5.	Program Description	7
6.	Minimum and Maximum Duration	8
7.	Programme Educational Objectives (PEO)	8
8.	Programme Outcomes (PO) and Programme Specific Outcomes (PSO)	9-10
9.	Admission Criteria (as per the concerned Statutory Body)	10
10.	Lateral Entry / Transfer Students requirements	11
11.	Change of Branch / Discipline / Specialization	13
12.	Specific Regulations regarding Assessment and Evaluation	14
13.	Additional clarifications – Rules and Guidelines for Transfer of Credits from MOOC, etc.	17
PART B: PROGRAM STRUCTURE		
14.	Structure / Component with Credit Requirements Course Baskets & Minimum Basket wise Credit Requirements	20
15.	Minimum Total Credit Requirements of Award of Degree	20
16.	Other Specific Requirements for Award of Degree, if any, as prescribed by the Statutory Bodies	21
PART C: CURRICULUM STRUCTURE		
17.	Curriculum Structure – Basket Wise Course List	21
18.	Practical / Skill based Courses – Internships / Thesis / Dissertation / Capstone Project Work / Portfolio / Mini project	24
19.	List of Elective Courses under various Specializations / Stream Basket	26

20.	List of Open Electives to be offered by the School / Department (Separately for ODD and EVEN Semesters).	31
21.	List of MOOC (NPTEL) Courses	36
22.	Recommended Semester Wise Course Structure / Flow including the Program / Discipline Elective Paths / Options	36
23.	Course Catalogue of all Courses Listed including the Courses Offered by other School / Department and Discipline / Program Electives	41

PART A – PROGRAM REGULATIONS

1. Vision & Mission of the University and the School / Department

3.3 Vision of the University

To be a Value-driven Global University, excelling beyond peers and creating professionals of integrity and character, having concern and care for society.

3.3 Mission of the University

- Commit to be an innovative and inclusive institution by seeking excellence in teaching, research and knowledge-transfer.
- Pursue Research and Development and its dissemination to the community, at large.
- Create, sustain and apply learning in an interdisciplinary environment with consideration for ethical, ecological and economic aspects of nation building.
- Provide knowledge-based technological support and services to the industry in its growth and development.
- To impart globally-applicable skill-sets to students through flexible course offerings and support industry's requirement and inculcate a spirit of new-venture creation.

1.3 Vision of Presidency School of Computer Science and Engineering

To be a value-based, practice-driven Presidency School of Computer Science and Engineering, committed to developing globally competent engineers, dedicated to developing cutting-edge technology to enhance the quality of life.

1.4 Mission of Presidency School of Computer Science and Engineering

- Cultivate a practice-driven environment with computing-based pedagogy, integrating theory and practice.
- Attract and nurture world-class faculty to excel in teaching and research in the realm of computing sciences.
- Establish state-of-the-art computing facilities for effective teaching and learning experiences.
- Promote interdisciplinary studies to nurture talent for global impact.
- Instill entrepreneurial and leadership skills to address social, environmental and community needs.

2. Preamble to the Program Regulations and Curriculum

This is the subset of Academic Regulations and it is to be followed as a requirement for the award of B.Tech degree.

The Curriculum is designed to take into the factors listed in the Choice Based Credit System (CBCS) with focus on Social Project Based Learning, Industrial Training, and Internship to enable the students to become eligible and fully equipped for employment in industries, choose higher studies or entrepreneurship.

In exercise of the powers conferred by and in discharge of duties assigned under the relevant provision(s) of the Act, Statutes and Academic Regulations, of the University, the Academic Council hereby makes the following Regulations.

3. Short Title and Applicability

- a. These Regulations shall be called the Bachelor of Technology Degree Program Regulations and Curriculum 2022-2026.
- b. These Regulations are subject to, and pursuant to the Academic Regulations.
- c. These Regulations shall be applicable to the ongoing Bachelor of Technology Degree Programs of the 2022-2026 batch, and to all other Bachelor of Technology Degree Programs which may be introduced in future.
- d. These Regulations shall supersede all the earlier Bachelor of Technology Degree Program Regulations and Curriculum, along with all the amendments thereto.
- e. These Regulations shall come into force from the Academic Year 2022-2023.

4. Definitions

In these Regulations, unless the context otherwise requires:

- a. "Academic Calendar" means the schedule of academic and miscellaneous events as approved by the Vice Chancellor;
- b. "Academic Council" means the Academic Council of the University;
- c. "Academic Regulations" means the Academic Regulations, of the University;
- d. "Academic Term" means a Semester or Summer Term;
- e. "Act" means the Presidency University Act, 2013;
- f. "AICTE" means All India Council for Technical Education;
- g. "Basket" means a group of courses bundled together based on the nature/type of the course;
- h. "BOE" means the Board of Examinations of the University;
- i. "BOG" means the Board of Governors of the University;
- j. "BOM" means the Board of Management of the University;
- k. "BOS" means the Board of Studies of a particular Department/Program of Study of the University;
- l. "CGPA" means Cumulative Grade Point Average as defined in the Academic Regulations;
- m. "Clause" means the duly numbered Clause, with Sub-Clauses included, if any, of these Regulations;
- n. "COE" means the Controller of Examinations of the University;
- o. "Course In Charge" means the teacher/faculty member responsible for developing and organising the delivery of the Course;
- p. "Course Instructor" means the teacher/faculty member responsible for teaching and evaluation of a Course;
- q. "Course" means a specific subject usually identified by its Course-code and Course-title, with specified credits and syllabus/course-description, a set of references, taught by some teacher(s)/course-instructor(s) to a specific class (group of students) during a specific Academic Term;

- r. *"Curriculum Structure" means the Curriculum governing a specific Degree Program offered by the University, and, includes the set of Baskets of Courses along with minimum credit requirements to be earned under each basket for a degree/degree with specialization/minor/honours in addition to the relevant details of the Courses and Course catalogues (which describes the Course content and other important information about the Course). Any specific requirements for a particular program may be brought into the Curriculum structure of the specific program and relevant approvals should be taken from the BOS and Academic Council at that time.*
- s. *"DAC" means the Departmental Academic Committee of a concerned Department/Program of Study of the University;*
- t. *"Dean" means the Dean / Director of the concerned School;*
- u. *"Degree Program" includes all Degree Programs;*
- v. *"Department" means the Department offering the degree Program(s) / Course(s) / School offering the concerned Degree Programs / other Administrative Offices;*
- w. *"Discipline" means specialization or branch of B.Tech. Degree Program;*
- x. *"HOD" means the Head of the concerned Department;*
- y. *"L-T-P-C" means Lecture-Tutorial-Practical-Credit – refers to the teaching – learning periods and the credit associated;*
- z. *"MOOC" means Massive Open Online Courses;*
- aa. *"MOU" means the Memorandum of Understanding;*
- bb. *"NPTEL" means National Program on Technology Enhanced Learning;*
- cc. *"Parent Department" means the department that offers the Degree Program that a student undergoes;*
- dd. *"Program Head" means the administrative head of a particular Degree Program/s;*
- ee. *"Program Regulations" means the Bachelor of Technology Degree Program Regulations and Curriculum, 2024-2028;*
- ff. *"Program" means the Bachelor of Technology (B.Tech.) Degree Program;*
- gg. *"PSCS" means the Presidency School of Computer Science and Engineering;*
- hh. *"Registrar" means the Registrar of the University;*
- ii. *"School" means a constituent institution of the University established for monitoring, supervising and guiding, teaching, training and research activities in broadly related fields of studies;*
- jj. *"Section" means the duly numbered Section, with Clauses included in that Section, of these Regulations;*
- kk. *"SGPA" means the Semester Grade Point Average as defined in the Academic Regulations;*
- ll. *"Statutes" means the Statutes of Presidency University;*
- mm. *"Sub-Clause" means the duly numbered Sub-Clause of these Program Regulations;*
- nn. *"Summer Term" means an additional Academic Term conducted during the summer break (typically in June-July) for a duration of about eight (08) calendar weeks, with a minimum of thirty (30) University teaching days;*
- oo. *"SWAYAM" means Study Webs of Active Learning for Young Aspiring Minds.*
- pp. *"UGC" means University Grant Commission;*

qq. "University" means Presidency University, Bengaluru; and
rr. "Vice Chancellor" means the Vice Chancellor of the University.

5. Program Description

The Bachelor of Technology Degree Program Regulations and Curriculum 2022-2026 are subject to, and, pursuant to the Academic Regulations. These Program Regulations shall be applicable to the following ongoing Bachelor of Technology (B.Tech.) Degree Programs of 2022-2026 offered by the Presidency School of Computer Science and Engineering (PSCS):

1. Bachelor of Technology in Computer Science and Engineering, abbreviated as CSE
2. Bachelor of Technology in Computer Science and Technology (Big Data), abbreviated as CBD
3. Bachelor of Technology in Computer Science and Engineering (Block Chain), abbreviated as CBC
4. Bachelor of Technology in Computer Science and Technology (Dev Ops), abbreviated as CDV
5. Bachelor of Technology in Computer Science and Engineering (Cyber Security), abbreviated as CCS
6. Bachelor of Technology in Computer Science and Engineering (Internet of Things), abbreviated as CIT
7. Bachelor of Technology in Computer Science and Engineering (Data Science), abbreviated as CSD
8. Bachelor of Technology in Computer Science and Technology, abbreviated as CSG
9. Bachelor of Technology in Information Science and Technology, abbreviated as IST
10. Bachelor of Technology in Computer Engineering, abbreviated as COM
11. Bachelor of Technology in Information Science and Engineering, abbreviated as ISE and
12. Bachelor of Technology in Computer Science and Engineering (Artificial Intelligence and Machine Learning) abbreviated as CAI

5.1 These Program Regulations shall be applicable to other similar programs, which may be introduced in future.

5.2 These Regulations may evolve and get amended or modified or changed through appropriate approvals from the Academic Council, from time to time, and shall be binding on all concerned.

5.3 The effect of periodic amendments or changes in the Program Regulations, on the students admitted in earlier years, shall be dealt with appropriately and carefully, so as to

ensure that those students are not subjected to any unfair situation whatsoever, although they are required to conform to these revised Program Regulations, without any undue favour or considerations

5. Minimum and Maximum Duration

- 6.1 Bachelor of Technology Degree Program is a Four-Year, Full-Time Semester based program. The minimum duration of the B.Tech. Program is four (04) years and each year comprises of two academic Semesters (Odd and Even Semesters) and hence the duration of the B.Tech. program is eight (08) Semesters.
- 6.2 A student who for whatever reason is not able to complete the Program within the normal period or the minimum duration (number of years) prescribed for the Program, may be allowed a period of two years beyond the normal period to complete the mandatory minimum credits requirement as prescribed by the concerned Program Regulations and Curriculum. In general, the permissible maximum duration (number of years) for completion of Program is 'N' + 2 years, where 'N' stands for the normal or minimum duration (number of years) for completion of the concerned Program as prescribed by the concerned Program Regulations and Curriculum.
- 6.3 The time taken by the student to improve Grades/CGPA, and in case of temporary withdrawal/re-joining (Refer to Clause 16.1 of Academic Regulations), shall be counted in the permissible maximum duration for completion of a Program.
- 6.4 In exceptional circumstances, such as temporary withdrawal for medical exigencies where there is a prolonged hospitalization and/or treatment, as certified through hospital/medical records, women students requiring extended maternity break (certified by registered medical practitioner), and, outstanding sportspersons representing the University/State/India requiring extended time to participate in National/International sports events, a further extension of one (01) year may be granted on the approval of the Academic Council.
- 6.5 The enrolment of the student who fails to complete the mandatory requirements for the award of the concerned Degree (refer Section 19 of Academic Regulations) in the prescribed maximum duration (Clauses 18.1 and 18.2 of Academic Regulations), shall stand terminated and no Degree shall be awarded.

7 Programme Educational Objectives (PEO)

After four years of successful completion of the program, the graduates shall be to:

PEO1. Demonstrate success as Computer Engineer with innovative skills and moral and ethical values.

PEO2. Engage in lifelong learning through research and professional development,

PEO3. Serve as a leader in the profession through consultancy, extension activities or entrepreneurship.

8 Programme Outcomes (PO) and Programme Specific Outcomes (PSO)

3.3 Programme Outcomes (PO)

On successful completion of the Program, the students shall be able to:

- PO1. Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2. Problem Analysis:** Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3. Design/Development of Solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4. Conduct Investigations of Complex Problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5. Modern Tool Usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and 9ulfil99g to complex engineering activities with an understanding of the limitations.
- PO6. The Engineer and Society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO7. Environment and Sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9. Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- PO11. Project Management and Finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- PO12. Life-Long Learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

8.2 Program Specific Outcomes (PSOs):

On successful completion of the Program, the students shall be able to:

- PSO 01: [Problem Analysis]:** Identify, formulate, research literature, and 9ulfil9 complex engineering problems related to Block Chain principles and practices, Programming

and Computing technologies reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.

PSO 02: [Design/development of Solutions]: Design solutions for complex engineering problems related to Block Chain principles and practices, Programming and Computing technologies and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, cultural, societal and environmental considerations.

PSO 03: [Modern Tool usage]: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities related to Block Chain principles and practices, Programming Block chain Computing & analytics with an understanding of the limitations.

9 Admission Criteria (as per the concerned Statutory Body)

The University admissions shall be open to all persons irrespective of caste, class, creed, gender or nation. All admissions shall be made on the basis of merit in the qualifying examinations; provided that forty percent of the admissions in all Programs of the University shall be reserved for the students of Karnataka State and admissions shall be made through a Common Entrance Examination conducted by the State Government or its agency and seats shall be allotted as per the merit and reservation policy of the State Government from time to time. The admission criteria to the B.Tech. Program is listed in the following Sub-Clauses:

- 9.1 An applicant who has successfully completed Pre-University course or Senior Secondary School course (+2) or equivalent such as (11+1), 'A' level in Senior School Leaving Certificate Course from a recognized university of India or outside or from Senior Secondary Board or equivalent, constituted or recognized by the Union or by the State Government of that Country for the purpose of issue of qualifying certificate on successful completion of the course, may apply for and be admitted into the Program.
- 9.2 Provided further, the applicant must have taken Physics and Mathematics as compulsory subjects in the Pre-University / Higher Secondary / (10+2) / (11+1) examination, along with either Chemistry / Biology / Electronics / Computer Science / Biotechnology subject, and, the applicant must have obtained a minimum of 45% of the total marks (40% in case of candidates belonging to the Reserved Category as classified by the Government of Karnataka) in these subjects taken together.
- 9.3 The applicant must have appeared for Joint Entrance Examinations (JEE) Main / JEE (Advanced) / Karnataka CET / COMED-K, or any other State-level Engineering Entrance Examinations.
- 9.4 Reservation for the SC / ST and other backward classes shall be made in accordance with the directives issued by the Government of Karnataka from time to time.
- 9.5 Admissions are offered to Foreign Nationals and Indians living abroad in accordance with the rules applicable for such admission, issued from time to time, by the Government of India.

- 9.6 Candidates must fulfil the medical standards required for admission as prescribed by the University.
- 9.7 If, at any time after admission, it is found that a candidate had not in fact fulfilled all the requirements stipulated in the offer of admission, in any form whatsoever, including possible misinformation and any other falsification, the Registrar shall report the matter to the Board of Management (BOM), recommending revoking the admission of the candidate.
- 9.8 The decision of the BOM regarding the admissions is final and binding.

10 Lateral Entry / Transfer Students requirements

3.3 Lateral Entry

The University admits students directly to the second year (3rd Semester) of the B.Tech. Degree program as per the provisions and/or regulations of the Government of Karnataka pertaining to the "Lateral Entry" scheme announced by the Government from time to time. Further, the general conditions and rules governing the provision of Lateral Entry to the B.Tech. Program of the University are listed in the following Sub-Clauses:

- 10.1.1 Admission to 2nd year (3rd Semester) of the B.Tech. Degree program shall be open to the candidates who are holders of a 3-year Diploma in Engineering (or equivalent qualification as recognized by the University), who have secured not less than forty-five percentage (45%) marks in the final year examination (5th and 6th Semesters of the Diploma Program) in the appropriate branch of Engineering. Provided that, in case of SC / ST and OBC candidates from Karnataka the minimum marks for eligibility shall be forty percent (40%).
- 10.1.2 Provided further that, candidates seeking Lateral Entry may be required to complete specified bridge Courses as prescribed by the University. Such bridge Courses, if any, shall not be included in the CGPA computations.
- 10.1.3 All the existing Regulations and Policies of the University shall be binding on all the students admitted to the Program through the provision of Lateral Entry.
- 10.1.4 The Course requirements prescribed for the 1st Year of the B.Tech. Program shall be waived for the student(s) admitted through Lateral Entry and the duration of the B.Tech. Program for such students is three (03) years, commencing from the 3rd Semester (commencement of the 2nd Year) of the B.Tech. Program and culminating with the 8th Semester (end of the 4th Year) of the B.Tech. Program.

10.1.5 Provided that, if a Lateral Entry student misses any mandatory program specific courses that are typically offered in the 1st year (1st or 2nd semesters), then those courses must be cleared by the students as soon as possible, preferably during the Summer Term.

10.1.6 The existing Program Regulations of the concerned Program to which the student is admitted through the provision of Lateral Entry shall be binding on the student with effect from the 3rd Semester of the Program. i.e., the Program Structure and Curriculum from the 3rd to 8th Semesters of the Program concerned shall be binding on the student admitted through Lateral Entry. Further, any revisions / amendments made to the Program Regulations thereafter, shall be binding on all the students of the concerned Program.

10.1.7 All the Courses (and the corresponding number of Credits) prescribed for the 1st Year of the concerned B.Tech. Program shall be waived for the student(s) admitted to the concerned B.Tech Program through Lateral Entry. Further, the *Minimum Credit Requirements* for the award of the B.Tech. Degree in the concerned Program shall be prescribed / calculated as follows:

The ***Minimum Credit Requirements*** for the award of the Bachelor of Technology (B.Tech.) Degree prescribed by the concerned Bachelor of Technology Degree Program Regulations and Curriculum, 2024-2028, minus the number of Credits prescribed / accepted by the Equivalence Committee for the 1st Year (1st and 2nd Semesters) of the B.Tech. Program.

For instance, if the *Minimum Credit Requirements* for the award of the Bachelor of Technology (B.Tech.) Degree as prescribed by the Regulations for B.Tech. (CSE-Block Chain) is "N" Credits, and, if the total credits prescribed in the 1st Year (total credits of the 1st and 2nd Semesters) of the Program concerned is "M" Credits, then the *Minimum Credit Requirements* for the award of the B.Tech. in CSE-Block Chain for a student who joins the Program through the provision of the Lateral Entry, shall be "N – M" Credits.

10.1.8 Further, no other waiver except the Courses prescribed for the 1st year of the B.Tech. Program of the University shall be permissible for students joining the B.Tech. Program through the provision of Lateral Entry.

3.3 Transfer of student(s) from another recognized University to the 2nd year (3rd Semester) of the B.Tech. Program of the University

A student who has completed the 1st Year (i.e., passed in all the Courses / Subjects prescribed for the 1st Year) of the B.Tech. / B.E. / B.S., Four-Year Degree Program from another recognized University, may be permitted to transfer to the 2nd Year (3rd Semester) of the B.Tech. Program of the University as per the rules and guidelines prescribed in the following Sub-Clauses:

10.1.1 The concerned student fulfils the criteria specified in Sub-Clauses 10.1.1, 10.1.2 and 10.1.3.

10.1.2 The student shall submit the Application for Transfer along with a non-refundable Application Fee (as prescribed by the University from time to time) to the University no later than July 10 of the concerned year for admission to the 2nd Year (3rd Semester) B.Tech. Program commencing on August 1 on the year concerned.

10.1.3 The student shall submit copies of the respective Marks Cards / Grade Sheets / Certificates along with the Application for Transfer.

10.1.4 The transfer may be provided on the condition that the Courses and Credits completed by the concerned student in the 1st Year of the B.Tech. / B.E. / B.S. Four Degree Program from the concerned University, are declared equivalent and acceptable by the Equivalence Committee constituted by the Vice Chancellor for this purpose. Further, the Equivalence Committee may also prescribe the Courses and Credits the concerned students shall have to mandatorily complete, if admitted to the 2nd Year of the B.Tech. Program of the University.

10.1.5 The Branch / Discipline allotted to the student concerned shall be the decision of the University and binding on the student.

11 Change of Branch / Discipline / Specialization

A student admitted to a particular Branch of the B.Tech. Program will normally continue studying in that Branch till the completion of the program. However, the University reserves the right to provide the option for a change of Branch, or not to provide the option for a change of Branch, at the end of 1st Year of the B.Tech. Program to eligible students in accordance with the following rules and guidelines: framed by the University from time to time.

11.1 Normally, only those students, who have passed all the Courses prescribed for

the 1st Year of the B.Tech. Program and obtained a CGPA of not less than 6.50 at the end of the 2nd Semester, shall be eligible for consideration for a change of Branch.

- 11.2 Change of Branch, if provided, shall be made effective from the commencement of the 3rd Semester of the B.Tech. Program. There shall be no provision for change of Branch thereafter under any circumstances whatsoever.
- 11.3 The student provided with the change of Branch shall fully adhere to and comply with the Program Regulations of the concerned Branch of the B.Tech. Program, the Fee Policy pertaining to that Branch of the B.Tech. Program, and, all other rules pertaining to the changed Branch existing at the time.
- 11.4 Change of Branch once made shall be final and binding on the student. No student shall be permitted, under any circumstances, to refuse the change of Branch offered.
- 11.5 The eligible student may be allowed a change in Branch, strictly in order of *inter se* merit, subject to the conditions given below:
 - 11.5.1 The actual number of students in the 3rd Semester in any particular Branch to which the transfer is to be made, should not exceed the intake fixed by the University for the concerned Branch;
 - 11.5.2 The actual number of students in any Branch from which transfer is being sought does not fall below 75% of the total intake fixed by the University for the concerned Branch.

The process of change of Branch shall be completed within the first five days of Registration for the 3rd Semester of the B.Tech. Program.

12 Specific Regulations regarding Assessment and Evaluation (including the Assessment Details of NTCC Courses, Weightages of Continuous Assessment and End Term Examination for various Course Categories)

12.1 The academic performance evaluation of a student in a Course shall be according to the University Letter Grading System based on the class performance distribution in the Course.

12.2 Academic performance evaluation of every registered student in every Course registered by the student is carried out through various components of Assessments spread across the Semester. The nature of components of Continuous Assessments and the weightage given to each component of Continuous Assessments (refer Clause 8.8 of Academic Reg) shall be clearly defined in the Course Plan for every Course, and approved by the DAC.

12.3 Format of the End-Term examination shall be specified in the Course Plan.

12.4 Grading is the process of rewarding the students for their overall performance in each Course. The University follows the system of Relative Grading with statistical approach to classify the students based on the relative performance of the students registered in the concerned Course except in the following cases:

- Non-Teaching Credit Courses (NTCC)
- Courses with a class strength less than 30

Absolute grading method may be adopted, where necessary with prior approval of concerned DAC.

Grading shall be done at the end of the Academic Term by considering the aggregate performance of the student in all components of Assessments prescribed for the Course. Letter Grades (Clause 8.10 of Academic Regulations) shall be awarded to a student based on her/his overall performance relative to the class performance distribution in the concerned Course. These Letter Grades not only indicate a qualitative assessment of the student's performance but also carry a quantitative (numeric) equivalent called the Grade Point.

12.5 Assessment Components and Weightage

12.1.

Table 1: Assessment Components and Weightage for different category of Courses		
Nature of Course and Structure	Evaluation Component	Weightage
Lecture-based Course L component in the L-T-P Structure is predominant (more than 1) (Examples: 3-0-0; 3-0-2; 2-1-0; 2-0-2, 2-0-4 etc.)	Continuous Assessments	50%
	End Term Examination	50%
Lab/Practice-based Course P component in the L-T-P Structure is predominant (Examples: 0-0-4; 1-0-4; 1-0-2; etc.)	Continuous Assessments	75%
	End Term Examination	25%
Skill based Courses like Industry Internship, Capstone project, Research Dissertation, Integrative Studio, Interdisciplinary Project, Summer / Short Internship, Social Engagement / Field Projects, Portfolio, and such similar Non-Teaching Credit Courses, where the pedagogy does not lend itself to a typical L-T-P structure	Guidelines for the assessment components for the various types of Courses, with recommended weightages, shall be specified in the concerned Program Regulations and Curriculum / Course Plans, as applicable.	

The exact weightages of Evaluation Components shall be clearly specified in the concerned PRC and respective Course Plan.

Normally, for Practice/Skill based Courses, without a defined credit structure (L-T-P) [NTCC], but with assigned Credits (as defined in Clause 5.2 of the Academic Regulations), the method of evaluation shall be based only on Continuous

Assessments. The various components of Continuous Assessments, the distribution of weightage among such components, and the method of evaluation/assessment, shall be as decided and indicated in the Course Plan/PRC. The same shall be approved by the respective DAC.

12.6 Minimum Performance Criteria:

2.1.1 Theory only Course and Lab/Practice Embedded Theory Course

A student shall satisfy the following minimum performance criteria to be eligible to earn the credits towards the concerned Course:

- a. A student must obtain a minimum of 30% of the total marks/weightage assigned to the End Term Examinations in the concerned Course.
- b. The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of the components of Continuous Assessments, Mid Term Examinations and End Term Examinations in the concerned Course.

2.1.2 Lab/Practice only Course and Project Based Courses

The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of all assessment components in the concerned Course.

- 12.6.3 A student who fails to meet the minimum performance criteria listed above in a Course shall be declared as "Fail" and given "F" Grade in the concerned Course. For theory Courses, the student shall have to re-appear in the "Make-Up Examinations" as scheduled by the University in any subsequent semester, or, re-appear in the End Term Examinations of the same Course when it is scheduled at the end of the following Semester or Summer Term, if offered. The marks obtained in the Continuous Assessments (other than the End Term Examination) shall be carried forward and be included in computing the final grade, if the student secures the minimum requirements (as per Sub-Clauses 8.9.1,8.9.2 of Academic Regulations) in the "Make-Up Examinations" of the concerned Course. Further, the student has an option to re-register for the Course and clear the same in the summer term/ subsequent semester if he/she wishes to do so, provided the Course is offered.

13 Additional clarifications – Rules and Guidelines for Transfer of Credits from MOOC, etc. – Note: These are covered in Academic Regulations

The University allows students to acquire credits from other Indian or foreign institutions and/or Massive Open Online Course (MOOC) platforms, subject to prior approval. These credits may be transferred and counted toward fulfilling the minimum credit requirements for the award of a degree. The process of transfer of credits is governed by the following rules and guidelines:

- 3.1** The transfer of credits shall be examined and recommended by the Equivalence Committee (Refer ANNEXURE B of Academic Regulations) and approved by the Dean – Academics.
- 3.2** Students may earn credits from other Indian or foreign Universities/Institutions with which the University has an MOU, and that MOU shall have specific provisions, rules and guidelines for transfer of credits. These transferred credits shall be counted towards the minimum credit requirements for the award of the degree.
- 3.3** Students may earn credits by registering for Online Courses offered by *Study Web of Active Learning by Young and Aspiring Minds* (SWAYAM) and *National Program on Technology Enhanced Learning* (NPTEL), or other such recognized Bodies/ Universities/Institutions as approved by the concerned BOS and Academic Council from time to time. The concerned School/Parent Department shall publish/include the approved list of Courses and the rules and guidelines governing such transfer of credits of the concerned Program from time to time. The Rules and Guidelines for the transfer of credits specifically from the Online Courses conducted by SWAYAM/ NPTEL/ other approved MOOCs are as stated in the following Sub-Clauses:
- 3.3.1** A student may complete SWAYAM/NPTEL/other approved MOOCs as mentioned in Clause 17.3 as per the Academic Regulations and transfer equivalent credits to partially or fully complete the mandatory credit requirements of Discipline Elective Courses and/or the mandatory credit requirements of Open Elective Courses as prescribed in the concerned Curriculum Structure. However, it is the sole responsibility of the student to complete the mandatory credit requirements of the Discipline Elective Courses and the Open Elective Courses as prescribed by the Curriculum Structure of the concerned Program.
- 3.3.2** SWAYAM/NPTEL/ other approved MOOCs as mentioned in Clause 17.3 as per the Academic Regulations shall be approved by the concerned Board of Studies and placed (as Annexures) in the concerned PRC.
- 3.3.3** Parent Departments may release a list of SWAYAM/NPTEL/other approved MOOCs for Pre-Registration as per schedule in the Academic Calendar or through University Notification to this effect.
- 3.3.4** Students may Pre-Register for the SWAYAM/NPTEL/other approved MOOCs in the respective Departments and register for the same Courses as per the schedule announced by respective Online Course Offering body/institute/ university.
- 3.3.5** A student shall request for transfer of credits only from such approved Courses as mentioned in Sub-Clause 3.3.2 above.
- 3.3.6** SWAYAM/NPTEL/other approved MOOCs Courses are considered for transfer of credits only if the concerned student has successfully completed the SWAYAM/NPTEL/other approved MOOCs and obtained a certificate of successful/satisfactory completion.

- 3.3.7** A student who has successfully completed the approved SWAYAM/NPTEL/ other approved MOOCs and wants to avail the provision of transfer of equivalent credits, must submit the original Certificate of Completion, or such similar authorized documents to the HOD concerned, with a written request for the transfer of the equivalent credits. On verification of the Certificates/Documents and approval by the HOD concerned, the Course(s) and equivalent Credits shall be forwarded to the COE for processing of results of the concerned Academic Term.
- 3.3.8** The credit equivalence of the SWAYAM/NPTEL/other approved MOOCs are based on Course durations and/or as recommended by the Course offering body/institute/university. The Credit Equivalence mapped to SWAYAM/ NPTEL approved Courses based on Course durations for transfer of credits is summarised in Table shown below. The Grade will be calculated from the marks received by the Absolute Grading Table 8.11 in the Academic Regulations.

Table 2: Durations and Credit Equivalence for Transfer of Credits from SWAYAM-NPTEL/ other approved MOOC Courses		
Sl. No.	Course Duration	Credit Equivalence
1	4 Weeks	1 Credit
2	8 Weeks	2 Credits
3	12 Weeks	3 Credits

- 3.3.9** The maximum permissible number of credits that a student may request for credit transfer from MOOCs shall not exceed 20% of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree.
- 3.3.10** The University shall not reimburse any fees/expense; a student may incur for the SWAYAM/NPTEL/other approved MOOCs.
- 3.4** The maximum number of credits that can be transferred by a student shall be limited to forty percent (40%) of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree. However, the grades obtained in the Courses transferred from other Institutions/MOOCs, as mentioned in this Section (13.0), shall not be included in the calculation of the CGPA.

14. Structure / Component with Credit Requirements Course Baskets & Minimum Basket wise Credit Requirements

The B.Tech. CSE-Block Chain Program Structure (2022-2026) totalling 160 credits. Table 3.0 summarizes the type of baskets, number of courses under each basket and the associated credits that are mandatorily required for the completion of the Degree.

Table 3: B.Tech. CSE (Block Chain) 2022-2026: Summary of Mandatory Courses and Minimum Credit Contribution from various Baskets		
S.No	Baskets	Credit Contribution
1	SCHOOL CORE	61
2	PROGRAM CORE	60
3	DISCIPLINE ELECTIVE	30
4	OPEN ELECTIVE	09
	TOTAL CREDITS	Min. 160

In the entire Program, the practical and skill based course component contribute to an extent of approximately 57% out of the total credits of 160 for B.Tech. Computer Science & Engineering(Blockchain)) program of four years' duration.

15. Minimum Total Credit Requirements of Award of Degree

As per the AICTE guidelines, a minimum of 160 credits is required for the award of a B.Tech. degree.

16. Other Specific Requirements for Award of Degree, if any, as prescribed by the Statutory Bodies,

- 16.1 The award of the Degree shall be recommended by the Board of Examinations and approved by the Academic Council and Board of Management of the University.
- 16.2 A student shall be declared to be eligible for the award of the concerned Degree if she/he:
 - a. Fulfilled the Minimum Credit Requirements and the Minimum Credits requirements under various baskets;
 - b. Secure a minimum CGPA of 4.50 in the concerned Program at the end of the Semester/Academic Term in which she/he completes all the requirements for the award of the Degree as specified in Sub-Clause 19.2.1 of Academic Regulations;
 - c. No dues to the University, Departments, Hostels, Library, and any other such Centers/ Departments of the University; and
 - d. No disciplinary action is pending against her/him.

17. Curriculum Structure – Basket Wise Course List (not Semester Wise)
List of Courses Tabled – aligned to the Program Structure

18. Practical / Skill based Courses – Internships / Thesis / Dissertation / Capstone Project Work / Portfolio / Mini project

Practical / Skill based Courses like internship, project work, capstone project, research project / dissertation, and such similar courses, where the pedagogy does not lend itself to a typical L-T-P-C Structure as defined in Clause 5.1 of the Academic Regulations, are simply assigned the number of Credits based on the quantum of work / effort required to fulfil the learning objectives and outcomes prescribed for the concerned Courses. Such courses are referred to as Non-Teaching Credit Courses (NTCC). These Courses are designed to provide students with hands-on experience and skills essential for their professional development. These courses aim to equip students with abilities in problem identification, root cause analysis, problem-solving, innovation, and design thinking through industry exposure and project-based learning. The expected outcomes are first level proficiency in problem solving and design thinking skills to better equip B.Tech. graduates for their professional careers. The method of evaluation and grading for the Practical / Skill based Courses shall be prescribed and approved by the concerned Departmental Academic Committee (refer Annexure A of the Academic Regulations). The same shall be prescribed in the Course Handout.

18.1 Internship

A student may undergo an Internship for a period of 10-12 weeks in an industry / company or academic / research institution during the 8th Semester, subject to the following conditions:

- 18.1.1 The Internship shall be conducted in accordance with the Internship Policy prescribed by the University from time to time.
- 18.1.2 The selection criteria (minimum CGPA, pass in all Courses as on date, and any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Internship to a student;
- 18.1.3 The number of Internships available for the concerned Academic Term. Further, the available number of internships shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution providing the Internship, as stated in Sub-Clause 18.1.2 above.
- 18.1.4 A student may opt for Internship in an Industry / Company or academic / research institution of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the Internship on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Internship confirms to the University that the Internship shall be conducted in accordance with the Program Regulations and Internship Policy of the University.
 - 18.1.4.1 A student selected for an Internship in an industry / company or academic / research institution shall adhere to all the rules and guidelines prescribed in the Internship Policy of the University.

18.2 Capstone Project

A student may undergo a Capstone Project for a period of 6-8 weeks in an industry / company or academic / research institution in the 7th Semester as applicable, subject to the following conditions:

- 18.2.1 The Capstone Project shall be conducted in accordance with the Capstone Project Policy prescribed by the University from time to time.
- 18.2.2 The selection criteria (minimum CGPA, pass in all Courses as on date, and any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Capstone Project

to a student;

18.2.3 The number of Capstone Project available for the concerned Academic Term. Further, the available number of Capstone Project shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution providing the Capstone Project, as stated in Sub-Clause 18.2.2 above.

18.2.4 A student may opt for Capstone Project in an Industry / Company or academic / research institution of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the I Capstone Project on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Capstone Project confirms to the University that the Capstone Project shall be conducted in accordance with the Program Regulations Policy of the University.

18.2.5 A student selected for a Capstone Project in an industry / company or academic / research institution shall adhere to all the rules and guidelines prescribed in the Capstone Project Policy of the University.

18.3 Research Project / Dissertation

A student may opt to do a Research Project / Dissertation for a period of 12-14 weeks in an Industry / Company or academic / research institution or the University Department(s) as an equivalence of Capstone Project, subject to the following conditions:

18.3.1 The Research Project / Dissertation shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.

The student may do the Research Project / Dissertation in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 18.3.1). Provided further, that the Industry / Company or academic / research institution offering such Research Project / Dissertation confirms to the University that the Research Project / Dissertation work will be conducted in accordance with the Program Regulations and requirements of the University.

21.List of MOOC Courses

21.1 Presidency University students are given the opportunity to study abroad in International Universities through a selection process coordinated by the Office of International Affairs (OIA). Such selected students need to complete their credits for the semester that they are abroad in the following way:

- 21.1.1** The student needs to study and complete School Core and Program Core Courses in offline mode only.
- 21.1.2** Massive Open Online Course (MOOC) courses maybe given for Open Elective and Discipline Elective Courses. These courses need to be approved by the concerned BOS and Academic Council from time to time.
- 21.1.3** SWAYAM/NPTEL/ other approved MOOCs shall be approved by the concerned Board of Studies and placed in the concerned PRC.
- 21.1.4** Student shall register for these courses in the ERP of Presidency University.
- 21.1.5** For these MOOC courses faculty coordinators are identified. These faculty should have undergone similar MOOC courses and therefore should be familiar with the mode of class conduction, types of assessments and evaluation procedures.
- 21.1.6** Study materials shall be provided to the students as video lectures shared by the MOOCs Coordinator(s), or the students may access the approved MOOCs Portal directly. The mode of class conduction is determined by the MOOCs coordinator(s) as detailed in the Course Catalogue and Course Plan.
- 21.1.7** The question paper shall be prepared by the MOOCs coordinator(s).
- 21.1.8** Students write the exams in online mode. These exams are scheduled and conducted by the School.
- 21.1.9** Results are evaluated by School and given to the Office of the Controller of Examinations (CoE).
- 21.1.10** The details of the duration, credits and evaluation are given below:

Sl#	Duration	Credits	Evaluation
1.	12 weeks	3	Continuous Assessment –50 Marks Mid Term –50 Marks End Term-100 Marks
2.	8 weeks	2	Mid Term-50 Marks End Term-100 Marks

3	4 weeks	1	End Term-100 Marks

21.2 MOOC - Discipline Elective Courses for B. Tech. Computer Science and Engineering Block Chain

11	CIV3065	Drone Systems and Control	3	3-0-0-3
12	ECE3183	Neural Networks for Signal Processing - I	3	3-0-0-3
13	CIVXXXX	Disaster Management	3	3-0-0-3

NOTE:

MEC3001 is offered to the students who had 1 credit shortage because of implementation of CBCS system during their 1st year.

ENG3004 is offered to the students who had 2 credits shortage along with the MEC3001 because of implementation of CBCS System during their 1st year.

PPS4009 is offered to only International students in place of Interview Preparedness course of their batch mates.

22. Course Catalogue

Course Catalogue of all Courses Listed including the Courses Offered by other School / Department and Discipline / Programme Electives – Course Code, Course Name, Prerequisite, Anti-requisite, Course Description, Course Outcome, Course Content (with Blooms Level, CO, No. of Contact Hours), Reference Resources.

Sample Catalogue is given below for reference:

Course Code: CSE 2007	Course Title: Data Structures and Algorithms Type of Course: Integrated	L- P- C	3	2	4
Version No.	1.0				
Course Pre-requisites	Problem Solving Using Java				
Anti-requisites	NIL				
Course Description	This course introduces the fundamental concepts of data structures and to emphasize the importance of choosing an appropriate data structure and technique for program development. This course has theory and lab component which emphasizes on understanding the implementation and applications of data structures using Java programming language. With a good knowledge in the fundamental concepts of data structures and practical experience in implementing them, the student can be an effective designer, developer for new software applications.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Data Structures and Algorithms and attain Skill Development through Experiential Learning techniques.				
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Implement program for given problems using fundamentals of data structures. [Application] CO2: Apply an appropriate linear data structure for a given scenarios. [Application] CO3: Apply an appropriate non-linear data structure for a given scenarios. [Application] CO4: Explain the performance analysis of given searching and sorting algorithms.				
Course Content:					
Module 1	Introduction to Data Structure and Linear Data Structure – Stacks and Queues	Assignment	Program activity	18 Sessions	
Introduction – Introduction to Data Structures, Types and concept of Arrays. Stack - Concepts and representation, Stack operations, stack implementation using array and Applications of Stack. Queues - Representation of queue, Queue Operations, Queue implementation using array, Types of Queue and Applications of Queue.					

Module 2	Linear Data Structure- Linked List	Assignment	Program activity	17 Sessions
Topics: Linked List - Singly Linked List, Operation on linear list using singly linked storage structures, Circular List, Applications of Linked list. Recursion - Recursive Definition and Processes, Programming examples.				
Module 3	Non-linear Data Structures - Trees and Graph	Assignment	Program activity	15 Sessions
Topics: Trees - Introduction to Trees, Binary tree: Terminology and Properties, Use of Doubly Linked List, Binary tree traversals: Pre-Order traversal, In-Order traversal, Post - Order traversal. Graph - Basic Concept of Graph Theory and its Properties, Representation of Graphs.				
Module 4	Searching & Sorting Performance Analysis	Assignment	Program activity	14sessions
Topic: Sorting & Searching - Sequential and Binary Search, Sorting – Selection and Insertion sort. Performance Analysis - Time and space analysis of algorithms – Average, best and worst case analysis.				
List of Laboratory Tasks: Lab sheet -1 Level 1: Prompt the user, read input and print messages. Programs using class, methods and objects Level 2: Programming Exercises on fundamental Data structure - Arrays based on Scenario. Lab sheet -2 Level 1: Programming Exercises on Stack and its operations Level 2: Programming Exercises on Stack and its operations with condition Lab sheet -3 Level 1: Programming on Stack application infix to postfix Conversion Level 2: - Lab sheet -4 Level 1: Programming Exercises on Queues and its operations with conditions Level 2: - Lab sheet -5 Level 1: Programming Exercises on Linked list and its operations. Level 2: Programming Exercises on Linked list and its operations with various positions Lab sheet -6 Level 1: - Level 2: Programming scenario based application using Linked List Lab sheet -7 Level 1: Programming Exercises on factorial of a number Level 2: Programming the tower of Hanoi using recursion Lab sheet -8 Level 1: - Level 2: Programming the tower of Hanoi using recursion Lab sheet -9 Level 1: Programming Exercise on Doubly linked list and its operations Level 2: -				

Lab sheet -10

Level 1: Program to Construct Binary Search Tree and Graph

Level 2: Program to traverse the Binary Search Tree in three ways(in-order, pre-order and post-order) and implement BFS and DFS

Lab sheet -11

Level 1: Program to Implement the Linear Search & Binary Search

Level 2: Program to Estimate the Time complexity of Linear Search

Lab sheet -12

Level 1: Program to Implement and Estimate the Time complexity of Insertion Sort

Level 2: Program to Implement and Estimate the Time complexity of Insertion Sort

Lab sheet -13

Level 1: Program to Implement and Estimate the Time complexity of Selection Sort

Level 2: Program to Implement and Estimate the Time complexity of Selection Sort

Targeted Application & Tools that can be used

Use of PowerPoint software for lecture slides and use of Ubuntu for lab programs to execute. Tool is Codetantra tool.

Project work/Assignment:

Assignment: Students should complete the lab programs by end of each practical session and module wise assignments before the deadline.

Course Code: CSE228	Course Title: Principles of Artificial Intelligence		L- T-P- C	3	0	0	3
	Type of Course: Theory Only						
Version No.	2.0						
Course Pre-requisites	- Mathematics: Logic, Algebra, Probability - Formal Languages						
Anti-requisites	NIL						
Course Description	This Course will introduce the basic principles in artificial intelligence. It will cover representation schemes, problem solving paradigms, constraint propagation, search strategies, knowledge representation, Probabilistic Reasoning. Topics include: AI methodology and fundamentals, intelligent agents, search algorithms, game playing, supervised and unsupervised learning, uncertainty and probability theory, probabilistic reasoning in AI, Bayesian networks, statistical learning.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Principles of Artificial Intelligence and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques						
Course Outcomes	On successful completion of the course the students shall be able to: 1. Explain the basic concepts of Artificial Intelligence. 2. Apply techniques logic rules for Knowledge Representation. 3. Apply Artificial Intelligence techniques for selected problem solving. 4. Apply probabilistic reasoning in AI.						
Course Content:							
Module 1	Introduction to Artificial Intelligence and Knowledge based systems	Comprehension					9 Sessions
Introduction to Artificial Intelligence, Definitions, foundation, History and Applications; Agents: Structure of Intelligent agent and its functions, reactive agents, deliberative agents, goal-driven agents, utility-driven agents, and learning agents; Introduction to Knowledge representation, approaches and issues in knowledge representation, foundations of knowledge representation and reasoning, representing and reasoning about objects, relations, events, actions, time, and space, Knowledge-based agent and its Structure, Knowledge-Based Systems; Frame Structures, Conceptual graphs.							
Module 2	Logic based Knowledge Representation	Application					9 Sessions
Introduction, Syntax and Semantics, Proof Systems, Natural Deduction, Tableau Method, Resolution Method, Propositional Logic, Predicate Logic, First order Logic, Properties of well-formed formulas (Wffs), Conversion to Clausal Form, The Resolution Principle, Inference in First Order Logic (FOL)							
Module 3	Problem Solving by searching	Application					12 Sessions
Introduction to Problem space and state space, State space search techniques solving problems by searching: forward and backward, state-space, blind, heuristic, problem-reduction, A, A*, AO*, minimax, constraint propagation, neural, stochastic, and evolutionary search algorithms, sample applications, Introduction to reasoning, various types of reasoning methods, Certainty factors and rule-based systems Dempster Shafer Theory.							

Module 4	Learning and Probabilistic reasoning in AI	Application		10 Sessions
Introduction to learning, Forms of Learning: Statistical learning, Supervised Learning, Unsupervised Learning, Learning rules of AI, Probabilistic reasoning in AI, Bayesian networks, Hidden Markov Model.				
Targeted Application & Tools that can be used: Google Colab, Python				
Text Book 1. Stuart J. Russell and Peter Norvig, Artificial intelligence: A Modern Approach, 3rd edition, Upper Saddle River, Prentice Hall. 2. Elaine Rich, Kevin Knight and Shivashankar B. Nair, "Artificial Intelligence", Tata McGraw- Hill, Third Edition, 2009 [R.N.].

Topics relevant to "SKILL DEVELOPMENT": Knowledge Based Systems, Probabilistic reasoning in AI, Bayesian networks, Hidden Markov Model for Skill Development through Participative Learning techniques. This is attained through the assessment component mentioned in the course handout.				

Course Code: CSE 260	Course Title: Introduction to Data Science Lab Type of Course: Program Core	L-P-C	0	0	2
Version No.	1.0				
Course Pre-requisites	Fundamentals of DS				
Anti-requisites	NIL				
Course Description	Objective of this course is to make students learn the basics of Machine Learning and data science are transforming engineering, healthcare and scientific discovery. In this class we are going to discuss how to use data to build models for prediction and inference. We put a special emphasis on engineering applications, signal prediction and modeling.				
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Introduction to Data Science Lab and attain Skill Development through Experiential Learning techniques.				
Course Out Comes	1. To understand the python libraries for data science 2. To understand the basic Statistical and Probability measures for data science. 3. To learn descriptive analytics on the benchmark data sets. 4. To apply correlation and regression analytics on standard data sets. 5. To present and interpret data using visualization packages in Python.				
Course Content:	On successful completion of the course the students shall be able to: CO1: Make use of the python libraries for data science CO2: Make use of the basic Statistical and Probability measures for data science. Lab Manual CO3: Perform descriptive analytics on the benchmark data sets. CO4: Perform correlation and regression analytics on standard data sets CS3361 Data Science Laboratory CO5: Present and interpret data using visualization packages in Python.				
List of Experiments		Quiz	Knowledge based quiz on	No. of Classes:	
1. Download, install and explore the features of NumPy, SciPy, Jupyter, Statsmodels and Pandas packages. 2. Working with Numpy arrays 3. Working with Pandas data frames 4. Reading data from text files, Excel and the web and exploring various commands for doing descriptive analytics on the Iris data set. CS3361 Data Science Laboratory 5. Use the diabetes data set from UCI and Pima Indians Diabetes data set for performing the following: a. Univariate analysis: Frequency, Mean, Median, Mode, Variance, Standard Deviation, Skewness and Kurtosis. b. Bivariate analysis: Linear and logistic regression modeling c. Multiple Regression analysis d. Also compare the results of the above analysis for the two data sets. 6. Apply and explore various plotting functions on UCI data sets. a. Normal curves b. Density and contour plots					

- c. Correlation and scatter plots
- d. Histograms CS3361 Data Science Laboratory Lab Manual
- e. Three dimensional plotting
- 7. Visualizing Geographic Data with Basemap

List of Laboratory Tasks: NA

Targeted Application & Tools that can be used:

1. AUTODESK SKETCHBOOK V8.4.3
2. AFFINITY PHOTO v 1.9
3. AFFINITY DESIGNER v 1.9
4. AFFINITY PUBLISHER v 1.9

Topics relevant to "SKILL DEVELOPMENT":

Data Visualization techniques for **Skill development** through **Experiential Learning techniques**. This is attained through the assessment component mentioned in the course handout.

Course Code: CSE 3039	Course Title: Social Media Analytics Type of Course: Integrated	L- P- C	2	2	3
Version No.	1.0				
Course Pre-requisites	Python Programming				
Anti-requisites					
Course Description	This course will introduce concepts and approaches to mining social media data. It focuses on obtaining and exploring those data, mining networks, and mining text from social platforms. Students will learn how to apply previously learned data mining concepts to a domain that will likely be familiar to all of them: social media. Students will learn to explore, model, and predict with network and textual data from existing social platforms.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Social Media Analytics and attain Employability through Experiential Learning techniques.				
Course Out Comes	On successful completion of the course the students shall be able to: - Introduce the idea of social media analytics to the students and assist them in comprehending its importance. - Introduce the learners to the social media analytics tools. - Give the students the tools they need to learn how to analyse the efficiency of social media for business.				
Course Content:					
Module 1	Introduction to Social Media Analytics	Assignment	Data Collection/Interpretation	10 Sessions	
Introduction to Social Media Analytics (SMA): Social media landscape, Need for SMA; SMA in Small organizations; SMA in large organizations; Application of SMA in different areas. Network fundamentals and models: The social networks perspective - nodes, ties and influencers, Social network and web data and methods. Graphs and Matrices- Basic measures for individuals and networks. Information visualization					
Module 2	Making connections: & Web analytics tools:	Case studies / Case let	Case studies / Case let	10 Sessions	
Making connections: Link analysis. Random graphs and network evolution. Social contexts: Affiliation and identity. Web analytics tools: Clickstream analysis, A/B testing, online surveys, Web crawling and Indexing. Natural Language Processing Techniques for Micro-text Analysis					
Module 3	Network Data Analytics:	Quiz	Case studies / Case let	11 Sessions	
Introduction, parameters, demographics. Analyzing page audience. Reach and Engagement analysis. Post- performance on Social Network. Social campaigns. Measuring and Analyzing social campaigns, defining goals and evaluating outcomes, Network Analysis. (LinkedIn, Instagram, YouTube Twitter etc. Google analytics. Introduction. (Websites)					

Module 4	Processing and Visualizing Data	Quiz	Case studies / Case let	08 Sessions
Processing and Visualizing Data, Influence Maximization, Link Prediction, Collective Classification, Applications in Advertising and Game Analytics Introduction to Python Programming, Collecting and analyzing social media data; visualization and exploration.				
Practical: Students should analyze the social media of any ongoing campaigns and present the findings.				
Project work/Assignment:				
Assignment on: Types of Data, Data Transfer, Fundamental Twitter Terminology

Topics relevant to “EMPLOYABILITY SKILLS”:				
Handling Unstructured Data for Employability skills through Experiential Learning techniques. This is attained through the assessment component mentioned in the course handout.				

Course Code: CSE 3035	Course Title: R Programming For Data Science Type of Course: Integrated	L- P- C	1	4	3
Version No.	1				
Course Pre-requisites	NIL				
Anti-requisites	NIL				
Course Description	This course is designed to provide the core concepts of data analytics in the R environment. Initially train them with basic R, then progressively increase the difficulty as they move along in the course, capping with advanced techniques through case studies. Mastering the core concepts and techniques of data analytics in R, will help the students to apply their knowledge to a wide range of Data Analytics. R is now considered one of the most popular analytics tools in the world.				

Course Objective	The objective of the course is to familiarize the learners with the concepts of R Programming For Data Science and attain Skill Development through Experiential Learning techniques.			
Course Out Comes	On successful completion of this course the students shall be able to: • Apply basic R functions pertaining to fundamental data analysis. [Application] • Interpret data using appropriate statistical methods [Application] • Demonstrate the decision trees concept with the given dataset. [Application] • Demonstrate the Mining concepts for both Data and Text. [Application]			
Course Content:				
Module 1	Introduction	Assignment	Data Collection/Interpretation	6 Sessions
Topics: Introduction to R, Overview of data analysis, Working with directory in R, Loading and handling data in R, Data Visualization with ggplot2, Data Transformation with dplyr.				
Module 2	Exploratory Data Analysis	Coding Assignment	Case Study	11 Sessions
Topics: Exploring a new dataset, Anomalies in numerical data, Visualizing relations between variables, Assumptions of Linear Regression, Validating Linear Assumption, Missing Values, Covariation, Patterns and Models, ggplot2 Calls.				
Module 3	Regression Analysis	Coding Assignment	Project	12 Sessions
Topics: Introduction, Types of Regression Analysis Models, Linear Regression, Simple Linear Regression, Non-Linear Regression, Regression Analysis with Multiple Variables, Cross Validation, Principal Component Analysis, Factor Analysis.				
Module 4	Classification	Quiz	Project	8 Sessions
Topics: Introduction, Different types of Classification, Logistic Regression, Support Vector Machines, K-Nearest Neighbors, Naïve Bayes Classifier, Decision Tree Classification, Random Forest Classification, Evaluation.				
List of Laboratory Tasks: 1. Using with and without R objects on console 2. Using mathematical functions on console 3. Write an R script, to create R objects for calculator 4. Write an R script to find basic descriptive statistics using summary, str, quartile function on mtcars& cars datasets. 5. Reading different types of data sets (.txt, .csv) from Web and disk and writing in file in specific disk location. b. Reading Excel data sheet in R 6. Find the data distributions using box and scatter plot. 7. Find the outliers using plot. 8. Plot the histogram, bar chart and pie chart on sample data 9. Find the correlation matrix. 10. Plot the correlation plot on dataset and visualize giving an overview of relationships among data on iris data				

11. Create a regression model for a given dataset 12. Install relevant package for classification. 13. Choose classifier for classification problem. c. Evaluate the performance of classifier. 14. Install relevant package for classification. 15. Choose classifier for classification problem. c. Evaluate the performance of classifier.
Targeted Application & Tools that can be used Tools: RStudio / Google Colab
Project work/Assignment:
Assignment: During the course, students would need to do coding assignments to learn to train and use different models. Sample coding assignments include: Analysis of Sales Report of a Clothes Manufacturing Outlet. Comcast Telecom Consumer Complaints. Web Data Analysis
Text Book T1 Hadley Wickham and Garrett Grolemund, "R for Data Science", O'reilly, 2017.
References R1 Dr. Bharati Motwani, "Data Analytics using R", Wiley, 2019.
Web resources: 1. https://www.geeksforgeeks.org/r-programming-for-data-science/ 2. https://r4ds.had.co.nz/
Topics relevant to "SKILL DEVELOPMENT": Regression model, classifier for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE 2014	Course Title: Software Engineering Type of Course: School Core [Theory Only]	L- P- C	3	0	3
Version No.	1.0				
Course Pre-requisites	NIL				
Anti-requisites	NIL				
Course Description	The objective of this course is to provide the fundamentals concepts of Software Engineering process and principles. The course covers software requirement engineering processes, system analysis, design, implementation and testing aspects of software system development. The course covers software quality, configuration management and maintenance.				
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Software Engineering and attain Skill Development through Participative Learning techniques.				
Course Out Comes	On successful completion of this course the students shall be able to: 1] Describe the Software Engineering principles, ethics and process models(Knowledge) 2] Identify the requirements, analysis and appropriate design models for a given application(Comprehension) 3] Understand the Agile Principles(Knowledge) 4] Apply an appropriate planning, scheduling, evaluation and maintenance principles involved in software(Application)				
Module 1	Introduction to Software Engineering and Process Models (Knowledge level)	Quiz			09 Hours
Introduction: Need for Software Engineering, Professional Software Development, Software Engineering Ethics, Software Engineering Practice-Essence of Practice, General Principles Software Development Life Cycle Models: Waterfall Model – Classical Waterfall Model, Iterative Waterfall Model, Evolutionary model-Spiral, Prototype.					
Module 2	Software Requirements, Analysis and Design (Comprehension level)	Assignment	Development of SRS documents for a given scenario		11 Hours
Requirements Engineering: Eliciting requirements, Functional and non- Functional requirements, Software Requirements Specification (SRS), Requirement Analysis and validation. Requirements modelling-Introduction to Use Cases, Activity diagram and Swim lane diagram. CASE support in Software Life Cycle, Characteristics of CASE Tools, Architecture of a CASE Environment. Design: Design concepts, Architectural design, Component based design, User interface design.					
Module 3	Agile Principles & Devops (Knowledge level)	Quiz			09 Hours
Agile: Scrum Roles and activities, Sprint Agile software development methods - Scaling, User Stories, Agile estimation techniques, Product backlogs, Stake holder roles, Dynamic System Development Method. Devops: Introduction, definition, history, tools.					
Module 4	Software Testing and Maintenance (Application Level)	Assignment	Apply the testing concepts using Programing		12 Hours

Software Testing-verification and validation, Test Strategies - White Box Testing, Black box Testing. Automation Tools for Testing. Software Quality Assurance-Elements of software quality assurance, SQA Tasks, Goals and Metrics, Software configuration management- SCM process, SCM Tools (GitHub). Maintenance- Characteristics of Software Maintenance, Software Reverse Engineering, Software Maintenance Process Models.
Targeted Application & Tools that can be used: Selenium, GitHub, CASE Tools
Text Book 1] Roger S. Pressman, “Software Engineering – A Practitioner’s Approach”, VII Edition, McGraw-Hill, 7. 2] Bob Hughes, Mike Cotterell, Rajib Mall, “Software Project Management”, VI Edition, McGraw-2018.
References Rajib Mall, “Fundamentals of Software Engineering”, VI Edition, PHI learning private limited, 2015. Ian Sommerville, “Software Engineering”, IX Edition, Pearson Education Asia, 2011. Agile Software Development Principles, Patterns and Practices.1st Edition, Wiley, 2002
Topics Relevant to “Skill Development: Balck box Testing, White box Testing, Automated Testing for Skill development through Participative Learning Techniques. This is attained through assessment mentioned in the course handout

Course Code: CSE 3002	Course Title: Big Data Technologies Type of Course: Program Core Theory and Lab Integrated Course			L- P- C	2	2	3
Version No.	1.0						
Course Pre-requisites	CSE2012-Database Management System, CSE1001- Problem solving using Java.						
Anti-requisites	NIL						
Course Description	The purpose of the course is to provide the fundamentals of Big data technology, to emphasize the importance of choosing suitable tools for processing and analyzing big data to gain insights. The student should have knowledge and skill to select and use most appropriate big data tools to solve business problems. The associated laboratory provides an opportunity to implement the concepts and enhance critical thinking and analytical skills. With a good knowledge in the fundamentals of Big data technology the student can gain practical experience in implementing them, enabling the student to be an effective solution provider for applications that involve huge volume of data.						
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Big Data Technologies and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques.						
Course Outcomes	On successful completion of the course the students shall be able to: • Apply Map-Reduce programming on the given datasets to extract required insights. (Application). • Employ appropriate Hadoop Ecosystem tools such as scoop, Hbase, Hive, to perform data analytics for a given problem. (Application). • Use Spark tool to analyze the given dataset for a given problem. (Application).						
Course Content:							
Module 1	Introduction to Hadoop	Programming Assignment	Data Collection and Analysis	10 Classes			
Introduction to Big Data and its importance: Basics of Distributed File System, Four Vs, Drivers for Big data, Big data applications, Structured, unstructured, semi-structured and quasi structured data. Big data Challenges-Traditional versus big data approach, The Big Data Technology Landscape: No-SQL. The Hadoop: History of Hadoop-Hadoop use cases, The Design of HDFS, Blocks and replication management, Rack awareness, HDFS architecture, HDFS Federation, Name node and data node, Anatomy of File write. Anatomy of File read, Hadoop Map Reduce paradigm, Map and reduce tasks, Job Tracker and task tracker, Map reduce execution pipeline, Key value pair, Shuffle and sort, Combiner and Partitioner, APIs used to Write/Read files into/from Hadoop, Need for Flume and Sqoop. Anatomy of a YARN: Hadoop 2.0 Features, Name Node High Availability, YARN Architecture, Introduction to Schedulers, YARN scheduler policies, FIFO, Fair And Capacity scheduler.							
Module 2	Hadoop Ecosystem Tools	Programming Assignment	Data Collection and Analysis	8 Classes			
Introduction to SQOOP: SQOOP features, Sqoop Architecture, Sqoop Import All Tables, Sqoop Export All Tables, Sqoop Connectors, Sqoop Import from MySQL to HDFS, Sqoop vs flume.							

Hive: Apache Hive with Hive Installation, Hive Data Types, Hive Table partitioning, Hive DDL commands, Hive DML commands, and Hive sort by vs. order by, Hive Joining tables, Hive bucketing.

Hbase: Introduction to HBase and its working architecture- Commands for creation and listing of tables- disabled and is disabled of table - enable and is enabled of table- describing and dropping of table-Put and Get command - delete and delete all command-commands for scan, count, truncate of tables.

Module 3	Spark	Programming Assignment	Data analysis	8 Classes

Introduction to Apache Spark A unified Spark, Who uses Spark and for what?, A Brief History of Spark, Spark version and releases, Storage layers for Spark. Programming with RDDs: RDD Basics, Creating RDDs, RDD Operations, Passing functions to Spark, Common Transformations and Actions, Persistence. Spark SQL: Linking with Spark SQL, Using Spark SQL in Applications, Loading and Saving Data, JDBC/ODBC Server, User-defined functions, Spark SQL Performance. Scala: The Basics, Control Structures and functions, Working with arrays, Maps and Tuples.

List of Laboratory Tasks:

- Level 1:** To install the Hadoop in pseudo cluster mode.
Level 1: HDFS Shell Commands – Files and Folders.
Level 2: HDFS Shell Commands – Management.
- Run a basic Word Count Map Reduce program to understand Map Reduce Paradigm.
Level 1: Find the number of occurrence of each word appearing in the input file(s)
Level 2: Performing a Map Reduce Job for word search count (look for specific keywords in a file).
- Write a Map Reduce program that mines weather data. Weather sensors collecting data every hour at many locations across the globe gather large volume of log data, which is a good candidate for analysis with Map Reduce, since it is record-oriented. Data available at: <https://github.com/tomwhite/hadoopbook/tree/master/input/ncdc/all>.
Level 1: Find average, max and min temperature for each year in NCDC data set?
Level 2: Programming assignment to analyze the social media data for business analytics.
- Level 1:** Finding out Number of Products Sold in Each Country using map reduce with sample dataset
Level 2: Find matrix multiplication using map reduce
- Level 1:** Installation of Hive, working on basic hive commands. (Create, Alter and Drop tables)
Level 2: Apply Hive commands to student database/employee database.
- Level 1:** Working on advance hive commands. (Static Partitioning & Dynamic partitioning)
Level 2: Continue the previous experiment, select and apply suitable partitioning technique.
- Level 1:** Working on advance hive commands-2. (Bucketing)
Level 2: Continue the previous experiment, apply bucketing technique to bring out the difference between partitioning and bucketing.
- Level 1:** Installing Ecosystem tools such as Scoop, Hbase.
Level 2: Scoop – Move Data into Hadoop.

9. **Level 1:** Working on basic Hbase commands (General commands, DDL Commands)
Level 2: Apply Hbase commands on Insurance database/employee dataset.
10. **Level 1:** Working on advanced Hbase commands. (DML).
Level 2: Continue the previous experiment to demonstrate CRUD operations.
11. **Level 1:** Install, Deploy & configure Apache Spark.
Level 2: Using RDD and FlatMap count how many times each word appears in a file and write out a list of words whose count is strictly greater than 4 using Spark
12. **Level 1:** Write a program in Apache spark to count the occurrences words in a given text file and display only those words starting with 'a' in ascending order of count.
Level 2: Apache access logs are responsible for recording data for all web page requests processed by the Apache server. An access log record written in the Common Log Format will look something like this: 127.0.0.1 - Scott [10/Dec/2019:13:55:36 - 0700] "GET /server-status HTTP/1.1" 200 2326 Where, HTTP 200 status response code indicates that the request has succeeded. Write a program to read the records of access log file log.txt and display the number of successful requests using Spark.
13. **Level 1:** Chess king moves horizontally, vertically or diagonally to any adjacent cell. Given two different cells of the chessboard, determine whether a king can go from the first cell to the second in one move.
Write a scala program that receives input of four numbers from 1 to 8, each specifying the column and row number, first two - for the first cell, and then the last two - for the second cell. The program should output YES if a king can go from the first cell to the second in one move, or NO otherwise.
Level 2: Data analytics using Apache Spark on Amazon food dataset, find all the pairs of items frequently reviewed together.
Write a single Spark application that:
 - Transposes the original Amazon food dataset, obtaining a Pair RDD of the type:
 - Counts the frequencies of all the pairs of products reviewed together;
 - Writes on the output folder all the pairs of products that appear more than once and their frequencies. The pairs of products must be sorted by frequency.

Targeted Application & Tools that can be used:

- **Business Analytical Applications**
- **Social media Data Analysis**
- **Predictive Analytics**

Tools: Hadoop Framework tools like map reduce, Hive, Hbase, Scoop, Spark.

Topics relevant to development of “Skill Development”: Real time application development using Hadoop Ecosystem tools through Experiential Learning as mentioned in the course handout.

Course Code: CSE3125/CSE265	Course Title: Service Oriented Architecture		L-P-C	3	0	3
	Type of Course: Program Core					
Version No.	2.0					
Course Pre-requisites	CSE207-Data Base Management System, CSE264 -Web Technology					
Anti-requisites	NIL					
Course Description	The study of the course is to enable the students to understand the different architectural styles and XML based web applications which is required to explore the basics of service-oriented Architecture(SOA) in two approaches i.e. Web Services (WS) and Representational State Transfer (REST) architecture.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Service Oriented Architecture and attain Skill Development through Participative Learning techniques.					
Course Out Comes	On successful completion of this course the students shall be able to: 1.Discuss the XML Fundamentals and to manipulate the data using XML. [Comprehension] 2.Define the key principles of SOA [Knowledge] 3.Discuss the web services technology elements for realizing SOA[Comprehension] 4. Illustrate the various Web Service Standards[Application]					
Course Content:						
Version No.	2.0					
Module 1	Introduction to XML	Assignment	Programming Task	08 Sessions		
Topics: XML document structure ,Well formed and valid documents ,Namespaces – DTD – xml Schema – X-Files,Parsing XML – using DOM, SAX – XML Transformation and XSL Formatting – Modelling Databases in XML.						
Module 2	Service Oriented Architecture	Assignment	Architectural study	10 Sessions		
Topics: Types of Architecture,Objectives of Software architecture,SOA Planning and analysis,Architecture patterns and styles ,Characteristics of SOA, Comparing SOA with Client-Server and Distributed architectures – Benefits of SOA ,Security and implementation ,Principles of Service orientation ,Service Layers, Application development process,SOA methodology for Enterprise.						
Module 3	Web Services	Quiz	Data patterns	08 Sessions		
Topics: Service Descriptions – WSDL – Messaging with SOAP – Service Discovery – UDDI – Message Exchange Patterns – Orchestration – Choreography – WS Transactions.						
Module 4	Building SOA based Applications	Quiz	Security aspects	11 Sessions		
Topics: Business Process Design,Business case for SOA, Stake holder objectives, Service Oriented Analysis and Design – Service Modeling – Design standards and guidelines – Composition – WS-BPEL – WS-Coordination – WS-Policy – WS-Security , Tools available for implementing SOA, SOA Security,						

approach for enterprise wide SOA implementation, Trends in SOA, Technologies in Relation to SOA, Advances in SOA, SOA Support in J2EE.

Targeted Application & Tools that can be used:

Basic HTML and XML

Topics relevant to “SKILL DEVELOPMENT”: Based on an understanding of architectural styles, understanding web applications based on XML, review architectures for web applications, Service-Oriented Architecture (SOA) in two approaches: Web Services (WS*) and Representational State Transfer (REST) architecture for Skill Development through Participative Learning techniques. This is attained through the Presentation as mentioned in the assessment component.

