory integrated	L-T-P-C	1-0-2-2
Version No.	V. 3		
Course Pre-requisites	Intermediate Level English		

Course Anti-requisites	NIL			
Course Description	Technical English course is designed to equip students with the language skills necessary for effective communication in technical and scientific contexts. The course focuses on the specialized vocabulary, writing styles, and communication techniques used in various technical fields, including engineering and information technology.			
Course Objectives	The objective of this course is to develop the learners' EMPLOYABILITY SKILLS by using EXPERIENTIAL LEARNING and PARTICIPATIVE LEARNING TECHNIQUES .			
Course Outcomes	On successful completion of the course, the students shall be able to: Develop proficiency in using technical vocabulary and terminology. Apply language skills for better speaking skills in technical fields. Write technical descriptions Demonstrate writing skills in writing technical documents such as reports, manuals, and articles.			
Course Content:				
Module 1	Fundamentals of Technical Communication	Worksheets & Quiz	Vocabulary building	9 Classes
Introduction to Technical English Differences between Technical English and General English Technical Writing Basics Technical Vocabulary				
Module 2	Technical Presentation	Presentations	Speaking Skills	12 Classes
Introduction Planning the Presentation Creating the Presentation Giving the Presentation				
Module 3	Technical Description	Assignment	Group Presentation	12 Classes
Product Description Process Description User Manuals Transcoding: Diagrams, charts and images				
Module 4	Technical Writing	Assignment	Writing Skills	12 Clas

				ses
Email Writing Persuasive and Descriptive Language Professional Email Etiquette Writing clear and concise technical emails Communicating technical information effectively Technical Report Writing Types of technical reports (Lab reports, research reports, etc.) Components of technical reports Writing an abstract and executive summary Structure and content organization Transcoding: diagrams, charts and images				
List of Laboratory Tasks: Module-1 Level 1: Worksheets Level 2: Worksheets Module 2 Level 1: Preparing Presentation Level 2: Giving Presentation (Individual) Module-3 Level 1: Product Description & User Manual Level 2: Process Description & Transcoding Module 4 Level 1: Email Writing Level 2: Report Writing				
Targeted Applications & Tools that can be used: Flipgrid Quizzes Youtube Videos Podcast				
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course Bring out the essence of technical communication with reference to the conventions of technical communication, with examples Prepare a technical presentation on the importance of Technical Communication and its relevance in a technical field, with real-life examples.				
The following individual, as well as group Assignments, will be given to the students. Presentation Describing a product/process Individual Reports

Topics Relevant to the Development of Employability Skills:
Speaking Skills, Writing Skills, Critical Thinking and Critical Analysis, and Group Communication.

Course Code: CSE1004	Course Title: Problem Solving Using C Type of Course: School Core Lab Integrated.	L-T-P-C	1	0	4	3
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	The course is designed to provide complete knowledge of C language. Students will be able to develop logics which will help them to create programs and applications in C. Also by learning the basic programming constructs they can easily switch over to any other language in future.					
Course Object	The objective of the course is to familiarize the learners with the concepts of Problem Solving Using C and attain Employability through Problem Solving Methodologies.					

Course Outcomes	On successful completion of this course the students shall be able to: Write algorithms and to draw flowcharts for solving problems Demonstrate knowledge and develop simple applications in C programming constructs Develop and implement applications using arrays and strings Decompose a problem into functions and develop modular reusable code Solve applications in C using structures and Union Design applications using Sequential and Random Access File Processing.			
Course Content:				
Module 1	Introduction to C Language	Quiz	Problem Solving	9 Hrs.
Topics: Introduction to Programming – Algorithms – Pseudo Code - Flow Chart – Compilation – Execution – Preprocessor Directives (#define, #include, #undef) - Overview of C – Constants, Variables and Data types – Operators and Expressions – Managing Input and Output Operations – Decision Making and Branching - Decision Making and Looping.				
Module 2	Introduction to Arrays and Strings	Quiz	Problem Solving	9 Hrs.
Topics: Arrays: Introduction – One Dimensional Array – Initialization of One Dimensional Arrays – Example Programs – Sorting (Bubble Sort, Selection Sort) – Searching (Linear Search) - Two Dimensional Arrays – Initialization of Two Dimensional Arrays. Example Programs – Matrix operations. Strings: Introduction – Declaring and Initializing String Variables – Reading Strings from Terminal – Writing String to Screen – String Handling Functions.				
Module 3	Functions and Pointers	Quiz	Problem Solving	9 Hrs.
Topics: Functions: Introduction – Need for User-defined functions – Elements of User-Defined Functions: declaration, definition and function call–Categories of Functions – Recursion. Pointers: Introduction – Declaring Pointer Variables – Initialization of Variables – Pointer Operators – Pointer Arithmetic – Arrays and Pointers – Parameter Passing: Pass by Value, Pass by Reference.				
Module 4	Structures and Union	Quiz	Problem Solving	9 Hrs.
Topics: Structures: Introduction – Defining a Structure – Declaring Structure Variable – Accessing Structure Members – Array of Structures – Arrays within Structures – Union: Introduction – Defining and Declaring Union – Difference Between Union and Structure.				
Module 5	File handling	Case Study	Problem Solving	9 Hrs.
Topics: Files: Defining and Opening a File – Closing a File – Input / Output Operations on File – Random Access Files				

List of Practical Tasks Lab Sheet 1 (Module I)

Programs using IO Statements, Conditional Statements and Looping Statements

Lab Sheet 2 (Module II)

Programs using Arrays and Strings

Lab Sheet 3 (Module III)

Programs using Functions and Pointers

Lab Sheet 4 (Module IV)

Programs using Structures and Unions

Lab Sheet 5 (Module V)

Programs using Files

Course Code: CHE1018	Course Title: Environmental Science Type of Course: School Core- Theory and Lab	L- T- P- C	1	0	2	0
Version No.	2.0					
Course Pre- requisite s	NIL					
Anti- requisite s	NIL					
Course Description	<p>This course emphasizes the need to conserve biodiversity and adopt a more sustainable lifestyle by utilizing resources in a responsible way. Topics covered include basic principles of ecosystem functions; biodiversity and its conservation; human population growth; water resources, pollution; climate change; energy resources, and sustainability; Sustaining human societies, policies, and education.</p> <p>This course is designed to cater to Environment and Sustainability</p>					

Course Objective	The objective of the course is to familiarize the learners with the concepts of "Environmental Science" and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques.			
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <p>Appreciate the historical context of human interactions with the environment and the need for eco-balance.</p> <p>Describe basic knowledge about global climate change with particular reference to the Indian context.</p> <p>Understand biodiversity and its conservation</p> <p>Develop an understanding on types of pollution and ways to protect the environment</p> <p>Learn about various strategies on Global environmental management systems</p>			
Course Content:				
Module 1	Humans and the Environment	Assignment	Data Collection	01 class
<p>Topics: The man-environment interaction: Mastery of fire; Origin of agriculture; Emergence of city states; Great ancient civilizations and the environment.</p> <p>Self-learning topics: Humans as hunter-gatherers; Industrial revolution and its impact on the environment; Environmental Ethics and emergence of environmentalism.</p>				
Module 2	Natural Resources and Sustainable Development	Assignment		03 Classes
<p>Topics:</p> <p>Overview of natural resources: Definition of resource; Classification of natural resources- biotic and abiotic, renewable and non-renewable. Water resources: Types of water resources- fresh water and marine resources;</p> <p>Soil and mineral resources: Important minerals; Mineral exploitation Soil as a resource and its degradation.</p> <p>Energy resources: Sources of energy and their classification, renewable and non-renewable sources of energy; Advantages and disadvantages.</p> <p>Self- learning topics: Availability and use of water resources; Environmental impact of over-exploitation, issues and challenges.; Environmental problems due to extraction of minerals and use; Sustainable Development Goals (SDGs)- targets, indicators, and challenges for SDGs.</p>				
Module 3	Environmental Issues: Local, Regional and Global	Case study		02 Classes
<p>Topics:</p> <p>Environmental Pollution: Types of Pollution- air, noise, water, soil, municipal solid waste, hazardous waste; Trans- boundary air pollution; Acid rain; Smog.</p> <p>Land use and Land cover change: land degradation, deforestation, desertification, urbanization.</p> <p>Global change: Ozone layer depletion; Climate change</p> <p>Self -learning topics: Environmental issues and scales</p>				
Module 4	Conservation of Biodiversity and	Assignment		02 Classes

		Ecosystems			
<p>Topics:</p> <p>Biodiversity-Introduction, types, Species interactions, Extinct, endemic, endangered and rare species, Threats to biodiversity: Natural and anthropogenic activities.</p> <p>Self-learning topics: Mega-biodiversity, Hot-spots, Major conservation policies. Biodiversity loss: past and current trends, impact.</p>					
	Module 5	Environmental Pollution and Health	Case study		03 Classes
<p>Topics:</p> <p>Pollution, Definition, point and nonpoint sources of pollution, Air pollution- sources, major air pollutants, health impacts of air pollution.</p> <p>Water pollution- Pollution sources, adverse health impacts on human and aquatic life and mitigation, Water quality parameters and standards.</p> <p>Soil pollution and solid waste- Soil pollutants and their sources, solid and hazardous waste, Impact on human health.</p> <p>Self-learning topics: Noise pollution, Thermal and radioactive pollution.</p>					
	Module 6	Climate Change: Impacts, Adaptation and Mitigation	Assignment/case		02 Classes
<p>Topics:</p> <p>Understanding climate change: Natural variations in climate; Projections of global climate change with special reference to temperature, rainfall and extreme events; Importance of 1.5 °C and 2.0 °C limits to global warming; Impacts</p> <p>Vulnerability and adaptation to climate change: Observed impacts of climate change on ocean and land systems; Sea level rise, changes in marine and coastal ecosystems; Impacts on forests and natural ecosystems; Indigenous knowledge for adaptation to climate change.</p> <p>Self-learning topics: Mitigation of climate change: Synergies between adaptation and mitigation measures; National and international policy instruments for mitigation.</p>					
	Module 7	Environmental Management	Case study	Data analysis	02 Classes
<p>Topics:</p> <p>Environmental management system: ISO 14001; Environmental risk assessment Pollution control and management; Waste Management- Concept of 3R (Reduce, Recycle and Reuse) and sustainability.</p> <p>Self-learning topics: Environmental audit and impact assessment; Eco labeling /Eco mark scheme</p>					
	Module 8	Environmental Treaties and Legislation	Case study	Data analysis	01 Classes

Topics:

Major International Environmental Agreements: Convention on Biological Diversity (CBD), Major Indian Environmental Legislations: Environmental Protection Act, Forest Conservation Act, Public awareness.

Self-learning topics: Paris Agreement, Conference of the Parties (COP), India's status as a party to major conventions: Air (Prevention and Control of Pollution) Act, Water (Prevention and control of Pollution) Act, Wildlife Protection Act.

List of laboratory tasks : Any eight experiments will be conducted

Determination of total alkalinity of a water sample (knowledge)

Estimation of water hardness by EDTA method and its removal (by zeolite/ ion exchange method) (Comprehensive)

Estimation of copper from industrial effluents by colorimetric method (Comprehensive)

Estimation of iron from industrial effluents by titrimetric method/potentiometric method (Comprehensive)

Estimation of nickel from industrial effluents by titrimetric method (Comprehensive)

Estimation of chloride in drinking water by titrimetric method (Comprehensive)

Estimation of fluoride in ground water by colorimetric method (Comprehensive)

Determination of calcium in aqueous solution (Comprehensive)

Determination of Total Dissolved Salts, conductivity and pH of a water samples (Knowledge)

Determination of Chemical oxygen demand in the industrial effluent. (Comprehensive)

Biological oxygen demand of waste water sample (Comprehensive)

Determination of dissolved oxygen of an industrial effluent (Comprehensive)

Quality monitoring analysis of a soil sample (knowledge)

Flame photometric estimation of Sodium and potassium (Application)

Gas Chromatographic analysis of volatile organic compounds (Application)

Targeted Application & Tools that can be used:

Application areas are Energy, Environment and sustainability

Tools: Statistical analysis of environmental pollutants using excel, origin etc.

Project work/Assignment:

Assessment Type

Midterm exam

Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screenshot accessing the digital resource.)

Lab evaluation/Assignment

End Term Exam

Self-learning

Assignment 1: Write a Statement of Environment report of your town/city/state/country

Assignment 2: Individual students will carry out the analyses of polluted solid, liquid, and gaseous samples and propose suitable mitigation measures. A detailed and in-depth report needs to be submitted for each case. This may include preparation of reagents, sample preparation (extraction), chemical analysis carried out, instruments and tools used, data collected and processed, inferences made and conclusions arrived at. Necessary support is given in the form of lab manual and reference links to e-books.

Topics relevant to Skill Development:

Industrial revolution and its impact on the environment, Environmental impact of over-exploitation of water resources, pollution and ill effects, lab experiments for Skills development through Problem solving Techniques. This is attained through assessment component mentioned in course handout.

All topics in theory component are relevant to Environment and Sustainability.

Course Code: PPS 1001	Course Title: Introduction to Soft Skills Type of Course: Practical Only Course	L- T-P- C	0-0-2-1
Version No.	1.0		
Course Pre-requisites	Students are expected to understand Basic English. Students should have desire and enthusiasm to involve, participate and learn.		
Anti-requisites	NIL		
Course Description	This course is designed to enable students understand soft skills concepts and improve confidence, communication and professional skills to give the students a competitive advantage and increase chances of success in the professional world. The course will benefit learners in presenting themselves effectively through various activities and learning methodologies.		
Course Objective	The objective of the course is to familiarize the learners with the concepts of "Soft Skills" and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques.		
Course Out Comes	On successful completion of this course the students shall be able to: CO1: Recognize significance of soft skills CO2: Illustrate effective communication while introducing oneself and others CO3: List techniques of forming healthy habits CO4: Apply SMART technique to achieve goals and increase productivity		
Course Content:			
Module 1	INTRODUCTION TO SOFT SKILLS	Classroom activity	04 Hours
Topics: Setting Expectations, Ice Breaker, Significance of soft skills, Formal grooming, punctuality			
Module 2	EFFECTIVE COMMUNICATION	Individual Assessment	10 Hours
Topics: Different styles of communication, Difference between hearing and listening, Effective communication for success, Email etiquette, Self-introduction framework, Video introduction, email-writing, Resume Building- Digital, Video, Traditional.			
Module 3	HABIT FORMATION	Worksheets & Assignment	4 Hours

Topics: Professional and personal ethics for success, Identity based habits, Domino effect, Habit Loop, Unlearning, standing up for what is right						
Module 4	Goal setting & Time Management	Goal sheet		8 Hours		
A session where students will be introduced to Time management, setting SMART Goals, Introduction to OKR Techniques, Time Management Matrix, steps to managing time through outbound group activity, making a schedule, Daily Plan and calendars (To Do List), Monitoring/charting daily activity						
Targeted Application & Tools that can be used: LMS						
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course						
Individual Assessment LMS MCQ						
The topics related to Skill Development: Communication and professional grooming, Goal setting and presentation for skill development through participative learning techniques. This is attained through assessment component mentioned in course handout.						

Course Code: CSE1004	Course Title: Problem Solving Using C Type of Course: School Core Lab Integrated.	L- T- P- C	1	0	4	3
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	The course is designed to provide complete knowledge of C language. Students will be able to develop logics which will help them to create programs and applications in C. Also by learning the basic programming constructs they can easily switch over to any other language in future.					
Course Object	The objective of the course is to familiarize the learners with the concepts of Problem Solving Using C and attain Employability through Problem Solving Methodologies.					
Course Outcomes	On successful completion of this course the students shall be able to: Write algorithms and to draw flowcharts for solving problems Demonstrate knowledge and develop simple applications in C programming constructs Develop and implement applications using arrays and strings Decompose a problem into functions and develop modular reusable code Solve applications in C using structures and Union Design applications using Sequential and Random Access File					

	Processing.			
Course Content:				
Module 1	Introduction to C Language	Quiz	Problem Solving	9 Hrs.
<p>Topics:</p> <p>Introduction to Programming – Algorithms – Pseudo Code - Flow Chart – Compilation – Execution – Preprocessor Directives (#define, #include, #undef) - Overview of C – Constants, Variables and Data types – Operators and Expressions – Managing Input and Output Operations – Decision Making and Branching - Decision Making and Looping.</p>				
Module 2	Introduction to Arrays and Strings	Quiz	Problem Solving	9 Hrs.
<p>Topics:</p> <p>Arrays: Introduction – One Dimensional Array – Initialization of One Dimensional Arrays – Example Programs – Sorting (Bubble Sort, Selection Sort) – Searching (Linear Search) - Two Dimensional Arrays – Initialization of Two Dimensional Arrays. Example Programs – Matrix operations. Strings: Introduction – Declaring and Initializing String Variables – Reading Strings from Terminal – Writing String to Screen – String Handling Functions.</p>				
Module 3	Functions and Pointers	Quiz	Problem Solving	9 Hrs.
<p>Topics:</p> <p>Functions: Introduction – Need for User-defined functions – Elements of User-Defined Functions: declaration, definition and function call–Categories of Functions – Recursion. Pointers: Introduction – Declaring Pointer Variables – Initialization of Variables – Pointer Operators – Pointer Arithmetic – Arrays and Pointers – Parameter Passing: Pass by Value, Pass by Reference.</p>				
Module 4	Structures and Union	Quiz	Problem Solving	9 Hrs.
<p>Topics:</p> <p>Structures: Introduction – Defining a Structure – Declaring Structure Variable – Accessing Structure Members – Array of Structures – Arrays within Structures – Union: Introduction – Defining and Declaring Union – Difference Between Union and Structure.</p>				
Module 5	File handling	Case Study	Problem Solving	9 Hrs.
<p>Topics:</p> <p>Files: Defining and Opening a File – Closing a File – Input / Output Operations on File – Random Access Files</p>				

List of Practical Tasks Lab Sheet 1 (Module I)

CHE1018

Lab Sheet 2 (Module II)

Programs using Arrays and Strings

Lab Sheet 3 (Module III)

Programs using Functions and Pointers

Lab Sheet 4 (Module IV)

Programs using Structures and Unions

Lab Sheet 5 (Module V)

Programs using Files

Course Code: PPS 1011	Course Title: Introduction to Verbal Ability Type of Course: Theory Only Course	L- T- P- C	0	1	0	0
Version No.	1.0					
Course Pre-requisites	Students are expected to understand Basic English. Students should have desire and enthusiasm to involve, participate and learn.					
Anti-requisites	NIL					

Course Description	This course is designed to enable students understand the importance of Verbal Ability and improve confidence, communication and professional skills to give them a competitive advantage and increase chances of success in the professional world. The course will benefit learners in presenting themselves effectively through various worksheets and learning methodologies.		
Course Objective	The objective of the course is to familiarize the learners with the concepts of "Verbal Ability" and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques.		
Course Out Comes	On successful completion of this course the students shall be able to: CO1: Recognize significance of verbal ability CO2: Utilize the rules of communication CO3: Apply techniques of vocabulary building to showcase effective communication		
Course Content:			
Module 1	INTRODUCTION TO VERBAL ABILITY	Individual Assessment	01 Hour
Topics: Setting Expectations, Ice Breaker, Significance of verbal ability, pre-assessment			
Module 2	EFFECTIVE VERBAL COMMUNICATION	Practice Worksheets	06 Hours
Topics: Different rules of grammar and application, Subject-Verb Agreement, Tenses			
Module 3	VOCABULARY BUILDING	Practice Worksheets	04 Hours
Topics: Root words, Synonyms and antonyms, analogies, para-jumbles			
Module 4	READING COMPREHENSION	Individual Assessment	02 Hours
A session where students will be introduced to speed reading and comprehension, post-assessment			
Targeted Application & Tools that can be used: LMS			
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course			

Individual Assessment LMS MCQ	<p>The topics related to Skill Development: Communication, grammar rules, vocabulary building, effective presentation for skill development through participative learning techniques. This is attained through learning and practicing the rules of effective communication through worksheets as mentioned in the assessment component.</p>					
----------------------------------	---	--	--	--	--	--

Course Code: MAT1003	Course Title: Applied Statistics Type of Course: School Core		L T P C	1	0	2	2
Version No.	3.0						
Course Pre-requisites	None						
Anti-requisites	None						
Course Description	<p>The goal of this course is to provide a firm understanding of probability and statistics by means of a thorough treatment of descriptive statistics, probability and probability distributions keeping in mind the future courses having statistical, quantitative and probabilistic components. The course covers topics such as descriptive statistics, probability, rules for probability, random variables and probability distributions, standard discrete and continuous probability distributions.</p>						
Course Objective	<p>The objective of the course is to familiarize the learners with the concepts of "Applied Statistics" and attain Skill Development Through Problem Solving techniques.</p>						
Expected Outcome:	<p>At the end of this course, students will be in a position to apply the techniques of descriptive statistics effectively interpret the ideas of probability and conditional probability demonstrate the knowledge of probability distributions Compute statistical parameters, correlation and regression, probability and sampling distributions using R software.</p>						
Module 1	Descriptive Statistics	Assignment	Coding needed	10 classes			
Introduction to Statistics, Data and statistical thinking, review of basic statistical parameters, Covariance, Correlation, Types of Measures of Correlation - Karl Pearson's Correlation Coefficient, Spearman Rank Correlation, linear regression, Multi linear regression .							
Module 2	Probability			6 classes			
Introduction to Probability, Probability of an event, Addition Principle, Multiplication law, Conditional Probability, Total Probability and Baye's theorem with examples							
Module 3	Random		Coding	14 classes			

	Variables and Probability Distributions		needed	
Introduction to Random variables, Discrete Random Variables and Continuous Random Variables, Probability Distributions, Probability Mass Function and Probability Density Function, Various Probability distributions, Binomial, Negative Binomial (Self Study), Poisson, Normal and Exponential distributions				
Module 4	Sampling Theory		Coding needed	15 classes
Introduction to Sampling Theory, Population, Statistic, Parameter, Sampling Distribution, Standard Error. Testing of Hypothesis, Types of Errors, Critical Region, level of Significance. Difference between Parametric and Non-parametric Tests, Large Sample Tests: Z-Test for Single Mean and Difference of Means (Self Study), Small Sample Tests: Student's t-Test for Single Mean and Difference of Means, F-Test, Chi-Square Test.				
Targeted Application & Tools that can be used: The objective of the course is to familiarize students with the theoretical concepts of probability and statistics and to equip them with basic statistical tools to tackle engineering and real-life problems. Tools used: R Software / MS-Excel				
Text Book Ronald E Walpole, Raymond H Myers, Sharon L Myers, and Keying E Ye, Probability and Statistics for Engineers and Scientists, Pearson Education, 2016.

Topics relevant to SKILL DEVELOPMENT: The goal of this course is to provide a firm understanding of probability and statistics by means of a thorough treatment of descriptive statistics, probability and probability distributions keeping in mind the future courses having statistical, quantitative and probabilistic components. The course covers topics such as descriptive statistics, probability, rules for probability, random variables and probability distributions, standard discrete and continuous probability distributions for Skill Development through Problem Solving methodologies. This is attained through assessment component mentioned in course handout.				

Course Code: ECE2007	Course Title: Digital Design Type of Course: Theory & Integrated Laboratory	L-T-P-C	2	0	2	3
Version No.	2.0					
Course Pre-requisites	[1] Elements of Electronics/Electrical Engineering, 2] Basic concepts of number representation, Boolean Algebra					
Anti-requisites	NIL					
Course Description	<p>The purpose of this course is to enable the students to appreciate the fundamentals of digital logic circuits and Boolean algebra focusing on both combinational and sequential logic circuits. The course emphasizes on minimization techniques for making canonical and low-cost digital circuit implementations. This course deals with analysis and design of digital electronic circuits. The course also creates a foundation for future courses which includes Computer Architecture, Microprocessors, Microcontrollers, and Embedded Systems etc.</p> <p>The course enhances the Design, Implementation and Programming abilities through laboratory tasks. The associated laboratory provides an opportunity to verify the theoretical knowledge.</p>					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Digital Design and attain the SKILL DEVELOPMENT through EXPERIENTIAL LEARNING.					
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <p>Describe the concepts of number systems, Boolean algebra and logic gates.</p> <p>Apply minimization techniques to simplify Boolean expressions.</p> <p>Demonstrate the Combinational circuits for a given logic</p> <p>Demonstrate the Sequential and programmable logic circuits</p> <p>Implement various combinational and sequential logic circuits using gates.</p>					
Course Content:						
Module 1	Fundamentals of Number systems- Boolean algebra and digital logic	Application Assignment	Data Analysis task		06 classes	
Topics:	<p>Review of Number systems and logic gates, Number base conversions, Overview of Boolean functions and simplifications, two, three, four variable K-Maps- Don't care conditions- Both SOP and POS- Universal Gates (NAND & NOR) Implementations. Introduction to HDL.</p>					
Module 2	Boolean function simplification	Application Assignment	Data Analysis task		08 Classes	
Topics:	Introduction to Combinational circuits, Analysis, Design procedure, Binary Adder and Subtractor,					

<p>Magnitude comparator, Parity generator and checker, Multiplexers-Demultiplexers, Decoders, Encoders and Priority Encoders, HDL Models of combinational circuits.</p>				
Module 3	Combinational Logic circuits:	Application Assignment	Programming Task & Data Analysis task	08 Classes
<p>Topics:</p> <p>Introduction to sequential circuits, Storage elements: latches and flip flops, Characteristic tables and equations, excitation table, Analysis of clocked sequential circuits, Mealy & Moore Models of finite state machines - Registers & Counters. HDL Models of Sequential circuits.</p>				
<p>List of Laboratory Tasks:</p> <p>Experiment NO 1: Verify the Logic Gates truth table</p> <p>Level 1: By using Digital Logic Trainer kit</p> <p>Level 2: By using Analog devices like RPS, Volt meter, Resistors and ICs</p> <p>Experiment No. 2: Verify the Boolean Function and Rules</p> <p>Level 1: By using Digital Logic Trainer kit</p> <p>Level 2: By using Analog devices like RPS, Volt meter, Resistors and ICs</p> <p>Experiment No. 3: Design and Implementations of HA/FA</p> <p>Level 1: By using basic logic gates and Trainer Kit</p> <p>Level 2: By using Universal logic gates and Trainer Kit</p> <p>Experiment No. 4: Design and Implementations of HS/FS</p> <p>Level 1: By using basic logic gates and Trainer Kit</p> <p>Level 2: By using Universal logic gates and Trainer Kit</p> <p>Experiment No. 5: Design and Implementations of combinational logic circuit for specifications</p> <p>Level 1: Specifications given in the form of Truth table</p> <p>Level 2: Specification should be extracted from the given scenario</p> <p>Experiment No. 6: Study of Flip flops</p> <p>Experiment No. 7: Design and Implementations of sequential logic circuit for specifications</p> <p>Level 1: Specifications given in the form of Truth table</p> <p>Level 2: Specification should be extracted from the given scenario</p> <p>Experiment No.8: HDL coding for basic combinational logic circuits</p> <p>Level 1: Gate level Modeling</p> <p>Level 2: Behavioral Modeling</p> <p>Experiment No.9: HDL coding for basic sequential logic circuit</p> <p>Level 1: Gate level Modeling</p> <p>Level 2: Behavioral Modeling</p>				
<p>Targeted Application & Tools that can be used:</p> <p>Digital electronics is the foundation of all modern electronic devices such as cellular phones, MP3 players, laptop computers, digital cameras, high definition televisions, Home Automation,</p>

<p>Topics relevant to "SKILL DEVELOPMENT": Adders, Multiplexers, Decoders / Encoders; Flip-Flops, Counters and Registers for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.</p>

Course Code: CIV1008	Course Title: Basic Engineering Sciences Type of Course: Theory Only	L-T-P-C	2	0	0	2
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	<p>This basic course on engineering science is designed to introduce students to the fields of civil, mechanical and petroleum engineering. Student will be exposed to various fields in civil engineering and different manufacturing techniques in addition to machinery for power production and consumption. Additionally, students will be getting an overview of various sectors of oil & gas industries. This course acquaints students to basics of Industry 4.0 and Construction 4.0. The course aims to enable students to appreciate the multidisciplinary nature of engineering design and operations in the current era with mechanization and digitization transforming every aspect of engineering.</p>					
Course Objective	<p>The objective of the course is skill development of student by using Participative Learning techniques.</p>					
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <ol style="list-style-type: none"> 1] Recognize the significance of various disciplines in Civil Engineering 2] Discuss the recent evolutions in Civil Engineering 3] Explain various energies, energy generating machineries and energy consumption machineries 4] Describe the fundamental concept and terminology associated with the Petroleum Industry 5] Distinguish between conventional and modern manufacturing techniques. 					
Course Content:						
Module 1	Introduction to various fields in Civil Engineering	Assignment	Case studies on different Civil Engineering Projects	6 Sessions		
Topics: Introduction to Civil Engineering: Definition, scope and branches of Civil Engineering, Role of Civil Engineer, Overview of Infrastructure.						
Module 2	Current Trends	Assignment	Article Review	6 Sessions		

	and Evolution in Civil Engineering			
Topics: Mechanization in Construction, Application of Digital Technologies in Planning, Design, execution, monitoring and maintenance of Construction. Overview of Smart Cities.				
Module 3	Power Production and Consumption Machinery	Assignment & Quiz	Data Collection	6 Sessions
Topics: Energy and its types, Engines and their applications, Pumps-Compressors and their applications.				
Module 4	Overview of Petroleum Engineering	Assignment & Quiz	Article Review	6 Sessions
Overview of the Petroleum Industry, Importance of Petroleum Engineering, lifecycle of Petroleum products, Classifications of E&P activities: Key difference between Offshore and Onshore, Onshore facilities, offshore platforms, Digitization of petroleum engineering				
Module 5	Industry 4.0	Assignment & Quiz	Data Collection	6 Sessions
Topics: Conventional manufacturing process: Metal forming, metal removal and metal joining process. Modern Manufacturing process: 3D Printing / Additive Manufacturing.				
Targeted Application & Tools that can be used: Application Areas include design and implementation of Smart City projects, Infrastructure maintenance, Power production, IC engines, Electric vehicles, onshore and offshore exploration and production activities				
Project work/Assignment:				
Assignment 1: Collect data and prepare report on various Mega Projects in Civil Engineering Assignment 2: Review Articles on current evolutions in Civil Engineering. Assignment 3: Collect data related to renewable energy generation (Wind, Solar) Assignment 4: Prepare an energy consumption chart for a compressor or pumps. Assignment 5: Prepare a report on role of 3D printing across various industries. Assignment 6: Prepare an assignment on geopolitical influence on oil and gas industries.

Course Code: MEC1006	Course Title: Engineering Graphics Type of Course: School Core & Theory Only	L- T-P- C	2-0-0-2
Version No.	1.2		

Course Pre-requisites	NIL			
Anti-requisites	NIL			
Course Description	<p>The course is designed with the objective of giving an overview of engineering graphics. It is introductory in nature and acquaints the students with the techniques used to create engineering drawings. The course emphasizes on projection of points, lines, planes and solids and isometric projections.</p>			
Course Objective	<p>The objective of the course is to familiarize the learners with the concepts of "Engineering Graphics" and attain SKILL DEVELOPMENT through Problem solving methodologies.</p>			
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <p>Demonstrate competency of Engineering Graphics as per BIS conventions and standards.</p> <p>Comprehend the theory of projection for drawing projections of Points, Lines and Planes under different conditions.</p> <p>Prepare multiview orthographic projections of Solids by visualizing them in different positions.</p> <p>Prepare pictorial drawings using the principles of isometric projections to visualize objects in three dimensions.</p>			
Course Content:				
Module 1	Introduction to Drawing	Assignment	Standard technical drawing	02 Sessions
<p>Topics:</p> <p>Introduction, drawing instruments and their uses, relevant BIS conventions and standards, Lettering, Line conventions, dimensioning, Selection of drawing sheet size and scale.</p> <p>[02 Hours: Comprehension Level]</p>				
Module 2	Orthographic projections of Points, Straight Lines and Plane Surfaces	Assignment	Projection methods Analysis	10 Sessions

Topics:

Introduction, Definitions – Elements of projection and methods of projection, Planes of projection, reference line and conventions adopted. First angle and third angle projections. Projection of Points in all 4 quadrants.

Projections of Straight Lines (located in first quadrant/first angle projection only): True and apparent lengths, true and apparent Inclinations to reference planes. (No application problems).

Projection of Plane surfaces (First angle projection): Regular plane surfaces – triangle, square, rectangle, pentagon, hexagon and circle – in different positions inclined to both the planes using change of position method only.

[10 Hours: Application Level]

Module 3	Orthographic Projections of Solids	Assignment	Multi-view drawing Analysis	10 Sessions
----------	------------------------------------	------------	-----------------------------	-------------

Topics:

Introduction, Projection of right regular prisms, pyramids, cone, hexahedron and tetrahedron in different positions (Problems resting on HP only and First angle projection).

[10 Hours: Application Level]

Module 4	Isometric Projections of Solids (Using isometric scale only)	Assignment	Spatial Visualization	8 Sessions
----------	--	------------	-----------------------	------------

Topics:

Introduction, Isometric scale, Isometric projections of right regular prisms, cylinders, pyramids, cones and their frustums, spheres and hemispheres, hexahedron (cube), and combination of 2 solids, conversion of orthographic view to isometric projection of simple objects.

[8 Hours: Application Level]

Topics relevant to “SKILL DEVELOPMENT”: Projection in first and third angle for SKILL DEVELOPMENT through Problem Solving methodologies. This is attained through the assessment component mentioned in the course handout.