Course Code: CSE 3010	Course Title: Deep Learning Techniques					
	Type of Course: Program Core Theory		L-P-C	3	0	3
Version No.	2.0					
Course Pre-requisites	• Data Mining and Machine Learning fundamentals • Basic working knowledge of Statistics and Probability • Familiarity with programming languages and hands on coding					
Anti-requisites	NIL					
Course Description	The course introduces the core intuitions behind Deep Learning, an advanced branch of Machine Learning involved in the development and application of Artificial Neural Networks that function by simulating the working principle of human brain. Deep learning algorithms extract layered high-level representations of data in a way that maximizes performance on a given task. The course emphasizes on understanding the implementation and application of deep neural networks in various prominent problem domains like speech recognition, sentiment analysis, recommendations, and computer vision etc. The course facilitates the students to interpret and appreciate the successful application of deep neural nets in various prediction and classification tasks of ML.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Deep Learning Techniques and attain Skill Development through Participative Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: 1. Apply basic concepts of Deep Learning to develop feed forward models(Knowledge) 2. Apply Supervised and Unsupervised Deep Learning techniques to build effective models for prediction or classification tasks(Comprehension) 3. Identify the deep learning algorithms which are more appropriate for various types of learning tasks in various domains of Machine Learning and Machine vision. (Comprehension) 4. Analyze performance of implemented Deep Neural models(Application)					
Course Content:						
Module 1	Introduction to Deep Learning	Assignment	Programming	10 Sessions		
Topics: Fundamentals of deep learning and neural networks, Deep Neural Network, Feedforward Neural Network, , Perceptron, MLP Structures, Activation Functions, Loss Functions, Gradient Descent, Back-propagation, Training Neural Networks, Building your Deep Neural Network: Step by Step.						
Module 2	Improving Deep Neural Networks	Assignment	Programming	8 Sessions		
Topics: Initialization, Overfitting and Underfitting, Regularization and Optimization, Dropout, Batch Normalization, Artificial Neural network.						

Module 3	Deep Supervised Learning Models	Assignment	Programming	10 Sessions
Topics: Convolutional neural network, Deep learning in Sequential Data, RNN & LSTM, GRU, Deep Models in Pattern Recognition.				
Module 4	Deep Unsupervised Learning	Assignment	Programming	10 Sessions
Topics: Basics of Deep unsupervised learning, Auto encoders, Boltzman Machine, Restricted Boltzmann Machine, Kohonen Networks, Deep Belief Network, Hopfield Network, Generative Adversarial Networks, Probabilistic Neural Network.				
Targeted Application & Tools that can be used: Google collab				
Professionally used software : Anaconda, Spider.				
Text Book T1. Ian Goodfellow, Yoshua Bengio, Aaron Courville, “Deep Learning”, MIT Press, 2017				
References R 1. Duda, R.O., Hart, P.E., and Stork, D.G. Pattern Classification. Wiley-Inderscience, 2nd Edition. 2013 R2. Theodoridis, S. and Koutroumbas, K. Pattern Recognition. Edition 4, Academic Press, 2015 R3. Russell, S. and Norvig, N. Artificial Intelligence: A Modern Approach. Prentice Hall Series in Artificial Intelligence, 2013 R4. Bishop, C. M. Neural Networks for Pattern Recognition, Oxford University Press, 2008. Weblinks: W1: pu.informatics.global, https://sm-nitk.vlabs.ac.in/				
Topics relevant to “SKILL DEVELOPMENT”: Real time Data Analysis using Deep learning. Naming and coding convention for Data Science Project Development using ML/DL for Skill Development through Participative Learning techniques. This is attained through the Presentation as mentioned in the assessment component.				

Course Code: CSE 313	Course Title: Storage Area Networks Type of Course: Theory Only Course	L- P- C	3	0	3
Version No.	2.0				
Course Pre-requisites	Basics of information storage				
Anti-requisites					
Course Description	The course aims to equip students with basic introduction to Storage Area Networks, including storage architectures, logical and physical components of a storage infrastructure, managing and monitoring the data center and basic Disaster Recovery principles.				

Course Objective	The objective of the course is to familiarize the learners with the concepts of Storage Area Networks and attain Employability through Participative Learning techniques.			
Course Out Comes	On successful completion of the course the students shall be able to: CO1 Identify key challenges in managing information and analyze different storage networking technologies. [Understanding] CO2 Explain physical and logical components of a storage infrastructure of RAID, and intelligent storage systems. [Comprehension] CO3 Describe Object and Content addressed storage and storage virtualization. [Comprehension] CO4 Articulate business continuity solutions—backup and archive for managing fixed content. [Application]			
Course Content:				
Module 1	Storage System: Introduction to Information Storage	Assignment	Data Collection/Interpretation	10 Sessions
Topics: Information Storage, Evolution of Storage Architecture, Data Center Infrastructure, Virtualization and Cloud Computing. Data Center Environment: Application Database Management System (DBMS), Host (Compute), Connectivity, Storage, Disk Drive Components, Disk Drive Performance, Host Access to Data, Direct-Attached Storage, Data Proliferation				
Module 2	Data Protection – RAID, Intelligent Storage Systems	Case studies / Case let	Case studies / Case let	08 Sessions
Topics: RAID Implementation Methods, RAID Array Components, RAID Techniques, RAID Levels, RAID Impact on Disk Performance, RAID vs SSD, Types of RAID Storage for Databases in Public Cloud Intelligent Storage Systems: Components of an Intelligent Storage System, Types of Intelligent Storage Systems, Optimal architectures for intelligent storage systems				
Module 3	Object-Based and Unified Storage	Quiz	Case studies / Case let	08 Sessions
Topics: Object-Based Storage Architecture: Components of OSD, Object Storage and Retrieval in OSD, Benefits of Object-Based Storage, Content-Addressed Storage. Virtualization in SAN: types of storage virtualization, Benefits of virtualization				
Module 4	Backup and Archive, Replication	Quiz	Case studies / Case let	10 Sessions
Backup Purpose, Backup Considerations, Backup Granularity, Data Recovery Services, Backup Methods, Backup Architecture, Backup and Restore Operations, Backup Topologies, Backup in NAS Environments. Local Replication: Replication Terminology, Uses of Local Replicas, Replica Consistency, Local Replication Technologies, Tracking Changes to Source and Replica, Restore and Restart Considerations, Creating Multiple Replicas. Remote Replication: Modes of Remote Replication, Remote Replication Technologies.				

Targeted Application & Tools that can be used: Architecture based environment

Topics relevant to “EMPLOYABILITY SKILLS”: Data Protection – RAID for developing Employability Skills through Participative Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE2051	Course Title: Information Retrieval			L- P- C	3	0	3
	Type of Course: Theory Only Course						
Version No.	1						
Course Pre-requisites	Basic Knowledge in Data Structures and algorithms and probability and statistics, background in machine learning						
Anti-requisites	NIL						
Course Description	The course studies the theory, design and implementation of Text- based information systems. The Information Retrieval core concepts of the course include statistical characteristics of text, representation of information needs and documents. Topics Include Several important retrieval models (Basic IR Models, Boolean Model, TF-IDF (Term Frequency/Inverse Document Frequency) Weighting, Vector Model, Probabilistic Model, Latent Semantic Indexing Model, Neural Network Model). Retrieval Evaluation, Retrieval Metrics, Text Classification and Clustering algorithms, Web Retrieval and Crawling. Recommender Systems: Basics of Content-based Recommender Systems, Content-based Filtering, Collaborative Filtering, Matrix factorization models and neighborhood models.						
Course Objective	The objective of the course is to familiarize the learners with the concepts Information Retrieval and attain Skill Development through Participative Learning techniques.						
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Define basic concepts of information Retrieval. [Knowledge] CO2: Evaluate the effectiveness and efficiency of different information retrieval methods. [Application] CO3: Explain different indexing methodology requirements and the concept of web retrieval and crawling. [Comprehension] CO4: Classify different recommender system and its aspect. [Comprehension]						
Course Content:							
Module 1	Introduction to Information Retrieval	Assignment	Data collection	7 Sessions			
Information Retrieval – Early Developments – The IR Problem – The Users Task – Information versus Data Retrieval – The IR System – The Software Architecture of the IR System – The Retrieval and Ranking Processes							
Module 2	Modeling and Retrieval Evaluation	Assignment	Problem solving	10 Sessions			
Basic IR Models – Boolean Model – TF-IDF (Term Frequency/Inverse Document Frequency) Weighting – Vector Model – Probabilistic Model – Latent Semantic Indexing Model – Neural Network Model – Retrieval Evaluation – Retrieval Metrics – Precision and Recall – Reference Collection – User-based Evaluation – Relevance Feedback and Query Expansion – Explicit Relevance Feedback.							
Module 3	Indexing & Web-Retrieval	Term paper/Assignment	Data analysis	8 Sessions			
Indexing and Searching – Inverted Indexes – Sequential Searching – Multi-dimensional Indexing. The Web – Search Engine Architectures – Cluster based Architecture - Search Engine Ranking – Link based Ranking – Simple Ranking Functions, Evaluations — Search Engine Ranking – Applications of a Web Crawler.							
Module 4	Recommender System	Term paper/Assignment	Problem solving	8 Sessions			
Recommender Systems Functions – Data and Knowledge Sources – Recommendation Techniques – Basics of Content-based Recommender Systems – High Level Architecture – Advantages and Drawbacks of Content-based Filtering – Collaborative Filtering – Matrix factorization models.							

Targeted Application & Tools that can be used: Information Retrieval System, Collaborative Filtering System, Feedback System, Evaluation Metrics
Assignment: Group assignment, Quiz

• Topics relevant to the development of SKILLS: Recommendation Techniques, Content-based Filtering for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE324	Course Title: Internet and Web Technologies Type of Course: Integrated		L- P- C	1	4	3
Version No.	1					
Course Pre-requisites	nil					
Anti-requisites	nil					
Course Description	The purpose of the course is to provide a comprehensive introduction to scripting languages that are used for creating web-based applications. The associated laboratory provides an opportunity to implement the concepts and enhance critical thinking and analytical skills					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Internet and Web Technologies and attain Skill Development through Participative Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: - Implement web-based application using markup languages. [Application] - Illustrate the use of various constructs to enhance the appearance of a website. [Application] Apply server-side scripting languages for web page design and link to a database. [Application]					
Course Content:	Module: 1: [20 Hrs - L[10] + T[10]] [Application] Module: 2: Advanced CSS [16 Hrs – L[8] + T[8]] [Application] XML: Basics, demonstration of applications using XML Module 3: PHP [20 Hrs – L[10] + T[10]] [Application] PHP: Introduction to server-side Development with PHP, Arrays, and Superglobals, Arrays, \$GET and \$ POST, Super global Arrays, \$_SERVER Array, \$_Files Array, Reading/Writing Files, PHP Classes and Objects, Object, Classes and Objects in PHP, Object Oriented Design, Working with Databases, SQL, Database APIs, Managing a MySQL Database. Accessing MySQL in PHP					
Module 1	Introduction to XHTML	Assignment	Data Collection/Interpretation	16 Sessions		
Topics: Basics: Web, WWW, Web browsers, Web servers, Internet. XHTML: Origins and Evolution of HTML and XHTML: Basic Syntax, Standard XHTML Document Structure, Basic Text Markup, Images, Hypertext Links, Lists, Tables, Forms, Frames, Syntactic Differences between HTML and XHTML						
Module 2	Advanced CSS	Experiment	Case studies / Case let	20 Sessions		
Topics: Layout, Normal Flow, Positioning Elements, Floating Elements, Constructing Multicolumn Layouts, Approaches to CSS Layout, Responsive Design, CSS Frameworks						
Module 3	PHP	Quiz	Case studies / Case let	20 Sessions		
Topics: Introduction to server-side Development with PHP, Arrays, and Superglobals, Arrays, \$GET and \$ POST, Super global Arrays, \$ SERVER Array, \$ Files Array, Reading/Writing Files, PHP Classes and Objects,						

Object, Classes and Objects in PHP, Object Oriented Design, Working with Databases, SQL, Database APIs, Managing a MySQL Database. Accessing MySQL in PHP

List of Laboratory Tasks:

1. HTML with tables
2. HTML with frames
3. Html with form
4. Web site with links
5. Website with advanced CSS
6. WAMP installation & introduction
7. PHP for website
8. Form validation
9. PHP and MySQL for website

Targeted Application & Tools that can be used

1. Notepad++
2. WAMP

Project work/Assignment:

Assignment: Mini Project on development of a Website

Topics relevant to development of “Skill Development”: Form Design and Validation for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE219	Course Title: Big Data Analytics		L- T-P- C	1	0	4	3
	Type of Course: Laboratory Integrated						
Version No.	2.0						
Course Pre-requisites	DDL, DML of SQL Queries and Creation of Class & object, interface, reading & writing a file, control statements in java programming.						
Anti-requisites	NIL						
Course Description	This course is designed to provide the fundamental knowledge to equip students being able to handle real world big data problems including the three key resources of Big Data: people, organizations, and sensor. With the advancement of IT storage, processing, computation and sensing technologies, big data has become a novel norm of life.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Big Data Analytics and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques						
Course Out Comes	On successful completion of the course the students shall be able to: 1: Describe the fundamental concepts of big data analytics (Knowledge) 2: Apply Map-Reduce programming on the given datasets to extract required insights. (Application). 3: Employ appropriate Hadoop Ecosystem tools such as Hive, Hbase to perform data analytics for a given problem (Application) 4: Use Spark and nosql tool to analyse the given dataset for a given problem. (Application).						
Course Content:							
Module 1	Introduction to Big data Analytics	Assignment	Case study on Real time applications	10 Sessions			
Introduction to Big Data: Basics of Distributed File System, Four Vs, Drivers for Big data, Big data applications, Structured, unstructured, semi-structured and quasi structured data. Big data Challenges-Traditional versus big data approach. The Hadoop: History of Hadoop-Hadoop use cases, The Design of HDFS, Blocks and replication management, Rack awareness, HDFS architecture, HDFS Federation, Name node and data node, Anatomy of File write, Anatomy of File read. Role of Data Scientist - Role of Data Analyst – Data Analytics in Product development - Business Intelligence vs Data analytics - Real time Business Analytical ProcessCase studies related to big data applications							
Module 2	Hadoop MapReduce Framework	Assignment	Installation of multimode cluster	10 Sessions			
MapReduce : Overview and Need of Distributed processing for big data- Introduction to hadoop framework and MapReduce programming - HDFS design and its goals - Master-Slave Architecture of hadoop – Working with hadoop daemons-Installation of hadoop single node cluster and multi node clusters - Working with MapReduce programming.							
Module 3	Hive and Hbase Analytical tools	Term paper/Assignment	Hive joins	10 Sessions			
Hive : Apache Hive with Hive Installation, Hive Data Types, Hive Table partitioning, Hive DDL commands, Hive DML commands, and Hive sort by vs. order by, Hive Joining tables, Hive bucketing. Hbase : Introduction to HBase and its working architecture- Commands for creation and listing of tables-disabled and is disabled of table - enable and is enabled of table- describing and dropping of table-Put and Get command - delete and delete all command-commands for scan, count, truncate of tables.							
Module 4	Data Analytics with Spark	Term paper/Assignment	Spark RDD	10 Sessions			

Spark: Spark: Apache Spark's Philosophy, History of Spark, Running Spark, A Gentle Introduction to Spark, Spark's Basic Architecture, Spark Applications, DataFrames, Partitions, Transformations, Lazy Evaluation, Actions, Spark UI, An End-to-End Example, Integration of Hive and spark.

Nosql: Mongo DB: Introduction ,Features ,Data types , Mongo DB Query language , CRUD operations ,Arrays , Functions: Count ,Sort , Limit , Skip , Aggregate , Cursors – Indexes , Mongo Import , Mongo Export.

List of Laboratory Tasks

1. Introduction to Hadoop Ecosystem tools
2. Introduction to Hadoop distributed file System.
3. Installation of Hadoop single node cluster using Ubuntu operating system.
4. Working with Hadoop Commands
5. Introduction to Mapreduce framework
6. Word Count analysis using sample data set (MapReduce)
7. Stock analysis using sample data set (MapReduce)
8. Web log analysis using sample data set (MapReduce)
9. Temperature analysis using sample data set .(MapReduce)
10. Working on basic hive commands
11. Working on basic hbase commands
12. Install, Deploy & configure Apache Spark
13. Word count analysis using RDD and FlatMap
14. Working with MongoDB using restaurant data.

Targeted Application & Tools that can be used:

Apache Hadoop-

HDFS – for data storage

Map reduce – Mapping and reducing.

Hive – Structured data,HQI

Hbase, MongoDB – No SQL

Apache Spark – SCALA LANGUAGE

Text Book

Topics relevant to SKILL DEVELOPMENT: Hadoop ecosystem tools, HDFS, Mapreduce, Hive, Hbase, MongoDB,NoSQL, Spark for **Skill Development** through **Experiential Learning** techniques. This is attained through the assessment component mentioned in the course handout.

Course Code: CSE3123	Course Title: Search Engine Optimization Type of Course: Program Core & Theory Only	L-P-C	3	0	3
Version No.	1.0				

Course Pre-requisites	NIL			
Anti-requisites	NIL			
Course Description	Objective of this course is to make students learn the basics of Search Engine and develop ability to optimize the searching based on the key words so that the business can be improved. The search engine optimization is the skill of improving a website to upsurge its visibility when people search for products or services. The more visible a website has on search engines, the more likely it is that brand captures business. The students should have prior knowledge of WWW to pursue the Course. After successful completion of the Course, the students would acquire knowledge to comprehend the Search Engine Optimization algorithms, SEO tools and Reporting methods to analyze the web sites.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Search Engine Optimization and attain Skill Development through Participative Learning techniques.			
Course Out Comes	On successful completion of the course the students shall be able to: 1. Outline the basic concepts of SEO (Knowledge) 2. Discuss the content necessary for On-page & Off-Page SEO (Comprehension) 3. Illustrate Technical SEO (Application) 4. Analyse the Report of SEO to measure the performance (Analysis)			
Course Content:				
Module 1	Introduction to SEO			10 Sessions
Topics: Search Engine – works- SEO vs SEM- need – history- works- Googlebot (Google Crawler)- Types of SEO technique- Search Engine Algorithm- Google Algorithm- Key word search- Types of key words- Competition analysis- Page ranking technology				
Module 2	On-Page and Off-Page SEO	Assignment		12 Sessions
Topics: Introduction to On-Page SEO, Basics of website designing/development, HTML Basics for SEO, Meta Tag, Title Tag, Image Tag and H Tag Optimization- Link building- Optimizing SEO content- Key word search and Analysis. Introduction to Off-Page optimization- Local marketing of website as per the location- Page ranking- Building back links- Type of links – Natural Link, manually built link & Self-created link- White hat, grey hat and Black hat SEO- Social Media optimization technique.				
Module 3	Technical SEO			10 Sessions

Basics of Technical SEO- Crawling and Indexing- HTML Sitemap vs. XML Sitemap, The robots.txt File protocol, Overcoming Error codes, Technical Analysis connected with Redirection, Broken Links - Redirects, Best Practices, Analysis of Crawl Errors				
Module 4	SEO Reporting	Assignment		08 Sessions
Website position analysis in various search engine- Analyzing performance of the website using Google analytics- Goals and conversion- Tracking and report- Reports submission- Securing Ranks.				
Targeted Application & Tools that can be used: Applications: Online Business models such as e-Commerce, Digital Marketing, Health Care Professionally used software – Google Analytics				
Text Book T1 - <i>"Search engine optimization all-in-one for dummies"</i> , Clay, B ,3rd ed., John Wiley & Sons, Inc., 2015. T2 - <i>"Google AdWords: A beginner's guide to Google. Use Analytics, SEO, and AdWords. Become an influencer on social media"</i> , Wally Bax , Notion Press Media Pvt Ltd., 2022.

Topics relevant to "SKILL DEVELOPMENT": Development basic using HTML and Search engine optimization tools for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course handout.				

Course Code: CSA3052/CSE3122	Course Title: PATTERN RECOGNITION		L- P- C	2	2	3
	Type of Course: Theory					
Version No.	1.0					
Course Pre-requisites	linear algebra, probability, random process, statistics, programming experience (MATLAB/C/C++) will be helpful.					
Anti-requisites	-					
Course Description	Pattern recognition techniques are used to design automated systems that improve their own performance through experience. This course covers the methodologies, technologies, and algorithms of statistical pattern recognition from a variety of perspectives. Topics including Bayesian Decision Theory, Estimation Theory, Linear Discrimination Functions, Nonparametric Techniques, Support Vector Machines, Neural Networks, Decision Trees, and Clustering Algorithms etc. will be presented.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of pattern recognition and attain Skill Development through Experiential Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Identify areas where Pattern Recognition and Machine Learning can offer a solution.[knowledge] CO2: Describe the strength and limitations of some techniques used in computational Machine Learning for classification, regression and density estimation problems[Comprehensive] CO3: Describe genetic algorithms, validation methods and sampling techniques[Comprehensive] CO4: Describe and model data to solve problems in regression and classification[Comprehensive] CO5: Implement learning algorithms for supervised tasks. [Application]					
Course Content:						
Module 1		quiz	Case studies / Case let	8 Sessions		
Importance of pattern recognition, Features, Feature Vectors, and Classifiers, Supervised, Unsupervised, and Semi-supervised learning, Introduction to Bayes Decision Theory, Discriminant Functions and Decision Surfaces, Gaussian PDF and Bayesian Classification for Normal Distributions. L1, L2						
Module 2		Assignment	Case studies / Case let	8 Sessions		
Introduction, Basis Vectors, The Karhunen Loeve (KL) Transformation, Singular Value Decomposition, Independent Component Analysis (Introduction only). Nonlinear Dimensionality Reduction, Kernel PCA. L1, L2						
Module 3		Quiz	Case studies / Case let	10 Sessions		
Maximum Likelihood Parameter Estimation, Maximum a Posteriori Probability estimation, Bayesian Interference, Maximum Entropy Estimation, Mixture Models, Naive-Bayes Classifier, The Nearest Neighbor Rule. L1, L2, L3						
Module 4 12 Session						
Introduction, Linear Discriminant Functions and Decision Hyperplanes, The Perceptron Algorithm, Mean Square Error Estimate, Stochastic Approximation of LMS Algorithm, Sum of Error Estimate. L1, L2, L3						
Text Book

Course Code: CSE 2050	Course Title: System Software		L-P-C	3	0	3
	Type of Course: Theory Only					
Version No.	1.1					
Course Pre-requisites	Students are expected to be familiar with the basics of DataStructure, Programming Language Java Basics, J2EE and should have a knowledge on DBMS.					
Anti-requisites	NIL					
Course Description	This course is introduced to have an understanding of foundations of design of assemblers, loaders, linkers, and macro processors, The design and implementation of various types of system software and relationship between machine architecture and system software. Use and implementation of assemblers, macros, loaders, compilers, and operating systems. To Introduce formal systems and their application to programming languages, including topics such as Different System Software– Assembler, Assembler design options, macro processors, Device drivers.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of System Software and attain SKILL DEVELOPMENT through Participative Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: CO1 : Distinguish different software into different categories. CO2 : Design, analyze and implement one pass, two pass or multi pass assembler CO3 : Design, analyze and implement loader and linker. CO4 : Design, analyze and implement macro processors CO5 : Critique the features of modern editing /debugging tools.					
Course Content:						
Module 1	Introduction to System Software	Assignment	Analysis			10 Sessions

Course Code: CSE2053	Course Title: Enterprise Network Design Type of Course: Theory Only Course		L- P- C	3	0	3
Version No.	1					
Course Pre-requisites	Computer Networks 1. OSI Reference Model and TCP/IP Protocol Suite 2. Routing IP Addresses 3. Internetworking Devices					
Anti-requisites						
Course Description	In Enterprise Network Design, students will investigate and design a variety of enterprise network configurations. They will enhance their consulting skills through the process of customer requirement analysis, network design, product specifications and price quotation. Methodologies for sourcing, wiring, hardware installations, software configurations and thorough testing and troubleshooting will complete the design to installation process. Modeling and simulating networks, using the most advanced computer tools, will be given special emphasis.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Enterprise Network Design and attain Skill Development through Participative Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: 1. Understand the customer requirements and Apply a Methodology to Network Design. Structure and Modularize the Network. 2. Design Basic Campus and Data Center Network, and Remote Connectivity. 3. Design IP Addressing and Select suitable Routing Protocols for the Network 4. Compare OpenFlow controllers and switches with other enterprise networks.					
Course Content:						
Module 1	Applying Methodology to Network Design:	Assignment	Data Collection/Interpretation			10 Sessions
Topics: The Cisco Service Oriented Network Architecture, Network Design Methodology, Identifying Customer Requirements, Characterizing the Existing Network and Sites, Using the Top-Down Approach to Network Design, The Design Implementation Process. Structuring and Modularizing the Network: Network Hierarchy, Using a Modular Approach to Network Design, Services Within Modular Networks, Network Management Protocols and Features						
Module 2	Designing Basic Campus and Data Center Networks	Case studies / Case let	Case studies / Case let			9 Sessions
Topics: Campus Design Considerations, Enterprise Campus Design, Enterprise Data Center Design Considerations. Designing Remote Connectivity Enterprise Edge WAN Technologies, WAN Design, Using WAN Technologies, Enterprise Edge WAN and MAN Architecture, Selecting Enterprise Edge Components, Enterprise Branch and Teleworker Design.						
Module 3	Designing IP Addressing in the	Quiz	Case studies / Case let			9 Sessions

	Network & Selecting Routing Protocols			
Topics: Designing an IP Addressing Plan, Introduction to IPv6, Routing Protocol Features, Routing Protocols for the Enterprise, Routing Protocol Deployment, Route Redistribution, Route Filtering, Redistributing and Filtering with BGP, Route Summarization.				
Module 4	Software Defined Network	Assignment	Data Collection/Interpretation	10 Sessions
Understanding SDN and Open Flow: SDN – SDN Building Blocks, OpenFlow messages – Controller to Switch, Symmetric and Asynchronous messages, Implementing OpenFlow Switch, OpenFlow controllers, POX and NOX, Open Flow in Cloud Computing, Case study: how SDN changed Traditional Enterprise network Design				
Targeted Application & Tools that can be used: Knowing and understanding an application as to how to design an enterprise network for given requirements.				
Project work/Assignment:				
Assignment: Students will have to do group assignments for Modules 1 & 4. As a part of their assignments, they will have to use some methodologies and approaches of network design for an enterprise network. Design an enterprise network for given user requirements in an application.				
Textbook T1 Authorized Self-Study Guide, Designing for Cisco Internetwork Solutions (DESGN), Second Edition, Cisco Press-Diane Teare. T 2. Network Analysis, Architecture, and Design 3rd Edition, Morgan Kaufman, James D. T3. CCDA Cisco official Guide T 4. Software Defined Networking with Open Flow: PACKT Publishing Siamak Azodolmolky				
References R1 Top-Down Network Design (Networking Technology) 3rd Edition, Priscilla Oppenheimer, Cisco Press Book R2. Network Planning and Design Guide Paperback – 2000, Shaun Hummel E book link R1: http://www.teraits.com/pitagoras/marcio/gpi/b_POppenheimer_TopDownNetworkDesign_3rd_ed.pdf E book link R2: https://archive.org/details/networkplanningd0000humh/page/n1/mode/2up Web resources: https://www.cisco.com/c/en/us/solutions/design-zone/networking-design-guides.html https://www.cisco.com/c/en/us/solutions/enterprise-networks/what-is-an-enterprise-network.html				
Topics relevant to “SKILL DEVELOPMENT”: Development of various solutions by students in making the network design and followed by discussions and presentations for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course handout.				

Course Code: CSE3120	Course Title: Operating System with Linux Internals Type of Course: Discipline Elective in Information Science & Engineering Basket		L- P- C	2	2	3
	Theory & Integrated Laboratory					
Version No.	1.0					
Course Pre-requisites	[1] C Programming [2] Unix shell programming [3] Data Structure					
Anti-requisites	NIL					
Course Description	The purpose of this course is to enable the students to understand the need for Operating systems and to develop the basic concepts of process management, synchronization and memory management. The course will expose students to Linux OS internals, its design and features. The course is both conceptual and analytical in nature towards managing the process and memory and needs fair knowledge of programming fundamentals, C programming and data structures. The course develops the critical thinking and analytical skills on allocating and managing resources. The course also enhances the problem solving and systems programming abilities through assignments The associated laboratory provides an opportunity to validate the concepts taught as well as enhances the ability to approach designing new OS level features with confidence.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Operating System with Linux Internals and attain <u>SKILL DEVELOPMENT</u> through <u>EXPERIENTIAL LEARNING</u> techniques.					
Course Outcomes	On successful completion of this course the students shall be able to: (1) Explain the structure and functions of OS (2) Solve problems on various CPU Scheduling Algorithms (3) Apply different techniques to various synchronization problems (4) Discuss various memory management techniques (5) Apply appropriate Linux commands for memory management and directory management					
Course Content:						
Module 1	Introduction	Quiz	Programming	09 Classes		
Topics: Introduction to OS – Computer System Architecture , Operating System Structure, Operations – Different management activities handled by the OS, Computing environments, Operating System Services, User and OS interface, System Calls and its types, System Programs[loaders, linkers...], Overview of OS design and implementation. Linux Operating System: Introduction to Linux OS, Basic Commands of Linux OS						
Module 2	Process Management	Quizzes and assignments	Pseudocode/Programming	9 Classes		
Topics: Process Concept, Operations on Processes, Inter Process Communication, Introduction to threads - Multithreading Models, Process Scheduling– Basic concepts, Scheduling Criteria, Scheduling Algorithms: FCFS, SJF, SRTF, RR, Priority, Multilevel Queue, Multilevel Feedback Queue. Linux Operating System: Process Management Commands and System Calls.						
Module 3	Process Synchronization and Deadlocks	Coding Assignment/Case Study	Pseudocode/Programming	9 Classes		
Topics:						

The Critical-Section Problem - Peterson's Solution, Synchronization hardware, Mutex locks, Semaphores, Classic Problems of Synchronization, Monitors. Introduction to Deadlocks, Deadlock Characterization, Methods for handling deadlock: Deadlock Prevention- Deadlock Avoidance- Deadlock detection & Recovery from Deadlock

Linux Operating System: Pipe, semaphore and message queue

List of Laboratory Tasks:

Experiment No. 1: Basic UNIX Commands

Level 1: Linux commands- PATH, man, echo, printf, script, passwd, uname, who, date, stty, pwd, cd, mkdir, rmdir, ls, cp, mv, rm, cat, more, wc, lp, od, tar, file handling utilities, security by file permissions, process utilities

Level 2: Text Processing utilities and backup utilities , tail, head, sort, nl, uniq, grep, egrep, fgrep, cut, paste, join, tee, pg, comm, cmp, diff, tr, awk, cpio

Experiment No. 2: Programs using system calls of UNIX operating system

Level 1 Programs using the following system calls of UNIX operating system fork, exec, getpid, exit, wait, close, stat, opendir, readdir

Level 2 Simulate UNIX commands like cp, ls, grep.

Experiment No. 3: Programs to demonstrate process creation and termination

Level 1: Program to demonstrate creating new processes and waiting for a process

Level 2: Program to demonstrate creation of zombie processes and orphan process

Experiment No. 4: Programs to demonstrate inter process communication using Pipe

Level 1: Programs to illustrate execution of two commands concurrently with a command pipe and communication between two unrelated processes

Level 2: Program to demonstrate inter process communication using mkfifo, open, read, write and close APIs

Experiment No. 5: Programs to demonstrate inter process communication using message queues

Level 1: Program to create a message queue with read and write permissions and to write messages with different priority numbers

Level 2: Program to receive messages of different priorities from the message queue and display them

Experiment No. 6: Programs to demonstrate process synchronization using Semaphores

Level 1: Program that illustrates suspending and resuming processes using signals

Level 2: Program that illustrates access of shared memory using counting semaphore

Experiment No. 7: Programs to demonstrate the event of a deadlock and its avoidance

Level 1: Using POSIX Semaphores demonstrate the scenario where in deadlock happens due to incorrect use of semaphores

Level 2: Program to implement a solution to the Dining Philosopher problem using Monitors

Targeted Application & Tools that can be used:

Targeted Application:

Real time Applications such as traffic management system, banking system, health care and many more systems where there are entities that use and manage the resources.

Software Tools:

Linux Environment

Project work/Assignment:

Each batch of students (self-selected batch mates) will identify projects and implement with the most suitable 2 or 3 antecedents.

Textbook(s):

1. Silberschatz A, Galvin P B and Gagne G, “Operating System Concepts”, 9th edition Wiley, 2013
2. Sumitabha Das, “Unix concept and Programming”, McGraw Hill education, 4th Edition, 2015

References

1. Ellen Siever, Stephen Figgins, Robert Love, Arnold Robbins, Linux in a Nutshell, O'Reilly Media, Inc, 2009
2. Operating Systems | Internals and Design Principles | Ninth Edition | By Pearson Paperback – 1 March 2018. by William Stallings (Author)

Topics relevant to “ **SKILL DEVELOPMENT** ”: Linux OS commands and programming for **SKILL DEVELOPMENT** through **EXPERIENTIAL LEARNING** techniques.. This is attained through assessment component mentioned in the course handout.

Course Code: CSE2056	Course Title: WEB 2.0 Type of Course: Program Core Laboratory Integrated Course	L- P- C	2	2	3
Version No.	1.0				
Course Pre-requisites	Programming fundamentals (any language), Knowledge of RDBMS, HTML, CSS, and JavaScript.				
Anti-requisites	NIL				
Course Description	The purpose of this course is to introduce the next level of web design using Web 2.0 technologies. Web 2.0 is the business revolution in the computer industry caused by the evolution of social networking. Students will be trained in planning and designing effective web pages by writing code using current leading trends in the web domain, enhancing web pages with the use of JavaScript frameworks. The major focus is on the key elements of web 2.0 like Rich internet applications, Service-oriented architecture, and social web.				
Course Outcomes	After the completion of the course students shall be able to: 1. Demonstrate database-driven web application with the server-side script using PHP. 2. Employ JavaScript frameworks to develop rich internet applications. 3. Demonstrate web application using Flex architecture deployed to flash player. 4. Describe the concept of web application terminologies and internet tools for developing the social web.				
Course Objectives	The objective of the course is to familiarize the learners with the concepts of WEB 2.0 and attain Skill Development through Experiential Learning techniques.				
Course Content:					
Module 1		Assignment		9 Hours	
Topics: Overview of internet and its evolution, Comparison of web 1.0 and web 2.0, characteristics of web 2.0, Introduction to server-side scripting-PHP, PHP and MySQL interaction, Web 2.0 technologies, Overview of JavaScript frameworks-AJAX. PHP example, AJAX example					
Module 2		Assignment		9 Hours	
Topics: Data interchange formats: XML, XML basics; XML Schema; Types, Sample program for XML, Overview of JQuery, JQuery example, Overview Angular JS					
Module 3		Assignment		9 Hours	
Topics: Overview of Flex architecture: Facebook, Angular JS example, Differences between HTML and Flex applications, Angular JS example, Flex example, Understanding ActionScript, Flex example, Differentiating between Flash player and Framework, Flex example, Understanding UI Components, Model View Controller					
Module 4		Assignment		9 Hours	
Topics: Introduction to Social Web, Building blog-part 1, Building blog-part 2, Social networking or social media sites Wikis, blog, Youtube, Building blog-part 3, Building blog-part 4, Collaborative consumption platforms, and mashup applications, Building blog-part 5					

Targeted Application & Tools that can be used:						
1. To creating a social web site						
List of Laboratory Task						
Experiment No. 1: Learn to use a web server (Apache) and server-side scripting using PHP along with a database.						
Experiment No. 2: Learn to create rich internet applications using JavaScript frameworks						
Experiment No. 3: Learn to create a web application using Flex architecture						
Experiment No. 4: Learn how web2.0 websites facilitate interaction among users, Eg: creating a social web site						
Project work/Assignment:						
Project Assignment: NIL						
Text Books

Topics relevant to “SKILL DEVELOPMENT”: Building blog, Social networking or social media sites for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.						

Course Code: CSE258	Course Title: Problem Solving Using Python	L-T-P- C	1	0	4	3
	Type of Course: Theory & Integrated Laboratory					
Version No.	1.0					
Course Pre-requisites	Nil					
Anti-requisites	NIL					

Course Description	This course provides the opportunity for the students of Computer Science engineering to develop Python scripts using its powerful programming features like lists, sets, tuples, dictionaries and sets. Students will also be introduced to object oriented programming concepts and packages for data visualization. Topics include: Basics of Python programming, operators and expressions, decision statements, loop control statements, functions, strings, lists, list processing : searching and sorting, nested list, list comprehension, tuples and dictionaries, sets, file handling, exception handling, object oriented programming concepts, modules and packages for data visualization			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Problem Solving Using Python and attain Employability Skills through Experiential Learning techniques.			
Course Out Comes	On successful completion of the course the students shall be able to: 1. Demonstrate problem solving through understanding the basics of python (Application) 2. Manipulate functions and data structures. (Application) 3. Apply Tuple, Dictionaries, File and Exception Handling concepts to solve real time problems (Application) 4. Practice object-oriented programming (Application) 5. Produce data visualization using modules and packages (Application)			
Course Content:				
Module 1	Problem Solving Techniques and Basics of Python Programming	assignments	Quizzes form basics of python	15Sessions
Basics of problem solving techniques, Basics of Python programming, operators and expressions, decision statements, loop control statements.				
Module 2	Function, String and List	Quizzes and assignments	Comprehension based Quizzes and assignments	15 Sessions
Functions, strings, lists, list processing: searching and sorting, nested list, list comprehension				
Module 3	Data Structures, File and Exception handling	Term paper/Assignment	Quizzes form advanced python	15 Sessions
Tuples and dictionaries, sets, file handling, exception handling.				
Module 4	Object-Oriented Programming and Data Visualization	Term paper/Assignment	Application on data visualization	15 Sessions
Object oriented programming concepts, modules and packages for data visualization.				
List of Laboratory Tasks: Each Lab sheets experiments are prepared by level 0 and level 1 module wise.				
Targeted Application & Tools that can be used: Any IDE – PyCharm, VS Code, Python IDE, Spyder, jupyter note book, Google Colab				
Text Book

Topics relevant to the Employability SKILLS: problem solving techniques – Function - Object oriented programming - data visualization for for Employability Skills through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE 2058	Course Title: Firewall and Internet security Type of Course: Integrated	L- P- C	2	2	3
Version No.	1				
Course Pre-requisites	Computer Networks				
Anti-requisites					
Course Description	This course provides an in-depth study of various network attacks techniques and methods to defend against them. A number of threats and vulnerabilities of the Internet will be covered, including various vulnerabilities of TCP/IP protocols, denial of service (DOS), attacks on routing, attacks on DNS servers, TCP session hijacking, and so on. This course will also cover defending mechanisms, including intrusion detection, firewalls, tracing the source of attacks, anonymous communication, IPsec, virtual private network, and PKI. To make it easy for students to understand these attacks, basics of the TCP/IP protocols will also be covered in the course.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Firewall and Internet security and attain Skill Development through Problem Solving Methodologies.				
Course Out Comes	On successful completion of the course the students shall be able to: • To identify elements of firewall design, types of security threats and responses to security attacks. • Examine security incident postmortem reporting and ongoing network security activities. • Construct code for authentication algorithms. • Develop a signature scheme using Digital signature standard. • Demonstrate the network security system using open source tools				
Course Content:					
Module 1	Introduction to Firewall	Assignment	Data Collection/Interpretation	12 Sessions	
Introduction of Firewall in computer network,Categories of firewall,How firewall works,Types of firewall, Firewall location and Configuration,Firewall Policies,Firewall Biasing,Network Architecture,Net masks,Packet filters,Stateful firewalls,Resources					
Module 2	Computer security	Case studies / Case let	Case studies / Case let	12 Sessions	
Topics: Attacks on Computers and Computer Security: Need for Security, Security Approaches, Principles of Security Types of Attacks. Transport Level Security: Web Security Considerations, Secure Sockets Layer, Transport Layer Security, HTTPS, Secure Shell (SSH)					
Module 3	Network Security	Quiz	Case studies / Case let	10 Sessions	
Topics: Overview of Network Security:Elements of Network Security , Classification of Network Attacks ,Security Methods ,Symmetric-Key Cryptography :Data Encryption Standard (DES),Advanced Encryption Standard (AES) , Public-Key Cryptography :RSA Algorithm ,Diffie-Hellman Key-Exchange Protocol , Authentication :Hash Function , Secure Hash Algorithm (SHA) , Digital Signatures.					
Module 4	Cyber laws and Compliance Standards	Quiz	Case studies / Case let	11 Sessions	
Topics:					

Kerberos:Working ,ASS,TGS,SS-Internet security protocols-AH,ESP,Models-Transport and tunnel-Email security,Public key Infrastructure,Certificates,certificates authority.Cyber Crime: Introduction,Hacking,Digital forgery,Cyber Stalking,Identify theft and Fraud,Cyber terrorism,Cyber defamation,Crime against individual,Government,Property.

List of Laboratory Tasks:

1. Perform encryption, decryption using the following substitution techniques
(i) Ceaser cipher, (ii) playfair cipher iii) Hill Cipher iv) Vigenere cipher
2. Perform encryption and decryption using following transposition techniques
i) Rail fence ii) row & Column Transformation
3. Apply DES algorithm for practical applications.
4. Apply AES algorithm for practical applications.
5. Implement RSA Algorithm using HTML and JavaScript
6. Implement the Diffie-Hellman Key Exchange algorithm for a given problem.
7. Calculate the message digest of a text using the SHA-1 algorithm.
8. Implement the SIGNATURE SCHEME – Digital Signature Standard.
9. Demonstrate intrusion detection system (ids) using any tool eg. Snort or any other s/w.
10. Automated Attack and Penetration Tools Exploring N-Stalker, a Vulnerability Assessment Tool
11. Defeating Malware
i) Building Trojans ii) Rootkit Hunter

Targeted Application & Tools that can be used

Course Code: CSE 2059	Course Title: MOBILE NETWORKING Type of Course: Integrated	L- P- C	2	2	3
Version No.	1.0				
Course Pre-requisites	NIL				
Anti-requisites	NIL				

Course Description	Objective of this course is to make students understand basics of various techniques in mobile Networks/Adhoc Networks and New technology of Wireless Broadband Networks			
Course Objective	The objective of the course is to familiarize the learners with the concepts of MOBILE NETWORKING and attain Skill Development through Experiential Learning techniques.			
Course Out Comes	On successful completion of the course the students shall be able to: 1] Understand basics of Routing and protocols in Adhoc and Sensor Networks. 2] Learn Wireless Broadband Networks Technology Overview, Platforms and Standards. 3] Learn management, testing and troubleshooting in Wireless Broadband Networks working principles of wireless LAN, its standards. 4] Learn latest wireless networks.			
Course Content:				
Module 1	AD HOC NETWORKS	Quiz	Case studies / Case let	8 Sessions
Topics: Characteristics and Applications of Ad hoc Networks, Routing – Need for routing and routing classifications, Table Driven Routing Protocols, Source Initiated On-Demand Routing Protocols,, Hybrid Protocols – Zone Routing, Fisheye Routing, LANMAR for MANET with group mobility, Location Added Routing, Distance Routing Effects, Microdiscovery and Power Aware Routing.				
Module 2	SENSOR NETWORKS	Quiz	Case studies / Case let	8 Sessions
Topics: Wireless Sensor Networks, DARPA Efforts, Classification, Fundamentals of MAC, Flat routing – Directed Diffusion, SPIN, COGUR, Hierarchical Routing, Cluster base routing, Scalable Coordination, LEACH, TEEN, APTEEN and Adapting to the dynamic nature of Wireless Sensor Networks.				
Module 3	WIRELESS BROADBAND NETWORKS TECHNOLOGY	Quiz	Case studies / Case let	8 Sessions
Topics: Overview, Platforms and Standards Wireless broadband fundamentals and Fixed Wireless Broadband Systems, Platforms- Enhanced Copper, Fibre Optic and HFC, 3G Cellular, Satellites, ATM and Relay Technologies, HiperLAN2 Standard, Global 3G CDMA Standard, CDMA Harmonization G3G Proposal for Protocol Layers.				
Module 4	MANAGING WIRELESS NETWORKS AND TESTING	Quiz	Case studies / Case let	8 Sessions
Managing Wireless Broadband Operations Management of LMDS Systems and their Application, Principles of operations Management, LMDS Versus Other Access technologies, Applications, Testing Wireless Satellite Networks and Fixed Wireless Broadband Networks.				
Module 5	ADVANCED WIRELESS NETWORKS	Quiz	Case studies / Case let	8 Sessions
Wireless. Broadband Network Applications: Teleservices Model and Adaptive QoS Parameters, Modeling of Wireless. Broadband Applications, Multicomponent Model, Residential High speed Internet Wireless Broadband Satellite Systems, Next Generation Wireless Broadband Networks – 3G, Harmonized 3G, 3G CDMA, Smart Phones and 3G Evolution.				
List of Laboratory Tasks: • Test the different sections of mobile phone. (such as ringer section, dialer section, receiver section and transmitter section). • Perform the process of call connection and call release of cellular Mobile system.				

• Transfer an image, audio and video file using Bluetooth protocol with varying distance between two devices and analyze the performance. • Configure Wi-Fi setting in mobile devices using mobile tethering to connect two devices such as mobile phone to mobile phone, mobile phone to laptop. • Apply RFID technology for real life applications using RFID kit. • Establish seamless wireless connectivity using multiple access point
Targeted Application & Tools that can be used
MATLAB and Simulink
Project work/Assignment:
Assignment:

Topics relevant to “SKILL DEVELOPMENT”: Wireless and Cellular networks for Skill Development through Experiential Learning techniques . This is attained through assessment component mentioned in course handout.

Course Code: CSE 3132	Course Title: Network Management Systems Type of Course: Theory Only Course	L- P- C	3	0	3
Version No.	1.0				
Course Pre-requisites	NIL				
Anti-requisites	NIL				
Course Description	To understand the principles of network management, different standards and protocols used in managing complex networks and the Automation of network management operations and making use of readily available network management systems.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Network Management Systems and attain Skill Development through Participative Learning techniques.				

Course Out Comes	On successful completion of the course the students shall be able to: 1]Acquire the knowledge about network management standards (OSI and TCP/IP). 2]Acquire the knowledge about various network management tools and the skill to use them in monitoring a network. 3]Analyze the challenges faced by Network managers. 4]Evaluate various commercial network management systems and open network management systems. 5]Analyze and interpret the data provided by an NMS and take suitable actions.			
Course Content:				
Module 1	DATA COMMUNICATION AND NETWORK MANAGEMENT	Assignment	Data Collection/Interpretation	12 Sessions
Topics: OVERVIEW : Analogy of Telephone Network Management, Communications protocols and Standards, Case Histories of Networking and Management, Challenges of Information Technology Managers, Network Management: Goals, Organization, and Functions, Network and System Management, Network Management System Platform, Current Status and future of Network Management.				
Module 2	Simple Network Management Protocol	Case studies / Case let	Case studies / Case let	12 Sessions
Topics: SNMPV1 NETWORK MANAGEMENT MANAGED NETWORK: Organization and Information Models MANAGED NETWORK: Case Histories and Examples, The History of SNMP Management, The SNMP Model, The Organization Model, System Overview, The Information Model. SNMPV1 NETWORK MANAGEMENT: Communication and Functional Models The SNMP Communication Model, Functional model. SNMP MANAGEMENT: SNMPv2 Major Changes in SNMPv2, SNMPv2 System architecture, SNMPv2 Structure of Management Information, The SNMPv2 Management Information Base, SNMPv2 Protocol, Compatibility with SNMPv1.				
Module 3	Remote Monitoring	Quiz	Case studies / Case let	14 Sessions
Topics: RMON : What is Remote Monitoring? ,RMON SMI and MIB, RMON1, RMON2, ATM Remote Monitoring, A Case Study of Internet Traffic Using RMON TELECOMMUNICATIONS MANAGEMENT NETWORK: Why TMN? , Operations Systems, TMN Conceptual Model, TMN Standards, TMN Architecture, TMN Management Service Architecture, An Integrated View of TMN, Implementation Issues.				
Module 4	NETWORK MANAGEMENT TOOLS AND SYSTEMS	Quiz	Case studies / Case let	14 Sessions
Network Management Tools, Network Statistics Measurement Systems, History of Enterprise Management, Network Management systems, Commercial Network management Systems, System Management, Enterprise Management Solutions.				
Module 5	WEB-BASED MANAGEMENT	Quiz	Case studies / Case let	14 Sessions
NMS with Web Interface and Web-Based Management, Web Interface to SNMP Management, Embedded Web-Based Management, Desktop management Interface, Web-Based Enterprise Management, WBEM: Windows Management Instrumentation, Java management Extensions, Management of a Storage Area Network , Future Directions. Case Studies.				
Targeted Application & Tools that can be used: Kiwi CatTools, SolarWinds Network Configuration Manager.				

Project work/Assignment:
Assignment: Simulation of NMS using any of the tools mentioned above.

Topics relevant to “SKILL DEVELOPMENT”: Telephony network management and SNMPV1 for Skill Development through Participative Learning techniques . This is attained through assessment component mentioned in course handout.

Course Code: CSE220	Course Title: Internet of Things		L- T-P- C	1	0	4	3
	Type of Course: Integrated						
Version No.	2.0						
Course Pre-requisites	1. Students should know basic python programming. 2. Students have basic knowledge basic electronic components such as sensors – temperature, motion, pressure, and actuators etc. 3. Students should have basic idea about Cloud and its uses.						
Anti-requisites	NIL						
Course Description	The Internet of Things (IoT) is an emerging paradigm combining heterogeneous devices at an unprecedented scale, thereby enabling individuals and organizations to gain greater value from networked connections among people, processes, data, and things. The Internet of Things (IoT) is a course of objects interacting with people, with information systems, and with other objects. The course will focus on creative thinking, IoT concepts & IoT technologies.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Internet of Things and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques						
Course Out Comes	On successful completion of the course the students shall be able to: 1. Identify the application areas of IoT 2. Understand building blocks of Internet of Things and characteristics 3. Describe IoT Protocols 4. Demonstrate use of IoT devices for simple application						
Course Content:							
Module 1	INTRODUCTION TO INTERNET OF THINGS	Assignment	Simulation/Data Analysis		18 Sessions		
Introduction, Definition & Characteristics of IOT, Physical Design of IoT- Things in IoT, IoT Protocols, Logical design of IoT- IoT functional blocks, IoT Communication Models, IoT Communication APIs, IoT Enabling Technologies- Wireless sensor networks, Cloud computing, Big data Analytics							
Module 2	IOT COMMUNICATION MODEL AND PROTOCOLS	Assignment	Numerical from E-Resources		18 Sessions		
Connectivity Protocols: 6LoWPAN, IEEE 802.15.4, Zigbee, Wireless HART, Z-Wave, ISA 100,NFC, RFID. Communication/Transport Protocols: Bluetooth. Data Protocols: Message Queue Telemetry Transport (MQTT), Constrained Application Protocol (CoAP), Advanced Message Queuing Protocol (AMQP), XMPP – Extensible Messaging and Presence Protocol							
Module 3	IOT COMMUNICATION MODEL AND PROTOCOLS	Term paper/Assignment	Simulation/Data Analysis		19 Sessions		
Communication/Transport Protocols: Bluetooth. Data Protocols: Message Queue Telemetry Transport (MQTT), Constrained Application Protocol (CoAP), Advanced Message Queuing Protocol (AMQP), XMPP – Extensible Messaging and Presence Protocol. RFID: Introduction, Principle of RFID, Components of an RFID system.							
List of Laboratory Tasks 1 Installation of arduino IDE & Arduino program to implement scrolling LED, to glow even/odd LED 2 Arduino program to demonstrate usage of push button to control the LED 3 Arduino program to demonstrates traffic control system 4 Arduino program to demonstrates usage of servo motor with potentio meter. 5.Arduino program to Control an LED using Bluetooth. 6.Arduino program to implement RFID reader for security access.							

7. Arduino Program to detect obstacle using IR sensor. 8. Arduino Program to detect motion using PIR sensor. 9. Installation of Raspberry pi software 10. Working basic commands on Raspberry pi & to demonstrate remote logging in raspberry pi 11. Raspberry pi program to implement blinking LED 12. Raspberry pi program to implement camera module for video 13. Raspberry pi program to obtain the temperature using DHT sensors 14. Using a Raspberry Pi with distance sensor (ultrasonic sensor HCSR04) 15. Raspberry pi program to implement Garage spot light
Targeted Application & Tools that can be used: Interfacing of ARDUINO and Raspberry pi for developing smart CITIES Tools: - Tinker cad - Cooja simulator - Contiki - Thingspeak
Text Book T1 Arshdeep Bagha, Vijay Madiseti, Internet of Things A hands on approach, First Edition, Universities Press, 2018 T2 Hakima Chaouchi, The internet of Things Connecting Objects to web Wiley 2017

Interpolation of sensors through group presentation for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE2057	Course Title: Could computing and Virtualization Type of Course : Theory	L- P- C	3	0	3
Version No.	1.0				
Course Pre-requisites	Basics of Distributed Computing, Service Oriented Architecture				
Anti-requisites	nil				
Course Description	This Course is designed to introduce the concepts of Cloud Computing as a new computing paradigm. Cloud Computing has emerged in recent years as a new paradigm for hosting and delivering services over the Internet. The students can explore various Cloud Computing terminology, principles and applications. Understanding different views of the Cloud Computing such as theoretical, technical and commercial aspects. Topics include: Evolution of cloud computing and its services available today, Introduction, Architecture of cloud computing, Infrastructure, platform, software, Types of cloud, Business models, cloud services, Collaborating using cloud services, Virtualization for cloud, Security, Standards and Applications.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Could computing and Virtualization and attain Employability through Participative Learning techniques.				
Course Out Comes	On successful completion of the course the students shall be able to: • Describe fundamentals of cloud computing, virtualization and cloud computing services. • Discuss high-throughput and data-intensive computing. • Explain security and standards in cloud computing. • Demonstrate the installation and configuration of virtual machine.				
Course Content:					
Module 1			10 Sessions		
Introduction to Cloud and Virtualization Cloud Computing at a Glance, Historical Developments, Building Cloud Computing Environments, Computing Platforms and Technologies, Virtualization, Characteristics of Virtualized Environments Taxonomy of Virtualization Techniques, Virtualization and Cloud Computing, Technology Examples, Cloud Computing Architecture, IaaS, PaaS, SaaS, Types of Clouds, Economics of Cloud					
Module 2			10 Sessions		
High Throughput and Data Intensive Computing: Task computing, MPI applications, Task based programming, Introduction to DIC, Technologies for DIC, Aneka Map Reduce Programming					
Module 3			09 Sessions		
Cloud Security and Standards : Cloud Security Challenges, Software-as-a-Service Security, Application standards, Client standards, Infrastructure and Service standards.					
Module 4			09 Sessions		
Cloud Platforms, Advances in cloud: introduction to Amazon Web Services: Introduction to Google App Engine , Introduction to Microsoft Azure .					

Media Clouds - Security Clouds - Computing Clouds - Mobile Clouds – Federated Clouds – Hybrid Cloud

Topics relevant to “EMPLOYABILITY SKILLS”:

Aws, Azure, APIs, Aneka Cloud Platform, EC2, Installation of VM Workstation, Infrastructure Security Challenges for developing **Employability Skills** through **Participative Learning techniques**. This is attained through assessment component mentioned in course handout..

Course Code: CSE3143	Course Title: Infrastructure Management Type of Course : Theory	L- P- C	3	0	3
Version No.	1.0				
Course Pre-requisites	Basic Knowledge on Linux and Information Management				
Anti-requisites	NIL				
Course Description	The course will employ a research, reporting and presentation approach using the latest ICT tools to examine and critically analyze a combination of the technical and management issues in contemporary infrastructure management, with a focus on business alignment. IT infrastructure Management evaluates new ICTs and case studies in the context of enterprise architecture. It is suitable for combinations of students in information technology, business administration and electronic commerce.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Infrastructure Management and attain Employability through Participative Learning techniques.				
Course Out Comes	On successful completion of the course the students shall be able to: • Describe the business value and processes of ICT services in an organization and apply that knowledge and skill with initiative to a workplace scenario. • Investigate, critically analyze and evaluate the impact of new and current ICT services to an organization. • Describe how effective IT Infrastructure Management requires strategic planning with alignment from both the IT and business perspectives in an organization. • Demonstrate the technical and communications skills that contribute to the operation of ICT services in an organization.				
Course Content:					
Module 1			10 Sessions		
Introduction to Infrastructure management Definitions, Infrastructure, management activities, Evolutions of Systems since 1960s (Mainframes-to-Midrange-to-PCs-to-Client-server computing-to-New age systems) and their management, growth of internet, current business demands and IT systems issues, complexity of today’s computing environment, Total cost of complexity issues, Value of Systems management for business.					
Module 2			10 Sessions		
Managing Infrastructure Factors to consider in designing IT organizations and IT infrastructure, determining customer’s Requirements, Identifying System Components to manage, Exist Processes, Data, applications, Tools and their integration, Patterns for IT systems management, Introduction to the design process for information systems, Models, Information Technology Infrastructure Library (ITIL).					
Module 3			09 Sessions		
Security Concerns Introduction Security, Identity management, Single sign-on, Access Management, Basics of network security, LDAP fundamentals, Intrusion detection, firewall, security information management. Introduction to Storage, Backup & Restore, Archive & Retrieve, Space Management, SAN & NAS, Disaster Recovery, Hierarchical space management, Database & Application protection, Bare machine recovery, Data retention. Service-level management, financial management and costing, IT services continuity management, Capacity management, Availability management.					
Module 4			09 Sessions		

Configuration Management

Configuration Management, Service desk, Incident management, Problem management, Change management, Release management.

Course Code: CSE384	Course Title: Data Warehousing and Mining Type of Course: Theory	L- P- C	3	0	3
Version No.	1.0				
Course Pre-requisites	Data Mining				
Anti-requisites	NIL				
Course Description	The course is an intermediary course and aims to provide students with an in-depth understanding of the design and implementation of data warehousing and data mining. The course will help students to enhance their understanding of various classification, clustering, and outlier analysis methods. An interest to understand the concepts of data warehousing, and data mining and a desire to be a successful data scientist are key to enabling students to complete the course successfully. Topics include: Data Models for Data Warehouses, data extraction, cleansing, transformation and loading, data cube computation, materialized view selection, and OLAP query processing. Data mining-Fundamentals. Mining Techniques and Application: Classification, Clustering, Outlier Analysis.				
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Data Warehousing and Mining and attain Skill Development through Participative Learning techniques.				
Course Out Comes	On successful completion of this course the students shall be able to: 1. Describe data warehousing architecture and considerations to build data warehouse. [Knowledge] 2. Discuss different multidimensional data models for data warehouse. [Comprehension] 3. Apply various classification and clustering methods for mining information from data. [Application] 4. Apply different techniques to find outliers in data. [Application]				
COURSE CONTENT (SYLLABUS):	Module 1: Introduction to Data Warehousing [07 Hrs] [Knowledge] The need for data warehousing, paradigm shift, data warehouse definition and characteristics, Data warehouse architecture, sourcing, acquisition, cleanup and transformation, metadata, access tools, data marts, data warehouse administration and management, building a data warehouse: business consideration, technical consideration, design consideration, implementation consideration, integrated solutions, benefits of data warehousing. Module 2: Data Warehouse modelling [12 Hrs] [Comprehension] Data cube: A multidimensional data model, stars, snowflakes, and fact constellations: schemas for multidimensional data models, dimensions: the role of concept hierarchies, measures: their categorization and computation, typical OLAP operations, efficient data cube computation, the compute cube operator and the curse of dimensionality, partial materialization: selected computation of cuboids, indexing olap data: bitmap index and join index. Module 3: Classification & Clustering methods [14 Hrs] [Application] Bayesian Belief Networks, Support Vector Machines, Classification by Back propagation, Fuzzy clusters, Probabilistic Model-Based Clusters, Expectation-Maximization Algorithm. Module 4: Outlier detection [06 Hrs] [Application] 1. Outliers and Outlier Analysis, Types of Outliers,				

	2. Outlier Detection Methods: Detection of univariate Outliers Based on Normal Distribution, 3. Statistical Approaches, 4. Proximity-Based Approaches. Report and PPT for 2 topics That means 2 PPTs and 2 reports. 1st topic should be from Module 4 2nd topics can be from module 4 or module 3. DELIVERY PROCEDURE (PEDAGOGY): Classroom Lecture, PPT Self-learning: Article review of journals on Data mining. Participative Learning: Implementation of discussed algorithm with graphical visualization using any suitable language/platform. REFERENCE MATERIALS: Text Books: T1. Alex Berson, Stephen J. 	Topics relevant to “SKILL DEVELOPMENT”: Bayesian Belief Networks, Support Vector Machines, Classification by Back propagation, Fuzzy clusters for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in the course handout.

Course Code: CSE2034	Course Title: Edge Computing	L-P-C	3	0	3
	Type of Course: Theory Only Course Discipline Elective				
Version No.	1.0				

Course Pre-requisites	Distributed Systems and Algorithms			
Anti-requisites	Nil			
Course Description	In this course, we will study significant tools and applications that comprise today's cloud computing platform, with a special focus on using the cloud for big data applications. The course covers various topics such as the evolution of computing industry, cloud computing basics and edge computing. The course provides information on the different types of edge compute deployments, different types of edge compute services (such as CDN Edge, IOT Edge, and Multi-access Edge (MEC)). The course also educates the students on the different vendor platforms, software services, standard bodies and open source communities available for edge computing. Students will also create a research project of their choosing.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Edge Computing and attain Employability through Problem Solving Methodologies.			
Course Out Comes	On successful completion of the course the students shall be able to: CO1 Understand the principles, architectures of edge computing (Knowledge) CO2 Describe IoT Architecture and Core IoT Modules (Comprehension) CO3 Summarize edge to Cloud Protocols (Comprehension) CO4 Describe Edge computing with RaspberryPi (Comprehension)			
Course Content:				
Module 1	IoT and Edge Computing Definition and Use Cases	Term paper/Assignment/Case Study	Programming/Simulation/Data Collection/any other such associated activity	9 Sessions
Topics: Introduction to Edge Computing Scenario's and Use cases - Edge computing purpose and definition, Edge computing use cases, Edge computing hardware architectures, Edge platforms, Edge vs Fog Computing, Communication Models - Edge, Fog and M2M.				
Module 2	IoT Architecture and Core IoT Modules	Term paper/Assignment/Case Study	Programming/Simulation/Data Collection/any other such associated activity	9 Sessions
Topics: A connected ecosystem, IoT versus machine-to-machine versus, SCADA, The value of a network and Metcalfe's and Beckstrom's laws, IoT and edge architecture, Role of an architect, Understanding Implementations with examples-Example use case and deployment, Case study – Telemedicine palliative care, Requirements, Implementation, Use case retrospective.				
Module 3	RaspberryPi	Term paper/Assignment/Case Study	Programming/Simulation/Data Collection/any other such associated activity	10 Sessions
Topics: Introduction to RaspberryPi, About the RaspberryPi Board: Hardware Layout and Pinouts, Operating Systems on RaspberryPi, Configuring RaspberryPi, Programming RaspberryPi,				

Connecting Raspberry Pi via SSH, Remote access tools, Interfacing DHT Sensor with Pi, Pi as Webserver, Pi Camera, Image & Video Processing using Pi.				
Module 4	Edge to Cloud Protocols	Term paper/Assignment/Case Study	Programming/Simulation/Data Collection/any other such associated activity	7 Sessions
Topics: Implementation of Microcomputer RaspberryPi and device Interfacing, Edge to Cloud Protocols- Protocols, MQTT, MQTT publish-subscribe, MQTT architecture details, MQTT state transitions, MQTT packet structure, MQTT data types, MQTT communication formats, MQTT 3.1.1 working example.				
Module 5	Edge computing with RaspberryPi	Term paper/Assignment/Case Study	Programming/Simulation/Data Collection/any other such associated activity	7 Sessions
Topics: Edge computing with RaspberryPi, Industrial and Commercial IoT and Edge, Edge computing and solutions.				
Targeted Application & Tools that can be used: Application : Smart Surveillance Video Stream Processing at the Edge for Real-Time Human Objects Tracking. Tools :Eclipse ioFog : An integrated development environment built by the Eclipse Foundation, backed by IBM. Eclipse ioFog is the organization's open-source edge computing platform.				
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course				
Exploring topics such as developing scalable architectures, moving from closed systems to open systems, and ethical issues rising from data sensing, addresses both the challenges and opportunities of Edge computing presents. Students can harness federating Edge resources, middleware design issues, data management and predictive analysis, smart transportation and surveillance applications, and more. A coordinated and integrated solutions can be provided by thorough knowledge of the foundations, applications, and issues that are central to Edge computing.				
Text Book - IoT and Edge Computing for Architects - Second Edition, by Perry Lea, Publisher: Packt Publishing, 2020, ISBN: 9781839214806 - Raspberry Pi Cookbook, 3rd Edition, by Simon Monk, Publisher: O'Reilly Media, Inc., 2019, ISBN: 978149204322.				
Topics relevant to "EMPLOYABILITY SKILLS": Implementation of Microcomputer RaspberryPi and device Interfacing for developing Employability Skills through Problem Solving methodologies . This is attained through assessment component mentioned in course handout.				

Course Code: CSE 3090	Course Title: 5G Networking Type of Course: Theory Only Course		L- P- C	3	0	3
Version No.	1					
Course Pre-requisites	Digital communications, Mobile Communication Systems, Wireless Networks					
Anti-requisites	Nil					
Course Description	The aim of this course is to let the students understand that air Interface is one of the most important elements that differentiate between 2G, 3G, 4G and 5G. While 3G was CDMA based, 4G was OFDMA based; this course reveals the contents of air interface for 5G. While 4G brought in a deluge of infotainment services, 5G aims to provide extremely low delay services, great service in crowd, enhanced mobile broadband (virtual reality being made real), ultra-reliable and secure connectivity, ubiquitous QoS, and highly energy efficient networks.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of 5G Networking and attain Employability through Participative Learning techniques					
Course Out Comes	On successful completion of the course the students shall be able to: • Explain the channel models of 5G and the use cases for 5G. • Analyze use of MIMO in 5G and its techniques. • Understand device to device (D2D) communication and standardization. • Illustrate the in-depth functioning of 5G radio access technologies and security issues in 5G.					
Course Content:						
Module 1	5G channel modelling and use cases	Assignment	Data Collection/Interpretation		10 Sessions	
Topics: 5G channel modelling and use cases, Modeling requirements and scenarios, Channel model requirements, Propagation scenarios, Relaying multi-hop and cooperative communications: Principles of relaying, fundamentals of relaying, Cognitive radio: Architecture, spectrum sensing, Software Defined Radio (SDR), Multiple-input multiple-output (MIMO) systems, Introduction to Multi-antenna Systems, Motivation, Types of multi-antenna systems, MIMO vs. multi-antenna systems. Diversity, exploiting multipath diversity, Transmit diversity, Space-time codes.						
Module 2	The 5G architecture	Case studies / Case let	Case studies / Case let		8 Sessions	
Topics: Introduction, NFV and SDN, Basics about RAN architecture, High-level requirements for the 5G architecture, Functional architecture and 5G flexibility, Functional split criteria, Functional split alternatives, Functional optimization for specific applications, Integration of LTE and new air interface to fulfill 5G Requirements, Enhanced Multi-RAT coordination features, Physical architecture and 5G deployment.						
Module 3	Device-to-device (D2D) communications	Quiz	Case studies / Case let		10 Sessions	
Topics: D2D: from 4G to 5G, D2D standardization: 4G LTE D2D, D2D in 5G: research challenges, Radio resource management for mobile broadband D2D, RRM techniques for mobile broadband D2D, RRM and system design for D2D, 5G D2D RRM concept: an example, Multi-hop D2D communications for proximity and emergency, services, National security and public safety requirements in 3GPP and METIS, Device discovery without and with network assistance.						
Module 4	The 5G radio-access technologies	Quiz	Case studies / Case let		8 Sessions	

Topics: Access design principles for multi-user communications, Orthogonal multiple-access systems, Spread spectrum multiple access systems, Capacity limits of multiple-access methods, Sparse code multiple access (SCMA), Interleave division multiple access (IDMA), Radio access for dense deployments, OFDM numerology for small-cell deployments, Small-cell sub-frame structure, Radio access for V2X communication, Medium access control for nodes on the move, Radio access for massive machine type communication.
Targeted Application & Tools that can be used:
Project work/Assignment:
Assignment: Quiz
Text Book T1 : Afif Osseiran, Jose F. Monserrat, Patrick Marsch, 5G Mobile and Wireless Communications Technology, Cambridge University Press Second Edition, 2015. T2 : Erik Dahlman, Stefan Parkvall, Johan Skögl, 5G NR: The Next Generation Wireless Access Technology, Elsevier First Edition, 2016.
References R1 : Jonathan Rodriguez, Fundamentals of 5G Mobile Networks, Wiley First Edition 2015 E book link R1: https://www.wiley.com/en-in/Fundamentals+of+5G+Mobile+Networks-p-9781118867525 Web resources: https://nptel.ac.in/courses/108/105/108105134/ https://www.udemy.com/course/5g-mobile-networksmodern-wireless-communication-technology/ https://presiuniv.knimbus.com/user#/home
Topics relevant to “EMPLOYABILITY SKILLS”: D2D: from 4G to 5G, D2D standardization: 4G LTE D2D for developing Employability Skills through Participative Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE316/3083	Course Title: Advanced Computer Architecture		L-P-C	3	0	3
	Type of Course: Program Core & Theory Only					
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	The course aims at familiarizing students with advanced computer architectures suitable for high-performance computing. The advanced concepts in uniprocessor and the issues in designing & using high performance parallel computers will also be covered. System resources such as memory technology and I/O subsystems needed to achieve proportional increase in performance will be discussed along with the software support required for these systems.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Advanced Computer Architecture and attain Employability through Participative Learning techniques .					
Course Out Comes	On successful completion of the course the students shall be able to: 1] Explain the concepts of parallel computing and hardware technologies 2] Compare and contrast the parallel architectures 3] Illustrate parallel programming concepts 4] Understand the organization and operation of current generation parallel computer systems, including multiprocessor and multicore systems.					
Course Content:						
Module 1	Theory of Parallelism	Assignment				10 Sessions
Topics: Theory of Parallelism: Parallel Computer Models, The State of Computing, Multiprocessors and Multicomputer, Multivector and SIMD Computers, PRAM and VLSI Models, Program and Network Properties, Conditions of Parallelism, Program Partitioning and Scheduling, Program Flow Mechanisms, System Interconnect Architectures, Principles of Scalable Performance, Performance Metrics and Measures, Parallel Processing Applications, Speedup Performance Laws, Scalability Analysis and Approaches.						