Course Code: CSE1006	Course Title: Problem Solving using JAVA Type of Course: Lab Integrated	L- T- P- C	1	0	4		3
Version No.	2.0						
Course Pre-requisites	CSE1004 – Problem-Solving Using C						
Anti-requisites	Nil						
Course Description	This course introduces the core concepts of object-oriented programming. This course has theory and lab component which emphasizes understanding the implementation and application of object-oriented programming paradigm. It helps the student to build real-time secure applications by applying these concepts and also for effective problem-solving. The students interpret and understand the need for object-oriented programming to build applications.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Problem-Solving using JAVA and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques						
Course Out Comes	On successful completion of the course, the students shall be able to: C.O. 1: Describe the basic programming concepts. [Knowledge] C.O. 2: Apply the concept of classes, objects and methods to solve problems. [Application] C.O. 3: Apply the concept of arrays and strings. [Application] C.O. 4: Implement inheritance and polymorphism in building secure applications. [Application] C.O. 5: Apply the concepts of interface and error handling mechanism. [Application]						
Course Content:							
Module 1	Basic Concepts of Programming and Java	Assignment	Data Collection/Interpretation			12 Sessions	
Topics: Introduction to Principles of Programming: Process of Problem Solving, Java program structure, Download Eclipse IDE to run Java programs, Sample program, Data types, Identifiers, Variables, Constants in java, Operators, Assignments and Expression, Basic Input/ Output functions, Control Statements: Branching and Looping.							
Module 2	Classes, objects, methods and Constructors	Case studies / Case let	Case studies / Case let			12 Sessions	

<p>Topics: Classes, Objects and Methods: Introduction to object Oriented Principles, defining a class, adding data members and methods to the class, access specifiers, instantiating objects, reference variable, accessing class members and methods.</p> <p>Static Polymorphism: Method overloading, constructors, constructor overloading, this keyword, static keyword, Nested classes, Accessing members in nested classes.</p>				
Module 3	Arrays, String and String buffer	Quiz	Case studies / Case let	14 Sessions
<p>Topics: Arrays: Defining an Array, Initializing & Accessing Array, Multi-Dimensional Array, Array of objects. String: Creation & Operation. String builder class, methods in String Buffer.</p>				
Module 4	Inheritance and Polymorphism	Quiz	Case studies / Case let	14 Sessions
<p>Topics: Inheritance: Defining a subclass, Types of Inheritance, super keyword. Dynamic Polymorphism: Method overriding. Final keyword: with data members, with member functions and with class. Abstract keyword: with data members, with member functions and with class, Exception handling.</p>				
Module 5	Input & Output Operation in Java	Quiz	Case studies / Case let	14 Sessions
<p>Input/output Operation in Java(java.io Package), Streams and the new I/O Capabilities, Understanding Streams, working with File Objects, File I/O Basics, Reading and Writing to Files, Buffer and Buffer Management, Read/Write Operations with File Channel, Serializing Objects, Observer and Observable Interfaces.</p>				
<p>List of Laboratory Tasks:</p> <p>P1 - Problem Solving using Basic Concepts.</p> <p>P2 - Problem Solving using Basic Concepts and Command Line Arguments.</p> <p>P3 - Programming assignment with class, objects, methods and Constructors.</p> <p>P4 - Programming assignment with method overloading.</p> <p>P5 - Programming assignment with constructor overloading.</p> <p>P6 - Programming assignment with Static members and static methods.</p> <p>P7 - Programming assignment with Nested classes.</p> <p>P8 - Programming assignment using Arrays.</p> <p>P9 - Programming assignment using Strings.</p> <p>P10 - Programming assignment using String Builder.</p> <p>P11 - Programming assignment using Inheritance and super keyword.</p> <p>P12 - Programming assignment using Method overriding and Dynamic method invocation.</p> <p>P13 - Programming assignment using Final keywords.</p> <p>P14 - Programming assignment using Abstract keywords.</p> <p>P15 - Programming assignment using Interface.</p> <p>P16 - Programming assignment using Interface.</p> <p>P17 - Programming assignment CharacterStream Classes</p> <p>P18 - Programming assignment Read/Write Operations with File Channel</p>				
<p>Targeted Application & Tools that can be used : JDK /eclipse IDE/ net Beans IDE.</p>				
<p>Text Book</p> <p>T1 Herbert Schildt, "The Complete Reference Java 2", Tata McGraw Hill Education.</p>

Course Pre-requisites	ENG1002 Technical English					
Anti-requisites	NIL					
Course Description	The course emphasizes on technical communication at advanced level by exploring critical reading, technical presentation and review writing. The purpose of the course is to enable learners to review literature in any form or any technical article and deliver technical presentations. Extensive activities in practical sessions equip to express themselves in various forms of technical communications. Technical presentations and the module on career setting focus on learners' area of interests and enhance their English language writing skills to communicate effectively.					

Course Outcome	On successful completion of the course the students shall be able to: Develop a critical and informed response reflectively, analytically, discursively, and creatively to their reading. Communicate effectively, creatively, accurately and appropriately in their writing. Deliver technical presentations Design resume and create professional portfolio to find a suitable career			
Course Content: Theory				
Module 1	Critical Reasoning and Writing	Writing Essays	Critical Reading	4 Classes
Topics: A Catalog of Reading Strategies The Myth of Multitasking A Guide to Writing Essays Speculating about Causes or Effects Is Google Making Us Stupid (Self Study)				
Module 2	Technical Presentation	Presentation	Oral Skills	3 Classes
Topics: Planning the presentation Creating the presentation Giving the presentation				
Module 3	Writing Reviews	Prezi	Review Writing	4 Classes
Topics: Review Writing Short film reviews Advanced English Grammar (Self Study)				
Module 4	Starting your Career	Online Writing Lab	Writing Skills	4 Classes
Topics: Preparing a Resume Writing Effective Application Letter Creating a Professional Portfolio				
Course Content: Practical Sessions				
Module 1	Critical Reasoning and Writing			8 Classes
Reading and Analyzing Level 1 – Annotation Level 2 - Assumptions Writing Narrative Essays Level 1 – Draft 1 Level 2 – Draft 2				
Module 2	Technical Presentation			10 Classes

<p>Fishbowl In Fishbowl, students form concentric circles with a small group inside and a larger group outside. Students in the inner circle engage in an in-depth discussion, while students in the outer circle listen and critique content, logic, and group interaction.</p> <p>Level 1 – within group Level 2 – Among 2 group Technical Group Presentation</p>		
Module 3	Writing Reviews	Classes
<p>Practice Worksheets Level 1 – Eliminating the Passive Voice Level 2 – Simple, compound and complex sentences Writing Short Film Reviews</p>		
Module 4	Starting your Career	Classes
<p>Collaborative Project Job search and writing report Writing Resume</p>		
Module 1-4	Academic Journal	2 Classes
<p>Academic Journal Writing Level 1- Mid Term Level 2 – End Term</p>		
<p>Targeted Application & Tools that can be used: Writing reports, Review writing, Group Discussion, Dyadic interviews, Grammarly.com</p>		
<p>Project work/Assignment:</p>		
<p>Academic Journal – Assignment In Academic Journal (CIJ), students compile task and activities completed in each module and submit to the instructor at the middle and end of the semester.</p>

Course Code: ECE2010	Course Title: Innovative Projects using Arduino		L- T- P- C	-	-	-	1
Version No.	1.0						
Course Pre-requisites	NIL						
Anti-requisites	NIL						
Course Description	<p>This course is designed to provide an in-depth understanding of Arduino microcontrollers and their application in various real time projects involving sensors. Throughout the course, students will learn the fundamentals of Arduino programming and gain hands-on experience with a wide range of sensors. Students will explore how to connect and interface sensors with Arduino boards, read sensor data, and use it to control various output devices. This course is suitable for beginners who are interested in exploring the world of electronics and developing practical applications using Arduino and sensors.</p>						
Course Objective	<p>The objective of the course is Employability Skills of student by using PARTICIPATIVE LEARNING techniques.</p>						
Course Outcomes	<p>On successful completion of the course the students shall be able to Explain the main features of the Arduino prototype board Demonstrate the hardware interfacing of the peripherals to Arduino system. Understand the types of sensors and its functions Demonstrate the functioning of live projects carried out using Arduino system.</p>						
Course Content:							
Module 1	Basic concepts of Arduino	Hands-on	Interfacing Task and Analysis		4 Sessions		
Topics:	<p>Introduction to Arduino, Pin configuration and architecture, Device and platform features, Concept of digital and analog ports, Familiarizing with Arduino Interfacing Board, API's, Introduction to Embedded C and Arduino platform, Arduino Datatypes and variables, Arduino i/o Functions, Arduino Communications, Arduino IDE, Various Cloud Platforms.</p>						

Module 2	Sensory Devices	Hands-on	Interfacing Task and Analysis	4 Sessions
<p>Arduino Sensors: Humidity Sensor, Temperature Sensor, Water Detector / Sensor, PIR Sensor, Ultrasonic Sensor, Connecting Switches and actuators, sensor interface with Arduino.</p> <p>Introduction to 3D Printer: 3D Printer technology and its working Principles, Applications.</p> <p>Introduction to online Simulators: Working with Tinkercad Simulator.</p>				
Topics: Types of Arduino boards, sensors, 3D Printer				
Targeted Application & Tools that can be used:				
Application Area:				
<p>Home Automation, Environmental Monitoring, Agriculture and Farming, Industrial Automation, Internet of Things (IoT), Robotics, Wearable Devices, Security Systems, Education and Learning. These are just a few examples of the many application areas where Arduino and sensors can be applied. The flexibility and affordability of Arduino, combined with the wide range of sensors available, allow for endless possibilities in creating innovative projects.</p>				
Professionally Used Software: students can use open SOURCE Softwares Arduino IDE and Tincker CAD				
Project work/Assignment:				
<p>1. Projects: At the end of the course students will be completing the project work on solving many real time issues.</p> <p>2. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link .</p> <p>3. Presentation: There will be a presentation from interdisciplinary students group, where the students will be given a project on they have to demonstrate the working and discuss the applications for the same</p>				
<p>Textbook(s):</p> <p>Monk Simon “Programming Arduino: Getting Started with Sketches”, Mc Graw Hill Publications Second Edition</p>

Course Code: PPS1012	Course Title: Enhancing Personality through Soft Skills Type of Course: Practical Only Course	L- T - P- C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	<ul style="list-style-type: none">Students are expected to understand Basic English.Students should have the desire and enthusiasm to be involved, participate and learn.					
Anti-requisites	NIL					

Course Description	This course is designed to enable students to understand soft skills concepts and improve confidence, communication, and professional skills to give the students a competitive advantage and increase chances of success in the professional world. The course will benefit learners in presenting themselves effectively through various activities and learning methodologies.		
Course Objective	The objective of the course is to familiarize the learners with the concepts of “Enhancing Personality through Soft Skills” and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques.		
Course Out Comes	<p>On successful completion of this course, the students shall be able to:</p> <p>CO 1 Identify the stages of team formation (Remember)</p> <p>CO 2 Demonstrate effective presentation skills (Apply)</p> <p>CO3 Prepare professional social media profile (Apply)</p>		
Course Content:			
Module 1	Professional Brand Building	Brand Framework Activity	6 Hours
<p>Topics: Personal brand definition, Crafting a compelling LinkedIn profile, Networking strategies, Leveraging AI tools for developing content for brand visibility.</p> <p>Activity: Create a post and enhancing LinkedIn profile</p>			
Module 2	Art of Questioning	Role plays	4 Hours
<p>Topics: Framing Questions, 5W1H Technique, Open-ended and Close-ended questions, Funnel technique, Probing questions, Leading questions</p>			
Module 3	Presentation Skills	Practice and evaluation of individual/group presentation	12 Hours
<p>Topics: Content development, Delivery techniques, Audience Analysis, Timing and Pacing, handling questions and challenges.</p> <p>Activity: Individual presentations or team presentation</p>			

Module 4	Team Building	Team building activities	6 Hours
Topics: Importance of team, stages of Team Formation, Trust and collaboration.			
Activity: Team Building Activity			
Module 5	Recap / Revision /Feedback Session	Discussion, Quiz	2 Hours
Targeted Applications & Tools that can be used:			
<ol style="list-style-type: none"> 1. TED Talks 2. You Tube Links 3. Activities 			
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course			
<ol style="list-style-type: none"> 1) Presentation Evaluation 2) LinkedIn assessment

Course Code: MAT1002	Course Title: Transform Techniques, Partial Differential Equations and Their Applications Type of Course: School Core	L-T-P-C	3	0	0	3
Version No.	2.0					
Course Pre-requisites	MAT1001 - Linear Algebra and Calculus					
Anti-requisites	NIL					

Course Description	<p>This course aims to introduce various transform techniques such as Laplace transform, Fourier transform and Z transform in addition to expressing functions in terms of Fourier series. The course covers applications of Laplace transform to LCR circuits and solution of difference equations using z-transform. The course also deals with the analytical methods for solving partial differential equations and the classical applications of partial differential equations.</p>			
Course Objective	<p>The objective of the course is Skill Development of student by using Problem Solving Techniques.</p>			
Course Outcomes	<p>On successful completion of this course the students shall be able to: CO-1: Express functions in terms of uniformly convergent Fourier series. CO-2: Apply Laplace transform technique to solve differential equations. CO-3: Employ z-transform technique to solve difference equations. CO-4: Solve a variety of partial differential equations analytically.</p>			
Course Content:				
Module 1	Fourier Series			10 CLASSES
<p>Fourier series: Fourier series - Euler's formulae - Dirichlet's conditions - Change of Interval - half range series – RMS value – Parseval's identity – Computation of harmonics. Engineering Applications of Fourier series.</p>				
Module 2	Integral Transforms			15 Classes
<p>Laplace Transform: Definition and Laplace transforms of elementary functions. Properties of Laplace transform. Laplace transform of periodic function, unit-step function and impulse function and the related problems. Inverse Laplace transform of standard functions and problems, initial and final value theorems. Convolution theorem, solution of linear ordinary differential equations, LCR circuit problems. Fourier Transform: Integral transforms, infinite Fourier transforms, Fourier sine and cosine transforms, inverse Fourier transforms. Engineering Applications of Fourier transform.</p>				
Module 3	Z Transform and Difference Equations			8 Classes
<p>Definition of Z-transform, Z transforms of standard functions and the related problems, standard inverse Z transforms and problems, computation of inverse Z-transform by partial fraction and convolution methods, solution of difference equations using Z-transforms. Business and Engineering Applications of Z transform.</p>				
Module 4	Partial Differential Equations			12 Classes
<p>Partial Differential Equations: Formation of PDEs, solution of non-homogeneous PDEs by direct</p>				

integration, solution of homogeneous PDEs involving derivatives with respect to only one independent variable, method of separation of variables, solution of the Lagrange's PDE of the type $Pp + Qq = R$.

Applications of PDEs: Various possible solutions of the one dimensional wave and heat equations by the method of separation of variables, D'Alembert's solution of the wave equation, solution of related boundary value problems.

Targeted Applications & Tools that can be used:

Applications to electrical engineering, vibrational analysis, acoustics, optics, signal processing, image processing, quantum mechanics, econometrics and shell theory by means of Fourier Series and integral transforms.

Opens up new approaches in terms of Z-transform to solving one of the central problems of modern science involving difference equations.

Finding the solutions of boundary value problems involving PDEs with reference to wave, heat, and Laplace equations.

Assignment: Mention the Type of Project /Assignment proposed for this course

Two Assignments based on the applications of the concepts leading to a minimum of 5 engineering problems from a common pool of problems.

Course Code: CSE2001	Course Title: Data Structures and Algorithms Type of Course: Integrated	L- T-P- C	3-0-2-4
Version No.	1.0		
Course Pre-requisites	Problem Solving Using Java		
Anti-requisites	NIL		

Course Description	<p>This course introduces the fundamental concepts of data structures and to emphasize the importance of choosing an appropriate data structure and technique for program development. This course has theory and lab component which emphasizes on understanding the implementation and applications of data structures using Java programming language. With a good knowledge in the fundamental concepts of data structures and practical experience in implementing them, the student can be an effective designer, developer for new software applications.</p>			
Course Objective	<p>The objective of the course is to familiarize the learners with the concepts of Data Structures and Algorithms and attain Skill Development through Experiential Learning techniques.</p>			
Course Outcomes	<p>On successful completion of the course the students shall be able to: CO1: Implement program for given problems using fundamentals of data structures. [Application] CO2: Apply an appropriate linear data structure for a given scenarios. [Application] CO3: Apply an appropriate non-linear data structure for a given scenarios. [Application] CO4: Explain the performance analysis of given searching and sorting algorithms.</p>			
Course Content:				
Module 1	Introduction to Data Structure and Linear Data Structure – Stacks and Queues	Assignment	Program activity	18 Sessions
<p>Introduction – Introduction to Data Structures, Types and concept of Arrays. Stack - Concepts and representation, Stack operations, stack implementation using array and Applications of Stack. Queues - Representation of queue, Queue Operations, Queue implementation using array, Types of Queue and Applications of Queue.</p>				
Module 2	Linear Data Structure- Linked List	Assignment	Program activity	17 Sessions
<p>Topics: Linked List - Singly Linked List, Operation on linear list using singly linked storage structures, Circular List, Applications of Linked list. Recursion - Recursive Definition and Processes, Programming examples.</p>				
Module 3	Non-linear Data Structures - Trees and Graph	Assignment	Program activity	15 Sessions
<p>Topics: Trees - Introduction to Trees, Binary tree: Terminology and Properties, Use of Doubly Linked List, Binary tree traversals: Pre-Order traversal, In-Order traversal, Post - Order traversal.</p>				

Graph - Basic Concept of Graph Theory and its Properties, Representation of Graphs.				
Module 4	Searching & Sorting Performance Analysis	Assignment	Program activity	14sessions
Topic: Sorting & Searching - Sequential and Binary Search, Sorting – Selection and Insertion sort. Performance Analysis - Time and space analysis of algorithms – Average, best and worst case analysis.				
List of Laboratory Tasks:				
Lab sheet -1				
Level 1: Prompt the user, read input and print messages. Programs using class, methods and objects				
Level 2: Programming Exercises on fundamental Data structure - Arrays based on Scenario.				
Lab sheet -2				
Level 1: Programming Exercises on Stack and its operations				
Level 2: Programming Exercises on Stack and its operations with condition				
Lab sheet -3				
Level 1: Programming on Stack application infix to postfix Conversion				
Level 2: -				
Lab sheet -4				
Level 1: Programming Exercises on Queues and its operations with conditions				
Level 2: -				
Lab sheet -5				
Level 1: Programming Exercises on Linked list and its operations.				
Level 2: Programming Exercises on Linked list and its operations with various positions				
Lab sheet -6				
Level 1: -				
Level 2: Programming scenario based application using Linked List				
Lab sheet -7				
Level 1: Programming Exercises on factorial of a number				
Level 2: Programming the tower of Hanoi using recursion				
Lab sheet -8				
Level 1: -				
Level 2: Programming the tower of Hanoi using recursion				
Lab sheet -9				
Level 1: Programming Exercise on Doubly linked list and its operations				
Level 2: -				
Lab sheet -10				
Level 1: Program to Construct Binary Search Tree and Graph				
Level 2: Program to traverse the Binary Search Tree in three ways(in-order, pre-order and post-order) and implement BFS and DFS				
Lab sheet -11				
Level 1: Program to Implement the Linear Search & Binary Search				
Level 2: Program to Estimate the Time complexity of Linear Search				
Lab sheet -12				
Level 1: Program to Implement and Estimate the Time complexity of Insertion Sort				
Level 2: Program to Implement and Estimate the Time complexity of Insertion Sort				

<p>Lab sheet -13</p> <p>Level 1: Program to Implement and Estimate the Time complexity of Selection Sort</p> <p>Level 2: Program to Implement and Estimate the Time complexity of Selection Sort</p> <p>Targeted Application & Tools that can be used</p> <p>Use of PowerPoint software for lecture slides and use of Ubuntu for lab programs to execute. Tool is Codetantra tool.</p>						
<p>Project work/Assignment:</p> <p>Assignment: Students should complete the lab programs by end of each practical session and module wise assignments before the deadline.</p>						
<p>Text Book</p> <p>T1 Narasimha Karumanchi: "Data Structures and Algorithms Made Easy in Java", 5th Edition, CareerMonk Publications, 2017.</p>						
<p>References</p> <p>R1 Mark Allen Weiss: "Data Structures and Algorithm Analysis in Java", 4th Edition, Pearson Educational Limited, 2014.</p> <p>R2 Michael T. Goodrich, Roberto Tamassia, Michael H. Goldwasser: "Data Structures and Algorithms in Java", 6th Edition, John Wiley & Sons, Inc., ISBN: 978-1-118-77133-4, 2014.</p> <p>R3 Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest and Clifford Stein, 2017: "Introduction to Algorithms", 3rd Edition, PHI Learning Private Limited.</p>

<p>Topics relevant to "SKILL DEVELOPMENT": Linked list and its type, Tree traversal and hashing tables for Skill Development through Experiential Learning techniques. This is attained through the assessment component mentioned in the course handout.</p>						

Course Code: CSE3155	Course Title: Data Communications and Computer Networks Type of Course: Program Core Theory–	L-T- P-C 3-0- 2-4	3	0	2	4
----------------------------	--	----------------------------	---	---	---	---

	Laboratory integrated				
Version No.	1.0				
Course Pre-requisites	Digital Design				
Anti-requisites	NIL				
Course Description	<p>The objective of this course is to provide knowledge in data communications and computer networks, its organization and its implementation, and gain practical experience in the installation, monitoring, and troubleshooting of LAN systems..</p> <p>The associated laboratory is designed to implement and simulate various networks using Cisco packet tracer, NS2. All the lab exercises will focus on the fundamentals of creating multiple networks, topologies and analyzing the network traffics.</p>				
Course Objective	<p>The objective of the course is to familiarize the learners with the concepts of Data Communications and Computer Networks and attain Employability through Problem Solving Methodologies.</p>				
Course Out Comes	<p>On successful completion of the course, the students shall be able to:</p> <p>1] Illustrate the Basic Concepts Of Data Communication and Computer Networks.</p> <p>2] Analyze the functionalities of the Data Link Layer.</p> <p>3] Apply the Knowledge of IP Addressing and Routing Mechanisms in Computer Networks.</p> <p>4] Demonstrate the working principles of the Transport layer and Application Layer.</p>				
Course Content:					
Module 1	Introduction and Physical Layer- CO1	Assignment	Problem Solving	07 Classes	
<p>Introduction to Computer Networks and Data communications, Network Components – Topologies, Transmission Media –Reference Models -OSI Model – TCP/IP Suite.</p> <p>Physical Layer -Analog and Digital Signals – Digital and Analog Signals – Transmission - Multiplexing and Spread Spectrum.</p>					
Module 2	Reference Models and Data Link Layer – CO2	Assignment	Problem Solving	7 Classes	

<p>Data Link Layer - Error Detection and Correction – Parity, LRC, CRC, Hamming Code, Flow Control and Error Control, Stop and Wait, ARQ, Sliding Window, Multiple Access Protocols, CSMA/CD, CSMA/CA, IEEE 802.3, IEEE 802.11 Ethernet.</p>				
Module 3	Network Layer – CO 3	Assignment	Problem Solving	10 Classes
<p>Network Layer Services - Network Layer Services, Switching Techniques, IP Addressing methods- IPv4 IPv6 – Subnetting. Routing, - Distance Vector Routing – RIP-BGP-Link State Routing – OSPF-Multi cast Routing-MOSPF- DVMRP – Broad Cast Routing. EVPN-VXLAN, VPLS, ELAN.</p>				
Module 4	Transport and Application Layer -CO3	Assignment	Problem Solving	10 Classes
<p>Transport Layers - Connection management – Flow control – Retransmission, UDP, TCP, congestion control, – Congestion avoidance (DECBit, RED) The Application Layer: Domain Name System (DNS), Domain Name Space, SSH, FTP, Electronic Mail (SMTP, POP3, IMAP, MIME) – HTTP – – SNMP, Web Services, Virtual Networking.</p>				
<p>List of Laboratory Tasks:</p>				
<p>Lab sheet -1, M-1, 3 [2 Hours]</p>				
<p>Experiment No 1:</p>				
<p>Level 1: Study of basic network commands and network configuration commands.</p>				
<p>Lab sheet -2, M-1[2 Hours]</p>				
<p>Experiment No 1:</p>				
<p>Level 1: Identify and explore Network devices, models and cables. Introduction to Cisco packet tracer.</p>				
<p>Experiment No. 2:</p>				
<p>Level 2 – Create various network topologies using a cisco packet tracer.</p>				
<p>Lab sheet -3, M-2,3 [2 Hours]</p>				
<p>Experiment No. 1:</p>				
<p>Level 2 - Basic Configuration of switch/router using Cisco packet tracer.</p>				
<p>Experiment No. 2:</p>				
<p>Level 2 -Configure the privilege level password and user authentication in the switch/router.</p>				
<p>Lab sheet – 4, M-3 [2 Hours]</p>				
<p>Experiment No. 1:</p>				
<p>Level 2 - Configure the DHCP server and wireless router and check the connectivity</p>				
<p>Lab sheet – 5, M-3 [2 Hours]</p>				
<p>Experiment No. 1:</p>				
<p>Level 2 - Configure the static routing in the Cisco packet tracer.</p>				

Experiment No. 2:

Level 2 - Configure the dynamic routing protocol in the Cisco packet tracer.

Lab sheet – 6, M-4 [2 Hours]

Experiment No. 1: Configuration of DNS Server with Recursive & Integrative approach in Cisco packet tracer.

Lab sheet – 7, M-4 [2 Hours]

Experiment No. 1:

Configure the telnet protocol in the router using the Cisco packet tracer.

Lab sheet – 8, M-4[2 Hours]

Experiment No. 1:

Level1- Introduction to NS2 and basic TCL program.

Lab sheet – 9, M-4 [2 Hours]

Experiment No. 1:

Level 1: Simulate three node Point to point network using UDP in NS2.

Experiment No. 2:

Simulate transmission of Ping message using NS2.

Lab sheet – 10, M-4[2 Hours]

Experiment No. 1:

Simulate Ethernet LAN using N-node in NS2.

Experiment No. 2:

Simulate Ethernet LAN using N-node using multiple traffic in NS2

Lab sheet –11, M-3,4 [2 Hours]

Experiment No. 1:

Level 1- Introduction to Wire Shark.

Experiment No. 2:

Level 2- Demonstration of packet analysis using wire shark.

Lab sheet –12, M-1,2,3 [2 Hours]

Experiment No. 1:

Level 2- Demonstration of switch and router configuration using real devices

Targeted Application & Tools that can be used: Cisco Packet Tracer, Wireshark, and NS2.

Case Study/Assignment: Choose and analyze a network from any organization/Assignment proposed for this course in CO1-CO4

Problem Solving: Choose and appropriate devices and implement various network concepts.

Programming: Simulation of any network using NS2.

Course Code: CSE2009	Course Title: Computer Organization and Architecture	L-T- P- C	3-0-0-3
Version No.	2.0		
Course Pre-requisites	CSE 2015 Digital Design		

Anti-requisites	NIL			
Course Description	This course introduces the core principles of computer architecture and organization from basic to intermediate level. This theory based course emphasizes on understanding the interaction between computer hardware and software. It equips the students with the intuition behind assembly-level instruction set architectures. It helps the students to interpret the operational concepts of computer technology as well as performance enhancement.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Computer Organization and Architecture and attain Skill Development through Participative Learning techniques.			
Course Outcomes	On successful completion of the course the students shall be able to: 1] Describe the basic components of a computer, their interconnections, and instruction set architecture [Comprehension] 2] Apply appropriate techniques to carry out selected arithmetic operations 3] Explain the organization of memory and processor sub-system			
Course Content:				
Module 1	Basic Structure of computers	Assignment	Data Analysis task	12 Classes
<p>Topics:</p> <p>Computer Types, Functional Units, Basic Operational concepts, Bus Structures, Computer systems RISC & CISC, Performance – Processor Clock, Basic Performance Equation, Clock Rate, Performance Measurement. Arithmetic Operations on Signed numbers. Instructions and Instruction Sequencing, Instruction formats, Memory Instructions.</p>				
Module 2	Instruction Set Architecture and Memory Unit	Assignment	Analysis, Data Collection	12 Classes
<p>Topics:</p> <p>Instruction Set Architecture: Addressing Modes, Stacks and Subroutines.</p> <p>Memory System: Memory Location and Addresses, Memory Operations, Semiconductor RAM Memories, Internal Organization of Memory chips, Cache memory mapping Techniques.</p>				
Module 3	Arithmetic and Input/output Design	Case Study	Data analysis task	10 Classes
<p>Topics:</p> <p>Arithmetic: Carry lookahead Adder, Signed-Operand Multiplication, Integer Division, and Floating point operations.</p> <p>Input/output Design: Accessing I/O Devices, I/O communication, Interrupt Hardware, Direct Memory Access, Buses, Interface Circuits</p>				
Module 4	BPU and Pipelining	Assignment	Analysis, Data Collection	11 Classes

<p>Topics:</p> <p>Basic Processing Unit: Fundamental Concepts, Single Bus organization, Control sequence, Execution of a Complete Instruction, Multiple Bus Organization.</p> <p>Pipelining: Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, Hazards.</p>
<p>Targeted Application & Tools that can be used:</p> <p>Targeted employment sector is processor manufacturing and memory chip fabrication vendors like Intel, AMD, Motorola, NVidia, Samsung, Micron Technology, western Digital etc. Targeted job profiles include Memory circuit design and verification engineers, Physical system design engineer, System programmer, Fabrication engineer etc.</p>
<p>Tools:</p> <p>Virtual Lab, IIT KGP</p> <p>Tejas – Java Based Architectural Simulator, IIT Delhi</p>
<p>Text Book</p> <p>Carl Hamacher, Zvonko Vranesic, Safwat Zaky, "Computer Organization", Fifth Edition, McGraw-Hill Higher Education, 2016 reprint.</p>

<p>Topics relevant to "SKILL DEVELOPMENT": Generation of Computers, CISC and RISC processors, Bus Arbitration, Collaboration and Data collection for Term assignments and Case Studies for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course handout.</p>

Course Code: MAT2004	Course Title: Discrete Mathematical Structures Type of Course: Program Core	L- T- P- C	3	0	0	3
Version No.	1.0					

Course Pre-requisites	Nil			
Anti-requisites	Nil			
Course Description	The course provides insights into the fundamental aspects of mathematical logic and predicate calculus. The course delves deeply into the concepts of algebraic structures, lattices and Boolean algebras which are widely used in computer science and engineering. It also highlights the principles of counting techniques and their applications.			
Course Objective	The objective of the course is Skill Development of student by using Problem Solving Techniques.			
Course Outcomes	On successful completion of the course the students shall be able to: CO1: Explain logical sentences through predicates, quantifiers and logical connectives. CO2: Comprehend the basic principles of set theory and different types of relations. CO3: Elucidate the concepts of lattices and Boolean algebra. CO4: Deploy the counting techniques to tackle combinatorial problems.			
Course Content:				
Module 1	Mathematical Logic and Predicate Calculus			12 classes
Propositional Logic, Propositional Logic Equivalences, Normal forms, Inference rules, Introduction to Proofs, Conversion to clausal form, Predicate calculus, The Statement function, Inference theory of the Predicate Calculus.				
Module 2	Algebraic Structures			10 classes
Sets and set-operations, functions, relations and their properties & representations of relation by matrix, closure of different type of relations, equivalence relations, primitive recursive function.				
Module 3	Lattices and Boolean Algebra			11 classes
Partial ordering, Posset, Lattices & Algebraic structures, Sub lattice, Basic properties of algebraic systems by lattices, Distributive lattices, complement of an element in a lattice, Boolean lattice & Boolean algebra, cancellation laws and unique complement theorem.				
Module 4	Principles of Counting Techniques			12 classes

Chinese Remainder Theorem, pigeonhole principle, generalized pigeonhole principle, Generalized Permutations and Combinations, Recurrence Relations.

Targeted Application & Tools that can be used:

Discrete mathematics provides the mathematical foundations for many computer science courses including data structures, algorithms, database theory, automata theory, formal languages, compiler theory, computer security, and operating systems.

Project work/Assignment: Mention the Type of Project /Assignment proposed for this course

Assignment 1: Logic Equivalences and Predicate calculus.