Course Code: CSE3068	Course Title: Advance Database Management System Type of Course: Integrated		L- P- C	2	2	3
Version No.	1.0					
Course Pre-requisites	1. Basics about DBMS 2. MYSQL software tool usage					
Anti-requisites	Nil					
Course Description	This course covers advanced aspects of database management including normalization and renormalizations, query optimization, distributed databases, data warehousing, and big data. There is extensive coverage and hands on work with SQL, and database instance tuning. Course covers various modern database architectures including relational, key value, object relational and document store models as well as various approaches to scale out, integrate and implement database systems through replication and cloud based instances. Students learn about unstructured "big data" architectures and databases, and gain hands-on experience with Spark and MongoDB.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Advance Database Management System and attain Employability through Experiential Learning techniques					
Course Out Comes	On successful completion of the course the students shall be able to: 1.Select the appropriate high-performance database like parallel and distributed database 2.Infer and represent the real-world data using object-oriented database 3.Interpret rule set in the database to implement data warehousing of mining					
Course Content:						
Module 1	Review of Relational Data Model and Relational Database Constraints:	Assignment	Data Collection/Interpretation		15 Sessions	
Relational model concepts; Relational model constraints and relational database schemas; Update operations, anomalies, dealing with constraint violations, Types and violations. Object and Object-Relational Databases: Overview of Object Database Concepts, Object Database Extensions to SQL, The ODMG Object Model and the Object Definition Language ODL, Object Database Conceptual Design, The Object Query Language OQL, Overview of the C++ Language Binding in the ODMG Standard.						
Module 2	Disk Storage, Basic File Structures, Hashing, and Modern Storage Architectures:	Assignment	Case studies / Case let		15 Sessions	
Introduction, Secondary Storage Devices, Buffering of Blocks, Placing File Records on Disk Operations on Files, Files of Unordered Records (Heap Files), Files of Ordered Records (Sorted Files), Hashing Techniques, Other Primary File Organizations, Parallelizing Disk Access Using RAID Technology, Modern Storage Architectures. Distributed Database Concepts: Distributed Database Concepts, Data Fragmentation, Replication, and Allocation Techniques for Distributed Database Design, Overview of Concurrency Control and Recovery in Distributed Databases, Overview of Transaction Management in Distributed Databases,Query Processing						

and Optimization in Distributed Databases, Types of Distributed Database Systems , Distributed Database Architectures, Distributed Catalogue Management				
Module 3	NOSQL Databases and Big Data Storage Systems	Assignment	Case studies / Case let	15 Sessions
Introduction to NOSQL Systems, The CAP Theorem, Document-Based NOSQL Systems and MongoDB, NOSQL Key-Value Stores, Column-Based or Wide Column NOSQL Systems, NOSQL Graph Databases and Neo4j. Big Data Technologies Based on MapReduce and Hadoop: What Is Big Data? Introduction to MapReduce and Hadoop, Hadoop Distributed File System (HDFS), MapReduce: Additional Details Hadoop v2 alias YARN, General Discussion				
List of Laboratory Tasks: Lab sheet -1 [2 Practical Sessions] Experiment No 1: Level 1 – Study and Configure Hadoop for Big Data Lab sheet – 2 [2Practical Sessions] Experiment No. 2: Level 1 – Study of NoSQL Databases such as Hive/Hbase/Cassandra/DynamoD Level 2 - Design Data Model using NoSQL Databases such as Hive/Hbase/Cassandra/DynamoDB Lab sheet – 3 [2 Practical Sessions] Experiment No. 1: Level 1 - Implement any one Partitioning technique in Parallel Databases Level 2 – Implement Two Phase commit protocol in Distributed Databases Lab sheet – 4 [2 Practical Sessions] Experiment No. 1: Level 1 - Design Persistent Objects using JDO and implement min 10 queries on objects using JDOQL in ObjectDB NOSQL DATABASE Level 2 - Design database schemas and implement min 10 queries using Hive/ Hbase/ Cassandra column based databases Lab sheet -5 [2 Practical Sessions] Experiment No. 1: Level 1 - Design database schemas and implement min 10 queries using DynamoDBkeyValue based databases Level 2 – Design and Implement social web mining application using NoSQL databases, machine learning algorithm, Hadoop and Java/.Net				
Targeted Application & Tools that can be used MangoDB				
Project work/Assignment:				
Assignment: CASE STUDY OF TRADITIONAL RDBMS AND NOSQL DATABASE SYSTEM and submit the report

Topics relevant to "EMPLOYABILITY SKILLS": Distributed Database **for developing Employability Skills** through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE 3015	Course Title: ADVANCED NATURAL LANGUAGE PROCESSING Type of Course: Integrated		L- P- C	2	2	3
Version No.	1.0					
Course Pre-requisites	CSE 3014 – Fundamentals of Natural Language Processing					
Anti-requisites						
Course Description	This course is an advanced course for Natural Language Processing. As a part of the course, students will be introduced to solving multiple problems in natural language processing, such as sentiment analysis, machine translation, cognitive natural language processing, etc. Topics include: Machine translation, Text summarization, Sentiment analysis, Cognitive NLP, Gaze behaviour, Evaluation Metrics, etc.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Advanced Natural Language Processing and attain Employability through Experiential Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: • Understand how to solve different problems in natural language processing. [Comprehension] • Solve natural language generation problems such as machine translation and text summarization. [Application] • Perform sentiment analysis on reviews to discern the stance of the writer. [Application] • Use public gaze behaviour data to improve the performance of different NLP systems. [Application]					
Course Content:						
Module 1	Pre-trained Language Models					4 Sessions
Topics: Introduction to Pre-Trained Language Models. BERT. Multi-lingual variants of BERT. Introduction to NLTK and Huggingface Transformers.						
Module 2	Machine Translation and Text Summarization					7 Sessions
Topics: Introduction to machine translation – source and target languages. Pivot-based machine translation. Using Transformers for machine translation. Monolingual machine translation examples. Machine translation evaluation metrics – BLEU. Implementation of BLEU score calculation using NLTK in Python. Other MT metrics – METEOR, TER, etc. Text summarization – definition. Types of summarizations – Extractive and Abstractive Summarization. Summarization evaluation metrics – ROUGE score.						
Module 3	Sentiment Analysis					6 Sessions
Topics: Introduction to Sentiment Analysis. Solving sentiment analysis using text classification. Classification of sentiment analysis based on different levels – polarity-based and intensity-based. Challenges in sentiment analysis – sarcasm, thwarting, negations. Case studies in sentiment analysis – Reviewer rating prediction, short-text classifications, etc.						
Module 4	Cognitive NLP Using Gaze Behaviour					7 Sessions
Topics: Eye-Mind Hypothesis and gaze behaviour terminology. Using gaze behaviour for prediction of translation complexity, sentiment analysis complexity, sarcasm understandability, text complexity, text quality prediction, etc. Challenges with recording gaze behaviour at run time. Comparison of gaze behaviour across different people – normalization and binning. Gaze behaviour datasets. Mitigation of recording gaze behaviour at run time using type aggregation.						

List of Laboratory Tasks: 1. Familiarization with Python. Using Python to read text files, basic tokenization and other preprocessing. 2. Introduction to NLTK and Huggingface Transformers in Python. 3. Using Huggingface Transformers to create a simple MT application. 4. Implementation of pivot-based machine translation using Huggingface Transformers. 5. Calculation of BLEU using NLTK – difference between sentence_bleu and corpus_bleu methods. 6. Implementation of extractive summarization. 7. Polarity classification of text using VADER. 8. Intensity prediction of text using Weighted Normalized Polarity Intensity. 9. Estimating gaze behaviour for a user using normalization and binning 10. Calculating gaze behaviour for a text based on type aggregation in multiple languages. 11. Complex word identification using gaze behaviour.					
Targeted Application & Tools that can be used: 1. Google Colab 2. Python IDE (Eg. PyCharm) 3. Huggingface Transformers 4. NLTK					
Project work/Assignment:					
Assignment: Students will have to do a course group assignment over the course of the semester. The assignment topics can be taken from Modules 2 or 3 as per the instructor-in-charge.					
Text Books T1 Daniel Jurafsky, and James Martin. “<i>Speech and Language Processing</i>” (3rd edition draft, 2022). T2 Abhijit Mishra, and Pushpak Bhattacharyya. “<i>Cognitively Inspired Natural Language Processing: An Investigation Based on Eye Tracking</i>”. Springer, Singapore. 2018.

E book link R1: https://www.nltk.org/book/ E book link R2: https://nlp.stanford.edu/fsnlp/ Web resources: http://pu.informatics.global					
Topics relevant to “EMPLOYABILITY SKILLS”: Calculation of BLEU and ROUGE scores using NLTK , Estimating gaze behaviour through type aggregation, Using Hugging face Transformers for machine translation for developing Employability Skills through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.					

Course Code: CSE3038	Course Title: Applied Data Science with Python Type of Course: Program Core	L-P-C	2	2	3
Version No.	1.0				
Course Pre-requisites	Fundamentals of Python concepts				
Anti-requisites	NIL				

Course Description	The aim of the course is to give complete overview of Python's data analytics tools and techniques. Learning python is a crucial skill for many data science roles, and this course helps to understand and develop feature engineering. With a blended learning approach, Python for data science along with concepts like data wrangling, mathematical computing, and more can be learnt.			
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Applied Data Science and attain Employability through Experiential Learning techniques.			
Course Out Comes	On successful completion of this course the students shall be able to: 1. Understand Numpy and Matrix Operations [Knowledge] 2. Analyze the need for data preprocessing and visualization techniques. [Comprehensive] 3. Demonstrate the performance of different supervised learning algorithms like decision Tree, Random Forest, Linear Regression, Logistic Regression etc. [Application] 4. Apply unsupervised learning algorithms like K-Means, K-Medoids etc for grouping the given data. [Applicaion]			
Course Content:				
Module 1	Introduction to Data Science, Python Data Structures, Python Numpy Package	Quiz	Knowledge based quiz	No. of sessions:8
Data Science - Need, Applications, Difference between data analysis and data analytics. Python- Variables, data types, control structures, Operators, Simple operations, Array and its operations, Numpy operations, Matrix and its operations				
Module 2	Data preparation and preprocessing using Pandas dataframe, Exploratory Data Analysis, Data Visualization	Assignment	Data Visualization	No. of sessions:10
Dealing missing values, Normalization, statistical description about the data, Accessing the data, Summary of the data, Relationship between the data, Data Visualization using matplotlib				
Module 3	Supervised Learning Algorithms	Design an algorithm using Example	Random Forest	No. of sessions:10
Decision Tree Algorithm, ID3 Classifier, Random Forest, Classifier Accuracy, Linear Prediction, Logistic Regression – Case study				
Module 4	Unsupervised Learning Algorithms	Case Study	Conduct a case study on how data sets can be gathered and implemented in real time application.	No. of sessions:10
Various distance Function, Dissimilarity between the mixed types of data, K-Means Algorithm, K- Medoids Algorithm -Case Study				
List of Laboratory Tasks: 1. Introduction to R tool for data analytics science 2. Basic Statistics and Visualization in R 3. K-means Clustering				

4. Association Rules 5. Linear Regression 6. Logistic Regression 7. Naive Bayesian Classifier 8. Decision Trees 9. Simulate Principal component analysis 10. Simulate Singular Value Decomposition
Targeted Application & Tools that can be used: • IBM SPSS • Julia and Jupyter Notebook • Matplotlib
Project work/Assignment:
1. Design forest fire and wildfire prediction system. 2. Driver Drowsiness Detection System with OpenCV & Keras 3. Credit Card Fraud Detection using Python.
Textbook(s): 1. Applied Data Science with Python and Jupyter-Alex Galea, Packt Publishing, October 2018 2. Data Visualization in Python with Pandas and Matplotlib Paperback – David Landup, June 16, 2021

Topics relevant to “EMPLOYABILITY SKILLS”: Data Science, Decision Tree Algorithm for developing Employability Skills through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE3017	Course Title: Autonomous Navigation and Vehicles Type of Course: Theory	L- P- C	3	0	3
Version No.	1				
Course Pre-requisites	• Real-time embedded programming • Optimal estimation and control • Linear algebra				
Anti-requisites	NIL				
Course Description	Overview of technologies vehicles including sensors, sensing algorithms, machine learning, localization, mapping, object detection, tracking, communication and security. Hands-on implementation of robotic sensing and navigation algorithms on both simulated and physical mobile platforms. This course covers the mathematical foundations and state-of-the-art implementations of algorithms for vision-based navigation of autonomous vehicles (e.g., mobile robots, self-driving cars, drones). It culminates in a critical review of recent advances in the field and a team project aimed at advancing the state-of-the-art. Topics include: Autonomous driving technologies overview, Object Recognition and Tracking, Localization with GNSS, Visual Odometry, Perceptions In				

	Autonomous driving, Deep learning in Autonomous Driving Perception, Prediction and Routing, Decision planning and control
Course Objective	The objective of the course is to familiarize the learners with the concepts of Autonomous Navigation and Vehicles and attain Employability through Participative Learning techniques.
Course Out Comes	On successful completion of the course the students shall be able to: CO1. Understand the Autonomous system's and its requirements. Explain algorithm, sensing, object recognition and tracking of an Autonomous system [Understand] CO2. Do the error analysis of Localization systems and use the tools and techniques [Application] CO3. Explain, plan and control the traffic behavior, and shall be able to do lane level routing and create simple algorithms [Understand] CO4. Explain Plan and control motion, choose proper client systems for automotive vehicles and understand the cloud platform. [Understand]
Course Content:	
Module 1	12 Sessions
Introduction to autonomous driving: Autonomous driving technologies overview, autonomous driving algorithms: Sensing, Perception. Object Recognition and Tracking: Autonomous driving client system, driving cloud platform, Robot Operating System, HD Map Production, Deep learning Model Training, Localization with GNSS: GNSS overview, GNSS error analysis, satellite based augmentation systems, real time kinematic and differential GPS, precise point positioning, Visual Odometry: Stereo Visual Odometry, Monocular Visual Odometry, Visual Inertial Odometry, Dead Reckoning and Wheel Odometry.	
Module 2	8 Sessions
Perceptions In Autonomous driving: Introduction, Datasets, Detection, Segmentation, Stereo, Optical flow and Scene flow. Deep learning in Autonomous Driving Perception: Convolutional Neural Networks, Detection, Semantic segmentation, Stereo and optical flow.	
Module 3	10 Sessions
Prediction and Routing: Planning and control overview, Traffic prediction: Behaviour prediction as classification, Vehicle trajectory generation, Lane level routing: Constructing a weighted directed graph for routing, typical routing algorithms, routing graph cost.	
Module 4	08 Sessions
Decision planning and control: Behavioral decisions, Motion planning, Feedback control Reinforcement Learning Based Planning and Control, Client systems for Autonomous Driving: Operating systems and computing platform Cloud platform for Autonomous driving: Introduction, infrastructure, simulation.	
Text Book T1: Shaoshan Liu, Liyun Li, Jie Tang, Shuang Wu, Jean-Luc, Creating Autonomous Vehicle Systems Morgan & Claypool Publishers 1st Edition, 2018 T2: Ronald K. Jurgen Autonomous Vehicles for Safer Driving SAE International Edition, 2013

Topics relevant to “EMPLOYABILITY SKILLS”: Autonomous driving for developing Employability Skills through Participative Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE 395	Course Title: Image Processing			L- T-P- C	3	0	0	3
	Type of Course: Theory Only							
Version No.	2.0							
Course Pre-requisites	In order to pursue this course student should have prior knowledge on Engineering Mathematics concepts and Digital Signal processing.							
Anti-requisites	NIL							
Course Description	This Course is an introduction to image processing and image analysis techniques and concepts. Image processing has found much wider applications not only in the space program, but also in the areas such as medicine, biology, industrial automation, astronomy, law enforcement, defense, intelligence. With the progress made in multimedia these days, digital image processing has become an indispensable part of our digital age. Topics include: Fundamentals, Applications, Human Visual Perception, Image Formation, Sampling and Quantization, Binary Image, Three-Dimensional Imaging, Image file formats. Color and Color Imagery: Perception of Colors, Image Transformation: Fourier Transforms, Enhancement Using Arithmetic/Logic Operations, Basics of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters, Combining Spatial Enhancement Methods , Smoothing Frequency-Domain Filters, Sharpening Frequency Domain Filters, Homomorphic Filtering, Image Enhancement and Restoration, Image Restoration, Image Reconstruction, Image Segmentation, Recognition of Image Patterns.							
Course Objective	The objective of the course is to familiarize the learners with the concepts of Image Processing and attain Entrepreneurship Skill through Participative Learning techniques.							
Course Out Comes	COURSE OUTCOMES: On successful completion of the course the students shall be able to: 1. Describe the Fundamentals and Applications of Image Processing. 2. Discuss the major Image Transformation Techniques 3. Explain the various models for the image restoration and degradation process. 4. Classify the Image Segmentation and Color Processing Models.							
Course Content:								
Module 1	Introduction	Quiz	Image file	10 Sessions				
Topics: Elements of Visual Perception, Light and the Electromagnetic Spectrum, Image Sensing and Acquisition, Image Sampling and Quantization, Classification of images, Some Basic Relationships between Pixels, Linear and Nonlinear Operations.								
Module 2	Image Transformation	Quiz	Spatial filters	9 Sessions				
Topics: Some basic gray level transformations, Histogram processing, Smoothing and Sharpening spatial filters. 1D FFT, 2D FFT, Smoothing and Sharpening frequency domain filters.								
Module 3	Image Restoration	Assignment	Exponential	10 Sessions				
Topics: A model of the image restoration and degradation process, Noise models – spatial and frequency properties of noise, some important probability density functions- Gaussian noise, Rayleigh noise, Gamma noise, exponential, uniform, impulse noise, Periodic noise Restoration in the Presence of Noise Only using Spatial Filtering and Frequency Domain Filtering.								
Module 4	Image Segmentation	Assignment	Morphological	9 Sessions				
Topics: Point, Line, and Edge Detection, Thresholding, Region growing, split and merge algorithms, Color Image Processing: Color Fundamentals, Color Models, Pseudo color Image Processing. Morphological Image Processing: Preliminaries, Erosion and Dilation, Opening and Closing.								

Targeted Application & Tools that can be used:

Professionally used software – Matlab permits quick prototyping leading to its usage in research. This tool is used in making the application of Image Processing.

Topics relevant to "ENTREPRENEURIAL SKILLS": Region-Based Segmentation, Morphological Image Processing, Biomedical Imaging for developing **Entrepreneurship Skills** through **Problem Solving methodologies**. This is attained through assessment component mentioned in course handout.

Course Code: CSE3021	Course Title: BLOCKCHAIN FOR PUBLIC SECTOR Type of Course: Theory	L-P-C	3	0	3
Version No.	1.0				
Course Pre-requisites	Foundations of Blockchain Technology				
Anti-requisites	NIL				
Course Description	Blockchain Technology is being increasingly employed in the public sector, specifically where trustworthiness and security are of importance. This course discusses about the blockchain technology and its potential applications, emerging technologies and their role in the implementation of blockchain technologies in the digital government and the public sector particularly in Smart City, Electronic Health Care monitoring and Digital Certificates. It also analyses effects, impacts, and outcomes from the implementation of blockchain technologies in the public sector in the selected case studies.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Blockchain For Public Sector and attain Employability through Participative Learning techniques..				
Course Out Comes	On successful completion of the course the students shall be able to: 1] Understand the Standards and Protocols of Blockchain and data management in the public sector [COMPREHENSION] 2] Apply Artificial intelligence and machine learning approaches for implementation of Smart cities using blockchain architecture [APPLICATION] 3] Discuss about Electronic Healthcare Records Monitoring using Blockchain Technology [COMPREHENSION] 4] Describe the Blockchain Technology use cases in Indian and Foreign Countries [KNOWLEDGE]				
Course Content:					
Module 1	Blockchain in Government and the Public Sector	Quiz	Data Collection	9 Sessions	
Blockchain in Government and the Public Sector use cases – Benefits – Standards and Protocols of Blockchain - data management in the public sector - Building networked public services - Understanding and addressing risks and challenges. Blockchain Applications to Public Sector Governance. Case Study – Keyless Signature Infrastructure (KSI)					
Module 2	Blockchain in Smart City Applications	Assignment	Data Collection	9 Sessions	
The Application of Blockchain Technology to Smart City Infrastructure - Artificial intelligence and machine learning approaches for smart transportation in smart cities using blockchain architecture - Blockchain architecture for intelligent water management system in smart cities - Blockchain					

based energy-efficient smart green city in IoT environments - Citizen e-governance using blockchain - Cloud/edge computing for smart cities.

Module 3	Blockchain in Healthcare	Case Study	Data Collection	9 Sessions
Blockchain in Healthcare Applications – Use cases - Blockchain and Data Security – Blockchain Medical Records - Healthcare Blockchain Use Case: Supply Chain Transparency – Electronic Health Records, A novel Blockchain-based Access Control Manager to Electronic Health Records.				
Case Study – Avaneer Health, MEDICALCHAIN, BurstIQ, Guardtime				
Module 4	Implementation of Blockchain in Indian System and Foreign Countries	Case Study	Data Collection	9 Sessions
Implementation of Blockchain in India - land registration - Blockchain Fit Assessment: Digital certificates, SuperCert: Anti certificates fraud identity intelligence blockchain solution for educational certificates.				
Case study- Implementation of Blockchain in Foreign Countries - Vehicle Wallet – BenBen – Project Ubin				
Targeted Application & Tools that can be used:				
Remix IDE - Solidity Programming				
Project Work / Assignment / Case Study				
Assignment 1: Blockchain architecture for intelligent water management system in smart cities.				
Case Study: Blockchain-based health care monitoring for privacy preservation of COVID-19 medical records.				
Case Study: Implementation of Blockchain in Government of Estonia - Digital Certification by DNV GL.

Topics relevant to “EMPLOYABILITY SKILLS”: Keyless Signature Infrastructure for developing Employability Skills through Participative Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE 3044	Course Title: BUILD AND RELEASE MANAGEMENT Type of Course: Theory Only Course		L- P- C	3	0	3
Version No.	1.0					
Course Pre-requisites	CSE 2014 – Software Engineering					
Anti-requisites	-					
Course Description	Build and Release management course guides the software development efforts from planning to deployment, resulting in better customer satisfaction with the end product. The benefits of Build and release is essential to high-performing software development and delivery. Build and release enhanced by safely testing features in production environments, gathering valuable feedback and releasing new and improved features continuously. In this course, Students will learn about the benefits of using a release management process to manage and improve the development of a software build. This course covers the key concepts and principles that apply to release management, as well as common considerations and potential challenges to be aware of.					
Course Objective	The objective of the course is to familiarize the learners with the concepts Of Build And Release Management and attain Employability through Participative Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: • Learn about the common Infrastructure build servers, scalability and availability • Understand the Continuous Integration and Deployment (CI/CD) • Implement Automated, build, Installations and deployments and release					
Course Content:						
Module 1	UNDERSTANDING COMMON AGILE PRACTICES IN DEVOPS	Assignment	Data Collection/Interpretation		12 Sessions	
Topics: Introduction to Product Management, Product Design and Requirement gathering, Product Design Challenges, UX Design, Product Development Methodologies, Product Marketing and Presentation, Traditional Software Development Methodologies, Problem/issues with traditional approach, Agile Development, Agile Manifesto, Scrum Model, Agile Estimations and Planning, Soft skills in agile Kanban - What is Kanban, Understanding the Principle of Kanban, Value System of Kanban, WIP Limits, Classes of Service in Kanban, Sample Kanban Boards (Proto Kanban) , How to read a Kanban Board, Meetings in Kanban System, Extreme Programming.						
Module 2	CODE DESIGN	Case studies / Case let	Case studies / Case let		12 Sessions	
Topics: Good design is good design regardless of paradigm, Fundamental characteristics of good design: modular, loosely coupled, etc., Using design to simplify code structure, how programming languages are designed to support good code design, best practices of design in OO program development, First Fundamental OO principle: Interface and implementation design, Second Fundamental OO Principle: Recursive design, Design Patterns: reusing best practices., SOLID Design Principles						
Module 3	TESTING AND DEBUGGING	Quiz	Case studies / Case let		14 Sessions	
Topics: TESTING AND DEBUGGING						

Planning for errors and exceptions, Basic test-driven development: writing tests first, How TDD improves the quality of the resulting code, automating testing: using Junit, etc, Avoiding creeping errors. REFACTORING: IMPROVING STRUCTURE Code smells: symptoms of poorly designed code, Refactoring: changing code structure without changing functionality, Using TDD for controlled code changes, the refactoring process, using refactoring to make better code faster, Collective Code Ownership
Targeted Application & Tools that can be used: Common frameworks and code architectures: Spring, Hibernate, Microservices, Spring Boot. IDEs: Eclipse, Visual Studio, IntelliJ
Project work/Assignment:
Assignment: Each student have to submit assignment as 4 to 5 pages report on Agile Frameworks and tools
Text Book T1. Eric Breachner, "Agile Project Management with Kanban", 1st Edition, 2019, MSPress Publishers. T2. Peter Measey and Radtack, "Agile Foundations: Principles, Practices and Frameworks", Whitshire publishers, 2015.

Topics relevant to "EMPLOYABILITY SKILLS": Build and release management Process, Frameworks and tools for developing Employability Skills through Participative Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE2025	Course Title: Business Continuity and Risk Analysis Type of Course: Theory	L- P- C	3	0	3
Version No.	1.0				
Course Pre-requisites	NIL				
Anti-requisites	NIL				
Course Description	Through the study of incident response and contingency planning, including incident response plans, disaster recovery plans, and business continuity plans, this course aims to help students comprehend the principles of risk management.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Business Continuity and Risk Analysis and attain Employability through Participative Learning techniques.				
Course Out Comes	On successful completion of the course the students shall be able to: 1. Describe concepts of risk management [Knowledge] 2. Define and be able to discuss incident response options [Comprehension] 3. Design an incident response plan for sustained organizational operations [Comprehension] 4. Discuss and recommend contingency strategies, including data backup and recovery and alternate site selection for business resumption planning. [Knowledge]				
Course Content:					
Module 1 Sources of disaster and types of disasters			10 Sessions		
Disaster Recovery Operational cycle of disaster recovery, disaster recovery cost, incidents that requires disaster recovery plans, evaluating disaster recovery - methods, team, phases, objectives, checklist. Best practices for disaster recovery - Business continuity - Business continuity vs. disaster recovery					
Module 2 Business continuity management:			10 Sessions		
Introduction - Elements of business continuity management. Business continuity plan – Business continuity planning and strategies - BCP standards and guidelines - BCP Project Organization - Crisis communication plan - Emergency response plan - Contingency planning					
Module 3 Managing, assessing and evaluating risks:			09 Sessions		
Importance of risk management - Risk management methodology - Attack methods and Countermeasures - Cost benefits analysis of risk management - Risk assessment responsibilities - Responsibilities of security professional - Information system auditing and monitoring – Verification tools and techniques.					
Module 4 Risk control policies and Counter measures			09 Sessions		
Introduction - Counter measures - Risk control policy development factors-Development of information assurance principles and practices - Laws and procedures in information assurance policy implementation, Security test and evaluation, Automated security tools, Cost benefit					

analysis, Developing a risk assessment methodology, Security requirements, Information categorization, Risk management methodologies to develop life cycle management policies and procedures, Education, training and awareness. Policy development Information security policy, change control policies, system acquisition policies and procedures, Risk analysis policies and General risk control policies.

Course Code: CSE3088	Course Title: Business Intelligence and Analytics Type of Course: Theory		L-P-C	3	0	3
Version No.	1.1					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	Business Intelligence (BI) refers to technologies, applications, and practices for the collection, integration, analysis, and presentation of business information. The purpose of business intelligence is to support better business decision making. This course provides an overview of the technology of BI and the application of BI to an organization’s strategies and goals.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Business Intelligence and Analytics and attain Employability through Problem Solving Methodologies.					
Course Out Comes	On successful completion of the course the students shall be able to: 1. Introduce the concepts and components of Business Intelligence (BI) [Knowledge] 2. Evaluate the technologies that make up BI (data warehousing, OLAP) [COMPREHENSION] 3. Define how BI will help an organization and whether it will helpful [COMPREHENSION] 4. Identify the technological architecture that makes up BI systems [COMPREHENSION]					
Course Content:						
Module 1	Basics of Insights	Assignment	Programming Task		10 Sessions	
Topics: The importance of data in the information age – the data value chain – tools for generating insights – job roles available in the data insights market						

Module 2	Basics Statistics: Foundation of Quantitative Insights	Assignment		12 Sessions
Topics: Basic statistics – Variables - Measures of central tendency - Measures of dispersion - Normal distribution and histograms - The empirical rule - Covariance and correlation				
Module 3	Data Visualization	Assignment		10 Sessions
Topics: Data visualisation and Anscombe's Quartet - Data cleaning using SAS Data Studio - Bar and Pie Charts				
Module 4	Advanced charts and dashboards			13 Sessions

Topics: Multi variation correlation matrix and bar and line chart - SAS Visual Analytics filtering and controls - KPIs and targeted bar charts - Dashboard theory – Demand forecasting - Linear regression analysis – Forecasting - Forecasting and smoothing methods
Targeted Application & Tools that can be used: Professionally used software
Project work/Assignment:

Course Code: CSE 3127	Course Title: Cloud Application Development	L-P-C	3	0	3
Type of Course: Theory Only					
Version No.	1.0				
Course Pre-requisites	Cloud Computing Basics				
Anti-requisites	NIL				
Course Description	The Cloud Application Development Foundations Specialization program will teach students the tools and technologies that successful software developers use to build, deploy, test, run, and manage Cloud Native applications – putting them in an advantageous position to begin a new career in a highly in-demand area. The course will provide the students’ knowledge on cloud computing and related concepts, cloud services, applications developments of Amazon web services, Cloud architecture and programming model, map reducing in cloud, virtualization, applying virtualization, Cloud Resource Management and Scheduling, Cloud Security issues.				

Course Objective	The objective of the course is to familiarize the learners with the concepts of Cloud Application Development and attain Employability through Participative Learning techniques.			
Course Out Comes	On successful completion of this course the students shall be able to: 1. Understand the Define cloud computing and related concepts and Memorize the Cloud architecture and programming model. [Comprehension] 2. Identify compute intensive model and date intensive model and Understand the Cloud Resource Management and Scheduling. [Comprehension] 3. Understand the Cloud Security issues and Identify the how standards deal with cloud services and virtualization. [Application] 4. Understand the cloud resource virtualization and Identify the application virtualization, applying virtualization. [Application] 5. Understand compliance for the cloud provider vs compliance for the customer. [Comprehension]			
Course Content:				
Module 1	INTRODUCTION AND CLOUD APPLICATION DEVELOPMENT	Assignment	Knowledge, Quizzes	No. of Classes:8
Topics: Introduction: Definition, Characteristics, Benefits, challenges of cloud computing, cloud models: service IaaS(infrastructure as service),PaaS(platform as a service),SaaS(software as a service), deployment models-public, private, hybrid, community; Types of cloud computing: Grid computing utility computing, cluster; computing Cloud services: Amazon, Google, Azure, online services, open source private clouds, SLA; Applications of cloud computing: Healthcare, energy systems, transportation, manufacturing, education, government, mobile communication, application development. Assignment: Types of cloud and their comparisons.				
Module 2	CLOUD ARCHITECTURE, PROGRAMMING MODEL	Assignment	Knowledge, Quizzes	No. of Classes:7
Topics: Cloud Architecture, programming model: NIST reference architecture, architectural styles of cloud applications, single, multi, hybrid cloud site, redundant, non-redundant, 3 tier, multi-tier architectures; Programming model: Compute and data intensive. Assignment: Cloud Architecture, architectural styles of cloud applications.				
Module 3	CLOUD RESOURCE VIRTUALIZATION	Case Study	Application, Quizzes	No. of Classes:8
Topics: Cloud resource virtualization: Basics of virtualization, types of virtualization techniques, merits and demerits of virtualization, Full vs Para - virtualization, virtual machine monitor/hypervisor. Virtual machine basics, taxonomy of virtual machines, process vs system virtual machines.				

Case Study: Cloud resource virtualization: Basics of virtualization, types of virtualization techniques.				
Module 4	CLOUD RESOURCE MANAGEMENT AND SCHEDULING	Case study	Application, Quizzes	No. of Classes:9
Topics: Cloud Resource Management and Scheduling: Policies and mechanisms for resource management, resource bundling, combinatorial, fair queuing, start time fair queuing, borrowed virtual time, cloud scheduling subject to deadlines, scheduling map reduce applications subject to deadlines, resource management and application scaling. Case Study: Cloud Resource Management and Scheduling.				
Module 5	CLOUD RESOURCE MANAGEMENT AND SCHEDULING	Case study	Application, Quizzes	No. of Classes:8
Topics: Cloud Security: Risks, privacy and privacy impacts assessments; Multi-tenancy issues, security in VM, OS, virtualization system security issues and vulnerabilities; Virtualization system-specific attacks: Technologies for virtualization-based security enhancement, legal. Case Study: Cloud Security: Risks, privacy and privacy impacts assessments.				
Targeted Application & Tools that can be used: Public cloud platforms like AWS, GCP and Azure.				
Project work/Assignment: 1. Create an Amazon EC2 Instance (Linux) or use equivalent other cloud platform such as Google Cloud or Azure to create a virtual machine service. 2. Create an Amazon S3 Bucket or use equivalent other cloud platform such as Google Cloud or Azure to create a storage service. 3. Create a static website in AWS using S3 and cloud front.

Topics relevant to “EMPLOYABILITY SKILLS”: EC2 for developing Employability Skills through Participative Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE3095	Course Title: Cloud Security Type of Course: Theory	L- P- C	3	0	3
Version No.	1.0				
Course Pre-requisites	Cloud Computing and Services (CSE322)				
Anti-requisites	NIL				
Course Description	This course provides ground-up coverage on the high-level concepts of cloud landscape, architectural principles, and techniques. It describes the Cloud security architecture and explores the guiding security for Infrastructure and Softwares.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Cloud Security and attain Employability through Participative Learning techniques.				
Course Outcomes	On successful completion of this course the students shall be able to: 1. Describe fundamentals of cloud computing [Knowledge]. 2. Explain cloud computing security architecture and associated challenges [Comprehension]. 3. Discuss cloud computing software security essentials [Comprehension]. 4. Apply infrastructure security and data security in cloud computing environment. [Application].				
Course Content:					
Module 1:	Fundamentals of Cloud Computing	Quiz	Knowledge based Quiz	10 Sessions	
Topics: Cloud Computing at a Glance, Building Cloud Computing Environments, Computing Platforms and Technologies, Cloud Computing Architecture: Cloud Delivery Models, The SPI Framework, Cloud Software as a Service (SaaS), Cloud Platform as a Service (PaaS), Cloud Infrastructure as a Service (IaaS), Cloud Deployment Models, Expected Benefits.					
Module 2:	Cloud Security Challenges and Cloud Security Architecture	Quiz	Comprehension based Quiz	10 Sessions	
Topics: Security Policy Implementation, Computer Security Incident Response Team, Virtualization Security Management. Architectural Considerations, Identity Management and Access Control, Autonomic Security.					
Module 3	Cloud Computing Software Security Essentials	Assignment	Batch-wise Assignments	9 Sessions	
Topics: Cloud Information Security Objectives, Cloud Security Services, Secure Cloud Software Requirements, Cloud Security Policy Implementation, Secure Cloud Software Testing, Cloud Computing and Business Continuity Planning/Disaster Recovery.					
Module 4:	Infrastructure Security and Data Security	Assignment and Presentation	Batch-wise Assignment and Presentations	9 Sessions	
Topics: Infrastructure Security: The Network Level, The Host Level, The Application Level. Data Security : Aspects of Data Security, Data Security Mitigation, Provider Data and its Security.					
Targeted Application & Tools that can be used: Use of CloudSim simulator.					
Project work/Assignment: Survey on Cloud Service Providers

Topics relevant to “EMPLOYABILITY SKILLS”: Cloud computing architecture, Security policy implementation, Infrastructure security and Data security **for developing Employability Skills through Participative Learning techniques. This is attained through assessment component mentioned in course handout.**

Course Code: CSE3103	Course Title: Cognitive Science & Analytics Type of Course:	L-P-C	3	0	3
Version No.	1.1				
Course Pre-requisites	NIL				
Anti-requisites	NIL				
Course Description	This course is an introduction to computational theories of human cognition. Drawing on formal models from classic and contemporary artificial intelligence, it will explore fundamental issues in human knowledge representation, inductive learning and reasoning. What are the forms that our knowledge of the world takes? What are the inductive principles that allow us to acquire new knowledge from the interaction of prior knowledge with observed data? What kinds of data must be available to human learners, and what kinds of innate knowledge (if any) must they have?				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Cognitive Science & Analytics and attain Employability through Participative Learning techniques.				
Course Out Comes	On successful completion of the course the students shall be able to: • Introduce the concepts and components of Cognitive Science • Evaluate the technologies that make up Cognitive Science . • Define how CS will help an organization and whether it will helpful • Identify the technological architecture that makes up this systems				
Course Content:					
Module 1	Introduction	Assignment	Programming Task	12 Sessions	
Topics: Cognition Process, Cognitive Psychology, Cognitive Science; Foundations of Cognitive Science, Cognitive Science and Multi-disciplinary; Machines and Minds; Laws thoughts to binary logic; Classical Cognitive Science; Connectionist Cognitive Science; Mind body Problem; Turing Response to Mind Body Problem; Pinker, Penderose and Searle’s Responses to Mind Body Problem; Representational Theory of Mind; Theories of Mental Representation: Minimal Analysis of mental representation, Resemblance theories of mental representation, Casual covariation theories of mental representation, internal roles theories of mental representation					
Module 2	Precursors of Cognitive Science	Assignment		10 Sessions	

Topics: Behaviorism; Theory of Computation and Algorithms; Algorithms and Turing Machines; Marr's Three Level of Computation; Linguistics and Formal Language; Information Processing Models in Psychology				
Module 3	Psychological Perspective of Cognition	Assignment		10 Sessions
Topics: Cognitive Models of Memory, Atkinson-Shiffrin's Model, Tulving's Model, Mental Imagery, Kosslyn's View, Moyer's View, Peterson's View, Cognitive Maps, Problem Understanding, States of Cognition, Cognition in AI				
Module 4	Cognitive System and analytics			13 Sessions
Topics: Cognitive System; Architecture for intelligent agents; Modularity of Mind; Modularity Hypothesis; The ACT-R/PM architecture Data Analytics overview, Importance of DA, Types of DA, Descriptive Analytics, Diagnostic Analytics, Predictive Analytics, Prescriptive Analytics, Benefits of DA, Data Visualization for Decision Making, Data types, Measure of central tendency, Measures of Dispersion				
Targeted Application & Tools that can be used: Professionally used software				
Project work/Assignment:				
Text Book 1. José Luis Bermúdez, Cognitive Science: An Introduction to the Science of the Mind, Cambridge University Press 2. Michael R. W. Dawson, Mind, Body, World: Foundations of Cognitive Science, UBC Press

Course Code: CSE3022	Course Title: Cryptocurrency Technology Type of Course: Theory Only Course	L- P- C	3	0	3
Version No.	1				
Course Pre-requisites	Basics of cryptography and Blockchain				
Anti-requisites					

Course Description	The course is designed to provide an introductory understanding of decentralized digital currencies (cryptocurrencies) such as bitcoin, a basic understanding of its underlying technology 'Blockchain' and why this new and innovative technology is so important, since it has the potential to disrupt a number of industries in the immediate near future. In particular, the course will survey the theory and principles by which cryptocurrencies operate, practical examples of basic cryptocurrency transactions, the likely interaction of cryptocurrencies with the banking, financial, legal and regulatory systems, and how cryptocurrencies could be viewed within a framework of innovation and development.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Cryptocurrency Technology and attain Employability through Participative Learning techniques.			
Course Out Comes	On successful completion of the course the students shall be able to: 1. Understand the technology components of blockchain-based digital currencies. [Comprehensive] 2. Explain the transactions from a digital currency wallet. [Comprehensive] 3. Understand alternatives to bitcoin, such as alt-coins, Ethereum and Bitcoin Cash. [Comprehensive] 4. Use cryptocurrencies in the context of disruptive innovations [Application]			
Course Content:				
Module 1	Introduction to Cryptography	Assignment	Data Interpretation	8 Sessions
Topics: Cryptography, Digital Signatures, Cryptographic Hash Functions. Cryptographic Data Structures: Hash Pointers, Append-Only Ledgers (BlockChains), Merkle Trees.				
Module 2	Bitcoin's Protocol	Assignment	Data Interpretation	10 Sessions
Topics: Bitcoin's Protocol Keys as Identities, Simple Cryptocurrencies, Decentralization through Distributed Consensus, Incentives, Proof of Work (Mining), Application-Specific Integrated Circuit (ASIC) Mining and ASIC-resistant Mining, Virtual Mining (Peer coin).				
Module 3	Bitcoin Engineering	Quiz	Questions Set	10 Sessions
Topics: Engineering Details, Bitcoin Blocks, Hot and Cold Storage, Splitting and Sharing Keys, Proof of Reserve Proof of Liabilities. Anonymity, Pseudonymity, Unlinkability: Statistical Attacks (Transaction Graph Analysis), Network-layer De-anonymization, Chaum's Blind Signatures, Single Mix and Mix Chains, Decentralized Mixing, Zero-Knowledge Proof Cryptocurrencies.				
Module 4	Cryptocurrency Technologies	Quiz	Questions Set	10 Sessions
Topics: Cryptocurrency Technologies, Smart Property, Efficient micro-payments, Coupling Transactions and Payment (Interdependent Transactions,) Public Randomness Source, Prediction Markets, Escrow transactions, Green addresses, Auctions and Markets, Multi-party Lotteries.				
Targeted Application & Tools that can be used: A cryptocurrency is a digital or virtual currency, it is secured by cryptography which makes it impossible to simulate or double-spend. Many cryptocurrencies are decentralized networks based on blockchain technology. Cryptocurrency caters to the promise of making the easier transaction of funds directly between two groups or parties without the need for any third party like bank or credit card company. Applications are Money transfer, Smart contracts, Internet of Things (IoT), Personal identity security, Healthcare, Logistics. Tools: Messari, Glass node, Lunar Crush, Coin Metrics, Coin Market Cal.				
Project work/Assignment:				
Assignment: 1. Beyond a method for payment, what are other functions of cryptocurrencies? 2. How are cryptocurrency transactions recorded?				

3. What are the top cryptocurrencies? 4. What is the market capitalization of all cryptocurrencies and which ones make up largest % of that capitalization? 5. Explain briefly efficient micro-payments

Course Code: CSE3096	Course Title: Cyber Digital Twin Type of Course: Theory Only Course	L- P- C	3	0	3
Version No.	1.0				
Course Pre-requisites	CSE2013				
Anti-requisites	NIL				
Course Description	This course is designed to improve the learners ‘Skill Development’ by using modeling, optimizing, and risk management approach. The course objective is to get familiar with the Cyber digital twin-working principal, Development considerations, Data-Modelling Environment, Digital Twin Optimization, Risk Management and Applications.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Cyber Digital Twin and attain Employability through Participative Learning techniques.				

Course Out Comes	On successful completion of the course the students shall be able to: 1. Understand the basic concepts of Cyber Digital twin, and its working principle. [KNOWLEDGE] 2. Explain Data modeling and development consideration in digital twin model for cloud and IoT technology.[COMPREHENSION] 3. Observe digital twin-human behavior modeling in digital twin-optimization [COMPREHENSION] 4. Show Risk Assessment-Digital twin reference model-Implementation. [APPLICATION] 5. Apply Digital twin in various area like Manufacturing, Automotive and Healthcare.[APPLICATION]			
Course Content:				
Module 1	Introduction	Assignment	Theory	No. of Classes:09
Introduction- Cyber Digital twin-definition-uses and benefits-need for digital twin-working principal Technology Digital thread-digital shadow-building blocks of digital twin-digital twin technology drivers and enablers.				
Module 2	Data Modelling Environment	Assignment	Theory	No. of Classes:10
Types of digital twin-Based on Product and Process-Based on Functionality-Based on Maturity. Development considerations-Overview of Data-Modelling Environment. Modelling-model and data management-Managing data-implementing the model- Cloud and IOT technologies.				
Module 3	Digital Twin Optimization	Assignment	Theory	No. of Classes:10
Cyber range vs digital twin-human behavior modeling in digital twin-optimization using digital twin-digital twin and cyber security-Techniques. Technologies-Industrial IOT and Digital Twin-simulation and digital twin-Machine learning and digital twin-virtual reality and digital twin-cloud technology and digital twin.				
Module 4	Risk Management and Applications	Assignment	Case Study	No. of Classes:10
Digital twin and Risk Assessment-Digital twin reference model-Implementation-Development of risk assessment plan-Development of communication and control system-Development of digital twin tools-Integration-platform validation-Difficulties-Practical implications. Applications: Digital Twin in Manufacturing-Digital Twin in Automotive-Digital Twin in Healthcare-Digital Twin in Utilities-Digital Twin in Construction				
Targeted Application & Tools that can be used:				
Ansys Twin Builder is a powerful solution for building, validation and deploying simulation-based systems and digital twins: Build, validate, and deploy digital twins. Digital twin models integrate real-world data. Increase efficiency with digital twins.				
Project work/Assignment:				
Project Assignment:

This is attained through assessment component mentioned in course handout.**

Course Code: CSE3094	Course Title: Cyber Security Type of Course: 1] Discipline Elective 2] Theory Only	L- P- C	3	0	3
Version No.	1.1				
Course Pre-requisites	Fundamental knowledge in Information Security and Networks				
Anti-requisites	NIL				
Course Description	This is a foundation program geared towards generating and enhancing awareness about cyber security challenges and the concept of Cyber Security and Cyber Ethics among the stakeholders to help them become responsible Cyber Citizens and participate safely and securely in the rapidly evolving information-age society. The important topics include: Network Security model, attacks, malware, firewall, IT act and Cyber forensics				
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Cyber Security and attain Employability through Participative Learning techniques.				
Course Out Comes	On successful completion of the course the students shall be able to: 1) Describe the basic concept of Cyber Security [Knowledge] 2)Classify different types of attacks for a scenario [Comprehension] 3) Prepare a mitigation policy for security threat [Comprehension] 4) Demonstrate Cyber Security tools [Application]				
Course Content:					

Module 1	Introduction to Cyber Security	Quiz	Knowledge	10 Sessions	
Topics					
History of Internet, Cyber Crime, Information Security, Computer Ethics and Security Policies, Guidelines to choose web browsers, Securing web browser, Antivirus, Email security, Guidelines for setting up a Secure password , Cyber Security Threat Landscape, Emerging Cyber Security Threats, Cyber Security Techniques					
Module 2		Security in Networks	Assignment	Comprehension	10 Sessions
Topics:					
Security in Networks – Concepts, threats in Network, website vulnerabilities, man in the middle attack, denial of Service attack, distributed denial of service attack, Firewalls – introduction and design, types of firewalls, personal firewalls, Program Security – non malicious program errors, malicious program flaws, virus and other malicious code, prevention of virus infection.					
Assignment: Program Security – non malicious program errors.					
Module 3		Smartphone Security	Assignment	Comprehension	12 Sessions
Topics:					
Introduction to mobile phones, Smartphone Security, Android Security, IOS Security, Cyber Security Exercise, Cyber Security Incident Handling, Cyber Security Assurance, Guidelines for social media security, Tips and best practices for safer Social Networking ,Basic Security for Windows, User Account Password					
Assignment: Social Media Security					
Module 4		Ethical Issues in Cyber Security	Assignment	Programming/Data analysis task	9 Sessions
Legal and ethical issues in Cyber Security – protecting program and data, copyright, patents and trade secrets, IT Act, EDP audit, Overview of CISA, Privacy in computing, Cyber Forensic Tools – types and categories, Cyber forensic suite. Forensic tools: types, categories, open source proprietary					
Assignment: Cyber Forensic Tools

Topics relevant to “EMPLOYABILITY SKILLS”: Mobile Security for developing Employability Skills through Participative Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE319	Course Title: Machine Learning	L- T-P- C	3	0	0	3
	Type of Course: Theory Only					
Version No.	2.0					
Course Pre-requisites	Mathematical Logic, Algebra, probability and Statistics, Vectors, Matrices.					
Anti-requisites	NIL					
Course Description	This Course aims to introduce student’s concepts and techniques on Machine Learning and to study various probability based learning techniques, graphical models of Machine Learning algorithms. This course encompasses various theoretical spectrum of Machine Learning concepts behind several Machine Learning algorithms without going deep into the mathematics, gaining practical experience by applying them. Covering Correlations, Regressions and to have a thorough understanding of the Supervised and Unsupervised learning techniques, and limitations on Predictive Models.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Machine Learning and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING techniques					
Course Out Comes	On successful completion of the course the students shall be able to: CO 1: Explain the basic concepts on Machine Learning. [Comprehension] CO 2: Apply Supervised Machine Learning algorithms on real time Applications. [Application] CO 3: Apply Un-Supervised Machine Learning algorithm for real time problems. [Application] CO 4: Illustrate advanced concepts in machine learning [Application]					
Course Content:						
Module 1	Introduction	Assignment	Simulation/Data Analysis		6 Sessions	
Introduction to Machine learning- What Why and How?, Types of Machine Learning, Applications, Models selection, Machine learning concept work flow, Issues, types of variables/features used in ML algorithms, One-hot encoding						
Module 2	Supervised learning	Assignment	Numerical from E-Resources		13 Sessions	

Types of supervised learning: linear regression, Simple Linear Regression, Multiple Linear Regression, Model Evaluation, Validation and Accuracy measures for Regression models. Classification: logistic-KNN-Decision tree-SVM-Naïve Bayes, Metrics for supervised learning.				
Module 3	Unsupervised learning	Term paper/Assignment	Simulation/Data Analysis	11 Sessions
Types of Unsupervised Learning: K-means clustering, Hierarchical clustering, Association Rule Mining, Collaborative Filtering – User based and item based similarity--Applications of unsupervised learning, cluster validity measures, Components of Time Series data				
Module 4	Introduction to Neural Network	Term paper/Assignment	Simulation/Data Analysis	8 Sessions
Overview of neural networks- What and Why? , Real and artificial neurons, Threshold logic unit algorithm, Linear separability and vectors, Introduction to Learning Rules in Neural Network.				
Targeted Application & Tools that can be used: Jupyter notebook Colab notebook

This is attained through assessment component mentioned in course handout				

Course Code: CSE2023	Course Title: Data Warehousing and its Applications			L- P- C	3	0	3
	Type of Course: Theory						
Version No.	1.0						
Course Pre-requisites	NIL						
Anti-requisites	Basics of data mining & Python						
Course Description	The Objective of this course is to create a trove of historical data that can be retrieved and analyzed to provide useful insight into the organization's operations. A data warehouse is a vital component of business intelligence. This course will introduce basic concepts of data warehousing, architecture, design principles, building data warehouse, data mining techniques and major application areas of data warehouse.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Data Warehousing and its Applications and attain Employability through Participative Learning techniques.						
Course Outcomes	On completion of this course, the students will be able to - Describe data warehousing architecture and considerations to build data warehouse. [Knowledge] - Discuss different multidimensional data models for data warehouse. [Comprehension] - Apply various techniques to build data warehouse [Application] - Apply different data mining techniques to mine insights [Application]						
Course Content:							
Module 1	Introduction To Data Warehousing	Assignment/Quiz	Benefits of data warehousing	8 Session			
Topics: The need for data warehousing, paradigm shift, data warehouse definition and characteristics, Data warehouse architecture, sourcing, acquisition, cleanup and transformation, metadata, access tools, data marts, data warehouse administration and management, building a data warehouse: business consideration, technical consideration, design consideration, implementation consideration, integrated solutions, benefits of data warehousing. Data Warehouse Architecture: Two and Three tier Data Warehouse architecture. Assignment: Benefits of data warehousing							
Module 2	Data Warehouse modelling	Assignment/Quiz	Data cube	12 Session			
Topics: Data cube: A multidimensional data model, stars, snowflakes, and fact constellations: schemas for multidimensional data models, dimensions: the role of concept hierarchies, measures: their categorization and computation, typical OLAP operations, efficient data cube computation, the compute cube operator and the curse of dimensionality, partial materialization: selected computation of cuboids, indexing olap data: bitmap index and join index. Assignment: Data cube							
Module 3	8	Case Study	Data Warehouse design principles	12 Session			
Topics: Building a data warehouse: Introduction, Critical Success Factors, Requirement Analysis, Planning for the data Warehouse-The data Warehouse design stage, Building and implementing data marts. Building data warehouses, Backup and Recovery, Establish the data quality framework, Operating the Warehouse, Recipe for a successful warehouse, Data warehouse pitfalls. Assignment: Data Warehouse design principles							
Module 4	Introduction to Data Mining	Case Study	Data Mining Techniques	8 Session			
Topics: Introduction to Data mining, KDD versus data mining, data mining techniques, tools and applications. Mining complex data objects, Spatial databases, Multimedia databases, Time series and Sequence data; mining Text Databases and mining Word Wide Web. Applications of data warehousing across different industries- Retail industry, Manufacturing and distribution, Bank, insurance company, Government agencies etc Assignment: Data Mining Techniques							

Targeted Application & Tools that can be used: Application Area includes Ecommerce, retail, manufacturing industry, government agencies, Finance, banking etc Professionally Used Software: Microsoft Azure Synapse SQL, IBM DB2 warehouse, Terradata vantage, SAP data warehouse cloud, Google Bigtable, google sheets, BigQuery, MongoDB, MarkLogic, Talend, Informatica, Arm Treasure data, Micro focus vertica, Cloudera Enterprise data platform.
Assignment: 1. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link. 2. Presentation: Group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

Topics relevant to “EMPLOYABILITY SKILLS”: Building a data warehouse, data mining tools, for developing Employability Skills through Participative Learning Techniques. This is attained through assessment components mentioned in course handout.

Course Code:	Course Title: Digital Health and Imaging	L- P- C	3	0	3
CSE3018	Type of Course: Program Core& Theory Only				
Version No.	1.0				
Course Pre-requisites	CSE3008: Machine Learning Techniques				
Anti-requisites	-				
Course Description	This course will give an overview of digital health and its impact on healthcare, Image enhancement techniques, filtering, and restoration. Medical Imaging, health informatics, Health data analytics and predictive modeling.				
Course Objectives	The objective of the course is to familiarize the learners with the concepts of : Digital Health and Imaging and attain Employability through Problem Solving Methodologies.				
Course Out Comes	On successful completion of the course the students shall be able to: 1.Understand the role of digital health’s impact in ethical and legal considerations. [Understand] 2. Apply Machine learning techniques for medical image analysis. [Application] 3. Apply Computer-aided detection and diagnosis in medical imaging. [Application] 4. Apply Health data analytics and predictive modeling. [Application]				
Course Content:					
Module 1	Introduction to Digital Health and Digital Image	Assignment	Theory	L : 8	
Introduction to Digital Health Overview of digital health and its impact on healthcare, Introduction to telemedicine, wearables, and health monitoring devices, Ethical and legal considerations in digital health. Digital Image Processing Fundamentals: Digital image representation and properties, Image enhancement techniques, Image filtering and restoration, Image segmentation and feature extraction					
Module 2	Medical Imaging Modalities	Assignment	Case studies can be assigned to students, where they analyze real-world scenarios and propose AI-based solutions	L: 10	
Medical Imaging Modalities: Principles and applications of various medical imaging modalities. X-ray imaging, computed tomography (CT), and magnetic resonance imaging (MRI) , Ultrasound imaging and nuclear medicine imaging, Imaging modalities for specific healthcare domains (e.g., radiology, cardiology)					
Module 3	Image Analysis in Healthcare	Assignment /Quiz	Researching and reviewing academic papers or industry publications on specific AI applications	L:12	
Image registration and fusion techniques, Quantitative image analysis for disease diagnosis and treatment planning, Computer-aided detection and diagnosis in medical imaging, Machine learning in medical image analysis.					

Health Informatics and Electronic Health Records, Introduction to health informatics and electronic health records (EHR), EHR systems and interoperability, Data privacy, security, and regulatory considerations in health informatics.				
Module 4	Digital Health Applications and Innovations	Assignment	Students may work with real or simulated datasets and be asked to explore and analyze the data, extract meaningful insights, and visualize the results using appropriate tools.	L: 10
Mobile health (mHealth) applications and remote patient monitoring, Health data analytics and predictive modeling. Artificial intelligence and machine learning in digital health. Emerging technologies and trends in digital health.				
Targeted Application & Tools that can be used: Applications: Quantitative image analysis for disease diagnosis, Mobile health (mHealth) Tools: TensorFlow, PyTorch, Computer-aided detection				
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course				
Assignments can involve researching and reviewing academic papers or industry publications on specific AI applications in engineering / Students may be given programming assignments to implement AI algorithms / Case studies can be assigned to students, where they analyze real-world scenarios and propose AI-based solutions / Students may work with real or simulated datasets and be asked to explore and analyze the data, extract meaningful insights, and visualize the results using appropriate tools.				
Text Book 1. "Digital Health: Scaling Healthcare to the World" by Paul Sonnier-2020 2. Digital Image Processing" by Rafael C. Gonzalez and Richard E. Woods 3. "Biomedical Signal and Image Processing" by Kayvan Najarian and Robert Splinter

Topics relevant to “EMPLOYABILITY SKILLS”: Health data analytics and predictive modeling. Artificial intelligence and machine learning in digital health for developing Employability Skills through Problem Solving methodologies. This is attained through assessment component mentioned in course handout.				

Course Code: CSE 3101	Course Title: Digital Watermarking and Steganography Type of Course: Theory Only	L-P-C	3	0	3
Version No.	1.1				
Course Pre-requisites	Fundamental knowledge in Operating Systems, Cryptography & Network Security and Computer Networks				
Anti-requisites	NIL				

Course Description	The purpose of this course is to enable the students to Comprehend the need for Digital Watermarking and Steganography and to develop the basic abilities of design and use Digital Watermarking and Steganography- information hiding technique. The course is both conceptual in nature and needs fair knowledge of Mathematical and computing. The course develops critical thinking and analytical skills. The course also enhances the abilities through assignments.			
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Digital Watermarking and Steganography and attain Employability through Participative Learning techniques.			
Course Out Comes	On successful completion of the course the students shall be able to: • Discuss the Introduction of Digital Watermarking • Classify the various Digital Watermarking techniques. • Explain the Fundamentals of Steganography. • Summarize the Steganographic Techniques.			
Course Content:				
Module 1	Introduction to digital watermarking	Assignment	Programming Task	7 Sessions
Topics Introduction to Digital Watermarking, Digital Steganography differences, brief History, Watermarking Applications, Classification in Digital Water Marking- Classification based on Characteristics, Classification based on Applications.				
Module 2	Types and tools of digital watermarking	Assignment	Programming Task	14 Sessions
Topics: Digital Watermarking Fundamentals, Least Significant bit substitution, Discrete Fourier Transform, Discrete Cosine Transform, Discrete Wavelet Transform, Random Sequence Generation, Chaotic Map, Error Detection Code. Spatial domain watermarking, frequency Domain watermarking, Fragile Watermark, Robust Water Mark, Watermarking attacks and Tools, Image processing techniques, Water Mark (software Analysis).				
Module 3	Introduction to Steganography	Assignment	Programming/Data analysis task	8 Sessions
Topics: Steganography, Watermarking vs Steganography, Need for Steganography, Application of Steganography, Methods of Hiding, properties of Steganography, Performance measure of Steganography Approaches, Mathematical Notation and Terminology, Steganography Software (S-tools, StegoDos, EzStezo, JSteg,Jpeg,).				
Module 4	Techniques of Steganography	Assignment	Programming/Data analysis task	7 Sessions

Substitution Systems and Bit-plane Tools- Least Significant Bit Substitution, Pseudorandom Permutations, Image Downgrading and Covert Channels, Practical Approach towards Steganography, Embedding of a secret Message.

Topics relevant to “EMPLOYABILITY SKILLS”: Building a data warehouse, data mining tools, for developing Employability Skills through Participative Learning Techniques. This is attained through assessment components mentioned in course handout.

Course Code: CSE3136	Course Title: E – Business and Marketing Analytics		L- P- C	3	0	3
	Type of Course: Discipline Theory					
Version No.	1.0					
Course Pre-requisites	• Basic Communication skills • General Knowledge in information technology • Basic knowledge about online business					
Anti-requisites	Nil					
Course Description	The course intends to provide the basis of electronic business applications. This course will help the students understand the dynamics of E – Business and demonstrate the ability to identify, describe and apply the essential current practices in the contemporary scenario and provides a conceptual understanding of how marketing decisions are aided by analytics.					
Course Out Comes	At the end of the course, the student shall be able to: CO 1: Describe the fundamentals of E – Business(Knowledge) CO 2: Discuss the various E – Business models (Comprehension) CO 3: Identify how to manage E – Business (Comprehension) CO4: Describe the basics of marketing analytics for decision making (Knowledge)					
Course Objective:	The objective of the course is to familiarize the learners with the concepts of E – Business and Marketing Analytics and attain Employability through Participative Learning techniques.					
Module 1	Introduction to Electronic Business	Case study	Case study on Types of Networking for E-Business	6 Sessions		
Electronic Business: Overview, Definitions, Advantages & Disadvantages of E - Business, History of Electronic Business, Threats of E – Business, Types of E – Business and related Industries, E – Business Technology: Different Types of Networking for E-Business, Internet, Intranet, EDI Systems, Development of the Internet, Advantages of Internet, E-Business Infrastructure: An Overview, Hardware, Server Operating System, Software, Network Website, Roadmap of E – Business in India						
Module 2	E-business Markets and Models	Case study	Case study on One-to-One Marketing and E – Governance	7 Sessions		
E-business Markets and Models: Introduction, E-business Environment, E – Marketplaces, E – Business Markets, Types of E – Business Models: Model based on Transaction Type, Model based on Transaction Party – B2B, B2C, C2B, C2C, E-commerce Sales Life Cycle (ESLC) Model, E – Marketing: Key Issues, Introduction, The Scope of E – Marketing, Internet Marketing Techniques, E – Marketing Plan, The Marketing Mix, Branding, Online Advertising, Targeting Online Customers, One-to-One Marketing, E – Governance						
Module 3	The Management of E – Business:	Group Discussion	Group Discussion on E – Payment Mechanism	10 Sessions		
Managing Knowledge, Managing Applications Systems for E – Business, Management Skills for E – Business, Comparison between Conventional Design and E – Organisation, Supply Chain Management (SCM), Customer Relationship Management, E – Payment Mechanism: Payment through Card System, E – Cheque, E – Cash, E – Payment Threats & Protections.						

Module 4	Introduction to Marketing Analytics	Assignment	E-resource Review	8 Sessions
Marketing analytics-data for marketing analytics-Exploratory data analysis-descriptive analysis-predictiveanalytics-prescriptive analytics-Customer analytics-benefits-Segmentation analytics-applications of cluster analysis				
DELIVERY PROCEDURE (PEDAGOGY):				
Self-learning: An Overview, Hardware, Server Operating System, Software, Network Website, Roadmap of E – Business in India				
Experiential Learning: Case Studies on E-business				
Participative learning: Group discussion on E-Payment Mechanism

Course Code: CSE3024	Course Title: Emerging Areas in Blockchain Type of Course: Theory Only Course		L- P- C	3	0	3
Version No.	1					
Course Pre-requisites	• Basic concepts in networking. • Cryptography Techniques • Data Structures and Algorithms • Introduction to Programming					
Anti-requisites						
Course Description	This course will be on the fundamentals of Blockchain and Blockchain Technology. The most well-known example of Blockchain Technology in wide use today is as the storage and transaction mechanism for the cryptocurrency Bitcoin. We will use historical examples, key concepts, key challenges, and their proposed (and implemented) solutions to help explain Blockchain Fundamentals. A key focus for the class will be on the decisions between challenge and implementation. This ‘design’ process can take a very long time, and the design and research process that ultimately led to a ‘successful’ implementation for a cryptocurrency took decades. Bitcoin represents an elegant technical solution to a series of long posed problems and partial solutions.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Emerging Areas in Blockchain and attain Employability through Participative Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: CO1: To understand the mechanism of Blockchain and Cryptocurrency. CO2: To understand the functionality of current implementation of blockchain technology. CO3: To explore the applications of Blockchain to cryptocurrencies and understanding limitations of current Blockchain.					
Course Content:						
Module 1	Blockchain: A new perspective in cyber technology	Assignment	Data Interpretation	8 Sessions		
Topics: 1. Introduction, Blockchain architecture, Blockchain concepts ,Consensus algorithms, Blockchain validity, Blockchain attacks, Merkle trees						
Module 2	Blockchain-enabled cyber-physical systems	Assignment	Data Interpretation	10 Sessions		
Topics: Background of CPS, Background of blockchain, Blockchain-enabled cyber-physical systems, Characteristics of blockchain-enabled CPS systems, Challenges in blockchain-enabled CPS systems						
Module 3	Blockchain for intrusion detection systems	Quiz	Questions Set	10 Sessions		
Topics: . Intrusion detection system, About blockchain, Host-based intrusion detection system, Blockchain-based intrusion detection, Collaborative intrusion detection system, Applications of IDS: Snort, Limitations Comparison with firewalls						

Module 4	Blockchain for digital rights management	Quiz	Questions Set	10 Sessions
Topics: Introduction, Illustrations, DRM requirement, Parts of a traditional DRM, Compatibility of blockchain for DRM, Various cryptographic hash functions in blockchain, Methodologies and technology in use, Effects and applications of using blockchain in DRM, Methodologies for coupling DRM with blockchain, Advantages of integrating blockchain with digital content, Limitation of blockchain in DRM,				
Targeted Application & Tools that can be used: Blockchain has so many applications in every sector you can imagine such as healthcare, finance, government, identity, etc. And that's not including its most popular application which is Bitcoin. Tools: Geth, Solc, Remix IDE, Truffle				
Project work/Assignment:				
Assignment: 1.				
T1. Blockchain Technology for Emerging Applications, A Comprehensive Approach 1st Edition - May 21, 2022, SK Hafizul Islam, Arup Kumar Pal, Debabrata Samanta, Siddhartha Bhattacharyya

Topics relevant to development of “EMPLOYABILITY SKILLS”: Byzantine Generals, Public-Key Cryptography, Bitcoin Blockchain, Incentive Model, Ethereum Structure, Ethereum Blockchain, for developing Employability Skills through Participative learning techniques. This is attained through assessment components mentioned in course handout.				

Course Code: CSE 3108	Course Title: Expert Systems Course type : Theory Only		L- P- C	3	0	3
Version No.	1.0					
Course Pre-requisites	“CSE 3108 – Expert systems” course					
Anti-requisites	NIL					
Course Description	The purpose of this course is to present the concepts of intelligent agents, searching, knowledge and reasoning, planning, learning and expert systems, to study the idea of intelligent agents and search methods, to study about representing knowledge, to study the reasoning and decision making in uncertain world, to construct plans and methods for generating knowledge, to study the concepts of expert systems.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Expert Systems and attain Employability through Participative Learning techniques .					
Course Out Comes	On successful completion of this course the students shall be able to: 1. CO1: Describe the modern view of AI as the study of agents that receive percepts from the Environment and perform actions. 2. CO2: Demonstrate awareness of informed search and exploration methods. 3. CO3: Explain about AI techniques for knowledge representation, planning and uncertainty Management. 4. CO4: Develop knowledge of decision making and learning methods.					
Course Content:						
Module 1	Introduction	Assignment	Theory	9 Hours		
Topics: Introduction to AI: Intelligent agents – Perception – Natural language processing – Problem – Solving agents – Searching for solutions: Uniformed search strategies – Informed search strategies.						
Module 2	Knowledge and Reasoning	Assignment	Theory	9 Hours		
Adversarial search – Optimal and imperfect decisions – Alpha, Beta pruning – Logical agents: Propositional logic – First order logic – Syntax and semantics – Using first order logic – Inference in first order logic.						
Module 3	Uncertain knowledge and Reasoning	Assignment	Theory	8 Hours		
Uncertainty – Acting under uncertainty – Basic probability notation – Axioms of probability – Baye’s rule – Probabilistic reasoning – Making simple decisions.						

Module 4	Planning and Learning	Assignment	Theory	9 Hours
Planning: Planning problem – Partial order planning – Planning and acting in non-deterministic domains – Learning: Learning decision trees – Knowledge in learning – Neural networks – Reinforcement learning – Passive and active.				
Module 5	Systems	Assignment	Theory	Expert
10hrs				
Definition – Features of an expert system – Organization – Characteristics – Prospector – Knowledge Representation in expert systems – Expert system tools – MYCIN – EMYCIN.				
Targeted Application & Tools that can be used:				
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course				
Text Book 1. Stuart Russel and Peter Norvig, ‘Artificial Intelligence A Modern Approach’, Second Edition, Pearson Education, 2003 / PHI. 2. Donald A. Waterman, ‘A Guide to Expert Systems’, Pearson Education.

Patterson, ‘Introduction to Artificial Intelligence and Expert Systems’, Prentice Hall of India, 2003.				
Links : <u>pu.informatics.global</u> , <u>https://sm-nitk.vlabs.ac.in/</u>				
Topics relevant to “EMPLOYABILITY SKILLS”: Optimal and imperfect decisions, Logical agents, for developing Employability Skills through Participative Learning Techniques. This is attained through Review of digital/e resource as mentioned in course handout.				

Course Code: CSA3073	Course Title: Game design and Development		L-P-C	2	2	3
	Type of Course: Program Core					
Version No.	1.0					
Course Pre-requisites	Nil					
Anti-requisites	NIL					
Course Description	The Game Design and development course is a hands-on learning experience that focuses on teaching students how to design, develop, and test game prototypes. Students will learn game design concepts such as player engagement, game mechanics, and game balance, as well as the basics of game art, sound, and programming. Throughout the course, students will work in teams to develop and refine their game prototypes, receiving feedback and guidance from the instructor and their peers. Topics covered include prototyping tools, sample game engines, and the creation of simple 2D and 3D game prototypes. The course will culminate in a final project where students will present and demonstrate their completed game prototypes to the class.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Game design and Development and attain Employability through Participative Learning techniques.					
Course Out Comes	At the end of the course the student should be able to: CO1 Recognize the elements of Game Mechanics. [Knowledge] CO2 Distinguish between various types of prototypes. [Comprehension] CO3 Apply concepts to create prototypes of games. [Application]					
Course Content:	Game mechanics, emergence and progression, resource mechanics, feedback structures. Uses and importance of prototyping, different types of prototypes, stages of prototyping, identifying key features, create functioning prototypes.					
Version No.	1.0					
Module 1	Game Mechanics	Assignment	Evolution of prototyping		No. of Classes:12	
Topics: Introduction to Game Mechanics, different types of game mechanics and applications, concepts of emergence and progression, Resource mechanics and economies, level design and progression in levels, feedback structures and semiotics.						
Module 2	Designing	Case Study	Importance of prototyping		No. of Classes:13	
Topics: Introduction to prototyping, uses and importance of prototyping. Different types of prototypes such as paper, physical, playable, art and sound prototypes, interface, low fidelity and high fidelity code, core game and complete game prototypes.						
Module 3	Creating and Testing Prototypes	Assignment	Prepare physical prototype of a popular game		No. of Classes:20	

Topics: Documentation, identifying key features, stages of prototyping, testing and feedback, application of different prototyping techniques such as paper, physical, playable, art and sound prototypes, interface, code, low fidelity and high fidelity prototyping techniques to create functioning prototypes.
Targeted Application & Tools that can be used: Algodoo
Project work/Assignment: 1. 2D Platformer Design 2. Game Development 3. UI/UX Design
Textbook(s): 1. Jeremy G. Bond, "Introduction to Game Design, Prototyping, and Development", 2nd Edition, Addison-Wesley Professional, 2017.

Ernest Adams, "Fundamentals of Game Design", Pearson Education, 2012. Weblinks: https://learn.unity.com/ https://starloopstudios.com/rapid-game-prototyping-why-is-it-important-in-game-development/
Topics relevant to "EMPLOYABILITY SKILLS": Progression, prototyping, for developing Employability Skills through Participative Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE 3025	Course Title: Industry Use Cases using Blockchain Type of Course: Theory Only			L-P-C	3	0	3
Version No.	1.0						
Course Pre- requisites	Data structures, Distributed Systems, Cryptography						
Anti-requisites	NIL						
Course Description	The widespread popularity of digital cryptocurrencies has led the foundation of Blockchain, which is fundamentally a public digital ledger to share information in a trustworthy and secure way. The concept and applications of Blockchain have now spread from cryptocurrencies to various other domains, including business process management, smart contracts, IoT and so on. This course is a joint venture from academia and industry, where the target is to cover both the conceptual as well as application aspects of Blockchain. This includes the fundamental design and architectural primitives of Blockchain, the system and the security aspects, along with various use cases from different application domains.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of : Industry Use Cases using Blockchain and attain Employability through Participative Learning techniques.						
Course Out Comes	- Describe what the Blockchain does - Evaluate if Blockchains are useful for a particular application - Demonstrate the application of hashing and public key cryptography in protecting the blockchain - Explain the elements of trust in a Blockchain: validation, verification, and consensus. - Develop smart contracts in Ethereum framework.						
Course Content:							
Version No.	1.0						
Module 1	Introduction to Blockchain	Assignment	Knowledge, Quizzes	No. of Classes:9			
Topics: Basic ideas behind blockchain, how it is changing the landscape of digitalization, Bitcoin eco system -,peer - to - peer permission less network addresses in bitcoin. Transactions : syntax , structures, and validation , Blocks - structure, Merkle tree and validation, Cryptographic Hash Functions, Hash Pointers and Data Structures, Mining : target/difficulty, hash rates, consensus, forking. Assignment: Blockchain Architecture and Components in the blockchain.							
Module 2	Tiers of Blockchain Technology	Assignment	Application, Quizzes	No. of Classes:8			

Topics: Blockchain 1.0, Blockchain 2.0, Blockchain 3.0, Types of Blockchain: Public Blockchain, Private Blockchain, Semi-Private Blockchain, Sidechains. Hashing, public key cryptosystems, private vs public blockchain and use cases, Hash Puzzles, Introduction to Bitcoin Blockchain, task of Bitcoin miners, Mining Hardware, Bitcoin network, Limitations and improvements. Assignment: Bitcoin Blockchain and use cases.				
Module 3	Cryptographic Applications in Blockchain	Case Study	Application, Quizzes	No. of Classes:10
Topics: Wallets - hash functions - public key cryptography - elliptic curve cryptography - digital signatures Introduction to Aneka, Framework overview, Anatomy of the Aneka container, Building Aneka clouds, Cloud programming, and management. Case Study: Use of Cryptography in Blockchain.				
Module 4	Types of Consensus Algorithms	Case study	Application, Quizzes	No. of Classes:10
Topics: Proof of Stake, Proof of Work, Delegated Proof of Stake, Proof Elapsed Time, Deposit-Based Consensus, Proof of Importance, Federated Consensus or Federated Byzantine Consensus, Practical Byzantine Fault Tolerance. Smart Contracts- Objectives and principles for the design of Blockchain systems, Understanding Ethereum, Ethereum Basics , Writing smart contracts using Ethereum, issues and Needs of Blockchain, Benefits and Challenges of Blockchain Implementation Case Study: Blockchain Use Case: Supply Chain Management, Smart Health Care, Transportation				
Targeted Application & Tools that can be used: Private Blockchain, Health sector, Finance, Supply Chain Management Ethereum, Hyper ledger				
Project work/Assignment: 1. Defend your blockchain analysis of real world systems and present relevant findings and arguments in a structured logical and compelling manner. 2. 9. Determine real world challenges that blockchain technologies may assist (or explain why not) in solving.				
Textbook(s): 1. Blockchain and Distributed Ledger Technology Use Cases: Applications and Lessons Learned Treiblmaier, Horst, and Trevor Clohessy ,1st ed. 2020 Edition, Kindle Edition 2. Ritesh Modi, Solidity Programming Essentials : A beginner's guide to build smart contracts for Ethereum and blockchain, Packt Publishing Limited, 2018.

Topics relevant to “EMPLOYABILITY SKILLS”: Hashing , public key cryptography, public and private blockchain, for development of Employability Skills through Participative Learning Techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE2060	Course Title: Information Security and Management Type of Course: Theory Only Course		L- P- C	3	0	3
Version No.	1					
Course Pre-requisites	Data Communication and Computer Networks, Information Security, Database Management Systems and Concepts of cryptography.					
Anti-requisites						
Course Description	The course explores information security through some introductory material and helps gain an appreciation of the scope and context of information security. It includes a brief introduction to cryptography, security management, network and computer security. It allows a student to begin a fascinating journey into the study of information security and develop an appreciation of some key security concepts. The course concludes with a discussion of a simple model of the information security in industry and explores skills, knowledge and roles required for employability. A student will be able to determine and analyze potential career opportunities in this profession.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Information Security and Management and attain Employability through Participative Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: - Describe the basic concept of information security. (Knowledge) - Explain the concepts and methods of cryptography. (Comprehension) - Demonstrate the aspects of risk management. (Application)					
Course Content:						
Module 1	Information Security Management:	Assignment	Data Collection/Interpretation		10 Sessions	
Topics: Information Security Overview, Threat and Attack Vectors, Types of Attacks, Common Vulnerabilities and Exposure (CVE), Security Attacks, Fundamentals of Information Security, Computer Security Concerns, Information Security Measures.						
Module 2	Fundamentals of Information Security and Data Leakage	Case studies / Case let	Case studies / Case let		13 Sessions	
Topics: Key Elements of Networks, Logical Elements of Networks, Critical Information Characteristics, Information States. What is Data Leakage and Statistics, Data Leakage Threats, Reducing the Risk of Data Loss, Key Performance Indicators (KPI), Database Security.						
Module 3	Information Security Policies and Management	Case studies / Case let	Case studies / Case let		14 Sessions	
Topics: Information Security Policies-Necessity-Key Elements and Characteristics, Security Policy Implementation, Configuration, Security Standards-Guidelines and Frameworks, Security Roles and Responsibilities, Accountability, Roles and Responsibilities of Information Security Management, Team Responding to Emergency Situation- Risk Analysis Process.						
Targeted Application & Tools that can be used:						

An ISMS is a systematic approach to managing sensitive company information so that it remains secure. It includes people, processes and IT systems by applying a risk management process.

It can help small, medium and large businesses in any sector keep information assets secure. The ISO 27000 family of standards helps organizations keep information assets secure.

Using this family of standards will help your organization manage the security of assets such as financial information, intellectual property, employee details or information entrusted to you by third parties.

ISO/IEC 27001 is the best-known standard in the family providing requirements for an information security management system (ISMS).

Project work/Assignment:

Topics relevant to development of "SKILL DEVELOPMENT": Security Policy Implementation, Security Roles, for development of Skill Development through Participative Learning Techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE3086	Course Title: Information Theory and Coding Type of Course: Theory Only	L-P-C	3	0	0
Version No.	1.1				
Course Pre-requisites	NIL				
Anti-requisites	NIL				

Course Description	Information Theory is the science for measuring, preserving, transmitting, and estimating <i>information</i> in random data. It was initially proposed by Shannon as a mathematical theory of communication more than five decades ago. It provides the fundamental limits of performance for transmission of messages generated by a random source over a noisy communication channel. On the one hand, Information Theory has been the driving force behind the revolution in digital communication and has led to various practical data compression and error correcting codes that meet the fundamental theoretical limits of performance. On the other hand, over the years, techniques and concepts from Information Theory have found applications well beyond communication theory. In this course, we will introduce the basic notions and results of Information Theory, keeping in mind both its fundamental role in communication theory and its varied applications beyond communication theory. This course, and the follow-up advanced courses to be offered in the future, will be of interest to students from various backgrounds.	
Course Objective	The objective of the course is to familiarize the learners with the concepts of Information Theory and Coding and attain Employability through Problem Solving Methodologies.	
Course Out Comes	On successful completion of the course the students shall be able to: 1. Calculate the entropy of Zero memory; Analyze Markov sources and Apply the properties of Entropy for a given source statistic. 2. For the given source message, Determine the code words and Calculate coding efficiency using Shannon, Shannon-Fano, Huffman and Arithmetic coding algorithm for memoryless sources given the source statistics and LZ algorithm for sources with memory. 3. Determine and Analyze the channel entropies, mutual information and the channel capacities for Discrete Memoryless Channels for the given channel diagram or channel matrix and to Discuss Shannon Hartley Law and Shannon's limit. 4. For the given (n, k) Linear Block Codes and Binary Cyclic Codes Determine the code words, syndrome, error detecting & correcting capability of the code and the corrected received vector; Design a single error correcting Linear Block Code for the given message length. 5. Evaluate the code words for a given (n, k, m) convolution encoder and Use Sequential search and Viterbi algorithm to decode the information from the given received vector and Discuss BCH, RS, Golay, shortened cyclic, burst error correcting, Burst and Random error correcting codes and Turbo codes.	
Course Content:		
Module 1	Information Theory	8 Sessions
Topics: Introduction, Measure of information, Average information content (entropy) of symbols in long independent sequences, Information rate, Properties of entropy, Extension of discrete memory less (zero-memory) sources, Average information content (entropy) of symbols in long dependent sequences, Mark off statistical model for information source, Entropy and information rate of Mark off sources.		
Module 2	Source Coding	8 Sessions

Topics: Properties of codes- Block codes, on-singular codes, Uniquely decodable codes. Instantaneous codes and Optimal codes, Prefix of a code, Test for instantaneous property, Construction of Instantaneous code, Decision tree, Kraft's inequality, Source coding theorem (Shannon's Noiseless coding theorem), Shannon's encoding algorithm, Shannon Fano Algorithm, Huffman minimum redundancy code (binary, ternary and quaternary), Code efficiency and redundancy, Extended Huffman Coding, Arithmetic Codes, Lempel – Ziv Algorithm.		
Module 3	Channels and Mutual Information	8 Sessions
Topics: Introduction, Discrete communication channels, Representation of a channel, Probability relations- Apriori, Posteriori entropy, Equivocation, Mutual information, Properties, Rate of information transmission over a discrete channel, Capacity of a discrete memoryless channel, Shannon's theorem on channel capacity (Shannon's second theorem), Special channels- Symmetric, Binary symmetric, Binary erasure, Noiseless, Deterministic and cascaded channels, Estimation of channel capacity by Muroga's method, Continuous channels, Shannon-Hartley theorem and its implications, Shannon's limit, Rate Distortion Theory.		
Module 4	Linear Block Codes	8 Sessions
Topics: Introduction to Fields and Vector Spaces, Types of errors, Examples, Methods of controlling errors, Types of codes, Linear Block Codes- Matrix description, Encoding circuit, Syndrome and error detection, Syndrome circuit, hamming weight, hamming distance, Minimum distance of a block code error detection and correction capabilities of a linear block code, Single error-correcting Hamming codes, Table lookup decoding using standard array, General decoder for a linear block code. Binary cyclic codes: Algebraic structures of cyclic codes, Encoding using (n-k) bit shift register, Syndrome calculation.		
Text Book T1- K. Sam Shanmugham, "Digital and Analog Communication Systems", John Wiley Publications, 1996. T2- Simon Haykin, "Digital Communications", John Wiley Publications, 2003. T3-. Shu Lin, Daniel J. Costello, "Error Control Coding", Pearson / Prentice Hall, 2nd Edition, 2004.

Weblinks: pu.informatics.global .		
Topics relevant to development of "EMPLOYABILITY SKILL": Algebraic structures of cyclic codes, Encoding using (n-k) bit shift register, Syndrome calculation, for developing Employability Skills through Problem Solving Techniques. This is attained through assessment component mentioned in course handout.		

Course Code: CSE305	Course Title: Parallel Computing Type of Course: Theory Only	L- P- C	3	0	3
Version No.	2.0				
Course Pre-requisites	Computer Organization and Architecture, Algorithms and Operating Systems, Some Networking concepts				
Anti-requisites	NIL				

Course Description	This is an introductory course to Parallel Computing. The purpose of this Course is to understand the motivation for Parallel Computing and the concept of Parallel Computing. It also exposes the various Models of Parallel Computers and their interconnections and how computations can be performed using Parallel Algorithms and Parallel Programming Models like OpenMP and MPI.			
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Parallel Computing and attain Employability through Problem Solving techniques			
Course Out Comes	On successful completion of this course the students shall be able to: 1. Classify Parallel Systems 2. Employ a Parallel Algorithm for the given Problem 3. Demonstrate the usage of Parallel Programming Tools			
Course Content:				
Module 1	Motivation, History & Scope of Parallel Computing, Concurrency	Assignment	Write about parallel computing application areas	7 Sessions
Topics: The significance of parallel computing, Motivating parallelism, scope and applications, types of computing – concurrent, parallel and distributed computing; Types of Parallel Systems: Shared Memory Systems and Distributed Memory Systems; Parallelism in uniprocessor systems – Implicit parallelism - pipelining and superscalar execution, Parallel processing mechanisms, Parallel Computer structures – pipeline computers, array processors, multiprocessor systems				
Module 2	Parallel Hardware	Assignment	Programming activity using OpenMP	10 Sessions
Flynn's Classification – SIMD , MIMD, interconnection networks, Performance evaluation criteria, The Effect of Granularity on Performance, Message-Passing Programming, Send and Receive Operations, Interconnection networks, Shared memory interconnects: Bus, Crossbar; Distributed Memory Model, Basic communication operations-One to all Broadcast and All to one Reductions, Ring, Mesh, Hypercube				
Module 3	Parallel Software, I/O, Performance, Parallel Algorithm Design	Case Study	Application of Foster's design methodology to Boundary Value problem	10 Sessions
Introduction to Decomposition, tasks and dependency graphs; granularity, concurrency and task interaction; Processes and mapping; processes versus processors; Decomposition techniques – recursive decomposition, data decomposition, exploratory decomposition, speculative decomposition, hybrid decomposition; Characteristics of tasks and interactions; Parallel algorithm models – data parallel, task graph, work pool, master slave, producer-consumer, hybrid models				
Module 4	Parallel Programming	Assignment	Programming activity using MPI	10 Sessions

Modelling parallel computation: Multiprocessor Models- Random-Access Machine, The Local-Memory Machine, The Memory-Module Machine, Parallel Programming Models: Shared Memory Model, Shared programming model with OpenMP, Message Passing Models, Message passing interface, MPI_init, MPI_Comm_rank, MPI_finalize, Running MPI Programs, collective Communication					
Targeted Application & Tools that can be used: OpenMP programming

This is attained through assessment component mentioned in course handout.					

Course Code: CSE3033	Course Title: INFORMATION VISUALIZATION Type of Course: Integrated	L- P- C	2	2	3
Version No.	1.0				
Course Pre-requisites	Basic Programming Concepts.				
Anti-requisites	NIL				
Course Description	This course offers foundational principles, methods, and techniques of visualization to enable creation of effective information representations suitable for exploration and discovery. Covers the design and evaluation process of visualization creation, visual representations of data, relevant principles of human vision and perception, and basic interactivity principles.				

Course Objective	The objective of the course is to familiarize the learners with the concepts Of Information Visualization and attain Employability through Experiential Learning techniques.			
Course Out Comes	On successful completion of the course the students shall be able to CO 1: Choose appropriate visualization methods for a given data type. CO 2: Implement interactive visualization interface for different types of data such as time oriented, textual, and spatial. CO 3: Design an effective visualization using design and human perception principles.			
Course Content:				
Module 1	Data Visualization & Techniques	Quiz	Data Collection/Interpretation	08 Sessions
Topics: Data Abstraction - Task Abstraction - Analysis: Four Levels for Validation, Human Visual Perception, Scalar and point techniques – vector visualization techniques – matrix visualization, Visualization Techniques for Trees, Graphs, and Networks, Multidimensional data.				
Module 2	Visual Analysis of data from various domains	Assignment	Programming	09 Sessions
Topics: Time-oriented data visualization – Spatial data visualization and case studies, Text data visualization – Multivariate data visualization, and case studies,				
Module 3	Designing Effective Dashboard and Visual Story Telling	Assignment	Programming	09 Sessions
Topics: Guidelines for designing successful visualizations, Data visualization dos and don'ts, Dashboard Design principles, Effective Dashboard Display Media, Dashboard creation using visualization tools for the use cases: Finance- marketing-insurance-healthcare etc.				
List of Laboratory Tasks:				
Targeted Application & Tools that can be used Targeted application: Business intelligence tools. Tools: Tableau, Google data studio, Openheatmap				
Project work/Assignment:				
Assignment: Programming

Topics relevant to development of “EMPLOYABILITY SKILLS”: Human Visual Perception, Effective Dashboard Display, for development of Employability Skills through Experiential Learning techniques. This is attained through assessment component as mentioned in course handout.

Course Code: CSE3102	Course Title: Malware Analysis Type of Course: Discipline Elective in Cyber Security Basket			L- P- C	3	0	3
Version No.	1.0						
Course Pre-requisites	Should Have the knowledge of Cryptography and Network Security						
Anti-requisites	NIL						
Course Description	The purpose of the course is to explore malware analysis tools and techniques in depth. Understanding the capabilities of malware is critical to an organization's ability to derive threat intelligence, respond to information security incidents, and fortify defenses. This course builds a strong foundation for reverse-engineering malicious software using a variety of system and network monitoring utilities, a disassembler, a debugger, and other tools useful for turning malware inside-out.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Malware Analysis and attain Employability through Participative Learning techniques.						
Course OutComes	On successful completion of this course the students shall be able to: 1. Understanding the nature of malware, its capabilities, and how it is combated through detection and classification. 2. Apply the methodologies and tools to perform static and dynamic analysis on unknown executables. 3. Analyze scientific and logical limitations on society’s ability to combat malware.. 4. Apply techniques and concepts to unpack, extract, decrypt, or bypass new anti analysis techniques in future malware samples.						
Course Content:							
Module 1	Introduction to MALWARE ANALYSIS		Assignment	Programming activity	12 Hours		
Topics: Introduction to malware, OS security concepts, malware threats, evolution of malware, malware typesviruses, worms, rootkits, Trojans, bots, spyware, adware, logic bombs, malware analysis, static malware analysis, dynamic malware analysis. Assignment: Brief study on types of spyware							
Module 2	Static Analysis		Assignment	Programming activity	11 Hours		
Topics: X86 Architecture- Main Memory, Instructions, Opcodes and Endianness, Operands, Registers, Simple Instructions, The Stack, Conditionals, Branching, Rep Instructions, C Main Method and Offsets. Antivirus Scanning, Fingerprint for Malware, Portable Executable File Format, The PE File Headers and Sections, The Structure of a Virtual Machine, ReverseEngineering- x86 Architecture Assignment: Static analysis on malware (PeStudio & ProcMon)							
Module 3	Dynamic Analysis		Assignment	Programming activity	11 Hours		

Topics: Live malware analysis, dead malware analysis, analyzing traces of malware- system-calls, api-calls, registries, network activities. Anti-dynamic analysis techniques anti-vm, runtime-evasion techniques, , Malware Sandbox, Monitoring with Process Monitor, Packet Sniffing with Wireshark Assignment: Demonstration of wireshark					
Module 4	Malware Functionality and Detection Techniques		Assignment	Programming activity	12 Hours
Topics: Downloader, Backdoors, Credential Stealers, Persistence Mechanisms, Privilege Escalation, Covert malware launching- Launchers, Process Injection, Process Replacement, Hook Injection, Detours, APC injection. Signature-based techniques: malware signatures, packed malware signature, metamorphic and polymorphic malware signature Non-signature based techniques: similarity-based techniques, machine-learning methods, invariant inferences Assignment: Packet malware signature					
Targeted Application & Tools that can be used: eCMAP (Certified Malware Analysis Professional)					
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course					
Any appropriate tool can be given to demonstrate.					
Text Book 1. Michael Sikorski and Andrew Honig, 2012: “ Practical Malware Analysis”, No Starch Press.

Topics relevant to “EMPLOYABILITY SKILLS”: X86 Architecture, Packet Sniffing, Wireshark, for development of Employability Skills through Participative Learning Techniques. This is attained through assessment components mentioned in course handout.					

Course Code: CSE3129	Course Title: Middleware Technologies		3	0	3
	Type of Course: Program Core Theory Based Course	L- P- C			
Version No.	1.0				
Course Pre-requisites	Familiarity with basics of Internet technologies would be essential.				
Anti-requisites	NIL				
Course Description	The main objective of the course is to create a practical, wide-ranging discussion on Middleware Technologies to help students understand what is going on so they can pick out the real issues from the imaginary issues and start building complex distributed systems with confidence.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Middleware Technologies and attain Employability through Participative Learning techniques.				
Course Outcomes	At the end of the course the student will be able to 1. Learn how to use Middleware to Build Distributed Applications 2. Implement Business Processes 3. Learn about Middleware Technologies 4. Implement Business Processes 5. Learn application design and IT architecture				
Course Content:					
Module 1		Case studies			9 Hours
Topics: Moving to e-business, what is IT architecture? Why is this different from what we did before? Rewrite or evolve? Who develops the architecture? Early days, Preliminaries, Remote procedure calls, Remote database, Distributed transaction processing, Message queuing, Message queuing versus distributed transaction processing, what happened to all this technology? OBJECTS, COMPONENTS, AND THE WEB: Using object middleware, Transactional component middleware, COM, EJB, Final comments on TCM, Internet Applications. WEB SERVICES: Service concepts, Web services, and Using Web services: A pragmatic approach.					
Module 2		Case studies			9 Hours
Topics: Middleware elements, the communications link, the middleware protocol, the programmatic interface, Data presentation, Server control, Naming and directory services, Security, System management, Comments on Web services, Vendor architectures, Vendor platform architectures, Vendor distributed architectures, Using vendor architectures, Positioning, Strawman for user target architecture, Marketing, Implicit architectures, Middleware interoperability.					
Module 3		Quiz			9 Hours
Topics: What is middleware for? Support for business processes, Information retrieval, Collaboration, Tiers, The presentation tier, The processing tier, The data tier, Services versus tiers, Architectural choices, Middleware bus architectures, Hub architectures, Web services architectures, Loosely coupled versus tightly coupled.					
Module 4		Case studies			9 Hours
Topics:					

What is a process? Business processes, Information and processes, Architecture process patterns, Clarification and analysis, Error Handling, Timing, Migration, Flexibility.
Targeted Application & Tools that can be used: To design and develop distributed application.
Project work/Assignment: Project Assignment: NIL Assignment 1: Paper Review of distributed application using web services
Text Books 1. Chris Britton and Peter Eye, “IT Architectures and Middleware: Strategies for Building Large, Integrated Systems”, 2nd Edition, Pearson Education, 2004.

Topics relevant to “EMPLOYABILITY SKILLS”: Middleware Protocol, Architecture process patterns, for developing Employability Skills through Participative Learning Techniques. This is attained through assessment components mentioned in course handout.

Course Code: CSE 3030	Course Title: Mining Massive Datasets Type of Course: Program Core Theory and Lab Integrated Course	L- P- C	2	2	3
Version No.	1.0				
Course Pre-requisites	CSE2021- Data Mining				
Anti-requisites	NIL				
Course Description	The purpose of the course is to provide knowledge of data mining, and to emphasize the importance of choosing suitable tools for processing and analyzing massive datasets to gain insights. The student should have the knowledge and skill to select and use the most appropriate mining tools to solve business problems. The associated laboratory provides an opportunity to implement the concepts and enhance critical thinking and analytical skills. With a good knowledge of data mining technology, the student can gain practical experience in implementing them, enabling the student to be an effective solution provider for applications that involve huge volumes of data.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Mining Massive Datasets and attain Skill Development through Experiential Learning techniques. .				
Course Outcomes	On successful completion of the course the students shall be able to: • Identify the right machine learning/mining algorithm for handling massive data • Apply classification and regression models with Spark and Mahout • Implement clustering models using Spark and Mahout • Apply semi-supervised learning for clustering and classification				
Course Content:					
Module 1	MapReduce Based Machine Learning	Programming Assignment	Data Collection and Analysis	09 Classes	
MapReduce Based Machine Learning K-Means, PLANET, Parallel SVM, Association Rule Mining in MapReduce, Inverted Index, Page Ranking, Expectation Maximization, Bayesian Networks					
Module 2	Classification and Regression models with Spark and Mahout	Programming Assignment	Data Collection and Analysis	10 Classes	
Classification and Regression models with Spark and Mahout Linear support vector machines - Naive Bayes model- Decision Trees – Least square regression. Decision trees for regression					
Module 3	Clustering in Spark and Mahout	Programming Assignment	Data analysis	10 Classes	
Clustering in Spark and Mahout					

Hierarchical Clustering in a Euclidean and Non-Euclidean Space - The Algorithm of Bradley, Fayyad, and Reina - A variant of K-means algorithm - Processing Data in BFR Algorithm CURE algorithm - Clustering models with Spark - Spectral clustering using Mahout				
Module 4	Mining Social-Network Graphs and Semi-Supervised Learning	Programming Assignment	Data Collection and Analysis	11 Classes
Mining Social-Network Graphs Clustering of Social-Network Graphs - Direct Discovery of Communities - Partitioning of Graphs Finding Overlapping Communities - Counting Triangles using MapReduce Neighbourhood Properties of Graphs Semi-Supervised Learning Introduction to Semi-Supervised Learning, Semi-Supervised Clustering, Transductive Support Vector Machines				
Targeted Application & Tools that can be used: • Business Analytical Applications • Social media Data Analysis • Predictive Analytics Tools: Data analytical tools like Spark, Mahout, map reduce.				
Project work/Assignment:				
After completion of each module, student will be asked to develop a mini project for Data mining.				
Text Book 1. Jure Leskovec, Anand Rajaraman, Jeffrey Ullman, "Mining of Massive Datasets", Standford Press,2016. 2. Nick Pentreath, "Machine Learning with Spark", Packt Publishing,2017 3. Olivier Chapelle, Bernhard Scholkopf, Alexander Zien "Semi-Supervised Learning", The MIT Press, 2016.

Topics relevant to “SKILL DEVELOPMENT”: Hierarchical Clustering in a Euclidean and Non-Euclidean Space for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.				

Course Code: CSE3009	Course Title: Optimization Techniques for Machine Learning Type of Course: Discipline Elective in Artificial Intelligence and Machine Learning Basket Theory	L- P- C	3	0	3
Version No.	1.0				
Course Pre-requisites	CSE3008 Machine Learning Techniques				
Anti-requisites	NIL				
Course Description	This course introduces a range of machine learning models and optimization tools that are used to apply these models in practice. Course will introduce what lies behind the optimization tools often used as a black box as well as an understanding of the trade-offs of numerical accuracy and theoretical and empirical complexity. For the students with some optimization background this course will introduce a variety of applications arising in machine learning and statistics as well as novel optimization methods targeting these applications.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Optimization Techniques for Machine Learning and attain Employability through Problem Solving Methodologies.				
Course Outcomes	On successful completion of this course the students shall be able to: 1. Describe fundamentals of Machine learning [Knowledge]. 2. Explain Machine learning models [Comprehension]. 3. Discuss Convex optimization models [Comprehension]. 4. Apply Methods for convex optimization [Application].				
Course Content:					
Module 1:	Fundamentals of Machine learning	Quiz	Knowledge based Quiz	8 Sessions	
Topics: Machine learning paradigm, empirical risk minimization, structural risk minimization, learning guarantees, introduction of VC-dimension.					
Module 2:	Machine learning models	Quiz	Comprehension based Quiz	10 Sessions	
Topics: logistic regression, support vector machines, sparse regression, low dimensional embedding, low rank matrix factorization, sparse PCA, multiple kernel learning.					
Module 3	Convex optimization models	Assignment	Batch-wise Assignments	9 Sessions	
Topics: linear optimization, convex quadratic optimization, second order cone optimization, semidefinite optimization, convex composite optimization					
Module 4:	Methods for convex optimization	Assignment and Presentation	Batch-wise Assignment and Presentations	11 Sessions	
Topics: gradient descent, Newton method, interior point methods, active set, prox methods, accelerated gradient methods, coordinate descent, cutting planes, stochastic gradient.					
Targeted Application & Tools that can be used: Use of Matlab tool					
Project work/Assignment: Survey on Methods for convex optimization					
Text Book T1. Charu C. Aggarwal, “ <i>Linear Algebra and Optimization for Machine Learning</i> ”, Springer, 2020. T2. Sra Suvrit, Nowozin Sebastian, and Wright Stephen J, “ <i>Optimization for Machine Learning</i> ”, The MIT Press,2012.

Course Code: CSE3063	Course Title: Privacy and Security in IoT Type of Course: Program Core & Theory only	L- P- C	3	0	3
Version No.	1.0				
Course Pre-requisites	[1] The primary prerequisite is a working knowledge of basic algebraic number theory, which includes number fields, rings of integers, factorization of ideals into primes [2] A working knowledge of basic algebraic number theory. [3] Basic concepts of cryptography like encryption decryption, Signature generation and verifications.				
Anti-requisites	NIL				
Course Description	The purpose of this course is to enable the students to appreciate the need for cryptography and to identify the applications of cryptography in Internet of Things (IoT). The course is both conceptual and analytical in nature and needs fair knowledge of mathematics and computing. The course develops the critical thinking and analytical skills. The course also enhances the programming abilities through assignments.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Privacy and Security in IoT and attain Skill Development through Problem Solving Methodologies .				
Course Outcomes	On successful completion of this course the students shall be able to: 1. Explain benefits of modern cryptographic algorithms 2. Apply the Elliptic curve Diffie Hellman and digital signature algorithms to encrypt-decrypt, generate and verify the signatures 3. Estimate the performance of ECC with other traditional cryptography algorithms.				
Course Content:					
Module 1	Introduction to Elliptic Curves	Quiz	Comprehension based Quizzes and assignments;		15 Classes
Topics: Elliptic Curve Cryptosystems (ECC): Introduction to ECC, Method of Diophantus, Elliptic curves in Cryptography, Discrete Logarithms in Finite Fields, Elliptic Curve on a finite set of Integers, Definition of Elliptic curves, General form of a EC, Weierstrass Equation, Points on the Elliptic Curve (EC), The Abelian Group, Operations on ECC- Point addition, Point doubling.					
Module 2	Elliptic Curve Cryptosystems	Quizzes and assignments	Comprehension based Quizzes and assignments;		15 Classes
Topics: Elliptic Curve Cryptosystems (ECC): Public-Key Cryptosystems, Public-Key Cryptography, What Is Elliptic Curve Cryptography (ECC)?, Using Elliptic Curves In Cryptography, Generic Procedures of ECC, Example – Elliptic Curve Cryptosystem Analog to El Gamal, Diffie-Hellman (DH) Key Exchange, ECC Diffie-Hellman, Example – Elliptic Curve Diffie-Hellman Exchange, Elliptic Curve Digital Signature Algorithm (ECDSA) Why use ECC?, Security of ECC, Applications of ECC, Benefits of ECC.					
Module 3	IOT Protocols	Assignment and Lab projects with presentation	Project implementations in software, batch wise presentations		10 Classes
Topics:					

IoT Communication model and Protocols :

Communication/Transport Protocols: Bluetooth. Data Protocols: Message Queue Telemetry Transport (MQTT), Constrained Application Protocol (COAP), Advanced Message Queuing Protocol (AMQP), Extensible Messaging and Presence Protocol (XMPP), Introduction, Principle of RFID, Components of an RFID system.

Targeted Application & Tools that can be used:

Application areas are to secure crypto currency- Bitcoin, Ethereum and Ripple using ECC in key agreement, digital signatures.

Professionally Used Software: elliptic2

: <https://www.graui.de/code/elliptic2/>

Project work/Assignment:

Each batch of students (self-selected batch mates) will identify projects from searching on Google, and implement with the most suitable 2 or 3 NIST /SECP curves

Project Assignment:

Assignment: 1 | Collect the running time of ECC on different standard NIST curves.

Assignment 2: Prepare a compressive report on the efficiency of NIST Vs SECP curves.

Topics related to development of “SKILL DEVELOPMENT”: IOT Protocols, Elliptic Curve Cryptosystem, for Skill Development through Participative Learning Techniques. This is attained through assessment components as mentioned in the course handout.

Course Code: CSE2038	Course Title: Privacy and Security in Online Social Media Type of Course: Program Core & Theory Only	L-P-C	3		0	3
Version No.	1.0					
Course Pre-requisites	Basic of Network security and cryptography.					
Anti-requisites	NIL					
Course Description	Objective of this course is to make students learn the basics of privacy and security in online social media and develop ability to understand the importance of privacy in anyone's life and their consequences if it is in peril. This course is both conceptual and analytical in nature that would help the student to predict the effects of any activity on Social Media. The students should have prior knowledge of some Social media platforms. After successful completion of the Course, the students would acquire knowledge to protect themselves from the online data theft on social media from attacker.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Privacy and Security in Online Social Media and attain Employability through Participative Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: 1] Recognize the significance of the Privacy and how to protect it [Knowledge] 2] Summarize the privacy and security Encryption for Peer to Peer Social Networks. [Comprehension] 3] Understand the function of stealing Reality and K-Anonymity. [Knowledge] 4]Use the Link Reconstruction attack in privacy Social Networks. [Application]					
Course Content:						
Module 1	ANALYSIS OF PRIVACY IN SOCIAL NETWORKS	Assignment	Knowledge		8 Sessions	
Topics: Three-Layered Framework-Characteristics Used to Analyze Social Web Privacy-Privacy Issues Related to Social Web Users-Privacy Issues Related to Service Providers-Security and Privacy for Digital Facets-Identifiable Facets-Private Facets. Assignment: Find real world problems and suggest solutions.						

Module 2	ENCRYPTION FOR PEER-TO-PEER SOCIAL NETWORKS	Assignment	Comprehension	8 Sessions

Topics: Essential Criteria for the P2P Encryption Systems-Existing P2P OSN Architectures-Evaluations of Existing Encryption Schemes Based on Our Criteria-Broadcast Encryption-Predicate Encryption. Assignment: - Survey of Unethical Behavior and Influencing factors.				
Module 3	STEALING REALITY AND K-ANONYMITY	Quiz	Comprehension	11 Sessions
Topics: Stealing Reality- Social Attack Model- Social Learnability- k-Anonymity- k-Degree Anonymity- k-Neighborhood Anonymity- k- Automorphism- k-Isomorphism-L-diversity- Attack Model and Privacy Guarantee- Insights from an ℓ -Diversified Graph.				
Module 4	PRIVACY IN SOCIAL NETWORKS- LINKS RECONSTRUCTION ATTACK	Assignment/Case study	Application	11 Sessions
Privacy in Social Networks- Link Prediction- Feature Extraction- Communities Datasets- Electronic Currencies- Anonymity- The Bit coin System- The Transaction Network- The User Network- Anonymity Analysis- Integrating Off-Network Information. Use Case and the Threat Model- Use Case for Private Record Linkage- Use Case for Privacy-Preserving Record Linkage- Assignment: - The Bit coin Faucet- Voluntary Disclosures- TCP/IP Layer Information- Context Discovery- Flow and Temporal Analyses.

Topics relevant to "EMPLOYABILITY SKILLS": Link Prediction, features extraction, for developing Employability Skills through Participative Learning Techniques. This is attained through the assessment component mentioned in the course handout.				

Course Code: CSE 2028	Course Title: Software Project Management Type of Course: Theory Only Course		L- P- C	3	0	3
Version No.	1					
Course Pre-requisites	Basics of Programming					
Anti-requisites						
Course Description	Effective software project management is crucial to the success of any software development or maintenance project. The roles and responsibilities of the project manager is numerous and varied. However, at the broad level, these can be classified in to the project planning and monitoring and control activities. Project planning involves making cost, effort, and duration estimation and preparing various types of plans such as schedule, configuration management, risk management, quality management. Staffing plan etc. The monitoring and control activities encompass keeping track of progress and removing bottlenecks using techniques such as PERT, GANTT, and also effective risk management, team building etc.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Software Project Management and attain Employability through Participative Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: - Understand the different project contexts and appropriate management strategy. - Practice the role of professional ethics in successful software development. - Identify the key phases of project management. - Determine an appropriate project management approach through an evaluation of the business context and scope of the project.					
Course Content:						
Module 1	Conventional & Modern Software Management	Assignment	Case studies	9 Sessions		
Topics: Waterfall Model, Conventional Software Management Performance; Evolution of Software Economics - Software economics, Pragmatic software cost estimation, Reducing software product size, Improving software processes. Principles of Conventional Software Engineering, Principles of Modern Software Management, Transitioning to an interactive Process.						
Module 2	Software Management Process Framework	Case studies / Case let	Case studies	9 Sessions		
Topics: Life cycle phases, The artifact sets, Management artifacts, Engineering artifacts, Pragmatic artifacts; ModelBased Software Architectures - A management perspective and A technical perspective.						
Module 3	Project Organization and Planning	Quiz	Case studies	10 Sessions		
Topics: Work breakdown structures, Planning guidelines, The cost and schedule estimating process, The iteration planning process, Pragmatic planning, Line-of-Business organizations, Project organizations, Evolution of organizations; Process automation - Automation building blocks, The project environment.						
Module 4	Project Control and Process Instrumentation	Quiz	Case studies	10 Sessions		

Topics: PROJECT CONTROL AND PROCESS INSTRUMENTATION :The Seven-Core metrics, Management indicators, Quality indicators, Life-Cycle expectations, Pragmatic software metrics, Metrics automation, Modern project profiles, Next generation software economics, Modern process transitions.
Targeted Application & Tools that can be used:
Project work/Assignment:
Assignment:

Topics relevant to development of “EMPLOYABILITY SKILLS”: Life cycle Phases, Seven Core Metrics, for development of Employability Skills through the Participative Learning Techniques. This is attained through the assessment components mentioned in the course handout.

Course Code: CSE250	Course Title: System Administration and IT Infrastructure Type of Course: Theory & Integrated Laboratory		L-P-C	2	4	4
Version No.	1.0					
Course Pre-requisites	[1] Preliminary knowledge on cloud computing and services-CSE 233					
Anti-requisites	Nil					
Course Description	The main goal of this course is to study the fundamentals of system administration and infrastructure services such as Managing Operating system, Upgrading, installing, and configuring application software and computer hardware, Creating and managing system permissions and user accounts, performing regular security tests and security monitoring, Maintaining networks and network file systems. The course aims to introduce the popular cloud infrastructure services such as managing cloud resources, virtual machine usage and storage management. The student will also learn how to manage and configure servers and way of using industry tools to manage computers, user information, and user productivity. Finally, the student will learn how to recover your organization’s IT infrastructure in the event of a disaster.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of System Administration and IT Infrastructure and attain Employability through Experiential Learning techniques .					
Course Out Comes	On successful completion of the course the students shall be able to: 1. Demonstrate the knowledge of different directory services and how a centralized system admin can support different parts of IT Infrastructure. 2. Apply the concepts of system administration to real life scenarios. 3. Understand the working of user Management and Directory management commands. 4. Demonstrate the knowledge of cloud infrastructure services. 5. Identify appropriate methods of system recovery and back-up.					
Course Content:						
MODULE 1	Introduction to System Administration	Quiz	Programming/ Problem Solving		05 Hours	
Topics: Define System Administration, Basics of system administration, organizational policies, IT infrastructure services, user and hardware provisioning, routine maintenance, troubleshooting, and managing potential issues. [Blooms ‘level selected: Comprehension]						
Module 2	Network and Infrastructure Services	Lab evaluation	Programming/ Problem Solving		06 Hours	
Topics: Introduction to network and infrastructure services, what IT infrastructure services are and what their role is in system administration, server operating systems, virtualization, network services, DNS for web						

services, and how to troubleshoot network services, introduction to system administration tasks. [Blooms 'level selected: **Comprehension**]

Module 3	Software and Platform Services	Lab evaluation	Programming/Problem Solving	07 Hours

Topics:

Explore software and platform services, types of software and platform services such as configure email services, security services, file services, print services, and platform services. Explore the ways to troubleshoot platform services and common issues to look out for. To setup and manage the IT infrastructure services to help a business stay productive, keep information secure, and deliver applications to its users. [Blooms 'level selected: **Application**]

Module 4	Directory Services	Lab evaluation/ Assignment	Programming/Problem Solving	07 Hours

Topics:

Learn about directory services -two of the most popular directory services, Active Directory and OpenLDAP, work in action. Explore the concept of centralized management and support in SysAdmins to maintain and support all the different parts of an IT infrastructure, how to add users, passwords, and use group policies in Active Directory and OpenLDAP. Introduction to RAID storage, Need of RAID storage, Types of Raid Storage in the cloud. [Blooms 'level selected: **Application**]

Module 5	Data Recovery & Backups	Assignment	Programming /Problem Solving	05 Hours

Topics:

Data recovery and backups, Backup and recovery of data, explore common corporate practices like designing a disaster recovery plan and writing post-mortem documentation. Study the trade-offs between on-site and off-site backups, understand the value and importance of backup and recovery testing, know different options for data backup and understand the purpose and contents of a disaster recovery plan. An introduction to edge computing- A new revolution in cloud computing. [Blooms 'level selected: **Comprehension**]

List of Laboratory Tasks:

Experiment No 1: Demonstrate basic Commands, Visual Interface (Vi Editor), User and Group Administration. [6 hours: **Application Level**]

Level 1: Demonstrate Linux basic commands.

Experiment No. 2: Demonstrate the use of permissions, access control list, change ownership of files and directories, using simple Filters, advanced Filters. [4 hours: **Application Level**]

Level 1: Work with basic file permissions, access control list.

Experiment No. 3: Demonstrate the working of User Management, Directory management commands, Start-up & Shutdown scripts, Process management commands and their execution. [4 hours: **Application Level**]

Level 1: Understand use of User Management, Directory management commands.

Experiment No. 4: Demonstrate the working of Firewall configuration in Linux, Study of Important LINUX Services. [4 hours: **Application Level**]

Level 1: Understand use of Firewall configuration in Linux, Study of Important LINUX Services.

Experiment No. 5: Practicing of some sample Shell Script programs. [6 hours: **Application Level**]

Level 1: Working with shell script programs.

Experiment No. 6: Create an Amazon EC2 Instance (Linux) or use equivalent other cloud platform such as Google Cloud or Azure to create a virtual machine service. [8 hours: **Application Level**]

Level 1: Explore cloud infrastructure service.

Experiment No. 7: Create an Amazon S3 Bucket or use equivalent other cloud platform such as Google Cloud or Azure to create a storage service. [8 hours: **Application Level**]

Level 1: Explore cloud infrastructure service. Experiment No.8: Configuring a Static Website with S3 and CloudFront. [6 hours: Application Level] Level 1: Explore cloud infrastructure service. Experiment No.9: Demonstrate the use of S3 Bucket Policies and Conditions to Restrict Specific Permissions. [8 hours: Application Level] Level 1: Explore cloud infrastructure service. Experiment No.10: Working with AWS Backup Services. [6 hours: Application Level] Level 1: Explore cloud infrastructure service.
Targeted Application & Tools that can be used: Application Area is to understand and apply concept of system administration and infrastructure services. Tools/Simulator used: Linux operating system, AWS cloud service subscription or equivalent cloud platform subscription.
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course
1. Problem Solving: Understanding different system administration services. 2. Programming: Implementation of different cloud infrastructure services.
Text Book 1. AEleen Frisch, “Essential System Administration”, Published by O’Reilly Media, 3rd Edition, 2014. 2. Donald Coffelt, Chris Hendrickson, “Fundamentals of Infrastructure Management”, Donald Coffelt and Chris Hendrickson, 2017.

Topics relevant to “EMPLOYABILITY SKILLS”: Demonstrate the use of permissions, access control list, change ownership of files and directories, using simple Filters for developing Employability Skills through Experiential Learning techniques. This is attained through the assessment component as mentioned in the course handout.

Course Code: CSE257	Course Title: Network Programming Type of Course: Laboratory only	L-P-C	0	4	2
Version No.	2.0				
Course Pre-requisites	C language				
Anti-requisites	NIL				
Course Description	Network Programming intends to explore the opportunities for developing, maintaining and supporting distributed and network applications. The Course covers the basics of computer networks to designing and implementing networks.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Network Programming and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques				
Course Outcomes	On successful completion of this laboratory based course the students will be able to: 1. Outline the basic network troubleshooting commands in windows/Linux. 2. Configure various networks using cisco packet tracer tool. 3. Demonstrate the working of client-server TCP/IP socket programming. 4. Demonstrate the usage of Wireshark tool in networking. 5. Simulate networking scenarios using NS2 simulator.				
Course Content:					
List of Laboratory Tasks Task 1: Troubleshoot using network DOS command Task 2: Demonstration of Cisco Packet Tracer Tool 2.1: Introduction to Cisco Packet Tracer 2.2: User interface and simulation view 2.3: Configure user name and password for the three modes in router 2.4: Configure the DHCP Server using 2 wireless router 2.5: Configure the TELNET Service for 2 different network 2.6: Demonstrate the static routing with multiple networks using serial port and interface 2.7: Demonstrate the RIP routing with multiple networks using serial port and interface 2.8: Configure the Static and dynamic NAT for private network Task 3: Demonstrate the working of client-server TCP/IP socket programming Task 4: Demonstrate the Wireshark tool Usage Task 5: Demonstration of Network Simulator Version 2					
Targeted Application & Tools that can be used: Simulate networking scenarios using Cisco Packet Tracer. Demonstrate the usage of Wireshark tool in networking. Practice the simulation-based network performance evaluation techniques using NS2.

Topics relevant to "SKILL DEVELOPMENT": Troubleshoot using network DOS command, Demonstration of Cisco Packet Tracer Tool for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE465	Course Title: Reinforcement Learning		L-P-C	3	0	3
	Type of Course: Theory Only					
Version No.	1.0					
Course Pre-requisites	• Knowledge of programming in Python is required. • Knowledge of probabilities/statistics, calculus and linear algebra is required. • Machine learning background, as provided for example by COMP-551 or COMP-652 is required.					
Anti-requisites	NIL					
Course Description	The goal of this class is to provide an introduction to reinforcement learning, a very active research sub-field of machine learning. Reinforcement learning is concerned with building programs that learn how to predict and act in a stochastic environment, based on past experience. Applications of reinforcement learning range from classical control problems, such as power plant optimization or dynamical system control, to game playing, inventory control, and many other fields. Notably, reinforcement learning has also produced very compelling models of animal and human learning. During this course, we will study theoretical properties and practical applications of reinforcement learning. We will follow the second edition of the classic textbook by Sutton & Barto (available online for free, or from MIT Press), and supplement it as needed with papers and other materials.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Reinforcement Learning and attain Skill Development through Problem Solving Methodologies.					
Course Out Comes	On successful completion of the course the students shall be able to: 1. Knowledge of basic and advanced reinforcement learning techniques. 2. Identification of suitable learning tasks to which these learning techniques can be applied. 3. Appreciation of some of the current limitations of reinforcement learning techniques. 4. Formulation of decision problems, set up and run computational experiments, evaluation of results from experiments.					
Course Content:						
Module 1	Introduction	Assignment	Programming	No. of Classes:10		
Topics: Course logistics and overview. Origin and history of Reinforcement Learning research. Its connections with other related fields and with different branches of machine learning. Probability Primer Brush up of Probability concepts - Axioms of probability, concepts of random variables, PMF, PDFs, CDFs, Expectation. Concepts of joint and multiple random variables, joint, conditional and marginal distributions. Correlation and independence.						
Module 2	Markov Decision Process	Assignment	Programming	No. of Classes:10		

Topics: Introduction to RL terminology, Markov property, Markov chains, Markov reward process (MRP). Introduction to and proof of Bellman equations for MRP along with proof of existence of solution to Bellman equations in MRP. Introduction to Markov decision process (MDP), state and action value functions, Bellman expectation equations, optimality of value functions and policies, Bellman optimality equations.				
Module 3	Prediction and Control by Dynamic Programing	Assignment	Programming	No. of Classes:10
Topics: Overview of dynamic programing for MDP, definition and formulation of planning in MDPs, principle of optimality, iterative policy evaluation, policy iteration, value iteration, Banach fixed point theorem, proof of contraction mapping property of Bellman expectation and optimality operators, proof of convergence of policy evaluation and value iteration algorithms, DP extensions Monte Carlo Methods for Model Free Prediction and Control Overview of Monte Carlo methods for model free RL, First visit and every visit Monte Carlo, Monte Carlo control, On policy and off policy learning, Importance sampling.				
Module 4	TD Methods and Policy Gradients	Assignment	Programming	No. of Classes:10
Topics: Incremental Monte Carlo Methods for Model Free Prediction, Overview TD(0), TD(1) and TD(λ), k-step estimators, unified view of DP, MC and TD evaluation methods, TD Control methods - SARSA, Q-Learning and their variants. Getting started with policy gradient methods, Log-derivative trick, Naive REINFORCE algorithm, bias and variance in Reinforcement Learning, Reducing variance in policy gradient estimates, baselines, advantage function, actor-critic methods.				
Targeted Application & Tools that can be used: While Convolution Neural Network (CNN) and Recurrent Neural Network (RNN) are becoming more important for businesses due to their applications in Computer Vision (CV) and Natural Language Processing (NLP), Reinforcement Learning (RL) as a framework for computational neuroscience to model decision making process seems to be undervalued. Besides, there seems to be very little resources detailing how RL is applied in different industries. Despite the criticisms about RL's weaknesses, RL should never be neglected in the space of corporate research given its huge potentials in assisting decision making. Tools: Torch, Google Colaboratory, Spider, Jupiter Notebook				
Project work/Assignment: This part is written for general readers. At the same time, it will be of greater value for readers with some knowledge about RL. <u>Resources management in computer clusters</u> Designing algorithms to allocate limited resources to different tasks is challenging and requires human-generated heuristics. The paper "Resource Management with Deep Reinforcement Learning" [2] showed how to use RL to automatically learn to allocate and schedule computer resources to waiting jobs, with the objective to minimize the average job slowdown. State space was formulated as the current resources allocation and the resources profile of jobs. For action space, they used a trick to allow the agent to choose more than one action at each time step. Reward was the sum of $(-1/\text{duration of the job})$ over all the jobs in the system. Then they combined REINFORCE algorithm and baseline value to calculate the policy gradients and find the best policy parameters that give the probability distribution of actions to minimize the objective. <u>Traffic Light Control</u>				

Researchers tried to design a traffic light controller to solve the congestion problem. Tested only on simulated environment though, their methods showed superior results than traditional methods and shed a light on the potential uses of multi-agent RL in designing traffic system.

Five agents were put in the five-intersection traffic network, with a RL agent at the central intersection to control traffic signalling. The state was defined as eight-dimensional vector with each element representing the relative traffic flow of each lane. Eight choices were available to the agent, each representing a phase combination, and the reward function was defined as reduction in delay compared with previous time step. The authors used DQN to learn the Q value of the {state, action} pairs.

- **Robotics**

There are tremendous works on applying RL in Robotics. Readers are referred to for a survey of RL in Robotics. In particular, trained a robot to learn policies to map raw video images to robot's actions. The RGB images were fed to a CNN and outputs were the motor torques. The RL component was the guided policy search to generate training data that came from its own state distribution.

- **Web System Configuration**

There are more than 100 configurable parameters in a web system and the process of tuning the parameters requires a skilled operator and numerous trial-and-error tests. The paper "A Reinforcement Learning Approach to Online Web System Auto-configuration" showed the first attempt in the domain on how to do autonomic reconfiguration of parameters in multi-tier web systems in VM-based dynamic environments.

The reconfiguration process can be formulated as a finite MDP. The state space was the system configuration, action space was {increase, decrease, keep} for each parameter, and reward was defined as the difference between the given targeted response time and measured response time. The authors used the model-free Q-learning algorithm to do the task.

Topics relevant to "SKILL DEVELOPMENT": Real time Data Analysis using Reinforcement learning for Skill Development through Problem Solving techniques. This is attained through assessment component mentioned in course handout.

Course Code: PIP103	Course Title: Professional Practice– II Type of Course: NTCC	L- T-P- C	-	-	-	15
Version No.	1.0					
Course Pre-requisites	Knowledge and Skills related to all the courses studied in previous semesters.					
Anti-requisites	NIL					
Course Description	Students observe science and technology in action, develop an awareness of the method of scientific experimentation, and often get an opportunity to see, study and operate sophisticated and costly equipment. They also learn about the implementation of the principles of management they have learnt in class, when they observe multidisciplinary teams of experts from engineering, science, economics, operations research, and management deal with techno-economic problems at the micro and macro levels. Finally, it enables them to develop and refine their language, communication and inter-personal skills, both by its very nature, and by the various evaluation components, such as seminar, group discussion, project report preparation, etc. The broad-based core education, strong in mathematics and science and rich in analytical tools, provides the foundation necessary for the student to understand properly the nature of real-life problems. The students have options to pursue this course as either Project Work and Dissertation at the university, or Project Work in an Industry/ Company/ Research Laboratory, or Internship Program in an Industry/Company.					
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Professional Practice and attain Employability Skills through Experiential Learning techniques.					
Course Outcomes	On successful completion of this course the students shall be able to: 1. Identify the engineering problems related to local, regional, national or global needs. 2. Apply appropriate techniques or modern tools for solving the intended problem. 3. Design the experiments as per the standards and specifications. 4. Interpret the events and results for meaningful conclusions. 5. Appraise project findings and communicate effectively through scholarly publications.					

Course Code: CSE 208	Course Title: Theory of Computation Type of Course: Theory Only	L- T-P- C	3	1	0	4
Version No.	2.0					
Course Pre-requisites	The students should have the Knowledge on Set Theory					
Anti-requisites	Nil					

Course Description	The course deals with introduction of formal languages and the correspondence between language classes and the automata that recognize them. Topics include: Formal definitions of grammars and acceptors, Deterministic and Nondeterministic systems, Grammar ambiguity, finite state and push-down automata; normal forms; Turing machines and its relations with algorithms.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Theory of Computation as mentioned above and attain Skill Development through Problem Solving Methodologies.			
Course Out Comes	On successful completion of the course the students shall be able to: 1. Describe various components of Automata. (Knowledge) 2. Illustrate Finite Automata for the given Language. (Application) 3. Distinguish between Regular grammar and Context free grammar. (Comprehension) 4. Construct Push down Automata. (Application) 5. Construct Turing machine for a Language. (Application)			
Course Content:				
Module 1	Introduction to automata theory	Assignment	Problems on Strings and Language operations	06 Sessions
Topics: Introduction to Automata Theory, Applications of Automata Theory, Alphabets, Strings, Languages & operations on languages, Representation of automata, Language recognizers, Finite State Machines (FSM): Deterministic FSM, Regular languages, Designing FSM, Nondeterministic FSMs				
Module 2	Finite Automata	Assignment	Problems on DFA, NFA's	13 Sessions
Topics: Basic concepts of Finite automata, DFA- definitions of DFA, Deterministic Accepters Transition Graphs and Languages and DFA's, Regular Languages, NFA- Definition of a Nondeterministic Acceptor, Languages and NFA's Why Non-determinism? Equivalence of Deterministic and Nondeterministic Finite Accepters, Reduction of the Number of States in Finite Automata.				
Module 3	Regular Expressions & Context Free Grammar	Assignment	Problems on RE, CFG, PT, PL and Ambiguity	12 Sessions
Topics: Formal Definition of a Regular Expression, Languages Associated with Regular Expressions, Languages, Regular Languages (RL) and Non-regular Languages: Closure properties of RLs, to show some languages are not RLs, Closure Properties of Regular Context Free Grammars-Examples of Context-Free Languages, Leftmost and Rightmost Derivations, Derivation Trees, Relation Between Sentential Forms and Derivation Trees, Ambiguity in Grammars and Languages: Ambiguous Grammars, Removing Ambiguity, Chomsky Normal Form, Gribiche Normal Form.				
Module 4	Push down Automata	Assignment	Problems on pushdown Automaton	08 Sessions
Topics: Definition of a Pushdown Automaton, Language Accepted by a Pushdown Automaton, Acceptance by Final State, Acceptance by Empty Stack, From Empty Stack to Final State, From Final State to Empty Stack Equivalence of PDA's and CFG's: From Grammars to Pushdown Automata.				
Module 5	Turing Machine	Assignment	Problems on Turning Machine	07 Sessions
Topics: Definition of a Turing Machine, Turing Machines as Language Accepters, Example Languages to construct Turing machine, Turing Machines as Transducers, Halting Programming Techniques for Turing Machines				

Targeted Application & Tools that can be used:

Targeted Application:

1. Text Processing
2. Compilers
3. Text Editors
4. Robotics Applications
5. Artificial Intelligence

Tools:

1. JFLAP (Java Formal Language and Automata Package) Software simulation tool. It's interactive educational software written in Java to experiment topics in automata theory.
2. Turing machine Online simulators.

E-ResourcesNPTEL course – https://onlinecourses.nptel.ac.in/noc21_cs83/preview

Topics relevant to "SKILL DEVELOPMENT": Deterministic and Non-Deterministic Automaton, Regular Expressions, CFGs, Turing Machine and Pushdown automaton for Skill Development through Problem Solving methodologies. This is attained through assessment component mentioned in course handout.

Course Code: CSE310	Mobile Applications and Development & CSE 310	L- T-P- C	1	0	4	3
Version No.	1.0					
Course Pre-requisites	The student needs to have fundamental understanding of object-oriented programming concepts with Java/C#, XML, usage of any integrated development environment.					
Anti-requisites						
Course Description	The course deals with the basics of android platform and application life cycle. The goal of the course is to develop mobile applications with Android containing at least one of the following phone material components: GPS, accelerometer or phone camera, use simple GUI applications and work with database to store data locally or in a server. Topics include user interface design; user interface building; input methods; data handling; network techniques and URL loading; GPS and motion sensing. Android application framework and deployment. Power management, Screen resolution, Touch interface, Store data on the device.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Mobile Applications and Development as mentioned above and attain Employability Skills through Experiential Learning Techniques.					

Course Out Comes	On successful completion of the course the students shall be able to: 1. Discuss the fundamentals of mobile application development and its architecture. (Comprehension) 2. Illustrate mobile applications with appropriate android view. (Application) 3. Demonstrate the use of services, broadcast receiver, Notifications and content provider.(Application) 4. Apply data persistence techniques, to perform CRUD operations. (Application) 5. Use advanced concepts for mobile application development. (Application)			
Course Content:				
Module 1	Introduction and Architecture of Android	Assignment	Simulation/Data Analysis	10 Sessions
Android: History and features, Architecture, Development Tools, Android Debug Bridge (ADB), and Life cycle.				
Module 2	User Interfaces, Intent and Fragments	Assignment	Numerical from E-Resources	15 Sessions
Views, Layout, Menu, Intent and Fragments.				
Module 3	Components of Android	Term paper/Assignment	Simulation/Data Analysis	15 Sessions
Activities, Services, Broadcast receivers, Content providers, User Navigation				
Module 4	Notifications and Data Persistence	Term paper/Assignment	Simulation/Data Analysis	15 Sessions
Notification, Shared Preferences, SQLite database, Android Room with a View, Firebase				
Module 5	Advance App Development	Term paper/Assignment	Simulation/Data Analysis	15 Sessions
Graphics and Animation, App Widgets, Sensors, Performance, Location, Places, Mapping, Custom Views, Canvas.				
List of Laboratory Tasks 1.a. Design an app to read user inputs using edit text and display the result of arithmetic operations using toast message. 1.b. Create an android app to calculate the current age of yourself, select your DOB using date picker. 2.a. Design an app to input your personal information. Use autocomplete text view to select your place of birth. 2.b. Design an app to select elective course using spinner view and on click of the display button, toast your ID and selected elective course. 3. Design a restaurant menu app to print the total amount of orders. 4. Develop an android app that uses intent to maintain the following scenario. Check the eligibility criteria for voting. Input the Aadhar no., Name & age in the first activity. If the age is above 18, display the voter's detail in the second activity. Else, display, "You are not eligible to vote" in the second Activity. 5. Demonstrate the use of fragment with list of buttons representing various colors, and on click of these buttons, the appropriate color is filled in the next fragment. Create an Android application to input the vitals of a person (temperature, BP). If the vitals are abnormal, give proper notification to the user. 6. Create an android app to for movie ticket booking. Save the user name of the customer using shared preferences. After completion of booking, retrieve the username from the shared preferences and print the ticket details.				

7. Create an android application to manage the details of students' database using SQLite. Use necessary UI components, which perform the operations such as insertion, modification, removal and view. Presidency University needs an APP for Admission eligibility checking for students, for that you need to take the following information from the Student: registration ID, physics, chemistry and mathematics marks (PCM), fees is allotted as below criteria.

PCM (Total marks %)	Fee concession

90 above	80 %

70 to 89	60 %

Below 69 %	no concession

On click on the button "Registration" details should be stored in the database using SQLite. Create button DISPLAY ALL (full students list) on click on the button it should display the students list per the fee concession.

8. A company need to design an app that plays soft music automatically in the background. Create an app to achieve this functionality.

9. Create an android application such that your view object in the Activity can be Animated with fade-in effect. Create an appropriate XML file named fade-in and write the application to perform the property animation.

10. Demonstrate how to send SMS and email.

11. Create an android application to transfer a file using WiFi. Create an android application "Where am I" with an Activity that uses the GPS Location provider to find the device's last known location.

Targeted Application & Tools that can be used:

Topics relevant to the development of SKILLS: Graphics and Animation, App Widgets Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE202	Course Title: DIGITAL DESIGN Type of Course: Theory Only	L- T-P- C	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Basics of Electronics: AC & DC Circuits, Boolean Algebra, Number Systems, Logic Gates					
Anti-requisites						
Course Description	This Course will provide the fundamental background needed to understand how digital systems work and how to design digital circuits. Students will gain experience with several digital systems, from simple logic circuits to programmable logic devices. Topics include: Number systems and codes, Boolean algebra, logic circuits and minimization, Combinational and sequential logic circuits, Programmable Logic devices, State table and state diagrams, Counters and shift registers, Arithmetic operations and algorithms, fault diagnosis and tolerance.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Digital design and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques					
Course Outcomes	On successful completion of the course the students shall be able to: 1. Apply minimization techniques to Boolean equations to drawing digital circuits 2. Select the appropriate combinational circuits for simple applications 3. Apply the knowledge of state table and state diagram to draw sequential circuits					
Course Content:						
Module 1	Introduction to Digital Systems	Application				10 Sessions
Fundamentals of Digital Systems, Number System and Codes, Boolean algebra, Logic Circuits and Minimization, Hardware Description Language(HDL) using Computer design tools.						
Module 2	Fundamentals of Digital System Design	Comprehension				14 Sessions

Minimization using K-Map and QM Method, Combinational Circuits, Programmable Logic Devices, Design of arithmetic/logic and control units-Half Adders and Full , Half Subtractors and Full subtractors, Multiplexers, 1:8 Demux, 1:16 Demux 1-Bit Comparator, 2-bit comparator Decoders, etc.				
Module 3	Sequential Circuits and its Applications	Application	Simulation/Data Analysis	15 Sessions
Sequential Vs Combinational Ckts, Sequential Logic Circuits, State Tables and State Transition Diagrams, Shift Registers and Counters, Fault Diagnosis and Tolerance				
Targeted Application & Tools that can be used: Xylinx Tool				
Text Book

E-Resources				
NPTEL course – https://nptel.ac.in/courses/106105185				
Topics relevant to “SKILL DEVELOPMENT”: Boolean Equations Simplifications, HDL, Sequential and Combinational Circuits for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course handout.				

Course Code: CSE206	Course Title: Microprocessor & Microcontrollers			L-P-C	3	0	3
	Type of Course: Theory Only						
Version No.	2.0						
Course Pre-requisites	Number Systems, basics of Digital Electronics, basics of Computers.						
Anti-requisites	NIL						
Course Description	This course introduces the assembly level language programming of 8086. The course introduces the core concept of microprocessor and develops in students the assembly language programming skills along with real time applications of microprocessor. It gives a practical training to students to perform interfacing peripheral devices with 8086 microprocessors. This lab focusses mainly on software and few interfacing programs with microprocessor						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Microprocessor &Microcontrollers and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques						
Course Out Comes	On successful completion of the course the students shall be able to: 1. Describe the fundamental principles of 8086 Microprocessor and 8051 Microcontroller. 2. Apply the programming knowledge of 8086 and 8051 to write Assembly language Programs. 3. Explore interfacing of 8086 to I/O devices using 8255 Programmable Peripheral Interface.						
Course Content:							
Module 1	Fundamentals of 8086 Microprocessor	Introduction	Knowledge			12 Sessions	
Topics: Organization of Computer Systems, architecture of computers, RISC and CISC, microprocessor evolution. 8086 Microprocessor architecture: main features of 8086, Modular Programming, 8086 internal architecture, assembly language program development tools.							
Module 2	Programming the 8086 Microprocessor	Application	Programming			16 Sessions	

Topics: 8086 Instructions set, addressing modes, simple sequence programs, Jumps, flags, and conditional jumps, unconditional jumps, Multiprocessor configurations — Coprocessor, Closely coupled and loosely Coupled configurations, repeated until programs, strings, procedure and macros				
Module 3	Basic of I/O Interfacing and Introduction to Microcontroller	Application	Programming	10 Sessions
Topics: Basic I/O interface, programmable peripheral interface and programming. I/O Pins Ports and Circuits — Instruction set, overview of 8051 family, 8051 assembly language programming.				
Targeted Application & Tools that can be used: Microsoft Assembler (MASM), TASM and KELL				
Text Book T1: Microprocessors and Interfacing (SIE), 3rd ed. by Douglas V. Hall & S.S.S.P. Rao, 3rd edition, Mc Graw Hill, 2012. T2: Barry B Brey, “The Intel Microprocessors”, 8th edition, Pearson, 2014.				
References R1: Muhammad Ali Mazidi, “Microprocessors and Microcontrollers”, First Impression, Pearson Education. R2: Ramesh S. Gaonkar, “Microprocessor Architecture, Programming, and Applications with the 8085”, 4e, Prentice Hall, 1998 Web resources: https://nptel.ac.in/courses/108107029 https://puniversity.informaticsglobal.com:2229/login.aspx				
Topics relevant to development of “SKILL”: Engineering Mechanics and its relevance. Force and its Characteristic, Laws of Motion. 8 bit microprocessors vs 16 bit microprocessors, Memory Read and Memory Write Cycle of 8086, Simple Program to interface 8255 and 8086, Simple programs to understand instruction set of 8051 for Skill Development through Participative Learning techniques. This is attained through the assessment component mentioned in the course handout.				