Assignment 2: Equivalence Relations and Lattices

Assignment 3: Recurrence Relations

Course Code: CSE3190	Course Title: Fundamentals of Data Analytics Type of Course: Theory-embedded Lab	L-T-P- C	2	0	2	3			
Version No.	3.0								
Course Pre-requisites	NIL								
Anti-requisites	NIL								
Course Description	Fundamentals of Data Analytics is designed for inspecting, cleansing, transforming, and modeling data with the goal of discovering useful information, and supports in decision-making. The course begins by covering Data extraction, pre-processing, and transformation. It delivers the basic statistics and taught in an intuitive way to analysis the data. This course will help the students to apply the knowledge on data analysis to a wide range of applications.								
Course Objective	The objective of the course is to familiarize the learners with the concepts of Fundamentals of Data Analytics and attain SKILL DEVELOPMENT through PROBLEM SOLVING Methodologies.								
Course Out Comes	On successful completion of the course the students shall be able to: Explain different types of data and variables. Interpret data using appropriate statistical methods. Demonstrate the collection, processing and analysis of data for any given application and Illustrate various charts using visualization methods. Apply the Data Analysis techniques by R Programming								
Course Content:									
Module 1	Introduction to Data Analysis	Assignment	Data Collection, data analysis, Programming	8 Sessions					
Topics: Introducing Data, overview of data analysis: Data in the Real World, Data vs. Information, The Many “Vs” of Data, Structured Data and Unstructured Data, Types of Data, Data Analysis Defined, Types of Variables, Central Tendency of Data, Scales of Data, Sources of Data. Data preparation.									
R Studio: Base R-R Studio IDE-Introduction to R Projects and R Markdown. Basic R: R as a Calculator-Scripts and Comments-R Variables. Data I/O: Working Directories-Importing Data Exporting Data-More ways to save-Data I/O in Base R.									
Module 2	Data Analysis and Visualization	Case studies	Programming	8 Sessions					
Topics: Data Summarization: One Quantitative and Categorical Variable. Data Classes: One Dimensional Data Classes-Data Frames and Matrices-Lists. Data Cleaning: Dealing with Missing Data-Strings and Recoding Variables. Manipulating Data in R: Reshaping Data-Merging Datasets. Data Visualizations: Plotting with ggplot2- Plotting with Base R									
Module 3	Statistical	Case studies	R programming	7 Sessions					

	Analysis			
Topics: Proportion tests-Chi squared test-Fisher exact test-Correlation-T test-Wilcoxon Rank sum tests-Wilcoxon signed rank test- one-way ANOVA test- Kruskal Wallis test				
Module 4	Predictive Analysis	Case studies	Programming	8 Sessions
Topics: Linear least-squares – implementation – the goodness of fit – testing a linear model – weighted resampling. Regression using Stats models – multiple regression – nonlinear relationships – logistic regression – estimating parameters – accuracy. Time series analysis – moving averages – missing values – serial correlation – autocorrelation. Introduction to survival analysis				
<p>List of Laboratory Tasks:</p> <p>Experiment No. 1: Introduction to R and RStudio</p> <p>Level 1: Getting Started with R and RStudio</p> <p>Installing R and RStudio.</p> <p>Basic R syntax and commands.</p> <p>Level 2: Working with RStudio</p> <p>Understanding the RStudio interface.</p> <p>Creating and managing R scripts.</p> <p>Experiment No. 2: Basic Data Handling in R</p> <p>Level 1: Data Types and Structures in R</p> <p>Vectors, matrices, and data frames.</p> <p>Lists and factors.</p> <p>Level 2: Data Import and Export</p> <p>Reading data from CSV, Excel, and text files.</p> <p>Exporting data to different formats.</p> <p>Level 3: Exploring Datasets</p> <p>Using functions like head(), summary(), and str().</p> <p>Experiment No. 3: Basic Data structure in R</p> <p>Level 1: a. Demonstrate a program to join columns and rows in a data frame using cbind() and rbind() in R.</p> <p> b. Implement different data structures in R (Vectors, Lists, Data Frames)</p> <p>Level 2: R AS CALCULATOR APPLICATION a. Using with and without R objects on console</p> <p>Using mathematical functions on console</p> <p>Write an R script, to create R objects for the calculator application</p> <p>Experiment No. 4: Data Cleaning and Preprocessing</p> <p>Level 1: Handling Missing Data in R</p> <p>Identifying missing values.</p> <p>Imputing missing values using mean, median, or other methods.</p> <p>Level 2: Data Transformation in R</p> <p>Standardizing and normalizing data.</p> <p>Log-transformations and scaling.</p> <p>Experiment No. 5: Exploratory Data Analysis (EDA) with R</p> <p>Level 1: Descriptive Statistics</p> <p>Calculating mean, median, and standard deviation.</p> <p>Visualizing data using histograms, box plots, and scatter plots.</p> <p>Experiment No. 6: Data Visualization with ggplot2</p>				

Level 1: Demonstrate various graphs that can be made and altered using the ggplot2 package.

Level 2: Create 500 random temperature readings for six cities over a season and then plot the generated data using ggplot2 packages in R

Experiment No. 7: Perform Tests of Hypotheses hypothesis test (parametric)

Level 1: How to perform tests of hypotheses about the mean when the variance is known. How to compute the p-value. Explore the connection between the critical region, the test statistic, and the p-value.

Level 2: A teacher claims that people who work for only five hours per week will score significantly lower than people who work for ten hours per week on a quantitative abilities test. He brings twenty people and randomly assigned them to one or two groups. In one group he has participants who work for ten hours and in another group, he has participants who work for five hours. He conducts the test for all participants. Scores on the test range from one to ten with higher scores representing better performance. Test if there is any significant difference between those who work for five hours per week versus those who work for ten hours per week based on the test performance.

Experiment No 8: Hypothesis – Non-Parametric Test

Level 1: A car manufacturing company like to find the sales of three types of cars produced by them in three regions and is given. Test if there is an association between the regions and types of cars purchased.

Experiment No 9: Correlation and Covariance

Level 1: Using the iris data set in R

Find the correlation matrix.

Plot the correlation plot on dataset and visualize giving an overview of relationships among data on iris data.

Analysis of covariance: variance (ANOVA), if data have categorical variables on iris data.

Level 2 : Ramesh is doing a statistics paper in his post-graduation course. He met his friend Amal who is a textile engineer. Ramesh, who is doing his internship at ABC Researchers, is interested in a question. He poses this question to Amal and tries to find if he can answer. The question is as follows: The data regarding sales of soft- drinks and sales of cotton clothes in a place during the last 12 months are given. Find if there is any association between sales of soft drinks and sales of cotton clothes. Also explain the reason if there is any relationship.

Experiment No 11: Regression Model

Level 1: Import data from web storage (<http://www.ats.ucla.edu/stat/data/binary.csv>). Name the dataset and now do Logistic Regression to find out the relation between variables that are affecting the admission of a student in an institute based on his or her GRE score, GPA obtained, and rank of the student. Also check the model is fit or not. Require (foreign), require (MASS).

Level 2: Demonstrate multiple regressions, if data have a continuous Independent variable.

Apply on the above dataset

Experiment No. 12: Time Series Analysis in R

Level 1: Demonstrate Time series analysis using Time Series Data Library at <http://robjhyndman.com/TSDL/>.

Targeted Application & Tools that can be used:

Application Area are Decision making in business, health care, financial sector, Medical diagnosis etc.

Course Code: CSE2014	Course Title: Software Engineering Type of Course: School Core [Theory Only]	L- T- P- C	3-0-0-3
Version No.	1.0		
Course Pre-requisites	NIL		
Anti-requisites	NIL		
Course Description	<p>The objective of this course is to provide the fundamentals concepts of Software Engineering process and principles.</p> <p>The course covers software requirement engineering processes, system analysis, design, implementation and testing aspects of software system development.</p> <p>The course covers software quality, configuration management and maintenance.</p>		
Course Objectives	<p>The objective of the course is to familiarize the learners with the concepts of Software Engineering and attain Skill Development through Participative Learning techniques.</p>		

Course Out comes	<p>On successful completion of this course the students shall be able to:</p> <ol style="list-style-type: none"> 1] Describe the Software Engineering principles, ethics and process models(Knowledge) 2] Identify the requirements, analysis and appropriate design models for a given application(Comprehension) 3] Understand the Agile Principles(Knowledge) 4] Apply an appropriate planning, scheduling, evaluation and maintenance principles involved in software(Application) 			
Module 1	Introduction to Software Engineering and Process Models (Knowledge level)	Quiz		09 Hours
<p>Introduction: Need for Software Engineering, Professional Software Development, Software Engineering Ethics, Software Engineering Practice-Essence of Practice, General Principles Software Development Life Cycle</p> <p>Models: Waterfall Model – Classical Waterfall Model, Iterative Waterfall Model, Evolutionary model-Spiral, Prototype.</p>				
Module 2	Software Requirements, Analysis and Design (Comprehension level)	Assignment	Development of SRS documents for a given scenario	11 Hours
<p>Requirements Engineering: Eliciting requirements, Functional and non- Functional requirements, Software Requirements Specification (SRS), Requirement Analysis and validation. Requirements modelling- Introduction to Use Cases, Activity diagram and Swim lane diagram. CASE support in Software Life Cycle, Characteristics of CASE Tools, Architecture of a CASE Environment.</p> <p>Design: Design concepts, Architectural design, Component based design, User interface design.</p>				
Module 3	Agile Principles & Devops (Knowledge level)	Quiz		09 Hours
<p>Agile: Scrum Roles and activities, Sprint Agile software development methods - Scaling, User Stories, Agile estimation techniques, Product backlogs, Stake holder roles, Dynamic System Development Method.</p> <p>Devops: Introduction, definition, history, tools.</p>				
Module 4	Software Testing and Maintenance (Application Level)	Assignment	Apply the testing concepts using Programing	12 Hours
<p>Software Testing-verification and validation, Test Strategies - White Box Testing, Black box Testing. Automation Tools for Testing.</p> <p>Software Quality Assurance-Elements of software quality assurance, SQA Tasks, Goals and Metrics, Software configuration management- SCM process, SCM Tools (GitHub).</p> <p>Maintenance- Characteristics of Software Maintenance, Software Reverse Engineering, Software Maintenance Process Models.</p>				
<p>Targeted Application & Tools that can be used: Selenium, GitHub, CASE Tools</p>				
Text Book

Course Code: ECE2001	Course Title: Innovation Project-Raspberry Pi Using Python Type of Course: School Core & Practical Only.	L- T- P- C	0	4 This includes few lecture sessions	2
Version No.	1.0				
Course Pre- requisites	NIL				
Anti- requisites	NIL				
Course Description	The Raspberry Pi is an amazing single board computer (SBC) capable of running Linus and a whole host of applications. Python is a beginner-friendly programming language that is used in schools, web development, scientific research, and in many other industries. This course will enable students in writing own programs with Python to blink lights, respond to button pushes, read sensors, log data on the Raspberry Pi and many more. The course also offers in-depth knowledge of designing, developing, coding and implementing projects using Raspberry Pi.				
Course Outcomes	On successful completion of this course the students shall be able to: Write a program in Python. Explain the main features of the Raspberry Pi board Demonstrate the hardware interfacing of the peripherals to Raspberry Pi system. Demonstrate the functioning of live various projects carried out using Raspberry Pi system.				
Course Content:					
Module 1	Basics of Python, functions	Quiz	Problem Solving	4 Lab Sessions	

<p>Topics: Introduction, Structure of Python Program, Data Types and Variables, Input and Output, Operators, Importing libraries, Functions, Development Tool. Concepts will be taught by solving problems through programs.</p>				
Module 2	Python Programming	Quiz	Problem Solving	4 Lab Sessions
<p>Control statements, Lists and Dictionaries, Problem solving using Python. Concepts will be taught by solving problems through programs.</p>				
Module 3	Overview of Raspberry Pi	Project Development	System Design Task and Analysis	4 Lab Sessions
<p>Topics: An exploration of GPIO pins, LED and switch control. Installation of libraries, PuTTY SSH. Raspberry Pi to interface with more complicated sensors and actuators like Pi Camera, servo motor ADS5115 through PIP libraries. Arduino with Raspberry-pi</p>				
Module 4	Interaction with API Services	Project Development	Modeling and Simulation task	3 Lab Sessions
<p>Topics: Raspberry Pi interact with online API services through the use of public APIs and SDKs using Firebase, Gspread API. Node-RED – a programming tool for wiring together hardware devices, MQTT. Android/Case study.</p>				
<p>Targeted Application & Tools that can be used: Making it a reality (Raspberry Pi Projects) : Projects will include but not limited to : 1) Intelligent home locking system. 2) Intelligent water level management system. 3) Home automation using RFID. 4) Real time clock-based home automation. 5) Intelligent Automatic Irrigation System Professionally Used Software: Raspberry Pi.</p>				
<p>Project work/Python Lab Test:</p>				
<p>Project work Python test.</p>

<p>Topics relevant to development of “Foundation Skills”: Basic Concepts of Python-Programming, and Raspberry Pi. Topics related to development of “Employability Skills”: Problem solving, Creative Thinking, Team work, Prototype Development.</p>				

Topics related to development of “Entrepreneurship”: Effective Communication, Strategic Thinking, Creative Thinking.	
Evaluation:	Review-1-20%, Review-2-25%, Python test-25%, Project Expo-30%

Course Code: CSE1005	Course Title: Programming in Python Type of Course: School Core Lab Integrated	L- T- P- C	1	0	4	3
Version No.	1.0					
Course Pre-requisites	Basic knowledge of Computers and Mathematics					
Anti-requisites	NIL					
Course Description	<p>The purpose of this course is to enable the students to develop python scripts using its basic programming features and also to familiarize the Python IDLE and other software's. This course develops analytical skills to enhance the programming abilities.</p> <p>The associated laboratory provides an opportunity to validate the concepts taught and enhances the ability to build real time applications.</p>					
Course Object	The objective of the course is to familiarize the learners with the concepts of Programming in Python and attain Employability through Problem Solving Methodologies.					
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <p>1. Summarize the basic Concepts of python.</p> <p>2. Demonstrate proficiency in using data structures.</p> <p>3. Illustrate user-defined functions and exception handling.</p> <p>4. Identify the various python libraries.</p>					
Course Content:						
Module 1	Basics of Python programming	Assignment	Programming		14 Classes	
Topics: Data types, operators and Expressions, Input and Output Statements. Control Structures – Selective and Repetitive structures						

Module 2	Indexed and Associative Data Structures	Simple applications	Programming	20 Classes
Topics: Strings, Lists, Sets, Tuples, Dictionaries				
Module 3	Functions, Exception handling and libraries	Case study	Programming	10 Classes
Topics: User defined functions, exception handling, Introduction to python built-in libraries				
<p>Targeted Application & Tools that can be used:</p> <p>Targeted Application : Web application development, AI, Operating systems</p> <p>Tools: Python IDLE, ANACONDA</p> <p>Application Areas:</p> <p>Web Development</p> <p>Game Development</p> <p>Scientific and Numeric Applications</p> <p>Artificial Intelligence and Machine Learning</p> <p>Software Development</p> <p>Enterprise-level/Business Applications</p> <p>Education programs and training courses</p> <p>Language Development</p> <p>Operating Systems</p> <p>Web Scrapping Applications</p> <p>Image Processing and Graphic Design Applications</p>				
Professionally Used Software: Python IDLE, Spyder, Jupyter Notebook, Google Colab				
<p>Project work/Assignment:</p> <p>Project Assignment: Developing python scripts using built in methods and functions</p>

Python Tutor - Visualize Python, Java, C, C++, JavaScript, TypeScript, and Ruby code execution
<https://practice.geeksforgeeks.org/courses/Python-Foundation>

Topics relevant to development of “FOUNDATIONS SKILLS”- Solve the real time problems by analyzing and visualizing the data.

Topics relevant to “HUMAN VALUES & PROFESSIONAL ETHICS”- Data collection and its arrangement

Course Code: PPS4002	Course Title: Introduction to Aptitude Type of Course: Practical Only Course	L- P- C	0	2	1
Version No.	1.0				
Course Pre- requisites	Students should know the basic Mathematics & aptitude along with understanding of English				
Anti- requisites	Nil				
Course Description	The objective of this course is to prepare the trainees to tackle the questions on various topics and various difficulty levels based on Quantitative Ability, and Logical Reasoning asked during the placement drives. There will be sufficient focus on building the fundamentals of all the topics, as well as on solving the higher order thinking questions. The focus of this course is to teach the students to not only get to the correct answers, but to get there faster than ever before, which will improve their employability factor.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Aptitude and attain Skill Development through Problem Solving techniques.				
Course Outcomes	On successful completion of the course the students shall be able to: CO1] Recall all the basic mathematical concepts they learnt in high school. CO2] Identify the principle concept needed in a question. CO3] Solve the quantitative and logical ability questions with the appropriate concept. CO4] Analyze the data given in complex problems. CO5] Rearrange the information to simplify the question				
Course Content:					
Module 1	Quantitative Ability	Assignment	Bloom's Level : Application	02 Hours	

<p>Topics: Introduction to Aptitude, working of Tables, Squares, Cubes</p> <table border="1"> <tr> <td>Module 2</td><td>Logical Reasoning</td><td>Assignment</td><td>Bloom's Level : Application</td><td>18 Hours</td></tr> </table>					Module 2	Logical Reasoning	Assignment	Bloom's Level : Application	18 Hours
Module 2	Logical Reasoning	Assignment	Bloom's Level : Application	18 Hours					
<p>Topics: Linear & Circular Arrangement Puzzle, Coding & Decoding, Blood Relations, Directions, Ordering and Ranking, Clocks and Calendars, Number Series, Wrong number series, Visual Reasoning</p>									
<p>Targeted Application & Tools that can be used: Application area: Placement activities and Competitive examinations. Tools: LMS</p>

Course Code: MAT2003	Course Title: NUMERICAL METHODS FOR ENGINEERS Type of Course: School Core	L-T-P-C	1	0	2	2
Version No.	1.0					
Course Pre-requisites	MAT1002 – Transform Techniques, Partial Differential Equations and Their Applications					
Anti-requisites	Nil					
Course Description	The course focuses on formulating and solving problems concerning real-world engineering applications numerically as well as statistically. This course provides an introduction to basic numerical methods to deal with algebraic and transcendental equations, system of equations, interpolation, differentiation and integration. This course also deals with numerical solution of ordinary differential equations by means of Taylor's series method, modified Euler's method and Runge-Kutta methods.					

Course Objective	The objective of the course is to familiarize the learners with the concepts of "NUMERICAL METHODS FOR ENGINEERS" and attain Skill Development Through Problem Solving.			
Course Outcomes	On successful completion of the course the students shall be able to: 1] Solve algebraic and transcendental equations numerically. 2] Adopt numerical techniques to differentiate and integrate functions. 3] Apply numerical methods to solve ordinary differential equations.			
Course Content:				
Module 1	Numerical solution of Algebraic and Transcendental Equations			15 Classes
Algebraic and Transcendental Equations, Regula - Falsi method, Bisection method (Self study), Secant method, Newton-Raphson method, and NR method for non-linear Equations, Fixed-point iteration method. System of Linear Equations: Introduction, LU decomposition method, Gauss-Jacobi method, Gauss-Seidel iteration method, Largest Eigen value and corresponding Eigen vector by Power method & Jacobi Method.				
Module 2	Numerical Interpolation, differentiation and Integration			15 Classes
Numerical Interpolation: Newton's forward and backward interpolation method, Newton's divided difference method, Lagrange's method, numerical differentiation. Numerical integration: Trapezoidal rule, Simpson's one-third rule, Simpson's three-eighth rule, Weddle's Rule. Area between the two curves.				
Module 3	Numerical solution of ODEs and PDEs			15 Classes
Solution of ordinary differential equations: Initial Value problems: Taylor's series method, Picard's method, Euler's Method, Modified Euler's method, Runge-Kutta method, Milne's predictor-corrector formula. Adams -Bashforth method, Boundary value problems - Finite difference methods for ODE. Numerical solution for LCR & damped forced oscillatory equations. Solution of partial differential equations: Schmidt Explicit Formula for Heat Equation, Crank-Nicolson method. Numerical solution to Wave, Laplace & Heat Equation.				
Targeted Application & Tools that can be used: The objective of the course is to familiarize students with a variety of numerical techniques and the theoretical concepts of probability and statistics so as to equip them with the necessary numerical approaches and basic statistical tools to tackle engineering and real-life problems.				
Assignment:				

<p>Gauss-Jacobi iteration method.</p> <p>Numerical differentiation.</p> <p>Gaussian quadrature rule for numerical integration.</p> <p>Taylor series method for ODEs.</p> <p>Implicit and explicit schemes for PDEs.</p>
<p>Text Books</p> <p>T1: M.K. Jain, S.R.K. Iyengar and R.K. Jain, Numerical Methods for Scientific and Engineering Computations, 6th Edition, New age Publishing House, 2015.</p> <p>T2: Erwin Kreyszig, "Advanced Engineering Mathematics", 10th Edition, John Wiley& Sons (India), 2014.</p>
<p>References:</p> <p>R1: B.S. Grewal, Numerical methods in engineering and science, 10th Edition, Khanna publishers, 2016.</p> <p>R2: B.S. Ray Wylie and Louis C Barrett, "Advanced Engineering Mathematics", 6th Edition, McGraw-Hill, 2012.</p>
<p>Topics relevant to SKILL DEVELOPMENT: This course focuses on formulating and solving problems concerning real-world engineering applications numerically as well as statistically. This course provides an introduction to basic numerical methods to deal with algebraic and transcendental equations, system of equations, interpolation, differentiation and integration with numerical solution of ordinary differential equations by means of Taylor's series method, modified Euler's method and Runge-Kutta methods for Skill Development through Problem Solving methodologies. This is attained through assessment component mentioned in course handout.</p>

Course Code: CSE2007	Course Title: Design and Analysis of Algorithms Type of Course: Program Core & Theory only	L-T-P-C	3	0	0	3
Version No.		2.1				
Course Pre-requisites		CSE2001, Data Structure and Algorithms				
Anti-requisites		NIL				
Course Description		This intermediate course enables students to design and analyze efficient algorithms to solve problems. This course covers typical design methods such as divide-and-conquer, dynamic programming and greedy method to solve problems. The students shall develop strong analytical skills as part of this course.				

Course Objectives		This course is designed to improve the learners' EMPLOYABILITY SKILLS by using PROBLEM SOLVING Methodologies.			
Course Outcomes		On successful completion of the course the students shall be able to: 1] Identify the efficiency of a given algorithm. [Comprehension] 2] Employ divide and conquer approach to solve a problem. [Application] 3] Illustrate dynamic programming approach to solve a given problem. [Application] 4] Solve a problem using the greedy method. [Application] 5] Discuss the techniques to solve a real-world problem based on its complexity classes. [Comprehension]			
Course Content:					
Module 1		Introduction to Algorithms	Assignment	Problem Solving	06 Sessions
	Topics: Algorithm Design and efficiency, measuring of running time of algorithms. Insertion sort and merge sort, Asymptotic Growth and Notations. Recurrences--Masters method. Assignment: Comparatively evaluate bubble sort, insertion sort and mergesort.				
Module 2		Review of Searching and Sorting techniques	Assignment	Programming/ Problem Solving	12 Sessions
	Topics: Divide and Conquer: Examples. Strassen's Matrix multiplication. Sorting: Quicksort, Heapsort, Lower bound of comparison-based sorting, non-comparison-based sorting: Radix sort. Search: Review of Linear Search and Binary Search, Hashing and hash tables. Assignment: Design and develop an algorithm using Divide and Conquer technique for a given scenario.				
Module 3		Greedy Algorithms	Assignment	Programming/ Problem Solving	09 Sessions
	Topics: Introduction, Fractional Knapsack Problem, Minimal Spanning Tree: Prim's Algorithm and Kruskal's Algorithm, Single-source Shortest Path: Dijkstra's Algorithm. Huffman Codes. Assignment: Design and Develop a solution to a given scenario using greedy method.				
Module 4		Dynamic Programming	Assignment	Programming/ Problem Solving	09 Sessions
	Topics: Introduction with examples, Principles of Memoization, 0-1 Knapsack Problem, Bellman-Ford algorithm, Floyd-Warshall's Algorithms. Optimal Binary Search Trees, Chain Matrix Multiplication. Assignment: For a given scenario, attempt the three design paradigms learned so far and				

	argue the best approach to solve the problem						
Module 5	Complexity Classes and Heuristics	Assignment	Programming/ Problem Solving		09 Hours		
	Topics: Complexity classes: P, NP, and NP-Complete Problems. Backtracking: n-Queens. Branch and bound: Travelling Salesman Problem. Assignment: Apply backtracking algorithmic designing technique for solving queen's problems for 4, 8 and 16 inputs.						
	Targeted Application & Tools that can be used: Application Area is to Design and Analyzing the efficiency of Algorithms. This fundamental course is used by all application developers. Professionally Used Software: GCC compiler.						
	Project work/Assignment:						
	Problem Solving: Design of Algorithms and implementation of programs. Programming: Implementation of given scenario using Java.

Course Code: CSE3156	Course Title: Database Management Systems Type of Course: 1) School Core 2) Laboratory Integrated	L-T-P-C 3 0 2 4
Version No.	1.0	
Course Pre-requisites	NIL	
Anti-requisites	NIL	

Course Description	<p>This course introduces the core principles and techniques required in the design and implementation of database systems. It covers concepts of relational database systems (RDBMS). More emphasis is set on how to design, develop, organize, maintain and retrieve information efficiently. It helps the students to learn and practice data modeling and database designs. The course also introduces the concept of object oriented and object relational databases.</p> <p>The associated laboratory is designed to implement database design using MySQL DATABASE in information technology applications. All the exercises will focus on the fundamentals for creating, populating, sophisticated, interactive way of querying, and simultaneous execution of the transactions of database.</p>			
Course Objective	<p>The objective of the course is to familiarize the learners with the concepts of Database Management Systems and attain Employability through Problem Solving Methodologies.</p>			
Course Out Comes	<p>On successful completion of the course the students shall be able to:</p> <p>1] Demonstrate a database system using ER model and relational algebra. [Understanding]</p> <p>2] Build databases using SQL queries query processing. [Applying]</p> <p>Apply the functional dependencies and design the database using normalization. [Applying]</p> <p>Interpret the concept of object-oriented databases and object-relational databases. [Understanding]</p>			
Course Content:				
Module 1	Introduction to Database Modelling and Relational Algebra (Understanding)	Assignment	Problem Solving	8 Classes
<p>Topics:</p> <p>Introduction to Database: Schema, Instance, 3-schema architecture, physical and logical data independence, Data isolation problem in traditional file system, advantages of database over traditional file systems. Entity Relationship (ER) Model, ER Model to Relational Model, Examples on ER model.</p> <p>Relational Algebra with selection, projection, rename, set operations, Cartesian product, joins (inner and outer joins), and division operator. Examples on Relational Algebra Operations.</p>				
Module 2	Fundamentals of SQL and Query Optimization (Applying)	Assignment	Programming	8 Classes

<p>Topics:</p> <p>SQL Database Querying, DDL, DML, Constraints, Operators, Set Operators, Aggregate Functions, Joins, Views, Procedures, Functions and Triggers.</p> <p>Database programming issues and techniques: Embedded SQL, Dynamic SQL; SQL / PSM and NoSQL.</p> <p>Query Optimization: Purpose, transformation of relational expressions, estimating cost and statistics of expression, choosing evaluation plans, linear and bushy plans, dynamic programming algorithms.</p>				
Module 3	Relational Database Design & Transaction Management (Applying)	Assignment	Problem Solving	12 Classes
<p>Topics:</p> <p>Relational database design: Problems in schema design, redundancy and anomalies, Normal Forms based on Primary Keys-(1NF,2NF, 3NF), Boyce-Codd Normal Form, Multi valued Dependency (Fourth Normal Form), Join Dependencies (Fifth Normal Form), lossy and lossless decompositions, Database De-normalization.</p> <p>Transaction Management: The ACID Properties; Transactions and Schedules; Concurrent Execution of Transactions; Lock- Based Concurrency Control; Performance of locking; Transaction support in SQL; Introduction to crash recovery; 2PL, Serializability and Recoverability; Lock Management; The write-ahead log protocol; Check pointing; Recovering from a System Crash; Media Recovery; Other approaches and interaction with concurrency control.</p>				
Module 4	Advanced DBMS Topics (Understanding)	Assignment	Case Study	8 Classes
<p>Topics:</p> <p>Advanced topics: Object oriented database management systems, Deductive database management systems, Spatial database management systems, Temporal database management systems, Constraint database management systems.</p> <p>New database applications and architectures such as Data warehousing, Multimedia, Mobility, NoSQL, Native XML databases (NXD), Document-oriented databases, Statistical databases.</p>				

List of Laboratory Tasks:

Create Employee, Student, Banking and Library databases and populate them with required data. Do the following experiments of different lab sheets on those databases.

Labsheet-1 [3 Practical Sessions] Experiment No 1: [1 Session]

To study and implement the different language of Structured Query Language.

Level 1: Perform operations using Data Definition Language and Data Manipulation Language commands including different variants of SELECT on Student DB.

Level 2: Identify the given requirements; valid attributes and data types and Perform DDL and DML operations on a given scenario. [Banking Databases]

Experiment No. 2: [2 Sessions]

To study and implement the concept of integrity constraints in SQL.

Level 1: Create tables on Banking database using PRIMARY KEY, NOT NULL, UNIQUE, FOREIGN KEY and demonstrate the working of relational, logical, pattern matching, BETWEEN, IS NULL, IN and NOT IN Special Operators on Student Database.

Level 2: Enforce different types of data and referential integrity constraints. Then try queries with special operators based on the student database. [Banking Database].

Labsheet-2 [3 Practical Sessions] Experiment No. 3: [1 Session]

Implement complex queries in SQL.

Level 1: Implement the conjugate of GROUP BY, ORDER BY and aggregate functions on

Banking Database. Level 2: Implement MySQL DB queries on library database using appropriate clauses and aggregate functions. Also order the data either in ascending and descending order using corresponding clause. [Library databases].

Experiment No. 4: [2 Session]

To study and implement different types of Set and Join Operations [2 Slots]

Level 1: Demonstrate different types of Set Operations (UNION, UNION ALL, INTERSECT, MINUS) and Join Operations (INNER JOINs, OUTER JOINS, CROSS JOIN, NATURAL JOIN) on two or more tables of Airline Database. Level 2: Use Set and Join operations to retrieve the data from two or more relations(tables) as per the given scenario. [Airline Database]

Labsheet-3 [2 Practical Sessions] Experiment No. 5: [2 sessions]
To study and implement Views, and Procedures in MySQL DB.
Level 1: Implement MySQL Views, and Procedures in ORACLE DB on Employee database.
Level 2: Analyze the requirement and construct views, and Procedures on Mini Project Domain.
[Banking Database]

Labsheet-4 [2 Practical Sessions] Experiment No. 6: [2 Sessions]
To study and implement Functions, and Triggers in MySQL DB.
Level 1: Implement Oracle Functions and Triggers in Oracle on Employee database.
Level 2: Analyze the requirement and construct Functions and Triggers. [Supply chain Database]

Labsheet-5 [2 Practical Sessions] Experiment No. 7: [2 Sessions]
To implement the concept of forms and reports. Level 1: Implement the concept of forms and reports. Level 2: Analyze the schema relationship.

Labsheet-6 [2 Practical Sessions] Experiment No. 8: [2 Sessions]
Design a mini project based on the databases such as Inventory Management System, University Management System, Hospital Management System, etc.
Level 1: Implement the real time database.
Level 2: Analyze the working of database in real time.

Targeted Application & Tools that can be used:
Application Area: Relational database systems for Business, Scientific and Engineering Applications.
Tools/Simulator used: MySQL DB for student practice.
Also demonstration of ORACLE DB on object-relational database creation and JDBC connection.
Percentage of changes in this version: 50% of changes from earlier version. New topics are highlighted in italic.

Problem Solving: Constructing ER-Diagrams for a given real time requirements, Normalizing the databases, querying the databases using relational algebra.

Programming: Implementation of any given scenario using MySQL.

Topics relevant to development of “FOUNDATION SKILLS”: S - Skill Development: Relational database design using ER- Relational mapping, Implementation of given database scenario using MYSQLDB.

Topics relevant to development of Employability: Develop, test and implement computer databases, creating sophisticated, interactive and secure database applications

Topics relevant to “HUMAN VALUES &PROFESSIONAL ETHICS”: Nil

Course Code: PPS4004	Course Title: Aptitude Training- Intermediate Type of Course: Practical Only Course	L-T P-C	0	0	2	1						
Version No.	1.0											
Course Pre-requisites	Students should have the basic concepts of Quantitative aptitude along with its applications in real life problems.											
Anti-requisites	Nil											
Course Description	This is a skill-based training program for the students (Undergraduate). This course is designed to enable the students to enhance their skills in Quantitative Aptitude.											
Course Objective	The objective of the course is to familiarize the learners with the concepts of Aptitude and attain Skill Development through Problem Solving techniques.											
Course Outcomes	On successful completion of the course the students shall be able to: CO1] Understand all the concepts. CO2] Apply the concepts in problem solving (Bloom’s taxonomy Level 3)											
Course Content:												
Module 1	Quantitative Ability	Assignment			24 Hours							
Topics: Number System, Percentage, Ratio and Proportion, Average, Mixture and Allegation, Time and Work, Profit and Loss, Time Speed and Distance, Boats and Streams, Simple Interest and Compound Interest, Probability, Permutation and Combination.												
Targeted Areas												
Application area: Placement activities and Competitive examinations.												
Tools: LMS

Topics relevant to Skill development: Quantitative aptitude for Skill Development through Problem solving Techniques. This is attained through assessment component mentioned in course handout.
Evaluation – Continuous Evaluation (Topic wise evaluation Mid-Term & End term)

Course Code: CSE3216	Course Title: Mastering Object- Oriented Concepts in Python Type of Course: Lab	L- T- P- C	0-0-2-1
Version No.	1		
Course Pre-requisites	CSE1005 – Programming in Python		
Anti-requisites	NIL		
Course Description	This course covers mastering object-oriented concepts in Python, including classes, inheritance, polymorphism, and encapsulation. Students will learn to design and implement robust, reusable code using real-world examples. Ideal for those with basic Python knowledge, it enhances problem-solving skills and software development proficiency.		
Course Objective	The objective of the course is to familiarize the learners with the concepts of Mastering Object Oriented Concepts in Python and attain Skill Development through Experiential Learning.		
Course Out Comes	CO1: Explain features of OOPS along with creation of Python classes and objects to represent real world Objects. [Understand] CO2: Demonstrate inheritance, polymorphism, and abstraction in Python to build maintainable and extendable software systems. [Apply] CO3: Demonstrate exception handling in Python to build robust error-handling mechanisms and debugging tool and Assess various file handling techniques in Python. [Apply]		

Course Content:				
Module 1	Introduction to OOPS, Classes and Objects	MCQ	Assignment	10 Sessions
Topics:				
<p>Introduction to OOPS: Problems in Procedure Oriented Approach, Specialty of Python Language, Features of OOPS - Classes and Objects, Encapsulation, Abstraction, Inheritance and Polymorphism.</p> <p>Classes and Objects: Creating a Class, The Self Variable, Constructor, Destructors, Types of Variables, Namespaces, Types of Methods - Instance Methods, Class Methods, Static Methods, Passing Members of One Class to Another Class, Inner Classes.</p>				
Module 2	Inheritance and Polymorphism	MCQ	Assignment	10 Sessions
Constructors in Inheritance, Overriding Super Class Constructors and Methods, The Super() Method, Types of Inheritance – Single Inheritance, Multiple Inheritance, Method Resolution Order(MRO), Polymorphism, Duck Typing Philosophy of Python, Operator Overloading, Method Overloading, Method Overriding.				
<p>Abstract Classes and Interfaces: Abstract Method and Abstract Class, Interfaces in Python, Abstract Classes vs. Interfaces.</p>				
Module 3	Exceptions and Files in Python	MCQ	Assignment	10 Sessions
<p>Exceptions: Errors in a Python Program – Compile-Time Errors, Runtime Errors, Logical Errors. Exceptions, Exception Handling, Types of Exceptions, The Except Block, The assert Statement, User-Defined Exceptions, Logging the Exceptions.</p> <p>Files in Python: Files, Types of Files in Python, Opening a File, Closing a File, Working with Text Files Containing Strings, Knowing whether a File Exists or Not, Working with Binary Files, The with Statement, Pickle in Python, The seek() and tell() Methods.</p>				
Targeted Application & Tools that can be used:				
Python, PyCharm				
Project work/Assignment:				
<p>Assignment:</p> <p>Module 1 Assignment: Design and implement a Python application that simulates a banking system using classes and methods for customers and accounts.</p> <p>Module 2 Assignment: Develop a Python application that simulates Library management system that demonstrates inheritance, polymorphism and abstraction concepts.</p> <p>Module 3 Assignment: Develop a Python program that handles different types of exceptions while processing user input for a movie ticket booking system showcasing exception handling and File handling concepts.</p>

This is attained through assessment component mentioned in course handout.