Course Code: CSE258	Course Title: Problem Solving Using Python	L-T-P- C	1	0	4	3
	Type of Course: Laboratory Integrated					
Version No.	2.0					
Course Pre-requisites	Nil					
Anti-requisites	NIL					
Course Description	This course provides the opportunity for the students of Computer Science engineering to develop Python scripts using its powerful programming features like lists, sets, tuples, dictionaries and sets. Students will also be introduced to object oriented programming concepts and packages for data visualization. Topics include: Basics of Python programming, operators and expressions, decision statements, loop control statements, functions, strings, lists, list processing : searching and sorting, nested list, list comprehension, tuples and dictionaries, sets, file handling, exception handling, object oriented programming concepts, modules and packages for data visualization					
Course Objective	The objective of the course is to familiarize the learners with the concepts of PROBLEM SOLVING USING PYTHON and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques					
Course Out Comes	On successful completion of the course the students shall be able to: 1. Demonstrate problem solving through understanding the basics of python. 2. Manipulate functions and data structures. 3. Apply Tuple, Dictionaries, File and Exception Handling concepts to solve real time problems. 4. Practice object-oriented programming. 5. Produce data visualization using modules and packages. 1.					
Course Content:						
Module 1	Problem Solving Techniques and Basics of Python Programming	assignments	Quizzes form basics of python	15 Sessions		
Basics of problem solving techniques, Basics of Python programming, operators and expressions, decision statements, loop control statements.						
Module 2	Function, String and List	Quizzes and assignments	Comprehension based Quizzes and assignments	15 Sessions		
Functions, strings, lists, list processing: searching and sorting, nested list, list comprehension						
Module 3	Data Structures, File and Data Visualization	Term paper/Assignment	Quizzes form advanced python	15 Sessions		
Tuples and dictionaries, Introduction To NumPy and pandas, DataFrame ,Series						
Module 4	Data Wrangling and Object-Oriented Programming	Term paper/Assignment	Application on data visualization	15 Sessions		
Data Transformation, Plotting and Visualization and Object-oriented programming concepts						

List of Laboratory Tasks:

Each Lab sheets experiments are prepared by level 0 and level 1 module wise.

Targeted Application & Tools that can be used:

Any IDE – PyCharm, VS Code, Python IDE, Spyder, jupyter note book, Google Colab

Topics relevant to the development of SKILLS:

Problem solving techniques – Function - Object oriented programming - data visualization for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE 2010	Course Title: Operating Systems Type of Course: Theory Only		L- P- C	3	0	3
Version No.	2.0					
Course Pre-requisites	Basic knowledge on computers, computer software & hardware, and Computer Organization.					
Anti-requisites	Nil					
Course Description	Operating systems being central to computing activities, this Course provide understanding of the functions and functional modules of operating systems. The design and implementation of Operating systems is also covered.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Operating Systems and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques					
Course Out Comes	On successful completion of the course the students shall be able to: • CO1: Describe the fundamental concepts of operating Systems [Knowledge Level] • CO2: Demonstrate various CPU scheduling algorithms. [Application Level] • CO3: Apply synchronization tools to a given problem. [Application Level] • CO4: Discuss various memory management techniques.[Comprehension Level]					
Course Content:						
Module 1	Introduction	Assignment	Data Analysis task	7 Sessions		
Topics: Overview of OS and design, Introduction- Computer System Architecture, Operating System Structure, Operations, Computing environments, OS implementation, Operating System Services, User and OS interface, System Calls and its types, System Programs [loaders, linkers], UNIX/LINUX commands: System Programs[CLI/SHELL, loaders, linkers]						
Module 2	Process Management	Assignments	Analysis, Data Collection	10 Sessions		
Topics: Process Concept, Operations on Processes, Inter Process Communication, Introduction to threads - Multithreading Models, Process Scheduling– Basic concepts, Scheduling Criteria, Scheduling Algorithms: FCFS, SJF, RR, Priority, Multilevel Queue, Linux Scheduler, CASE STUDY: Linux Scheduler						
Module 3	Process Synchronization and Deadlocks	Quiz	Case studies / Case let	10 Sessions		
Topics: The Critical-Section Problem- Peterson’s Solution, Synchronization hardware, Test and Set, Mutex locks, Semaphores, Advanced Synchronization Problems-IBM Quality and implementation, Monitors. Introduction to Deadlocks, Deadlock Characterization, Methods for handling deadlock: Deadlock Prevention and Implementation, Deadlock Avoidance and Implementation Deadlock detection & Recovery from Deadlock.						
Module 4	Memory Management and File Systems	Assignment	Case Studies / Case let	11 Sessions		
Topics: Introduction to Memory Management, Swapping, Contiguous and Non-Contiguous Memory Allocation, Segmentation, Paging - Structure of the Page Table – Demand Paging – Page Replacement, Allocation of Frames – Thrashing. RAID Structures: Disk Scheduling, RAID LEVELS						
Targeted Application & Tools that can be used: UNIX						

Project work/Assignment:

- Mini Project: Demonstration of File Handling techniques/Memory and Disk Management.

Page replacement algorithms, Scheduling policies, Deadlocks **for Skill Development through Participative Learning techniques**. This is attained through the assessment component mentioned in the course handout.

Course Code: CSE2052	Course Title: DISTRIBUTED SYSTEM Type of Course: Theory based	L- P- C	3	0	3
Version No.	2.0				
Course Pre-requisites	Operating systems				
Anti-requisites	NIL				
Course Description	This course is designed to provide the knowledge of the concepts related to distributed system. The course is aimed at understanding the foundations of distributed systems. It also deals with Peer to peer services and to understand about the system level and support required for distributed system. Further, it focuses on Synchronization, Process and Resource Management. Students will also learn the overview of Distributed system.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of DISTRIBUTED SYSTEMS and attain EMPLOYABILITY through using PARTICIPATIVE LEARNING techniques.				
Course Outcomes	On successful completion of this course the students shall be able to: CO1: Describe the functional characteristics and challenges in distributed system (Knowledge level) CO2: Summarize the mechanism of inter process, indirect communication techniques. (Comprehensive level) CO3: Discuss the features of peer to peer services and file systems. (Comprehensive level) CO4: Apply synchronization techniques. (Application level) CO5: Explain the different process and resource management approaches. (Comprehensive level)				
Course Content:					
Module 1	INTRODUCTION TO DISTRIBUTED SYSTEM	Quiz	Knowledge based Quizzes and assignments;	6 sessions	
Topics: Introduction - Trends in Distributed Systems – Focus on resource sharing- Distributed System model – Challenges-Examples of Distributed Systems -Case study: World Wide Web.					
Module 2	COMMUNICATION IN DISTRIBUTED SYSTEM	Quizzes and assignments	Comprehension based Quizzes and assignments	8 sessions	
Topics: System Model – Models of Communication networks- Inter process Communication – the API for internet protocols – External data representation and Multicast communication. Network virtualization: Overlay networks. Indirect Communication: Group communication – Publish-subscribe systems – Message queues – Shared memory approaches.					
Module 3	PEER TO PEER SERVICES AND FILE SYSTEM	Quizzes and assignments	Comprehension based Quizzes and assignments	9 sessions	
Topics: Peer-to-peer Systems – Introduction – Peer-to-peer – Middleware – Routing overlays. Distributed File Systems –Introduction – File service architecture – Andrew File system-Tapestry. File System: Features-File model -File accessing models.					
Module 4	SYNCHRONIZATION	Quizzes and assignments	Application based Quizzes and assignments	7 sessions	

Introduction – Clocks, events and process states – Synchronizing physical clocks- Logical time and logical clocks – Snapshot algorithm for FIFO channels -Global states – Coordination and Agreement– Distributed mutual exclusion – Shared memory mutual exclusion -Elections				
Module 5	PROCESS AND RESOURCE MANAGEMENT	Quizzes and assignments	Comprehension based Quizzes and assignments	6 sessions
Process Management: Process Migration, Resource Management: Introduction- Load Balancing Approach – Load Sharing Approach-Deadlocks-Models of Deadlock-Deadlock Detection in distributed systems.				
Targeted Application & Tools that can be used: LINUX

Topics relevant to “EMPLOYABILITY SKILLS”: Synchronization, Resource Management, Deadlocks for developing Employability Skills through Participative Learning techniques for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course handout				

Course Code: CSE-404	Course Title: Social Network Analytics Type of Course: Program Core		L-P-C	3	0	3
Version No.	2.0					
Course Pre-requisites	Data Mining, Machine Learning, Graph Theory and Combinatorics, Working knowledge of Python syntax and semantics					
Anti-requisites	NIL					
Course Description	The Course Social Network Analysis is to provide students with essential knowledge of network analysis applicable to real world data, with examples from today’s most popular social networks. The Course presents mathematical methods and computational tools for Social Network Analysis (SNA). Students learn how to identify key individuals and groups in social systems, to detect and generate fundamental network structures, and to model growth and diffusion processes in networks. The course also includes the popular algorithms behind Recommender systems and Search Engine Optimization.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Social Network Analysis and attain ENTREPRENEURIAL SKILLS through PROBLEM SOLVING techniques					
Course Out Comes	On successful completion of this course the students shall be able to: 1. Describe network structure and various types of network centrality measures. (Comprehension) 2. Explain the relevance of ‘influence’ and ‘homophily’ in social network communities. (Application) 3. Interpret the popular algorithms behind Recommender systems and Search Engine Optimization. (Application)					
Course Content:						
Module 1	Introduction to Network Science and Measures	Quiz	Knowledge based quiz on Network Density, Describing Networks, Distance between nodes, walks, trails and paths	No. of Sessions:9		
Topics: Introduction to network science, Relational Data, Nodes, edges and boundaries, Types of Relations, Types of Networks, Representation of Network data, Network Density, Describing Networks, Distance between nodes, walks, trails and paths, Centrality, Degree centrality, Betweenness centrality, Eigenvector centrality, Group centrality.						
Module 2	Community Analysis	Assignment	Node Centric Community Detection & Network Centric Community Detection	No. of Sessions:10		
Topics: Introduction to Community, Communities in Social Media, Taxonomy of Community Criteria, Node Centric Community Detection, Network Centric Community Detection, Edge Betweenness, Community evolution, Evolution of networks in Community Detection, Community Evaluation, Evaluation with and without ground truth, Evaluation measures.						
Module 3	Influence and Homophily	Quiz	Assortativity for Nominal and Ordinal Attributes	No. of Sessions:8		

Topics: Measuring Assortativity, Homophily, Test of Homophily, Mechanisms Underlying Homophily, Selection and Social Influence, Modelling Influence and Schelling Model.				
Module 4	Recommendation systems and SEO	Case Study	How Long Does It Take to Rank for A Keyword – Bloggers Passion SEO Case Study	No. of Sessions:10
Topics: Recommendation in Social Media, Recommender System, Content-Based Methods, Collaborative Filtering(CF),Evaluating Recommendations, Search Engine Optimization, Google PageRank algorithm, Citation Analysis, Dangling Links, IBM HITS algorithm, Limitations of HITS.				
List of Laboratory Tasks: NA				
Project work/Assignment:				
Textbook(s): 1. "Social Media Mining: An Introduction", Reza Zafarani, Mohammad Ali Abbasi, Huan Liu, Cambridge University Press, 2018. 2. "Social Network Analysis, Methods and Applications." Stanley Wasserman and Katherine Faust, Cambridge University Press, 2019				
References: 1. "Web Mining and Social Networking: Techniques and Applications", Guandong Xu, Yanchun Zhang, Lin Li, Springer, 2016				
Web References : 1. https://presiuniv.knimbus.com/user				
Topics relevant to "ENTREPRENEURIAL SKILL": Content-Based Methods, Collaborative Filtering(CF),Evaluating Recommendations, Search Engine Optimization, Google PageRank algorithm ENTREPRENEURIAL SKILLS through PROBLEM SOLVING techniques the assessment is mentioned in the course handout				

Course Code: CSE301	Course Title: Programming in Advanced JAVA Type of Course: Program Core Laboratory integrated			L-P-C	1	4	3
Version No.	2.0						
Course Pre-requisites	NIL						
Anti-requisites	NIL						
Course Description	This intensive, hands-on Course explores advanced Java features and packages. Students will learn Multi-threaded applications, client server programming and JDBC connection. This Course provide in-depth knowledge in JAVA programming - advanced concepts in java , packages and applets, GUI concepts in java-swing, java database connectivity, servlets, J2EE framework, java script and XML.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Advanced Java Programming and attain Employability through Experiential Learning techniques.						
Course Out Comes	COURSE OUTCOMES: On successful completion of the course the students shall be able to: • Implement communication of GUI with DBMS • Develop application using Swing MVC • Develop Server side Application using Servlets and JSP • Implement Inversion of Control and Dependency Injection • Integrate different technology using spring Framework • Practice Enterprise Application						
Course Content:							
Module 1	Database Connectivity	Assignment	Programming Task	10 Sessions			
Topics: SQL basic, Introduction to JDBC, JDBC Drivers & Architecture, CRUD operations using JDBC, Merging data from multiple tables: Joining, Manipulating database with JDBC, Invoking Stored Procedure, JDBC with PostgreSQL.							
Module 2	Swings	Assignment	Programming Task	10 Sessions			
Topics: Introduction to Swings and MVC, Swing MVC Architecture, Component Classes : JButton, JLabel, JTextField, JComboBox, JList, JTable and JTree. Layout Managers, Database Operation using Event Handling.							
Module 3	Web Programming with Servlets & JSP	Assignment	Programming Task	12 Sessions			

Topics: Servlets Introduction, Life Cycle of a Servlet, using Tomcat for servlet development, simple servlet: create and compile servlet source code, start tomcat, start a web browser and request the servlet, servlet API, Handling HTTP Requests and Responses: Handling HTTP GET requests and POST request, Using Cookies, Session Tracking.				
Java Server Pages (JSP): Introduction to JSP, Creating simple JSP Programs, How JSP is processed, JSP Scripting Constructs, Predefined Variables, JSP Directives, JSTL (Core Tags, Function Tags, Formatting Tags, SQL Tags).				
Module 4	Introduction to Spring Frameworks	Assignment	Programming/Data analysis task	10 Sessions
Topics: Hibernate and Java Web Frameworks(Spring): Spring JPA, JPA Specification, Classes and Interfaces, Object Relational Mapping using JPA, JPA implementation with Hibernate, Simple JPA-Hibernate program to Create Database schemas. Spring CORE, Overview of Spring, Spring Architecture, bean life cycle, XML Configuration on Spring, Managing Database				
Targeted Application & Tools that can be used: IDE, Eclipse, Application server, Version control system.

Topics relevant to development of “Employability”: JDBC Drivers & Architecture, Life Cycle of a Servlet, using Tomcat for servlet development for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE311	Course Title: Web Services Type of Course: Laboratory integrated		L- P- C	1	4	3
Version No.	2.0					
Course Pre-requisites	Web Services					
Anti-requisites	NIL					
Course Description	The course includes the basic principles of service-oriented architecture, its components and techniques. It provides an understanding of the architecture, technology, underlying service design and development aspects of web services. The students will also gain knowledge on the operational aspects of cloud services, which form the basic building blocks of cloud computing. Topics include: Introduction to Service Oriented Architecture, Web Service fundamentals, WS-* extensions, Building Service Oriented Architecture, Web Services framework, Service Descriptions (WSDL), Messaging (SOAP & RESTful), Web Service Transactions, Orchestration and Choreography, Policies, Security.					
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Web Services and attain Employability Skills through Experiential Learning techniques.					
Course Out Comes	On successful completion of this course the students shall be able to: 1) Describe the concepts of web services and service oriented architecture.[Knowledge] 2) Develop a SOAP based Web Services for a given scenarios. [Application] 3) Develop a RESTful architecture based Web Services for a given scenario.[Application] 4) Demonstrate the cloud based micro services. [Comprehension]					
Course Content:						
Module 1	Fundamentals of SOA and Web Services (Knowledge)	Assignment	Programming activity		13 Sessions	
Evolution and Emergence of Web Services – Evolution of distributed computing. Core distributed computing technologies – client/server, CORBA, JAVA RMI, Micro Soft DCOM, MOM, Challenges in Distributed Computing, Introduction to Web Services – The definition of web services, basic operational model of web services, tools and technologies enabling web services, benefits and challenges of using web services						
Module 2	SOAP Web Services (Application)	Assignment	Programming activity		10 Sessions	
Overview of SOAP protocol, SOAP Messaging Format, WSDL, WSDL related XML Schema, WSDL language basics, Creating Web Services using SOAP, Deployment of SOAP services, Real-world applications of SOAP based Web services.						
Module 3	RESTful Web Services (Application)	Assignment	Programming activity		10 Sessions	

Overview of REST architectural style, URIs and Resources, REST Principles, REST Methods, Design, Development and Deployment of RESTful Web Services, Real-world applications of RESTful Web Services.				
Module 4	Advances in Web services (Knowledge)	Assignment	Programming activity	8 Sessions
Cloud Services overview, Design, Development and Deployment of cloud services; Concept of Micro Services, Architecture and Development.				
Text book(s): Thomas Erl, “ <i>Service-Oriented Architecture: Concepts, Technology, and Design</i> ”, Pearson Education. 2005				
Reference Book(s): 1. Heather Williamson, “ <i>XML, The Complete Reference</i> ”, McGraw Hill Education.2001 2. Frank. P. Coyle, “ <i>XML, Web Services And The Data Revolution</i> ”, Pearson Education.2002 3. Topics relevant to “SKILL DEVELOPMENT”: Case studies of design and development of web services for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.				

Course Code: CSE233/CSE306	Course Title: Cloud Computing Type of Course: Theory	L- P- C	3	0	3
Version No.	1				
Course Pre-requisites	Basics of Distributed Computing, Service Oriented Architecture				
Anti-requisites	nil				
Course Description	This Course is designed to impart the knowledge of Cloud Computing as a new computing paradigm. The course explores various Cloud Computing terminology, principles and applications. The course also demonstrates the different views of the Cloud Computing such as theoretical, technical and commercial aspects.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Cloud Computing and attain Employability through Participative Learning techniques.				
Course Out Comes	On successful completion of the course the students shall be able to: Describe fundamentals of cloud computing, virtualization and cloud computing services. Explain security and standards in cloud computing. Discuss Cloud mechanisms to optimize the QoS parameters. Develop applications using Cloud services and VM instances.				
Course Content:					
Module 1			10 Sessions		
Introduction to Cloud Cloud Computing at a Glance, Historical Developments, Building Cloud Computing Environments, Computing Platforms and Technologies, Technology Examples, Cloud Computing Architecture, IaaS, PaaS, SaaS, Types of Clouds, Economics of Cloud					
Module 2			10 Sessions		
Virtualization Techniques Basics of Virtualization - Types of Virtualizations, Taxonomy of Virtualization Techniques, Implementation Levels of Virtualization.					
Module 3			09 Sessions		
Cloud QoS and Management Cloud Infrastructure Mechanisms, SLAs, Specialized Cloud Mechanisms, Cloud Management Mechanisms, Cloud Security Mechanisms.					
Module 4			09 Sessions		
Cloud Platforms, Advances in cloud: introduction to Amazon Web Services: Introduction to Google App Engine, Introduction to Microsoft Azure. Media Clouds - Security Clouds - Computing Clouds - Mobile Clouds – Federated Clouds – Hybrid Cloud					
Text Book					

1. John Rittinghouse and James Ransome, “Cloud Computing, Implementation, Management and Security”, CRC Press.

Course Code: CSE 314	Course Title: Software Architecture		L- T-P- C	3	0	0	3
	Type of Course: Theory Only						
Version No.	2.0						
Course Pre-requisites	Software Engineering and Object-oriented Analysis and design						
Anti-requisites	NIL						
Course Description	This course deals with basic concepts and principles regarding software architecture and software design. It starts with discussion on importance of Architectures, design issues, followed by coverage on design patterns. It then gives an overview of architectural structures and styles. Practical approaches and methods for creating and analysing software architecture is presented. The emphasis is on the interaction between quality attributes and software architecture. Students will also gain experience with examples in design pattern application and case studies in software architecture.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Software Architecture and attain EMPLOYABILITY SKILLS through PARTICIPATIVE LEARNING techniques.						
Course Out Comes	COURSE OUTCOMES: On successful completion of the course the students shall be able to: CO1. Describe the importance of software architecture in large-scale software systems. CO2. Recognize the major software architectural styles, design patterns, and frameworks. CO3. Distinguish the quality attributes of a system at the architecture, security and performance levels. CO4. Identify the appropriate architectural pattern(s) for a given scenario						
Course Content:							
Module 1	Introduction	Quiz	Patterns	08 Sessions			
Topics: The Architecture Business Cycle: Where do architectures come from. Software processes and the architecture business cycle; What makes a “good” architecture. Influence of software architecture on organization-both business and technical, What software architecture is and what it is not; Other points of view; Architectural patterns, reference models and reference architectures; Architectural structures and views.							
Module 2	Architectural Styles and Case Studies	Quiz	SOA	07 Sessions			
Topics: Architectural styles; Four Architectural Designs for the KWIC System, Pipes and filters; Data abstraction and object-oriented organization; Event-based, implicit invocation; Layered systems; Service oriented architecture, Hypertext style, Repositories; Interpreters; Heterogeneous architectures. Case Studies: Keyword in Context, Mobile Robot system.							
Module 3	Quality: Functionality and architecture	Quiz	MVC	09 Sessions			
Topics:Architecture and quality attributes; System quality attributes; Quality attribute scenarios in practice; Business qualities; Introducing tactics; Availability tactics; Modifiability tactics; Performance tactics, Security tactics. Quality Model, Application of The Customized Quality Model to a Case Study							
Module 4	Architectural patterns and styles	Seminar	Architectural styles	17 Sessions			
Topics: Architectural Patterns: Introduction; From Mud to Structure: Layers, Pipes and Filters, Blackboard, Distributed Systems: Broker. Design Patterns: Structural decomposition: Whole – Part; Organization of work: Master – Slave; Model View Controller and Reflection patterns. Introduction to Service Oriented Architecture, Three Types of Service-Oriented Architecture							

Targeted Application & Tools that can be used:

Multiple integrations with other major architecture software(ArchX, Archisoft, Build software, Astena, Bouwsoft, Teamleader, Total Synergy, etc.) and export opportunities with google drive, dropbox, and CSV formats allow this tool to be widely and comfortably used in the industry.

Professionally used software – Slack, Google calendar, outlook email, **and others.**

Course Code: CSE 217	Compiler Design	L-T-P- C	3	1	0	4
	Type of Course: Theory Only					
Version No.	2.0					
Course Pre-requisites	nil					
Anti-requisites	NIL					
Course Description	The Course is intended to teach the students the basic techniques that underlie the practice of Compiler Construction. The Course will introduce the theory and tools that can be employed in order to perform syntax-directed translation of a high-level programming language into an executable code. Topics consist of: Introduction to Compilers, Language translators: compilers and interpreters. Lexical Analysis, Role of the parser ,semantic analysis, Intermediate Code Generation, Code Optimization, DAG representation of Basic Blocks, Global optimization, Peephole Optimization, Garbage Collection, Parallel Architectures.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Compiler Design and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: 1. Explain the basic concepts of compiler and its various phases. 2. Construct front end of the compiler. 3. Apply suitable data structure to improve efficiency of compiler. 4. Generate Intermediate code for the given statements. 5. Discuss how to optimize the program for backend of the compiler for different computer architecture					
Course Content:						
Module 1	Introduction And Lexical Analysis	Term paper	Data Analysis	13 Sessions		
Topics: Compilers , Analysis of the source program ,Phases of a compiler ,Cousins of the Compiler , Grouping of Phases, Compiler construction tools , Lexical Analysis , Role of Lexical Analyzer , Input Buffering, Specification of Token, – Recognizer - Introduction to LEX Programming.						
Module 2	Syntax Analysis	Term paper	Data Analysis	15 Sessions		
Topics: Role of the parser, Top Down parsing, Recursive decent parser - Predictive parser -Bottom-up parsing Shift reduce parser - LR parser – SLR parser – Canonical parser – LALR parser - YACC programming.						
Module 3	Semantic Analysis And Intermediate Code Generation	Data Analysis	Data Analysis	8 Sessions		
Introduction to syntax directed translation - Synthesis and inherited attributes - Type Checking - Type Conversions .Topics: Intermediate languages, Declarations, Assignment Statements , Boolean Expressions ,Case Statements – Back patching – Looping statements - Procedure calls.						
Module 4	Code Optimization	Data Analysis	Data Analysis	8 Sessions		
Topics: Optimization of basic Blocks, Introduction to Global Data Flow Analysis, Basic Blocks and Flow Graphs, Next-use Information, Machine Independent Code Optimizations, DAG representation of Basic Blocks, Peephole Optimization.						
Module 5	Code Generation	Data Analysis	Data Analysis	8 Sessions		
Storage Organization, Stack Allocation Space, Access to Non-local Data on the Stack, Heap Management, Issues in the design of code generator, The target machine Register allocation, A simple Code generator						

Targeted Application & Tools that can be used:

The knowledge of this course can be applied in the building automatic translators (compilers) for higher level programming languages. Professionally used software –lex and YACC

Assignment:

Assignment 1- Translate the arithmetic expression: $a + -(b+c)$ into quadraples, triples and indirect triples.

Assignment 2- Draw the DAG for the arithmetic expression $a+a*(b-c)+(b-c)*d$.

Topics relevant to the development of SKILLS:

To optimize the program for backend of the compiler for different computer architecture for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE252	Course Title: Digital Design Laboratory Type of Course: Laboratory Only	L-P-C	0	2	1
Version No.	2.0				
Course Pre-requisites	Basics of Electronics: AC & DC Circuits, Boolean Algebra, Number Systems, Logic Gates.				
Anti-requisites	NIL				
Course Description	Implementing digital design concepts like verification of logic gates, De Morgan's theorem, Reducing Boolean expression using K-map, Adder and subtractor circuits, Number conversion, Multiplexer and De multiplexer using gates, Flip flops, shift registers and counters.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Digital Design and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques.				
Course Outcome	After successful completion of course, students shall be able to i. Develop a simplified logic through simplification technique for complex Boolean functions using logic gates and Hardware Description Language. ii. Demonstrate various combinational and sequential circuits. iii. Implement logic circuits that can function in real life situations				
Course Content:					

1.	:	Verify the truth table / functionality of basic logic gates and universal gates using appropriate ICs
2.	:	Federal bank has implemented Intrusion Detection and Avoidance System, customer can access his locker only under below mentioned conditions. The security system for locker should not allow anybody to access the lockers at any other circumstances. • Lock A, B, C are Open. • Lock A and B are Open but Lock C is Closed. • Lock A and C are Open but Lock B is Closed. • Lock C and B are Open but Lock A is Closed. i. Draw a truth table for this situation and obtain a Boolean expression. Minimize this expression and implement the logic circuit using NAND gates only
3.	:	Mercedes Benz has implemented failsafe sensors for its latest engine. It has 4 failsafe sensors. Engine should switch off to safeguard the passenger and the vehicle for certain hazardous situations, else, engine should keep running unless any of the following conditions arise: • If sensor 1 is activated.

		• If sensor 2 and sensor 3 are activated at the same time. • If sensor 4 and sensor 3 are activated at the same time. • If sensors 2, 3, 4 are activated at the same time. Implement the simplified logic using NAND gates only				
4.	:	A digital system is to be designed in which the month of the year is given as input in four-bit form. The month January is represented as '0000', February '0001' and so on. The output of the system should be '1' corresponding to the input of the month containing 31 days or otherwise it is '0'. Consider the excess numbers in the input beyond '1011' as don't care conditions for system of four variables (A, B, C, D). Design and implement the simplified logic using NAND gates only				
5.	:	Realize and implement a logic circuit that can convert a given binary value to its gray code equivalent and vice versa				
6.	:	Infosys provides intercom facility (EPABX) to all its employees. Development team A is comprised of 16 people positioned in D block. All the team members can communicate with the outer world individually, but the outgoing line is only one. The condition is, the EPABX system is equipped with an 8:1 multiplexer. Realize and implement a logic circuit to enable all the 16 people communicate with the outer world (Function is given).				
7.	:	An event detector is implemented using single JK flip-flop. The output of the event detector becomes uncertain when both the inputs are high. Rectify the problem by cascading one more JK Flip Flop to the first one. Note the changes observed in the output and verify the truth table.				
8.	:	Implement a circuit to count number of floors in ascending order for an elevator that can travel from 0th floor to 7th floor using IC-7476				
9.	:	Using IC-7495, design a circuit to implement the following: i. Ring Counter ii. Johnson Counter				
10.	:	Implement the following function as a decoder using basic gates. <table><tr><td>1</td><td>$F1 = x'yz' + xz$ $F2 = xy'z' + x'y$ $F3 = x'y'z' + xy$</td><td>2</td><td>$F1 = (y'+x)z$ $F2 = y'z' + x'y + yz'$ $F3 = (x+y)z$</td></tr></table>	1	$F1 = x'yz' + xz$ $F2 = xy'z' + x'y$ $F3 = x'y'z' + xy$	2	$F1 = (y'+x)z$ $F2 = y'z' + x'y + yz'$ $F3 = (x+y)z$
1	$F1 = x'yz' + xz$ $F2 = xy'z' + x'y$ $F3 = x'y'z' + xy$	2	$F1 = (y'+x)z$ $F2 = y'z' + x'y + yz'$ $F3 = (x+y)z$			
11.	:	Write Verilog program for the following combinational design along with test bench to verify the design 2 to 4 decoder realization using NAND gates only (structural model)				
12.	:	Write Verilog program for the following combinational design along with test bench to verify the design b. 8 to 3 encoder with priority and without priority (behavioural model)				

13.	:	Write Verilog program for the following combinational design along with test bench to verify the design 8 to 1 multiplexer using case statement and if statements
14.	:	Write Verilog program for the following combinational design along with test bench to verify the design 4-bit binary to gray converter using 1-bit gray to binary converter 1-bit adder and subtractor
15.	:	Model in Verilog for a full adder and add functionality to perform logical operations of XOR, XNOR, AND and OR gates. Write test bench with appropriate input patterns to verify the modeled behaviour
Targeted Application & Tools that can be used: Xilinx Tool

Topics relevant to “SKILL DEVELOPMENT”: 8:1 multiplexer, Ring Counter, Jhonson Counter, JK Flip-Flop, decoder for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.		

Course Code: CSE307	Course Title: Data Mining Type of Course: Discipline Elective/ Theory Only Course		L- P- C	3	0	3
Version No.	2.0					
Course Pre-requisites	Students are expected to be familiar with the basics of Linear Algebra, Probability and Statistics and should have a knowledge on DBMS.					
Anti-requisites	NIL					
Course Description	Introduction, Applications, issues in data mining, data pre-processing techniques, data mining tasks, association rules, advanced association rules, classification, different approaches for classification, clustering, outlier detection. Recent trends in data mining.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Data Mining and attain Employability through Problem Solving Methodologies					
Course Out Comes	On successful completion of the course the students shall be able to: • Apply the various pre-processing techniques needed for a data mining task. • Understand the functionality of the various data mining algorithms. • Appreciate the strengths and limitations of various data mining models. • Understand the advances in data mining for real life applications.					
Course Content:						
Module 1	Introduction to Data Mining	Assignment	Data Collection	5 Sessions		
Topics: Introduction to Data mining – Data Mining Goals– Stages of the Data Mining Process–Data Mining Techniques– Merits and Demerits.						
Module 2	Data preprocessing	Quiz	Problem Solving	9 Sessions		
Topics: Types of data – Pre Processing steps – Data Preprocessing Techniques – Similarity and Dissimilarity measures.						
Module 3	Data Mining – Frequent Patterns	Assignment	Problem Solving	7 Sessions		
Topics: Market Basket Analysis, item sets – Generating frequent item sets and rules efficiently – Apriori Algorithm– FPGrowth.						
Module 4	Classification and clustering	Assignment	Problem Solving	11 Sessions		
Classification and Clustering Decision tree Induction – Bayesian classification –Classification by Back Propagation - Lazy learners – Modern evaluation and selection techniques to improve classification accuracy. Clustering Analysis – portioning method – Hierarchical methods – Density based method						
Module 5	Outlier detection & Data mining trends	Assignment	Problem Solving	5 Sessions		
Anomaly detection preliminaries - Different Outlier detection techniques-Web mining- Text mining- Demonstration of Weka tool.						
Project work/Assignment:						

Assignments

1. From the dataset given, find the Entropy, Gain value of the attributes and also draw the decision tree using entropy for the given dataset.
2. Transactional Data Base, D given below which contains set of items find the frequent item set using the Apriori Algorithm and generate the Association Rules. Minimum Support count is 2%. Minimum confidence is 60%.

T _{id}	Items
10	1, 3, 4
20	2, 3, 5
30	1, 2, 3, 5
40	2, 5

Course Code: CSE2009	Course Title: Computer Organization and Architecture	L- P- C	3	0	3
Version No.	2.0				
Course Pre-requisites	CSE 2015 Digital Design				
Anti-requisites	NIL				
Course Description	This course introduces the core principles of computer architecture and organization from basic to intermediate level. This theory based course emphasizes on understanding the interaction between computer hardware and software. It equips the students with the intuition behind assembly-level instruction set architectures. It helps the students to interpret the operational concepts of computer technology as well as performance enhancement.				

Course Objective	The objective of the course is to familiarize the learners with the concepts of Computer Organization and Architecture and attain Skill Development through Participative Learning techniques.			
Course Outcomes	On successful completion of the course the students shall be able to: 1] Describe the basic components of a computer, their interconnections, and instruction set architecture [Comprehension] 2] Apply appropriate techniques to carry out selected arithmetic operations 3] Explain the organization of memory and processor sub-system			
Course Content:				
Module 1	Basic Structure of computers	Assignment	Data Analysis task	12 Classes
Topics: Computer Types, Functional Units, Basic Operational concepts, Bus Structures, Computer systems RISC & CISC, Performance – Processor Clock, Basic Performance Equation, Clock Rate, Performance Measurement. Arithmetic Operations on Signed numbers. Instructions and Instruction Sequencing, Instruction formats, Memory Instructions.				
Module 2	Instruction Set Architecture and Memory Unit	Assignment	Analysis, Data Collection	12 Classes
Topics: Instruction Set Architecture: Addressing Modes, Stacks and Subroutines. Memory System: Memory Location and Addresses, Memory Operations, Semiconductor RAM Memories, Internal Organization of Memory chips, Cache memory mapping Techniques.				
Module 3	Arithmetic and Input/output Design	Case Study	Data analysis task	10 Classes
Topics: Arithmetic: Carry lookahead Adder, Signed-Operand Multiplication, Integer Division, and Floating point operations. Input/output Design: Accessing I/O Devices, I/O communication, Interrupt Hardware, Direct Memory Access, Buses, Interface Circuits				
Module 4	BPU and Pipelining	Assignment	Analysis, Data Collection	11 Classes
Topics: Basic Processing Unit: Fundamental Concepts, Single Bus organization, Control sequence, Execution of a Complete Instruction, Multiple Bus Organization. Pipelining: Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, Hazards.				
Targeted Application & Tools that can be used: Targeted employment sector is processor manufacturing and memory chip fabrication vendors like Intel, AMD, Motorola, NVidia, Samsung, Micron Technology, western Digital etc. Targeted job profiles				

include Memory circuit design and verification engineers, Physical system design engineer, System programmer, Fabrication engineer etc.

Tools:

- Virtual Lab, IIT KGP
- Tejas – Java Based Architectural Simulator, IIT Delhi

Topics relevant to “SKILL DEVELOPMENT”: Generation of Computers, CISC and RISC processors, Bus Arbitration, Collaboration and Data collection for Term assignments and Case Studies for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE203	Course Title: Discrete Mathematics Type of Course: Program Core& Theory Only	L-P-C	4	0	4
Version No.	2.0				
Course Pre-requisites	NIL				
Anti-requisites	NIL				
Course Description	This course highlights the basics of discrete structures and develop ability to solve problems involving mathematical logic, sets, functions, relations, principles of counting, pigeonhole principles, recurrence relations, Principles of Inclusion and Exclusion. forces, and moments with their applications in allied subjects. It is a prerequisite for several Courses involving Compiler Design, Artificial Intelligence. This course is both conceptual and analytical in nature that would help the student to use the concepts of discrete structures to solve and prediction of data analytics. The students should have prior knowledge of basic mathematics pursue the Course. After successful completion of the Course, the students would acquire knowledge to solve problems involving mathematical logic, sets, functions, relations, principles of counting, pigeon hole principles, recurrence relations, Principles of Inclusion and Exclusion with an emphasis on real-world engineering applications and problem solving.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Discrete Mathematics and attain SKILL DEVELOPMENT through PROBLEM SOLVING Methodologies techniques.				
Course Out Comes	On successful completion of the course the students shall be able to: 1] Describe a logic sentence in terms of predicates, quantifiers, and logical connectives. 2] Solve problems on Functions and Relations using basic principles of Set Theory. 3] Explain the concepts of Boolean Algebra. 4] Apply basic counting techniques to combinatorial problem.				
Course Content:					
Module 1	Foundations of Logics and Proofs	Assignment	Problem Solving	10 Sessions	
Topics: Propositional Logic, Propositional Logic Equivalences, Inference rules, Normal forms, Introduction to Proofs, Resolution by Refutation, Predicates and Quantifiers, Introduction to Proofs. Assignment: Problems.					
Module 2	Basic Structures: Sets, Functions, Relations	Assignment	Problem Solving	10 Sessions	

Topics: Sets and set-operations, Venn Diagram, Cardinality of Sets, Functions: Types, Invertible Functions, Composition, Sequences and Summations, Relations and their properties & representations, Equivalence Relations, Closure of Relations. Assignment: Problems and applications				
Module 3	Posets, Lattices and Boolean Algebra	Assignment	Problem Solving	10 Sessions
Topics: Partial ordering, Poset, Hasse Diagram, Lattices & Algebraic structures, Basic properties of algebraic systems by lattices, Distributive lattices, complement of an element in a lattice, Boolean lattice & Boolean algebra, Topological Sorting. Assignment: Problems and Applications				
Module 4	Principles of Counting Techniques	Assignment	Problem Solving	12 Sessions
Topics: Number Theory: Integers and Division, GCD, Chinese Remainder Theorem, Solving Congruences, Pigeon Hole Principle, Mathematical Induction, Generalized Permutations and Combinations, Recurrence Relations, Applications of Recurrence Relations, Generating Functions, Principle of Inclusion and Exclusion, Applications of Inclusion and Exclusion. Assignment: Problems and Applications				
Targeted Application & Tools that can be used: NIL				
Project work/Assignment: Problems on all the topics and relevance with field of computer science

Topics relevant to development of "SKILL": Mathematical Logic, Permutation and Combinations for Skill Development through Problem Solving methodologies. This is attained through assessment component mentioned in course handout.				

Course Code: CSE225	Course Title: Introduction to Combinatorics and Graph Theory Type of Course:		L- P- C	3	0	3
Version No.	2.0					
Course Pre-requisites	Discrete Mathematical Structures					
Anti-requisites	NIL					
Course Description	This course is a blend of the mathematical techniques applicable to Computer science, Information Technology and Statistics. Graph Theory gives us, both an easy way to pictorially represent many major mathematical results, and insights into the deep theories behind them. In this course, among other intriguing applications, we will see how GPS systems find shortest routes, how engineers design integrated circuits, how biologists assemble genomes, why a political map can always be colored using a few colors. Topics Include: Principles of Inclusion and Exclusion, Rook Polynomial, Derangements. Graph Theory: Graph Terminologies, Isomorphism, Coloring, Matching, Planar Graphs, Trees Terminologies, Traversals, Spanning Trees, Shortest path algorithms, Prefix Codes.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Introduction to Combinatorics and Graph Theory and attain SKILL DEVELOPMENT through PROBLEM SOLVING Methodologies.					
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Discuss the fundamental concepts of Graph theory, theorems of matching, connectivity, coloring, and planar graphs. [L2: Comprehension] CO2: Discuss different types of trees and traversal techniques. [L2: Comprehension] CO3: Apply different algorithms to find optimal path for a given graph. [L3: Applications] CO4: Application of different mathematical proofs techniques in proving theorems. [L3: Applications]					
Module 1	Principles of Counting	Assignment and Quiz	Comprehension based Quizzes and Assignment	12 Sessions		
The Principle of Inclusion and Exclusion, Generalizing Inclusion – Exclusion Principles, Derangements – Nothing is in its Right Place, First order and second order homogeneous recurrence relations – Non-homogeneous recurrence relations, Generating functions –Exponential generating function.						
Module 2	Introduction to Graph Theory	Assignment and Quiz	Comprehension based Quizzes and Assignment	18 Sessions		
Basic Concepts: definition, types of graphs, Graph Terminology and Special Types of Graph, representation of a graph and connectedness graph: (paths, walk. cycles, edge deleted and vertex deleted). Graph isomorphism, Eulerian graph, Hamiltonian graph, Planar graph (three utility problem), Graph traversal- BFS, DFS, Transport network-Max-flow/Min-cut algorithm ,Graph coloring.						
Module 3	Trees	Assignment and Quiz	Comprehension based Quizzes and Assignment	18 Sessions		

Tree: Definitions, properties, Binary search tree, Rooted trees-M-ary tree, weighted tree, Prefix code-Huffman code, Game Tree, Decision tree, Tree traversal: in-order, pre-order, post-order, infix, postfix, prefix, spanning tree, Algorithm on networks: Shortest path algorithm- Dijkstra's algorithm, Minimal spanning tree- Kruskal algorithm and Prim's algorithm.	
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course

Topics relevant to "SKILL DEVELOPMENT": Rooted trees-M-ary tree, weighted tree, Prefix code-Huffman code, Game Tree for Skill Development through Problem Solving Methodologies. This is attained through assessment component mentioned in the course handout.	

Course Code: CSE 211	Course Title: COMPUTER NETWORKS Type of Course: Program Core Theory	L-P-C	3	0	3
Version No.	2.0				
Course Pre-requisites	Analog and digital signals, Number representation-binary, decimal, hexadecimal, Binary-Logical, Operations, Frequency, Amplitude and Phase, Knowledge about directed and undirected graphs and Basics of Communications.				
Anti-requisites	NIL				

Course Description	The main emphasis of this Course is on the organization and management of networks. The Course objectives include learning about computer network organization and implementation, obtaining a theoretical understanding of data communication and computer networks, and protocols, and gaining practical experience in the installation, monitoring, and troubleshooting of LAN systems.			
Course Objectives	The objective of the course is to familiarize the learners with the concepts of COMPUTER NETWORKS and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques			
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Describe The Basic Concepts Of Computer Networks And Reference Models. [Knowledge] CO2: Describe The Physical And Data Link Layer Functionalities. [Comprehension] CO3: Apply the knowledge of IP addressing and routing mechanisms connect to a computer network. [Application] CO4: Explain The Functionalities Of Transport Layer And Application Layer. [Comprehension]			
Course Content:				
Module 1	Introduction to data communication and computer networks:	Assignment	Knowledge	No. of Sessions:9
Topics: Introduction, Networks, Network Types, Internet History , Protocol Layering, The OSI Model, TCP/IP Protocol Suite, Networking Devices				
Module 2	Physical And Data Link Layer	Assignment	Comprehension	No. of Sessions: 9
Topics: Data And Signals, Digital Signals, Transmission Impairment, Data Rate Limits: Noiseless Channel, Nyquist Bit Rate, Noisy Channel: Shannon Capacity Performance , Error – Detection And Correction – Parity, CRC, Flow Control And Error Control-Stop And Wait, Go Back-N ARQ, Selective Repeat ARQ, Sliding Window, MAC, Wired LAN Ethernet				
Module 3	Network Layer:	Assignment	Application	No. of Sessions:12
Topics: Network Layer Services, Packet Switching, Ipv4 Addresses, IPv4 Header, Basic Routing Algorithm, Unicast Routing Protocols: Interior Gateway Protocols, Exterior Gateway Protocols, Introduction To Troubleshooting And The Future Of Networking , Ping: Internet Control Message Protocol, Traceroute, Ipv6 Headers, Transition From Ipv4 To Ipv6				
Module 4	Transport layer and Application Layer	Assignment	Application	No. of Sessions: 12
Topics: Introduction To The Transport Layers , UDP, TCP, The Application Layer: Domain Name System (DNS), Domain Name Space, Name/Address Mapping, Telnet, SSH , HTTP, SMTP, FTP.

Topics relevant to “SKILL DEVELOPMENT”: Domain Name Space, Name/Address Mapping for Skill Development through Participative Learning. This is attained through the assessment component mentioned in the course handout.

Course Code: CSE255	Course Title: ANALYSIS OF ALGORITHMS LAB Type of Course: Practical	L- T-P- C	0	0	2	1
Version No.	2.0					
Course Pre-requisites	Meaning of Analysis and various analysis and its extension, Mathematical Induction and its importance to analysis of Algorithms, Introduction to Pseudo code, Knowledge of Recursive and Non Recursive algorithms.					
Anti-requisites						
Course Description	This Course introduces techniques for the design and analysis of efficient algorithms and methods of applications. It deals with analyzing time and space complexity of algorithms, and to evaluate trade-offs between different algorithms. Topics include: Brute force- Bubble sort, linear search, Divide-and-conquer- Merge sort, Quick sort. Dynamic programming and greedy technique- Prim's, Kruskal's, Dijkstra's Algorithm, Warshall's algorithm, Floy'd algorithm, Coin changing problem, Multi stage graph – Optimal Binary Search Trees ,Backtracking – N Queens Problem, Hamiltonian Path Problem, M Coloring Problem. Backtracking.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Analysis of Algorithms Lab and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: 1. Compute time complexities for various Recursive and non-recursive Algorithms [Application]. 2. Demonstrate the Brute Force Technique for real world problems [Application] 3. Apply divide and conquer technique for searching and sorting [Application] 4. Demonstrate the Dynamic Programming and Greedy Algorithms for various applications [Application]					
Course Content:	Non-recursive algorithms: Factorial, Max. Recursive algorithms: Factorial, GCD, Search, Tower of Hanoi. Brute Force Technique: Bubble sort, Linear Search. Divide and Conquer: merge sort, quick sort. Dynamic programming: Coin changing problem, Multi stage graph – Optimal Binary Search Trees ,The knapsack problem, Warshall's Algorithm, Floyd's Algorithm. The Greedy Method: Prim's and Kruskal's algorithm to find Minimum Spanning Tree, Single source shortest path (Dijkstra's Algorithm), Boolean Satisfiability Problem (SAT). Hamiltonian Path Problem, M Coloring Problem. Backtracking: N-Queens problem.					

List of Laboratory Tasks

1. Apply non recursive algorithmic designing technique to solve Factorial of a number, Linear Search , finding max element problem and calculate the time efficiency (best, average & worst).
2. Apply recursive algorithmic designing technique to solve Factorial, GCD, , Tower of Hanoi, problems and calculate time (Best, average & worst) efficiency.
3. Apply Brute force algorithmic designing technique to sort elements using bubble sort algorithm and calculate time (Best, average & worst) efficiency.
4. Apply divide and conquer algorithmic designing technique to sort elements using merge sort algorithm and calculate time (Best, average & worst) efficiency.
5. Apply divide and conquer algorithmic designing technique to sort elements using Quick sort algorithm and calculate time (Best, average & worst) efficiency
6. Apply dynamic programming algorithmic designing technique to find All pair Shortest Path for a given graph using Floyds and Warshall's algorithm
7. Apply dynamic programming algorithmic designing technique for Solving 0/1 knapsack problem and find its efficiency.

Apply dynamic programming algorithmic designing technique for Solving Coin changing problem and find its efficiency.

Apply dynamic programming algorithmic designing technique to find Optimal Binary Search Trees.

10. Apply greedy algorithmic designing technique for constructing MST for a given graph using prim's algorithm
11. Apply greedy algorithmic designing technique for constructing minimum spanning tree using Kruskal's algorithm

Apply backtracking algorithmic designing technique for M Coloring Problem

13. Apply backtracking algorithmic designing technique for solving queen's problems for 4, 8 and 16 inputs.

Targeted Application & Tools that can be used:

Social media networks, GPS applications, Google search, e-commerce platforms, Netflix recommendation systems, etc.

NPTEL course – <https://nptel.ac.in/courses/106106131>

Topics relevant to the development of SKILLS:

1. Quick sort
2. The knapsack problem
3. Warshall's Algorithm
4. Floyd's Algorithm.
5. Prim's and Kruskal's algorithm to find Minimum Spanning Tree
6. Single source shortest path (Dijkstra's Algorithm).
7. Backtracking: N-Queens problem.

for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE218	Course Title: Human-Computer Interaction Type of Course: Theory Only	L- T- P- C	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Basic knowledge of HTML and web design					
Anti-requisites						
Course Description	This course highlights the fundamental theories to introduce students about the basic concepts of human-computer interaction. It will cover the theory and methods that exist in the field. Human-computer interaction is an interdisciplinary field that integrates theories and methodologies from computer science, cognitive psychology, design, and many other areas. It stresses the importance of good interfaces and the relationship of interface design to effective human interaction with computers. It helps in categorizing the interfaces based on the processes, methods and programming used. It focuses on applications of emerging fields in human computer interaction.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Human Computer Interaction and attain Skill Development through Participative Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: 1) Identify the factors influencing user interfaces; [Knowledge] 2) Apply guidelines, principles, theories and methodologies for designing interfaces; [Application] 3) Select user interfaces based on interface design evaluation. [Comprehension] 4) Identify the applications of emerging fields in human computer interaction; [Comprehension]					
Course Content:						
Module 1	Introduction to HCI	Knowledge				20 Sessions
Introduction to HCI – Importance of HCI - Human Perception - Input output channels, Human memory, Thinking: Reasoning and problem solving, Emotion, Psychology and the design of interactive systems – Cognition – Cognitive frameworks – Models of interaction, Frameworks and HCI – Ergonomics – Universal usability.						
Module 2	Interface design	Application				10 Sessions
Good and Bad design – Interaction design – Guidelines – Principles – Theories – The process of design –Prototyping and Construction - Conceptual design – Physical design – The four pillars of design – Development methodologies – Participatory design – Scenarios development – Social impact statement for early design review – Legal issues.						
Module 3	Evaluating interface design	Comprehension				11 Sessions

Evaluating interface design – Evaluation, Goals of evaluation, Expert Reviews, Usability testing and Laboratories, Survey Instruments, Acceptance Tests, evaluating during Active Use, Controlled Psychologically Oriented Experiments, Choosing an evaluation method, Natural Language in Computing				
Module 4	Information presentation	Term paper/Assignment	Comprehension	9 Sessions
Information presentation – Data type by task taxonomy, Challenges for Information Visualization – Groupware – Goals of collaboration and participation, Asynchronous distributed interfaces, Synchronous distributed interfaces, Face to Face interfaces - Speech and auditory interfaces – Multi modal interaction - Design for diversity – Graphical user interfaces – The web mobile devices.				
Targeted Application & Tools that can be used:				
Assignment:				
1. Explain the role of cognition in human computer interaction. 2. Explain any three expert review methods

for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course handout.				

Course Code: CSE325	Course Title: Introduction to Bioinformatics Type of Course: General CSE Basket, Theory based	L- P- C	3	0	3
Version No.	2.0				
Course Pre-requisites	Basics of Biology, basics of Computers.				
Anti-requisites	NIL				

Course Description	This course is designed to provide the knowledge of the concepts related to bioinformatics. The course is aimed at understanding the DNA and Protein sequences and databases. It also deals with Pairwise comparison and calculating the scoring matrix. Further, it focuses on Sequence Alignment techniques, discovering the Motifs in the sequence. Students will also learn the overview of Structural Bioinformatics and Genome sequencing.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Introduction to Bioinformatics and attain Employability through Participative Learning techniques.			
Course Outcomes	C.O.1: Understand the DNA Protein sequence and structures. (Bloom's Level: Knowledge) C.O.2: Explain the file formats and sequence alignments of DNA sequence. (Bloom's Level: Comprehension) C.O.3: Apply the techniques of the motifs discovery for the analysis of Protein Sequence. (Bloom's Level: Application)			
Course Content:				
Module 1	Fundamentals of Bioinformatics	Quiz	Comprehension based Quizzes and assignments;	9 Classes
Topics: Introduction to Bioinformatics: Introduction to molecular biology, Cell, DNA, RNA, Transcription, Translation, Folding, Gene Structure, Introduction to Bioinformatics, Components and fields of bioinformatics, Omics, basic principles of structural/functional analysis of biological molecules, Biological Data Acquisition, Types of DNA sequences, Genomic DNA, Mitochondrial DNA, DNA Sequencing tools, Protein sequencing and structure determination methods, Finding Reverse complement of a sequence.				
Module 2	Genome databases and Sequence Similarity	Quizzes and assignments	Comprehension based Quizzes and assignments	8 Classes
Topics: Types and classification of genome databases, DNA sequence retrieval system, various DNA and protein sequence file formats, Common sequence file formats; Files for multiple sequence alignment; Files for structural data, Frequent words and k-mers in Text, String Reconstruction problem, Sequence Similarity searching, Sequence Similarity searching tools, NCBI BLAST, PSI BLAST, Significance of sequence alignments, Alignment scores and gap penalties.				
Module 3	DNA sequence analysis and applications	Quizzes and assignments	Comprehension based Quizzes and assignments	10 Classes
Sequence similarity searches and alignment tools, Finding alignment using Needleman-Wunsch and Smith-Waterman algorithm, Heuristic Methods of sequence alignment, Pair-wise and multiple sequence alignments, DNA sequence analysis, Motif in protein sequence, Motif discovery using Gibbs sampling, Motif finding, Gene Prediction models: Hidden Markov model(HMM), Generalized Hidden Markov model(GHMM), Bayesian method.				
Targeted Application & Tools that can be used: BLAST, FastA, ClustalW, MEGA				
Project work/Assignment:				

Each batch of students (self-selected batch mates – up to 4 in a batch) will be allocated case studies/assignments

Textbook(s):

Topics related to development of “Employability skills”: Batch wise presentations on selected topics

1. String Reconstruction problem
2. Sequence Similarity searching
3. Alignment scores and gap penalties
4. Protein sequencing
5. Gene Prediction models: Hidden Markov model(HMM)
6. Finding similarities by performing pairwise and multiple sequence alignment,
7. Evaluating phylogenetic trees.

for developing **Employability Skills** through **Participative Learning techniques**. This is attained through assessment component mentioned in course handout.

Course Code: CSE396	Course Title: Software Testing and Quality assurance Type of Course: Lab Integrated	L- T-P- C	2	0	2	3
Version No.	2.0					
Course Pre-requisites	Basic knowledge of software engineering and programming knowledge					
Anti-requisites						
Course Description	This Course is designed to make the students understand the strategies, methods and technologies of software testing effectively. It aims at Designing test plans and test cases, doing automatic testing; reporting on software defects; assessing the software product correctly; and distinguish the relationship between software testing and quality assurance. In addition, students are expected to do a group assignment on software testing tools of their choice. Topics include: Testing techniques, integration, code inspection, peer reviews, verification and validation, statistical testing methods, preventing and detecting errors, selecting and implementing project metrics, and defining test plans and strategies that map to system requirements. Testing principles, formal models of testing, all aspects of quality assurance, performance measuring and monitoring.					
Course Objective	This course is designed to develop ENTREPRENEURIAL SKILLS by using EXPERIENTIAL LEARNING Techniques.					

Course Outcomes	On successful completion of the course the students shall be able to: 1. Describe the fundamentals of software testing for Quality assurance 2. Select the appropriate Testing type to test Applications/Softwares 3. Report the bugs found in Testing			
Course Content:				
Module 1	Basics of software testing	Knowledge		8 Sessions
Phases of Software Project, Quality, Quality assurance and Quality Control, Testing, Verification and Validation, Life Cycle Models. Software Testing life Cycle (STLC)				
Module 2	Types of testing	Comprehension		10 Sessions
Introduction to White Box Testing, Static Testing, structural Testing. Challenges in White Box Testing, Fundamentals of Black Box Testing, When and How to do Black Box Testing. Problems Boundary value Analysis. Equivalence Partition ,Problems on Equivalence Partition				
Module 3	TYPES OF TESTING, continued	Comprehension		12 Sessions
Integration Testing overview, Integration Testing as a Phase of Testing, Defect Bash System Testing Overview, Functional and Non-Functional Testing, Acceptance Testing. Compatibility Testing , Stress and Interoperability Testing , Test case Preparation.				
Module 4	Specialized testing techniques	Comprehension		9 Sessions
Performance Testing, Regression Testing, Internationalization Testing, Ad-hoc testing Defect Life Cycle, Bug Reporting, Basics of Software Test Automation, Metrics, Metrics Types, Project Metrics.				
Targeted Application & Tools that can be used: MS office				
Assignment: Writing Test Cases and Bug Reports for simple Applications				
Text Book

https://puniversity.informaticsglobal.com:2229/login.aspx				
Topics relevant to “EMPLOYABILITY SKILLS”:				
1. Black Box testing 2. White Box Testing 3. Test Case preparations 4. Bug Reports				
for developing Entrepreneurial Skills through Experiential Learning techniques . This is attained through assessment component mentioned in course handout.				

Course Code: CSE 299	Course Title: Data Analytics using R Type of Course: Integrated	L- P- C	2	2	3
Version No.	2.0				
Course Pre-requisites	Fundamentals of Computers and Basic Knowledge of Statistics.				
Anti-requisites	NIL				
Course Description	This course is designed to provide the core concepts of data analytics in the R environment. Initially train them with basic R, then progressively increase the difficulty as they move along in the course, capping with advanced techniques through case studies. Mastering the core concepts and techniques of data analytics in R, will help the students to apply their knowledge to a wide range of Data Analytics. R is now considered one of the most popular analytics tool in the world.				
Course Objective	This course is designed to develop ENTREPRENEURIAL SKILLS by using EXPERIENTIAL LEARNING Techniques				
Course Outcomes	On successful completion of this course the students shall be able to: 1). Apply basic R functions pertaining to fundamental data analysis. [Application] 2). Interpret data using appropriate statistical methods. [Application] 3). Demonstrate the decision trees concept with the given dataset. [Application] 4). Demonstrate the Mining concepts for both Data and Text. [Application]				
Course Content:					
Module 1	Introduction to Data Analysis and R	Quiz	Coding Assignment	6 Sessions	
Topics: Introduction to R, Overview of data analysis, Working with Directory in R, Loading and Handling data in R, Exploring Data in R, Classification of Data: Structured, Semi-Structured, Applications of Data Analytics, R Commands, Variables and Data Types, Control Structures, Array, Matrix, Vectors, Factors, Functions, R packages.					
Module 2	Exploratory Data Analytics	Coding Assignment	Case Study	11 Sessions	
Topics: Exploring a new dataset, Anomalies in numerical data, Visualizing relations between variables, Analysis of Variance and Correlation, Data Transformation, Merging Data Frames, Outlier Detection, Combining multiple vectors, Assumptions of Linear Regression, Simple and multi linear regression, KNN, Support Vector Machine, Logistic Regression, PCA.					
Module 3	Decision Tree and Clustering	Coding Assignment	Project	12 Sessions	
Topics: What is Decision Tree, Decision Tree Representation in R, Basic Decision Tree Learning Algorithm, Measuring Features, Issues in Decision Tree Learning, performance evaluation of Decision tree. Basic concepts of Clustering, Hierarchical Clustering, k-means Algorithm, CURE Algorithm.					

Module 4	Association Rules and Text Mining	Quiz	Project	8 Sessions
Topics: Frequent Itemset, Mining Algorithm Interfaces, Distance-based Clustering Transaction and Associations, Definition of Text Mining, A few Challenges in Text Mining, Text Mining Vs Data Mining, Text Mining in R, Core Text Mining Operations.				
Targeted Application & Tools that can be used: Tools: RStudio / Google Colab				
Project work/Test: During the course, students would need to do coding assignments to learn to train and use different models. Sample coding assignments include: Analysis of Sales Report of a Clothes Manufacturing Outlet. Comcast Telecom Consumer Complaints. Web Data Analysis				
Text Book(s): 1. Data Analytics Using R – Seema Acharya, Mc Graw Hill.				
Reference(s): 1. Exploratory Data Analytics Using R, Ronald K Pearson, CRC Press				
Web link(s): 1. https://r4ds.had.co.nz/ 2. https://puniversity.informaticsglobal.com:2229/login.aspx				
Topics relevant to “Entrepreneurial SKILLS”: 1. Linear Regression 2. Logistic Regression 3. K-means Algorithm 4. Hierarchical clustering 5. CURE Algorithm 6. Decision Tree Learning				
for developing Entrepreneurial Skills through Experiential Learning techniques . This is attained through assessment component mentioned in course handout.				

Course Code: CSE2074	Course Title: Database Management Systems			L-P-C	2	2	3
	Type of Course: 1) School Core 2) Laboratory Integrated						
Version No.	1.0						
Course Pre-requisites	NIL						
Anti-requisites	NIL						
Course Description	This course introduces the core principles and techniques required in the design and implementation of database systems. It covers concepts of relational database systems (RDBMS). More emphasis is set on how to design, develop, organize, maintain and retrieve the information efficiently. It helps the students to learn and practice data modeling and database designs. The associated laboratory is designed to implement database design using MySQL (My Structured Query Language-Open Source) in information technology applications. All the exercises will focus on the fundamentals for creating, populating, sophisticated, interactive way of querying, and simultaneous execution of the transactions of database.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Database Management Systems and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques.						
Course Outcomes:	On successful completion of the course the students shall be able to: 1] Understand core concepts of database (Knowledge) 2] Apply normalization techniques to refine database schema (Application) 3] Develop database with concurrent transactions execution feature (Application)						
Course Content							
Module 1	Introduction to Database and its Conceptual Model (Knowledge)	Assignment	Problem Solving	6 Classes			
Topics: Introduction to Database: Schema, Instance, 3-shema architecture, <i>physical and logical data independence</i> , <i>Data isolation problem in traditional file system</i> , advantages of database over traditional file systems. Conceptual Data Modelling: Entity Relationship (ER) Model, ER Model to Relational Model, Examples on ER model.							
Module 2	Query Languages (Application)	Assignment	Problem Solving	7 Classes			
Topics: Relational Algebra with selection, projection, rename, set operations, cartesian product, joins (inner and outer joins), and division operator. Examples on Relational Algebra Operations. MySQL Database Querying , DDL, DML, Constraints, Operators, Set Operators, Aggregate Functions, Joins, Views, Procedures, Functions and Triggers.							

Module 3	Designing and Refining Database Schema (Application)	Assignment	Programming Task	7 Classes
Topics: Schema Design: <i>Problems in schema design, redundancy and anomalies.</i> Schema refinement: Normal Forms based on Primary Keys-(1NF,2NF, 3NF), Boyce-Codd Normal Form, Multi valued Dependency (Fourth Normal Form), Join Dependencies (Fifth Normal Form), <i>lossy and lossless decompositions.</i>				
Module 4	Transaction Management and Concurrency Control (Application)	Assignment	Problem Solving	6 Classes
Topics: Transaction: Desirable properties (ACID) of Transactions, <i>Simultaneous Transactions and their problems like dirty read, lost update and incorrect summary</i>, Serializability, Conflict Serializability, View Serializability; Concurrency Control: Locking and Time-stamping concurrency schemes.				
List of Laboratory Tasks: Create Employee, Student, Banking and Library databases and populate them with required data. Do the following experiments of different lab sheets on those databases. Labsheet-1 [3 Practical Sessions] Experiment No 1: [1 Session] To study and implement Data Definition Language (DDL) commands and Data Manipulation Language (DML) commands of MySQL. Level 1: Perform operations using Data Definition Language and Data Manipulation Language commands including different variants of SELECT on Student DB. Level 2: Identify the given requirements; valid attributes and data types and Perform DDL and DML operations on a given scenario. [Banking Databases] Experiment No. 2: [2 Sessions] To implement different types of MySQL constraints and relational, logical, pattern matching, BETWEEN, IS NULL, IN and NOT IN Special Operators. Level 1: Create tables on Banking database using PRIMARY KEY, NOT NULL, UNIQUE, FOREIGN KEY and demonstrate the working of relational, logical, pattern matching, BETWEEN, IS NULL, IN and NOT IN Special Operators on Student Database. Level 2: Enforce different types of data and referential integrity constraints. Then try queries with special operators based on the student database. [Banking Database]. Labsheet-2 [3 Practical Sessions] Experiment No. 3: [1 Session] To try for aggregation of data in to groups and sub-groups using Group by, HAVING clauses and sort data using Order By Clauses. Level 1: Implement the conjugate of GROUP BY, ORDER BY and aggregate functions on Banking Database. Level 2: Implement MySQL queries on library database using appropriate clauses and aggregate functions. Also order the data either in ascending and descending order using corresponding clause. [Library databases].				

Experiment No. 4: [2 Session]

To study and implement different types of Set and Join Operations [3 Slots]

Level 1: Demonstrate different types of Set Operations (UNION, UNION ALL, INTERSECT, MINUS) and Join Operations (INNER JOINS, OUTER JOINS, CROSS JOIN, NATURAL JOIN) on two or more tables of Banking Database.

Level 2: Use Set and Join operations to retrieve the data from two or more relations (tables) as per the given scenario. [Library databases]

Labsheet-3 [3 Practical Sessions]**Experiment No. 5: [3 sessions]**

To study and implement Views, and Procedures in MySQL.

Level 1: Implement MySQL Views, and Procedures in MySQL on Employee database.

Level 2: Analyze the requirement and construct views, and Procedures on Mini Project Domain. [Banking Database]

Labsheet-4 [3 Practical Sessions]**Experiment No. 6: [3 Sessions]**

To study and implement Functions, and Triggers in MySQL.

Level 1: Implement MySQL Functions and Triggers in MySQL on Employee database.

Level 2: Analyze the requirement and construct Functions and Triggers on Mini Project Domain. [Banking Database]

Targeted Application & Tools that can be used:

Application Area: Relational database systems for Business, Scientific and Engineering Applications.

Tools/Simulator used: MySQL

Course Code: CSE3006	Course Title: Artificial Intelligence and Neural Networks Type of Course: Theory only	L-P-C	3	0	3
Version No.	2.0				

Course Pre-requisites	NIL			
Anti-requisites	NIL			
Course Description	This Course highlights the basic principles in Artificial Intelligence. It will cover representation schemes, problem solving paradigms, , search strategies, knowledge representation, probabilistic reasoning, elements of Artificial Neural Network. Topics include: AI methodology and fundamentals, intelligent agents, search algorithms, game playing, probabilistic reasoning in AI, Elements of Artificial Neural Network, models of neuron, architecture and learning laws. Several assignments will be given to enable the student to gain practical experience in using these techniques.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Artificial Intelligence and Neural Networks and attain EMPLOYABILITY SKILLS through PROBLEM SOLVING techniques			
Course Out Comes	On successful completion of the course the students shall be able to: CO 1: Apply techniques of Knowledge Representation [Application] CO 2: Apply Artificial Intelligence techniques for problem solving [Application] CO3: Understand the models of Neuron [Knowledge] CO4: Explain the basic elements of Artificial Neural Network [Comprehension]			
Course Content:				
Module 1	Introduction to Artificial Intelligence and Knowledge Based Systems	Assignment	Theory	14 Sessions
Topics: Introduction to Artificial Intelligence, Definitions, foundation, History and Applications; Agents: Types of Agent, Structure of Intelligent agent and its functions; Introduction to Knowledge representation, approaches, Knowledge-Based Systems; Frame Structures, Conceptual graphs. Logic- Propositional Logic, First order Logic				
Module 2	Problem Solving by Searching	Assignment	Theory	13 Sessions
Topics: Introduction to Problem space and state space, State space search techniques solving problems by searching: Classical Search, Adversarial Search, and Constraint Satisfaction Problems, Introduction to reasoning. Probabilistic reasoning in AI, Bayesian networks, Hidden Markov Model, Certainty factors, rule-based systems and Demster Shafer Theory.				
Module 3	Introduction to Artificial Neural Network	Assignment	Theory	9 Sessions
Topics : Introduction to learning, Forms of Learning: Statistical learning, Supervised Learning, Unsupervised Learning, Reinforcement Learning, Learning rules of AI, Learning Laws. Historical Development of Neural Network Principles, Characteristics of Neural Networks and Artificial Neural Networks: Terminology, Models of Neuron				
Module 4	Essentials of Artificial Neural Network	Assignment	Theory	07 Sessions
Topics: Artificial Neuron Model, Operations of Artificial Neuron, Types of Neuron Activation Function, ANN Architectures, Single-Layer Feed forward Networks, Multilayer Feed forward Networks, Types of Application				
Targeted Application & Tools that can be used:				

Use of PowerPoint software for lecture slides and use of Google's Colab cloud service https://www.tutorialspoint.com/google_colab/index.html for executing and sharing of lab exercises.

for developing Employability Skills through Problem Solving methodologies . This is attained through assessment component mentioned in course handout.	