Course Code: CBD2508	Course Title: Big Data Technologies Type of Course: Program Core Theory	L-T-P-C	3-0-0-3
Version No.	1.0		
Course Pre-requisites			
Anti-requisites	NIL		
Course Description	<p>The purpose of the course is to provide the fundamentals of Big data technology, to emphasize the importance of choosing suitable tools for processing and analyzing big data to gain insights. The student should have knowledge and skill to select and use most appropriate big data tools to solve business problems.</p> <p>The associated laboratory provides an opportunity to implement the concepts and enhance critical thinking and analytical skills.</p> <p>With a good knowledge in the fundamentals of Big data technology the student can gain practical experience in implementing them, enabling the student to be an effective solution provider for applications that involve huge volume of data.</p>		
Course Objectives	<p>The objective of the course is to familiarize the learners with the concepts of Big Data Technologies and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques.</p>		
Course Outcomes	<p>On successful completion of the course the students shall be able to:</p> <ul style="list-style-type: none"> • Apply Map-Reduce programming on the given datasets to extract required insights.(Application). • Employ appropriate Hadoop Ecosystem tools such as scoop, Hbase, Hive, to performdata analytics for a given problem. (Application). • Use Spark tool to analyze the given dataset for a given problem. (Application). 		
Course			

Content:				
Module 1	Introduction to Hadoop	Programming Assignment	Data Collection and Analysis	10 Classes
Introduction to Big Data and its importance: Basics of Distributed File System, Four Vs, Drivers for Big data, Big data applications, Structured, unstructured, semi-structured and quasi structured data. Big data Challenges-Traditional versus big data approach, The Big Data Technology Landscape: No-SQL.				
The Hadoop: History of Hadoop-Hadoop use cases, The Design of HDFS, Blocks and replication management, Rack awareness, HDFS architecture, HDFS Federation, Name node and data node, Anatomy of File write. Anatomy of File read, Hadoop Map Reduce paradigm, Map and reduce tasks, Job Tracker and task tracker, Map reduce execution pipeline, Key value pair, Shuffle and sort, Combiner and Partitioner, APIs used to Write/Read files into/from Hadoop, Need for Flume and Sqoop.				
Anatomy of a YARN: Hadoop 2.0 Features, Name Node High Availability, YARN Architecture, Introduction to Schedulers, YARN scheduler policies, FIFO, Fair And Capacity scheduler.				
Module 2	Hadoop Ecosystem Tools	Programming Assignment	Data Collection and Analysis	8 Classes
Introduction to SQOOP: SQOOP features, Sqoop Architecture, Sqoop Import All Tables, Sqoop Export All Tables, Sqoop Connectors, Sqoop Import from MySQL to HDFS, Sqoop vs flume.				
Hive: Apache Hive with Hive Installation, Hive Data Types, Hive Table partitioning, Hive DDL commands, Hive DML commands, and Hive sort by vs. order by, Hive Joining tables, Hive bucketing.				
Hbase: Introduction to HBase and its working architecture- Commands for creation and listing of tables- disabled and is disabled of table - enable and is enabled of table- describing and dropping of table-Put and Get command - delete and delete all command-commands for scan, count, truncate of tables.				
Module 3	Spark	Programming Assignment	Data analysis	8 Classes
Introduction to Apache Spark A unified Spark, Who uses Spark and for what?, A Brief History of Spark, Spark version and releases, Storage layers for Spark. Programming with RDDs: RDD Basics, Creating RDDs, RDD Operations, Passing functions to Spark, Common Transformations and Actions, Persistence. Spark SQL: Linking with Spark SQL, Using Spark SQL in Applications, Loading and Saving Data, JDBC/ODBC Server, User-defined functions, Spark SQL Performance.				
Scala: The Basics, Control Structures and functions, Working with arrays, Maps and Tuples.				
Targeted Application & Tools that can be used: <ul style="list-style-type: none"> • Business Analytical Applications • Social media Data Analysis • Predictive Analytics 				
Tools: Hadoop Framework tools like map reduce, Hive, Hbase, Scoop, Spark.

Module 2	Hadoop stem Tools	Ecosy	Programming Assignment	Data Collection and Analysis	8 Classes
Introduction to SQOOP: SQOOP features, Sqoop Architecture, Sqoop Import All Tables, Sqoop Export All Tables, Sqoop Connectors, Sqoop Import from MySQL to HDFS, Sqoop vs flume.					
Hive: Apache Hive with Hive Installation, Hive Data Types, Hive Table partitioning, Hive DDL commands, Hive DML commands, and Hive sort by vs. order by, Hive Joining tables, Hive bucketing.					
Hbase: Introduction to HBase and its working architecture- Commands for creation and listing of tables- disabled and is disabled of table - enable and is enabled of table- describing and dropping of table- Put and Get command - delete and delete all command-commands for scan, count, truncate of tables.					
Module 3	Spark		Programming Assignment	Data analysis	8 Classes
Introduction to Apache Spark A unified Spark, Who uses Spark and for what?, A Brief History of Spark, Spark version and releases, Storage layers for Spark. Programming with RDDs: RDD Basics, Creating RDDs, RDD Operations, Passing functions to Spark, Common Transformations and Actions, Persistence. Spark SQL: Linking with Spark SQL, Using Spark SQL in Applications, Loading and Saving Data, JDBC/ODBC Server, User-defined functions, Spark SQL Performance.					
Scala: The Basics, Control Structures and functions, Working with arrays, Maps and Tuples.					
Targeted Application & Tools that can be used:					
<ul style="list-style-type: none"> • Business Analytical Applications • Social media Data Analysis • Predictive Analytics 					
Tools: Hadoop Framework tools like map reduce, Hive, Hbase, Scoop, Spark.					
1. Level 1: To install the Hadoop in pseudo cluster mode. Level 1: HDFS Shell Commands – Files and Folders. Level 2: HDFS Shell Commands – Management.					
2. Run a basic Word Count Map Reduce program to understand Map Reduce Paradigm. Level 1: Find the number of occurrence of each word appearing in the input file(s) Level 2: Performing a Map Reduce Job for word search count (look for specific keywords in a file).					
3. Write a Map Reduce program that mines weather data. Weather sensors collecting data every hour at many locations across the globe gather large volume of log data, which is a good candidate for analysis with Map Reduce, since it is record-oriented. Data available at: https://github.com/tomwhite/hadoopbook/tree/master/input/ncdc/all . Level 1: Find average, max and min temperature for each year in NCDC data set? Level 2: Programming assignment to analyze the social media data for business analytics.					
4. Level 1: Finding out Number of Products Sold in Each Country using map reduce with sampledataset Level 2: Find matrix multiplication using map reduce					
5. Level 1: Installation of Hive, working on basic hive commands. (Create, Alter and Drop tables) Level 2: Apply Hive commands to student database/employee database.					
6. Level 1: Working on advance hive commands. (Static Partitioning & Dynamic partitioning) Level 2: Continue the previous experiment, select and apply suitable partitioning technique.					
7. Level 1: Working on advance hive commands-2. (Bucketing) Level 2: Continue the previous experiment, apply bucketing technique to bring out the difference between partitioning and bucketing.					
8. Level 1: Installing Ecosystem tools such as Scoop, Hbase.					

Level 2: Scoop – Move Data into Hadoop.

9. **Level 1:** Working on basic Hbase commands (General commands, DDL Commands)

Level 2: Apply Hbase commands on Insurance database/employee dataset.

10. **Level 1:** Working on advanced Hbase commands. (DML).

Level 2: Continue the previous experiment to demonstrate CRUD operations.

11. **Level 1:** Install, Deploy & configure Apache Spark.

Level 2: Using RDD and FlatMap count how many times each word appears in a file and write out a list of words whose count is strictly greater than 4 using Spark

12. **Level 1:** Write a program in Apache spark to count the occurrences words in a given text file and display only those words starting with 'a' in ascending order of count.

Level 2: Apache access logs are responsible for recording data for all web page requests processed by the Apache server. An access log record written in the Common LogFormat will look something like this: 127.0.0.1 - Scott [10/Dec/2019:13:55:36 -0700] "GET /server-status HTTP/1.1" 200 2326 Where, HTTP 200 status response

code indicates that the request has succeeded. Write a program to read the records of access log file log.txt and display the number of successful requests using Spark.

13. **Level 1:** Chess king moves horizontally, vertically or diagonally to any adjacent cell. Given two different cells of the chessboard, determine whether a king can go from the first cell to the second in one move.

Write a scala program that receives input of four numbers from 1 to 8, each specifying the column and row number, first two - for the first cell, and then the last two - for the second cell. The program should output YES if a king can go from the first cell to the second in one move, or NO otherwise.

Level 2: Data analytics using Apache Spark on Amazon food dataset, find all the pairs of items frequently reviewed together.

Write a single Spark application that:

Recommended by the Board of Studies on	BOS NO: 16, BOS held on 25/07/22
Date of Approval by the Academic Council	Academic Council Meeting No.18, Dated 03/08/22

Course Code: CBD2504	Data Security and Cryptography	L-T-P-C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	CBD 2000 Introduction to Big Data					
Anti-requisites	NIL					
Course Description	<p>This course offers a comprehensive introduction to the principles and practices of data security and cryptography. It covers classical and modern cryptographic algorithms, key management techniques, authentication protocols, data integrity, and network security mechanisms. Students will gain practical understanding of how cryptographic techniques are used to secure systems and communications, ensuring confidentiality, integrity, and availability of data in real-world applications.</p>					
Course Objectives	<p>To introduce the fundamentals of cryptographic techniques and their mathematical foundations.</p> <p>To understand symmetric and asymmetric encryption algorithms and their real-world applications.</p> <p>To explore cryptographic protocols for authentication, digital signatures, and secure communication.</p> <p>To analyze and evaluate security threats and countermeasures in digital systems and networks.</p>					
Course Outcomes	<p>CO1 (Understand): Explain fundamental concepts of cryptography and data security.</p> <p>CO2 (Analyze): Compare and analyze various encryption techniques and cryptographic protocols.</p> <p>CO3 (Apply): Implement encryption/decryption algorithms and simulate secure data communication.</p> <p>CO4 (Apply): Apply knowledge of security mechanisms to assess and solve real-time data security issues.</p>					
Module 1	Introduction to Cryptography and Number Theory		Understand	No. of Sessions: 12		
Cryptography Basics, Security Attacks, Services, Mechanisms, Symmetric vs. Asymmetric Cryptography, Modular Arithmetic, Euler's Theorem, Fermat's Theorem, Euclidean Algorithm.						
Module 2	Symmetric and Asymmetric Encryption Algorithms		Analyse	No. of Sessions: 11		
DES, Triple DES, AES, Blowfish, RC4, RSA Algorithm, ElGamal, Key Distribution and Management, Diffie-						

Hellman Key Exchange.			
Module 3	Authentication, Hashing and Digital Signatures	<input type="button" value="Apply"/>	No. of Sessions: 11
Authentication Protocols, Message Authentication Codes (MAC), Hash Functions (SHA, MD5), Digital Signatures, Public Key Infrastructure (PKI), Certificate Authorities.			
Module 4	Data Security and Network Protocols	<input type="button" value="Apply"/>	No. of Sessions: 11
IPSec, SSL/TLS, Secure Email (PGP, S/MIME), Secure E-commerce, Firewalls, Intrusion Detection Systems (IDS), Blockchain Basics for Security.

Course Code: CBD2505	Data Security and Cryptography Lab	L-T-P-C	0	0	4	2
Version No.	1.0					
Course Pre-requisites	CBD 2000 Introduction to Big Data					
Anti-requisites	NIL					
Course Description	This lab course provides practical exposure to the implementation of various cryptographic algorithms and data security mechanisms. Students will explore symmetric and asymmetric encryption methods, hashing algorithms, digital signatures, and secure data transmission protocols. Through hands-on experiments using programming tools and libraries, the course aims to build a strong foundation in securing digital information and understanding the real-world application of cryptographic techniques.					
Course Objectives	To provide practical understanding of classical and modern cryptographic algorithms.					

	<p>To develop skills in implementing data confidentiality, integrity, and authentication mechanisms.</p> <p>To enable students to simulate secure communication using encryption and hashing techniques.</p> <p>To encourage application of cryptography in real-world security scenarios such as digital signatures, SSL, and secure file transfer.</p>
Course Outcomes	<p>CO1 (Understand): Demonstrate understanding of fundamental cryptographic principles and data protection techniques.</p> <p>CO2 (Apply): Implement symmetric and asymmetric encryption algorithms using programming languages.</p> <p>CO3 (Apply): Apply hashing and digital signature mechanisms to ensure message integrity and authentication.</p> <p>CO4 (Analyze): Analyze the effectiveness of various cryptographic methods in securing data transmission and storage.</p>
List of Tools:	
<ul style="list-style-type: none"> • OpenSSL- Command-line tool for implementing SSL/TLS, certificate creation, and encryption algorithms. • CrypTool- Educational tool to demonstrate and analyze cryptographic algorithms visually. • Wireshark- Packet analyzer for network protocol analysis and examining secure communication. 	
Python with Crypto Libraries:	
<ul style="list-style-type: none"> • PyCryptodome – modern cryptographic library in Python. • cryptography – widely used high-level cryptographic package. • hashlib – built-in module for hashing (SHA, MD5). 	
List of Experiments	
<p>Week 1: Introduction to Cryptographic Tools</p> <ul style="list-style-type: none"> • Familiarization with CrypTool, OpenSSL, and GnuPG. • Basic encryption/decryption using Caesar Cipher and Monoalphabetic Cipher. 	
<hr/> <p>Week 2: Substitution and Transposition Techniques</p> <ul style="list-style-type: none"> • Implement Playfair Cipher and Hill Cipher. • Perform encryption/decryption and analyze security. 	
<hr/> <p>Week 3: Symmetric Key Cryptography – DES</p> <ul style="list-style-type: none"> • DES algorithm implementation using OpenSSL or Python (PyCryptodome). • File encryption/decryption using DES. 	
<hr/> <p>Week 4: Symmetric Key Cryptography – AES</p> <ul style="list-style-type: none"> • Implement AES encryption in ECB and CBC modes. • Analyze block cipher properties. 	

Week 5: Asymmetric Cryptography – RSA

- Key generation, encryption, and decryption using RSA (Python/Java).
- Encrypt messages and files.

Week 6: Diffie-Hellman Key Exchange Protocol

- Simulate secure key exchange between two users.
- Visualize key agreement and its mathematical basis.

Week 7: Message Digest and Hashing

- Use hashing algorithms (MD5, SHA-1, SHA-256) in Python.
- Verify message integrity using hash functions.

Week 8: Digital Signature Implementation

- Generate and verify digital signatures using GnuPG or Python.
- Understand certificate generation and validation.

Week 9: SSL/TLS Secure Communication

- Use OpenSSL to create a self-signed certificate.
- Setup a basic HTTPS server with TLS security.

Week 10: Steganography and Cryptanalysis

- Perform basic steganography (text/image) using open tools.
- Introduction to cryptanalysis techniques like brute force, frequency analysis.

Week 11: Wireless Security and WPA2 Cracking Demo (Ethical)

- Use Kali Linux tools like Aircrack-ng (in a simulated lab).
- Understand vulnerabilities in wireless protocols.

Week 12: Password Cracking Techniques

- Perform password hashing and cracking using John the Ripper or Hashcat.
- Practice using rainbow tables.

Week 13: Secure Email Communication Using GPG

- Encrypt and sign emails with GnuPG.
- Simulate secure PGP-based communication.

Week 14: Network Packet Sniffing and Analysis

- Use Wireshark to capture and analyze SSL/TLS and encrypted packets.
- Identify handshake, certificates, and cipher suites.

Week 15: Mini Project & Viva

- Students present a mini project (e.g., secure chat, encrypted file sharing).
- Viva voce to evaluate understanding of tools and cryptographic principles.

Course Title: Data Mining and Predictive Analytics

L:T:P:C – 3:0:0:3

Course Description

This course provides an introduction to data mining concepts and predictive modeling techniques. It explores data preprocessing, classification, clustering, association rule mining, and model evaluation, along with real-world applications of predictive analytics using tools like Python, R, and data mining platforms.

Course Objectives

- Understand the concepts, techniques, and algorithms in data mining
- Explore various predictive modeling and classification techniques
- Develop skills to build, evaluate, and interpret predictive models
- Apply data mining techniques to extract patterns from large datasets

Course Outcomes

CO1 (Understand): Explain fundamental concepts of data mining and predictive analytics

CO2 (Analyze): Evaluate and compare algorithms for classification, clustering, and association

CO3 (Apply): Develop predictive models using machine learning techniques

CO4 (Apply): Use data mining tools to perform pattern discovery and decision making

Course Content (45 Hours Total)

Module 1: Introduction to Data Mining and Preprocessing – 11 Sessions

Overview of data mining, KDD process, Data types and formats, Data cleaning, integration, transformation, normalization, Data reduction, Feature selection

Module 2: Classification and Prediction Techniques – 12 Sessions

Classification vs prediction, Decision trees, Naïve Bayes, k-NN, Logistic Regression, Support Vector Machines (SVM), Model accuracy, Confusion matrix, ROC, Precision-Recall

Module 3: Clustering and Association Rule Mining – 11 Sessions

Partitioning methods (k-Means), Hierarchical clustering, DBSCAN, Apriori algorithm, FP-Growth, Market basket analysis, Interestingness measures (support, confidence, lift)

Module 4: Predictive Analytics Applications – 11 Sessions

Predictive analytics in business, health, and finance, Case studies, Introduction to tools (Orange, RapidMiner, Weka, Python libraries), Model deployment and interpretation

Textbooks

Course Title: Data Mining and Predictive Analytics Lab

L:T:P:C – 0:0:2:1

Course Description

This course provides an introduction to data mining concepts and predictive modeling techniques. It explores data preprocessing, classification, clustering, association rule mining, and model evaluation, along with real-world applications of predictive analytics using tools like Python, R, and data mining platforms.

Course Objectives

- Understand the concepts, techniques, and algorithms in data mining
- Explore various predictive modeling and classification techniques
- Develop skills to build, evaluate, and interpret predictive models
- Apply data mining techniques to extract patterns from large datasets

Course Outcomes

CO1 (Understand): Explain fundamental concepts of data mining and predictive analytics

CO2 (Analyze): Evaluate and compare algorithms for classification, clustering, and association

CO3 (Apply): Develop predictive models using machine learning techniques

CO4 (Apply): Use data mining tools to perform pattern discovery and decision making

Course Content (45 Hours Total)

Module 1: Introduction to Data Mining and Preprocessing – 11 Sessions

Overview of data mining, KDD process, Data types and formats, Data cleaning, integration, transformation, normalization, Data reduction, Feature selection

Module 2: Classification and Prediction Techniques – 12 Sessions

Classification vs prediction, Decision trees, Naïve Bayes, k-NN, Logistic Regression, Support Vector Machines (SVM), Model accuracy, Confusion matrix, ROC, Precision-Recall

Module 3: Clustering and Association Rule Mining – 11 Sessions

Partitioning methods (k-Means), Hierarchical clustering, DBSCAN, Apriori algorithm, FP-Growth, Market basket analysis, Interestingness measures (support, confidence, lift)

Module 4: Predictive Analytics Applications – 11 Sessions

Predictive analytics in business, health, and finance, Case studies, Introduction to tools (Orange, RapidMiner, Weka, Python libraries), Model deployment and interpretation

List of Experiments

Week	Lab Experiment Title	Tools / Technologies
1	Introduction to Data Mining Tools and Datasets	Weka / Orange / Jupyter (Python)
2	Data Preprocessing: Cleaning, Normalization, Encoding	Python (pandas, sklearn)
3	Data Visualization and Exploration	seaborn / matplotlib
4	Implement Decision Tree Classification	Python (scikit-learn) / Weka
5	Implement Naïve Bayes Classifier	Python (scikit-learn)
6	Implement k-Nearest Neighbors (k-NN)	Python (scikit-learn)
7	Logistic Regression for Binary and Multiclass Prediction	Python (scikit-learn) / R
8	Model Evaluation: Confusion Matrix, Accuracy, Precision, Recall, F1-Score	Python (metrics module)
9	Clustering with k-Means and Visualizations	Python (scikit-learn, seaborn)
10	Hierarchical Clustering and Dendograms	scipy.cluster.hierarchy
11	Market Basket Analysis using Apriori Algorithm	Weka / mlxtend (Python)
12	FP-Growth Algorithm for Frequent Pattern Mining	Orange / Python (pyfgrowth)
13	Mini Project Part 1: Real-world classification or prediction dataset analysis	Any platform
14	Mini Project Part 2: Model building and performance reporting	Python / RapidMiner / Orange
15	Mini Project Presentation and Demonstration	Any suitable tools

💡 Recommended Tools & Libraries

- Languages: Python (pandas, scikit-learn, matplotlib, seaborn, mlxtend)
- Tools: Weka, Orange, RapidMiner, Jupyter Notebook
- Optional: R (caret, ggplot2), Tableau for visualization

Course Code: CSE2266	Course Title: Theory of Computation Type of Course: Theory Only	L- T-P- C	3	0	0	3
Version No.	2.0					
Course Pre-requisites	NIL					
Anti-requisites	Nil					
Course Description	The course deals with introduction of formal languages and the correspondence between language classes and the automata that recognize them. Topics include: Formal definitions of grammars and acceptors, Deterministic and Nondeterministic systems, Grammar ambiguity, finite state and push-down automata; normal forms; Turing machines and its relations with algorithms.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Theory of Computation as mentioned above and attain Skill Development through Problem Solving Methodologies.					
Course Out Comes	On successful completion of the course the students shall be able to: 1. Describe various components of Automata. (Knowledge) 2. Illustrate Finite Automata for the given Language. (Application) 3. Distinguish between Regular grammar and Context free grammar. (Comprehension) 4. Construct Push down Automata. (Application) 5. Construct Turing machine for a Language. (Application)					
Course Content:						
Module 1	Introduction to automata theory	Assignment	Problems on Strings and Language operations	06 Sessions		

Topics: Introduction to Automata Theory, Applications of Automata Theory, Alphabets, Strings, Languages & operations on languages, Representation of automata, Language recognizers, Finite State Machines (FSM): Deterministic FSM, Regular languages, Designing FSM, Nondeterministic FSMs				
Module 2	Finite Automata	Assignment	Problems on DFA, NFA's	13 Sessions
Topics: Basic concepts of Finite automata, DFA- definitions of DFA, Deterministic Accepters Transition Graphs and Languages and DFA's, Regular Languages, NFA- Definition of a Nondeterministic Acceptor, Languages and NFA's Why Non-determinism? Equivalence of Deterministic and Nondeterministic Finite Accepters, Reduction of the Number of States in Finite Automata.				
Module 3	Regular Expressions & Context Free Grammar	Assignment	Problems on RE, CFG, PT, PL and Ambiguity	12 Sessions
Topics: Formal Definition of a Regular Expression, Languages Associated with Regular Expressions, Languages, Regular Languages (RL) and Non-regular Languages: Closure properties of RLs, to show some languages are not RLs, Closure Properties of Regular Context Free Grammars-Examples of Context-Free Languages, Leftmost and Rightmost Derivations, Derivation Trees, Relation Between Sentential Forms and Derivation Trees, Ambiguity in Grammars and Languages: Ambiguous Grammars, Removing Ambiguity, Chomsky Normal Form, Gribiche Normal Form.				
Module 4	Push down Automata	Assignment	Problems on pushdown Automaton	08 Sessions
Topics: Definition of a Pushdown Automaton, Language Accepted by a Pushdown Automaton, Acceptance by Final State, Acceptance by Empty Stack, From Empty Stack to Final State, From Final State to Empty Stack Equivalence of PDA's and CFG's: From Grammars to Pushdown Automata.				
Module 5	Turing Machine	Assignment	Problems on Turning Machine	07 Sessions
Topics: Definition of a Turing Machine, Turing Machines as Language Accepters, Example Languages to construct Turing machine, Turing Machines as Transducers, Halting Programming Techniques for Turing Machines				
Targeted Application & Tools that can be used:				
Targeted Application: 1. Text Processing 2. Compilers 3. Text Editors 4. Robotics Applications 5. Artificial Intelligence				
Tools: 1. JFLAP (Java Formal Language and Automata Package) Software simulation tool. It's interactive educational software written in Java to experiment topics in automata theory. 2. Turing machine Online simulators.				
Text Book 1. Peter Linz, "An introduction to Formal Languages and Automata", Jones and Bartlett Publications 6 th Ed, 2018.

NPTEL course – https://onlinecourses.nptel.ac.in/noc21_cs83/preview

Topics relevant to “SKILL DEVELOPMENT”: Deterministic and Non-Deterministic Automaton, Regular Expressions, CFGs, Turning Machine and Pushdown automaton for Skill Development through Problem Solving methodologies. This is attained through assessment component mentioned in course handout.

Course Code: APT4006	Course Title: Logical and Critical Thinking Type of Course: Audited	L- T- P- C	0	0	2	0			
Version No.	1.0								
Course Pre-requisites	Students should have the basic concepts of Logical reasoning and Critical thinking, along with its applications in real life problems.								
Anti-requisites	Nil								
Course Description	This is a skill-based training program for the engineering students (Undergraduate). This course is designed to enable the students to enhance their skills in Logical reasoning and Critical thinking.								
Course Objective	The objective of the course is to familiarize the learners with concepts in Logical reasoning and Critical thinking through problem solving techniques suitable for their career development.								
Course Outcomes	On successful completion of the course the students shall be able to:								
	CO1] Understand all the concepts.								
	CO2] Apply the concepts in problem solving (Bloom's taxonomy Level 3)								
	CO3] Analyze and structure the reasoning techniques and spatial visualization skills								
Course Content:									
Module 1	Logical Thinking	Assignment				16 Hours			
	Topics:								
	Syllogisms, Cubes and Dices, Mirror and Water images, Paper cutting and Folding, Embedded figures & Completion of figures, Data Interpretation, Data sufficiency								
Module 2	Critical Thinking	Assignment				14 Hours			
	Topics:								
	Analogy, Symbol and Notations, Statement and assumption, Cause of action, Statement and conclusion, Puzzles								
	Targeted Application & Tools that can be used:								
	Application area: Placement activities and Competitive examinations.								

	Tools: LMS

Course Code: CIV7601	Course Title: Universal Human Values and Ethics Type of Course: MAC course	L-T-P-C	-	-	-	0
Course Pre-requisites	NIL					
Anti-requisites	NIL					

Course Description	<p>The purpose of the course is to develop a holistic perspective in students' life. The course adopts a self-reflective methodology of teaching and is designed to equip the students to explore their role in all aspects of living as a part of the society. It presents a universal approach to value education by developing the right understanding of reality through the process of self-exploration.</p> <p>This self-exploration develops more confidence and commitment in students enabling them to critically evaluate their pre-conditioning and present beliefs. As an outcome of the holistic approach, the students will be able to practice the ethical conduct in the social and professional life. The prime focus throughout the course is toward affecting a qualitative transformation in the life of the student rather than just a transfer of information.</p> <p>This course is designed to cater to Human Values and Professional Ethics.</p>			
Course Objective	<p>The objective of the course is 'SKILL DEVELOPMENT' of the student by using 'SELF LEARNING' techniques</p>			
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <p>CO.1 Recognize the importance of Value Education through the process of self-exploration</p> <p>CO.2 Explain the human being as the co-existence of the self and the body in harmony.</p> <p>CO.3 Describe the role of foundational values in building harmonious relationships.</p> <p>CO.4 Summarize the importance of a holistic perspective in developing ethical professional behavior.</p>			
Course Content:				
Module 1	Introduction to Value Education	Online Assessment	MCQ Quiz	5 Sessions
<p>Topics:</p> <p>Right Understanding, Relationship and Physical Facility (Holistic Development and the Role of Education), Understanding Value Education, Self-exploration as the Process for Value Education, Continuous Happiness and Prosperity – the Basic Human Aspirations, Happiness and Prosperity – Current Scenario, Method to Fulfil the Basic Human Aspirations.</p>				
Module 2	Harmony in the Human Being	Online Assessment	MCQ Quiz	5 Sessions
<p>Topics:</p> <p>Understanding Human being as the Co-existence of the Self and the Body, Distinguishing between the Needs of the Self and the Body, The Body as an Instrument of the Self, Understanding Harmony in the Self, Harmony of the Self with the Body, Programme to ensure self-regulation and Health</p>				
Module 3	Harmony in the Family and Society	Online Assessment	MCQ Quiz	5 Sessions
<p>Topics:</p> <p>Harmony in the Family – the Basic Unit of Human Interaction, 'Trust' – the Foundational Value in Relationship, 'Respect' – as the Right Evaluation, Other Feelings, Justice in Human-to-Human Relationship, Understanding Harmony in the Society, Vision for the Universal Human Order.</p>				
Module 4	Implications of the Holistic Understanding – A Look at Professional Ethics	Online Assessment	MCQ Quiz	5 Sessions

<p>Topics: Natural Acceptance of Human Values, Definitiveness of (Ethical) Human Conduct, A Basis for Humanistic Education, Humanistic Constitution and Universal Human Order, Competence in Professional Ethics, Holistic Technologies, Strategies for Transition towards Value-based Life and Profession</p>
<p>Targeted Application & Tools that can be used: Application areas are Personal life, Education and Career, Workplace , Society and Environmental Responsibility Tools: Online Tools – NPTEL and Swayam.</p>
<p>Project work/Assignment:</p>
<p>Assessment Type</p> <ul style="list-style-type: none"> •Online exams (MCQs) will be conducted by the Department of Civil Engineering through Linways.
<p>Online Link*:</p> <ol style="list-style-type: none"> 1) UHV II - https://www.youtube.com/watch?v=NhFBzn5qKIM&list=PLWDeKF97v9SO8vvjC1KyqteziTbTjN1So&pp=0gcJCWMEOCosWNin 2) Lecture by Dr. Kumar Sambhav, NPTEL course: Universal Human Values, https://onlinecourses.swayam2.ac.in/aic22_ge23/preview 3) Lecture by Dr. Padmavati, Dr Narendran Thiruthy, NPTEL Course: Biodiversity Protection, Farmers and Breeders Rights, https://nptel.ac.in/courses/129105008, 2024.

1. An attitude of enquiry.
2. Write reports

The topics related to Human values and Professional ethics:

All topics in are relevant to Human values and Professional ethics.

Course Code: CSE7000	Course Title: Internship Type of Course:	L- T-P- C	-	-	-	2
Version No.	1.0					
Course Pre-requisites	Knowledge and Skills related to all the courses studied in previous semesters.					
Anti-requisites	NIL					
Course Description	Students observe science and technology in action, develop an awareness of the method of scientific experimentation, and often get an opportunity to see, study and operate sophisticated and costly equipment. They also learn about the implementation of the principles of management they have learnt in class, when they observe multidisciplinary teams of experts from engineering, science, economics, operations research, and management deal with techno-economic problems at the micro and macro levels. Finally, it enables them to develop and refine their language, communication and inter-personal skills, both by its very nature, and by the various evaluation components, such as seminar, group discussion, project report preparation, etc. The broad-based core education, strong in mathematics and science and rich in analytical tools, provides the foundation necessary for the					

	student to understand properly the nature of real-life problems.
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Professional Practice and attain Employability Skills through Experiential Learning techniques.
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <ol style="list-style-type: none"> 1. Identify the engineering problems related to local, regional, national or global needs. (Understand) 2. Apply appropriate techniques or modern tools for solving the intended problem. (Apply) 3. Design the experiments as per the standards and specifications. (Analyze) 4. Interpret the events and results for meaningful conclusions. (Evaluate)

Semester: 6

Course Code: PG COURSE: CBD2510	Course Title:No SQL Databases Type of Course:Program Core Theory	L-T-P-C	3-0-0-3
Version No.	1.0		
Course Pre-requisites	CSE2074-DBMS		
Anti-requisites	NIL		
Course Description	Introduction to non-relational (NoSQL) data models, such as Key-Value, Document, Column, Graph and Object-Oriented database models. Advantages and disadvantages of the different data architecture patterns will be discussed. Hands-on experience with a representative sample of open-source NoSQL databases will be provided. The rapid and efficient processing of data sets with a focus on performance, reliability, and agility will be covered.		
Course Objectives	The objective of the course is to familiarize the learners with the concepts of NoSQL Databases and attain Skill Development through Experiential Learning techniques.		