Course Code: CSE248	Course Title: Object Oriented analysis and Design with UML Type of Course: Integrated Only	L- T-P- C	3	0	2	4
Version No.	2.0					
Course Pre-requisites	Object Oriented Programming fundamentals, Software Engineering					
Anti-requisites						
Course Description	This course deals with producing detailed object models and designs from system requirements; using the modeling concepts provided by UML; identifying use cases and expanding them into full behavioral designs; expanding the analyzing into a design ready for implementing and constructing designs that are reliable. The course begins with an overview of the object oriented analysis and design.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of A Object Oriented analysis and Design with UML and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques					
Course Out Comes	CO1 : Ability to analyze and model software specifications. CO2 : Ability to abstract object-based views for generic software systems. CO3 : Ability to deliver robust software components.					

Course Content:				
Module 1	Introduction to Object oriented system- Knowledge level	Assignment	SRS	20 Sessions
Object Basics-Object Oriented System Development Life Cycle- Use case driven approach- Rumbaugh Object Model- Booch Methodology-Jacobson Methodology-Unified Approach, Framing problem statement and SRS document.				
Module 2	Object oriented analysis- Comprehensive Level	Assignment	Class diagram	10 Sessions
Identifying use cases-Object Analysis-Classification: Theory-Approaches for Identifying Classes: Noun Phrase approach, Common Class pattern approach, Use case driven approach, Classes, Responsibilities and Collaborators- Identifying Object relationships: Associations, Super-sub class relationships, Aggregation.				
Module 3	Object oriented design- Comprehensive Level	Term paper/Assignment	Object Diagram	11 Sessions
Object Oriented Design Axioms-Designing Classes -Class visibility -Redefining attributes - Designing methods and protocols -Packages and managing classes -Access Layer- Object Storage Persistence - Object oriented Database System-Designing view layer classes -Macro level process - Micro level process- Prototyping the user interface -Quality Assurance Tests-Testing Strategies.				
Module 4	Object oriented UML Modeling-Application level	Term paper/Assignment	Dynamic Diagrams	9 Sessions
Static and Dynamic Modeling-Unified Modeling Language -UML diagrams: Class Diagrams-Use case Diagram- UML Dynamic modeling: Interaction diagram, Sequence diagram, Collaboration diagram, State-chart diagram, Activity diagram				
Targeted Application & Tools that can be used: Star UML				
Text Book Object Oriented Modeling and Design using UML, Second Edition, Michael Blaha and James Rumbaugh, Pearson Education, Second Edition, 2007

Course Code: CSE1001	Course Title: Problem Solving using JAVA Type of Course: Integrated	L- P- C	2	2	3
Version No.	2.0				
Course Pre-requisites	Basic Programming knowledge.				
Anti-requisites	NIL				
Course Description	This course introduces the core concepts of object-oriented programming. This course has theory and lab component which emphasizes on understanding the implementation and application of object-oriented programming paradigm. It helps the student to build real time secure applications by applying these concepts and also for effective problem solving. The students interpret and understand the need for object oriented programming to build applications.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Problem-Solving using JAVA and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques				
Course Out Comes	On successful completion of the course the students shall be able to: C.O. 1: Describe the basic programming concepts. [Knowledge] C.O. 2: Apply the concept of classes, objects and methods to solve problems. [Application] C.O. 3: Apply the concept of arrays and strings. [Application] C.O. 4: Implement inheritance and polymorphism building secure applications. [Application] C.O. 5: Apply the concepts of interface and error handling mechanism. [Application]				
Course Content:					
Module 1	Basic Concepts of Programming and Java	Assignment	Data Collection/Interpretation		12 Sessions
Topics: Introduction to Principles of Programming: Process of Problem Solving, Java program structure, Download Eclipse IDE to run Java programs, Sample program, Data types, Identifiers, Variables, Constants in java, Operators, Assignments and Expression, Basic Input/ Output functions, Control Statements: Branching and Looping.					
Module 2	Classes, objects, methods and Constructors	Case studies / Case let	Case studies / Case let		12 Sessions

Topics: Classes, Objects and Methods: Introduction to object Oriented Principles, defining a class, adding data members and methods to the class, access specifiers, instantiating objects, reference variable, accessing class members and methods. Static Polymorphism: Method overloading, constructors, constructor overloading, this keyword, static keyword, Nested classes, Accessing members in nested classes.				
Module 3	Arrays, String and String buffer	Quiz	Case studies / Case let	14 Sessions
Topics: Arrays: Defining an Array, Initializing & Accessing Array, Multi –Dimensional Array, Array of objects. String: Creation & Operation. String builder class, methods in String Buffer.				
Module 4	Inheritance and Polymorphism	Quiz	Case studies / Case let	14 Sessions
Topics: Inheritance: Defining a subclass, Types of Inheritance, super keyword. Dynamic Polymorphism: Method overriding. Final keyword: with data members, with member functions and with class. Abstract keyword: with data members, with member functions and with class, Exception handling.				
Module 5	Input & Output Operation in Java	Quiz	Case studies / Case let	14 Sessions
Input/output Operation in Java(java.io Package), Streams and the new I/O Capabilities, Understanding Streams, working with File Object, File I/O Basics, Reading and Writing to Files, Buffer and Buffer Management, Read/Write Operations with File Channel, Serializing Objects, Observer and Observable Interfaces.				
List of Laboratory Tasks: P1 - Problem Solving using Basic Concepts. P2 - Problem Solving using Basic Concepts and Command Line Arguments. P3 - Programming assignment with class, objects, methods and Constructors. P4 - Programming assignment with method overloading. P5 - Programming assignment with constructor overloading. P6 - Programming assignment with Static members and static methods. P7 - Programming assignment with Nested classes. P8 - Programming assignment using Arrays. P9 - Programming assignment using Strings. P10 - Programming assignment using String Builder. P11 - Programming assignment using Inheritance and super keyword. P12 - Programming assignment using Method overriding and Dynamic method invocation. P13 - Programming assignment using Final keywords. P14 - Programming assignment using Abstract keywords. P15 - Programming assignment using Interface. P16 - Programming assignment using Interface. P17 - Programming assignment CharacterStream Classes P18 - Programming assignment Read/Write Operations with File Channel				
Targeted Application & Tools that can be used : JDK /eclipse IDE/ net Beans IDE.

Course Code: CSE302	Course Title: Programming in C# and .NET Framework Type of Course: Program Core Theory & Laboratory integrated			L- P - C	1	4	3
Version No.	2.0						
Course Pre-requisites	NIL						
Anti-requisites	NIL						
Course Description	This course is designed to teach third-year computer science students, to provide an introduction to the .net framework and C# language. This course deals with the programming skills that are required to create applications using the C# language. Helps the students to build an application that incorporates several features of the .NET Framework.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Programming in C# and .NET Framework and attain EMPLOYABILITY SKILLS through EXPERIENTIAL LEARNING techniques						
Course Out Comes	COURSE OUTCOMES: On successful completion of the course the students shall be able to: • Apply OOPS concepts in C# for solutions to real-world problems • Use ADO.NET to manage databases; • Write GUI applications in C#.						
Course Content:							
Module 1	C # Language Syntax	Assignment	Programming Task			12 Sessions	
Topics: C # Language Syntax - Datatypes & Variables Declaration, Implicit and Explicit Casting, Checked and Unchecked Blocks, Enum and Constant, Operators, Control Statements, Working with Arrays, working with Methods, Pass by value and by reference and out parameters. OOPs-Concept - Learning about Class, Object, Component, encapsulation, Inheritance, Polymorphism. Abstract Class, Types of Inheritance with example programs . Exception Handling-Defining Exception, Understandings try and catch keywords, Using “finally” block, Throw , Throws , Throwing exceptions, Creating User-defined/Custom Exception class and basic example for the both exception.							
Module 2	Developing GUI Application Using WINFORMS	Assignment	Data Collection/Excel			12 Sessions	

Topics: Developing GUI Application Using WINFORMS- Basic Controls, Panel & Layouts, Drawing and GDI Devices, MenuStrip, ToolStrip and ContextMenuStrip , Model and Modeless Dialog boxes ,Multiple Document Interface(MDI) ,Form Inheritance , Building Login Form, Working with Resource Files and Setting, Notify Icon Controls, Using Components like Timer, FileSystemWatcher, Solving few case studies in developing GUI Application using WINFORMS. Database Programming Using ADO.NET -Introduction, and Evolution of ADO.NET, Understanding the Role of Managed Provider and ADO.NET Objects, Connecting to Database and Connection Pooling, Performing Insert, Update and Delete Operations, Fetching Data from the database - Executing Select Statements, basics query. Solving few case studies .				
Module 3	Managing Data using DataSet	Assignment	Programming/Data analysis task	14 Sessions
Managing Data using DataSet -Introduction DataSet and its Object Model, Filling DataSet using DataAdapter, Binding DataSet to DataGridView, Updating changes to the database using DataAdapter, DataAdapter events. A few Advanced Features -Reflection and Attributes, Delegates & Events, User Control and Custom Control. Multithreading- Threading Overview, Thread States, Methods of Thread Class, Thread Pool, Thread Synchronization, Advantages of threads and thread in built functions .Solving some real world examples on threads .				
Targeted Application & Tools that can be used:

Course Code: CSE397	Course Title: Digital and Mobile Forensics Type of Course: Theory		L- P- C	3	0	3
Version No.	2.0					
Course Pre-requisites	Operating System, Computer Networks.					
Anti-requisites	Nil					
Course Description	This course demonstrates the use of Mobile phones and digital devices across the globe has increased dramatically. These devices are more susceptible to information security attacks and thus they also possess huge evidences which shall be used during crime scene investigation. This makes the Course on mobile and digital forensics an inevitable one for the security professionals. This Course on mobile and digital forensics will provide a better understanding on different forms of evidences in many digital devices, collection and interpretation of the same. Topics include: Wireless technologies and security-wireless protocols, wireless threats, cell phones and GPS, SMS and data interception in GSM. Mobile phone forensics - files present in SIM card, device data, external memory dump, Android forensics. Digital forensics: - evaluating digital evidence, Digital forensics examination principles					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Database Management Systems and attain EMPLOYABILITY SKILLS through PARTICIPATIVE Learning techniques					
Course Outcomes	On successful completion of this course the students shall be able to: CO 1: Outline the basic concepts of Cybercrime and digital Forensics. (L1) CO 2: Employ various digital Forensic tools to perform Forensic investigation(L3) CO 3: Interpret security challenges and Forensic examination process of wireless devices. (L2) CO 4: Produce digital evidence through the usage of mobile device Forensic tools (L3)					
Course Content:						
Module 1	Cybercrime and Digital Forensic Principles	Assignment	Seminar			10 Sessions
Cybercrime: Definition, Nature and Scope of Cyber crime, Types of cyber crime, Categories of cyber crime, Investigating Cybercrime, Digital Evidence, Prevention of cyber crime, Overview of Digital Forensics, Phases of Digital Forensics, Digital devices in society, Evidential Potential of Digital Devices: closed and open systems, Digital investigation process models: Staircase Model, Evidence Flow Model, Increasing awareness of digital evidence, Case studies on Cyber Crimes.						
Module 2	Digital Forensics examination process	Case Studies	Case Study			11 Sessions
Language of Computer crime investigation, preparing a Digital Forensics Investigation, Challenging aspects of digital evidence, Presenting digital evidence, Device usage, Profiling and cyberprofiling, Contamination, Digital forensics examination principles: Previewing, Imaging, Continuity and hashing, Evidence locations, A seven-element security model, A developmental model of digital systems.						
Module 3	Wireless technologies and Wireless threats	Quiz	GSM, Parben's Cell Seizure			12 Sessions

Overview of Modern Wireless Technology, Wireless Crime Prevention Techniques, War-Driving, War-Chalking, War Flying, Voice SMS, GSM and Identification Data Interception in GSM, Cell Phone Hacking and Phreaking, Who's Tracking You and Your Cell Phone? How Does Cellular Fraud Occur? Cell Phone Forensics, Forensic Rules for Cellular Phones, Cell Phone Flowchart Processes Using Paraben's Cell Seizure.

Module 4	Mobile phone Forensics	Quiz	Forensic Tools	10 Sessions

Importance and Motivation behind Mobile Forensics, Mobile Phone Forensics: Crime and Mobile Phones, the Evidence, Forensic Procedures of mobile phones, The SIM Card, Files Present in SIM Card, Device Data, SMS Spam, What Data Is Available from Mobile Phones?, Handling Instructions for Mobile Phones, Mobile Phone Forensics Tools and Methods, Social Media Forensics on Mobile Devices.

Targeted Application & Tools that can be used:

- Wireless Security
- Digital Forensics
- Android Forensics

1. Prevention of cybercrime
2. preparing a Digital Forensics Investigation
3. Mobile Phone Forensics: Crime and Mobile Phones.
4. Mobile Phone Forensics Tools

for developing **Employability Skills** through **Participative Learning techniques**. This is attained through assessment component mentioned in course handout.

Course Code: CSE3001	Course Title: Artificial Intelligence and Machine Learning Type of Course: Integrated	L- P- C	2	2	3
Version No.	2.0				
Course Pre-requisites	CSE1003 Innovation Project - Raspberry Pi Using Python				
Anti-requisites	NIL				
Course Description	This course introduces the basic concepts of artificial intelligence. It introduces students to the basic concepts and techniques of Machine Learning (ML), a subset of Artificial Intelligence (AI), is an important set of techniques and algorithms used for solving several business and social problems. The objective of this course is to discuss machine learning model development using Python. Topics include: Working with Collections and Data Frames; Regression algorithms; Classification algorithms; Optimization techniques – Gradient Descent algorithm, Gradient Descent for simple Linear Regression; Ensemble Learning – Random Forest, Boosting techniques – AdaBoost and Gradient Boosting; Grid Search for optimal parameters; Clustering algorithms; Forecasting with Time-Series data : Auto-Regressive Integrated Moving Average Models, Recommender Systems : Association Rule Mining, Collaborative Filtering, Text Analytics – Sentiment Classification using Naïve Bayesian model.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Artificial Intelligence and Machine Learning and attain Skill Development through experiential Learning techniques.				
Course Out Comes	On successful completion of the course the students shall be able to: CO1: To develop a basic understanding of the building blocks of AI as presented in terms of intelligent agents. [Comprehension] CO2: Produce machine learning models for predictive analytics. [Application] CO3: Apply ensemble learning, optimization and hyper parameter tuning techniques for machine learning algorithms. [Application] CO4: Demonstrate different types of clustering techniques. [Application] CO5: Employ time series forecasting techniques/models for real world problems. [Application]				
Course Content:					
Module 1	Introduction to Artificial Intelligence and Knowledge based systems	Assignment	Theory	6 Sessions	
Topics: Introduction to Artificial Intelligence, Definitions, foundation, History and Applications; Agents: Types of Agent, Structure of Intelligent agent and its functions, Agents and Environment; Introduction to Knowledge representation, approaches and issues in knowledge representation, Introduction to searching algorithm in AI, Conceptual graphs, Methods for Logic representation(POL, FOL).					

Module 2	Supervised Machine Learning Algorithms	Assignment	Programming activity	16 Sessions
Topics: Introduction to the Machine Learning (ML) Framework, types of ML, types of variables/features used in ML algorithms, Feature engineering-Normalization, One-hot encoding, Simple Linear Regression, Multiple Linear Regression, Validation and Accuracy measures for Regression models. Classification models – Decision Tree algorithms using Entropy and Gini Index as measures of node impurity, model evaluation metrics for classification algorithms, Logistic regression, Naïve Bayes Classifiers and Naive Bayes model for sentiment classification – an introduction..				
Module 3	Advanced Machine Learning Concepts	Assignment	Programming activity	14 Sessions
Topics: Nearest Neighbor techniques, Cost functions and Optimization Technique – introduction to Gradient Descent, its applications on Linear Regression. C.Ensemble Learning algorithms – Bagging (Random Forest), Boosting(AdaBoost), XGBoost.				
Module 4	Clustering and Forecasting with Time-Series Data	Assignment	Programming activity	10 Sessions
Topics: Partitioned Clustering – K-means and Hierarchical Clustering techniques, cluster validity measures, Components of Time Series data, Basic Concepts of Forecasting , An introduction to Forecasting from Time Series Models, calculating forecast accuracy, Association Rule Mining, Collaborative Filtering – User based and item based similarity, closed and maximal frequent item sets.				
List of Laboratory Tasks: Lab sheet -1 Level 1: A review of Python programming - Introduction to Python Stack for Data Science, Core Python Libraries for data analysis, Anaconda platform and its installation, Executing programs on Jupyter IDE/ Colab. Level2: Programming exercises to revise variables, control statements and collections – lists, list comprehension Lab sheet -2 Level 1 - Programming exercises on Tuples Level 2- Nested data structures Lab sheet -3 Level 1: Introduction to Numpy, Pandas, Level 2: Scikit-learn and Visualization techniques. Lab sheet -4 Level 1 - Dictionaries, dictionary comprehension. Level 2 - Introduction to Data Frames using Pandas and working with frames Lab sheet -5 Level 1- Regression Models Simple linear regression, outlier detection. Level 2 - multiple linear regressions – model evaluation, multi-co linearity and handling multi-co linearity, outlier detection. Lab sheet -6 Level 1- Decision Tree Classifiers - Decision Tree classifier using Gini Index- measuring test accuracy, displaying the tree, confusion matrix and ROC. Level 2- Decision Tree Classifier using Entropy. Lab sheet -7				

Level 1 - Optimization Techniques Developing a Gradient Descent Algorithm for linear regression – using NumPy and using sklearn.

Level 2 - cohen_kappa_score.

Lab sheet -8

Level 1- Hyper parameter Tuning methods Hyper parameter tuning using Grid Search for Nearest Neighbor Classifiers and

Level 2- Hyper parameter tuning using Grid Search for Decision Tree Classifiers.

Lab sheet -9

Level 1 - Hyper parameter Tuning for Ensemble models Ensemble Learning – Random Forest – Building the model, Grid Search for optimal parameters,

Level 2 - Feature Importance. Ada Boost Classifiers and Gradient Boosting Classifiers

Lab sheet -10

Level 2 - Clustering – Kmeans – cluster centers and interpreting the clusters, finding the optimal number of clusters using Elbow Curve method.

Level 2 - Agglomerative Hierarchical Clustering – Compare the clusters formed by kmeans and Agglomerative Clustering

Lab sheet -1 1

Level 1 – Probability theory(Conditional Probability)

Level 2 - Naïve Bayes Model

Lab sheet -12

Level 1- Models forecasting Applications

Level 2 - Models for Forecasting Time Series data

Lab sheet -13

Level 1- Recommender Systems - Association Rule Mining using Apriori for frequent Itemset Generation.

Level 2 - Recommender Systems – user based similarity

Targeted Application & Tools that can be used

Use of PowerPoint software for lecture slides and use of Google's Colab cloud service https://www.tutorialspoint.com/google_colab/index.html for executing and sharing of lab exercises.

Project work/Assignment:

Assignment:

1. Programming: Implementation of given scenario using Python and Colab.

Assignment: Learning courses for 4 Hours from the following link

3. Hyper parameter Tuning methods
4. Agglomerative Hierarchical clustering
5. Decision tree classifiers

for **Skill Development** through **Experiential Learning** techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE 1002	Course Title: Innovation Project-Arduino Using Embedded C Type of Course: Lab only		L- P- C	0	4	2
Version No.	2.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	The course deals with the fundamental concepts of ‘C’ and Embedded C, problem-solving using C in a systematic way to read and write the C code and to implement them on an Arduino prototype board. The course will also demonstrate how to assemble various sensory devices and program them using the Arduino platform as a basis. Students will have the opportunity of gaining real-world experience in handling IOT devices involving hardware and software combinations. The course also offers in-depth knowledge of designing, developing, coding, and implementing Arduino projects.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Innovation Project-Arduino Using Embedded C and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques					
Course Out Comes	On successful completion of the course the students shall be able to: • Write a program using Arduino programming language using Embedded ‘C’. • Explain the main features of the Arduino prototype board • Demonstrate the hardware interfacing of the peripherals to Arduino system. • Demonstrate the functioning of live various projects carried out using Arduino system.					
Course Content:						
Module 1	Basics of C, Branching and looping	Quiz	Problem Solving	9 Sessions		
Topics: Structure of C programs, Variables, Keywords, Datatypes, declaration, and Initialization Decision Making and Branching: if, if-else, else-if ladder, switch statement. Decision making and looping: for, while, and do-while statements.						
Module 2	Arrays, functions, strings	Quiz	Problem Solving	8 Sessions		
Topics: Arrays: Introduction ,one dimensional array, two dimensional array, Functions: User defined functions, Categories, searching and sorting Strings: Introduction, string handling functions.						
Module 3	Structures and Pointers		Problem Solving	7 Sessions		
Topics: Structure definition, syntax and application of structures, definition of pointers ,syntax, pass –by-reference.						
Module 4	Introduction to Arduino and Sensory Devices	Project Development	Modeling and Simulation task	6 Sessions		

Topics:
Introduction to Arduino, Pin configuration and architecture, Device and platform features, Concept of digital and analog ports, Familiarizing with Arduino Interfacing Board, API's , Introduction to Embedded C and Arduino platform, Arduino Datatypes and variables, Arduino i/o Functions, Arduino Communications, Arduino IDE, Various Cloud Platforms.
List of Laboratory Tasks
Targeted Application & Tools that can be used: Making it a reality (Arduino Projects) : Projects will include but not limited to : 1) Intelligent home locking system. 2) Intelligent water level management system. 3) Home automation using RFID. 4) Real time clock-based home automation. 5) Intelligent Automatic Irrigation System Professionally Used Software: Arduino IDE.
Project work/Assignment:
z1- Fundamentals of C-Programs, z2- Basics of Embedded C and Arduino Project work

Topics relevant to the development of “Skill Development”: 1. Basic Concepts of C-Programming 2. Embedded ‘C’ and Arduino 3. Problem solving 4. Creative Thinking 5. Team work 6. Prototype Development. for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE 2066	Course Title: Computer Graphics	L-P-C	3	0	3
Version No.	2.0				
Course Pre-requisites	C Programming				
Anti-requisites	NIL				

Course Description	This course demonstrates the basics of graphics and visualization in computer science, enabling students to appreciate how the computer system displays graphics and visual effects on a display device. The course uses assignments to develop visualization skills of the students. The key topics covered in this course include algorithms for drawing basic primitives, transformations, viewing and clipping for both 2D and 3D objects along with Bezier curves and Surfaces.		
Course Objective	The objective of the course is to familiarize the learners with the concepts of Computer Graphics and attain Skill Development through Participative Learning techniques.		
Course Out Comes	On successful completion of the course the students shall be able to: CO 1: Illustrate algorithms for drawing basic primitives like Point, Line and Polygon. CO 2: Illustrate algorithms for performing 2D Geometric Transformations, viewing and clipping. CO 3: Illustrate algorithms for performing 3D Geometric Transformations, clipping. CO 4: Describe plane Bezier curves and Bezier surfaces.		
Course Content:			
Module 1	Overview: Basics of Computer Graphics	Assignment	No. of Sessions 13
Topics: An Introduction Graphics System: Computer Graphics and Its Types, Application of computer graphics. Graphics Systems: Video Display Devices, Raster Scan Systems, Random Scan Systems, Raster graphics Vs. Random Graphics, Flat panel Displays – emissive and non-emissive displays, Input Devices, logical inputs, Graphics tools and software Line drawing algorithms - Midpoint, DDA, Bresenham's. Circle generation algorithms - Midpoint circle drawing algorithm, Bresenham's circle algorithm. Basics of 2D and 3D objects. Assignment: Numerical problems based on Line and circle drawing algorithm			
Module 2	2D Geometric Transformations, viewing and clipping	Assignment	No. of Sessions : 12
2D Geometric Transformations: Basics of translation, scaling, rotation, reflection and shearing. Matrix representations and homogeneous coordinates for translation, scaling, rotation, reflection and shearing. 2D Composite transformations, General pivot point rotation and scaling. Introduction to OpenGL concepts and libraries. OpenGL geometric transformations functions. Basics of 2D viewing and Clipping: Basics of viewing and Clipping, 2D viewing pipeline, Viewing Transformation systems, Normalization and Viewport Transformation Types of clipping: point, Line and polygon clipping, 2D line clipping algorithms: cohen-sutherland line clipping, Liang-Barsky line clipping algorithm, polygon fill area clipping: Sutherland-Hodgeman polygon clipping algorithm, OpenGL 2D viewing and clipping functions. Assignment: Numerical problems based on 2D transformations.			
Module 3	3D Geometric Transformations, clipping:	Mini-project	No. of Sessions : 11

3D Geometric Transformations: 3D translation, rotation, scaling, reflection and shearing, composite 3D transformations, OpenGL 3D geometric transformations functions, Transformations between 3D Coordinate Systems. Basics of 3D Viewing and Clipping: 3D viewing concepts, 3D viewing coordinate parameters, Transformation from world to viewing coordinates, Projection transformation, parallel projections - orthogonal projections and oblique projections, parallel-Projection Transformation Matrix, perspective projections, Perspective-Projection Transformation Matrix Assignment: Based on the activities in the link: pu.informatics.global			
Module 4	Plane curves and surfaces	Quiz	No. of Classes : 9
Plane Curves: Plane Curves representation, Nonparametric Curves, Parametric Curves, Curved Surfaces, Quadric Surfaces. Basics of Curves and surfaces: Interpolation and Approximation Splines, Parametric Continuity Conditions, Geometric Continuity Conditions, Spline Specifications. Representation of Space Curves, Cubic Splines, Bezier Curves, Parametric Cubic Curves, Quadric Surfaces, Bezier Surfaces. OpenGL Quadric-Surface and Cubic-Surface Functions			
Targeted Application & Tools that can be used: Application Area: Game design and Animation Tools/Simulator/Software used: Visual Studio 17.0 / CodeBlock			
Text Book: T1: Donald D. Hearn, M. Pauline Baker and Warren Carither, Computer Graphics with OpenGL, Pearson Education, 4th Edition, 2021

Topics relevant to development of “Skill Development”: 1. Line drawing algorithms (DDA, Bresenham's) 2. Graphics tools and software 3. Liang-Barsky line clipping algorithm 4. cohen-sutherland line clipping 5. OpenGL 2D viewing and clipping functions for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course handout.			

Course Code: CSE 215 / CSE 3078	Cryptography and Network Security	L- P- C	3	0	3
Version No.	2.0				
Course Pre-requisites	Basic Knowledge in Number Theory, Binary Operations				
Anti-requisites	NIL				

Course Description	The Course deals with the principles and practice of cryptography and network security, focusing in particular on the security aspects of the web and Internet.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Cryptography and Network Security above and attain Skill Development through Problem Solving methodologies.			
Course Outcomes	On successful completion of this course the students shall be able to: 1. Describe the basic concept of Cryptography 2. Classify different types of Cryptographic Algorithms 3. Solve Mathematical problems required for Cryptography 4. Illustrate Network Security concepts			
Course Content:				
Module 1	Introduction to Cryptography	Assignment	Recognize the techniques	07 Sessions
Topics: Introduction to Cryptography, Model of Network Security, OSI Security architecture, Security Attacks: active attacks, passive attacks, services: Authentication, Access Control, Data Confidentiality, Data Integrity, Nonrepudiation, Substitution Ciphers : Play-fair and Hill Cipher, Vigenere cipher, Introduction to Block Cipher and Stream Cipher, Feistel Structure, ECB modes of block cipher				
Module 2	Symmetric Encryption Algorithms	Assignment	Analysis of results	09 Sessions
Topics: Symmetric Encryption Algorithms : Data Encryption Standard, Introduction to Galois Field, Advanced Encryption Standard, Modular Arithmetic, Prime numbers, Fermat's little theorem, Applications of Fermat's little theorem in modular arithmetic, brief about primality testing and factorization, Euclidean and Extended Euclidean Algorithm, Euler Totient Function, Chinese remainder theorem.				
Module 3	Public Key Cryptography	Assignment	Analysis of solutions	09 Sessions
Topics: Overview of Public Key Cryptography, RSA, Diffie-Helman Key exchange, Man in the middle attack, Cryptographic Hash functions, Secure Hash Algorithm, Message Authentication Codes – HMAC, Digital Signature, El-gamal Encryption, Elliptic curve cryptography overview.				
Module 4	Network Security	Assignment	Analysis of solutions	05 Sessions
Topics: Network Security fundamentals, Network Security applications: Authentication: Kerberos, PKI, Network Security applications: e-mail security: PGP, MIME, Network Security applications: IP Security: IPSec architecture, Network Security applications: DNS Security.				
Targeted Application & Tools that can be used: Students get the knowledge about cryptography techniques followed, the algorithms used for encryption and decryptions & the techniques for authentication and confidentiality of messages.

2. Euclidean and Extended Euclidean Algorithm
3. Secure Hash Algorithm
4. Diffie-Helman Key exchange
5. Totient Function.
6. Fermat's little theorem

Course Code: CSE2027	Course Title: Fundamentals of Data Analytics		L- P- C	3	0	3
	Type of Course: Theory only					
Version No.	2.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	Fundamentals of Data Analytics is designed for inspecting, cleansing, transforming, and modeling data with the goal of discovering useful information, and supports in decision-making. The course begins by covering Data extraction, pre-processing, and transformation. It delivers the basic statistics and taught in an intuitive way to analysis the data. This course will help the students to apply the knowledge on data analysis to a wide range of applications.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Fundamentals of Data Analytics and attain SKILL DEVELOPMENT through PROBLEM SOLVING Methodologies.					
Course Out Comes	On successful completion of the course the students shall be able to: 1) Explain different types of data and variables. 2) Interpret data using appropriate statistical methods. 3) Demonstrate the collection, processing and analysis of data for any given application and Illustrate various charts using visualization methods. 4) Apply the Data Analysis techniques by MAT Lab					
Course Content:						
Module 1	Introduction to Data Analysis	Assignment	Data Collection , data analysis	6 Sessions		
Topics: Introducing Data, overview of data analysis: Data in the Real World, Data vs. Information, The Many “Vs” of Data, Structured Data and Unstructured Data, Types of Data, Data Analysis Defined, Types of Variables, Central Tendency of Data, Scales of Data, Sources of Data, Data preparation: Cleaning the data, Removing variables, Data Transformations.						
Module 2	Statistical functions	Assignment	Data analysis	8 Sessions		
Topics: Descriptive Statistics, Inferential Statistics (T test, Z test,), Probability Uses In Business and Calculating Probability from a Contingency Tables.						
Module 3	Data Collection, Processing and Analysis	Project based MAT Lab	MAT LAB	6 Sessions		
Topics: Collection of Primary Data(Observation Method, Interview Method, Collection of Data through Questionnaires ,Collection of Data through Schedule) Difference between Questionnaires and Schedules, Some Other Methods of Data Collection, Collection of Secondary Data ,Difference between Survey and Experiment Processing Operations, correlation. Introduction: Overview, Classification, Regression, Building a prediction model						
Module 4	Data Visualization and Charting Prediction	Project MAT Lab	Data Collection, visualization and data analysis	6 Sessions		

Topics: Types of charts and their significance, Organize data interactively with tables , Visualizing data with charts, Analyzing data with pivot tables, Build presentation ready dashboards and turn real world data into business insights, Tracking trends and making forecasts, Interpretation and report writing				
Module 5	Introduction to MATLAB	Project MAT Lab	Data analysis with optimization	12 Sessions
Topics: Defining Categories of Data, Analyzing Groups within Data, Importing Data from Multiple Files, Review Project ,Images and 3-D Surface Plots, Importing Unstructured Data				
Targeted Application & Tools that can be used: Application Area are Decision making in business, health care, financial sector, Medical diagnosis etc... MAT Lab				
Text Books 1. Glenn J. Myatt and Wayne P. Johnson, "Making Sense of Data I: A Practical Guide to Exploratory Data Analysis and Data Mining Paperback", Import, 22 July 2014. 2. William Menke And Joshua Menke,"Environmental Data Analysis with MAT Lab", Elsevier, 2012. 3. https://matlabacademy.mathworks.com/details/matlab-for-data-processing-and-visualization/mlvi				
References 1. Paul McFedries , "Excel Data Analysis-visual blue print",Wiley 4th Edition September 2019. 2. Gerald Knight, "Analyzing Business Data with Excel",O'Reilly; 1st Edition,13 January 2006. 3. https://people.highline.edu/mgirvin/AllClasses/348/348/AllFilesBI348Analytics.htm 4. Hansa Lysander,"Data Analysis and business modelling using Microsoft Excel", PHI, 2017. Web Links: https://presiuniv.knimbus.com/user#/home				
Topics relevant to development of "FOUNDATION SKILLS": 1. Statistical Concepts for data, visualization techniques. 2. Data collection for project based assignments. 3. Inferential Statistics (T test, Z test) 4. Probability Calculation for Skill Development through Problem Solving methodologies. This is attained through assessment component mentioned in course handout.				

Course Code: CSE2008	Course Title: Programming in Java (Object Oriented Programming) Type of Course: Program Core Theory and Laboratory Integrated	L-P-C	1	4	3
Version No.	1.0				
Course Pre-requisites	Basic knowledge of any structured programming: Data types, variables, constants, operators, conditional & control structures, Loops, arrays & function.				
Anti-requisites	NIL				

Course Description	This course introduces the core concepts of object-oriented programming by using Java. This course has theory and lab component which emphasizes on understanding the implementation and application of object-oriented programming paradigm. It helps the student to build real time secure applications by applying these concepts and also for effective problem solving. The students interpret and understand the need for object oriented programming to build applications			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Programming in Java and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques.			
Course Out Comes	On successful completion of the course the students shall be able to: 1. Write programs using basic concepts in JAVA 2. Apply the concept of arrays, strings, polymorphism & inheritance for building desktop 3. Implement interface & packages for building secure applications 4. Apply the concepts of error handling mechanism and multithreading. 5. Apply the concepts of Collections to develop high performance applications.			
Course Content:				
Module 1	INTRODUCTION	Assignment	Programming	No. of Classes:10
Topics: Introduction to Object Oriented Programming, Java Evolution, and How Java differs from C++, Features of Java, Java Environment: Installing JDK (JVM, JRE), Java Source File Structure, Compilation and Execution of Java Programs. TOKENS: Data types, Variables, Operators, Control Statements, Command Line Arguments. CLASSES, OBJECTS, AND METHODS: Defining a class, access specifiers, instantiating objects, reference variable, accessing class members and methods, constructors, method overloading, static members, static methods, inner class, Wrapper class , Autoboxing and Unboxing,				
Module 2	Arrays, Strings, inheritance and Polymorphism	Assignment	Programming	No. of Classes:6
Topics:Defining an Array, Initializing & Accessing Array, Multi –Dimensional Array. Operation on String, Mutable & Immutable String, Creating Strings using StringBuffer or StringBuilder. Defining a subclass, types of Inheritance, method overriding, super keyword, dynamic method invocation, dynamic polymorphism, usage of final abstract and this keyword.				
Module 3	Interfaces, Packages and Exception Handling	Assignment	Programming	No. of Classes:8
Topics:Defining interfaces, extending an interface, Implementing interfaces. Organizing Classes and Interfaces in Packages, Package as Access Protection, Defining a Package, Library Packages, import packages. Exception handling: Introduction to Exceptions, Difference between Exceptions & Errors, Types of Exception. Handling Exceptions: Use of try, catch, finally, throw, throws. User Defined Exceptions, Checked and Un-Checked Exceptions.				
Module 4	MULTITHREADED PROGRAMMING:	Assignment	Programming	No. of Classes:12
Topics: Introduction to threads, life cycle of a thread, creating threads, extending the Thread Class, Implementing the “runnable” interface. Thread Priority, Thread synchronization, Inter communication of Threads				

Module 5	Collections and Graphic Programming(AWT,Swings)	Assignment	Mini Project	No. of Classes:12
Introduction to Collections, Classification of Collection. Introduction to List, Map and Set Interface, Introduction to Applets. Introduction to the abstract window toolkit (AWT), Frames, Event-driven programming: Mouse and Key Event handling. Introduction to Swings, JFC, Swing GUI Components and Layout Manager.				
List of Laboratory Tasks: Experiment NO 1: Programming assignment with class, objects and basic control structures. (Application: Build a basic menu driven application) Level 1: Programming scenarios which use control structures to solve simple case scenarios (Eg: Check if a number is odd or even) Level 2: Programming assignment which will build menu driven application by identifying the class and its relevant methods. Experiment No. 2: Programming assignment using Arrays and Strings. (Application: Develop application on Matrices, build String based application like Telephone directory) Level 1: Programming scenarios which build single dimensional and multidimensional array, apply the different methods to operate on strings. Level 2: Programming assignment which will manipulate the data stored in matrices and identify the appropriate usage String methods. Experiment No. 3: Programming assignment using Inheritance and Polymorphism Level 1: Programming scenarios which use the concept the polymorphism for method overloading. Scenarios which apply the concept of inheritance (identifying parent, child class and its relationship) Level 2: Programming assignment which build application which have same functions in different forms. Experiment No. 4: Programming assignment using Exception Handling Level 1: Programming assignment on building applications using built in Exceptions. Level 2: Programming assignment on building application using user defined Exceptions. Experiment No. 5: Programming assignment using Multithreading. (Eg: Building an application which performs different arithmetic operations and sharing the resources using threads) Level 1: Programming scenarios to build a thread, assign priority and use the thread methods to perform operations Level 2: Programming scenarios for building synchronized applications. Experiment No. 8: Programming assignment using Collections Level 1: Programming Scenarios to apply and use the Collection framework (List, SET, Map, Interface)				

Experiment No. 9: Programming assignment to build GUI Applications.

Level 1: Programming Scenarios to build GUI for a given scenario using AWT and Swings concepts.

Targeted Application & Tools that can be used:

- Platform independent Application Development
- Secure Application Development
- Data Mining
- Operating Systems.
- Database Management Systems
- Banking software
- Automobiles
- Mobile Applications

Tools: JDK (Java Development Tool kit), Integrated Development Environment (IDE), Apache NetBeans, Eclipse.

Project work/Assignment: Mention the Type of Project /Assignment proposed for this course

After completion of each module a programming based Assignment/Assessment will be conducted. A scenario will be given to the student to be developed as a Java Application. On completion of Module 5, student will be asked to develop a Mini Project using the GUI functionalities.

Text Book

Topics relevant to development of "Skill Development": **Real time application development using OOPs concept, Naming and coding convention for Project Development** for Skill development through Experiential Learning Techniques. This is attained through assessment component mentioned in the course handout.

Course Code: CSE2067	Course Title: Web Technology Type of Course: Program core Theory Only			L- P- C	3	0	3
Version No.	2.0						
Course Pre-requisites	NIL						
Anti-requisites	NIL						
Course Description	This course highlights the basic web design using Hypertext Markup Language and Cascading Style Sheets. Students will be trained in planning and designing effective web pages by writing code using current leading trends in the web domain, enhancing web pages with the use of page layout techniques, text formatting, graphics, images, and multimedia. The focus is on popular key technologies that will help students to build Internet- and web-based applications that interact with other applications and with databases.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Web Technology and attain Skill Development through Experiential Learning techniques.						
Course Outcomes	On successful completion of this course the students shall be able to: CO1: Implement web-based application using client-side scripting languages. (Application level) CO2: Apply various constructs to enhance the appearance of a website. (Application level) CO3: Illustrate java-script concepts to demonstration dynamic web site (Application level) CO4: Apply server-side scripting languages to develop a web page linked to a database. (Application level)						
Course Content:							
Module 1	Introduction to XHTML	Quizzes and Assignments	Quizzes on various features of XHTML, simple applications		10 Sessions		
Topics: Basics: Web, WWW, Web browsers, Web servers, Internet. XHTML: Origins and Evolution of HTML and XHTML: Basic Syntax, Standard XHTML Document Structure, Basic Text Markup, Images, Hypertext Links, Lists, Tables, Forms, Frames, Syntactic Differences between HTML and XHTML.							
Module 2	Advanced CSS	Quizzes and assignments	Comprehension based Quizzes and assignments; Application of CSS in designing webpages		8 Sessions		
Topics: CSS: Introduction to CSS, Defining & Applying a style, Creating style sheets, types of style sheet, selectors, CSS font properties, border properties, Box model, opacity, CSS pseudo class and pseudo-elements. Advanced CSS: Layout, Normal Flow, Positioning Elements, Floating Elements, Responsive Design, CSS Frameworks XML: Basics, demonstration of applications using XML							
Module 3	Fundamentals of JavaScript	Quizzes and assignments	Application of JavaScript for dynamic web page designing		10 Sessions		

Topics: JavaScript: Introduction to JavaScript, Basic JavaScript Instructions, Functions, Methods & Objects, Decisions and Loops, Document Object Model, Event handling, handling window pop-ups, JavaScript validation.				
Module 4	PHP – Application Level	Quizzes and assignments	Application of PHP in web designing	14 Sessions
Topics: PHP: Introduction to server-side Development with PHP, Arrays, \$GET and \$ POST, \$_Files Array, Reading/Writing Files, PHP Classes and Objects, Working with Databases, SQL, Database APIs, Managing a MySQL Database. Accessing MySQL in PHP.				
Targeted Application & Tools that can be used: Xampp web server to be used to demonstrate PHP.				
Project work/Assignment:				
Assignments are given after completion of each module which the student need to submit within the stipulated deadline.				
Textbook(s): 1] Robert. W. Sebesta, "<i>Programming the World Wide Web</i>", Pearson Education, 8th Edition, 2015. 2] <i>CSS Notes for Professionals</i>, ebook available at https://books.goalkicker.com/CSSBook/ (Retrieved on Jan. 20, 2022) 3] Deitel, Deitel, Goldberg, "<i>Internet & World Wide Web How to Program</i>", Fifth Edition, Pearson Education, 2021.

Course Code: CSE 151	Course Title: Computer Programming Type of Course: Laboratory Integrated Course		L- P- C	2	4	4
Version No.	1					
Course Pre-requisites	NA					
Anti-requisites	NA					
Course Description	This Course will provide an introduction to foundational concepts of computer programming to students of all branches of Engineering. This course includes a mix of traditional lectures and laboratory sessions. Each meeting starts with a lecture and finishes with a laboratory session. Topics covered in this Course are problem formulation and development of simple programs, Pseudo code, Flow Chart, Algorithms, data types, operators, decision making and branching, looping statements, arrays, functions, structures and union. In the lab session students are required to solve problems based on the above concepts to illustrate the features of the structured programming.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Computer Programming and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques					
Course Out Comes	On successful completion of the course the students shall be able to: COURSE OUTCOMES: On successful completion of the course the students shall be able to: CO 1: Apply the basic concepts and control structures of programming to so particular problems (L3) CO 2: Apply the concepts of array and strings to represent data and its operations.(L3) CO 3: Illustrate the concepts of functions, structure and unions in programming.(L3)					
Course Content:						
Module 1	Introduction	Quizzes				7 Sessions
Topics: Introduction to Problem Solving Basic organization of Computer, System software and Application software, Operating System and Programming languages. Logical analysis using Algorithm and Flowchart. Introduction to C Structure of C program, variables, keywords, data types and sizes, declaration and initialization of variables, storage class, operators and expression, managing input and output operations, compiling and linking.						
Module 2	Branching and looping	Quizzes	Assignments			8 Sessions
Decision Making and Branching: if, if-else, if-else ladder, nested if and switch case Unconditional: break, continue, and return Decision Making and Looping: for, while, do-while, and nested looping statements.						
Module 3	Arrays and Functions	Quizzes	Assignments			12 Sessions
Arrays						

Introduction, one-dimensional arrays, two dimensional arrays, multi-dimensional arrays, searching and sorting. Functions Introduction, user defined functions, categories of functions, nesting of functions, recursion, passing arrays to function, the scope, visibility and lifetime of a variable.				
Module 4	Strings, Structures and union	Quizzes		9 Sessions
Strings Introduction to strings, String Handling Functions, Passing string as parameter to function. Structure and Union Introduction, array of structure, structure within a structure, unions, passing structure and union as parameter to the function.				
Targeted Application & Tools that can be used: 1. C				
Project work/Assignment:				
Assignment: Students will have to do group assignments for Modules 2 & 3. As a part of their assignments, they will have to implement the solution to particular problems.				
Text Books 1. E. Balagurusamy, “Programming in ANSI C”, Seventh Edition - Tata McGraw Hill.				
References 1. Behrouz A Forouzan, Richard F Gilberg, “Computer Science: A structured programming approach using C”, Cengage Learning. 2. Brian W. Kernighan / Dennis Ritchie, “The C Programming Language “ ,Pearson Edition. 3. Yashavant Kanetkar, “Let Us C”, 16th edition , BPB Publications

Topics relevant to development of “Skill Development”: Assignment implementations in software, batch wise presentations. 1. Decision Making and Looping 2. Storage class 3. Compiling and linking 4. Nesting of functions for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.				

Course Code: CSE 304	Course Title: Mobile Communication Type of Course: Program Core - Theory	L- P- C	3	0	3
Version No.	1.0				
Course Pre-requisites					
Anti-requisites	NIL				

Course Description	The course helps the students to apply the engineering principles in the specification, design, development, and deployment of mobile communications. Students will develop a detailed knowledge and critical understanding of the core skills in mobile communications and networks. Topics include: Fundamental knowledge of wireless and mobile networks, mobile communication systems / networks / architecture. The cellular communications, mobile networks, including wireless transmission technology, wireless PAN/ LAN/ MAN/ WAN, Mobile IP, Ad-Hoc networks, sensor networks, wireless mesh networks.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Database Management Systems and attain EMPLOYABILITY through PARTICIPATIVE LEARNING techniques			
Course Outcomes	On successful completion of this course the students shall be able to: 1. Explain the limitations of fixed networks, the need and the trend toward mobility, the concepts of portability and mobility. 2. Describe the network infrastructure requirements to support mobile devices and users. 3. Explain the concepts, techniques, protocols, and architecture employed in wireless local area networks, cellular networks, and perform basic requirements analysis. 4. Apply techniques and technologies to design a communication application for mobile devices.			
Course Content:				
Module 1	Introduction	Assignment	Multiplexing and Modulation	09 Sessions
Topics: Introduction to Wireless Communication – Mobile and Wireless Devices - Antennas - Signal Propagation - Multiplexing - Modulations - Cellular Systems.				
Module 2	MOBILE TELECOMMUNICATION SYSTEM	Assignment	GPRS, RFID	9 Sessions
Topics: Global System for Mobile Communications (GSM) - General Packet Radio Service (GPRS) - Universal Mobile Telecommunication System (UMTS) – Radio Frequency Identification (RFID) – Bluetooth – SMS and MMS.				
Module 3	WIRELESS PROTOCOLS AND STANDARDS	Seminar	Routing Protocols	09 Sessions
Topics: MAC Protocol – Wireless MAC Issues – Code Division Multiple Access (CDMA) – Wireless LANs and PANs - IEEE802.11 – Mobile Internet Protocol – DHCP – Routing Protocols.				
Module 4	MOBILE APPLICATIONS AND PLATFORMS	Case Study	Applications of Cloud and IoT	10 Sessions
Topics: Mobile Phones - Tablet and Other Handheld Devices - Mobile Device Operating Systems - Mobile Computing: Applications, Characteristics and Structure - Mobile Computing Support: Cloud and Internet of Things - Wireless Security				

Targeted Application & Tools that can be used:	
Application Area:	
Tools:	
Textbooks:	
1. Jochen Schiller, "Mobile Communications", Pearson Education Limited, Second Edition 2007. 2. Asoke K. Talukder, Hasan Ahmed, Roopa R. Yavagal, "Mobile Computing: Technology, Applications, and Service Creation", Tata McGraw-Hill, Second Edition 2010.

Topics relevant to "Employability": Routing Protocols, Cloud Applications in Mobile for developing Employability Skills through Participative Learning Techniques. This is attained through assessment component in course handout.	

Course Code: CSE2051	Course Title: Information Retrieval	L- P- C	3	0	3
	Type of Course: Theory Only Course				
Version No.	1				
Course Pre-requisites	Basic Knowledge in Data Structures and algorithms and probability and statistics, background in machine learning				
Anti-requisites	NIL				
Course Description	The course studies the theory, design and implementation of Text- based information systems. The Information Retrieval core concepts of the course include statistical characteristics of text, representation of information needs and documents. Topics Include Several important retrieval models (Basic IR Models, Boolean Model, TF-IDF (Term Frequency/Inverse Document Frequency) Weighting, Vector Model, Probabilistic Model, Latent Semantic Indexing Model, Neural Network Model). Retrieval Evaluation, Retrieval Metrics, Text Classification and Clustering algorithms, Web Retrieval and Crawling. Recommender Systems: Basics of Content-based Recommender Systems, Content-based Filtering, Collaborative Filtering, Matrix factorization models and neighborhood models.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Information Retrieval and attain SKILL DEVELOPMENT through Participative Learning techniques				

Course Out Comes	On successful completion of the course the students shall be able to: CO1: Define basic concepts of information Retrieval. [Knowledge] CO2: Evaluate the effectiveness and efficiency of different information retrieval methods. [Application] CO3: Explain different indexing methodology requirements and the concept of web retrieval and crawling. [Comprehension] CO4: Classify different recommender system and its aspect. [Comprehension]			
Course Content:				
Module 1	Introduction to Information Retrieval	Assignment	Data collection	7 Sessions
Information Retrieval – Early Developments – The IR Problem – The Users Task – Information versus Data Retrieval – The IR System – The Software Architecture of the IR System – The Retrieval and Ranking Processes				
Module 2	Modeling and Retrieval Evaluation	Assignment	Problem solving	10 Sessions
Basic IR Models – Boolean Model – TF-IDF (Term Frequency/Inverse Document Frequency) Weighting – Vector Model – Probabilistic Model – Latent Semantic Indexing Model – Neural Network Model – Retrieval Evaluation – Retrieval Metrics – Precision and Recall – Reference Collection – User-based Evaluation – Relevance Feedback and Query Expansion – Explicit Relevance Feedback.				
Module 3	Indexing & Web-Retrieval	Term paper/Assignment	Data analysis	8 Sessions
Indexing and Searching – Inverted Indexes – Sequential Searching – Multi-dimensional Indexing. The Web – Search Engine Architectures – Cluster based Architecture - Search Engine Ranking – Link based Ranking – Simple Ranking Functions, Evaluations – Search Engine Ranking – Applications of a Web Crawler.				
Module 4	Recommender System	Term paper/Assignment	Problem solving	8 Sessions
Recommender Systems Functions – Data and Knowledge Sources – Recommendation Techniques – Basics of Content-based Recommender Systems – High Level Architecture – Advantages and Drawbacks of Content-based Filtering – Collaborative Filtering – Matrix factorization models.				
Targeted Application & Tools that can be used: Information Retrieval System, Collaborative Filtering System, Feedback System, Evaluation Metrics				
Assignment: Group assignment, Quiz

This is attained through assessment component mentioned in course handout.

Course Code: CSE2011	Course Title: Data Communications and Computer Networks Type of Course: Program Core - Theory	L- P- C	3	0	3
Version No.	1				
Course Pre-requisites	NIL				
Anti-requisites					
Course Description	This is the first course on data communication and computer networks. This course gives a thorough introduction to all the layers of a computer network following the top-down approach. Application, Transport, Network, and data link layer protocols are taught with analysis wherever applicable. All-important concepts required to take up advanced courses and to face placement tests by an undergraduate student will be covered in this course. This course also covers necessary foundational topics pertaining to data communications. This course can be followed up with an advanced computer network by the student to get a complete understanding of this domain.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Data Communications and Computer Networks and attain Skill Development through Participative Learning techniques.				
Course Outcomes	1. Explain the concepts of Computer Networks and Working Principles of Application Layer and Transport Layer (Comprehension) 2. Apply the Knowledge of IP Addressing and Routing Mechanism in Computer Networks. (Application) 3. Discuss the functionalities of Data Link Layer (Comprehension) 4. Explain the Basic Concepts of Data communication. (Comprehension)				
Course Content:					
Module 1	Overview, Application and Transport Layers.	Assignment	Comprehension	13 Sessions	
Introduction: Computer Networks, Topologies, OSI Reference Model, TCP/IP model. Principles of Network Applications, The Web and HTTP, DNS—The Internet’s Directory Service, Socket Programming: Creating Network Applications. Introduction and Transport-Layer Services, Connection-less Transport: UDP,					

Principles of Reliable Data Transfer, Connection-Oriented Transport: TCP, Principles of Congestion Control, TCP Congestion Control.				
Module 2	Network Layer	Assignment	Application	12 Sessions
Overview of Network Layer, Forwarding and Routing, The Data and Control Planes. The Internet Protocol (IP): IPv4, Addressing, IPv6, IPv4 Datagram Format, IPv4 Addressing, Network Address Translation (NAT), IPv6. Introduction Routing Algorithms: The Link-State (LS) Routing Algorithm, The Distance-Vector (DV) Routing Algorithm, Intra-AS Routing in the Internet, OSPF Routing Among the ISPs: BGP, Introduction to BGP. ICMP: The Internet Control Message Protocol.				
Module 3	Data Link Layer	Assignment	Comprehension	10 Sessions
Introduction to the Link Layer, The Services Provided by the Link Layer, Error-Detection and -Correction Techniques, Parity Checks, Check summing Methods, Cyclic Redundancy Check (CRC), Multiple Access Links and Protocols. Switched Local Area Networks, Link-Layer Addressing and ARP, Ethernet, Link-Layer Switches, Virtual Local Area Networks (VLANs), DHCP, UDP, IP and Ethernet.				
Module 4	Physical Layer with Data Communication	Assignment	Comprehension	07 Sessions
Data communications: Components, Data Representation, Data Flow, Analog and Digital Signals, Periodic Analog Signals: Sine Wave, Phase, Wavelength, Time and Frequency Domains, Composite Signals, Bandwidth, Digital Signals, Transmission Impairment, Data Rate Limits: Noiseless Channel, Nyquist Bit Rate, Noisy Channel: Shannon Capacity, Performance: Bandwidth, Throughput, Latency (Delay), Bandwidth-Delay Product, Parallel/Serial Transmission, Multiplexing: Frequency-Division Multiplexing, Wavelength-Division Multiplexing, Synchronous Time-Division Multiplexing.				
Targeted Application & Tools that can be used: 1. Instant Messaging 2. Telnet 3. File Transfer Protocol 4. Video Conferencing				
Textbooks: T1. James F. Kurose, Keith W. Ross, <i>“Computer Networking A Top down Approach”</i> , 8 th Edition, Pearson, 2021. T2. Behrouz A. Forouzan, <i>“Data Communications and Networking”</i> , 6 th Edition, Tata McGraw-Hill, 2021.

Web references: Digital Learning Resources (Library Resources) W1. https://puniversity.informaticsglobal.com/login https://nptel.ac.in/courses/105106053				
Topics relevant to “Skill Development”: Virtual Local Area Networks (VLANs), DHCP, UDP, IP and Ethernet for Skill Development through Participative Learning Techniques. This is attained through assessment component mentioned in course handout.				

Course Code: CSE2036	Course Title: Programming in C++ Type of Course: Discipline Elective Theory & Integrated Laboratory		L-P-C	1	4	3
Version No.	2.0					
Course Pre-requisites	C with Arduino CSE 1002					
Anti-requisites	Nil					
Course Description	The main goal of this course is to study the fundamentals of object-oriented paradigm with concepts of streams, classes, functions, data, and objects. The course aims to provide the basic characteristics of OOP through C++, to impart skills on various kinds of overloading and inheritance, to introduce pointers and file handling in C++ together with exception handling mechanism.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Programming in C++ and attain Employability through Experiential Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: 1. Explain the need and features of OOP and idealize how C++ differs from C. 2. Understand knowledge on various types of overloading and streams. 3. Choose suitable inheritance while proposing solution for the given problem. 4. Implement the concept of pointers and effective memory management, illustrate the application of pointers in virtual functions. 5. Apply the attained knowledge by applying the learned techniques to solve various real-world problems.					
Course Content:						
Module 1	Introduction to object-oriented programming	Quiz	Programming/ Problem Solving		07 Hours	
Topics: Beginning with C++ and its features: Introduction to C++, Applications and structure of C++ program, Different Data types, Variables, Different Operators, expressions, Control structures, arrays, Functions, Inline function, function overloading. [Blooms 'level selected: Comprehension]						
Module 2	Classes and Objects, Static member	Lab evaluation	Programming/ Problem Solving		08 Hours	
Topics: Functions, classes and Objects: Define class, data members and member functions (methods), method overloading, arrays within a class, array of objects, static members, pointers in C++, new and delete. [Blooms 'level selected: Comprehension]						

Module 3	Constructors, Destructors and Operator overloading, Strings	Lab evaluation	Programming/Problem Solving	07 Hours
Topics: Constructors, Destructors and Operator overloading: Constructors, constructor overloading, copy constructor, Destructors, Polymorphism: operator overloading, Overloading Unary and binary operators, friend function, operator overloading using friend function, strings and its operators. [Blooms 'level selected: Application]				
Module 4	Inheritance, Virtual Functions, Polymorphism	Lab evaluation/ Assignment	Programming/Problem Solving	08 Hours
Topics: Inheritance, Pointers, Virtual Functions, Polymorphism: Define inheritance, base and derived Classes, types of inheritance: Single, multilevel, multiple inheritance, Multi-Path inheritance, Pointers to objects and derived classes, "this" pointer, Run time polymorphism: Virtual functions and pure virtual functions. [Blooms 'level selected: Application]				
Module 5	Streams and Working with files, Templates, Manipulators	Assignment	Programming /Problem Solving	05 Hours
Topics: Streams and Working with files: Controlling output with manipulators, Templates: Function templates and class templates. [Blooms 'level selected: Comprehension]				
List of Laboratory Tasks: Experiment No 1: Demonstrate control structures, arrays, inline functions. [2 hours: Application Level] Level 1: Demonstrate control structures in C++. Level 2: Use of arrays in C++. Experiment No. 2: Demonstrate the use of functions, inline functions and function overloading. [2 hours: Application Level] Level 1: Use of functions and inline function. Level 2: Use of function overloading. Experiment No. 3: Demonstrate the working of classes, objects, member functions and method overloading.[2 hours: Application Level] Level 1: Understand use of classes, objects, member functions. Level 2: Use of method overloading. Experiment No. 4: Demonstrate the working of array of objects, static members, new and delete. [2 hours: Application Level] Level 1: Understand use of array of objects. Level 2: Use of static members, new and delete. Experiment No. 5: Implement the concept of constructors, destructors, constructor overloading and copy constructor. [2 hours: Application Level] Level 1: Understand the concept of constructors and destructors and strings. Level 2: Understand the concept of constructor overloading and copy constructor.				

Experiment No. 6: Implement the concept of operator overloading and friend function. [2 hours: Application Level] Level 1: Use of binary operator overloading. Level 2: Importance of friend function in operator overloading. Experiment No. 7: Implement the use of inheritance. [2 hours: Application Level] Level 1: Understand the concept of single, multi-level inheritance. Level 2: Passing arguments to base and derived classes using constructors. Experiment No.8: Implement the use of Virtual functions. [2 hours: Application Level] Level 1: Understand the concept of constructor in derived class. Level 2: Understand the concept of virtual function. Experiment No.9: Apply the knowledge of manipulators and function templates [2 hours: Application Level] Level 1: Understand the concept manipulators. Lever 2: Understand the concept of function template. Experiment No.10: Apply the knowledge of class templates. [2 hours: Application Level] Level 1: Understand the class templates. Lever 2: Real time scenario problem to cover all the concepts. Targeted Application & Tools that can be used: Application Area is to understand and apply concept of object oriented concepts using C++. Tools/Simulator used: GCC compiler/ Linux terminal. Project work/Assignment: Mention the Type of Project /Assignment proposed for this course 1. Problem Solving: Understanding different OOPS and implementation of programs. 2. Programming: Implementation of given scenario using C++. Text Book 1. Herbert Schildt, "C++: The Complete Reference", McGraw Hill Education, 4th Edition, 2017. 2. Behrouz A. Forouzan, Richard F. Gilberg, " C++ Programming: An Object-Oriented Approach", McGraw Hill Education, 1st edition, 2022. References 1. Robert Lafore, "Object Oriented Programming using C++", Galgotia publication, 2010. 2. Bjarne Stroustrup, "The C++ Programming Language", Pearson Education, 2004. 3. Stanley B. Lippman and Josee Louie, "C++ Primer", Pearson Education, 2003. 4. K.R.Venugopal, Rajkumar Buyya, T.Ravishankar, "Mastering C++", TMH, 2003. 5. E. Balaguruswamy, "Object Oriented Programming with C++", TMH, 6th Edition, 2013. Topics relevant to "EMPLOYABILITY SKILLS": Object, Class, Inheritance, Polymorphism, traction, Encapsulation for developing Employability Skills through Experiential Learning niques. This is attained through assessment component mentioned in course handout.					
Course Code: CSE3070	Course Title: ADVANCED COMPUTER NETWORK Type of Course: Theory Only	L- P- C	3	0	3
Version No.	1.0				
Course Pre-requisites	Computer Networks and Computer Architecture Course				
Anti-requisites					

Course Description	This course aims to provide understanding of advanced computer network concepts, building on the basic functions of various layers, protocols and standards used in practice to have a comprehensive and deep knowledge in computer networks.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Advanced Computer Network and attain EMPLOYABILITY SKILL through PARTICIPATIVE LEARNING techniques			
Course Out Comes	On successful completion of the course the students shall be able to: 1. Describe network architecture and application programming interface concepts (L2) 2. Explain working of internetworking protocols (L2) 3. Illustrate different routing protocols and end-to-end transmission (L3) 4. Distinguish the various protocols used at the transport layer (L2) 5. Summarize working of traditional, multimedia applications and overlay networks (L2)			
Course Content:				
Module 1	Introduction	Assignment	Data Collection/Interpretation	12Sessions
Topics: Introduction: Applications, Requirements – Perspectives, Scalable Connectivity, Cost-Effective Resource Sharing, Support for Common Services. Network Architecture- Layering and Protocols, OSI Architecture, Internet Architecture. Implementing Network Software- Application Programming Interface (Sockets). Performance- Bandwidth and Latency, Delay×Bandwidth Product, Application Performance Needs.				
Module 2	Internetworking	Case studies / Case let	Case studies / Case let	12 Sessions
Topics: Internetworking (Part - I): Switching and Bridging- Datagrams, Virtual Circuit Switching, Source Routing, Bridges and LAN switches. Basic Internetworking (IP)- What is an internetwork, service model, global addresses, Datagram Forwarding in IP, Subnetting and classless addressing, address translation (ARP), DHCP, ICMP, Virtual Networks and Tunnels.				
Module 3	Internetworking and Advanced Internetworking	Quiz	Case studies / Case let	14 Sessions
Topics: Inter-networking (Part - II): Routing - Network as a Graph, Distance Vector (RIP), Link State (OSPF), Metrics. Implementation and Performance- Switch Basics, Ports, Fabrics, Router Implementation. Advanced Internetworking: The Global Internet – Routing Areas, Inter domain Routing (BGP), IP Version 6 (IPv6). Multicast: Multicast addresses, Multicast routing (DVMRP, PIM)				
Module 4	Advanced Internetworking and End-to-End Protocols	Quiz	Case studies / Case let	14 Sessions
Topics: Multiprotocol Label Switching (MPLS): Destination-Based Forwarding, Explicit Routing, Virtual Private Networks and Tunnels, Routing among Mobile Devices: Challenges for Mobile Networking, Routing to Mobile Hosts (Mobile IP), End-to-End Protocols: Simple Demultiplexer (UDP), Reliable Byte Stream (TCP) - End-to-End Issues, Segment Format, Connection Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Performance,				

Alternative Design Choices. Congestion Control and Resource Allocation: Issues in Resource Allocation - Network Model, Taxonomy, Evaluation Criteria. Queuing Disciplines - FIFO, Fair Queuing.
Targeted Application & Tools that can be used:
Project work/Assignment:
Assignment:
Text Book: T1. Larry L. Peterson, Bruce S. Davie. Computer Networks, A Systems Approach, Morgan Kaufmann Publishers, Fifth Edition, 2012

Topics relevant to development of “Employability”: IP addressing for developing Employability Skills through Participative Learning Techniques. This is attained through assessment component mentioned in course handout.

Course Code: (CSE225)	Course Title: Introduction to Combinatorics and Graph Theory Type of Course: Program Core - Theory			L- P- C	3	0	3
Version No.	version 1						
Course Pre-requisites	Basic logic and Set theory						
Anti-requisites	nil						
Course Description	Graph Theory is a blend of the mathematical techniques applicable to Computer science, Information Technology and Statistics. Graph Theory gives us, both an easy way to pictorially represent many major mathematical results, and insights into the deep theories behind them. In this course, among other intriguing applications, we will see how GPS systems find shortest routes, how engineers design integrated circuits, how biologists assemble genomes, why a political map can always be colored using a few colors. Topics Include: Principles of Inclusion and Exclusion, Rook Polynomial, Derangements. Graph Theory: Graph Terminologies, Isomorphism, Coloring, Matching, Planar Graphs, Trees Terminologies, Traversals, Spanning Trees, Shortest path algorithms, Prefix Codes						
Course Objective	The objective of the course is to familiarize the learners with the concepts : Introduction to Combinatorics and Graph Theory and attain Skill Development through Participative Learning techniques.						
Course Outcomes	CO1: Explain the fundamental concepts of Graph theory. [L1: Knowledge] CO2: Discuss theorems of matching, connectivity, coloring and planar graphs. [L2: Comprehension] CO3: Discuss different types of trees and traversal techniques. [L2: Comprehension] CO4: Apply different algorithms to find optimal path for a given graph. [L3: Applications]						
Course Content:							
Module 1	Introduction to Graph Theory	Assignment	Data Collection	07 Sessions			
Introduction to Graph Theory 07H [Knowledge Level] Basic Concepts: definition, types of graphs, Graph Terminology and Special Types of Graph, representation of a graph and connectedness graph: (paths, walk. cycles, edge deleted and vertex deleted).							
Module 2	Introduction to Graph Theory contd	Assignment	Analysis of test results and also can be dealt with Lab	11 Sessions			
Introduction to Graph Theory contd. 11H [Comprehension Level] Graph isomorphism, Eulerian graph, Hamiltonian graph, Planar graph (three utility problem), Graph coloring, Combinatorics-Principle of Inclusion and Exclusion.							
Module 3	Trees	Assignment	MS Excel, Using Graphs and Pi Charts and tables for analysis	13 Sessions			

Trees 13H [Comprehension Level] Tree: Definitions, properties, Rooted trees, Binary search tree, Decision tree, prefix code, Tree traversal: in-order, pre-order, post-order, infix, postfix, prefix, spanning tree: BFS, DFS.				
Module 3	Algorithm on networks	on Assignment	MS Excel, Using Graphs and Pi Charts and tables for analysis	13 Sessions
Algorithm on networks Shortest path algorithm- Dijkstra's algorithm, Minimal spanning tree- Kruskal algorithm and Prim's algorithm, Transport network-Max-flow/Min-cut algorithm, Combinatorics-Rook polynomial, Derrangements .				
Targeted Application & Tools that can be used:				
Project work/Assignment:				
Project Assignment: Assignment 1: Assignment 2:				
Textbooks: K H Rosen, "Discrete Mathematics and its Application", McGraw Hill. [T1]				
References: 1. Harris, Hirst and Mossinghoff," Combinatorics and Graph theory", Springer. [R1] 2. Grimaldi," Graph Theory and Combinatorics", Pearson Education. [R2] 3. J Nestril and etal," Introduction to Discrete Mathematics", Oxford University Press. [R3] Web references: https://onlinecourses.nptel.ac.in/noc22_ma10/preview				
Topics relevant to "SKILL DEVELOPMENT": Dijkstra's algorithm, Minimal spanning tree- Kruskal algorithm and Prim's algorithm, Transport network-Max-flow/Min-cut algorithm, Combinatorics-Rook polynomial, Derrangements for skill development through Participative Learning techniques . This is attained through the assessment component mentioned in the course handout.				

Course Code: CSE 261	Course Title: Machine Learning Using Python Type of Course: Laboratory Integrated	L- P- C	2	2	4
Version No.	2.0				
Course Pre-requisites	Data Structures, Statistics, Linear Algebra, Python, Database				

Anti-requisites	--			
Course Description	Machine learning (ML), a subset of Artificial Intelligence (AI), is an important set of techniques and algorithms used for solving several business and social problems. The objective of this course is to discuss machine learning model development using Python. AI and ML are important skills that every engineering graduate will require to advance in their career. Python is the leading programming language used by several organizations for creating end-to-end solutions using ML. Topics include: Working with Collections and Data Frames; Regression algorithms; Classification algorithms; Optimization techniques – Gradient Descent algorithm, Gradient Descent for simple Linear Regression; Ensemble Learning – Random Forest, Boosting techniques – AdaBoost and Gradient Boosting; Grid Search for optimal parameters; Clustering algorithms; Forecasting with Time-Series data : Auto-Regressive Integrated Moving Average Models, Recommender Systems : Association Rule Mining, Collaborative Filtering, Text Analytics – Sentiment Classification using Naïve Bayesian model.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Machine Learning Using Python and attain Skill Development through Experiential Learning techniques.			
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Produce Machine Learning Models for Predictive Analytics. [Application]. CO2: Apply Ensemble Learning, Optimization and Hyper Parameter Tuning Techniques for machine learning algorithms. [Application] CO3: Demonstrate different types of Clustering Algorithms.[Application] CO4: Illustrate advanced concepts in Machine Learning such as time series forecasting techniques, Recommender systems, Sentiment Classification. [Application]			
Course Content:				
Module 1	Supervised Machine Learning Algorithms	Assignment	Data Collection/Interpretation	8 Sessions
Topics: Introduction to the Machine Learning (ML) Framework, types of ML, Feature Engineering, One-hot encoding, Simple Linear Regression, Multiple Linear Regression, Model Evaluation, Validation and Accuracy measures for Regression models. Classification models – Decision Tree algorithms using Entropy and Gini Index as measures of node impurity, model evaluation metrics for classification algorithms, Multi-class classification and Class Imbalance problem.				
Module 2	Advanced Machine Learning Concepts	Case studies / Case let	Case studies / Case let	12 Sessions
Topics: Nearest Neighbor techniques, Support Vector Machine, Cost functions and Optimization Technique – introduction to Gradient Descent, its applications on Linear Regression. Ensemble Learning algorithms – Bagging (Random Forest), Boosting(AdaBoost), Hyperparameter Tuning for nearest neighbor learning using Grid Search. Introduction to Regularization with Advanced Regression models- LASSO and Ridge Regression an introduction.				