Course Out Comes	On successful completion of the course the students shall be able to: 1. Understand history, fundamentals, characteristics, and main benefits of NoSQL databases. [Knowledge] 2. Comprehend different types of NoSQL databases through case studies. [Comprehension] 3. Design different types of NoSQL databases, add content, and try queries on them. [Comprehension]			
Course Content:				
Module 1	NoSQL Database Architectures	Assignment	Knowledge	No. of Classes:10
Topics: Transactions: Concurrency and Integration, ACID, NoSQL emergence and its main features, BASE for reliable database transactions, Achieving horizontal scalability with data base sharding, Brewers CAP theorem. Main Data models of NoSQL: Document Data Model, Key-Value Data Model, Columnar Data Model, Graph Data Model.				
Module 2	Document data model	Assignment	Analysis	No. of Classes:11
Topics: Characteristics of Document Data Model, Collection, Naming, CRUD Operation, Querying, Indexing, Replication, Sharding, Consistency, Update Consistency, Read Consistency, Relaxing Consistency, Capped Collection.				
Module 3	Document Data Model Hands on: Mongo DB/Cassandra	Assignment	Programming (EmbeddedLab)	No. of Classes:9
Topics: Install, Perform CRUD (create, read, update and delete) Operations, Aggregations, Data Models, Transactions, Indexes, Security, Replication and Sharding.				
Module 4	Basics of Columnar and Graph Data Models	Assignment	Comprehend	No. of Classes:15
Topics: Columnar Data Model: Comparison of columnar and row-oriented storage, Column-store Architectures: C-Store and Vector-Wise, Column-store internals and, Inserts/updates/deletes, Indexing, Adaptive Indexing and Database Cracking. Graph Data Model: Comparison of Relational and Graph Modeling, Property Graph Model Graph Analytics: Link analysis algorithm- Web as a graph, Page Rank-Markov chain, page rank computation, Topic specific page rank (Page Ranking Computation techniques: iterative processing, Random walk distribution).				
Learn MongoDB/Cassandra by doing the following <ul style="list-style-type: none"> Master the art of queries, CRUD, schema design, and data aggregation Understand scalability using sharding and replication Write code, build real-world projects and learn hands-on with Cloud Labs 				
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course				
Project Works: <ol style="list-style-type: none"> Create a database that stores road cars. Cars have a manufacturer, a type. Each car has a maximum performance and a maximum torque value. Do the following: Test Cassandras replication schema and Consistency models. Shopping Mall case study using cassandra, where we have many customers ordering items from the mall and we have suppliers who deliver them their ordered items.

More than 25% of changes are made from the earlier version. Changes are highlighted in bold.

Topics relevant to “SKILL DEVELOPMENT”: Usage of un-structured data for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: COURSE: CBD2511	Course Title: No SQL Databases Lab Type of Course: Program Core Theory	L-T-P-C	0-0-4-2
Version No.	1.0		
Course Pre-requisites			
Anti-requisites	NIL		
Course Description	Introduction to non-relational (NoSQL) data models, such as Key-Value, Document, Column, Graph and Object-Oriented database models. Advantages and disadvantages of the different data architecture patterns will be discussed. Hands-on experience with a representative sample of open-source NoSQL databases will be provided. The rapid and efficient processing of data sets with a focus on performance, reliability, and agility will be covered.		
Course Objectives	The objective of the course is to familiarize the learners with the concepts of NoSQL Databases and attain Skill Development through Experiential Learning techniques.		
Course Out Comes	On successful completion of the course the students shall be able to: 4. Understand history, fundamentals,characteristics, and main benefits of NoSQL databases. [Knowledge] 5. Comprehend different types of NoSQL databases through case studies. [Comprehension] 6. Design different types of NoSQL databases, add content, and try queries on them. [Comprehension]		
Course Content:			
Module 1	NoSQL Database Architectures	Assignment	Knowledge
			No. of Classes:6
Topics: Transactions: Concurrency and Integration, ACID, NoSQL emergence and its main features, BASE for reliable database transactions, Achieving horizontal scalability with data base sharding, Brewers CAP theorem. Main Data models of NoSQL: Document Data Model, Key-Value Data Model, Columnar Data Model, Graph Data Model.			
Module 2	Document data model	Assignment	Analysis
			No. of Classes:6
Topics: Characteristics of Document Data Model, Collection, Naming, CRUD Operation, Querying, Indexing, Replication, Sharding, Consistency, Update Consistency, Read Consistency, Relaxing Consistency, Capped Collection.			
Module 3	Document Data Model Hands on: Mongo DB/Cassandra	Assignment	Programming (Embedded Lab)
			No. of Classes:7
Topics:Install, Perform CRUD (create, read, update and delete) Operations, Aggregations, Data Models, Transactions, Indexes, Security, Replication and Sharding.			
Module 4	Basics of Columnar and Graph Data Models	Assignment	Comprehend
			No. of Classes:7

Topics:

Columnar Data Model: Comparison of columnar and row-oriented storage, Column-store Architectures: C-Store and Vector-Wise, Column-store internals and, Inserts/updates/deletes, Indexing, Adaptive Indexing and Database Cracking.

Graph Data Model: Comparison of Relational and Graph Modeling, Property Graph Model Graph Analytics: Link analysis algorithm- Web as a graph, Page Rank-Markov chain, page rank computation, Topic specific page rank (Page Ranking Computation techniques: iterative processing, Random walk distribution.

- **List of Lab Experiments**

Lab Experiments are to be conducted on the following topics

Topic 1: Install MongoDB

Topic 2: Do lab experiment to perform CRUD (create, read, update and delete).

Topic 2: Demonstrate Aggregations in NoSQL with a real-life application.

Topic 3: Demonstrate different aspect of transactions in NoSQL by taking suitable problem.

Topic 5: Show making indexes in NoSQL with a suitable application.

Topic 6: Illustrate security features of NoSQL with a suitable problem. Topic 6: Explain Sharding concept practically through a suitable example.

Targeted Applications(few are as given below):

1. Content Management systems are pretty common. All the comments on posts on social media are contained in a separate database. In MongoDB, a model has been designed to store such comments and is known as "MetaData and Asset Management".

2. MongoDB is widely used for storing product information and details by finance and e-commerce companies. You can even store the product catalogue of your brand in it.

3. MongoDB can also be used to store and model machine-generated data. For this, you can learn the "Storing Log data" document. This is known as operational intelligence.

List of MongoDB Tools

- MongoDB Compass.
- Mongo Management Studio.
- MongoJS Query Analyzer.
- Nucleon Database Master.
- NoSQLBooster.
- Studio 3T.
- MongoDB Spark Connector.

3. MongoDB Charts.**Text Books**

Course Code: CBD2512	Course Title: Web Intelligence and Analytics Type of Course: Theory	L- T- P- C	2-0-0-2	
Version No.	1.0			
Course Pre-requisites	CBD2000			
Anti-requisites				
Course Description	This course is an introduction to Web Analytics and Web Intelligence - is not intended to provide an in-depth review of marketing principles and concepts. Nor is it intended to provide an in-depth explanation or review of statistical analysis principles, though some of these principals and concepts will be mentioned from time to time in the lectures and reading materials. Rather, this course will give you the mastery of analytics to a sufficient degree to deploy Web Analytics platforms within your organizations and gain meaningful insights from them that can drive the bottom line.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Web Intelligence and Analytics and attain Skill Development through Experiential Learning techniques.			
Course Out Comes	<p>On successful completion of the course the students shall be able to:</p> <ol style="list-style-type: none"> 1. A grounded understanding of web intelligence and business analytics terminology related to the above. 2. How to deploy web intelligence to improve the outcomes of your marketing or business plan. 3. How Analysts impact the bottom line (their role) within various businesses and lines of business 4. Growth potentials for Web Analysts and Big Data professionals 			
Course Content:				
Module 1	INTRODUCTION TO INTELLIGENT WEB	Assignment	Data Collection/Interpretation	6 Sessions
INTRODUCTION TO INTELLIGENT WEB -Inside the search engine - Examples of intelligent web applications - Basic elements of intelligent applications - Machine learning, data mining – Searching, Reading, indexing, and searching.				
Module 2	LISTEN AND LOAD	Case studies / Case let	Case studies / Case let	6 Sessions
LISTEN AND LOAD- Streams, Information and Language, - Statistics of Text - Analyzing Sentiment and Intent – Load - Databases and their Evolution, Big data Technology and Trends.				

Module 3	CLUSTERING AND CLASSIFICATION	Quiz	Case studies / Case let	9 Sessions
CLUSTERING AND CLASSIFICATION An overview of clustering algorithms - Clustering issues in very large datasets - The need for classification - Automatic categorization of emails and spam filtering - Classification with very large datasets - Comparing multiple classifiers on the same data.				
Module4- REASONING (4 hours) Reasoning: Logic and its Limits, Dealing with Uncertainty - MechanicalLogic - The Semantic Web - Limits of Logic - Description and Resolution - Collective Reasoning.				
Module-5 PREDICTING (6 hours) Statistical Forecasting - Neural Networks - Predictive Analytics - Sparse Memories - Sequence Memory - Network Science – Data Analysis: Regression and Feature Selection - Case Study - set of retrieved and processed news stories.				
List of Laboratory Tasks: Laboratory Work: to analyzing the web for various functionalities given in the subject and using various tools and technologies to do the experimentation. It also involves installation and working on tools and technologies in this domain.

Course Code: CSE2258	Course Title: Web Technology Type of Course: Program core Theory	L-T P- C3	0	0	3
Version No.	2.0				
Course Pre-requisites	NIL				
Anti-requisites	NIL				
Course Description	This course highlights the basic web design using Hypertext Markup Language and Cascading Style Sheets. Students will be trained in planning and designing effective web pages by writing code using current leading trends in the web domain, enhancing web pages with the use of page layout techniques, text formatting, graphics, images, and multimedia. The focus is on popular key technologies that will help students to build Internet- and web-based applications that interact with other applications and with databases.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Web Technology and attain Skill Development through Experiential Learning techniques.				

Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <p>CO1: Implement web-based application using client-side scripting languages. (Application level)</p> <p>CO2: Apply various constructs to enhance the appearance of a website. (Application level)</p> <p>CO3: Illustrate java-script concepts to demonstrate dynamic web site (Application level)</p> <p>CO4: Apply server-side scripting languages to develop a web page linked to a database. (Application level)</p>			
Course Content:				
Module 1	Introduction to XHTML	Quizzes and Assignments	Quizzes on various features of XHTML, simple applications	10 Sessions
<p>Topics:</p> <p>Basics: Web, WWW, Web browsers, Web servers, Internet.</p> <p>XHTML: Origins and Evolution of HTML and XHTML: Basic Syntax, Standard XHTML Document Structure, Basic Text Markup, Images, Hypertext Links, Lists, Tables, Forms, Frames, Syntactic Differences between HTML and XHTML.</p>				
Module 2	Advanced CSS	Quizzes and assignments	Comprehension based Quizzes and assignments; Application of CSS in designing webpages	8 Sessions
<p>Topics:</p> <p>CSS: Introduction to CSS, Defining & Applying a style, Creating style sheets, types of style sheet, selectors, CSS font properties, border properties, Box model, opacity, CSS pseudo class and pseudo-elements.</p> <p>Advanced CSS: Layout, Normal Flow, Positioning Elements, Floating Elements, Responsive Design, CSS Frameworks</p> <p>XML: Basics, demonstration of applications using XML</p>				
Module 3	Fundamentals of JavaScript	Quizzes and assignments	Application of JavaScript for dynamic web page designing	10 Sessions
<p>Topics:</p> <p>JavaScript: Introduction to JavaScript, Basic JavaScript Instructions, Functions, Methods & Objects, Decisions and Loops, Document Object Model, Event handling, handling window pop-ups, JavaScript validation.</p>				
Module 4	PHP – Application Level	Quizzes and assignments	Application of PHP in web designing	14 Sessions
<p>Topics:</p> <p>PHP: Introduction to server-side Development with PHP, Arrays, \$_GET and \$_POST, \$_FILES Array, Reading/Writing Files, PHP Classes and Objects, Working with Databases, SQL, Database APIs, Managing a MySQL Database.</p> <p>Accessing MySQL in PHP.</p>				
<p>Targeted Application & Tools that can be used:</p> <p>Xampp web server to be used to demonstrate PHP.</p>				
<p>Project work/Assignment:</p> <p>Assignments are given after completion of each module which the student need to submit within the stipulated deadline.</p>				

Course Code: CSE2259	Course Title: Web Technologies Lab				L-T- P- C	0	0	2	1				
Version No.	1.0

(Apply)</p>												
Course Content:													
Module 1	Introduction to XHTML Features	Quizzes and Assignments	Quizzes on various features of XHTML, simple applications		8 Sessions								
	Standard XHTML Document Structure, Basic Text Markup such as headings, paragraphs, lists, tables, forms, and semantic tags.												
Module 2	CSS Styling	Quizzes and assignments	Comprehension based Quizzes and assignments; Application of CSS in designing webpages		10 Sessions								
	Apply CSS3 to style HTML elements, including layout techniques, color schemes, typography, and responsive design principles.												
XML: Basics, Demonstration of applications using XML with XSLT.													
Module 3	PHP – Application Level	Quizzes and assignments	Application of PHP in web designing	12 Sessions									

PHP: Introduction to server-side Development with PHP, Arrays, Superglobal Arrays, \$GET and \$ POST, \$_SERVER Array, \$_Files Array, Reading/Writing Files, PHP Classes and Objects, Object Oriented Design, Working with Databases, SQL, Database APIs, Managing a MySQL Database. Accessing MySQL in PHP, Applications.

List of Laboratory Tasks:

Experiment No. 1: Demonstration of XHTML features

Level 1: Demonstration of various XHTML Tags (Level 1)

Level 2: Design and develop static web pages for an online Book store (Level 2).

Experiment No. 2: Application of CSS in web designing

Level 1: Design a document using XHTML and CSS to create a catalog of items for online electronic shopping.

Level 2: Create and save XML document for students' information and display the same using cascaded style sheet.

Experiment No. 3: Application of PHP in web designing.

Level 1: Write a PHP program to read the personal information of a person such as first name, last name, age, permanent address, and pin code entered by the user into a table created in MySQL. Read the same information from the database and display it on the front end.

Level 2: Using PHP develop a web page that accepts book information such as ISBN number, title, authors, edition, and publisher and store information submitted through the web page in MySQL database.

Experiment No. 4: Building a website.

Build a website for organizing an International Conference. The conference website must be able to collect the author's details and upload a file.

Targeted Application & Tools that can be used: Xampp web server to be used to demonstrate PHP.

Project work/Assignment:

Assignments are given after completion of each module which the student need to submit within the stipulated deadline.

 Designing the website for healthcare.

Course Code: CSE2262	Course Title: Analysis of Algorithms Type of Course: THEORY Only			L-T-P-C	3	0	0	3
Version No.	1.0							
Course Pre-requisites	CSE2001							
Anti-requisites	Nil							
Course Description	This course introduces techniques for the design and analysis of efficient algorithms and methods of applications. This course discusses the classic approaches for algorithm design such as Divide and Conquer, Dynamic Programming, Greedy method. This course also describes other basic strategies searching solution space. The core concepts of analyzing algorithms and classifying them into various complexity classes is covered in the end.							
Course Objective	The objective of the course is to familiarize the learners with the concepts of Analysis of Algorithms and attain Skill Development through Problem Solving Methodologies.							
Course Out Comes	On successful completion of the course the students shall be able to: 1. Compute efficiency of a given algorithm.[Applying] 2. Apply divide and conquer technique for searching and sorting Problems.[Applying] 3. Apply the Dynamic Programming technique for a given problem. [Applying] 4. Apply greedy technique for solving a Problem.[Applying] 5. Demonstrate Back tracking technique and limitations of Algorithms.[Applying]							
Course Content:								
Module 1	Introduction	Assignment	Simulation/Data Analysis	10 Sessions				
Introduction, Asymptotic Notations and its properties, Best case, worst case and average case- Sequential search, Sorting; Mathematical analysis for Recursive and Non-recursive algorithms: Substitution method and Master’s Theorem.								
Module 2	Divide-and-conquer	Assignment	Simulation/Data Analysis	08 Sessions				
Introduction. Insertion Sort; Merge sort, Quick sort, Binary search.								
Module 3	Dynamic programming	Term paper/Assignment	Simulation/Data Analysis	10 Sessions				
Introduction with examples, Principles of Memoization, 0-1 Knapsack Problem, Bellman-Ford algorithm, Floyd-Warshall’s Algorithms. Chain Matrix Multiplication.								
Module 4	Greedy technique	Term paper/Assignment	Simulation/Data Analysis	09 Sessions				

Introduction, Fractional Knapsack Problem, Minimal Spanning Tree: Prim's Algorithm and Kruskal's Algorithm, Single-source Shortest Path: Dijkstra's Algorithm

Module 5	Complexity Classes	Term paper/Assignment	Simulation/Data Analysis	08 Sessions
Complexity Classes- P,NP- NP Hard and NP Complete - Boolean Satisfiability Problem (SAT).				
Branch and Bound: Knapsack problem; Backtracking, - N-Queens problem.

Apply greedy technique for solving a Problem. [Applying] 5. Demonstrate Back tracking technique and limitations of Algorithms. [Applying] 		
Course Content			
Module 1	Introduction		3 Sessions
Measuring running time of an algorithm, Compare running time of algorithms, Implement sorting algorithms such as bubble sort, selection sort			
Module 2	Divide-and-conquer		3 Sessions
Compare searching algorithms: Linear Search, Binary Search; Compare Sorting algorithms: Insertion Sort, Merge Sort, QuickSort.			
Module 3	Dynamic programming		3 Sessions
Introduction and memorization: Factorial; Coin Change Problem ; Floyd-Warshall's Algorithm.			
Module 4	Greedy technique		3 Sessions
Fractional Knapsack Problem; Minimal Spanning Tree Algorithms-Prim's Algorithm, Kruskal's algorithm			
Module 5	Complexity Classes		3 Sessions
Branch and Bound: Knapsack problem; Backtracking, - N-Queens problem.			
	<p>List of Laboratory Tasks:</p> <ol style="list-style-type: none"> 1. Measuring running time of an algorithm Objective: To experimentally determine the running time of basic algorithms for input size $n=10, 100, 1000$, etc. by taking difference of starting time and ending time. 2. Compare running time of algorithms Objective: To execute two algorithms to solve the same problem, and to comparatively evaluate the better algorithm for large values of N. 3. Implement sorting algorithms such as bubble sort, selection sort Objective: To implement comparison based sorting strategies. 4. Compare searching algorithms 		

	<p>Objective: To implement two searching strategies and compare their performance.</p> <p>5. Compare Sorting algorithms</p> <p>Objective: To implement searching strategies that follow top down design approach(Insertion sort, merge sort).</p> <p>6. Quick Sort</p> <p>Objective: To demonstrate Quick sort and its variants, and their impact on running time.</p> <p>7. Dynamic Programming</p> <p>Objective: To demonstrate Dynamic Programming approach with the help of Factorial algorithm.</p> <p>8. Coin Change Problem</p> <p>Objective: To implement an efficient algorithm for the Coin Change problem.</p> <p>9. Floyd-Warshall's Algorithm</p> <p>Objective: To demonstrate how dynamic programming is used with the help of Floyd-Warshall's algorithm.</p> <p>10. Fractional Knapsack Problem</p> <p>Objective: To demonstrate how greedy method can be used to solve the Fractional Knapsack Problem.</p> <p>11. Course Code: CSE2274	Course Title: Competitive Programming and Problem Solving	L-T-P-C	0	0	4	2
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	<p>The Competitive Programming and Problem Solving course equips students with efficient problem-solving skills for coding competitions and real-world challenges. Starting with brute-force solutions, students learn to optimize time and space complexity using advanced techniques like dynamic programming, greedy algorithms, and backtracking. Hands-on practice on platforms like CodeChef and Codeforces helps tackle problems involving number theory, data structures, and algorithmic paradigms. By understanding CP constraints and fostering a strategic mindset, students gain the confidence to excel in competitions, technical interviews, and practical applications.</p>					
Course Out Comes	<p>On successful completion of the course the students shall be able to:</p> <p>CO1 : Understanding the issues of online platforms and Competitive Programming (CP) and developing brute force coding for commonly asked CP problems.</p> <p>CO2 : Analyzing the space and time complexity of brute force solutions and designing efficient solutions.</p>					

	<p>CO3 : Evaluating the applicability of suitable algorithmic approaches to solve relevant CP problems.</p> <p>CO4: Creating efficient solutions of CP problems using the learnt algorithmic approaches.</p>
Course Objective	The objective of the course is to familiarize the learners with the concepts of Competitive Programming and Problem Solving and attain Skill Development through Experiential Learning techniques.
Module 1: Introduction to Competitive Programming	
Overview of Efficient Coding for Problem Solving and CP: Introduction to competitive programming (CP); revisit of complexity analysis; introduction to online platforms such as codechef, codeforces etc and online submission; constraints during CP, online testing process and common errors such as TLE; use of STL	
Module 2: Number Theory for Problem-Solving	
Use of Number Theory for problem-solving: reducing time/space complexity of brute force coding solution of Sieve Method, Inverse Module, Euclidian Method of factorization; efficient coding for Permutation Combination; XORing based and pattern-based solutions.	
Module 3: Optimizing Time & Space Using Sequential Storage	
Coding for Optimizing time and Space using Sequential Storage: two pointer approach; problem-solving using arrays and strings such as rotation on sorted arrays, duplicate removal, string matching algorithms; Kadane's algo, stacks, priority-queues and hashing based efficient coding; median based problems and alternate solutions.	
Module 4: Non-Linear Data Structures	
Applying Non-Linear Data Structures for real-life problems: design of efficient solutions for problems such as finding loops in a linked list, memory efficient DLL, block reversal in LL; problem solving using trees and binary trees, Catalan numbers, applications of graphs, spanning tree and path algos for CP problems with reduced time/space complexity.	
Module 5: Problem Solving using Advanced Topics	
CP Problem Solving using Advanced Topics: concept of disjoint sets and their efficient representation, algorithmic approaches such as Greedy, Backtracking, Dynamic Programming and applying them for CP problems using bottom-up dynamic programming.	
List of Laboratory Tasks:	
<ol style="list-style-type: none"> 1. You are given the finishing times of 'N' runners in a marathon. Write a program to find the runner who finished in the third position. Focus: Basic data structures (arrays), sorting algorithms (e.g., insertion sort, selection sort), and basic input/output. 2. In the same marathon, you are given the finishing times of 'N' runners and their bib numbers. Write a program to efficiently find the top 10 runners and their corresponding bib numbers. Focus: Efficient sorting algorithms (e.g., merge sort, quick sort), data structures like priority queues, and optimizing for large datasets. 3. A library maintains a list of books with their unique IDs. Write a program to check if a given book ID is present in the library. Focus: Searching algorithms (linear search), basic data structures (arrays or lists). 4. The library wants to implement a system to quickly find books by their titles. Suggest an efficient data structure (e.g., a hash table or a trie) and explain how to implement it to achieve fast book lookups. Focus: Understanding 	

the trade-offs between different data structures, choosing the most appropriate data structure for a specific problem, and implementing efficient search operations.

5. An online store sells products with different prices. Write a program to calculate the total cost of a given list of products. **Focus:** Basic arithmetic operations, working with arrays or lists to store product prices.
6. The online store offers discounts based on the total purchase amount. Design an algorithm to efficiently calculate the final cost of an order, considering different discount rules (e.g., percentage discounts, fixed amount discounts, tiered discounts). **Focus:** Algorithmic design, conditional statements, handling complex scenarios with multiple rules, and potentially using dynamic programming techniques for optimization.
7. You are given two integers, 'a' and 'm'. Calculate 'a' raised to the power 'm' modulo a large prime number 'p'. **Focus:** Basic modular arithmetic operations (modular exponentiation), understanding the modulo operator.
8. In a secure communication system, you need to efficiently compute the modular exponentiation for very large values of 'm'. Implement and analyze the efficiency of the binary exponentiation algorithm for this task. **Focus:** Efficient algorithms for modular exponentiation (binary exponentiation), time complexity analysis, and understanding the importance of efficient algorithms in cryptography.
9. You have a deck of 'N' cards. Calculate the total number of possible hands of size 'K' that can be drawn from the deck. **Focus:** Basic combinatorics (combinations), factorial calculations.
10. In a card game, you need to calculate the probability of drawing certain combinations of cards (e.g., a pair, a three-of-a-kind) from a shuffled deck. Design an efficient algorithm to calculate these probabilities. **Focus:** Advanced combinatorics (permutations and combinations with repetitions), probability calculations, and optimizing calculations to avoid overflows.
11. You are given a network of devices represented as a graph. Determine if there is a path between two given devices in the network. **Focus:** Graph traversal algorithms (depth-first search or breadth-first search).
12. In a secure network, you need to detect and isolate compromised devices. Design an algorithm that efficiently identifies devices that exhibit anomalous behavior (e.g., unusual traffic patterns) using XOR-based techniques for data comparison and pattern matching. **Focus:** Applying XOR operations for data comparison and pattern recognition, understanding the properties of XOR (e.g., commutative, associative), and designing algorithms for network anomaly detection.
13. You are given an array representing the speeds of cars on a highway. Find the minimum time required for all cars to pass a certain point. **Focus:** Basic array traversal, finding the minimum element in an array.
14. In a more realistic scenario, cars have different lengths. Implement a two-pointer approach to simulate the movement of cars and determine the minimum time for all cars to pass a given point. **Focus:** Two-pointer technique, simulating real-world scenarios with arrays, optimizing time complexity.
15. Given a string, find the number of occurrences of a specific substring within the string. **Focus:** Basic string manipulation, string matching (brute-force approach).
16. Implement the KMP (Knuth-Morris-Pratt) string matching algorithm to efficiently find all occurrences of a given pattern within a large text document. **Focus:** Advanced string matching algorithms, understanding the concept of the "next" array in KMP, optimizing for large input sizes.
17. An online auction platform receives bids for different items. Implement a data structure (e.g., a priority queue) to efficiently track the highest bid for each item. **Focus:** Priority queues, insertion and extraction operations on priority queues, basic implementation of a priority queue using an array or a suitable library.
18. The auction platform needs to handle a large number of bids concurrently. Design and implement a system that efficiently processes bids, updates the highest bid for each item, and handles potential race conditions. **Focus:** Concurrent data structures and algorithms, thread safety, handling race conditions, optimizing for high-throughput scenarios.

19. A social network can be represented as a graph where users are nodes, and connections between users are edges. Write an algorithm to find if two given users are connected in the network. **Focus:** Graph traversal algorithms (depth-first search or breadth-first search), basic graph representation (adjacency list or adjacency matrix).
20. In a large social network, efficiently finding the shortest path between two users is crucial. Implement Dijkstra's algorithm to find the shortest paths between users in the network, considering edge weights (e.g., representing the strength of connections). **Focus:** Shortest path algorithms (Dijkstra's algorithm), graph algorithms with weighted edges, optimizing for large graphs.
21. A file system can be modeled as a tree structure. Implement a function to traverse the file system and print the names of all files and directories. **Focus:** Tree traversal algorithms (depth-first search or breadth-first search), basic tree representation (using nodes and pointers).
22. Design and implement a file system that supports efficient operations like creating directories, deleting files, and finding files based on their names or paths. Consider using a combination of tree structures and hash tables for efficient indexing and searching. **Focus:** Designing and implementing file system structures, using multiple data structures together, optimizing for common file system operations.
23. An online shopping cart can be represented as a tree, where each node represents an item or a category of items. Write an algorithm to calculate the total price of all items in the shopping cart. **Focus:** Tree traversal, calculating sums within a tree structure.
24. Implement a system that allows customers to apply discounts and coupons to their shopping carts. Consider using a combination of trees and other data structures (e.g., hash tables) to efficiently apply discounts and calculate the final price. **Focus:** Applying discounts and promotions to tree-like structures, efficient implementation of discount rules, optimizing for complex pricing scenarios.
25. In a social network, users can form groups. Given a list of friendships, determine if all users in a specific group are connected (directly or indirectly) through friendships. **Focus:** Disjoint set union (DSU) data structure, basic connectivity checks.
26. Design an efficient algorithm to find the minimum number of new friendships needed to connect all users in the social network into a single, connected component. **Focus:** Applying DSU for finding connected components, greedy algorithms, optimization for minimizing connections.
27. A treasure hunt involves a series of clues leading to the final treasure. Given a list of possible paths and their associated costs, find the cheapest path to reach the treasure. **Focus:** Greedy algorithms (e.g., Dijkstra's algorithm for shortest paths), basic graph representation.
28. In a more complex treasure hunt, there are time constraints associated with each path. Design an algorithm to find the fastest path to the treasure while considering both path costs and time constraints.
Focus: Combining greedy approaches with other techniques (e.g., priority queues), handling multiple constraints, optimizing for time-critical scenarios.
29. In a simplified chess game with only rooks, determine the minimum number of moves required for a rook to reach a specific target square on an empty board. **Focus:** Breadth-first search (BFS) on a graph (the chessboard), basic graph traversal.
30. In a more realistic chess game with multiple pieces and obstacles, implement a minimax algorithm with alpha-beta pruning to determine the best move for a player. **Focus:** Game tree search, minimax algorithm, optimization techniques like alpha-beta pruning, handling complex game states.

Targeted Application & Tools that can be used:

1. C or C++ Compiler (g++): The standard compiler for CP. Familiarize students with compilation flags (e.g., -O2 for optimization).

2. IDE (Integrated Development Environment): Code:: Blocks, Visual Studio, CLion, or similar IDEs. These provide debugging capabilities, code completion, and other helpful features.
3. Online Judges (CodeChef, Codeforces, LeetCode, HackerRank): Essential for practicing and submitting solutions.
4. Debugger (gdb): Crucial for understanding code execution and finding bugs. Origin, excel and Mat lab soft wares for programming and data analysis.
5. Number Theory Libraries: Some libraries provide pre-built functions for number theory operations (though often it's better to implement them yourself for learning).
6. Wolfram Alpha: A useful tool for verifying number theory calculations and exploring concepts.
7. **String Libraries:** Familiarize students with the string manipulation functions available in C++.
8. **Graph Visualization Tools:** Tools like Graphviz can be helpful for visualizing graphs and understanding graph algorithms.
9. **DP Debugging Techniques:** Practice debugging DP solutions, as they can be complex. Visualizing the DP table can be helpful.

Course Code: LAW7601	Indian Constitution Type of Course: MOOC course	L-T-P-C - - - 0
-------------------------	--	--------------------

		Contact hours	-	-	-	-	-							
Course Pre-requisites	NIL													
Anti-requisites	NIL													
Course Description	<p>This course is designed to improve the learners' SKILL DEVELOPMENT by using PARTICIPATIVE LEARNING techniques. This course aims to familiarize students with fundamentals of Indian Constitution concepts and their relevance to 75+ Years of Republic of India (https://constitution75.com/) as well as #AzaadiKaAmritMahotsav / Azadi Ka Amrit Mahotsav (https://amritmahotsav.nic.in). It is designed to equip students with the knowledge about the Constitution of India. This course aims to introduce the constitutional law of India to students from all walks of life and help them understand the constitutional principles as applied and understood in everyday life. The objective of making the Constitution of India, familiar to all students, and not only to law students, this course aims and objectifies legal understanding in the simplest of forms.</p> <p>This course is designed to cater to Constitutional Studies.</p>													
Course Objective	The objective of the course is 'SKILL DEVELOPMENT' of the student by using 'PARTICIPATIVE LEARNING' techniques													
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <ol style="list-style-type: none"> 1. Describe the basic understanding of the Indian Constitution and the concepts and issues relevant to day-to-day life of the nation and to equip the Citizen with the zeal of capacity building. Recognizing and identify the values of the Constitution of India. 2. Enabling the Citizen-centric Awareness of Rights and Responsibilities of the State 3. Explain the role of the State actors in building India. 4. Understanding the Gandhian vision over the power of the LSG (Local Self-Governance) 													
Course Content:														
Module 1	Understanding the Making of the Constitution: The Constituent Assembly & The Constitution of India													
Topics:														
Historical Context of Constituent Assembly - Compositions & Functions of Constituent Assembly														
What is a Constitution? – Why have a Constitution? – Constitutional Change - Features of Indian Constitution – Preamble of Indian Constitution														
Module 2	Citizen's Fundamental Rights and State's Responsibilities (Directive Principles)													
Topics:														
Introduction to Fundamental Rights - Right to Equality – Facets of Right to Equality - Right to Freedom - Constitutional Position of Some Democratic Rights - Right Against Exploitation - Right to Freedom of Religion - Right to Constitutional Remedies														
Directive Principles of the State Policy														
Module 3	Organs Of the Government													
Topics:														
Executive: The President of India - Powers and Functions of President of India - Emergency Powers and the Position of the President														
Legislature: Union Council of Ministers - Prime Minister - The Rajya Sabha - The Lok Sabha - Relation between the Lok Sabha & Rajya Sabha - Office of the Speaker – Important Parliamentary Committees														
Judiciary: The Structure and Organization of the Judiciary & the High Court - The Supreme Court - Role of The Supreme Court - Judicial Activism in India - Basic Structure Doctrine & PIL														
Module 4	Federalism & Decentralization													
Topics:														

What is Federalism? - Centre-State Legislative Relations - Centre-State Administrative Relations - Centre-State Financial Relations

The 5th & 6th Schedules - Municipality- (History of Indian Municipality, Organization & Functions) – Panchayat 1 (Idea of Panchayat, Organization and Powers of Panchayats in India)

Targeted Application & Tools that can be used:

Application areas to familiarize students with fundamentals of Indian Constitutional concepts.

Tools: Online Tools – NPTEL and Swayam.

Project work/Assignment:

Assessment Type

- Online end term exam will be conducted as notified by the Presidency University.

<p>Course Code: CBC2507</p> <p>Course Title: Token Standards and Creation</p> <p>L:T:P:C – 3:0:0:3</p> <p>Total Hours: 45</p> <p>Prerequisite: CBC2000 – Foundations of Blockchain Technology</p>
--

Course Description

This course provides a comprehensive understanding of tokenization in blockchain systems. It covers various token standards (like ERC and BEP series), token creation processes, smart contract deployment, and real-world applications such as NFTs and utility tokens. The course emphasizes hands-on learning by building and deploying tokens on blockchain networks.

Course Objectives

- Understand the principles and need for tokenization in blockchain systems
- Explore various token standards across public blockchains
- Learn to create and deploy tokens using smart contracts
- Analyze use-cases of fungible and non-fungible tokens in real-world ecosystems

Course Outcomes

- **CO1 (Understand):** Explain the concept of tokenization and differentiate between fungible and non-fungible tokens
- **CO2 (Analyze):** Compare various token standards and evaluate their use cases
- **CO3 (Apply):** Develop and deploy ERC-20 and BEP-20 tokens on Ethereum and BNB chains
- **CO4 (Apply):** Create and deploy NFTs using ERC-721/1155 and demonstrate their usage in real-world applications

Course Content (Total: 45 Hours)

Module 1: Introduction to Tokenization (10 Sessions)

Definition and types of tokens (utility, security, governance), Fungible vs Non-Fungible Tokens (NFTs), Role of tokens in DeFi and Web3, Token economics (tokenomics), Token lifecycle and distribution models

Module 2: Token Standards Overview (12 Sessions)

Ethereum Token Standards: ERC-20, ERC-721, ERC-777, ERC-1155, Binance Smart Chain Token Standards: BEP-2, BEP-20, Comparison of standards, use cases in games, metaverse, finance

Module 3: Smart Contract-Based Token Creation (11 Sessions)

Writing smart contracts for ERC-20/ERC-721 using Solidity, Contract structure and metadata, Minting, burning, transferring, access control, Testing, deploying tokens using Remix, Truffle, and Hardhat

Module 4: Token Integration and Case Studies (12 Sessions)

Wallets and token interaction (MetaMask, Trust Wallet), Interfacing tokens in DApps, NFT marketplaces and royalties, Security considerations in token contracts, Case studies: Uniswap token, Bored Ape NFTs, Chainlink, Axie Infinity

Course Code: PGCOURSE: CBD2510	Course Title: NoSQL Databases Type of Course: Program Core Theory			L-T-P-C	3-0-0-3
Version No.	1.0				
Course Pre-requisites	CSE2074-DBMS				
Anti-requisites	NIL				
Course Description	Introduction to non-relational (NoSQL) data models, such as Key-Value, Document, Column, Graph and Object-Oriented database models. Advantages and disadvantages of the different data architecture patterns will be discussed. Hands-on experience with a representative sample of open-source NoSQL databases will be provided. The rapid and efficient processing of data sets with a focus on performance, reliability, and agility will be covered.				
Course Objectives	The objective of the course is to familiarize the learners with the concepts of NoSQL Databases and attain Skill Development through Experiential Learning techniques.				
Course Out Comes	On successful completion of the course the students shall be able to: 7. Understand history, fundamentals, characteristics, and main benefits of NoSQL databases. [Knowledge] 8. Comprehend different types of NoSQL databases through case studies. [Comprehension] 9. Design different types of NoSQL databases, add content, and try queries on them. [Comprehension]				
Course Content:					
Module 1	NoSQL Database Architectures	Assignment	Knowledge	No. of Classes:10	
Topics: Transactions: Concurrency and Integration, ACID, NoSQL emergence and its main features, BASE for reliable database transactions, Achieving horizontal scalability with data base sharding, Brewer's CAP theorem. Main Data models of NoSQL: Document Data Model, Key-Value Data Model, Columnar Data Model, Graph Data Model.					
Module 2	Document data model	Assignment	Analysis	No. of Classes:11	
Topics: Characteristics of Document Data Model, Collection, Naming, CRUD Operation, Querying, Indexing, Replication, Sharding, Consistency, Update Consistency, Read Consistency, Relaxing Consistency, Capped Collection.					
Module 3	Document Data Model Hands on: Mongo DB/Cassandra	Assignment	Programming (Embedded Lab)	No. of Classes:9	
Topics: Install, Perform CRUD (create, read, update and delete) Operations, Aggregations, Data Models, Transactions, Indexes, Security, Replication and Sharding.					

Module 4	Basics of Columnar and Graph Data Models	Assignment	Comprehend	No. of Classes:15
Topics:				
Columnar Data Model: Comparison of columnar and row-oriented storage, Column-store Architectures: C-Store and Vector-Wise, Column-store internals and, Inserts/updates/deletes, Indexing, Adaptive Indexing and Database Cracking.				
Graph Data Model: Comparison of Relational and Graph Modeling, Property Graph Model Graph Analytics: Link analysis algorithm- Web as a graph, Page Rank-Markov chain, page rank computation, Topic specific page rank (Page Ranking Computation techniques: iterative processing, Random walk distribution.				
Learn MongoDB/Cassandra by doing the following				
<ul style="list-style-type: none"> • Master the art of queries, CRUD, schema design, and data aggregation • Understand scalability using sharding and replication • Write code, build real-world projects and learn hands-on with Cloud Labs 				
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course				
Project Works:				
4. Create a database that stores road cars. Cars have a manufacturer, a type. Each car has a maximum performance and a maximum torque value. Do the following: Test Cassandras replication schema and Consistency models.				
5. Shopping Mall case study using cassendra, where we have many customers ordering items from the mall and we have suppliers who deliver them their ordered items.

Topics: Install, Perform CRUD (create, read, update and delete) Operations, Aggregations, Data Models, Transactions, Indexes, Security, Replication and Sharding.				
Module 4	Basics of Columnar and Graph Data Models	Assignment	Comprehend	No. of Classes: 7
<p>Topics:</p> <p>Columnar Data Model: Comparison of columnar and row-oriented storage, Column-store Architectures: C-Store and Vector-Wise, Column-store internals and, Inserts/updates/deletes, Indexing, Adaptive Indexing and Database Cracking.</p> <p>Graph Data Model: Comparison of Relational and Graph Modeling, Property Graph Model Graph Analytics: Link analysis algorithm- Web as a graph, Page Rank-Markov chain, page rank computation, Topic specific page rank (Page Ranking Computation techniques: iterative processing, Random walk distribution.</p> <ul style="list-style-type: none"> List of Lab Experiments <p>Lab Experiments are to be conducted on the following topics</p> <p>Topic 1: Install MongoDB</p> <p>Topic 2: Do lab experiment to perform CRUD (create, read, update and delete). Topic 2: Demonstrate Aggregations in NoSQL with a real-life application.</p> <p>Topic 3: Demonstrate different aspect of transactions in NoSQL by taking suitable problem. Topic 5: Show making indexes in NoSQL with a suitable application.</p> <p>Topic 6: Illustrate security features of NoSQL with a suitable problem. Topic 6: Explain Sharding concept practically through a suitable example.</p>				
<p>Targeted Applications(few are as given below):</p> <p>4. Content Management systems are pretty common. All the comments on posts on social media are contained in a separate database. In MongoDB, a model has been designed to store such comments and is known as "MetaData and Asset Management".</p> <p>5. MongoDB is widely used for storing product information and details by finance and e-commerce companies. You can even store the product catalogue of your brand in it.</p> <p>6. MongoDB can also be used to store and model machine-generated data. For this, you can learn the "Storing Log data" document. This is known as operational intelligence.</p> <p>List of MongoDB Tools</p>				

- MongoDB Compass.
- Mongo Management Studio.
- MongoJS Query Analyzer.
- Nucleon Database Master.
- NoSQLBooster.
- Studio 3T.
- MongoDB Spark Connector.

6. MongoDB Charts.

More than 25% of changes are made from the earlier version. Changes are highlighted in bold.

Topics relevant to “SKILL DEVELOPMENT”: Usage of un-structured data for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CBD2513	Course Title: Web Intelligence and Analytics Type of Course: Lab	L- T- P- C	2-0-0-2
Version No.	1.0		
Course Pre-requisites	CSE2021-Data Mining		
Anti-requisites			

Course Description	<p>This course is an introduction to Web Analytics and Web Intelligence - is not intended to provide an in-depth review of marketing principles and concepts. Nor is it intended to provide an in-depth explanation or review of statistical analysis principles, though some of these principals and concepts will be mentioned from time to time in the lectures and reading materials. Rather, this course will give you the mastery of analytics to a sufficient degree to deploy Web Analytics platforms within your organizations and gain meaningful insights from them that can drive the bottom line.</p>			
Course Objective	<p>The objective of the course is to familiarize the learners with the concepts of Web Intelligence and Analytics and attain Skill Development through Experiential Learning techniques.</p>			
Course Outcomes	<p>On successful completion of the course the students shall be able to:</p> <ol style="list-style-type: none"> 5. A grounded understanding of web intelligence and business analytics terminology related to the above. 6. How to deploy web intelligence to improve the outcomes of your marketing or business plan. 7. How Analysts impact the bottom line (their role) within various businesses and lines of business 8. Growth potentials for Web Analysts and Big Data professionals 			
Course Content:				
Module 1	INTRODUCTION TO INTELLIGENT WEB	Assignment	Data Collection/Interpretation	6 Sessions
<p>INTRODUCTION TO INTELLIGENT WEB - Inside the search engine - Examples of intelligent web applications - Basic elements of intelligent applications - Machine learning, data mining - Searching, Reading, indexing, and searching.</p>				
Module 2	LISTEN AND LOAD	Case studies / Case let	Case studies / Case let	6 Sessions
<p>LISTEN AND LOAD - Streams, Information and Language, - Statistics of Text - Analyzing Sentiment and Intent - Load - Databases and their Evolution, Big data Technology and Trends.</p>				
Module 3	CLUSTERING AND CLASSIFICATION	Quiz	Case studies / Case let	9 Sessions
<p>CLUSTERING AND CLASSIFICATION An overview of clustering algorithms - Clustering issues in very large datasets - The need for classification - Automatic categorization of emails and spam filtering - Classification with very large datasets - Comparing multiple classifiers on the same data.</p>				
<p>Module 4 - REASONING (4 hours) Reasoning: Logic and its Limits, Dealing with Uncertainty - Mechanical Logic - The Semantic Web - Limits of Logic - Description and Resolution - Collective Reasoning.</p>				
<p>Module 5 - PREDICTING (6 hours) Statistical Forecasting - Neural Networks - Predictive Analytics - Sparse Memories - Sequence Memory - Network Science - Data Analysis: Regression and Feature Selection - Case Study -</p>				

set of retrieved and processed news stories.

List of Laboratory Tasks: Laboratory Work: to analyzing the web for various functionalities given in the subject and using various tools and technologies to do the experimentation. It also involves installation and working on tools and technologies in this domain.

List of Laboratory Tasks: Laboratory Work: to analyzing the web for various functionalities given in the subject and using various tools and technologies to do the experimentation. It also involves installation and working on tools and technologies in this domain.

W e e k	Lab Experiment Title	Tools / Technologies
1	Design a static web page using HTML and CSS	HTML5, CSS3
2	Create an interactive web form with validation using JavaScript	JavaScript, DOM
3	Build a dynamic dashboard with charts using any JS library (e.g., Chart.js / Google Charts)	JavaScript, Chart.js / Google Charts
4	Introduction to WEKA: Loading datasets and understanding file formats	WEKA (ARFF, CSV)
5	Perform data preprocessing: normalization, filtering, and attribute selection	WEKA Preprocess Panel
6	Apply classification using J48 (Decision Tree) and evaluate performance	WEKA – J48
7	Classification using Naïve Bayes and compare accuracy	WEKA – Naïve Bayes
8	Implement k-Nearest Neighbors (IBk) and visualize confusion matrix	WEKA – IBk
9	Perform clustering using k-Means and interpret results	WEKA – SimpleKMeans
10	Explore hierarchical clustering on a sample dataset	WEKA – HierarchicalClusterer
11	Apply association rule mining using Apriori algorithm	WEKA – Apriori
12	Visualize the rules and patterns discovered from transactional data	WEKA Visualization tools
13	Use WEKA Experimenter to compare classifiers on multiple datasets	WEKA – Experimenter
14	Feature selection using attribute evaluators and rankers	WEKA – Attribute Selection
15	Mini project: Perform end-to-end analysis on a real dataset using classification and visualization	WEKA + any visualization tool (optional)

Course Code: CSE2264	Course Title: Essentials of AI	L- T-P- C	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Basic knowledge of programming, mathematics, understanding of data handling					
Anti-requisites	NIL					
Course Description	This course is a comprehensive introductory course designed to equip learners with the fundamental Python programming skills necessary to work with artificial intelligence (AI) technologies. This course is aimed at individuals who are new to AI but have a basic understanding of programming concepts. It combines Python programming fundamentals with hands-on experience in implementing AI techniques such as machine learning, neural networks, and natural language processing.					

Course Objective	The objective of the course is to Understand Python Programming Fundamentals, Manipulate and Process Data with Python, Implement Machine Learning Algorithms and Build and Train Neural Networks for AI Applications.			
Course Outcomes	On successful completion of the course the students shall be able to: CO 1: Apply Python Programming to AI Projects CO 2: Build and Train Machine Learning Models CO 3: Develop Deep Learning Models with Neural Networks CO 4: Deploy AI Solutions and Understand Ethical Implications			
Course Content:				
Module 1	Introduction to Python Programming for AI	Assignment	Implementation	10 Sessions
<p>Topics:</p> <p>Python Basics: Variables, Data Types, Operators, and Control Flow Functions, Loops, and Conditionals statements, Data Structures: Lists, Tuples, Dictionaries, Sets ,Introduction to Libraries: NumPy and Pandas for data manipulation, Basic Input/Output and File Handling</p> <p>Introduction to Python for AI: Libraries and Frameworks Overview</p>				
Module 2	Data Processing, Visualization	Assignment	Implementation	10 Sessions
<p>Topics:</p> <p>cleaning and preprocessing with Pandas, Handling missing data, outliers, and duplicates, Data transformation (Normalization, Encoding), Introduction to Matplotlib and Seaborn for Data Visualization, Exploratory Data Analysis (EDA), Visualizing datasets to understand patterns and relationships.</p>				
Module 3	Introduction to Machine Learning	Mini - Project	Implementation	10 Sessions
<p>Topics:</p> <p>What is Machine Learning? Types of ML algorithms Supervised Learning: Regression, Classification, Unsupervised Learning: Clustering, Key ML Algorithms: Linear Regression, Decision Trees, K-Means ,Introduction to Scikit-learn library</p> <p>Model evaluation (Accuracy, Precision, Recall, Confusion Matrix)</p>				
Module 4	Neural Networks and Deep Learning	Quiz	Implementation	10 Sessions
<p>Topics:</p> <p>Introduction to Neural Networks and Deep Learning, Perceptron Model and Backpropagation</p> <p>Deep Neural Networks and Activation Functions, Introduction to TensorFlow and Keras, Building and Training Neural Networks for Image and Text Classification, Overview of Convolutional Neural Networks (CNNs) and Recurrent Neural Networks (RNNs)</p>				
<p>Targeted Application & Tools that can be used:</p> <p>Applications:</p> <ol style="list-style-type: none"> Data Preprocessing: Clean and manipulate data from various sources such as CSV, Excel, SQL databases, and APIs. Exploratory Data Analysis (EDA): Gain insights into datasets by identifying trends, patterns, and outliers. Predictive Modeling: Build models for classification (e.g., spam detection) and regression (e.g., house price prediction). Clustering: Group data into clusters for unsupervised learning tasks (e.g., customer segmentation). Model Evaluation: Assess model performance using appropriate metrics such as accuracy, precision, recall, 				

and F1-score.

Tools:

- **Pandas:** For data manipulation and cleaning (e.g., handling missing values, merging datasets).
- **NumPy:** For numerical operations and working with arrays and matrices.
- **Matplotlib:** For creating static, animated, and interactive visualizations.
- **Seaborn:** For advanced data visualizations (e.g., heatmaps, pair plots).
- **Plotly:** For creating interactive visualizations, especially useful for large datasets.
- **Scikit-learn:** The go-to library for implementing machine learning algorithms (e.g., linear regression, decision trees, k-means clustering).
- **XGBoost:** For advanced gradient boosting models, particularly for large-scale machine learning tasks.
- **TensorFlow** (for deep learning in Module 4): A powerful open-source library for building machine learning and deep learning models.
- **Keras:** High-level neural network API, built on top of TensorFlow, to easily create deep learning models.
NLTK: The Natural Language Toolkit for various text processing tasks like tokenization, stemming, and part-of-speech tagging.
spaCy: A fast NLP library for advanced NLP tasks such as named entity recognition and dependency parsing.
Transformers (by Hugging Face): A powerful library for using pre-trained Transformer-based models like BERT, GPT, and others for advanced NLP tasks.

Course Code: CSE2265	Course Title: Essentials of AI Lab	L- T-P- C	0	0	2	1
Version No.	2.0					
Course Prerequisites						
Anti-requisites	NIL					
Course Description	This course introduces students to the essential concepts and techniques of Artificial Intelligence (AI) with a focus on practical implementation using Python. Students will explore core AI topics such as search algorithms, knowledge representation, machine learning, and neural networks, while gaining proficiency in using popular Python libraries like NumPy, pandas, scikit-learn, and TensorFlow. Through a series of lab exercises and projects, students will apply AI principles to solve real-world problems, develop intelligent applications, and understand how AI systems function at a foundational level.					
Course Objective	The primary objectives of the course are to Gain Proficiency in AI Concepts and Python Implementation, Develop and Implement Machine Learning Models, Understand and Build Neural Networks, Apply AI to Real-World Problems					

Course Outcomes	On successful completion of the course the students shall be able to: <ol style="list-style-type: none"> 1. Proficiency in Implementing AI Algorithms Using Python 2. Ability to Build and Evaluate Machine Learning Models 3. Hands-on Experience with Neural Networks and Deep Learning 4. Practical Application of AI to Solve Real-World Problems 			
Course Content:				
Module 1	Introduction to AI and Python for AI	Assignment	Implementation	8 Sessions
<p><i>Lab Assignment 1: Setting Up the Python Environment</i></p> <ul style="list-style-type: none"> ● Objective: Get familiar with setting up a Python environment for AI projects. ● Tasks: <ol style="list-style-type: none"> 1. Install Python, Anaconda, and Jupyter Notebook. 2. Set up a virtual environment for AI development. 3. Install essential Python libraries: numpy, pandas, matplotlib, and scikit-learn. 4. Write and execute simple Python code to verify installation (e.g., print a “Hello AI” message). <p><i>Lab Assignment 2: Basic Python Programming for AI</i></p> <ul style="list-style-type: none"> ● Objective: Understand and practice the basic Python syntax and data structures used in AI. ● Tasks: <ol style="list-style-type: none"> 1. Write Python code to work with basic data types (integer, float, string, boolean). 2. Implement and manipulate Python lists, tuples, sets, and dictionaries. 3. Create basic control flow structures: if-else, for loops, while loops. 4. Use functions and lambda functions to solve small AI-related problems, such as calculating factorial or Fibonacci numbers. <p><i>Lab Assignment 3: Data Exploration and Preprocessing</i></p> <ul style="list-style-type: none"> ● Objective: Learn how to work with data for AI models. ● Tasks: <ol style="list-style-type: none"> 1. Load a dataset (e.g., Titanic or Iris dataset) using pandas. 2. Clean the dataset by handling missing values, removing duplicates, and converting data types if needed. 3. Explore the dataset by visualizing it using matplotlib and seaborn. 4. Perform basic data preprocessing tasks such as feature scaling, encoding categorical variables, and splitting data into training and testing sets. 				
Module 2	Data Processing, Visualization	Assignment	Implementation	8 Sessions
<p><i>Lab Assignment 1: Data Preprocessing with Pandas</i></p> <p>Objective: Learn the fundamentals of data preprocessing, including cleaning, handling missing values, and performing basic transformations using Pandas.</p>				

Tasks:

1. **Load and Inspect the Dataset:**
 - Load a dataset (e.g., **Iris**, **Titanic**, **Wine Quality** dataset) using `pandas.read_csv()` or `pandas.read_excel()`.
 - Inspect the first few rows of the dataset using `.head()` and check basic information using `.info()`.
2. **Handle Missing Values:**
 - Identify missing values in the dataset using `.isnull()` or `.isna()`.
 - Handle missing data by imputing with mean, median, or mode using `SimpleImputer` from `sklearn`, or remove rows with missing data using `.dropna()`.
3. **Data Transformation:**
 - Convert categorical variables to numerical values using one-hot encoding or label encoding.
 - Normalize/standardize numerical columns using `StandardScaler` or `MinMaxScaler` from `sklearn`.
4. **Subset and Filter Data:**
 - Create subsets based on certain conditions (e.g., select rows where a specific feature value is greater than a threshold).
 - Filter outliers from numerical data using interquartile range (IQR).

Lab Assignment 2: Data Aggregation and Grouping with Pandas

Objective:

Master aggregation and grouping techniques using **Pandas** for summarizing data.

Tasks:

1. **Group Data by Category:**
 - Group data by one or more categorical features (e.g., "class" in the Iris dataset or "embarked" in Titanic dataset).
 - Use `.groupby()` to calculate aggregate statistics such as mean, median, sum, and count.
2. **Pivot Tables:**
 - Create a pivot table to summarize data (e.g., aggregate the average age of passengers in the Titanic dataset by class and gender).
 - Use `.pivot_table()` to perform multi-dimensional aggregation.
3. **Data Aggregation and Custom Functions:**
 - Apply custom aggregation functions to the grouped data (e.g., calculate custom metrics or perform complex transformations within each group).
4. **Sorting and Ranking Data:**
 - Sort the dataset by multiple columns (e.g., sorting by "age" or "fare").
 - Rank data based on specific metrics (e.g., assign ranks to passengers by fare in the Titanic dataset).

Lab Assignment 3: Data Visualization with Matplotlib and Seaborn

Objective:

Learn to visualize datasets using **Matplotlib** and **Seaborn** for better understanding and insights.

Tasks:

1. **Basic Plotting with Matplotlib:**

- Create simple plots like line plots, bar plots, and histograms using **Matplotlib**.
- Customize the plots by setting titles, labels, and legends.
- Create scatter plots to visualize relationships between two variables.

2. **Advanced Plotting with Seaborn:**

- Use **Seaborn** to create advanced visualizations like pair plots, heatmaps, box plots, and violin plots.
- Customize visualizations with color palettes, styling, and themes.
- Create a correlation heatmap to visualize correlations between features in the dataset.

3. **Distribution Visualizations:**

- Plot distributions of continuous variables using **Seaborn's** distplot() or kdeplot().
- Create bar plots for categorical variables to understand their frequency distribution.

4. **Multi-Plot Grid Layouts:**

- Use **Matplotlib's** subplots() function to create multiple plots in a grid layout for comparison (e.g., scatter plot and histogram in the same figure).

Lab Assignment 4: Visualizing Relationships and Feature Importance

Objective:

Understand how to visualize relationships between features and evaluate feature importance for predictive models.

Tasks:

1. **Scatter Plot Matrix:**

- Use **Seaborn's** pairplot() to create a scatter plot matrix to visualize the relationships between multiple features.
- Analyze the pairwise relationships between features and identify any patterns or correlations.

2. **Heatmap of Correlation Matrix:**

- Use **Pandas** to calculate the correlation matrix of numeric features.
- Visualize the correlation matrix using **Seaborn's** heatmap() to understand feature correlations and multicollinearity.

3. **Feature Importance from Models:**

- Train a decision tree or random forest model using **scikit-learn** on a dataset (e.g., **Iris** or **Titanic**).
- Visualize feature importance using a bar chart to understand which features have the most impact on the model.

4. **Visualizing Predictions vs. Actual Values:**

- For regression tasks, visualize the predicted values against the actual values using a scatter plot.
- For classification tasks, visualize the classification results with a confusion matrix.

Lab Assignment 5: Time Series Data Visualization and Processing

Objective:

Learn how to process and visualize time series data, which is common in AI applications like forecasting and trend analysis.

Tasks:

1. **Load and Preprocess Time Series Data:**

- Load a time series dataset (e.g., stock market data, weather data).
- Parse dates properly and set the date column as the index using `pd.to_datetime()` and `.set_index()`.

2. **Plot Time Series Data:**

- Plot a time series line chart using **Matplotlib** to visualize trends over time.
- Create rolling averages (e.g., 7-day, 30-day) to smooth out short-term fluctuations in the time series data.

3. **Seasonal Decomposition of Time Series:**

- Use **statsmodels** to decompose a time series into seasonal, trend, and residual components.
- Visualize the decomposed components to understand seasonal variations.

4. **Forecasting with Simple Models:**

- Use simple forecasting models (e.g., moving average, ARIMA) to predict future values.
- Visualize the forecasted data along with actual historical data.

Module 3	Introduction to Machine Learning	Assignments	Implementation	8 Sessions
----------	----------------------------------	-------------	----------------	------------

Lab Assignment 3: Implementing Linear Regression

- **Tasks:**

1. Load a real-world dataset (e.g., **Boston Housing Price** dataset).
2. Train a **Linear Regression** model using `LinearRegression()` from scikit-learn.
3. Evaluate the model using **Mean Squared Error (MSE)** and **R-squared Score**.
4. Visualize the regression line using Matplotlib.

Lab Assignment 4: Logistic Regression for Classification

- **Tasks:**

1. Load the **Iris** or **Breast Cancer** dataset.
2. Preprocess the dataset (handle missing values, encode categorical variables, scale data).
3. Train a **Logistic Regression** model using `LogisticRegression()`.
4. Evaluate performance using **Accuracy**, **Precision**, **Recall**, **F1-score**.
5. Plot the **Confusion Matrix** and **ROC Curve**.

Lab Assignment 5: Implementing K-Nearest Neighbors (KNN)

- **Tasks:**

1. Load the **Iris dataset** and split it into training and testing sets.
2. Train a **KNN classifier** using `KNeighborsClassifier()`.
3. Experiment with different values of **K** and evaluate performance.
4. Visualize decision boundaries using a **scatter plot**.

Lab Assignment 6: Decision Trees and Random Forests

- **Tasks:**

1. Train a **Decision Tree classifier** on the Titanic dataset.
2. Visualize the tree structure using `plot_tree()`.

3. Train a **Random Forest classifier** and compare performance with the decision tree.
4. Determine the **feature importance** using `feature_importances_`.

Module 4	Neural Networks and Deep Learning	Quiz	Implementation	6 Sessions
-----------------	-----------------------------------	------	----------------	------------

Lab Assignment 7: Introduction to Perceptron and Activation Functions

Tasks:

1. Implement a **single-layer perceptron** using NumPy.
2. Train the perceptron to classify **AND, OR, XOR** gates.
3. Experiment with different **activation functions** (Sigmoid, ReLU, Tanh).
4. Visualize decision boundaries.

—
Lab Assignment 8: Building a Simple Neural Network with Keras

Tasks:

1. Load the **MNIST dataset** from `keras.datasets`.
2. Preprocess the data (normalize pixel values, reshape input).
3. Create a **fully connected neural network** using Sequential API.
4. Train and evaluate the model using **categorical cross-entropy loss** and **accuracy**.

Lab Assignment 9: Implementing CNN from Scratch

Tasks:

1. Load the **CIFAR-10 dataset**.
2. Build a CNN with **Conv2D, MaxPooling2D, Flatten, Dense, Dropout** layers.
3. Use **Adam optimizer** and **categorical cross-entropy loss**.
4. Train and visualize loss/accuracy curves.

—
Lab Assignment 10: Image Augmentation & Regularization

Tasks:

1. Apply **data augmentation** (rotation, zoom, flipping) using `ImageDataGenerator`.
2. Add **dropout and batch normalization** to prevent overfitting.
3. Compare model performance with and without augmentation.

—
Lab Assignment 11: Transfer Learning with Pre-trained Models

Tasks:

1. Use **VGG16 or ResNet50** pre-trained on ImageNet.
2. Replace the output layer to classify **new images**.
3. Freeze earlier layers and fine-tune deeper layers.
4. Evaluate the model on a custom **dataset (e.g., Cats vs. Dogs)**.

Lab Assignment 12: Implementing RNN for Text Classification

Tasks:

1. Load **IMDB movie reviews dataset** from keras.datasets.
2. Preprocess text (tokenization, padding sequences).
3. Build an **RNN** with **Embedding, SimpleRNN, Dense** layers.
4. Train and evaluate the model.

Lab Assignment 13: Building an LSTM for Time Series Prediction

Tasks:

1. Load a **time series dataset** (e.g., stock prices, temperature data).
2. Preprocess the data (normalize, reshape).
3. Build an **LSTM-based model**.
4. Predict future values and visualize trends.

Targeted Application & Tools that can be used:

Applications:

1. **Data Preprocessing:** Clean and manipulate data from various sources such as CSV, Excel, SQL databases, and APIs.
- **Exploratory Data Analysis (EDA):** Gain insights into datasets by identifying trends, patterns, and outliers.
- **Predictive Modeling:** Build models for classification (e.g., spam detection) and regression (e.g., house price prediction).
- **Clustering:** Group data into clusters for unsupervised learning tasks (e.g., customer segmentation).
- **Model Evaluation:** Assess model performance using appropriate metrics such as accuracy, precision, recall, and F1-score.

Tools:

- **Pandas:** For data manipulation and cleaning (e.g., handling missing values, merging datasets).
- **NumPy:** For numerical operations and working with arrays and matrices.
- **Matplotlib:** For creating static, animated, and interactive visualizations.
- **Seaborn:** For advanced data visualizations (e.g., heatmaps, pair plots).
- **Plotly:** For creating interactive visualizations, especially useful for large datasets.
- **Scikit-learn:** The go-to library for implementing machine learning algorithms (e.g., linear regression, decision trees, k-means clustering).
- **XGBoost:** For advanced gradient boosting models, particularly for large-scale machine learning tasks.
- **TensorFlow** (for deep learning in Module 4): A powerful open-source library for building machine

learning and deep learning models.

- **Keras:** High-level neural network API, built on top of TensorFlow, to easily create deep learning models.

NLTK: The Natural Language Toolkit for various text processing tasks like tokenization, stemming, and part-of-speech tagging.

spaCy: A fast NLP library for advanced NLP tasks such as named entity recognition and dependency parsing.

Transformers (by Hugging Face): A powerful library for using pre-trained Transformer-based models like BERT, GPT, and others for advanced NLP tasks.

Text Book(s):

T1: Essentials of Python for Artificial Intelligence and Machine Learning by Pramod Gupta and Anupam Bagchi

Course Code: CSE2508	Course Title: Mobile Applications and Development Type of Course: Theory	L- C	T- 2	P- 0	2	0	2
Version No.	2.0						
Course Pre-requisites	CSE3514 Object Oriented Programming Using Java						
Anti-requisites	NIL						
Course Description	The course deals with the basics of android platform and application life cycle. The goal of the course is to develop mobile applications with Android containing at least one of the following phone material components: GPS, accelerometer or phone camera, use simple GUI applications and work with database to store data locally or in a server. Topics include user interface design; user interface building; input methods; data handling; network techniques and URL loading; GPS and motion sensing. Android application framework and deployment. Power management, Screen resolution, Touch interface, Store data on the device.						

Course Objective	The objective of the course is to familiarize the learners with the concepts of Mobile Applications and Development as mentioned above and attain Employability Skills through Experiential Learning Techniques.			
Course Outcomes	<p>On successful completion of the course the students shall be able to:</p> <ol style="list-style-type: none"> 1. Discuss the fundamentals of mobile application development and its architecture. (Comprehension) 2. Illustrate mobile applications with appropriate android view. (Application) 3. Demonstrate the use of services, broadcast receiver, Notifications and content provider.(Application) 4. Apply data persistence techniques, to perform CRUD operations. (Application) 5. Use advanced concepts for mobile application development. (Application) 			
Course Content:				
Module 1	Introduction and Architecture of Android	Assignment	Simulation/Data Analysis	5 Sessions
<p>Topics:</p> <p>Android: History and features, Architecture, Development Tools, Android Debug Bridge (ADB), and Life cycle.</p>				
Module 2	User Interfaces, Intent and Fragments	Term paper/Assignment	Simulation/Data Analysis	6 Sessions
<p>Topics:</p> <p>Views, Layout, Menu, Intent and Fragments.</p>				
Module 3	Components of Android	Term paper/Assignment	Simulation/Data Analysis	6 Sessions
<p>Topics:</p> <p>Activities, Services, Broadcast receivers, Content providers, User Navigation</p>				
Module 4	Notifications and Data Persistence	Term paper/Assignment	Simulation/Data Analysis	6 Sessions
<p>Topics:</p> <p>Notification, Shared Preferences, SQLite database, Android Room with a View, Firebase.</p>				
Module 5	Advance App Development	Term paper/Assignment	Simulation/Data Analysis	7 Sessions
<p>Topics:</p> <p>Graphics and Animation, App Widgets, Sensors, Performance, Location, Places, Mapping, Custom Views, Canvas.</p>				
<p>Targeted Application & Tools that can be used:</p> <p>Applications:</p> <ul style="list-style-type: none"> Native Android Applications Native iOS Applications Cross Platform mobile Apps Mobile web Applications

Course Code: CSE2509	Course Title: Mobile Applications and Development Lab Type of Course: Lab	L- T-P- C	0	0	4	2
Version No.	2.0					
Course Pre-requisites	CSE1514 Object Oriented Programming using Java					
Anti-requisites	NIL					

Course Description	The course provides hands-on experience in designing, developing, and deploying mobile applications for Android and iOS platforms. Students will work with native development frameworks such as Android Studio (Java/Kotlin) and Xcode (Swift), as well as explore cross-platform tools like Flutter or React Native.			
Course Objective	The objective of the course is to develop Native and Cross-Platform Mobile Applications, design Interactive and Responsive User Interfaces, integrate Backend Services and APIs, implement State Management and Performance Optimization, ensure Mobile App Security and Data Protection			
Course Outcomes	On successful completion of the course the students shall be able to: 1. Develop Functional Mobile Applications 2. Design and Implement Interactive UIs 3. Integrate Cloud Services and APIs 4. Integrate Backend Systems and Data Management 5. Deploy, Publish, and Maintain advanced Mobile Application			
Course Content:				
Module 1	Introduction and Architecture of Android	Assignment	Simulation/Data Analysis	8 Sessions
	1.a. Design an app to read user inputs using edit text and display the result of arithmetic operations using toast message. 1.b. Create an android app to calculate the current age of yourself, select your DOB using date picker. 2. Design an app to input your personal information. Use an autocomplete text view to select your place of birth.			
Module 2	User Interfaces, Intent and Fragments	Term paper/Assignment	Simulation/Data Analysis	13 Sessions
	3. a. Design an app to select elective course using spinner view and on click of the display button, toast your ID and selected elective course. 3. b. Design a restaurant menu app to print the total amount of orders.			
Module 3	Components of Android	Term paper/Assignment	Simulation/Data Analysis	13 Sessions
	4. Develop an android app that uses intent to maintain the following scenario. Check the eligibility criteria for voting. Input the Aadhar no., Name & age in the first activity. If the age is above 18, display the voter's detail in the second activity. Else, display, "You are not eligible to vote" in the second Activity. 5. Demonstrate the use of fragment with list of buttons representing various colors, and on click of these buttons, the appropriate color is filled in the next fragment. Create an Android application to input the vitals of a person (temperature, BP). If the vitals are abnormal, give proper notification to the user. 6. Create an android app to for movie ticket booking. Save the user name of the customer using shared preferences. After completion of booking, retrieve the username from the shared preferences and print the ticket details.			