Module 3	Clustering and Forecasting with Time-Series Data	Quiz	Case studies / Case let	14 Sessions
Topics: Partitional Clustering – K-means and Hierarchical Clustering techniques, cluster validity measures, Dimensionality Reduction Techniques-Linear Discriminant Analysis, Principal Component Analysis, Components of Time Series data, forecasting using moving average, exponential smoothing, calculating forecast accuracy, decomposing time series data.				
Module 4	Recommender Systems and Text Analytics	Quiz	Case studies / Case let	14 Sessions
Topics: Association Rule Mining, Collaborative Filtering – User based and item based similarity, Text Analytics – text preprocessing, representation using BoW and vector space model. Naïve Bayes Classifiers and Naive Bayes model for sentiment classification – an introduction.				
List of Laboratory Tasks: ○ A review of Python programming - Introduction to Python Stack for Data Science, Core Python Libraries for data analysis, Anaconda platform and its installation, Executing programs on Jupyter IDE/Colab, Programming exercises to revise variables, control statements and collections – lists, list comprehension ○ Programming exercises on Tuples, dictionaries, functions using math, random modules. ○ Introduction to Data Frames using Pandas and working with frames – shape, summary, cross tabs, sorting by column names, creating new columns, aggregation and grouping, CO11filtering records, removing a column/row, handling missing values, Plotting using matplotlib library histogram, scatter Plot ○ Regression Models Simple linear regression, outlier detection, multiple linear regression – model evaluation, multi-collinearity and handling multi-collinearity, outlier detection ○ Decision Tree Classifiers - Decision Tree classifier using Gini Index- measuring test accuracy, displaying the tree, confusion matrix and ROC, Decision Tree Classifier using Entropy. ○ Optimization Techniques Developing a Gradient Descent Algorithm for linear regression – using NumPy and using sklearn ○ Hyperparameter Tuning methods Hyperparameter tuning using Grid Search for Nearest Neighbor Classifiers and Decision Tree Classifiers ○ Hyperparameter Tuning for Ensemble models Ensemble Learning – Random Forest – Building the model, GridSearch for optimal parameters, Feature Importance. Ada Boost Classifiers and Gradient Boosting Classifiers ○ Clustering – Kmeans – cluster centers and interpreting the clusters, finding the optimal number of clusters using Elbow Curve method, Agglomerative Hierarchical Clustering – Compare the clusters formed by kmeans and Agglomerative Clustering ○ Models for Forecasting Time Series data ○ Recommender Systems - Association Rule Mining using Apriori for frequent Itemset Generation. ○ Recommender Systems – user based similarity ○ Naïve Bayes Model				
Targeted Application & Tools that can be used • Rapid Miner • Orange • MatLab

Topics relevant to “SKILL DEVELOPMENT”: Data Visualization using Seaborn library, Applications of Machine Learning in different domains for Skill Development through Experiential Learning techniques. This is attained through the Lab Experiments as mentioned in the assessment component	

Course Code: CSE3066	Course Title: Mobile Application for IoT Type of Course: Program Core& Theory Only	L-P-C	3	0	3
Version No.	1.0				
Course Pre-requisites	NIL				
Anti-requisites	NIL				

Course Description	Mobile Application is the essential part for IoT infrastructure, which helps in understanding the architectural overview of IOT. The purpose of this course is to expose the students to understand the IoT Reference Architecture and Real World Design Constraints along with various IOT protocols. This course is both conceptual and analytical in nature that would help the student to predict the effects of forces and its motion while carrying out creative design functions.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Mobile and Application for IoT and attain Skill Development through Participative Learning techniques.			
Course Out Comes	On successful completion of the course the students shall be able to: 1. Able to understand the application areas of IOT 2. Able to realize the revolution of Internet in Mobile Devices, Cloud & Sensor Networks 3. Able to understand building blocks of Internet of Things and characteristics. 4. Learn about android application development			
Course Content:				
Module 1	Overview	Assignment	Programming Task	9 Sessions
Topics: IoT-An Architectural Overview Building an architecture, Main design principles and needed capabilities, An IoT architecture outline, standards considerations. M2M and IoT Technology Fundamentals- Devices and gateways, Local and wide area networking, Data management, Business processes in IoT, Everything as a Service(XaaS), M2M and IoT Analytics, Knowledge Management				
Assignment: Case study on Business processes in IoT.				
Module 2	Basic Design	Assignment	Data Collection/Excel	10 Sessions
Topics: Introduction Basics of embedded systems design Embedded OS - Design constraints for mobile applications, both hardware and software related Architecting mobile applications user interfaces for mobile applications touch events and gestures Achieving quality constraints performance, usability, security, availability and modifiability.				
Assignment: Recent trends In mobile application development				
Module 3	IOT mobile apps	Assignment	Programming/Data analysis task	9 Sessions

Topics: IoT Mobile App Development Trends In 2020 - Role of Mobile Apps in revolutionizing the world of IoT - UX / UI design for IoT Mobile apps - challenges of UX/UI design for IoT applications - practice tips on design for IoT mobile apps IoT App Design Solutions				
Assignment: Challenges faced during mobile application development				
Module 4	TECHNOLOGY I- ANDROID	Assignment	Programming/Data analysis task	10 Sessions
Topics: Introduction Establishing the development environment Android architecture Activities and views Interacting with UI Persisting data using SQLite Packaging and deployment Interaction with server side applications Using Google Maps, GPS and Wifi Integration with social media applications.				
Targeted Protocols & Tools that can be used: Bluetooth, ZigBee, LoRa, NBIoT, WiFi, and Thread				
Text Book T1: "From machine to machine to the internet of things: Introduction to the new age of intelligence", 1 st edition, Academic press, 2014. T2: Jeff McWherter and Scott Gowell, "Professional Mobile Application Development", Wrox, 2012

Topics relevant to “SKILL DEVELOPMENT”: Wifi integration and social media analysis for developing Skill Development through Participative Learning Techniques . This is attained through the assessment component mentioned in the course handout.				

Course Code: CSE3055	Course Title: Wireless communication in IOT Type of Course: Program Core& Theory Only		L-P-C	3	0	3
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	Wireless communication system is the essential part for IoT infrastructure, which acts as the bridge for dual directional communication for data collection and control message delivery. The purpose of this course is to expose the students to understand the fundamentals of wireless network and problems related to real-world scenarios. This course is both conceptual and analytical in nature.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Wireless communication in IOT and attain Skill Development through Participative Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: 1. To understand the fundamentals of wireless networks 2. Analyze the standards of IoT which employed for wireless networks 3. Explain the use of various wireless technologies in IoT 4. Design and develop various applications of IoT					
Course Content:						
Module 1	Cellular standards	Assignment	Programming Task		9 Sessions	
Topics: Cellular carriers and Frequencies, Channel allocation, Cell coverage, Cell Splitting, Microcells, Picocells, Handoff, 1st, 2nd, 3rd and 4th Generation Cellular Systems (GSM, CDMA, GPRS, EDGE,UMTS), Mobile IP, WCDMA						

Assignment: Case study on generation cellular systems.				
Module 2	Radio Frequency (RF) Fundamentals	Assignment	Data Collection/Excel	10 Sessions
Topics: Introduction to RF & Wireless Communications Systems, RF and Microwave Spectral Analysis, Communication Standards, Understanding RF & Microwave Specifications. Spectrum Analysis of RF Environment, Protocol Analysis of RF Environment, Units of RF measurements, Factors affecting network range and speed, Environment, Line-of-sight, Interference, Defining differences between physical layers- OFDM. Assignment: Determination of RF and Microwave spectral Analysis				
Module 3	WLAN: Wi-Fi Organizations and Standards	Assignment	Programming/Data analysis task	9 Sessions
Topics: IEEE, Wi-Fi Alliance, WLAN Connectivity, WLAN QoS & Power-Save, IEEE 802.11 Standards, 802.11- 2007, 802.11a/b/g, 802.11e/h/l, 802.11n Assignment: Protocols on WLAN connectivity				
Module 4	Wi-Fi Hardware & Software	Assignment	Programming/Data analysis task	10 Sessions
Topics: Access Points, WLAN Routers, WLAN Bridges, WLAN Repeaters, Direct-connect Aps, Distributed connect Aps, PoE Infrastructure, Endpoint, Client hardware and software, Wi-Fi Applications				
Targeted Protocols & Tools that can be used: Bluetooth, ZigBee, LoRa, NBloT, WiFi, and Thread				
Text Book T1: Wireless Communications – Principles and Practice; by Theodore S Rappaport, Pearson Education Pte. Ltd. T2: Wireless Communications and Networking; By: Stallings, William; Pearson Education Pte. Ltd.

Topics relevant to "SKILL DEVELOPMENT":

GSM, CDMA for developing **Skill Development** through **Participative Learning Techniques**.
This is attained through the assessment component mentioned in the course handout.

Course Code: CSE 3053	Course Title: Big Data Analytics for IoT			L- P- C	1	4	3
	Type of Course: Program Core Theory with embedded lab						
Version No.	1.0						
Course Pre-requisites							
Anti-requisites	NIL						
Course Description	The course covers basic concepts for IOT Analytics, collection of data for IOT, Integration of IOT with Cloud, Big Data Environments. Students can learn about applying geospatial analytics and applying machine learning to the IOT data. The course also covers the organization of the IOT data, cost benefits of using IOT and review of IOT in various sectors.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Big Data Analytics for IoT and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques.						
Course Outcomes	On successful completion of the course the students shall be able to: CO1: Demonstrate IOT Data Analytics and machine learning application in IOT (Apply) CO2: Apply appropriate Hadoop Ecosystem tools to perform data analytics for a given problem (Apply) CO3: Examine concepts of cloud based IOT, Big data and IOT (Apply) CO4: Illustrate techniques and strategies for data collection and Geospatial Analytics to IOT Data (Apply)						
Course Content:							
Module 1	IOT Analytics	Assignment					5 sessions
Introduction – IOT Data, Challenges of IOT analytics Applications – IOT analytics Lifecycle and Techniques. IOT Cloud and Big Data Integration – Cloud based IOT platform – Data Analytics for IOT, IOT devices in different domains. IOT Analytics for the Cloud.							
Module 2	Hadoop Ecosystem Tools						5 sessions
Introduction – Big Data and Big Data Analytics – Hadoop Ecosystem – Hadoop Distributed File System (HDFS) – MapReduce – YARN Architecture – PIG Architecture – Apache HIVE – Mahout – Apache Spark – Apache HBase – Apache Zookeeper.							
Module 3	Overview of AWS and Thingworx	Assignment					5 sessions
AWS overview - AWS key services for IOT analytics. Thingworx overview. Creating an AWS Cloud Analytics environment.							
Module 4	Geospatial Analytics to IOT Data	Case Study				Data Collection and Analysis	
Strategies and Techniques in Data collection: Designing data processing for analytics – Applying big data to storage for Geospatial.							

List of Practical Tasks:**Experiment 1:[Module 1]**

Level 1: Installation of Raspbian OS, working basic commands on raspberry pi

Level 2: Demonstrate to obtain the temperature using DHT22 sensors .

Experiment 2: [Module 1]

Level 1: Design and Simulate the RADAR SYSTEM Using Arduino and display on the serial monitor using ultrasonic sensor/PIR WITH &WITH OUT BUZZER/Servo motor

Level 2: using a raspberry pi to Demonstrate to find the distance using ultrasonic sensor hc- sr04

Experiment 3: [Module 1]

Level 1 : using a raspberry pi Set the connections of healthcare sensors

Level 2: using a raspberry pi to Demonstrate to find the ECG, Temperature, etc using Healthcare sensors

Experiment 4: [Module 2]

Level 1: Hadoop Single node cluster installation on ubuntu

Level 2: Hadoop Multiple node cluster installation, windows installation

Experiment 5: [Module 2]

Level 1: Basic hadoop commands and Word count analysis for given dataset

Level 2: Analysis on particular matching word on huge dataset

Experiment 6: [Module 2]

Level 1: Basic hadoop commands and Stock analysis on given dataset

Level 2: Analysis with max, min, average functions on particular field with missing values

Experiment 7: [Module 2]

Level 1: Basic hadoop commands and Temperature analysis on given dataset

Level 2: Analysis with max, min, average functions on particular field with missing values

Experiment 8: [Module 3]

Level 1: Working on hive commands

Level 2: Apply bucketing technique to bring out the difference between partitioning and bucketing

Experiment 9: [Module 3]

Level 1: Working on Hbase commands .

Level 2: Apply Hbase commands on Insurance database/employee dataset.

Experiment 10: [Module 3]

Level 1: Installation of spark and word count analysis

Level 2: Using RDD and FlatMap count how many times each word appears in a file and write out a list of words whose count is strictly greater than 4 using Spark

Experiment 11: [Module 4]

Level 1: Temperature Data stored in cloud through IoT devices

Level 2: Retrieve the data set for cloud and Apply data analytics techniques

Experiment 12: [Module 4]

Level 1: Healthcare Data stored through IoT sensors in Cloud

Level 2: Retrieve the data set for cloud and Apply data analytics techniques

Targeted Application & Tools that can be used:

Hadoop ecosystem tools, Thingworx , AWS Cloud

Project work/Assignment:

Student will be asked to carry out a mini project integrating IoT & data Analytics.

Version No.	1.0						
Course Pre-requisites	NIL						
Anti-requisites	NIL						
Course Description	The course will provide a solid base for understanding the challenges and problems underlying the design and development of fog computing systems and applications. Thus, this course will teach how to specify, design, program, analyze and implement such systems and applications. Fog computing is a decentralized computing infrastructure in which data, compute, storage and applications are located somewhere between the data source and the cloud. Like edge computing, fog computing brings the advantages and power of the cloud closer to where data is created and acted upon. Many people use the terms fog computing and edge computing interchangeably because both involve bringing intelligence and processing closer to where the data is created. This is often done to improve efficiency, though it might also be done for security and compliance reasons.						
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Introduction to Fog Computing and attain SKILL DEVELOPMENT through Problem Solving techniques.						
Course Out Comes	On successful completion of this course the students shall be able to: 1. Understand the basic principles and concepts of fog computing systems and their relation to other models such as Cloud Computing and Near-Far computing. 2. Understand the challenges of developing fog based applications and middleware, and the possible solutions. 3. Specifically, understand the issues mostly related to fog computing, namely: introduction to the fog programming model and related models, security, offloading, Software Defined Network, load balancing, communication, containers and orchestration, application areas. 4. Able to decide which is the best approach for a particular problem regarding the design and development of a fog computing system. 5. Able to design and implement an application using containers. 6. Able to measure and analyze the performance of a fog computing application.						
Course Content:							
Module 1	INTRODUCTION TO FOG COMPUTING	Assignment	Programming activity	11 Sessions			
Topics: Fog Computing, Characteristics, Application Scenarios, Issues and challenges. Fog Computing, Internet of Things-Pros and Cons-Myths of Fog Computing -Need and Reasons for Fog Computing Fog Computing and Edge Computing-IoT , FOG, CloudBenefits.							
Module 2	ARCHITECTURE	Assignment	Programming activity	10 Sessions			

Topics: Communication and Network Model, Programming Models, Fog Architecture for smart cities, healthcare and vehicles. Fog Computing Communication Technologies: Introduction ,IEEE 802.11,4G,5G standards, WPAN, Short-Range Technologies, LPWAN and other medium and Long-Range Technologies.				
Module 3	FOG PROTOCOLS AND COMMUNICATION TECHNOLOGIES	Assignment	Programming activity	10 Sessions
Topics: Fog Protocol-Fog Kit- Proximity Detection Protocols- DDS/RTPS computing protocols, Introduction ,IEEE 802.11,4G,5G standards, WPAN, Short-Range Technologies, LPWAN and other medium and Long-Range				
Module 4	MANAGEMENT AND ORCHESTRATION	Assignment	Programming activity	11 Sessions
Topics: Management and Orchestration of Network Slices in 5G, Fog, Edge, and Clouds: Introduction, Background , Network Slicing in 5G , Network Slicing in Software-Defined Clouds, Network Slicing Management in Edge and Fog , Middleware for Fog and Edge Computing, Need for Fog and Edge Computing Middleware, Clusters for Lightweight Edge Clouds , IoT Integration , Security Management for Edge Cloud Architectures. Fog Computing Realization for Big Data Analytics: Introduction to Big Data Analytics, Data Analytics in the Fog, Prototypes and Evaluation.				
Module 5	FOG COMPUTING REQUIREMENTS WHEN APPLIED TO IOT	Assignment	Programming activity	11 Sessions
Topics: Fog computing requirements when applied to IoT: Scalability,Interoperability,Fog-IoT: architectural model, Challenges on IoT Stack Model via TCP/IP Architecture, DataManagement,filtering,EventManager,DeviceManagement,cloudification,virtualization, security and privacy issues. Integrating IoT,Fog, Cloud Infrastructures: Methodology , Integrated C2F2T Literature by Modeling Technique re by Use-Case Scenarios , Integrated C2F2T Literature by Metrics.				
Targeted Application & Tools that can be used: Case Study: Wind Farm - Smart Traffic Light System, Wearable Sensing Devices, Wearable Event Device ,Wearable System, Demonstrations , Post Application Example . . Event Applications Example.				
Text Book 1. Fog Computing: Theory and Practice by Assad Abbas, Samee U. Khan, Albert Y. Zomaya. 2. Fog and Edge Computing: Principles and Paradigms (Wiley Series on Parallel and Distributed Computing) by RajkumarBuyya and Satish Narayana Srirama. 3. Sensors, Cloud, and Fog: The Enabling Technologies for the Internet of Things Paperback by SudipMisra , Subhadeep Sarkar , Subarna Chatterjee.				
Web Links: Fog Computing: Theory and Practice by Assad Abbas, Samee U. Khan, Albert Y. Zomaya. Fog Computing Wiley Online Books Fog and Edge Computing: Principles and Paradigms (Wiley Series on Parallel and Distributed Computing) by RajkumarBuyya and Satish Narayana Srirama.

Topics relevant to "SKILL DEVELOPMENT":

Fog Computing requirements for **SKILL DEVELOPMENT** through **Problem Solving Techniques**. This is attained through the assessment component mentioned in course handout.

Course Code: CSE3046	Course Title: DevOps Tools And Internals Type of Course: Theory & Integrated Laboratory			L-P-C	2	2	3
Version No.	1.2						
Course Pre-requisites	Fundamentals of Devops						
Anti-requisites	NIL						
Course Description	This course is designed to offer profound perceptions and knowledge in various tools like Git, Ansible, Selenium and Jekins. With the proficient learning of DevOps course, a student will be able to work in all the above tools and become a trained practitioner in the integration and monitoring of software. DevOps Tool is an application that helps the software development process to industrialize. It mainly focuses on communication and collaboration between product management, software development, and operations professionals. The objective of this course is to discuss and implement the various tools usage and internals practically.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of DevOps Tools And Internals and attain Skill Development through Experiential Learning techniques.						
Course Out Comes	On successful completion of this course the students shall be able to: 1] Apply the features and common Git workflow. [Application] 2] Practice the filters and plugins to populate, manipulate, and manage data used by Ansible Playbooks. [Application] 3] Compute the features of selenium IDE. [Application] 4] Interpret the installation and features of Jenkins and build jobs. [Application]						
Course Content:							
Module 1	Git	Quiz	Quiz on Git commands	5L +4P Classes			
Topics: Introduction to Git, Features of Git, Benefits, Workflow, Git vs GitHub, Installation of Git on Windows/Linux and Environment set up, All Git Commands-Working with local and remote repositories, Running first Git command, Fundamentals of Repository structure and file status life cycle, Working locally with staging, unstaging and commit.							
Module 2	Containerization Using Docker	Quiz	Quiz on Ansible tool usage	5L +4P Classes			
Topics: Docker Life Cycle,Docker Installation, Docker Operations,Docker Concepts - Registry, Repository, Tag, Image and Containers, Create A Docker Hub Account, Docker Images and Containers, Pushing Docker To Container Hub, Docker File.							
Module 3	Ansible	Assignment	Assignments on	5L +4P			

			Selenium tool usage and test case	Classes
Topics: Ansible Workflow, Architecture, Installation in Linux/Windows, ad-hoc Commands, Playbooks, Tower, Roles, Variables open link, Tags, Galaxy, Commands Cheat Sheets, Modules, Shell, Templates, YAML, Inventory, Debug, Apt, Lineinfile, Copy, Command, File, Vault, Windows, Yum, AWX, Unarchive, Ansible Pip				
Module 4	Jenkins	Assignment	Assignments on Jenkins tool usage and Build jobs	5L +4P Classes
Topics: Introduction To Continuous Integration, Jenkins Architecture, Managing Nodes On Jenkins, Jenkins Master Node Connection, Jenkins Integration With Devops Tools, Understanding CI/CD Pipelines, Creating A CI/CD Pipeline				
List of Laboratory Tasks: Git 1. Level 1: Installation of Git on windows Level 2: Git commands-Local repositories Level 2: Git commands-Remote repositories 2. How Git can handle automatically file modifications when they are not related to the same lines of text. Level 1: You are in a new repository located in C:\Repos\Exercises\Ch2-1. Level 1: You have a master branch with two previous commits: the first commit with a file1.txt file and the second commit with a file2.txt file. Level 2: After the second commit, you created a new branch called File2Split. You realized that file2.txt is too big, and you want to split its content by creating a new file2a.txt file. Do it, and then commit the modifications. 3. How to resolve conflicts when Git cannot merge files automatically. Level 1: You are in the same repository used earlier, C:\Repos\Exercises\Ch2-1. On the master branch, you add the file3.txt file and commit it. Level 2: Then, you realize that it is better to create a new branch to work on file3.txt, so you create the File3Work branch. You move in this branch, and you start to work on it, committing modifications. Level 2: The day after, you accidentally move to the master branch and make some modifications on the file3.txt file, committing it. 5. Then, you try to merge it. 4. Level 1: Installation of Ansible Level 2: Create a basic inventory file Level 2: Running your first Ad-Hoc Ansible command. Ansible 5. Ansible Archive Level 1: Compressing the Directory with TAR and tar and gz Level 1: Compress the file – Default File Compress format and Remove the Source files after archiving Level 2: Create a ZIP file archive – File and Directory Level 2: Create a BZIP archive – File and Directory				

6. A Quick Syntax of Ansible Shell module – ADHOC
 - Level 1: A Quick Syntax of Ansible Shell module in a Playbook
 - Level 1: Ansible Shell Examples
 - Level 2: Execute a Single Command with Ansible Shell
 - Level 2: Execute a Command with Pipe and Redirection
7.
 - Level 1: Run playbook
 - Level 2: Create the file on the target machines or servers as mentioned in the inventory file and the webserver's group, save the below code with .yaml extension and run the playbook.
 - Level 2: Create multiple directories. To create multiple directories with one single task you can use the loop **with_items** statement. So when you run the below playbook it is interpreted as 3 different tasks.

Selenium

8.
 - Level 1: Selenium IDE Download and Install
 - Level 2: Selenium IDE - First Test Case, Login Test and command usage
9.
 - Level 1: Write a script to open google.co.in using chrome browser (ChromeDriver).
 - Level 2: Write a script to open google.com and verify that title is Google and also verify that it is redirected to google.co.in.
10.
 - Level 1: Write a script to open google.co.in using internet explorer (InternetExplorerDriver).
 - Level 2: Write a script to create browser instance based on browser name.
11.
 - Level 1: Write a script to close all the browsers without using quit() method.
 - Level 2: Write a script to search for specified option in the listbox

Jenkins

12. Level 1:
 - Environment Setup
 Level 2:
 - Jenkins downloading and installation
13. Level 1:
 1. Setup a Jenkins Job with Apache Ant Build Tool
 2. Setup a Jenkins Job with Apache Maven
 Level 2 :
 1. Setup a Jenkins Job with Batch Script.
14. Level 1: Add a Linux Node (Also Check SSH Slaves plugin plugins)
 - Level 1: Add a Windows Node
 - Level 2: Assign a Java Based Job to Linux and Build it
 - Level 2: Assign a MSBuild Based to Windows and Build it

Targeted Application & Tools that can be used:

Tracking changes in the source code and source code management
 Automates web browsers
 Configuration Management and IT automation.
 Integration of Individual Jobs and Effortless Auditing
 Tools: Git, Ansible, Selenium and Jenkins

Project work/Assignment: Mention the Type of Project /Assignment proposed for this course					
Each batch of students (self-selected batch mates) will identify projects from searching on Google and implement with the most suitable 2 or 3 antecedents.

Course Code: CSE3045	Course Title: Development Automation Type of Course: Elective in Devops Basket Theory & Integrated Laboratory	L- P- C	2	2	3
Version No.	1.0				
Course Pre-requisites	NIL				
Anti-requisites	Scripting Language Knowledge, Linux Fundamentals				
Course Description	The Objective of this course is to give a strong foundation of the Development Automation. DevOps refers to the integration of an organization’s development (dev) and operations (ops) teams. It encompasses an organization’s culture, processes, and philosophies. DevOps tools enable faster development cycles and higher software quality. DevOps speeds delivery of higher quality software by combining and automating the work of software development and IT operations teams.				

Course Objective	The objective of the course is to familiarize the learners with the concepts of Development Automation and attain SKILL DEVELOPMENT through Experiential Learning techniques.			
Course Outcomes	On successful completion of the course, the students shall be able to I. Understand the automated software delivery and deployment process[Knowledge] II. Analyze the various automation scenarios .[Comprehension] III. Demonstrate the interaction with linux environment[Application] IV. Implement scripts[Application] V. Implement makefiles to automate tasks[Application]			
Course Content:				
Module 1	Introduction to Automation	Assignment/Quiz	Fully Automated Software delivery process	06 Session
Topics: The Software Delivery Pipeline, Overview of the Continuous Delivery Pipeline, Fully Automated Software Delivery Process, The Build Process, Automated build, Automated Test, Automated Deployment, Benefits of Automated Deployment, Automated Deployment and DevOps Adoption, Automated Deployment and DevOps Adoption, Overview of Rapid Application Development (RAD), Phases in RAD, Essential Aspects of RAD, Code generation, Categories of Code Generators, Common. Assignment: The build process				
Module 2	Advantages of Automation	Case study	Automation scenarios	06 Session
Topics: Advantages of Automation, Automation Scenarios, Archiving Logs, Auto-Discard Old Archives, MySQL (RDBMS) Backups, Email Web Server Summary, Ensure Web Server is Running, User Command Validation, Disk Usage Alarm, Sending Files to Recycle Bin, Restoring Files from Recycle Bin, Logging Delete Actions, File Formatter, Decrypting Files, Bulk File Downloader, System Information, Install LAMP Stack, Get NIC's IP, Scenarios Where Automation Prevents Errors . Assignment: Email web server summary				
Module 3	Interacting with Linux Environment	Case study	Linux File system	06 Session
Topics: The Linux System, Linux File System, Partitions, Common System Directories, Shell, User Groups and Permissions, User Accounts, The passwd File, Creating User Accounts, File Ownership, File Permissions, Working with Bash, Shell Features Assignment: Linux File System				
Module 4	Scripting Development Tasks	Case study	Linux commands	06 Session
Topics: Writing Automation Scripts, Task Scheduling Using Cron, Basic Linux Commands, Best Practices for Scripting, Make use of Shell's Built-In Options, Naming Conventions, Annotations Make the Logic Clean, Command Substitution, Always Begin with a Shebang, Variable Substitution, Conditionals, Regular Expressions. Assignment: Shell's built-in options				

Module 5	“Make” “Makefiles”	and	Case study	Makefile arguments and source code creation	06 Session
Topics: Why “Make”? Why not Others?, Why not use “Bash Script” instead of “Makefile”?, features of “Make”, Various versions and Variants of “Make”, Structure of a “Makefile”, What is a Rule?, Structure of a “Makefile” Rule, Targets, Some Special Built-in Target Names, Automatic Variables, Suffix Rules, Pattern Rules, The “Make” command, “Make” arguments, recursive makefile, Building Binary from Source Code, Conditionals in “Makefile”, Best Practices in writing “Makefiles”. Assignment: Best practices in writing Makefiles					
List of Laboratory Tasks: Experiment No 1: Working with Basic Linux Commands, make use of shells built in options, naming conventions, Level 1: basic linux commands Level 2: Advanced linux commands Experiment No 2: Working with Linux File System, Partitions, Common System Directories Level 1: Simple commands for exploring partitions, common system directories Level 2: configuring linux system Experiment No 3: Working with writing automation scripts Level 1: Simple automation scripts Level 2: Complicated automation scripts Experiment No 4: Working with variable substitution, conditionals, regular expressions Level 1: Simple regular expressions, conditionals Level 2: Advanced regular expressions, conditionals Experiment No 5: creation of makefile , Structure of makefile Level 1: Simple makefile creation Level 2: Advanced program on makefile Experiment No 6: Working with automatic variables, pattern rules , make command Level 1: Basic pattern rules, make command Level 2: Advanced pattern rules Experiment No 7: Building binary from source code Level 1: basic binary from source code Level 2: Advanced binary from source code Experiment No 8: Working with Conditionals in “Makefile”, Best Practices in writing “Makefiles Level 1: Basic conditionals in makefile Level 2: Advanced conditions and best practices in writing makefiles					
Targeted Application & Tools that can be used: Application Area includes Online Financial Trading Company, Network Cycling, Car manufacturing industries, Airlines industries, GM Financial, Bug Reduction. Companies like Amazon, Target, Esty, Netflix, Google, Walmart use Devops in their day to day processes to increase efficiency and improve delivery time. Professionally Used Software: Red hat Linux Operating system, GIT					

Besides these software tools Visual studio code also used					
Project work/Assignment:					
1. Case Studies: At the end of the course students will be given a real-world scenario for any application on automating software development and deployment process, automation scenarios, working with linux environment using script and makefile. 2. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link. 3. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.					
Text Book(s): a. Running Linux – Book by Matthias Kalle Dalheimer, Matt Welsh b. Mastering Linux Shell Scripting – Book by Andrew Mallett .

Topics relevant to “SKILL DEVELOPMENT”: Simple automation Scripts, Linux commands for SKILL DEVELOPMENT through Experiential Learning Techniques. This is attained through the assessment component mentioned in the course handout.					

Course Code: CSE 3043	Course Title:	L- P- C	2	2	3
	Automated Test Management Type of Course: Integrated				

Version No.	1.0			
Course Pre-requisites	Introductory course on Software Engineering.			
Anti-requisites	NA			
Course Description	This course is intended for understanding the principles of automation and the application of tools for the analysis and testing of software. The automated analysis encompasses both approaches to automatically generate a very large number of tests to check whether programs meet requirements, and also means by which it is possible to prove that software meets requirements and that it is free from certain commonly-occurring defects, such as divide-by-zero, overflow/underflow, deadlock, race-condition freedom, buffer/array overflow, uncaught exceptions, and several other commonly-occurring bugs that can lead to program failures or security problems. The learner will become familiar with the fundamental theory and applications of such approaches, and apply a variety of automated analysis techniques on example programs.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Automated Test Management and attain SKILL DEVELOPMENT through Experiential Learning techniques.			
Course Out Comes	On successful completion of the course the students shall be able to: • Understand testing in DevOps. • Learn its approaches to testing. • Understand to design test cases.			
Course Content:				
Module 1		CA1	Lab Experiments	10 Sessions
Topics: Seven Principles - SDLC vs STLC - Testing Life Cycle - Usability Testing - Functional Testing - End to End Testing - Compatibility Testing - GUI Testing - API testing.				
Module 2		CA2	Lab Experiments	10 Sessions
Topics: Usability Testing - Functional Testing - End to End Testing - Compatibility Testing - GUI Testing - API testing.				
Module 3		CA3	Lab Experiments	10 Sessions
Topics: Manual Testing - Automation Testing - Unit Testing - Integration Testing - Smoke-Sanity Testing - Regression Testing , Reasons for Automated Testing: Controlling Costs, Application Coverage, Scalability, Repeatability.				
Module 4		CA4	Lab Experiments	10 Sessions
Topics : Test Scenario - Test Case Design - Test Basis - Traceability Matrix				
Module 5		CA4	Lab Experiments	8 Sessions
Topics : ESTIMATION TECHNIQUES :Estimating automation - Test Plan Document - Bug Life Cycle				
List of Laboratory Tasks: Introduction and installation of DevOps. SDLC, STLC, GUI and API testing modules. Unit Testing and Integration testing modules. Creating test scenarios. Bug Life Cycle				

Targeted Application & Tools that can be used DevOps
Project work/Assignment:
Assignment: CA1, CA2, CA3, CA4
Text Book T1.Flexible Test Automation - by Vitaliano Inglese, Pasquale Arpaia T2.Experiences of Test Automation: Case Studies of Software Test Automation - by Mark Fewster, Dorothy Graham
References Web resources: W1. https://presiuniv.knimbus.com/user#/home
Topics relevant to “SKILL DEVELOPMENT”: Unit testing, Functional testing for Skill Development through Experiential Learning Techniques . This is attained through assessment component mentioned in course handout.

Course Code: CSE 3040	Course Title: Agile Structures and Frameworks Type of Course: School Core		L- P- C	3	0	3
Version No.	1.0					
Course Pre-requisites	Software Engineering					
Anti-requisites	NIL					
Course Description	This course imparts knowledge to students in the basic concepts of Agile Software Process, methodology and its development The objective of this course is to provide the fundamentals concepts of Agile and its Significance. This course covers the Agile and its methodologies. The objective of the course is to understand the Agility and Assurance.					
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Agile Structures and Frameworks and attain Skill Development through Participative Learning techniques.					
Course Out Comes	On successful completion of this course the students shall be able to: 1] Understand the basic concepts of Agile Software Process. (Knowledge level) 2] Comprehend the various Agile Methodologies. (Comprehension level) 3] Develop Agile Software Process. (Knowledge level) 4] Apply principles of Agile Testing. (Application level)					
Module 1	Introduction	Assignment	Agile Estimation	08 Sessions		
Introduction to Agile technology, Iterative and Evolutionary Methods, Agile – Agile Development. Agile Values, Agile Principles, Compare and Contrast the agile with traditional methods. Agile Benefits. Agile Estimation Techniques. Case Study						
Module 2	Agile and Its Significance	Assignment	Comparison of Agile technologies with traditional methods	09 Sessions		
Agile Story : Evolutionary delivery ,Scrum Demo, Planning game, Sprint back log, adaptive planning. Agile Motivation – Problems With The Waterfall - Research Evidence. Scrum : Method Overview ,Life cycle phases and Work product roles and practices.						
Module 3	Agile methodology		Case Study	12 Sessions		
Extreme Programming: Method Overview ,Life cycle phases and Work product roles and practices. Unified process : Method Overview ,Life cycle phases and Work product roles and practices. EVO : Method Overview ,Life cycle phases and Work product roles and practices. Case Study.						
Module 4	Agility and Quality Assurance	Assignment	Apply the testing concepts using Programing	09 Sessions		
Agile product development – Agile Metrics – Feature Driven Development (FDD). Agile approach to Quality Assurance. Test Driven Development – Agile approach in Global Software Development. Agile Technology Tools.						

Targeted Application & Tools that can be used: JIRA
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course
1. Agile Estimation 2. Comparison of Agile technologies with traditional methods 3. Case Study: Student group must collaborate and report together along with assigned batch members. Collect the requirements from the client and adopt the suitable agile practice method for your project 4. Installation and features of JIRA tool.

Course Code: CSE227	Course Title: SOFTWARE ENGINEERING AND PROJECT MANAGEMENT	L- T-P- C	3	0	0	3
	Type of Course: Theory Only					
Version No.	2.0					
Course Pre-requisites	Object Oriented Concepts, Basic programming knowledge, basic understanding of algorithms.					
Anti-requisites	Nil					
Course Description	The objective of this course is to help students understand the process and fundamental principles involved in software system development and software project management. The course covers software process models, software requirement engineering processes, system analysis, design, implementation and testing aspects of software system development. The course also covers project evaluation, planning, effort estimation and risk management aspects in software project planning. Topics include: Introduction to Software Engineering, Process Life Cycle Models, Requirement Analysis and Specification, User Interface Analysis and Design, Software Testing, Project Management, Project Planning, Effort Estimation Techniques, Project Scheduling, Project Metrics & Evaluation, Risk Management.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of SOFTWARE ENGINEERING AND PROJECT MANAGEMENT and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques.					
Course Outcomes	On successful completion of the course the students shall be able to: 1) Describe the software engineering principles, ethics and process models. 2) Identify the requirements and appropriate design models for a given application. 3) Discuss the various types of testing methods and Quality Assurance. 4) Apply project planning, scheduling, evaluation and risk management principles for a given project.					
Course Content:						
Module 1	Introduction to Software Engineering & Process Models	Knowledge level	SCRUM Models		08 Sessions	
Software and Software Engineering: Nature of Software, Software Engineering Practice, Software Myths, SDLC, Software Processes: Generic Model, Prescriptive Process Model, Unified Process Model, Agile Development: Extreme Programming, Iterative Waterfall Model, Classical Waterfall Model						
Module 2	Software Requirements and Design	Comprehension level	Use Case Diagram		09 Sessions	
Requirements Engineering: Eliciting requirements, Functional and non- Functional requirements, SRS, Requirements modelling: Developing Use Cases, Developing Activity diagram and Swimlane diagram, Design : Design concepts, Architectural design,, Introduction to Star UML tool						
Module 3	Software Testing and Quality	Comprehension level	Software Testing		08 Sessions	
Introduction to Software Testing: verification and validation, Test Strategies for conventional Software, Validation Testing, White box Testing: Basis path testing, Black box Testing. Software Quality Assurance : Elements of software quality assurance, Software configuration management : SCM process. Introduction to JIRA and Selenium tools						
Module 4	Software Project Management	Application	CMM level		13 Sessions	
Project Management Concepts, Project Planning, Overview of metrics, Estimation for Software projects, Project Scheduling, Risk Management, Maintenance and Reengineering, Introduction to DevOps						

Targeted Application & Tools that can be used: Star UML, Jira	
Text Book 1. Roger S. Pressman, “Software Engineering – A Practitioner’s Approach”, VII Edition, McGraw-Hill, 2017. 2. Bob Hughes, Mike Cotterell, Rajib Mall, “Software Project Management”, VI Edition, McGraw-Hill, 2018.

The course covers software quality, configuration management and maintenance.				
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Software Engineering and attain Skill Development through Participative Learning techniques.				
Course Out Comes	On successful completion of this course the students shall be able to: 1] Describe the Software Engineering principles, ethics and process models(Knowledge) 2] Identify the requirements, analysis and appropriate design models for a given application(Comprehension) 3] Understand the Agile Principles(Knowledge) 4] Apply an appropriate planning, scheduling, evaluation and maintenance principles involved in software(Application)				
Module 1	Introduction to Software Engineering and Process Models (Knowledge level)	Quiz			09 Hours

Introduction: Need for Software Engineering, Professional Software Development, Software Engineering Ethics, Software Engineering Practice-Essence of Practice, General Principles Software Development Life Cycle Models: Waterfall Model – Classical Waterfall Model, Iterative Waterfall Model, Evolutionary model-Spiral, Prototype.				
Module 2	Software Requirements, Analysis and Design (Comprehension level)	Assignment	Development of SRS documents for a given scenario	11 Hours
Requirements Engineering: Eliciting requirements, Functional and non- Functional requirements, Software Requirements Specification (SRS), Requirement Analysis and validation. Requirements modelling- Introduction to Use Cases, Activity diagram and Swim lane diagram. CASE support in Software Life Cycle, Characteristics of CASE Tools, Architecture of a CASE Environment. Design: Design concepts, Architectural design, Component based design, User interface design.				
Module 3	Agile Principles & Devops (Knowledge level)	Quiz		09 Hours
Agile: Scrum Roles and activities, Sprint Agile software development methods - Scaling, User Stories, Agile estimation techniques, Product backlogs, Stake holder roles, Dynamic System Development Method. Devops: Introduction, definition, history, tools.				
Module 4	Software Testing and Maintenance (Application Level)	Assignment	Apply the testing concepts using Programing	12 Hours
Software Testing- verification and validation, Test Strategies - White Box Testing, Black box Testing. Automation Tools for Testing. Software Quality Assurance- Elements of software quality assurance, SQA Tasks, Goals and Metrics, Software configuration management- SCM process, SCM Tools (GitHub). Maintenance- Characteristics of Software Maintenance, Software Reverse Engineering, Software Maintenance Process Models.				
Targeted Application & Tools that can be used: Selenium, GitHub, CASE Tools				
Text Book 1] Roger S. Pressman, “Software Engineering – A Practitioner’s Approach”, VII Edition, McGraw-Hill, 7. 2] Bob Hughes, Mike Cotterell, Rajib Mall, “Software Project Management”, VI Edition, McGraw-2018.				
References Rajib Mall, “Fundamentals of Software Engineering”, VI Edition, PHI learning private limited, 2015. Ian Sommerville, “Software Engineering”, IX Edition, Pearson Education Asia, 2011. Agile Software Development Principles, Patterns and Practices.1 st Edition, Wiley, 2002				
Topics Relevant to “Skill Development: Balck box Testing, White box Testing, Automated Testing for Skill development through Participative Learning Techniques . This is attained through assessment mentioned in the course handout				

Course Code: CSE3145	Course Title: Intrusion Detection and Prevention System		L- P- C	3	0	3
	Type of Course: 1] Program Core 2] Theory Only					
Version No.	1.0					
Course Pre-requisites	Fundamental knowledge in Operating Systems, Information Security and Networks					
Anti-requisites	NIL					
Course Description	Objective of the course is to Understand when, where, how, and why to apply Intrusion Detection tools and techniques in order to improve the security posture of an enterprise. Apply knowledge of the fundamentals and history of Intrusion Detection in order to avoid common pitfalls in the creation and evaluation of new Intrusion Detection Systems and Analyze intrusion detection alerts and logs to distinguish attack types from false alarms.					
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Intrusion Detection and Prevention System and attain Skill Development through Participative Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: - Understand about the intruders. - Define intrusion detection and prevention policies - Explain the fundamental concepts of Network Protocol Analysis and demonstrate the skill to capture and analyze network packets. - Use various protocol analyzers and Network Intrusion Detection Systems as security tools to detect network attacks and troubleshoot network problems.					
Course Content:						
Module 1	Introduction to Intrusion Detection and Prevention System	Assignment	Programming Task	10 Sessions		
Topics Understanding Intrusion Detection – Intrusion detection and prevention basics – IDS and IPS analysis schemes, Attacks, Detection approaches –Misuse detection – anomaly detection – specification based detection – hybrid detection. Internal and external threats to data, Need and types of IDS, Information sources, Host based information sources, Network based information sources.						
Assignment: Demonstrating the skills to capture and analyze network packets using network packet analyzer.						
Module 2	Intrusion Prevention System	Assignment	Programming Task	10 Sessions		
Topics:						

Intrusion Prevention Systems, Network IDs protocol based IDs, Hybrid IDs, Analysis schemes, thinking about intrusion. A model for intrusion analysis, techniques, Responses, requirement of responses, Types of responses, mapping responses to policy Vulnerability analysis, credential analysis, non-credential analysis. Architecture models of IDs and IPs.

Assignment: Applying Intrusion detection in security applications.

Module 3	Applications and tools	Assignment	Programming/Data analysis task	12 Sessions

Topics:

Tool Selection and Acquisition Process – Bro Intrusion Detection – Prelude Intrusion Detection – Cisco Security IDS – Snorts Intrusion Detection – NFR security. Introduction to Snort, Snort Installation Scenarios, Installing Snort, Running Snort on Multiple Network Interfaces, Snort Command Line Options. Step-By-Step Procedure to Compile and Install Snort Location of Snort Files, Snort Modes Snort Alert Modes

Assignment: Demonstrate the working with Snort Rules, Rule Headers, Rule Options and The Snort Configuration File.

Module 4	Legal issues and organizations standards	Assignment	Programming/Data analysis task	9 Sessions

Law Enforcement / Criminal Prosecutions – Standard of Due Care – Evidentiary Issues, Organizations and Standardizations.

Assignment: Addressing common legal concerns and myths about Intrusion Detection system

Topics relevant to “SKILL DEVELOPMENT”: Agent development for intrusion detection for Skill Development through **Participative Learning techniques**. This is attained through assessment component mentioned in course handout.

Course Code: CSE2040	Course Title: Cyber threats for IOT and Cloud		L- P- C	3	0	3
	Type of Course: 1] Program Core 2] Theory Only					
Version No.	1.0					
Course Pre-requisites	Cyber Security, Information Security and Networks					
Anti-requisites	NIL					
Course Description	Objective of the course is to understand the most important cyber threats for IOT and Cloud. Cyber attackers discover new possibilities in the areas of Internet of Things and cloud services. It mainly focuses on multiple security challenges facing the IoT and cloud computing especially concerns surrounding privacy and cyber security threats of the users and the how can the cyber risks relating to them be mitigated.					
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Cyber threats for IOT and Cloud and attain Skill Development through Participative Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: - Understand the different types of cyber threats for IOT and cloud - Develop a deeper understanding and familiarity with various types of cyber-attacks, cybercrimes, vulnerabilities and remedies thereto. - Plan, implement, and monitor cyber security mechanisms to ensure the protection of information technology assets.					
Course Content:						
Module 1	Introduction to IOT and Cloud computing	Assignment	Programming Task	12 Sessions		
Topics What is IoT, Genesis of IoT, IoT and Digitization, IoT Impact, IoT Challenges, IOT Architecture and protocols, Various platforms for IoT, Real-Time examples of IoT, Overview of IoT components and IoT communication Technologies. Introduction to Cloud Computing, The Vision of Cloud Computing, Defining a Cloud, Cloud Computing Reference Model, Characteristics and Benefits, Challenges Ahead, Distributed Systems, Virtualization, Service-Oriented Computing, Utility-Oriented Computing, Building Cloud Computing Environments, Application Development, Infrastructure and System Development, Computing Platforms and Technologies.						
Assignment:						
Module 2		Cyber Threats	Assignment	Programming Task	8 Sessions	
Topics:						

What are Cyber Security Threats? Common Sources of Cyber Threats, Types of Cyber security Threats- Malware attacks, Social Engineering attacks, Supply chain attacks, Man-in-the middle Attack, Threat Detection Tools, Cyber Defense for Individuals.

Assignment:

Module 3	Cyber Threats in Internet of Things	Assignment	Programming/Data analysis task	10 Sessions

Topics:

IoT threats and vulnerabilities- IoT attack surface, Attack surface areas of the IoT, Types of IoT security threats-Botnets, Denial of service, Man-in-the-Middle, Identity and data theft, Social engineering, Advanced persistent threats, Ransomware, Remote recording, How does the IoT influence security?, Best practices to reduce risks and prevent threats. Security guidelines for IoT. Managing IoT Security Threats.

Assignment:

Module 4	Cyber Threats in Cloud computing	Assignment	Programming/Data analysis task	9 Sessions

Topics:

Cybersecurity Threats to Cloud Computing-Identity First Security, Cloud misconfiguration, Denial of Service, Insider Threats, Reduced Infrastructure Visibility, Unauthorized use of Cloud workloads, Insecure API's, Compliance and regulation issues, Mitigating cyber risks in cloud computing

Assignment:

Topics relevant to “SKILL DEVELOPMENT”:

Cyber threats in IoT and Cloud Computing for **skill development** through **Participative Learning** techniques. This is attained through the assessment component mentioned in the course handout.

Course Code: CSE 3097	Course Title: Web Security Type of Course: Integrated		L- P- C	2	2	3
Version No.	1					
Course Pre-requisites	Advanced Computer networks(CSE3070)					
Anti-requisites	NIL					
Course Description	The purpose of this course this course is to introduce you to the field of web security by understanding web functionality and various security validations. The web is our gateway to many critical services and is quickly evolving as a platform to connect all our devices. Web vulnerabilities are growing on a year-to-year basis and designing secure web applications is challenging. The course covers fundamental concepts of web security principles, web vulnerability and exploitation, various attacks on web applications, and a few basic topics on web encryption.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Web Security and attain Skill Development through Experiential Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: - Define the fundamentals of web applications and validation [Knowledge] - Recognize the significance of password and authentication in web applications [Comprehension] - Explain the importance of session management in web [Comprehension] - Apply web attack techniques to find vulnerabilities in web applications [Application]					
Course Content:						
Module 1	Introduction	Quiz	Comprehension based Quiz on web fundamentals		10 Sessions	
Topics: Web Functionality, Encoding Schemes, Mapping the Application - Enumerating the Content and Functionality, Analyzing the Application Bypassing, Client-Side Controls: Transmitting Data Via the Client, Capturing User Data, Handling Client-Side Data Securely - Input Validation, Blacklist Validation - Whitelist Validation - The Defense in-Depth Approach - Attack Surface Reduction, Rules of Thumb, Classifying and Prioritizing Threats.						
Module 2	Web Application Authentication	Assignment	Comprehensive based assignment on Web authentication		11 Sessions	
Topics: Authentication Fundamentals- Two Factor and Three Factor Authentication, Web Application Authentication- Password Based, Built-in, HTTP, Single Sign-on, Custom Authentication, Validating credentials - Secured Password Based Authentication: Attacks against Password, Importance of Password Complexity - Design Flaws in Authentication Mechanisms - Implementation Flaws in Authentication Mechanisms - Securing Authentication.						

Module 3	Session Management & Web Security Principles	Quiz	Comprehension based Quiz on web security techniques.	11 Sessions
Topics: Need for Session Management, Weaknesses in Session Token Generation, Weaknesses in Session Token Handling, Securing Session Management; Access Control: Access Control Overview, Common Vulnerabilities, Attacking Access Controls, Securing Access Control. Origin Policy, Exceptions, Browser security Principles- Cross Site Scripting and Cross Site Request Forgery, File Security Principles: Source Code Security, Forceful Browsing, Directory Traversals.				
Module 4	Web Application Vulnerability	Assignment	Comprehension based assignment on web vulnerabilities	10 Sessions
Topics: Attacking data-stores and backend components- Injecting into Interpreted Contexts, injecting into SQL, NoSQL, XPath, LDAP, Injecting OS Commands, Manipulating File Paths, Injecting into XML Interpreters, Injecting into Back-end HTTP Requests, Injecting into Mail Services, Attacking application logic-real world logic flaws, Attacking users-Cross site scripting-varieties of XSS,XSS attacks in action, finding and exploiting XSS vulnerabilities, preventing XSS attacks, Other techniques-cookie based Attacks, HTTP Header Injection				
List of Laboratory Tasks: Task 01: Practical knowledge of known vulnerabilities in CGI, LAMP stacks, REST APIs cross-site scripting Task 02: HTTP and setting up stacks, the various types of databases Access Controls, Vulnerabilities Task 03: SQL injection and prevention Task 04: Study of web authoring tools Task 05: Testing web applications Task 06: Cross site request forgery attack lab Task 07: Web tracking				
Targeted Application & Tools that can be used 1. Wordpress tool can be used for building websites with possible vulnerabilities. 2. Tools such as Nmap and Nessus can be used for web attack demonstration.				
Project work/Assignment:				
Assignment: Group assignment to identify and write different web exploits to demonstrate vulnerabilities in web applications.				
Text Book T1 Dafydd Stuttard, Marcus Pinto, “The Web Application Hacker’s Handbook”, Willey Publishing Inc.

Topics relevant to “EMPLOYABILITY SKILLS”:

Session Management & Web Security Principles and Web Application vulnerability for **Skill Development** through **Experiential Learning Techniques**. This is attained through the assessment component mentioned in the course handout.

Course Code: CSE2037	Course Title: Cyber Forensics Type of Course: Program Core		L- P- C	2	2	3
Version No.	1.0					
Course Pre-requisites	Cryptography and Network Security					
Anti-requisites	NIL					
Course Description	The purpose of this course is to introduce to the students Cyber Forensic concepts. The course is both conceptual and analytical and is understood with various open-source software's. The course develops critical thinking like correctly collect and analyze computer forensic evidence, analyze and validate Forensics Data, study the tools and tactics associated with Cyber Forensics. The course involves quizzes, assignments with various open-source software.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Cyber Forensics and attain Skill Development through Experiential Learning techniques.					
Course Outcomes	On successful completion of this course the students shall be able to: (1) understand various digital investigation terminologies and methods (knowledge) (2) understand various file formats (knowledge) (3) Recognize the importance of digital forensic duplication and various tools for analysis to achieve adequate perspectives of digital forensic investigation in various applications (Comprehension) (4) Apply techniques for forensic investigation (Application)					
Course Content:						
Module 1	DIGITAL INVESTIGATION	Quiz	MCQ/Based on Investigation process	No. of Sessions: 09		
Digital Evidence and Computer Crime - History and Terminology of Computer Crime Investigation - Technology and Law - The Investigative Process -Investigative Reconstruction - Modus Operandi, Motive and Technology -Digital Evidence in the Courtroom.						
Module 2	UNDERSTANDING INFORMATION	Quiz	MCQ/Based on file format	No. of Sessions: 09		
Methods of storing data: number systems, character codes, record structures, file formats and file signatures - Word processing and graphic file formats - Structure and Analysis of Optical Media Disk Formats - Recognition of file formats and internal buffers - Extraction of forensic artifacts– understanding the dimensions of other latest storage devices – SSD Devices.						
Module 3	COMPUTER BASICS FOR DIGITAL INVESTIGATORS	Assignment	Writing task	No. of Sessions: 09		

Computer Forensic Fundamentals - Applying Forensic Science to computers - Computer Forensic Services - Benefits of Professional Forensic Methodology -Steps taken by computer forensic specialists.

Information warfare: Arsenal – Surveillance Tools – Hackers and Theft of Components – Contemporary Computer Crime-Identity Theft and Identity Fraud – Organized Crime &Terrorism.

Computer forensic cases: Developing Forensic Capabilities – Searching and Seizing Computer Related Evidence –Processing Evidence and Report Preparation – Future Issues.

Assignment: Computer Crime

Module 4	Computer Forensic Evidence and Data Recovery	Assignment	Writing task	No. of Sessions: 09

Data Recovery Defined, Data Backup and Recovery, The Role of Backup in Data Recovery, The Data-Recovery Solution, Hiding and Recovering Hidden Data.

Data Collection and Data seizure: why collect evidence? - Collection Options, Obstacles, Types of Evidence, The Rules of Evidence, Volatile Evidence, General Procedure, Collection and Archiving, Methods of Collection, Artifacts, Collection Steps, Controlling Contamination: The Chain of Custody. Reconstructing the Attack.

Assignment: Data Recovery

List of Laboratory Tasks:

1. Case Studies of Opensource Forensic Tools
2. FTK Forensic Tool kit for taking mirror image

Disk Forensics-

3. Identify digital evidences
4. Acquire the evidence
5. Authenticate the evidence
6. Preserve the evidence
7. Analyze the evidence
8. Report the findings

Network Forensics:

9. Intrusion detection
10. Logging
11. Correlating intrusion detection and logging

Device Forensics

12. Mobile phone
13. Digital Music
14. Printer Forensics
15. Scanner Forensics
16. Credit Card Forensics
17. Telecommunications Forensics
18. Forensic Analysis of a Virtual Machine
19. Forensic analysis of Cloud storage and data remnants
20. RAM Dumping Tool

Targeted Application & Tools that can be used:

1. **FTK Forensic Toolkit**

2. Encase 3. Kali Linux- Vinetto, galatta 4. Autopsy – Disk Forensics
Project work/Assignment: Each batch of students (self-selected batch mates) will identify projects based on the content and implement with the most suitable 2 or 3 antecedents.

Topics relevant to "Skill Development": Cyber Forensics techniques for Skill development through Experiential Learning techniques . This is attained through the assessment component mentioned in the course handout.

Course Code: CSE2039	Course Title: Ethical Hacking Type of Course: Discipline Elective in Cyber Security Basket		L- P- C	2	2	3
Version No.	1.0					
Course Pre-requisites	Basic networking tools knowledge and Cryptography & Network Security					
Anti-requisites	NIL					
Course Description	This course introduces students to a wide range of topics related to ethical hacking. It also provides an in-depth understanding of how to effectively protect computer networks. These topics cover some of the tools and penetration testing methodologies used by ethical hackers and provide a thorough discussion of what and who an ethical hacker is and how important they are in protecting corporate and government data from cyber-attacks					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Ethical Hacking and attain Skill Development through experiential Learning techniques.					
Course Outcomes	On successful completion of this course the students shall be able to: 1. Illustrate the importance of ethical hacking 2. Categorize the various techniques for performing reconnaissance. 3. Demonstrate various types of system scanners and their functions 4. Demonstrate the function of sniffers on a network					
Course Content:						
Module 1	Introduction to Hacking (Knowledge, Application)	Assignment	Programming activity	12 Hours		
Topics: Introduction to Hacking-Important Terminologies - Asset - Vulnerability - Penetration Test - Vulnerability Assessments versus Penetration Test - Penetration Testing Methodologies - Categories of Penetration Test. Assignment: Different phase methodologies on penetration testing						
Module 2	Linux Basics	Assignment	Programming activity	10 Hours		
Topics: Major Linux Operating Systems - File Structure inside of Linux - BackTrack - Changing the Default Screen Resolution - Some Unforgettable Basics. Assignment: Penetration testing distribution						
Module 3	Information Gathering Techniques	Assignment	Programming activity	11 Hours		
Topics: Sources of Information Gathering - Copying Websites Locally - NeoTrace - Xcode Exploit Scanner - Interacting with DNS Servers - DNS Cache Snooping - DNS Lookup with Fierce - SNMP - SMTP. Assignment: Domain internet groper						
Module 4	Target Enumeration and Port Scanning Techniques	Assignment	Programming activity	13 Hours		

Topics: Target Enumeration and Port Scanning Techniques - Host Discovery - Scanning for Open Ports and Services - Types of Port Scanning - Vulnerability Assessment. Assignment: Demonstrations for port scanning	
List of Laboratory Tasks: Experiments: 1. Installing BackTrack 2. Netcraft 3. Keyloggers 4. Acunetix 5. Nslookup 6. SNMP 7. Port Scanning 8. NetStumbler 9. Performing an IDLE Scan with NMAP 10. Network Sniffing	
Targeted Application & Tools that can be used: Application Software and open source tools	
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course	
Any appropriate tool can be given to demonstrate i.e Sql injections.	
Text Book 1. Rafay Baloch, 2014: "Ethical Hacking and Penetration Testing Guide" Apple Academic Press Inc.	
References 2. Gary Hall, Rrin Watson, 2016: "Hacking: Computer Hacking, Security Testing, Penetration Testing, and Basic Security". 3. James Corley, Kent Backman, Michael Simpson, 2010: "Hands-On Ethical Hacking and Network Defense", 2nd Edition, Cengage Learning.	
Topics relevant to "EMPLOYABILITY SKILLS": Ethical hacking techniques for Skill Development through Experiential Learning techniques . This is attained through the assessment component mentioned in course handout.	

Course Code: CSE241	Course Title: Wireless Sensor and Adhoc Networks Type of Course: 1] Discipline Elective 2] Lab Integrated Course	L- P- C	3	0	3
Version No.	1.0				
Course Pre-requisites	NIL				
Anti-requisites	NIL				

Course Description	This course examines wireless cellular, ad hoc and sensor networks, covering topics such as wireless communication fundamentals, medium access control, network and transport protocols, unicast and multicast routing algorithms, mobility and its impact on routing protocols, application performance, quality of service guarantees, and security. Energy efficiency and the role of hardware and software architectures may also be presented for sensor networks.			
Course Objectives	The objective of the course is to familiarize the learners with the concept of Wireless Sensor and Ad-Hoc Networks for SKILL DEVELOPMENT by using PARTICIPATIVE LEARNING techniques.			
Course Out Comes	On successful completion of this course the students shall be able to: 1. Explain the basic working of the Wireless systems. (Knowledge) 2. Describe different protocols being used by wireless networks including ABR and MANETS.(Knowledge) 3. Illustrate the Fundamental Concepts and applications of ad hoc and wireless sensor networks.(Comprehension) 4. Interpret the WSN routing issues by considering related QoS measurements.(Application)			
Course Content:				
Module 1	Overview of Wireless Sensor and Adhoc Networks	Assignment	Programming activity	10 Hours
Topics: Introduction, Sensor Network Technology background, Elements of basic Sensor Network Architecture, Survey of Sensor Networks, Network Characteristics and Challenges, Applications of Wireless Sensor Networks, Range of Applications, Category 2 WSN Applications – Home Control, Industrial Automation, Medical Applications, Category 1 WSN Applications – Sensor and Robots, Reconfigurable Sensor Networks, Highway Monitoring, Military Applications, Civil and Environmental Engineering Applications, Wildfire Instrumentation, Habitat Monitoring, Nanoscopic Sensor Applications, Introduction to Cellular and Adhoc Networks, Issues in Adhoc Networks – Routing, Multicasting, QoS, Security, Scalability.				
Module 2	Wireless Transmission Technology and MAC Protocols for Adhoc	Assignment	Programming activity	10 Hours
Topics: Introduction, Radio Technology Primer – Propagation and Modulation, Propagation and Modulation impairments, Available Wireless Technologies, Campus Applications, MAN/WAN Applications, Medium Access Control Protocols – Fundamentals, Performance Requirements, MAC Protocols for WSNs -Schedule based Protocols and Random Access based Protocols, Sensor MAC case study, Issues in Designing MAC Protocol for Adhoc Networks - Bandwidth efficiency, QoS support, Synchronization, error-prone broadcast channel, Mobility of nodes.				
Module 3	Routing Protocols for Adhoc and WSN	Assignment	Programming activity	10 Hours

Topics: Background, Data Dissemination and gathering, Routing challenges, Network Scale and Time-Varying Characteristics,, Routing Strategies, characteristics of an ideal Routing Protocol for Adhoc Networks, WSN Routing Techniques, Classifications of Routing Protocols, Table-driven and on-demand Routing Protocols, Routing Protocols with efficient flooding mechanism.				
Module 4	Demonstration of WSN Adhoc Network using Simulators	Assignment	Programming activity	6 Hours
Topics: GloMoSim Simulator, TOSSIM, OMNeT++ and other recent available simulation tools (MATLAB wireless module, NS2, etc).				
Targeted Application & Tools that can be used: Case Study: GloMoSim Simulator, TOSSIM, OMNeT++ and other recent available simulation tools -MATLAB wireless module, NS2, etc.				
Text Book 1. T1: Kazem Soharby, Daniel Minoli and Taieb Znati, Wireless Sensor Networks : Technology, Protocols and Applications, Wiley Publication, 2016, ISBN : 978-81-265-2730-4 2. T2: C. Topics relevant to “SKILL DEVELOPMENT”: Campus Applications and Routing Protocol for Adhoc Networks for Skill Development through Participative Learning techniques. This is attained through the Presentation as mentioned in the assessment component.				

Course Code: CSE 262	Course Title: CLIENT SERVER COMPUTING		L-T-P- C	3	0	0	3
	Type of Course: Theory Only						
Version No.	2.0						
Course Pre-requisites	Knowledge of Computer networks.						
Anti-requisites	NIL						
Course Description	Course description: The course covers basic concepts of client server computing, client side services, server side services, protocols for implementation of client server environment. The students will learn the concepts of client server architecture, components of client server computing, Client/Server Database Architecture, Network operating system, Middleware and RPC.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Client Server Computing and attain Skill Development through Participative Learning techniques.						
Course Out Comes	On successful completion of the course the students shall be able to: 1) Describe the basic concepts of client server computing and types of client server architecture [knowledge] 2) Discuss the components and operating system of client server computing [Comprehension] 3) Understand the Client/Server Database Computing. [Comprehension] 4) Distinguish the different category of client server applications. [Comprehension]						
Course Content:							
Module 1	Client Server System Concepts and Architecture	Assignment	Client Server Architecture	8 Sessions			
Topics: Client Server System Concepts - Introduction – Server, Clients, client – client server topology: Single Client, Multiple Clients Single Servers, Multiple clients Multiple Server. Characteristics and types of Server: File server Print server Application server Mail server. Characteristics and types of Clients: Thin and Fat clients. Client Server Architecture: Two-Tier Architecture – Three-Tier Architecture - N-Tier Architecture- client server Advantage and Disadvantage - Client /server Building Blocks							
Module 2	Client Server Computing Components and Operating system	Assignment/Quiz1	Components of Client Server Computing, Components of Server, Network operating system	8 Sessions			
Topics: Components of Client Server Computing , Client: Hardware, Operating System, communication, GUI. Role of the Client , Client Services :Request for Service , Components of Server: Server – File server, Fax server, Mail,Server Functionality in detail.Network operating system : server operating system.							
Module 3	Client/Server Database Computing	Assignment/Quiz2	Client/Server Database Architecture, Database Middleware Component	10 Sessions			
Topics: Client/Server Database Computing: Service of client/server application. Client/Server Database Architecture: process per client architecture, multi-threaded architecture, Hybrid architecture. Database Middleware Component: API, Database translator, Network translator..Distributed							

Client/Server Database Systems: Web/Database System for Client/Server Applications , Design Approach.				
Module 4	Client/Server Applications	Assignment/Quiz2	Categories Of Client/Server Applications, DDE, OLE	12 Sessions
Topics: Client/Server Application: Technologies for client/server applications. Categories Of Client/Server Applications: File sharing, Database centered system, Groupware, Transactional processing. Inter Process Communication: socket interface -RPC-RMI. Dynamic Data Exchange (DDE)- Object Linking and Embedding (OLE)- Middleware - Role and Mechanism of Middleware- Types of Middleware. Targeted Application & Tools that can be used: This course helps the student to understand the concepts of client server architecture, components of client server computing, Client/Server Database Architecture, Network operating system, Middleware and RPC.				
Text Book T1. Robert Orfali, Dan Harkey and Jerri Edwards: Essential Client/Server Survival Guide, John Wiley & Sons Edition 3 2019 T2. Patrick Smith & Steve Guengerich, "Client/Server Computing". PHI 2011 Edition 2				
References R1. Subhash Chandra Yadav : An Introduction to Client/Server Computing newagepublishers; First edition January 2009 E-Resources NPTEL course –NPTEL :: Computer Science and Engineering - NOC:Cloud computing IIT Kharagpur, Prof. Sowmya Kanti Gosh. https://presiuniv.knimbus.com/user#/home Topics relevant to "SKILL DEVELOPMENT": Socket Programming, RMI and RPC for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course handout.				

Course Code: CSE240	Course Title: Information Security Type of Course: Open Elective/ Theory Only Course	L- P- C	3	0	3
Version No.	2.0				
Course Pre-requisites	CSE-236 Principles of Data Communications and Computer Networks				
Anti-requisites	NIL				
Course Description	The course explores information security through some introductory material and helps gain an appreciation of the scope and context of information security. It includes a brief introduction to cryptography, security management, network and computer security. It allows a student to begin a fascinating journey into the study of information security and develop an				

	appreciation of some key security concepts. The course concludes with a discussion of a simple model of the information security in industry and explores skills, knowledge and roles required for employability. A student will be able to determine and analyze potential career opportunities in this profession.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Course Title_as_mentioned above and attain Entrepreneurship through Participative Learning techniques.			
Course Out Comes	On successful completion of the course the students shall be able to: - Describe the basic concept of information security. (Knowledge) - Explain the concepts and methods of cryptography. (Comprehension) - Demonstrate the aspects of risk management. (Application) - Illustrate Network Security concepts. (Application)			
Course Content:				
Module 1	Introduction to Information Security	Assignment	Data Collection/Interpretation	08 Sessions
Topics: What is Information Security, The CIA Triad: Confidentiality Integrity and Availability, why study information security, Basic principles of information system security, Information classification, A model for Network Security.				
Module 2	Introduction to Cryptography	Assignment	Basics and Interpretation	13 Sessions
Topics: Introduction to Cryptography, Role of cryptography in information security, OSI Security architecture, Security Attacks, Security Services, Security Mechanism, Types of Cryptography, Overview of Public and Private Key Cryptography.				
Module 3	Information Security Management & Risk Analysis	Quiz	Questions Set	9Sessions
Topics: Information Security Managements, Security Policy, Standards and Procedures, Risk Analysis of Information Security, Risk Analysis.				
Module 4	Securityin Networks	Quiz	Questions Set	8Sessions
Topics: Biometrics for security, Kerberos, PKI, Network Security applications: e-mail security: PGP, MIME, IP Security, Web Security, Intrusion Detection, Firewalls.				
Targeted Application & Tools that can be used: This course helps the students to understand the concepts related to information and network security. InfoSec provides coverage for cryptography, mobile computing, social media, as well as infrastructure and networks containing private, financial, and corporate information, and tools includes Web vulnerability, scanning tools, Antivirus software, Network intrusion detection, Packet sniffers, Firewall tools.				
Project work/Assignment:				
Project Assignment: 1) Projects for students interested in thisAntivirus, Online Fund Transfers with DES Encryption, Firewall Web Application. Assignment: 1]What do you understand by Risk, Vulnerability & Threat in a network?				