Module 4	Notifications and Data Persistence	Term paper/Assignment	Simulation/Data Analysis	13 Sessions
<p>7. Create an android application to manage the details of students' database using SQLite. Use necessary UI components, which perform the operations such as insertion, modification, removal and view. Presidency University needs an APP for Admission eligibility checking for students, for that you need to take the following information from the Student: registration ID, physics, chemistry and mathematics marks (PCM), fees is allotted as below criteria.</p> <p>PCM (Total marks %) Fee concession</p> <p>90 above 80 %</p> <p>70 to 89 60 %</p> <p>Below 69 % no concession</p> <p>On click on the button "Registration" details should be stored in the database using SQLite. Create button DISPLAY ALL (full students list) on click on the button it should display the students list per the fee concession.</p> <p>8. A company need to design an app that plays soft music automatically in the background. Create an app to achieve this functionality.</p> <p>9. Create an android application such that your view object in the Activity can be Animated with fade-in effect. Create an appropriate XML file named fade-in and write the application to perform the property animation.</p>				
<p>10. Demonstrate how to send SMS and email.</p> <p>11. Create an android application to transfer a file using WiFi. Create an android application "Where am I" with an Activity that uses the GPS Location provider to find the device's last known location.</p>				
<p>Targeted Application & Tools that can be used:</p> <p>Applications:</p> <ol style="list-style-type: none"> Native Android Applications (Java/Kotlin) <ul style="list-style-type: none"> Android Mobile Apps built for Android smartphones and tablets using Java or Kotlin programming languages. Target audience: Android users. Native iOS Applications (Swift) <ul style="list-style-type: none"> iOS Mobile Apps designed for iPhone and iPad using Swift. Target audience: iOS users (Apple ecosystem). Cross-Platform Mobile Apps (Flutter, React Native) <ul style="list-style-type: none"> Cross-platform apps designed to run on both Android and iOS from a single codebase using frameworks like Flutter or React Native. 				

- Target audience: Users on both Android and iOS platforms.

4. Mobile Web Applications (Progressive Web Apps - PWA)
 - Mobile-optimized web applications using HTML5, CSS3, and JavaScript that run in a browser with native-like functionality (offline support, push notifications).
 - Target audience: Users accessing apps via mobile browsers.

Development Tools and Frameworks

1. Integrated Development Environments (IDEs)
 - Android Studio (for Android): The official IDE for Android development, supporting Java, Kotlin, and Android SDK.
 - Xcode (for iOS): The official IDE for iOS development with Swift and Objective-C, providing a comprehensive suite of development tools for iPhone/iPad applications.
 - Visual Studio Code (VS Code): Lightweight IDE for working with Flutter, React Native, and web development projects.
2. Cross-Platform Development Frameworks
 - Flutter: Open-source UI framework by Google for building natively compiled applications for mobile, web, and desktop from a single codebase.
 - React Native: Open-source framework developed by Facebook for building cross-platform apps with JavaScript and React.
3. Backend & Cloud Tools
 - Firebase: Google's backend-as-a-service (BaaS) platform offering authentication, real-time databases, cloud storage, and push notifications for mobile apps.
 - AWS Amplify: Cloud platform for backend services (API, storage, authentication) and mobile deployment.
 - SQLite / Realm: Local storage solutions for mobile apps to manage data storage and retrieval on-device.
4. Mobile App Testing and Debugging Tools
 - Android Emulator (for Android): A virtual device to run and test Android apps without needing physical devices.
 - Xcode Simulator (for iOS): A tool to simulate different iOS devices and test apps during development.
 - Appium: Open-source tool for automated testing across native, hybrid, and mobile web applications.
5. Version Control and Collaboration

- Git: Version control system for managing code changes and collaborating with teams.
- GitHub / GitLab / Bitbucket: Online platforms for hosting Git repositories, collaboration, and version control management.

6. Mobile App Deployment Tools

- Google Play Console: For managing Android app publishing, distribution, and monitoring.
- Apple App Store Connect: For managing iOS app submissions, reviews, and releases on the Apple App Store.

7. UI/UX Design Tools

- Figma / Adobe XD: Tools for UI/UX design and wireframing to create the visual elements of mobile applications before development.
- Sketch: Vector-based design tool for iOS UI design and prototyping

Course Code: CSE7000	Course Title: Internship Type of Course:	L- T- P- C	-	-	-	2
Version No.	1.0					
Course Pre-requisites	Knowledge and Skills related to all the courses studied in previous semesters.					
Anti-requisites	NIL					
Course Description	Students observe science and technology in action, develop an awareness of the method of scientific experimentation, and often get an opportunity to see, study and operate sophisticated and costly equipment. They also learn about the implementation of the principles of management they have learnt in class, when they observe multidisciplinary teams of experts from engineering, science, economics, operations research, and management deal with techno-economic problems at the micro and macro levels. Finally, it enables them to develop and refine their language, communication and inter-personal skills, both by its very nature, and by the various evaluation components, such as seminar, group discussion, project report preparation, etc. The broad-based core education, strong in mathematics and science and rich in analytical tools, provides the foundation necessary for the student to understand properly the nature of real-life problems.					
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Professional Practice and attain Employability Skills through Experiential Learning techniques.					
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <ol style="list-style-type: none"> Identify the engineering problems related to local, regional, national or global needs. (Understand) Apply appropriate techniques or modern tools for solving the intended problem. (Apply) Design the experiments as per the standards and specifications. (Analyze) Interpret the events and results for meaningful conclusions. (Evaluate) 					

Course Code: CBD2515	Bioinformatics and Genomic Data Analytics	L- T- P-C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	CBD 1700 Introduction to Big Data					

Anti-requisites	NIL		
Course Description	<p>This course introduces the fundamental concepts and tools of bioinformatics and genomic data analysis. It covers biological databases, sequence alignment, gene expression analysis, and genome annotation. Students will learn computational techniques for analyzing large-scale genomic and transcriptomic datasets. The course emphasizes the application of statistical, algorithmic, and machine learning approaches in biological data interpretation. Practical sessions include hands-on experience with tools such as BLAST, Bioconductor, and R for genomic data analysis.</p>		
Course Objectives	<p>To provide foundational knowledge of molecular biology concepts essential for understanding genomic data and bioinformatics tools.</p> <p>To introduce key algorithms and statistical methods used in sequence alignment, gene prediction, and genome annotation.</p> <p>To equip students with practical skills in analyzing and interpreting high-throughput genomic and transcriptomic data using open-source bioinformatics tools.</p> <p>To enable critical thinking and application of computational approaches for solving biological research problems and data-driven discoveries in genomics.</p>		
Course Outcomes	<p>CO1 : Describe the fundamental concepts of bioinformatics, including sequence alignment, gene annotation, and structural genomics.(Understand)</p> <p>CO2 : Analyse genomic and proteomic data to interpret biological significance using statistical and computational tools.(Analyse)</p> <p>CO3: Apply bioinformatics tools and algorithms for sequence comparison, genome annotation, and phylogenetic analysis. (Apply)</p> <p>CO4: Apply data analytics techniques to process and visualize large-scale genomic data using R, Python, or similar platforms. (Apply)</p>		
Module 1	Introduction to Bioinformatics and Genomics	Understand	No. of Sessions: 10
Overview of Bioinformatics and its Applications, Central Dogma of Molecular Biology, DNA, RNA, and Protein Structures, Introduction to Genomics and Proteomics, Biological Databases: NCBI, EMBL, UniProt, File Formats: FASTA, GenBank			
Module 2	Sequence Alignment and Genome Annotation	Analyse	No. of Sessions: 12

Pairwise and Multiple Sequence Alignment, Dynamic Programming: Needleman-Wunsch and Smith-Waterman Algorithms, BLAST and FASTA Tools, Gene Prediction and Annotation Techniques, Homology Modelling, Comparative Genomics, Case Studies on Gene Function Prediction

Module 3	Phylogenetics and Structural Bioinformatics	Apply	No. of Sessions: 11
Phylogenetic Tree Construction: UPGMA, Neighbor Joining, Molecular Evolution and Substitution Models, Protein Structure Prediction, Protein-Protein Interaction Networks, Tools: MEGA, Clustal Omega, SWISS-MODEL			
Module 4	Genomic Data Analytics	Apply	No. of Sessions: 12
Next-Generation Sequencing (NGS) Technologies, Data Preprocessing and Quality Control, Gene Expression Data Analysis (Microarray, RNA-Seq), Tools and Languages: Bioconductor (R), Pandas, BioPython, Data Visualization Techniques, Clustering Techniques, Introduction to Machine Learning in Genomics

Course Code: CBD2516	Bigdata in Supply Chain Logistics	L-T-P-C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	CBD 1700 Introduction to Big Data					

Anti-requisites	NIL		
Course Description	<p>This course introduces the application of big data analytics in the field of supply chain and logistics management. It explores how data-driven decision-making can enhance supply chain visibility, forecasting accuracy, and operational efficiency. Learners will gain insights into data acquisition, integration, and processing methods using big data tools and platforms tailored to supply chain contexts. Topics include real-time tracking, demand prediction, inventory optimization, risk assessment, and strategic sourcing using big data. The course emphasizes both theoretical understanding and practical implementations using case studies and industry examples.</p>		
Course Objectives	<p>To introduce the concepts and importance of big data analytics in modern supply chain and logistics management.</p> <p>To familiarize students with data sources, data types, and technologies used in supply chain data analytics.</p> <p>To develop analytical skills for interpreting large datasets and extracting meaningful insights for supply chain decisions.</p> <p>To enable learners to apply big data tools and techniques for solving real-time logistics and supply chain problems.</p>		
Course Outcomes	<p>CO1: Understand the fundamentals of big data and its role in enhancing supply chain and logistics operations.</p> <p>CO2: Analyze various big data tools and technologies used for optimizing supply chain processes.</p> <p>CO3: Apply data-driven techniques to improve forecasting, inventory control, and demand planning.</p> <p>CO4: Apply big data analytics to solve real-world supply chain and logistics challenges, ensuring better decision-making and efficiency.</p>		
Module 1	Introduction to Big Data in Supply Chain	Understand	No. of Sessions: 10
	Introduction to supply chain and logistics, Basics of Big Data, Role of data in supply chain, Data generation sources (IoT, RFID, GPS), Data types and challenges in supply chain analytics, Use cases and industry relevance.		
Module 2	Big Data Technologies and Tools for Supply Chain	Analyse	No. of Sessions: 12

Big Data ecosystem (Hadoop, Spark), Data storage frameworks (HDFS, NoSQL), Real-time vs. batch processing, Data integration platforms, Overview of data warehousing and ETL tools, Role of cloud computing in supply chain logistics.

Module 3	Data Analytics and Predictive Modelling	Apply	No. of Sessions: 11
Descriptive, Predictive, and Prescriptive Analytics, Demand forecasting, Inventory optimization, Transportation analytics, Predictive maintenance, Machine learning models in logistics, Case studies with sample datasets.			
Module 4	Applications and Case Studies in Supply Chain Analytics	Apply	No. of Sessions: 12
Big Data applications in procurement, warehousing, and last-mile delivery, Risk analysis, Supplier performance evaluation, Real-world case studies (Amazon, Walmart, Maersk), Ethical and privacy concerns in data handling.

Course Code: CSE2510	Course Title: Competitive Programming and Problem Solving Type of Course: Program Core	L-T-P-C								
Version No.	1.0									
Course Pre-requisites	NIL									
Anti-requisites	NIL									
Course Description	The Competitive Programming and Problem Solving course equips students with efficient problem-solving skills for coding competitions and real-world challenges. Starting with brute-force solutions, students learn to optimize time and space complexity using advanced techniques like dynamic programming, greedy algorithms, and backtracking. Hands-on practice on platforms like CodeChef and Codeforces helps tackle problems involving number theory, data structures, and algorithmic paradigms. By understanding CP constraints and fostering a strategic mindset, students gain the confidence to excel in competitions, technical interviews, and practical applications.									
Course Out Comes	<p>On successful completion of the course the students shall be able to:</p> <p>CO1 : Understanding the issues of online platforms and Competitive Programming (CP) and developing brute force coding for commonly asked CP problems.</p> <p>CO2 : Analyzing the space and time complexity of brute force solutions and designing efficient solutions.</p> <p>CO3 : Evaluating the applicability of suitable algorithmic approaches to solve relevant CP problems.</p> <p>CO4: Creating efficient solutions of CP problems using the learnt algorithmic approaches.</p>									
Course Objective	The objective of the course is to familiarize the learners with the concepts of Competitive Programming and Problem Solving and attain Skill Development through Experiential Learning techniques.									
<p>Module 1: Introduction to Competitive Programming</p> <p>Overview of Efficient Coding for Problem Solving and CP: Introduction to competitive programming (CP); revisit of complexity analysis; introduction to online platforms such as codechef, codeforces etc and online submission; constraints during CP, online testing process and common errors such as TLE; use of STL</p>										
<p>Module 2: Number Theory for Problem-Solving</p> <p>Use of Number Theory for problem-solving: reducing time/space complexity of brute force coding solution of Sieve Method, Inverse Module, Euclidian Method of factorization; efficient coding</p>										

for Permutation Combination; XORing based and pattern-based solutions.

Module 3: Optimizing Time & Space Using Sequential Storage

Coding for Optimizing time and Space using Sequential Storage: two pointer approach; problem-solving using arrays and strings such as rotation on sorted arrays, duplicate removal, string matching algorithms; Kadane's algo, stacks, priority-queues and hashing based efficient coding; median based problems and alternate solutions.

Module 4: Non-Linear Data Structures

Applying Non-Linear Data Structures for real-life problems: design of efficient solutions for problems such as finding loops in a linked list, memory efficient DLL, block reversal in LL; problem solving using trees and binary trees, Catalan numbers, applications of graphs, spanning tree and path algos for CP problems with reduced time/space complexity.

Module 5: Problem Solving using Advanced Topics

CP Problem Solving using Advanced Topics: concept of disjoint sets and their efficient representation, algorithmic approaches such as Greedy, Backtracking, Dynamic Programming and applying them for CP problems using bottom-up dynamic programming.

List of Laboratory Tasks:

31. You are given the finishing times of 'N' runners in a marathon. Write a program to find the runner who finished in the third position. **Focus:** Basic data structures (arrays), sorting algorithms (e.g., insertion sort, selection sort), and basic input/output.
32. In the same marathon, you are given the finishing times of 'N' runners and their bib numbers. Write a program to efficiently find the top 10 runners and their corresponding bib numbers. **Focus:** Efficient sorting algorithms (e.g., merge sort, quick sort), data structures like priority queues, and optimizing for large datasets.
33. A library maintains a list of books with their unique IDs. Write a program to check if a given book ID is present in the library. **Focus:** Searching algorithms (linear search), basic data structures (arrays or lists).
34. The library wants to implement a system to quickly find books by their titles. Suggest an efficient data structure (e.g., a hash table or a trie) and explain how to implement it to achieve fast book lookups. **Focus:** Understanding the trade-offs between different data structures, choosing the most appropriate data structure for a specific problem, and implementing efficient search operations.
35. An online store sells products with different prices. Write a program to calculate the total cost of a given list of products. **Focus:** Basic arithmetic operations, working with arrays or lists to store product prices.
36. The online store offers discounts based on the total purchase amount. Design an algorithm to efficiently calculate the final cost of an order, considering different discount rules (e.g., percentage discounts, fixed amount discounts, tiered discounts). **Focus:** Algorithmic design, conditional statements, handling complex scenarios with multiple rules, and potentially using dynamic programming techniques for optimization.
37. You are given two integers, 'a' and 'm'. Calculate 'a' raised to the power 'm' modulo a large prime number 'p'. **Focus:** Basic modular arithmetic operations (modular exponentiation), understanding the modulo operator.
38. In a secure communication system, you need to efficiently compute the modular exponentiation for very large values of 'm'. Implement and analyze the efficiency of the binary exponentiation algorithm for this

task. **Focus:** Efficient algorithms for modular exponentiation (binary exponentiation), time complexity analysis, and understanding the importance of efficient algorithms in cryptography.

39. You have a deck of 'N' cards. Calculate the total number of possible hands of size 'K' that can be drawn from the deck. **Focus:** Basic combinatorics (combinations), factorial calculations.

40. In a card game, you need to calculate the probability of drawing certain combinations of cards (e.g., a pair, a three-of-a-kind) from a shuffled deck. Design an efficient algorithm to calculate these probabilities. **Focus:** Advanced combinatorics (permutations and combinations with repetitions), probability calculations, and optimizing calculations to avoid overflows.

41. You are given a network of devices represented as a graph. Determine if there is a path between two given devices in the network. **Focus:** Graph traversal algorithms (depth-first search or breadth-first search).

42. In a secure network, you need to detect and isolate compromised devices. Design an algorithm that efficiently identifies devices that exhibit anomalous behavior (e.g., unusual traffic patterns) using XOR-based techniques for data comparison and pattern matching. **Focus:** Applying XOR operations for data comparison and pattern recognition, understanding the properties of XOR (e.g., commutative, associative), and designing algorithms for network anomaly detection.

43. You are given an array representing the speeds of cars on a highway. Find the minimum time required for all cars to pass a certain point. **Focus:** Basic array traversal, finding the minimum element in an array.

44. In a more realistic scenario, cars have different lengths. Implement a two-pointer approach to simulate the movement of cars and determine the minimum time for all cars to pass a given point. **Focus:** Two-pointer technique, simulating real-world scenarios with arrays, optimizing time complexity.

45. Given a string, find the number of occurrences of a specific substring within the string. **Focus:** Basic string manipulation, string matching (brute-force approach).

46. Implement the KMP (Knuth-Morris-Pratt) string matching algorithm to efficiently find all occurrences of a given pattern within a large text document. **Focus:** Advanced string matching algorithms, understanding the concept of the "next" array in KMP, optimizing for large input sizes.

47. An online auction platform receives bids for different items. Implement a data structure (e.g., a priority queue) to efficiently track the highest bid for each item. **Focus:** Priority queues, insertion and extraction operations on priority queues, basic implementation of a priority queue using an array or a suitable library.

48. The auction platform needs to handle a large number of bids concurrently. Design and implement a system that efficiently processes bids, updates the highest bid for each item, and handles potential race conditions. **Focus:** Concurrent data structures and algorithms, thread safety, handling race conditions, optimizing for high-throughput scenarios.

49. A social network can be represented as a graph where users are nodes, and connections between users are edges. Write an algorithm to find if two given users are connected in the network. **Focus:** Graph traversal algorithms (depth-first search or breadth-first search), basic graph representation (adjacency list or adjacency matrix).

50. In a large social network, efficiently finding the shortest path between two users is crucial. Implement Dijkstra's algorithm to find the shortest paths between users in the network, considering edge weights (e.g., representing the strength of connections). **Focus:** Shortest path algorithms (Dijkstra's algorithm), graph algorithms with weighted edges, optimizing for large graphs.

51. A file system can be modeled as a tree structure. Implement a function to traverse the file system and print the names of all files and directories. **Focus:** Tree traversal algorithms (depth-first search or breadth-first search), basic tree representation (using nodes and pointers).

52. Design and implement a file system that supports efficient operations like creating directories, deleting files, and finding files based on their names or paths. Consider using a combination of tree structures and hash tables for efficient indexing and searching. **Focus:** Designing and implementing file system structures, using multiple data structures together, optimizing for common file system operations.

53. An online shopping cart can be represented as a tree, where each node represents an item or a category of items. Write an algorithm to calculate the total price of all items in the shopping cart. **Focus:** Tree traversal, calculating sums within a tree structure.

54. Implement a system that allows customers to apply discounts and coupons to their shopping carts. Consider using a combination of trees and other data structures (e.g., hash tables) to efficiently apply discounts and calculate the final price. **Focus:** Applying discounts and promotions to tree-like structures, efficient implementation of discount rules, optimizing for complex pricing scenarios.

55. In a social network, users can form groups. Given a list of friendships, determine if all users in a specific group are connected (directly or indirectly) through friendships. **Focus:** Disjoint set union (DSU) data structure, basic connectivity checks.

56. Design an efficient algorithm to find the minimum number of new friendships needed to connect all users in the social network into a single, connected component. **Focus:** Applying DSU for finding connected components, greedy algorithms, optimization for minimizing connections.

57. A treasure hunt involves a series of clues leading to the final treasure. Given a list of possible paths and their associated costs, find the cheapest path to reach the treasure. **Focus:** Greedy algorithms (e.g., Dijkstra's algorithm for shortest paths), basic graph representation.

58. In a more complex treasure hunt, there are time constraints associated with each path. Design an algorithm to find the fastest path to the treasure while considering both path costs and time constraints. **Focus:** Combining greedy approaches with other techniques (e.g., priority queues), handling multiple constraints, optimizing for time-critical scenarios.

59. In a simplified chess game with only rooks, determine the minimum number of moves required for a rook to reach a specific target square on an empty board. **Focus:** Breadth-first search (BFS) on a graph (the chessboard), basic graph traversal.

60. In a more realistic chess game with multiple pieces and obstacles, implement a minimax algorithm with alpha-beta pruning to determine the best move for a player. **Focus:** Game tree search, minimax algorithm, optimization techniques like alpha-beta pruning, handling complex game states.

Targeted Application & Tools that can be used:

10. C or C++ Compiler (g++): The standard compiler for CP. Familiarize students with compilation flags (e.g., -O2 for optimization).
11. IDE (Integrated Development Environment): Code::Blocks, Visual Studio, CLion, or similar IDEs. These provide debugging capabilities, code completion, and other helpful features.
12. Online Judges (CodeChef, Codeforces, LeetCode, HackerRank): Essential for practicing and submitting solutions.
13. Debugger (gdb): Crucial for understanding code execution and finding bugs. Origin, excel and Mat lab softwares for programming and data analysis.
14. Number Theory Libraries: Some libraries provide pre-built functions for number theory operations (though often it's better to implement them yourself for learning).

15. Wolfram Alpha: A useful tool for verifying number theory calculations and exploring concepts.
16. **String Libraries:** Familiarize students with the string manipulation functions available in C++.
17. **Graph Visualization Tools:** Tools like Graphviz can be helpful for visualizing graphs and understanding graph algorithms.
18. **DP Debugging Techniques:** Practice debugging DP solutions, as they can be complex. Visualizing the DP table can be helpful.

Project work/Assignment: Mention the Type of Project /Assignment proposed for this course

Assessment Type

- Midterm exam
- Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screen shot accessing digital resource.)
- Quiz
- End Term Exam
- Self-Learning

Course Code: CSE 7300	Course Title: Capstone Project Type of Course:	L- T-P- C	0	0	0	10
Version No.	1.0					
Course Pre-requisites	Knowledge and Skills related to all the courses studied in previous semesters.					
Anti-requisites	NIL					

Course Description	<p>Students observe science and technology in action, develop an awareness of the method of scientific experimentation, and often get an opportunity to see, study and operate sophisticated and costly equipment. They also learn about the implementation of the principles of management they have learnt in class, when they observe multidisciplinary teams of experts from engineering, science, economics, operations research, and management deal with techno-economic problems at the micro and macro levels. Finally, it enables them to develop and refine their language, communication and inter-personal skills, both by its very nature, and by the various evaluation components, such as seminar, group discussion, project report preparation, etc. The broad-based core education, strong in mathematics and science and rich in analytical tools, provides the foundation necessary for the student to understand properly the nature of real-life problems. The students have options to pursue this course as either Project Work and Dissertation at the university, or Project Work in an Industry/ Company/ Research Laboratory, or Internship Program in an Industry/Company.</p>
Course Objectives	<p>The objective of the course is to familiarize the learners with the concepts of Professional Practice and attain Employability Skills through Experiential Learning techniques.</p>
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <ol style="list-style-type: none"> 1. Identify problems based on societal /research needs. (Understand) 2. Apply Knowledge and skill to solve societal problems in a group. (Apply) 3. Develop interpersonal skills to work as member of a group or leader. (Apply) 4. Analyze the inferences from available results through theoretical / Experimental / Simulations. (Analyze) 5. Analyze the impact of solutions in societal and environmental context for sustainable development. (Analyze) 6. Improve in written and oral communication. (Create) 7. Demonstrate capabilities of self-learning in a group, which leads to lifelong learning. (Understand)

Course Code: CBD3400

Course Title: Fundamentals of Cloud Computing

L:T:P:C – 3:0:0:3

Prerequisite: Introduction to Big Data

Course Description

This course introduces the core concepts and architecture of cloud computing. It provides an overview of service models, deployment models, virtualization, resource provisioning, and security in cloud environments. Students will understand how cloud computing supports scalable, on-demand services for businesses and developers.

Course Objectives

- Understand the fundamentals and evolution of cloud computing
- Explore different cloud service and deployment models
- Learn about virtualization and resource management in the cloud
- Examine cloud security, billing models, and industry platforms

Course Outcomes

CO1 (Understand): Describe cloud computing architecture, characteristics, and models

CO2 (Analyze): Compare cloud service models and deployment strategies

CO3 (Apply): Identify appropriate virtualization and provisioning methods

CO4 (Apply): Analyze cloud security and pricing models for applications

Course Content (45 Hours Total)

Module 1: Introduction to Cloud Computing – 11 Sessions

History and evolution of cloud computing, Characteristics of cloud, Benefits and challenges, Cloud architecture and components, Use cases and industry adoption

Module 2: Cloud Service and Deployment Models – 11 Sessions

Service models: IaaS, PaaS, SaaS, Deployment models: Public, Private, Hybrid, Community, Case studies of service providers (AWS, Azure, GCP)

Module 3: Virtualization and Resource Management – 11 Sessions

Concept of virtualization, Types: CPU, Storage, Network virtualization, Hypervisors, Containerization (Docker), Resource provisioning and scheduling

Module 4: Security, Billing, and Industry Trends – 12 Sessions

Cloud security issues and solutions, Identity and access management (IAM), Data protection, Billing and pricing models, SLAs, Future of cloud: Edge, Serverless, Multi-cloud

Course Title: Distributed Computing with Hadoop

L:T:P:C – 3:0:0:3

Prerequisite: Introduction to Big Data

Course Description

This course provides an in-depth understanding of distributed computing concepts and practical implementation using the Hadoop ecosystem. It covers HDFS, MapReduce, YARN, and an introduction to tools such as Hive, Pig, and HBase. Emphasis is placed on scalable data processing and real-world big data applications.

Course Objectives

- Understand the principles of distributed computing and Hadoop architecture
- Learn how Hadoop handles large-scale data using HDFS and MapReduce
- Explore data processing tools in the Hadoop ecosystem
- Apply Hadoop tools to solve real-world big data problems

Course Outcomes

CO1 (Understand): Describe the architecture and components of Hadoop and distributed file systems

CO2 (Analyze): Compare Hadoop MapReduce with traditional data processing models

CO3 (Apply): Implement data processing tasks using MapReduce and HDFS

CO4 (Apply): Use Hadoop ecosystem tools for querying and analysis of big data

Course Content (45 Hours Total)

Module 1: Introduction to Distributed Computing and Hadoop – 11 Sessions

Basics of distributed systems, Challenges in distributed computing, Hadoop overview, HDFS architecture, Namenode, Datanode, HDFS operations, Fault tolerance and replication

Module 2: MapReduce Framework – 11 Sessions

MapReduce programming model, Job lifecycle, Input/output formats, Partitioning, Sorting, Combiner, Counters, Writing MapReduce jobs in Java / Python

Module 3: Hadoop Ecosystem and YARN – 11 Sessions

YARN architecture, Resource Manager, Node Manager, Job scheduling, Introduction to Hive (SQL on Hadoop), Pig (Scripting), HBase (NoSQL), Zookeeper, Sqoop and Flume basics

Module 4: Big Data Use Cases and Performance – 12 Sessions

Performance tuning in MapReduce, Hadoop configuration and administration basics, Real-time case studies (e.g., log analysis, recommendation engines), Introduction to Spark for Hadoop users

Course Code: CBD3402**Course Title: Edge Computing & IoT Integration with Cloud****L:T:P:C – 3:0:0:3****Prerequisite: Introduction to Big Data****Course Description**

This course explores the synergy between edge computing, the Internet of Things (IoT), and cloud technologies. It focuses on distributed data processing, IoT device integration, fog computing, edge analytics, and cloud-based orchestration. Students will understand architectures, platforms, and protocols used for scalable and real-time data management in smart environments.

Course Objectives

- Understand the architecture and fundamentals of IoT, edge, fog, and cloud computing
- Explore communication protocols, devices, and middleware for IoT-cloud integration
- Learn the role of edge and fog computing in reducing latency and enabling real-time analytics
- Apply cloud platforms for scalable IoT deployment and data orchestration

Course Outcomes

CO1 (Understand): Explain architectures and technologies involved in IoT-edge-cloud ecosystems

CO2 (Analyze): Compare edge, fog, and cloud computing paradigms for IoT integration

CO3 (Apply): Design real-time edge analytics frameworks using appropriate communication protocols

CO4 (Apply): Integrate IoT systems with cloud platforms for scalable data processing and control

Course Content (45 Hours Total)**Module 1: Introduction to IoT and Cloud Integration – 11 Sessions**

Overview of IoT systems, IoT architecture layers, IoT sensors, actuators, and gateways, Cloud computing for IoT, Cloud platforms for IoT: AWS IoT, Azure IoT Hub, Google Cloud IoT

Module 2: Edge and Fog Computing – 11 Sessions

Definition and need for edge computing, Fog computing vs. cloud computing, Edge device architecture, Edge gateways, Edge-cloud orchestration, Use cases (smart cities, healthcare, manufacturing)

Module 3: Protocols and Middleware for IoT Integration – 11 Sessions

IoT protocols: MQTT, CoAP, HTTP, AMQP, LPWAN, Middleware and API management, Pub/Sub models, Real-time messaging, Data acquisition and preprocessing at edge nodes

Module 4: Edge Analytics and Deployment Frameworks – 12 Sessions

Edge AI and analytics using TinyML and TensorFlow Lite, Stream processing on edge devices, Docker and Kubernetes for IoT containerization, Security in IoT-cloud integration, Case studies and emerging trends

Course Code: CBD3403**Course Title: Cloud Storage & Data Management****L:T:P:C – 3:0:0:3****Prerequisite: Introduction to Big Data****Course Description**

This course provides comprehensive knowledge on cloud-based data storage and management solutions. It covers storage architectures, distributed file systems, data lifecycle management, backup, archiving, and security. The course also focuses on cloud-native and hybrid storage models with applications in scalable and resilient enterprise systems.

Course Objectives

- Understand the principles and architecture of cloud storage systems
- Explore data management strategies including backup, recovery, and archiving
- Analyze performance, scalability, and consistency models in storage
- Implement cloud-native storage solutions for structured and unstructured data

Course Outcomes

CO1 (Understand): Explain cloud storage models, architectures, and technologies

CO2 (Analyze): Evaluate storage performance, redundancy, and availability strategies

CO3 (Apply): Use distributed file systems and object stores for cloud-based data management

CO4 (Apply): Design and manage data lifecycle and security in cloud environments

Course Content (45 Hours Total)

Module 1: Fundamentals of Cloud Storage – 11 Sessions

Introduction to cloud storage, Types: block, file, object storage, Cloud storage architectures (centralized vs distributed), Characteristics: durability, availability, scalability, Examples: AWS S3, Azure Blob, GCP Cloud Storage

Module 2: Distributed File Systems and Storage Services – 11 Sessions
HDFS architecture, Hadoop storage layers, Google File System (GFS), Amazon S3 internals, CephFS, GlusterFS, Data redundancy, replication strategies, Storage SLAs

Module 3: Data Management Techniques – 11 Sessions

Data lifecycle management, Tiered storage, Storage provisioning and pooling, Backup and disaster recovery, Snapshots, Versioning, Archival systems, Metadata management

Module 4: Storage Security and Monitoring – 12 Sessions

Data encryption (at rest and in transit), Identity and access control (IAM), Secure file sharing, Auditing, Logging, Storage cost management, Monitoring tools (CloudWatch, Azure Monitor), Case studies on hybrid storage management

Course Title: Serverless Computing & Microservices in Cloud

L:T:P:C – 3:0:0:3

Course Description

This course introduces serverless architecture and microservices in cloud computing. It explores FaaS (Function-as-a-Service), container orchestration, service discovery, API gateways, and CI/CD pipelines. Students will learn to design and deploy lightweight, modular applications with improved scalability, maintainability, and cloud efficiency.

Course Objectives

- Understand the principles of serverless computing and microservices
- Learn function-based application development with cloud platforms
- Explore containerization, orchestration, and API management
- Design scalable and resilient microservice architectures in the cloud

Course Outcomes

CO1 (Understand): Describe the architecture and components of serverless computing and microservices

CO2 (Analyze): Evaluate platforms and design strategies for scalable service deployment

CO3 (Apply): Implement serverless functions and microservices using cloud-native tools

CO4 (Apply): Design CI/CD-enabled, containerized microservices with monitoring and scaling capabilities

Course Content (45 Hours Total)

Module 1: Introduction to Serverless Computing – 11 Sessions

Serverless paradigm overview, Benefits and challenges, FaaS overview, Serverless platforms (AWS Lambda, Azure Functions, GCP Cloud Functions), Event-driven execution, Stateless design principles

Module 2: Microservices Architecture – 11 Sessions

Introduction to monolithic vs. microservices architecture, Communication protocols (REST, gRPC), Service discovery, Load balancing, API Gateways, Design patterns for microservices

Module 3: Containers and Orchestration – 11 Sessions

Containerization using Docker, Docker Compose, Kubernetes architecture, Pods and Services, Scaling and replication, CI/CD pipelines with Jenkins/GitHub Actions for microservices deployment

Module 4: Monitoring, Security, and Case Studies – 12 Sessions

Service observability (logging, metrics, tracing), Tools (Prometheus, Grafana), Security best practices, Serverless security considerations, Cost optimization, Real-world use cases in retail, healthcare, and fintech

Course Code: CBD3406**Course Title: Introduction to Data Science & Big Data**

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course introduces the fundamental concepts of data science and big data analytics. It provides an overview of data collection, cleaning, exploratory analysis, visualization, and basic predictive modeling. It also introduces scalable processing

using big data frameworks like Hadoop and Spark. The course emphasizes real-world applications of data science across domains.

Course Objectives

- Understand the data science process and big data ecosystem
- Explore data collection, preparation, and analysis techniques
- Learn basic machine learning methods and evaluation techniques
- Introduce big data technologies and their role in modern analytics

Course Outcomes

CO1 (Understand): Describe the data science life cycle and big data characteristics

CO2 (Analyze): Perform exploratory and statistical data analysis techniques

CO3 (Apply): Implement basic machine learning models for classification and prediction

CO4 (Apply): Demonstrate big data processing using Hadoop and Spark platforms

Course Content (45 Hours Total)

Module 1: Introduction to Data Science and Big Data – 11 Sessions

What is data science?, Data science workflow and roles, Characteristics of big data (5Vs), Types and sources of data, Introduction to tools: Python, R, Jupyter, Big data ecosystem overview

Module 2: Data Wrangling and Exploratory Analysis – 11 Sessions

Data cleaning, Handling missing data and outliers, Feature engineering, Descriptive statistics, Data visualization (histograms, boxplots, scatterplots), Correlation analysis

Module 3: Introduction to Machine Learning – 11 Sessions

Supervised vs. unsupervised learning, Linear regression, Logistic regression, k-Nearest Neighbors, Model evaluation: Accuracy, Precision, Recall, Confusion matrix

Module 4: Big Data Platforms and Applications – 12 Sessions

Hadoop ecosystem: HDFS, MapReduce, YARN, Introduction to Spark and PySpark, RDDs and DataFrames, Real-world applications of data science in business, healthcare, and IoT

Course Code: CBD3407

Course Title: Feature Engineering & Model Selection

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course covers the essential techniques for preparing data and selecting models in machine learning workflows. It introduces feature engineering methods such as encoding, transformation, dimensionality reduction, and feature selection. It also emphasizes model comparison, cross-validation, hyperparameter tuning, and performance evaluation strategies for supervised learning tasks.

Course Objectives

- Understand the role and importance of feature engineering in model development
- Apply preprocessing and transformation techniques to real-world data
- Explore model selection, tuning, and validation approaches
- Evaluate machine learning models using appropriate performance metrics

Course Outcomes

CO1 (Understand): Explain the concepts of feature engineering and its impact on model performance

CO2 (Analyze): Evaluate features using statistical and model-based selection techniques

CO3 (Apply): Perform dimensionality reduction and transformation on datasets

CO4 (Apply): Select, validate, and tune models for classification and regression problems

Course Content (45 Hours Total)

Module 1: Introduction to Feature Engineering – 11 Sessions

Types of features, Importance of features in machine learning, Handling missing values, Encoding categorical variables, Binning and bucketing, Variable transformation (log, Box-Cox), Feature scaling (normalization, standardization)

Module 2: Advanced Feature Construction and Selection – 11 Sessions

Polynomial and interaction features, Feature extraction (date/time, text), Feature selection methods: filter, wrapper, embedded, Recursive Feature Elimination (RFE), Feature importance using tree-based models

Module 3: Dimensionality Reduction Techniques – 11 Sessions

Curse of dimensionality, PCA (Principal Component Analysis), t-SNE, LDA, Autoencoders (overview), Choosing number of components, Visualizing high-dimensional data

Module 4: Model Selection and Validation – 12 Sessions

Train/test split, k-Fold Cross-validation, Leave-one-out CV, Hyperparameter tuning (Grid Search, Random Search), Bias-variance trade-off, Evaluation metrics: Accuracy, ROC-AUC, MAE, RMSE, Model comparison techniques

Course Code: CBD3408**Course Title: Big Data-driven Business Intelligence****L:T:P:C – 3:0:0:3****Prerequisite:** CBD1700 – Introduction to Big Data**Course Description**

This course explores how big data technologies empower business intelligence (BI) systems for strategic decision-making. It covers data warehousing, OLAP, big data analytics, real-time dashboards, and visualization tools. Students will gain practical insights into the design, development, and application of BI solutions using big data platforms.

Course Objectives

- Understand the role of big data in modern business intelligence systems
- Learn data warehousing and OLAP techniques for analytical processing
- Explore big data analytics for descriptive, predictive, and prescriptive insights
- Apply visualization and reporting tools for real-time decision support

Course Outcomes

CO1 (Understand): Explain the principles of business intelligence and big data analytics

CO2 (Analyze): Evaluate data models, OLAP operations, and data integration in BI systems

CO3 (Apply): Design BI dashboards using big data visualization tools

CO4 (Apply): Develop insights from structured and unstructured data using BI pipelines

Course Content (45 Hours Total)

Module 1: Foundations of Business Intelligence – 11 Sessions

BI concepts and components, Role of data in decision-making, Data-driven organizations, BI architecture, Key performance indicators (KPIs), Data integration and ETL processes

Module 2: Data Warehousing and OLAP – 11 Sessions

Data warehouse architecture, Star and snowflake schemas, Fact and dimension tables, OLAP operations (slice, dice, drill-down), Data marts, ETL with big data sources

Module 3: Big Data Analytics in BI – 11 Sessions

Types of analytics: descriptive, predictive, prescriptive, Real-time analytics, Tools: Hadoop, Spark, Hive, Stream processing with Kafka/Spark Streaming, Use cases in retail, finance, healthcare

Module 4: BI Dashboards and Visualization – 12 Sessions

Data storytelling, BI tools (Power BI, Tableau, Google Data Studio), Real-time dashboards, Interactive reports, Custom KPIs, Case studies, Industry applications and trends

Course Title: Time Series Analysis & Forecasting

L:T:P:C – 3:0:0:3

Prerequisite: CBD1700 – Introduction to Big Data

Course Description

This course focuses on the analysis of time-dependent data for forecasting and decision-making. It covers fundamental and advanced techniques in time series analysis, including decomposition, smoothing, ARIMA models, machine learning approaches, and evaluation methods. Applications in business, finance, IoT, and climate analytics are explored.

Course Objectives

- Understand the nature and components of time series data
- Learn classical statistical methods and modern techniques for forecasting
- Develop models to predict future values based on historical patterns
- Apply time series methods in real-world domains using Python or R

Course Outcomes

CO1 (Understand): Explain key concepts and techniques used in time series modeling

CO2 (Analyze): Decompose time series into components and evaluate model assumptions

CO3 (Apply): Develop and validate forecasting models using ARIMA and machine learning techniques

CO4 (Apply): Interpret time series results and apply them to practical problems in various domains

Course Content (45 Hours Total)

Module 1: Introduction to Time Series Data – 11 Sessions

(Understand)

Definition and types of time series, Components: trend, seasonality, cyclicity, randomness, Time series plots, Stationarity, Lag plots, Autocorrelation (ACF) and Partial ACF (PACF)

Module 2: Classical Forecasting Techniques – 11 Sessions (Analyze)

Moving averages, Exponential smoothing (SES, Holt's, Holt-Winters), Model selection with AIC/BIC, Forecast accuracy metrics (MAE, MSE, RMSE, MAPE)

Module 3: ARIMA and Seasonal Models – 11 Sessions

(Apply)

AR, MA, ARMA, ARIMA models, Box-Jenkins methodology, Differencing, Seasonal ARIMA (SARIMA), Model diagnostics and residual analysis, Ljung-Box test

Module 4: Advanced and Machine Learning Approaches – 12 Sessions (Apply)

Vector Auto Regression (VAR), Facebook Prophet, LSTM for time series, Time series cross-validation, Feature engineering for time series, Use cases: sales, temperature, finance, energy

Course Title: Natural Language Processing for Big Data

L:T:P:C – 3:0:0:3

Prerequisite: CBD1700 – Introduction to Big Data

Course Description

This course introduces core concepts and practical techniques in Natural Language Processing (NLP) applied to large-scale datasets. It covers text preprocessing, vector representations, syntactic and semantic analysis, sentiment classification, and neural models for text. Students will work with big data tools and NLP frameworks to extract, analyze, and visualize textual data from real-world sources.

Course Objectives

- Understand the fundamentals of NLP and linguistic data processing
- Explore algorithms for syntactic, semantic, and contextual analysis
- Apply NLP techniques on large-scale datasets using machine learning
- Use big data platforms to perform distributed text analytics and insights

Course Outcomes

CO1 (Understand): Explain foundational NLP techniques for text processing and representation

CO2 (Analyze): Evaluate NLP pipelines using linguistic and statistical models

CO3 (Apply): Implement sentiment analysis, topic modeling, and entity recognition on large datasets

CO4 (Apply): Use big data tools for scalable NLP workflows in real-world applications

Course Content (45 Hours Total)

Module 1: Fundamentals of NLP and Text Processing – 11 Sessions (Understand)

Text types and structures, NLP pipeline stages, Tokenization, Stop word removal, Lemmatization and stemming, POS tagging, Regular expressions, Bag-of-words and TF-IDF models

Module 2: Language Modeling and Syntax – 11 Sessions (Analyze)

N-gram models, Smoothing techniques, Syntax parsing (constituency and

dependency), Named entity recognition (NER), Chunking, Word embeddings (Word2Vec, GloVe), Language resources (WordNet, corpora)

Module 3: NLP Applications on Big Data – 11 Sessions (Apply)

Text classification (Naïve Bayes, SVM), Sentiment analysis, Topic modeling with LDA, Text clustering, Text summarization, Document similarity and search, Case studies: product reviews, tweets, forums

Module 4: Scalable NLP with Big Data Tools – 12 Sessions (Apply)

Distributed text processing with Apache Spark (MLlib, Spark NLP), Text pipelines in spaCy, NLTK, and Hugging Face Transformers, Cloud-based NLP services (AWS Comprehend, Azure Text Analytics), Real-world project: NLP at scale

Course Title: Data Governance, Ethics & Privacy

L:T:P:C – 3:0:0:3

Prerequisite: CBD1700 – Introduction to Big Data

Course Description

This course addresses the frameworks, principles, and practices for governing data responsibly. It focuses on data privacy, security, regulatory compliance, ethical AI practices, and responsible data usage in organizations. Students will explore legal aspects such as GDPR, data handling standards, and ethical dilemmas in data-driven decision-making.

Course Objectives

- Understand key concepts in data governance, ethics, and privacy
- Analyze regulatory frameworks, data handling policies, and global standards
- Explore ethical challenges in data science and AI applications
- Apply best practices for data protection and ethical compliance in projects

Course Outcomes

CO1 (Understand): Describe the principles of data governance, privacy, and ethical frameworks

CO2 (Analyze): Evaluate compliance requirements and legal aspects such as GDPR and data protection laws

CO3 (Apply): Develop policies and controls for ethical handling of sensitive and personal data

CO4 (Apply): Integrate data ethics and governance strategies into real-world data projects

Course Content (45 Hours Total)**Module 1: Introduction to Data Governance – 11 Sessions (Understand)**

Principles of data governance, Data stewardship and ownership, Data policies, Metadata management, Data quality management, Governance frameworks (DAMA, COBIT), Data lifecycle

Module 2: Data Privacy and Protection Regulations – 11 Sessions (Analyze)

Global data protection laws: GDPR, CCPA, HIPAA, Consent management, Anonymization and pseudonymization, Privacy by design, Data breach reporting, Risk assessment and DPIA

Module 3: Ethics in Data Science and AI – 11 Sessions (Apply)

AI and algorithmic bias, Fairness, transparency, accountability in AI, Ethical data sourcing, Responsible AI principles, Case studies on ethical lapses and implications

Module 4: Implementing Governance and Ethics in Practice – 12 Sessions (Apply)

Data classification and access control, Policy enforcement and audits, Ethical codes for data professionals, Cloud data governance, Tools and platforms (Collibra, Apache Ranger), Real-world governance challenges

Course Title: Computer Vision for AI Applications

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course introduces the core concepts of computer vision and its applications in AI. It covers image formation, filtering, feature extraction, object detection, and deep learning models for visual recognition. Students will explore practical techniques to build intelligent vision systems using Python libraries and pre-trained models.

Course Objectives

- Understand the principles of image processing and computer vision
- Explore algorithms for feature extraction, object detection, and tracking
- Learn to apply deep learning models in visual recognition tasks
- Implement computer vision pipelines using real-world datasets and tools

Course Outcomes

CO1 (Understand): Explain basic image processing and vision principles

CO2 (Analyze): Evaluate computer vision algorithms for feature detection and representation

CO3 (Apply): Develop models for object detection, segmentation, and classification

CO4 (Apply): Use deep learning frameworks to build AI-enabled vision systems

Course Content (45 Hours Total)

Module 1: Introduction to Computer Vision – 11 Sessions (Understand)

Image formation and representation, Color models, Camera models, Sampling and quantization, Histogram equalization, Image filtering (smoothing, sharpening), Edge detection (Sobel, Canny)

Module 2: Feature Detection and Matching – 11 Sessions (Analyze)

Corner detection (Harris), Keypoint detectors (SIFT, SURF, ORB), Feature descriptors, Template matching, Homography and geometric transformations, Image stitching basics

Module 3: Object Detection and Tracking – 11 Sessions (Apply)

Object recognition pipelines, Face detection (Haar cascades), HOG+SVM, Object tracking (Mean-shift, KLT), Semantic segmentation overview, Contour detection, Background subtraction

Module 4: Deep Learning for Vision – 12 Sessions (Apply)

CNN architectures (LeNet, AlexNet, VGG, ResNet), Transfer learning, Image classification, Object detection using YOLO/SSD, Pre-trained models (OpenCV DNN, TensorFlow, PyTorch), Real-world applications (autonomous vehicles, surveillance, healthcare)

Course Title: Generative AI and Large Language Models (LLMs)

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course introduces the fundamental concepts and techniques of Generative AI with a focus on Large Language Models (LLMs). It explores language modeling, training methods, transformer architectures, ethical considerations, and practical applications in content generation, dialogue systems, and multimodal AI. Students will gain hands-on experience with open-source models and platforms.

Course Objectives

- Understand the architecture and working of large language models and generative AI
- Explore training methodologies, tokenization, and fine-tuning strategies
- Apply LLMs for various NLP tasks including generation, summarization, and translation
- Evaluate the ethical, social, and security concerns of using generative AI

Course Outcomes

CO1 (Understand): Explain the concepts, architectures, and workflows of generative AI and LLMs

CO2 (Analyze): Examine the performance and limitations of pre-trained LLMs across various NLP tasks

CO3 (Apply): Use open-source LLMs for real-world language generation and reasoning tasks

CO4 (Apply): Address ethical challenges and deploy LLMs responsibly in AI systems

Course Content (45 Hours Total)

Module 1: Introduction to Generative AI and LLMs – 11 Sessions (Understand)

Overview of generative models, Difference between discriminative and generative AI, Introduction to LLMs, Tokenization, Embeddings, Language modeling objectives, Applications of LLMs

Module 2: Transformer Architecture and Training – 11 Sessions (Analyze)

Self-attention and multi-head attention, Encoder-decoder and decoder-only models, Pretraining objectives (causal and masked language modeling), Fine-tuning strategies, OpenAI GPT, BERT, T5, LLaMA

Module 3: Prompt Engineering and Applications – 11 Sessions (Apply)

Few-shot, zero-shot, and chain-of-thought prompting, Prompt design strategies, Text generation, Summarization, Translation, Conversational AI, Code generation, Retrieval-augmented generation (RAG)

Module 4: Evaluation, Deployment, and Ethics – 12 Sessions (Apply)

Evaluation metrics (BLEU, ROUGE, perplexity), Hallucination and bias, Adversarial inputs, Security threats, Content moderation, Explainability in LLMs, Tools for deployment (LangChain, Hugging Face, OpenAI API), Responsible AI

Course Code: CBD3415**Course Title: Explainable AI (XAI) and Ethical AI****L:T:P:C – 3:0:0:3****Prerequisite:** Nil**Course Description**

This course explores the emerging fields of Explainable Artificial Intelligence (XAI) and Ethical AI. It covers the need for transparency, interpretability, and trust in AI systems. Students will learn technical methods for explaining AI models, frameworks for ethical AI development, and guidelines for responsible deployment in sensitive domains such as finance, healthcare, and law.

Course Objectives

- Understand the importance of explainability and fairness in AI systems
- Learn technical methods for interpreting machine learning and deep learning models
- Analyze ethical challenges such as bias, accountability, and data privacy
- Apply frameworks and standards for building responsible and trustworthy AI solutions

Course Outcomes**CO1 (Understand):** Explain the need for interpretability and fairness in AI systems**CO2 (Analyze):** Evaluate different XAI techniques and their effectiveness across models**CO3 (Apply):** Use XAI tools and libraries to explain AI model predictions**CO4 (Apply):** Develop ethically aligned AI systems considering societal and legal norms**Course Content (45 Hours Total)****Module 1: Introduction to Explainable and Ethical AI – 11 Sessions (Understand)**

Definition and need for XAI, Black-box vs. white-box models, Trade-offs in interpretability vs. performance, Overview of ethical AI principles: fairness, accountability, transparency

Module 2: Techniques for Explainable AI – 11 Sessions (Analyze)

Local and global interpretability, Feature importance, Surrogate models, LIME, SHAP, Partial Dependence Plots, Counterfactual explanations, Interpreting CNNs and attention mechanisms

Module 3: Tools and Platforms for XAI – 11 Sessions (Apply)

Open-source libraries: ELI5, SHAP, Alibi, InterpretML, Model cards and datasheets, Visualization dashboards, Case studies from healthcare, finance, and education

Module 4: Ethical and Responsible AI Practices – 12 Sessions (Apply)

Bias detection and mitigation, Privacy-preserving AI (differential privacy, federated learning), Legal frameworks (GDPR, AI Act), Guidelines from IEEE, OECD, UNESCO, Building trust and human-centric design

Course Code: CBD3416**Course Title: Advanced Deep Learning Architectures****L:T:P:C – 3:0:0:3****Prerequisite:** Nil**Course Description**

This course covers advanced neural network architectures and techniques used in solving complex AI tasks. Topics include CNNs, RNNs, GANs, Transformers, attention mechanisms, and hybrid models. Students will explore state-of-the-art deep learning frameworks and apply them to domains such as vision, NLP, and generative modeling.

Course Objectives

- Understand the design and training of advanced deep neural network architectures
- Explore attention-based models, recurrent and convolutional networks
- Apply deep generative and sequence models to real-world problems
- Evaluate architectural trade-offs and optimize performance across domains

Course Outcomes

CO1 (Understand): Describe advanced architectures used in deep learning systems

CO2 (Analyze): Compare the strengths and limitations of CNNs, RNNs, GANs, and Transformers

CO3 (Apply): Implement models using state-of-the-art libraries for vision and sequence tasks

CO4 (Apply): Fine-tune and optimize deep networks for performance and scalability

Course Content (45 Hours Total)

Module 1: Convolutional and Residual Networks – 11 Sessions

(Understand)

Review of CNNs, Architectural innovations: AlexNet, VGG, ResNet, DenseNet, MobileNet, Transfer learning, Applications in computer vision

Module 2: Recurrent Networks and Sequence Modeling – 11 Sessions (Analyze)

RNNs, LSTMs, GRUs, Bidirectional RNNs, Sequence-to-sequence models, Attention in sequence modeling, Applications: speech, text, time series

Module 3: Generative Models – 11 Sessions (Apply)

Autoencoders (AEs, VAEs), Generative Adversarial Networks (GANs), DCGANs, Conditional GANs, Image generation, Anomaly detection, Text-to-image synthesis

Module 4: Transformers and Hybrid Architectures – 12 Sessions (Apply)

Transformer architecture and self-attention, BERT and GPT overview, Vision Transformers (ViT), Combining CNNs and RNNs, Training strategies and performance tuning, Application case studies

Course Title: Real-Time Big Data Processing and AI Deployment

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course introduces frameworks and tools for real-time big data stream processing and the deployment of AI models in production environments. It explores streaming platforms like Apache Kafka and Spark Streaming, containerization, model serving, orchestration, and monitoring techniques to ensure scalable and reliable AI systems.

Course Objectives

- Understand real-time data processing architectures and tools
- Learn to build and deploy AI models in cloud and edge environments
- Explore CI/CD pipelines for AI workflows
- Apply monitoring and performance tuning techniques for production systems

Course Outcomes

CO1 (Understand): Describe real-time big data processing and AI deployment architectures

CO2 (Analyze): Compare stream processing frameworks and deployment strategies

CO3 (Apply): Build pipelines for real-time data analytics and AI model inference

CO4 (Apply): Deploy and monitor AI services using scalable production frameworks

Course Content (45 Hours Total)

Module 1: Introduction to Real-Time Data Processing – 11 Sessions (Understand)

Batch vs. stream processing, Real-time data characteristics, Apache Kafka, Apache Flink, Spark Streaming, Lambda vs. Kappa architecture, Event time processing, Use cases

Module 2: AI Model Deployment Fundamentals – 11 Sessions (Analyze)

Model serialization (Pickle, ONNX, SavedModel), Model serving frameworks (TensorFlow Serving, TorchServe), REST APIs with Flask/FastAPI, Deployment strategies: online, batch, shadow, blue-green

Module 3: Scalable Deployment with Containers and Orchestration – 11 Sessions (Apply)

Docker containers, Building and packaging ML apps, Kubernetes basics, Deploying AI services in Kubernetes, Helm charts, Scaling and resource allocation, Serverless inference

Module 4: CI/CD, Monitoring, and MLOps Tools – 12 Sessions (Apply)

CI/CD for AI (Jenkins, GitHub Actions), ML pipelines (MLflow, Kubeflow), Logging and monitoring (Prometheus, Grafana), Model drift detection, Alerting, Use cases in finance, IoT, healthcare

Course Code: MAT2064	Course Title: Numerical Computing Type of Course: 1] School Core	L-T-P-C	3	0	0	3
Version No.	1.0					
Course Pre-requisites		Calculus, Linear Algebra, Differential Equations				
Anti-requisites		NIL				
Course Description		The course explores mathematical techniques used to approximate solutions to complex problems that are difficult to solve analytically, often utilizing computers to perform calculations, including methods for root finding, interpolation, numerical differentiation and integration, solving systems of linear equations, and approximating solutions to differential equations, with applications across various scientific and engineering fields. It focuses on understanding the theoretical basis behind these methods, their implementation in programming languages, and analyzing their accuracy and stability.				
Course Objective		The objective of the course is to equip students with understanding and ability to apply various numerical techniques to approximate solutions to complex mathematical problems that are difficult or impossible to solve analytically, particularly focusing on areas like solving systems of equations, finding roots of functions, interpolation, numerical differentiation, and integration, often utilizing computational tools to implement these methods.				
Course Out Comes		On successful completion of the course the students shall be able to: CO1 - Calculate errors induced in the values by truncation of a series expansion. CO2 - Demonstrate the applications of numerical methods to find the roots of polynomial equations and eigen values of real symmetric matrices. CO3 - Apply the knowledge of numerical methods in modelling of various physical and engineering phenomena. CO4 - Apply various numerical methods for solving linear Ordinary & Partial differential equations arising in engineering field.				
Course Content:						

Module 1	Solution of Linear Systems of Equation		(12 Classes)
Numerical Computation: Motivation and Objectives, Number Representation, Machine Precision, Round-off Error, Truncation Error, Random Number Generation.			
Solution of algebraic and transcendental equations: Various types of errors - Bisection method, Regula-Falsi method, Newton-Raphson method, Graffe's method - Bairstow's method - Newton's method for solving $f(x,y) = 0$ and $g(x,y) = 0$, secant method, Fixed point iteration method, Solution of linear system of equations, Gauss elimination method, Pivoting, Gauss Jordan method, Iterative methods of Gauss Jacobi and Gauss Seidel, Sufficient conditions for convergence - LU decomposition method, Eigenvalues of a matrix by Power method and Jacobi's method for symmetric matrices.			
Module 2	Interpolation and Approximation	Assignment	(8 Classes)
Interpolation with equal intervals, Newton's forward and backward difference formulae, Interpolation with unequal intervals, Lagrange's interpolation, Newton's divided difference interpolation, Cubic Splines, Difference operators and relations.			
Module 3	Numerical Differentiation and Integration		(10 Classes)
Numerical differentiation, Approximation of derivatives using interpolation polynomials, Numerical integration using Trapezoidal rule, Simpson's one-third rule, Simpson's three-eighth rule, Weddle's rule, Romberg's Method, Two point and three point Gaussian quadrature formulae, Evaluation of double integrals by Trapezoidal rule and Simpson's one-third rule			
Module 4	Initial & Boundary Value Problems for Ordinary & Partial Differential Equations	Assignment	(15 Classes)
Single step methods — Taylor's series method, Modified Euler's method, Fourth order Runge-Kutta method for solving first order equations, Multi step methods, Milne's and Adams, Bashforth predictor corrector methods for solving first order equations.			
Finite difference methods for solving second order, two-point linear boundary value problems, Finite difference techniques for the solution of two-dimensional Laplace's and Poisson's equations on rectangular domain, One-dimensional heat flow equation by explicit and implicit (Crank-Nicholson) methods, One-dimensional wave equation by explicit method.			
Targeted Application & Tools that can be used: The contents of this course has direct applications in most of the core engineering courses for problem formulations, Problem Solution and system Design. Tools Used: Python.			
Assignment: 1. Select any one simple differential equation pertaining to the respective branch of engineering, identify the dependent and independent variable – Obtain the solution and compare the solution sets by varying the values of the dependent variable.

Topics relevant to SKILL DEVELOPMENT: The course focuses on the concepts of calculus and differential equation with reference to specific engineering problems. The course is of both conceptual and analytical type in nature through Problem solving. This is attained through the assessment component mentioned in course handout.

Course Code: CSE3120	Course Title: Operating System with Linux Internals Type of Course: Discipline Elective in Information Science &Engineering Basket Theory & Integrated Laboratory	L- P- C	2	2	3
Version No.	1.0				
Course Pre-requisites	[1] C Programming [2] Unix shell programming [3] Data Structure				
Anti-requisites	NIL				
Course Description	The purpose of this course is to enable the students to understand the need for Operating systems and to develop the basic concepts of process management, synchronization and memory management. The course will expose students to Linux OS internals, its design and features. The course is both conceptual and analytical in nature towards managing the process and memory and needs fair knowledge of programming fundamentals, C programming and data structures. The course develops the critical thinking and analytical skills on allocating and				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Operating System with Linux Internals and attain <u>SKILL DEVELOPMENT</u> through <u>EXPERIENTIAL LEARNING</u> techniques.				
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <ul style="list-style-type: none"> (1) Explain the structure and functions of OS (2) Solve problems on various CPU Scheduling Algorithms (3) Apply different techniques to various synchronization problems (4) Discuss various memory management techniques (5) Apply appropriate Linux commands for memory management and directory management 				
Course Content:					
Module 1	Introduction	Quiz	Programming		09 Classes
<p>Topics: Introduction to OS – Computer System Architecture , Operating System Structure, Operations – Different management activities handled by the OS, Computing environments, Operating System Services, User and OS interface, System Calls and its types, System Programs[loaders, linkers...], Overview of OS design and implementation.</p> <p>Linux Operating System: Introduction to Linux OS, Basic Commands of Linux OS</p>					
Module 2	Process Management	Quizzes and assignments	Pseudocode/Programming		9 Classes
<p>Topics: Process Concept, Operations on Processes, Inter Process Communication, Introduction to threads - Multithreading Models, Process Scheduling– Basic concepts, Scheduling Criteria, Scheduling Algorithms: FCFS, SJF, SRTF, RR, Priority, Multilevel Queue, Multilevel Feedback Queue.</p> <p>Linux Operating System: Process Management Commands and System Calls.</p>					
Module 3	Process Synchronization and Deadlocks	Coding Assignment/Case Study	Pseudocode/Programming		9 Classes

Topics:

The Critical-Section Problem - Peterson's Solution, Synchronization hardware, Mutex locks, Semaphores, Classic Problems of Synchronization, Monitors. Introduction to Deadlocks, Deadlock Characterization, Methods for handling deadlock: Deadlock Prevention- Deadlock Avoidance- Deadlock detection & Recovery from Deadlock

Linux Operating System: Pipe, semaphore and message queue

List of Laboratory Tasks:**Experiment No. 1:** Basic UNIX Commands

Level 1: Linux commands- PATH, man, echo, printf, script, passwd, uname, who, date, stty, pwd, cd, mkdir, rmdir, ls, cp, mv, rm, cat, more, wc, lp, od, tar, file handling utilities, security by file permissions, process utilities

Level 2: Text Processing utilities and backup utilities , tail, head, sort, nl, uniq, grep, egrep, fgrep, cut, paste, join, tee, pg, comm, cmp, diff, tr, awk, cpio

Experiment No. 2: Programs using system calls of UNIX operating system

Level 1 Programs using the following system calls of UNIX operating system fork, exec, getpid, exit, wait, close, stat, opendir, readdir

Level 2 Simulate UNIX commands like cp, ls, grep.

Experiment No. 3: Programs to demonstrate process creation and termination **Level 1:** Program to demonstrate creating new processes and waiting for a process**Level 2:** Program to demonstrate creation of zombie processes and orphan process**Experiment No. 4:** Programs to demonstrate inter process communication using Pipe

Level 1: Programs to illustrate execution of two commands concurrently with a command pipe and communication between two unrelated processes

Level 2: Program to demonstrate inter process communication using mkfifo, open, read, write and close APIs

Experiment No. 5: Programs to demonstrate inter process communication using message queues

Level 1: Program to create a message queue with read and write permissions and to write messages with different priority numbers

Level 2: Program to receive messages of different priorities from the message queue and display them

Experiment No. 6: Programs to demonstrate process synchronization using Semaphores

Course Code: CSE7101	Course Title: Mini Project Type of Course:	L- T-P- C	0	0	0	5
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	<p>Students observe science and technology in action, develop an awareness of the method of scientific experimentation, and often get an opportunity to see, study and operate sophisticated and costly equipment. They also learn about the implementation of the principles of management they have learnt in class, when they observe multidisciplinary teams of experts from engineering, science, economics, operations research, and management deal with techno-economic problems at the micro and macro levels. Finally, it enables them to develop and refine their language, communication and inter-personal skills, both by its very nature, and by the various evaluation components, such as seminar, group discussion, project report preparation, etc. The broad-based core education, strong in mathematics and science and rich in analytical tools, provides the foundation necessary for the student to understand properly the nature of real-life problems. The students have options to pursue this course as either Project Work and Dissertation at the university, or Project Work in an Industry/ Company/ Research Laboratory, or Internship Program in an Industry/Company.</p>					
Course Objectives	<p>The objective of the course is to familiarize the learners with the concepts of Professional Practice and attain Employability Skills through Experiential Learning techniques.</p>					
Course Outcomes	<p>On successful completion of this course the students shall be able to:</p> <ol style="list-style-type: none"> 1. Identify the engineering problems related to local, regional, national or global needs. (Understand) 2. Apply appropriate techniques or modern tools for solving the intended problem. (Apply) 3. Design the experiments as per the standards and specifications. (Analyze) 4. Interpret the events and results for meaningful conclusions. (Evaluate) 5. Appraise project findings and communicate effectively through scholarly publications. (Create) 					

Level 1: Program that illustrates suspending and resuming processes using signals

Level 2: Program that illustrates access of shared memory using counting semaphore

Experiment No. 7: Programs to demonstrate the event of a deadlock and its avoidance

Level 1: Using POSIX Semaphores demonstrate the scenario where in deadlock happens due to incorrect use of semaphores

Level 2: Program to implement a solution to the Dining Philosopher problem using Monitors

Targeted Application & Tools that can be used:

Targeted Application:

Real time Applications such as traffic management system, banking system, health care and many more systems where there are entities that use and manage the resources.

Software Tools:

Linux Environment

Project work/Assignment:

Each batch of students (self-selected batch mates) will identify projects and implement with the most suitable 2 or 3 antecedents.

Textbook(s):

1. Silberschatz A, Galvin P B and Gagne G, "Operating System Concepts", 9th edition Wiley, 2013
2. Sumitabha Das, "Unix concept and Programming", McGraw Hill education, 4th Edition, 2015