- 2] What are the response codes that can be received from a Web Application?
 3] What is the difference between Symmetric and Asymmetric encryption?

Topics relevant to "ENTREPRENEURIAL SKILLS": Sustainable development tools, Integrity Availability Concepts Policies, procedures, Guidelines, Standards Administrative Measures and Technical Measures, People, Process, Technology for developing **Entrepreneurial Skills** through **Participative Learning** techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE3034	Course Title: BIG DATA SECURITY AND PRIVACY Type of Course: Elective in Big Data Basket Theory			L-P-C	3	0	3
Version No.	1.0						
Course Pre-requisites	CSE219 Big Data Analytics						
Anti-requisites	NIL						
Course Description	The purpose of this course is to sensitize security in Big Data environments. This course will discover cryptographic principles, mechanisms to manage access controls in Big Data system. This course teaches the principles and practices of big data for improving the privacy and the security of computing systems. Big data is being applied in areas where there is great commercial advantage to be had, and consequently, attacks and failures have become a serious concern. It delves into a set of techniques for defending big data techniques against breaching of bigdata (the privacy aspect) and against malicious attacks (the security aspect).						
Course Objective	The objective of the course is to familiarize the learners with the concepts of BIG DATA SECURITY AND PRIVACY and attain Skill Development through Participative Learning techniques.						
Course Outcomes	On successful completion of this course the students shall be able to: i. Define cryptographic principles and mechanisms to manage access controls in Big Data system.[Knowledge] ii. Explain security risks and challenges for Big Data system.[Knowledge] iii. Recognize all security related issues in big data systems .[Comprehension] iv. Apply Kerberos configuration for Hadoop ecosystem components.[Application]						
Course Content:							
Module 1	Big Data Privacy, Ethics And Security	Assignment/Quiz	Big data security-organizational security	08 classes			
Topics: Privacy – Reidentification of Anonymous People – Why Big Data Privacy is self regulating? – Ethics – Ownership – Ethical Guidelines – Big Data Security – Organizational Security. Assignment: Big data security-organizational security							
Module 2	Security, Compliance, Auditing, And Protection	Assignment	communication protocols for each of the Hadoop ecosystem components	08 classes			
Topics: Steps to secure big data – Classifying Data – Protecting – Big Data Compliance – Intellectual Property Challenge – Research Questions in Cloud Security – Open Problems. Assignment: communication protocols for each of the Hadoop ecosystem components							
Module 3	Hadoop Security Design, Hadoop Ecosystem Security	Case study	Kerberos configuration for ecosystem tools	08 classes			
Topics: Kerberos – Default Hadoop Model without security - Hadoop Kerberos Security Implementation & Configuration. Configuring Kerberos for Hadoop ecosystem components – Pig, Hive, Oozie, Flume, HBase, Sqoop. Assignment: Kerberos configuration for Hadoop ecosystem tools							
Module 4	Data Security & Event Logging	Case study	Event monitoring in Hadoop cluster	08 classes			

Topics: Integrating Hadoop with Enterprise Security Systems - Securing Sensitive Data in Hadoop – SIEM system – Setting up audit logging in hadoop cluster Assignment: Event monitoring in Hadoop cluster
Assignment: 1. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link . 2. Presentation: Group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.

Topics relevant to “SKILL DEVELOPMENT”: Configuring Kerberos for Hadoop ecosystem components – Pig, Hive, Oozie, Flume for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE3032	Course Title: Streaming Data Analytics Type of Course: Program Core Theory and Lab Integrated Course			L-P-C	2	2	3
Version No.	1.0						
Course Pre-requisites	CSE3032 -Big Data Analytics						
Anti-requisites	NIL						
Course Description	The purpose of the course is to introduce theoretical foundations, algorithms, methodologies, and applications of streaming data. It also provides practical knowledge for handling and analyzing streaming data. The associated laboratory provides an opportunity to implement the concepts and enhance critical thinking and analytical skills. With good knowledge of the fundamentals of streaming analytics, the student can gain practical experience in implementing them, enabling the student to be an effective solution provider for applications that involve huge volume of streaming data.						
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Streaming Data Analytics as mentioned above and attain Skill Development through experiential Learning techniques.						
Course Outcomes	On successful completion of the course the students shall be able to: • Recognize the characteristics of data streams that make it useful to solve real-world problems. • Identify and apply appropriate algorithms for analyzing the data streams for a variety of problems. • Implement different algorithms for analyzing the data streams.						
Course Content:							
Module 1	Introduction to Data Streams	Programming Assignment	Streaming methods		8 Classes		
Introduction to Data Streams: Data Stream Models, Research Issues in Data Streams Management Systems,Knowledge Discovery from Data Streams,Basic Streaming Methods: Counting the Number of Occurrence of the Elements in a Stream, Counting the Number of Distinct Values in a Stream, Bounds of Random Variables, Poisson Processes, Sliding Windows.							
Module 2	Decision Trees and Clustering from Data Streams	Programming Assignment	Streaming Data Collection and Analysis		10 Classes		
Decision Trees and Clustering from Data Streams: Introduction, The Very Fast Decision Tree Algorithm, Extensions to the Basic Algorithm: Processing Continuous Attributes, Functional Tree Leaves, Clustering Examples: Partitioning Clustering, Hierarchical Clustering, Micro Clustering,Grid Clustering .							
Module 3	Frequent Pattern Mining	Programming Assignment	Streaming Data analysis		8 Classes		

Frequent Pattern Mining: Introduction to Frequent Itemset Mining: The FP-growth Algorithm, Summarizing Itemsets, Heavy Hitters, Mining Frequent Itemsets from Data Streams: Landmark Windows, Mining Recent Frequent Itemsets, Frequent Itemsets at Multiple Time Granularities, Sequence Pattern Mining

Module 4

7 classes

Evaluating Streaming Algorithms Evaluation Issues, Design of Evaluation Experiments, Evaluation Metrics, Error Estimators using a Single Algorithm and a Single Dataset, Comparative Assessment, The 0-1 loss function, Evaluation Methodology in Non-Stationary Environments, The Page-Hinkley Algorithm

List of Laboratory Tasks:

1. **Level 1:** Exploring stream processing engine STORM

Level 2: Exploring stream processing engine STREAM

2. Implementation of decision tree algorithms

Level 1: Implementation of VFDT decision tree algorithm

Level 2: Implementation of CVFDT decision tree algorithm

3. Implementation of partitioning clustering on stream.

Level 1: Implementation of partitioning clustering The Leader Algorithm.

Level 2: Implementation of Single Pass k-Means partitioning Clustering Algorithm.

4. Implementation of micro clustering on stream.

Level 1: Implementation of Fractal Clustering algorithm Initialization phase

Level 2: Implementation of Fractal Clustering algorithm Incremental phase

5. **Level 1:** Implementation of The ODAC Global Algorithm.

Level 2: Implementation of The ODAC: The TestSplit Algorithm

6. **Level 1** Implementation of the Apriori algorithm to find frequent itemsets

Level 2: Implementation of the Apriori algorithm to find association rules

7. **Level 1:** Frequent Itemsets mining of data streams using Lossy Counting algorithm

Level 2: Reservoir Sampling for Sequential Pattern Mining over Data Streams.

•

Targeted Application & Tools that can be used:

- **Apache Spark**
- **Social media Data Analysis**
- **Predictive Analytics**

Project work/Assignment:

Students will be asked to develop a mini-project for streaming Data Analysis on streaming data.

Topics relevant to "SKILL DEVELOPMENT":

Streaming data analysis of twitter data using Apache Spark for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE 212/2007	Course Title: Analysis of Algorithms		L- T-P- C	3	0	0	3
	Type of Course: THEORY Only						
Version No.	2.0						
Course Pre-requisites	Introduction to Pseudo code, Knowledge of Recursive and Non Recursive algorithms, Meaning of correctness.						
Anti-requisites							
Course Description	This Course introduces techniques for the design and analysis of efficient algorithms and methods of applications. Deals with analyzing time and space complexity of algorithms, and to evaluate trade-offs between different algorithms.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Analysis of Algorithms and attain Skill Development through Problem Solving Methodologies.						
Course Out Comes	On successful completion of the course the students shall be able to: 1. Classify the types of asymptotic notations. 2. Discuss the Brute Force Technique used for solving a problem. 3. Explain divide and conquer technique for searching and sorting problems. 4. Discuss the Dynamic Programming Algorithm used for solving a problem. 5. Discuss the Back tracking technique and limitations of Algorithms.						
Course Content:							
Module 1	Introduction	Assignment	Simulation/Data Analysis		08 Sessions		
Important Problem types, Asymptotic Notations and its properties, Mathematical analysis for Recursive and Non-recursive algorithms.							
Module 2	Algorithm design techniques-Brute force	Assignment	Numerical from E-Resources		09 Sessions		
Selection Sort, sequential search, Uniqueness of Array, Exhaustive search Travelling Salesman, Knapsack Problem.							
Module 3	Divide-and-conquer	Term paper/Assignment	Simulation/Data Analysis		08 Sessions		
Master Theorem, Merge sort, Quick sort, Binary search.							

Module 4	Dynamic programming and greedy technique	Term paper/Assignment	Simulation/Data Analysis	08 Sessions
Introduction, Coin changing problem, Multi stage graph – Optimal Binary Search Trees, warshall's, floyds, 0/1 Knapsack, Prim's, Kruskal's, Dijkstra's Algorithm.				
Module 5	Complexity Classes	Term paper/Assignment	Simulation/Data Analysis	06 Sessions
Complexity Classes- P, NP- NP Hard and NP Complete - Boolean Satisfiability Problem (SAT). Hamiltonian Path Problem, M Coloring Problem. Backtracking, - Backtracking – n-Queens problem.

E-Resources NPTEL course – https://onlinecourses.nptel.ac.in/noc19_cs47/preview https://www.coursera.org/learn/analysis-of-algorithms https://puuniversity.informaticsglobal.com				
Topics relevant to “SKILL DEVELOPMENT”: knapsack, prim's, kruskal's algorithm, quick sort, binary search for Skill Development through Problem Solving methodologies . This is attained through assessment component mentioned in course handout.				

Course Code: CSE3031	Course Title: Web Intelligence and Analytics Type of Course: Integrated		L- P- C	2	2	3
Version No.	1.0					
Course Pre-requisites	CSE2021-Data Mining					
Anti-requisites						
Course Description	This course is an introduction to Web Analytics and Web Intelligence - is not intended to provide an in-depth review of marketing principles and concepts. Nor is it intended to provide an in depth explanation or review of statistical analysis principles, though some of these principals and concepts will be mentioned from time to time in the lectures and reading materials. Rather, this course will give you the mastery of analytics to a sufficient degree to deploy Web Analytics platforms within your organizations and gain meaningful insights from them that can drive the bottom line.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Web Intelligence and Analytics and attain Skill Development through Experiential Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: 1. A grounded understanding of web intelligence and business analytics terminology related to the above. 2. How to deploy web intelligence to improve the outcomes of your marketing or business plan. 3. How Analysts impact the bottom line (their role) within various businesses and lines of business 4. Growth potentials for Web Analysts and Big Data professionals					
Course Content:						
Module 1	INTRODUCTION TO INTELLIGENT WEB	Assignment	Data Collection/Interpretation	6Sessions		
INTRODUCTION TO INTELLIGENT WEB -Inside the search engine - Examples of intelligent web applications - Basic elements of intelligent applications - Machine learning, data mining – Searching, Reading, indexing, and searching.						
Module 2	LISTEN AND LOAD	Case studies / Case let	Case studies / Case let	6 Sessions		
LISTEN AND LOAD- Streams, Information and Language, - Statistics of Text - Analyzing Sentiment and Intent – Load - Databases and their Evolution, Big data Technology and Trends.						
Module 3	CLUSTERING AND CLASSIFICATION	Quiz	Case studies / Case let	9 Sessions		
CLUSTERING AND CLASSIFICATION An overview of clustering algorithms - Clustering issues in very large datasets - The need for classification - Automatic categorization of emails and spam filtering - Classification with very large datasets - Comparing multiple classifiers on the same data.						

Module4- REASONING (4 hours) Reasoning: Logic and its Limits, Dealing with Uncertainty - Mechanical Logic - The Semantic Web - Limits of Logic - Description and Resolution - Collective Reasoning. Module-5 PREDICTING (6 hours) Statistical Forecasting - Neural Networks - Predictive Analytics - Sparse Memories - Sequence Memory - Network Science – Data Analysis: Regression and Feature Selection - Case Study - set of retrieved and processed news stories. List of Laboratory Tasks: Laboratory Work: to analyzing the web for various functionalities given in the subject and using various tools and technologies to do the experimentation. It also involves installation and working on tools and technologies in this domain. Targeted Application & Tools that can be used Project work/Assignment: Assignment: Text Book 1. Gautam Shroff, “Intelligent Web - Search, Smart Algorithms, and Big Data”, Oxford University Press, 2016. 2. R3 Resources: http://www.coursetalk.com/coursera/web-intelligence-and-big-data Course code Course Title L T informatics.global, https://sm-nitk.vlabs.ac.in/ Topics relevant to “Skill Development”: Intelligent Web and Clustering for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: PG COURSE: CSE 2024	Course Title:NoSQL Databases Type of Course:Program Core Theory and Laboratory Integrated			L-P-C	2	2	3
Version No.	1.0						
Course Pre-requisites	CSE2074-DBMS						
Anti-requisites	NIL						
Course Description	Introduction to non-relational (NoSQL) data models, such as Key-Value, Document, Column, Graph and Object-Oriented database models. Advantages and disadvantages of the different data architecture patterns will be discussed. Hands-on experience with a representative sample of open-source NoSQL databases will be provided. The rapid and efficient processing of data sets with a focus on performance, reliability, and agility will be covered.						
Course Objectives	The objective of the course is to familiarize the learners with the concepts of NoSQL Databases and attain Skill Development through Experiential Learning techniques.						
Course Out Comes	On successful completion of the course the students shall be able to: 1. Understand history, fundamentals,characteristics, and main benefits of NoSQL databases. [Knowledge] 2. Comprehend different types of NoSQL databases through case studies. [Comprehension] 3. Design different types of NoSQL databases, add content, and try queries on them. [Comprehension]						
Course Content:							
Module 1	NoSQL Database Architectures	Assignment	Knowledge	No. of Classes:6			
Topics: Transactions: Concurrency and Integration, ACID, NoSQL emergence and its main features, BASE for reliable database transactions, Achieving horizontal scalability with data base sharding, Brewers CAP theorem. Main Data models of NoSQL: Document Data Model, Key-Value Data Model, Columnar Data Model, Graph Data Model.							
Module 2	Document data model	Assignment	Analysis	No. of Classes:6			
Topics: Characteristics of Document Data Model, Collection, Naming, CRUD Operation, Querying, Indexing, Replication, Sharding, Consistency, Update Consistency, Read Consistency, Relaxing Consistency, Capped Collection.							
Module 3	Document Data Model Hands on: Mongo DB/Casandra	Assignment	Programming (Embedded Lab)	No. of Classes:7			
Topics:Install, Perform CRUD (create, read, update and delete) Operations, Aggregations, Data Models, Transactions, Indexes, Security, Replication and Sharding.							
Module 4	Basics of Columnar and Graph Data Models	Assignment	Comprehend	No. of Classes:7			
Topics: Columnar Data Model: Comparison of columnar and row-oriented storage, Column-store Architectures: C-Store and Vector-Wise, Column-store internals and, Inserts/updates/deletes, Indexing, Adaptive Indexing and Database Cracking.							

Graph Data Model: Comparison of Relational and Graph Modeling, Property Graph Model Graph Analytics: Link analysis algorithm- Web as a graph, Page Rank-Markov chain, page rank computation, Topic specific page rank (Page Ranking Computation techniques: iterative processing, Random walk distribution.

Learn MongoDB/Cassandra by doing the following

- Master the art of queries, CRUD, schema design, and data aggregation
- Understand scalability using sharding and replication
- Write code, build real-world projects and learn hands-on with Cloud Labs

List of Lab Experiments

Lab Experiments are to be conducted on the following topics

Topic 1: Install MongoDB

Topic 2: Do lab experiment to perform CRUD (create, read, update and delete).

Topic 2: Demonstrate Aggregations in NoSQL with a real-life application.

Topic 3: Demonstrate different aspect of transactions in NoSQL by taking suitable problem.

Topic 5: Show making indexes in NoSQL with a suitable application.

Topic 6: Illustrate security features of NoSQL with a suitable problem.

Topic 6: Explain Sharding concept practically through a suitable example.

Targeted Applications(few are as given below):

1.Content Management systems are pretty common. All the comments on posts on social media are contained in a separate database. In MongoDB, a model has been designed to store such comments and is known as “MetaData and Asset Management”.

2.MongoDB is widely used for storing product information and details by finance and e-commerce companies. You can even store the product catalogue of your brand in it.

3. MongoDB can also be used to store and model machine-generated data. For this, you can learn the “Storing Log data” document. This is known as operational intelligence.

List of MongoDB Tools

- MongoDB Compass.
- Mongo Management Studio.
- MongoDB Query Analyzer.
- Nucleon Database Master.
- NoSQLBooster.
- Studio 3T.
- MongoDB Spark Connector.
- MongoDB Charts.

Project work/Assignment: Mention the Type of Project /Assignment proposed for this course

Project Works:

1. Create a database that stores road cars. Cars have a manufacturer, a type. Each car has a maximum performance and a maximum torque value. Do the following: Test Cassandras replication schema and Consistency models.

2. Shopping Mall case study using cassendra, where we have many customers ordering items from the mal land we have suppliers who deliver them their ordered items.

More than 25% of changes are made from the earlier version. Changes are highlighted in bold.

Topics relevant to “SKILL DEVELOPMENT”: Usage of un-structured data for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE2011	Course Title: Data Communications and Computer Networks Type of Course: Program Core - Theory	L- P- C	3	0	3
Version No.	1				
Course Pre-requisites	NIL				
Anti-requisites					
Course Description	This is the first course on data communication and computer networks. This course gives a thorough introduction to all the layers of computer network following the top-down approach. Application, Transport, Network, and data link layer protocols are taught with analysis wherever applicable. All-important concepts required to take up advanced courses and to face placement tests by an undergraduate student will be covered in this course. This course also covers necessary foundational topics pertaining to data communications. This course can be followed up with an advanced computer networks by the student to get a complete understanding of this domain.				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Operating Systems and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques				
Course Outcomes	1. Explain the concepts of Computer Networks and Working Principles of Application Layer and Transport Layer (Comprehension) 2. Apply the Knowledge of IP Addressing and Routing Mechanism in Computer Networks. (Application) 3. Discuss the functionalities of Data Link Layer (Comprehension) 4. Explain the Basic Concepts of Data communication. (Comprehension)				
Course Content:					
Module 1	Overview, Application and Transport Layers.	Assignment	Comprehension	13 Sessions	

Introduction: Computer Networks, Topologies, OSI Reference Model, TCP/IP model. Principles of Network Applications, The Web and HTTP, DNS—The Internet's Directory Service, Socket Programming: Creating Network Applications. Introduction and Transport-Layer Services, Connection-less Transport: UDP, Principles of Reliable Data Transfer, Connection-Oriented Transport: TCP, Principles of Congestion Control, TCP Congestion Control.				
Module 2	Network Layer	Assignment	Application	12 Sessions
Overview of Network Layer, Forwarding and Routing, The Data and Control Planes. The Internet Protocol (IP): IPv4, Addressing, IPv6, IPv4 Datagram Format, IPv4 Addressing, Network Address Translation (NAT), IPv6. Introduction Routing Algorithms: The Link-State (LS) Routing Algorithm, The Distance-Vector (DV) Routing Algorithm, Intra-AS Routing in the Internet, OSPF Routing Among the ISPs: BGP, Introduction to BGP. ICMP: The Internet Control Message Protocol.				
Module 3	Data Link Layer	Assignment	Comprehension	10 Sessions
Introduction to the Link Layer, The Services Provided by the Link Layer, Error-Detection and -Correction Techniques, Parity Checks, Check summing Methods, Cyclic Redundancy Check (CRC), Multiple Access Links and Protocols. Switched Local Area Networks, Link-Layer Addressing and ARP, Ethernet, Link-Layer Switches, Virtual Local Area Networks (VLANs), DHCP, UDP, IP and Ethernet.				
Module 4	Physical Layer with Data Communication	Assignment	Comprehension	07 Sessions
Data communications: Components, Data Representation, Data Flow, Analog and Digital Signals, Periodic Analog Signals: Sine Wave, Phase, Wavelength, Time and Frequency Domains, Composite Signals, Bandwidth, Digital Signals, Transmission Impairment, Data Rate Limits: Noiseless Channel, Nyquist Bit Rate, Noisy Channel: Shannon Capacity, Performance: Bandwidth, Throughput, Latency (Delay), Bandwidth-Delay Product, Parallel/Serial Transmission, Multiplexing: Frequency-Division Multiplexing, Wavelength-Division Multiplexing, Synchronous Time-Division Multiplexing.				
Targeted Application & Tools that can be used: 1. Instant Messaging 2. Telnet 3. File Transfer Protocol 4. Video Conferencing				
Project work/Assignment:				
Project Assignment: Assignment 1: Data Flow Directions Assignment 2: Types of Topology				
Textbooks:

Topics relevant to “Skill Development”:

Virtual Local Area Networks (VLANs), DHCP, UDP, IP and Ethernet **for Skill Development through Participative Learning techniques**. This is attained through the assessment component mentioned in the course handout.

Course Code: CSE 3028	Course Title: Blockchain security and performances			2	2	3
	Type of Course: Program Core Theory and Laboratory Integrated		L-P-C			
Version No.	1.0					
Course Pre-requisites	Blockchain Technology and Applications					
Anti-requisites	NIL					
Course Description	The purpose of this course is to introduce the students to security and privacy techniques in blockchain based systems. The course provides a comprehensive understanding of blockchain security, risks, methods, and best practices. The course develops critical thinking skills by augmenting the student’s ability to tackle security related issues of blockchain The associated laboratory provides an opportunity to validate the concepts taught as well as enhances the ability to visualize the real-world problems in order to provide a solution using various tools and techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: CO1:Comprehend security and performance perspective of blockchain technology. CO2: Apply cryptographic techniques to enhance security in blockchain based systems CO3: Implement secure transaction models. CO4: Apply security techniques to blockchain systems that provide solutions to some real world problems					
Course Outcome	The objective of the course is to familiarize the learners with the concepts of CSE3028_BLOCKCHAIN SECURITY & PERFORMANCE and attain Employability through Experiential Learning techniques.					
Course Content:						
Module 1	Fundamentals of Privacy And Security Techniques In Blockchain	Assignment	Programming	9 Sessions		
Introduction to Blockchain Technology, Cyber Security Threats and incidents on blockchain networks, Categorization of blockchain threats and vulnerabilities: Client vulnerabilities, Consensus Mechanism vulnerabilities, Mining Pool vulnerabilities, Network vulnerabilities, Smart Contract vulnerabilities; Privacy and security techniques: Mixing, Anonymous Signatures, Homomorphic Encryption, Attribute-Based Encryption, Secure Multi-Party Computation, Non-Interactive Zero-Knowledge (NIZK) Proof, TEE Based Smart Contracts, Game-Based Smart Contracts.						
Module 2	Cryptography	Assignment	Programming	12 sessions		
Cryptography, Public Key Cryptography and Cryptocurrency, Private Keys, Generating a Private Key from a Random Number, Public Keys, Elliptic Curve Cryptography, Elliptic Curve Arithmetic Operations, Generating a Public Key, Elliptic Curve Libraries, Cryptographic Hash Functions, Ethereum’s Cryptographic Hash Function: Keccak-256, Ethereum Address and Formats, Inter Exchange Client Address Protocol						
Module 3	Transaction Model	Assignment	Programming	9 sessions		
Topics: Blockchain Level Transaction Models : UTXO, Account-Based Online Transaction Model, CAP Properties in Blockchain, Security and Privacy Requirements of Online Transactions, Basic Security Properties: Consistency, Tamper-Resistance, Resistance to DDoS attacks, Resistance to Double-Spending attacks, Resistance to the Consensus attacks, Pseudonymity; Additional Security and Privacy Properties of Blockchain: Unlinkability, Confidentiality of Transactions and Data Privacy, Consensus Algorithms, BFT						

based Consensus Algorithms, Sleepy Consensus, Proof of Elapsed Time, Proof of Authority, Proof of Reputation, Comparison of Consensus Algorithms

List of Laboratory Tasks:

Targeted Application & Tools that can be used:

Project work/Assignment: Mention the Type of Project /Assignment proposed for this course

After completion of each module a programming based Assignment/Assessment will be conducted. On completion of Module 3, student will be asked to develop a Project.

Course Code: CSE3023	Course Title: Distributed Ledger Technology Type of Course: Discipline Elective	L-P-C	2	2	3
Version No.	1.0				
Course Pre-requisites	Foundations of Blockchain Technology				
Anti-requisites	NIL				

CourseDescription	The purpose of the course is to provide the fundamental concepts of distributed ledger technologies as well as to explore various aspects of distributed ledger techniques like Ethereum, Hyper ledger and smart contract. With a good knowledge in the fundamental concepts of block chain and distributed ledger technologies, the student can gain practical experience in implementing them, enabling the student to be an effective chain code creator.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Distributed Ledger Technology and attain Skill Development through Experiential Learning techniques .			
Course Out Comes	On successful completion of this course the students shall be able to: 1. Understand and explore the working of distributed ledger technology (Knowledge) 2. Understand the working of Smart Contracts (Knowledge) 3. Apply the learning of solidity and de-centralized apps on Ethereum (Application).			
Course Content:				
Version No.	1.0			
Module 1	Introduction to Distributed Ledger Technologies	Assignment	Data Collection	No. of Sessions: 09
Topics: What is Distributed Ledger Technology (DLT) and How Does it work? Key Features of DLT, Distributed Nature of the Ledger, Consensus Mechanism, Open/Permissionless Distributed Ledgers : Bitcoin , Ethereum ; Permissioned Distributed Ledgers ;, Ripple, Fabric (Hyperledger Project) , Corda, Key Advantages of DLT, Challenges and Risks related to DLT, Applications of DLT. Assignment: Permissionless Distributed Ledgers/ Permissioned Distributed Ledgers				
Module 2	Introduction to Hyperledger	Assignment	Writing Task	No. of Sessions: 09
Topics: What is Hyperledger? Hyper ledger frameworks, Hyperledger Fabric- Components design, principles of Hyperledger design, reference architecture, run time architecture, the journey of sample transaction, Hyperledger Composer. Assignment: Hyperledger Fabric Design				
Module 3	Designing a Data and Transaction Model	Assignment	Programming Task	No. of Sessions: 10
Topics: Starting the chaincode development, Compiling and running chaincode, Installing and instantiating chaincode, Invoking chaincode, Creating a chaincode, The chaincode interface, setting up chaincode file, Access control – ABAC- Registering a user, Enrolling a user, Retrieving user identities and attributes in chaincode, Implementing chaincode functions, Defining chaincode assets, Coding chaincode functions Creating an asset, Testing. Assignment: Creating Chaincode and interfacing among them.				
Module 4	Applications of DLT	Case Study	Discussion	No. of Sessions: 08

Topics: Applications: Internet of Things, Medical Record Management System, Domain Name Service and Future of Blockchain, Alt Coins. Case study: Managing the Metal and Mining Industry's Supply Chain with Hyperledger Fabric
List of Laboratory Tasks: - Level 1: Create a Simple Blockchain in any suitable programming language. Level 2: Create a complex Blockchain in any suitable programming language - Level 1: Deposit one Ether in your MetaMask accounts. Level 2: Deposit 10 Ether in your MetaMask accounts - Level 1: Create Single account. Level 2: Create multiple accounts and make a transaction between these accounts - Level 1: Test any one property of cryptographic hashing Level 2: Test all the properties of cryptographic hashing - Level 1: Add a transaction to a blockchain Level 2: Add multiple transaction to a blockchain - Level 1: Create a new file 'WorkingWithVariables.sol' in Solidity Level 2: Program to write a solidity program with required variables - Level 1: Create a new file 'SendMoney.sol' in solidity Level 2: Create new transaction with signing - Level 1: Single Error Handling using solidity Level 2: Complex exception Handling using solidity - Level 1: Use Geth to Implement Private Ethereum Block Chain. Level 2: Use Geth to Implement public Ethereum Block Chain. - Level 1: Build Hyperledger Fabric Client Application. Level 2: Build Hyperledger Fabric Server/network Application. - Level 1: Build Hyperledger Fabric with Smart Contract. Level 2: Case study on Hyperledger Fabric - Level 1: Create Case study of Block Chain being used in illegal activities in real world. Level 2: Using Golang to develop Block Chain Application
Targeted Application & Tools that can be used: Meta mask, Docker and Docker compose, Go Programming language
Project work/Assignment:
Topics: 1. Permissioned Distributed Ledgers 2. Chaincode- Creation and interface

Course Code: CSE 3020	Course Title: Smart Contract and Solidity Type of Course: Integrated	L- P- C	2	2	3
Version No.	1				
Course Pre-requisites	Basics of Mathematics and any Programming Language				
Anti-requisites	NONE				
Course Description	Solidity is an object-oriented, high-level language for implementing smart contracts. Smart contracts are programs which govern the behaviour of accounts within the Ethereum state. Solidity is a curly-bracket language designed to target the Ethereum Virtual Machine (EVM). It is influenced by C++, Python and JavaScript. The Ethereum Virtual Machine (EVM) and assembly (low level language), events and logging blockchain emissions, send vs transfer methods, scoping and more				
Course Objective	The objective of the course is to familiarize the learners with the concepts of Smart Contract and Solidity and attain EMPLOYABILITY through Experiential Learning Techniques .				
Course Out Comes	On successful completion of the course the students shall be able to: CO 1 : Understand the fundamentals of computational Element of the Blockchain Technology C.O 2: Implement user-defined operations of arbitrary complexity that are not possible through plain cryptocurrency protocols				

	C.O 3: Exhibit best practices for designing solutions with smart contracts using Solidity and Remix IDE			
Course Content:	Module: 1: Introduction to Smart Contract[14 Hrs - L[14] + T[00]] [Knowledge] A Simple Smart Contract, Blockchain Basics, The Ethereum Virtual Machine, Versioning, Remix, npm / Node.js, Docker, Binary Packages, Building from Source, CMake options. Module: 2: Solidity in Depth [22 Hrs – L[08] + T[02] + P[12]] [Application] Layout of a Solidity Source File, Structure of a Contract, Types, Units and Globally Available Variables, Expressions and Control Structures, Contracts, Solidity Assembly, Miscellaneous, Solidity v0.5.0 Breaking Changes Module 3: Contract Metadata & Contract ABI Specification [22 Hrs – L[08] + T[02] + P[12]] [Comprehension] Encoding of the Metadata Hash in the Bytecode, Usage for Automatic Interface Generation and NatSpec, Usage for Source Code Verification, Basic Design, Function Selector, Argument Encoding, Types, Design Criteria for the Encoding, Formal Specification of the Encoding, Function Selector and Argument Encoding, Examples, Use of Dynamic Types, Events, JSON, Strict Encoding Mode, Non-standard Packed Mode			
	Module 1	Introduction to Smart Contract	TEST-1	Fundamentals of Smart Contract and Solidity 12 Sessions
	Topics:			
	Module 2	Solidity in Depth	TEST-1	Case studies / Case let 12 Sessions
	Topics:			
	Module 3	Contract Metadata & Contract ABI Specification	Endterm lab Exam	Implementing Applications 14 Sessions
	Topics:			
	List of Laboratory Tasks: Develop a complex voting application Build blind auction App Create safe remote purchase			

Develop micropayment channel Creating Decentralized Apps with Solidity Store Patient Health Records using Solidity Implement Supply Chain Management App using Solidity
Targeted Application & Tools that can be used NetBeans

Topics relevant to “SKILL DEVELOPMENT”: Encoding of the Metadata Hash in the Bytecode, Usage for Automatic Interface Generation and NatSpec, Usage for Source Code Verification, Basic Design, Function Selector, Argument Encoding, Types, Design Criteria for the Encoding, Formal Specification of the Encoding, Function Selector and Argument Encoding for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE3020	Course Title: Blockchain Technology and Applications Type of Course: Program Core			L-P-C	3	0	3
Version No.	1.0						
Course Pre-requisites	Fundamentals of Blockchain Technology						
Anti-requisites	NIL						
Course Description	The purpose of the course is to provide an introduction to Blockchain technology with specific focus on industrial applications like Blockchain in Financial system, trade/supply chain management, agriculture industry, Healthcare sectors and Insurance system. With the knowledge of blockchain technology, Students will learn how these system are built, how to interact with them.						
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Blockchain Technology and Applications and attain Skill Development through Participative Learning techniques.						
Course Out Comes	On successful completion of this course the student shall be able to: 1. Understand the concepts of Blockchain technology (Knowledge). 2. Explain the methods for verification and validation of Bitcoin transactions (Comprehension). 3. Explore the use the Ethereum programming (Application). 4. Illustrate the role of blockchain in various domain (Comprehension).						
Course Content:							
Module 1	Introduction to Blockchain	Quiz	Knowledge based quiz on Cryptographic Hash Functions	No. of Classes: 8			
Topics: Incentives and proof of work. Simple Local Storage, Hot and Cold Storage, Online Wallets and Exchanges, Payment Services, Transaction Fees, Cryptographic Hash Functions, Hash Pointers and Data Structures, Digital Signatures.							
Module 2	Bitcoin	Assignment	Bitcoin mining pools	No. of Classes: 10			
Bitcoin Mechanics: Bitcoin transactions, Bitcoin Scripts, Applications of Bitcoin scripts, Bitcoin blocks, The Bitcoin network, Limitations and improvements. Bitcoin mining: The task of Bitcoin miners, Mining Hardware, Energy consumption, Mining pools, Mining incentives and strategies.							
Module 3	Ethereum	Create a smart contract using solidity language	Components of Ethereum Ecosystem	No. of Classes: 10			
The Ethereum Network – Components of Ethereum Ecosystem – Ethereum Programming Languages: Runtime Byte Code, Blocks and Blockchain, Fee Schedule – Supporting Protocols – Solidity Language.							
Module 4	Blockchains in Business	Case Study	Conduct a case study on how BaaS is adopted in industries.	No. of Classes: 10			

Topics: Blockchain in Supply Chain - Blockchain in Manufacturing - Blockchain in Automobiles - Blockchain in Healthcare- Blockchain in Financial Industry
List of Laboratory Tasks: NA
Targeted Application & Tools that can be used: • Ethereum Remix online& Ganache • Solidity programming language
Project work/Assignment: 1. Calculate the ‘number of ethers’ for the transaction of gas limit for the scenario in which the sender sets the gas limit to 50,000 and a gas price to 20 gwei. 2. Represent the EthereumMerkley Tree for the given list of Transactions. 3. Create Survey report of various types of Blockchain and its real time use cases.

CourseContent:						
Module 1	BlockchainBasics	Quiz	Knowledge based quiz on distributed ledger	10 Sessions		
Topics:The history of Blockchain: Blockchain, Generic elements of a blockchain, Benefits and limitations of Blockchain, Tiers of Blockchain technology, Features of Blockchain. Types of Blockchain: Distributed ledgers, Public Blockchain, private Blockchain, shared ledger. Quiz:Knowledge based quiz on distributed ledger						
Module 2	Distributed Consensus	Assignment	PoW	08 Sessions		
Topics: Consensus: Consensus mechanism, Types of consensus mechanisms, Consensus in Blockchain. Assignment: Write an assignment on PoW consensus mechanism						
Module 3	Introducing Bitcoin	Case study	Bitcoin network wallets	10 Sessions		
Topics: Bitcoin definition, Digital keys and addresses, Transactions, mining, Bitcoin network wallets, Bitcoin payments. Case Study: Conduct a study about hot bitcoin wallets						
Module 4	Smart contracts	Case study	how to execute smart contract	10 Sessions		

Topics:History, Definition, Introduction to Ethereum,Ethereum network,Components of Ethereum ecosystem, Smart contracts.

Case Study: Create a simple smart contract for User identity management using Solidity language and show how to execute.

Targeted Application & Tools that can be used:

- Ethereum Remix
- MetaMask
- Truffle
- Ganache

| Course Code: CBC2000 | Course Title: Blockchain Technology and Applications |
L:T:P:C = 3:0:0:3

| Version 1.0 |

Course Pre-requisites: Basics of Computer Networks, Database Systems

Anti-requisites: NIL

Course Description:

This course introduces the core concepts of blockchain technology, including its structure, consensus algorithms, and cryptographic foundations. It explores the various applications of blockchain in sectors such as finance, healthcare, supply chain, and digital identity.

Students will also understand the legal, ethical, and scalability challenges of blockchain systems.

Course Objectives:

1. Understand the foundational principles of blockchain technology.
2. Explore blockchain architecture, cryptographic elements, and consensus mechanisms.
3. Analyze real-world blockchain use cases and evaluate their effectiveness.
4. Examine privacy, scalability, legal, and governance issues in blockchain ecosystems.

Course Outcomes:

CO1 (Understand): Describe blockchain architecture, key components, and cryptographic elements.

CO2 (Analyze): Compare different types of blockchains and consensus mechanisms.

CO3 (Apply): Demonstrate blockchain use cases across various industries.

CO4 (Apply): Analyze the social, legal, and ethical implications of blockchain adoption.

Course Content:

Module 1: Introduction to Blockchain and Cryptographic Foundations | No. of Sessions: 11
Distributed systems, Introduction to Blockchain, Properties of blockchain, Cryptographic hash functions, Merkle trees, Digital signatures, Public key infrastructure (PKI), Blockchain transactions

Module 2: Blockchain Types and Consensus Mechanisms | No. of Sessions: 11
Permissioned vs Permissionless blockchains, Public vs Private vs Consortium blockchains, Bitcoin architecture, Ethereum overview, Consensus algorithms: PoW, PoS, DPoS, PBFT

Module 3: Blockchain Platforms and Applications | No. of Sessions: 12
Smart contracts and dApps, Ethereum use cases, Hyperledger Fabric, Blockchain in finance (DeFi, tokenization), Healthcare, Supply chain, Identity verification, Voting systems

Module 4: Challenges, Governance, and Future Trends | No. of Sessions: 11
Scalability and interoperability, Energy consumption, Privacy challenges, Legal and regulatory frameworks, Blockchain governance models, Emerging trends: CBDCs, NFTs, Web3, DAOs

Course Title: Blockchain Security and Performance

L:T:P:C – 3:0:0:3

Course Description

This course delves into the security and performance aspects of blockchain systems. It covers consensus attacks, smart contract vulnerabilities, performance bottlenecks, and secure protocol design. Emphasis is laid on techniques to improve resilience, scalability, and privacy while preserving decentralization.

Course Objectives

- Understand blockchain-specific threats and security principles
- Analyze performance metrics in blockchain platforms
- Explore security techniques for smart contracts and consensus algorithms
- Evaluate design strategies to enhance scalability and privacy

Course Outcomes

CO1 (Understand): Identify and describe security challenges in blockchain platforms

CO2 (Analyze): Evaluate consensus attacks and performance issues in different blockchain frameworks

CO3 (Apply): Implement security-aware smart contracts and mitigation techniques
CO4 (Apply): Analyze and optimize blockchain performance under diverse network loads

Course Content (45 Hours Total)

Module 1: Blockchain Security Foundations – 11 Sessions

Security principles in distributed systems, Blockchain threat models, Sybil attacks, Eclipse attacks, 51% attack, Cryptographic assumptions, Consensus vulnerabilities, Double-spending

Module 2: Smart Contract Security – 11 Sessions

Ethereum vulnerabilities, DAO attack analysis, Reentrancy, Arithmetic overflow/underflow, Front-running, Best practices in secure smart contract design, Tools for smart contract auditing

Module 3: Blockchain Performance Metrics – 11 Sessions

Performance benchmarks: latency, throughput, block size, transaction rate, Bottlenecks in scalability, Network propagation delay, Chain growth and quality, Trade-offs in performance vs security

Module 4: Enhancing Blockchain Performance and Privacy – 12 Sessions

Layer-2 scaling (State Channels, Rollups), Sharding, DAG-based architectures, ZKPs, Mixers and Privacy coins, Secure multi-party computation, Formal verification of performance

Course Code: CBC3400

Course Title: Cryptography and Security in Blockchain

L:T:P:C – 3:0:0:3

Prerequisite: CSE2019

Course Description

This course provides a deep dive into the **cryptographic principles and security mechanisms** that underpin blockchain technology. It explores key cryptographic algorithms, consensus protocols, wallet security, smart contract vulnerabilities, and advanced security features essential for safeguarding decentralized systems.

Course Objectives

- Understand core cryptographic techniques used in blockchain ecosystems
- Explore consensus protocols and their security implications
- Analyze common attacks and vulnerabilities in blockchain networks
- Apply cryptographic methods for secure blockchain applications and smart contracts

Course Outcomes

CO1 (Understand): Explain the role of cryptographic primitives in securing blockchain data and identity

CO2 (Analyze): Evaluate consensus protocols and blockchain attack surfaces

CO3 (Apply): Implement and test cryptographic algorithms and secure wallet mechanisms

CO4 (Apply): Identify and mitigate security flaws in smart contracts and blockchain systems

Course Content (45 Hours Total)

Module 1: Cryptographic Foundations – 11 Sessions (Understand)

Symmetric vs. asymmetric cryptography, Hash functions (SHA-256, Keccak), Digital signatures (ECDSA), Message integrity and non-repudiation, Merkle trees, Zero-knowledge proofs basics

Module 2: Consensus and Blockchain Security – 11 Sessions (Analyze)

Proof of Work (PoW), Proof of Stake (PoS), PBFT, Delegated PoS, Sybil attacks, 51% attack, Forking issues, Blockchain scalability vs. security trade-offs

Module 3: Wallets and Transaction Security – 11 Sessions (Apply)

Public/private key generation, Wallet types (hot, cold, hardware), Multisig wallets, Transaction signing and verification, Secure key storage, Replay protection

Module 4: Smart Contract and Platform Security – 12 Sessions (Apply)

Smart contract vulnerabilities (reentrancy, overflow), DAO case study, Formal verification, Auditing tools (Mythril, Slither), Secure coding standards, Layer-2 security (ZK-rollups, state channels), Privacy coins (ZCash, Monero)

Textbooks**T1:** Kelsey Hightower et al., *Blockchain Security and Privacy*, Wiley, **2023****T2:** Imran Bashir, *Mastering Blockchain*, Packt Publishing, **4th Edition, 2023****Reference Books****R1:** Arvind Narayanan et al., *Bitcoin and Cryptocurrency Technologies*, Princeton University Press, **2022****R2:** William Stallings, *Cryptography and Network Security*, Pearson, **7th Edition, 2022****R3:** Andreas M. This course provides an in-depth understanding of **crypto trading mechanisms, investment strategies, and risk management techniques**. It covers technical and fundamental analysis, trading indicators, automated strategies, and regulatory considerations. Emphasis is placed on market psychology, portfolio diversification, and risk mitigation in highly volatile crypto markets.

Course Objectives

- Understand cryptocurrency markets, exchanges, and trading instruments
- Learn technical and fundamental analysis techniques for crypto assets
- Explore risk assessment models and portfolio protection strategies
- Apply trading strategies and automation tools within regulatory frameworks

Course Outcomes**CO1 (Understand):** Explain cryptocurrency market structures, instruments, and volatility characteristics**CO2 (Analyze):** Evaluate and compare crypto trading strategies and their performance indicators**CO3 (Apply):** Apply risk management techniques and portfolio diversification methods**CO4 (Apply):** Use tools to implement, simulate, or automate crypto trading strategies**Course Content (45 Hours Total)****Module 1: Cryptocurrency Markets & Exchanges – 11 Sessions (Understand)**

Overview of crypto assets, Exchanges (CEX vs DEX), Trading pairs, Order types (market, limit, stop-loss), Market liquidity and volatility, Understanding spreads, slippage, and fees

Module 2: Trading Strategies and Analytics – 11 Sessions (Analyze)

Technical indicators (MACD, RSI, Bollinger Bands), Candlestick patterns, Moving averages, Breakout and momentum strategies, Arbitrage and swing trading, Volume analysis, On-chain analytics

Module 3: Risk Management in Crypto Trading – 11 Sessions (Apply)

Position sizing, Risk-reward ratio, Stop-loss vs trailing stops, Leverage and margin risks, Portfolio diversification, Drawdown analysis, Hedging strategies

Module 4: Automation, Tools & Regulations – 12 Sessions (Apply)

Trading bots and scripting basics (Python, Pionex), Backtesting tools (TradingView, CryptoCompare), Trading APIs (Binance, Coinbase), Regulatory risks, KYC/AML, Taxation, Real-world strategy simulation

Course Title: Bitcoin and Ethereum Protocols

L:T:P:C – 3:0:0:3

Prerequisite: CSE2019

Course Description

This course offers an in-depth exploration of the **technical protocols behind Bitcoin and Ethereum**, the two most prominent blockchain platforms. It focuses on consensus algorithms, cryptographic structures, transaction lifecycles, smart contract execution, protocol upgrades, and governance models. Students will gain foundational knowledge to build, secure, and innovate on these platforms.

Course Objectives

- Understand the architecture and protocols of Bitcoin and Ethereum blockchains
- Explore the transaction mechanisms and consensus protocols of both platforms
- Learn how Ethereum enables smart contracts and decentralized applications
- Analyze protocol limitations, upgrades, and scalability efforts

Course Outcomes

CO1 (Understand): Describe the technical components and operation of Bitcoin and Ethereum
CO2 (Analyze): Compare consensus mechanisms and data structures used in both platforms
CO3 (Apply): Trace transaction flow and analyze smart contract execution
CO4 (Apply): Evaluate scaling solutions, forks, and governance in decentralized networks

Course Content (45 Hours Total)

Module 1: Bitcoin Protocol Internals – 11 Sessions (Understand)

Bitcoin architecture, UTXO model, SHA-256 and ECDSA cryptography, Merkle trees, Block structure and mining, Proof-of-Work (PoW), Difficulty adjustment, Nakamoto consensus

Module 2: Ethereum Platform and EVM – 11 Sessions (Analyze)

Ethereum accounts model (EOA vs Contract), Gas and transaction fees, Ethereum Virtual Machine (EVM), Solidity basics, State transitions, Keccak-256 hashing, Contract storage and execution

Module 3: Transaction Lifecycle & Security – 11 Sessions (Apply)

Transaction creation, mempool, mining and validation, Transaction finality, Smart contract deployment, Reentrancy and gas-related vulnerabilities, Forking and transaction replay

Module 4: Protocol Upgrades, Governance & Scaling – 12 Sessions (Apply)

Bitcoin forks (SegWit, Taproot), Ethereum forks (Byzantium to Shanghai), Ethereum 2.0 and Proof-of-Stake (PoS), Rollups and Layer 2 scaling, DAO governance models, Limitations and innovations

Course Title: Blockchain for Digital Identity Management

L:T:P:C – 3:0:0:3

Prerequisite: CSE2019

Course Description

This course explores how **blockchain technology** is revolutionizing **digital identity management** by enabling decentralized, secure, and privacy-preserving solutions. Topics include identity lifecycle, verifiable credentials, decentralized identifiers (DIDs), self-sovereign identity (SSI), and regulatory compliance. Real-world platforms and government use cases are also covered.

Course Objectives

- Understand the challenges of traditional identity management systems
- Explore blockchain-based identity frameworks and standards
- Learn to design and implement decentralized digital identity models
- Evaluate security, privacy, and compliance aspects in identity solutions

Course Outcomes

CO1 (Understand): Describe the principles and components of blockchain-based digital identity systems

CO2 (Analyze): Compare centralized and decentralized identity models and their implications

CO3 (Apply): Design verifiable credentials and DIDs using standard protocols

CO4 (Apply): Evaluate use cases and compliance aspects of blockchain-enabled identity frameworks

Course Content (45 Hours Total)

Module 1: Digital Identity Concepts & Challenges – 11 Sessions (Understand)

Digital identity basics, Authentication vs authorization, Centralized identity systems, Federated login issues, Identity theft and fraud, Introduction to identity on blockchain

Module 2: Decentralized Identity & Standards – 11 Sessions (Analyze)

Decentralized Identifiers (DIDs), Verifiable Credentials (VCs), Self-Sovereign Identity (SSI), DIDComm, W3C standards, Privacy-preserving principles (ZKP, selective disclosure)

Module 3: Platforms & Architecture – 11 Sessions (Apply)

Sovrin, uPort, Hyperledger Indy, Aries, Trust over IP (ToIP), Blockchain identity layers, Wallets and credential holders, Issuer-verifier-holder architecture

Module 4: Implementation & Regulatory Compliance – 12 Sessions (Apply)

Smart contract-enabled identity, GDPR compliance, KYC/AML on blockchain, Identity in banking and e-governance, Cross-border identity solutions, Use cases: Aadhaar on blockchain, eIDAS, decentralized healthcare ID

Course Title: Cryptocurrency Wallet Development

L:T:P:C – 3:0:0:3

Prerequisite: CSE2019

Course Description

This course focuses on the **design, development, and security of cryptocurrency wallets**, which are essential tools for interacting with blockchain networks. Students will learn about wallet types, key management, transaction signing, wallet APIs, and user interface design, along with best practices for developing secure and user-friendly crypto wallets.

Course Objectives

- Understand the fundamentals of cryptocurrency wallets and key management
- Learn to build and secure wallets for Bitcoin, Ethereum, and other blockchains
- Explore wallet SDKs, libraries, and integration techniques
- Apply secure coding practices to prevent theft, fraud, and misuse

Course Outcomes

CO1 (Understand): Explain the architecture and functionality of cryptocurrency wallets

CO2 (Analyze): Compare wallet types and evaluate their security mechanisms

CO3 (Apply): Design and develop wallets with secure key storage and transaction capabilities

CO4 (Apply): Integrate wallet features with DApps and blockchain networks using APIs and SDKs

Course Content (45 Hours Total)

Module 1: Wallet Architecture & Key Management – 11 Sessions (Understand)

Wallet types (hot, cold, custodial, non-custodial), Mnemonic phrases and HD wallets (BIP32/39/44), Public-private key pairs, Address generation, Key encryption, Backup and recovery mechanisms

Module 2: Wallet Security & Compliance – 11 Sessions (Analyze)

Threats and attack vectors (phishing, malware, keylogging), Secure enclave and HSM, 2FA and biometric protection, Anti-fraud mechanisms, KYC/AML integration, Regulatory frameworks (FATF, GDPR)

Module 3: Wallet Development – 11 Sessions (Apply)

Bitcoin and Ethereum transaction lifecycle, Signing and broadcasting transactions, Wallet SDKs (Web3.js, ethers.js, bitcoinjs-lib), QR code integration, Multi-currency support, UI/UX for wallet apps

Module 4: DApp Integration & Advanced Features – 12 Sessions (Apply)

Interfacing with smart contracts, MetaMask integration, Web3 wallets, WalletConnect

protocol, Hardware wallet integration (Ledger, Trezor), Lightning wallets, Token swap and staking support

Course Title: Blockchain Security & Ethical Hacking

L:T:P:C – 3:0:0:3

Prerequisite: CSE2019

Course Description

This course focuses on **security challenges and ethical hacking techniques** specific to blockchain systems. It explores vulnerabilities in smart contracts, consensus mechanisms, cryptographic exploits, and network-level attacks. Students will gain hands-on knowledge in penetration testing, auditing, and securing decentralized applications in a responsible and ethical manner.

Course Objectives

- Understand blockchain security principles and ethical hacking frameworks
- Explore attack vectors in consensus, smart contracts, wallets, and networks
- Learn secure development practices and ethical exploitation techniques
- Apply auditing tools and mitigation strategies to secure blockchain ecosystems

Course Outcomes

CO1 (Understand): Describe blockchain security models, attack surfaces, and ethical hacking methodologies

CO2 (Analyze): Identify and assess vulnerabilities in blockchain components and smart contracts

CO3 (Apply): Simulate blockchain-specific attacks in a controlled environment

CO4 (Apply): Use auditing tools and secure coding techniques to mitigate real-world blockchain threats

Course Content (45 Hours Total)

Module 1: Blockchain Threat Landscape & Security Models – 11 Sessions (Understand)

Security principles in decentralized systems, Attack surfaces in blockchain, Common vulnerabilities (51% attack, Sybil attack, DDoS), Smart contract security flaws, Wallet security risks, Ethics and legalities in hacking

Module 2: Ethical Hacking & Penetration Testing – 11 Sessions (Analyze)

Reconnaissance and scanning, Blockchain-specific enumeration, Network sniffing, Exploit development for smart contracts, Bug bounty frameworks (Immunefi, HackenProof), Legal compliance and scope setting

Module 3: Secure Development & Mitigation – 11 Sessions (Apply)

Secure coding standards (Solidity), Gas optimization and fallback protection, Reentrancy guards, Rate limiting and throttling, Smart contract auditing lifecycle, Continuous security integration (DevSecOps)

Module 4: Tools & Real-World Case Studies – 12 Sessions (Apply)

Tools: Mythril, Slither, Hardhat, Truffle Security, Wireshark, Metasploit, Analysis of DAO hack, Poly Network breach, DeFi protocol exploits, Wallet draining scams, Building a secure DApp from scratch

Course Title: Introduction to Artificial Intelligence in Blockchain

L:T:P:C – 3:0:0:3

Prerequisite: CSE2019

Course Description

This course introduces how **Artificial Intelligence (AI)** can be integrated with **blockchain technology** to create intelligent, secure, and autonomous decentralized systems. Topics include AI-driven smart contracts, secure data sharing, AI model integrity on-chain, blockchain for AI auditability, and applications in finance, healthcare, and supply chain.

Course Objectives

- Understand the synergy between AI and blockchain technologies
- Explore architectures that combine decentralized data with intelligent decision-making
- Learn use cases of AI-powered blockchain applications
- Analyze challenges in data privacy, trust, and model governance in AI-blockchain systems

Course Outcomes

CO1 (Understand): Explain the fundamentals of AI and blockchain and their convergence

CO2 (Analyze): Evaluate use cases and architectures of AI-powered blockchain systems

CO3 (Apply): Integrate AI models into smart contracts and decentralized applications

CO4 (Apply): Examine the challenges and ethical concerns of deploying AI on the blockchain

Course Content (45 Hours Total)**Module 1: Fundamentals of AI and Blockchain – 11 Sessions (Understand)**

Overview of AI (ML, DL, NLP), Blockchain structure, consensus, and smart contracts, AI vs blockchain roles, Benefits of integration, Blockchain for AI audit trails and data provenance

Module 2: Intelligent Smart Contracts & AI Models On-Chain – 11 Sessions (Analyze)

Embedding decision-making into contracts, Oracle networks, AI-driven DApps, Federated learning and blockchain, Edge AI and decentralized AI agents

Module 3: Use Cases in Industry – 11 Sessions (Apply)

AI in DeFi fraud detection, Healthcare diagnostics with secure sharing, Predictive analytics in blockchain logistics, Tokenizing AI models, Model training marketplaces, NFT + AI systems

Module 4: Challenges, Ethics & Future Directions – 12 Sessions (Apply)

Data privacy, GDPR, Explainable AI (XAI) on blockchain, Resource constraints, Model verification and updates, Regulatory landscape, Ethical implications, Roadmap to autonomous decentralized AI

Course Code: CBC3407

Course Title: Machine Learning for Cyber Threat Detection

L:T:P:C – 3:0:0:3

Prerequisite: CSE2019

Course Description

This course focuses on the application of **machine learning techniques** for detecting and preventing **cybersecurity threats**. It explores supervised, unsupervised, and deep learning methods for anomaly detection, intrusion detection systems (IDS), malware analysis, and phishing detection. Real-time threat analytics, datasets, and evaluation metrics are emphasized.

Course Objectives

- Understand the fundamentals of cyber threats and threat detection strategies
- Learn to apply machine learning models to identify malicious activities
- Explore threat datasets, feature engineering, and evaluation metrics
- Analyze and compare ML techniques for cybersecurity use cases

Course Outcomes

CO1 (Understand): Explain the types of cyber threats and the role of machine learning in threat detection

CO2 (Analyze): Evaluate datasets and select appropriate ML models for different security tasks

CO3 (Apply): Build and train ML models for intrusion detection and malware classification

CO4 (Apply): Implement real-time threat detection and evaluate model performance

Course Content (45 Hours Total)

Module 1: Introduction to Cybersecurity and Threat Types – 11 Sessions (Understand)

Cyber threat landscape, Attack vectors (phishing, malware, DoS, ransomware), Indicators of compromise (IOCs), Traditional IDS vs ML-based IDS, Need for intelligent threat detection

Module 2: Machine Learning for Threat Modeling – 11 Sessions (Analyze)

Supervised vs unsupervised learning, Feature selection from logs/packets, Preprocessing and encoding, Cyber threat datasets (NSL-KDD, CICIDS, CTU-13), Model selection strategies

Module 3: Model Development and Application – 11 Sessions (Apply)

Logistic regression, Decision trees, SVM, Random Forests, K-means, Autoencoders, Neural networks for classification, Evaluation metrics (precision, recall, F1, ROC-AUC)

Module 4: Advanced Detection and Real-World Use Cases – 12 Sessions (Apply)

Deep learning for APT and malware detection, Threat intelligence integration, Adversarial ML, Real-time IDS with streaming data, SOC and SIEM integration, Case studies: phishing, botnet, zero-day detection

Course Title: AI-Powered Fraud Detection in Blockchain

L:T:P:C – 3:0:0:3

Prerequisite: CSE2019

Course Description

This course explores the application of **Artificial Intelligence (AI)** for detecting **fraudulent activities** in blockchain-based systems. It covers anomaly detection, behavioral analysis, graph-based fraud detection, and ML techniques to identify suspicious patterns in transactions, smart contracts, and decentralized applications. Real-world case studies and tools for fraud prevention are also included.

Course Objectives

- Understand the nature of fraud in blockchain networks and DeFi systems
- Explore AI and ML techniques for fraud detection
- Apply anomaly detection and classification models on blockchain datasets
- Learn to deploy real-time fraud detection pipelines and interpret alerts

Course Outcomes

CO1 (Understand): Describe types of fraud in blockchain systems and the role of AI in detecting them

CO2 (Analyze): Evaluate transaction patterns using AI algorithms to identify anomalies

CO3 (Apply): Implement supervised and unsupervised models for fraud detection in smart contracts and wallets

CO4 (Apply): Build and test AI-driven fraud analytics dashboards for real-time monitoring

Course Content (45 Hours Total)

Module 1: Blockchain Fraud & Risk Landscape – 11 Sessions (Understand)

Types of fraud: double-spending, Sybil attacks, wash trading, flash loan exploits, rug pulls, Ponzi schemes in DeFi, Anti-fraud mechanisms, AML/KYC challenges, Role of explainable AI (XAI)

Module 2: ML Techniques for Fraud Detection – 11 Sessions (Analyze)

Supervised learning (logistic regression, decision trees, SVM), Unsupervised methods (k-means, Isolation Forest, PCA), Graph-based approaches (Graph Neural Networks), Transaction feature engineering, Datasets (EtherScan, Elliptic, AMLSim)

Module 3: Smart Contract & Wallet Behavior Analysis – 11 Sessions (Apply)

Contract flow analysis, Malicious patterns in Solidity, Detecting honeypots and backdoors, Wallet profiling, Time-series analysis of transfers, API integration for behavioral monitoring

Module 4: Tools, Visualization & Real-Time Analytics – 12 Sessions (Apply)

Building fraud dashboards with Kibana/Grafana, Stream analytics for fraud signals, Alerting engines, Case studies (DAO exploit, PolyNetwork hack), Integration with Chainalysis, CipherTrace, AML Bot APIs

Course Title: Optimizing Blockchain Networks with AI

L:T:P:C – 3:0:0:3

Prerequisite: CSE2019

Course Description

This course focuses on leveraging **Artificial Intelligence (AI)** to enhance the **performance, scalability, and security of blockchain networks**. It explores optimization techniques for transaction throughput, consensus efficiency, node management, and predictive maintenance using AI models. The course emphasizes both theoretical foundations and practical applications of AI in blockchain infrastructure.

Course Objectives

- Understand performance challenges in blockchain networks
- Explore AI techniques for optimizing consensus, throughput, and latency
- Learn predictive models for network behavior and threat detection
- Apply intelligent algorithms to improve scalability and resource management

Course Outcomes

CO1 (Understand): Explain the performance and scalability limitations of blockchain networks

CO2 (Analyze): Evaluate the role of AI in enhancing consensus mechanisms and throughput

CO3 (Apply): Design and test AI models to predict congestion, detect anomalies, and optimize node behavior

CO4 (Apply): Integrate AI algorithms for energy efficiency, resource allocation, and real-time network tuning

Course Content (45 Hours Total)

Module 1: Blockchain Network Architecture & Bottlenecks – 11 Sessions (Understand) Node types and network topology, Transaction processing pipeline, Consensus protocol overview (PoW, PoS, PBFT), Throughput and latency issues, Scalability trilemma, Gas fee dynamics
Module 2: AI Techniques for Network Optimization – 11 Sessions (Analyze) Reinforcement Learning for block size tuning, Neural networks for congestion prediction, Anomaly detection in peer behavior, AI-assisted block propagation, ML models for dynamic fee estimation
Module 3: Resource & Energy Optimization – 11 Sessions (Apply) AI for miner/validator selection, Load balancing, Smart node clustering, Energy-efficient scheduling, Predictive fault detection in blockchain nodes, Real-time node health monitoring
Module 4: Intelligent Consensus & Future Directions – 12 Sessions (Apply) AI-enhanced consensus models, Swarm intelligence, Federated learning for decentralized AI, Hybrid optimization architectures (AI + DLT), Use cases in DeFi, supply chain, and CBDC networks

Course Code: CBC3410 Course Title: Generative AI for Blockchain Applications L:T:P:C – 3:0:0:3 Prerequisite: CSE2019
Course Description This course introduces the integration of Generative AI with Blockchain technology to develop intelligent, decentralized, and automated applications. It focuses on the use of models like GPT, LLMs, and diffusion networks to enhance smart contracts, autonomous agents, decentralized content creation, NFT generation, and AI transparency using blockchain.
Course Objectives — Understand the fundamentals of Generative AI and its potential in blockchain ecosystems — Explore the use of LLMs and generative models for smart contracts, NFTs, and

decentralized apps — Apply decentralized storage and blockchain for provenance and model verification — Investigate real-world use cases and ethical implications of AI-generated content on-chain
Course Outcomes CO1 (Understand): Describe the principles of Generative AI and how it enhances blockchain use cases CO2 (Analyze): Evaluate generative models for decentralized identity, content, and NFTs CO3 (Apply): Design applications that combine smart contracts with LLM-generated outputs CO4 (Apply): Implement provenance, audit trails, and ownership models using blockchain for AI-generated assets
Course Content (45 Hours Total)
Module 1: Introduction to Generative AI & Blockchain – 11 Sessions (Understand) Overview of Generative AI: GPT, GANs, VAEs, Diffusion Models, Blockchain basics: smart contracts, transactions, oracles, Benefits of integrating AI with blockchain (immutability, trust, decentralization)
Module 2: Generative AI for NFTs and Smart Contracts – 11 Sessions (Analyze) AI-generated NFTs and metadata, Smart contract-driven art/music/token generation, Prompt engineering for blockchain use, Ethereum, IPFS, and Arweave for content storage, Creative commons and licensing on-chain
Module 3: Autonomous Agents & Decentralized AI Apps – 11 Sessions (Apply) Autonomous AI agents for DeFi and DAO governance, Blockchain-based prompt markets, Agent verification and staking, AI for DAO proposals and decision-making, Combining LLMs with Chainlink oracles
Module 4: Security, Ethics & Use Cases – 12 Sessions (Apply) AI model validation and IP protection using blockchain, Verifiable credentials, Combatting AI-generated misinformation, Case studies: OpenAI tokens, Alethea AI, Bittensor, Web3 AI marketplaces, Regulatory landscape and ethical concerns

Course Code: CBC3411
Course Title: Quantum Computing & Blockchain-AI Security
L:T:P:C – 3:0:0:3
Prerequisite: CSE2019

Course Description

This course provides an interdisciplinary overview of **quantum computing** and its implications for the **security of blockchain and AI systems**. It covers quantum algorithms, post-quantum cryptography, quantum-safe blockchain protocols, and the impact of quantum advancements on AI model integrity, smart contracts, and decentralized security mechanisms.

Course Objectives

- Understand the fundamentals of quantum computing and its threat to classical cryptography
- Explore quantum-resistant cryptographic techniques and blockchain adaptations
- Analyze the vulnerabilities in AI and blockchain systems in a post-quantum world
- Apply hybrid security models combining quantum safety, blockchain, and AI

Course Outcomes

CO1 (Understand): Explain the principles of quantum computing and quantum threats to cryptographic systems

CO2 (Analyze): Evaluate the impact of quantum algorithms on blockchain consensus and AI model security

CO3 (Apply): Implement basic post-quantum algorithms and analyze their integration in blockchain

CO4 (Apply): Propose secure architectures combining AI, blockchain, and quantum-safe techniques

Course Content (45 Hours Total)

Module 1: Foundations of Quantum Computing – 11 Sessions (Understand)

Qubits, superposition, entanglement, quantum gates and circuits, Quantum parallelism, Quantum vs classical models, Introduction to quantum programming (Qiskit, Cirq)

Module 2: Quantum Threats to Blockchain and AI – 11 Sessions (Analyze)

Shor's algorithm, Grover's algorithm, Breaking RSA/ECC, Threats to Bitcoin and Ethereum, Risks to AI model integrity, Quantum attacks on hashes and signatures

Module 3: Post-Quantum Cryptography & Blockchain – 11 Sessions (Apply)

Lattice-based, hash-based, code-based cryptography, NIST PQC candidates, Blockchain modifications for quantum resistance, Quantum key distribution (QKD), Hybrid encryption in smart contracts

Module 4: Secure Architectures & Use Cases – 12 Sessions (Apply)

Combining AI with quantum-safe blockchains, Use cases: quantum voting, decentralized identity, healthcare AI security, IBM Q and Google Quantum AI tools, Regulatory and ethical considerations

Course Title: Introduction to Decentralized Finance (DeFi)

L:T:P:C – 3:0:0:3

Prerequisite: CSE2019

Course Description

This course provides a foundational understanding of **Decentralized Finance (DeFi)**—an open financial ecosystem built on blockchain networks. It covers core DeFi primitives such as lending, staking, token exchanges, liquidity pools, stablecoins, DAOs, and yield farming. Emphasis is placed on smart contract mechanics, platform security, and regulatory considerations.

Course Objectives

- Understand the architecture and protocols that power DeFi systems
- Explore key DeFi applications including lending, trading, and insurance
- Learn how smart contracts automate financial services in DeFi
- Analyze risks, governance, and compliance challenges in decentralized finance

Course Outcomes

CO1 (Understand): Explain the foundational concepts, architecture, and drivers of DeFi

CO2 (Analyze): Evaluate DeFi protocols such as DEXs, lending markets, and stablecoins

CO3 (Apply): Simulate DeFi operations such as liquidity provision and staking on testnets

CO4 (Apply): Analyze risks (smart contract, liquidity, governance) and suggest mitigation strategies

Course Content (45 Hours Total)

Module 1: Introduction to DeFi and Blockchain Infrastructure – 11 Sessions (Understand)

What is DeFi?, DeFi vs TradFi, Ethereum and EVM, Smart contracts in DeFi, Token standards (ERC-20, ERC-721), Role of oracles, Introduction to wallets (MetaMask, Ledger)

Module 2: DeFi Applications & Protocols – 11 Sessions (Analyze)

Decentralized exchanges (Uniswap, Curve), Lending/borrowing protocols (Aave, Compound), Stablecoins (DAI, USDC, algorithmic types), Derivatives and synthetic assets, Cross-chain DeFi

Module 3: Participation in DeFi Ecosystem – 11 Sessions (Apply)

Liquidity provision, Yield farming, Staking and governance tokens, DAO voting, Token bonding curves, Farming simulations on testnets (Ropsten, Mumbai)

Module 4: Security, Risks & Regulation – 12 Sessions (Apply)

Smart contract bugs and audits, Flash loan attacks, Liquidity risks, Rug pulls, DeFi insurance, Regulatory overview (FATF, SEC, MiCA), DeFi compliance tools and trends

Course Title: Blockchain in Financial Services

L:T:P:C – 3:0:0:3

Prerequisite: CSE2019

Course Description

This course explores how **blockchain technology is transforming the financial services industry**, from traditional banking to insurance and capital markets. Topics include decentralized clearing and settlement, digital identity, smart contracts, CBDCs, and regulatory frameworks. Emphasis is placed on architecture, security, scalability, and practical applications.

Course Objectives

- Understand blockchain fundamentals in the context of financial services
- Explore real-world applications in payments, lending, trade finance, and capital markets
- Learn about digital identity, regulatory compliance, and tokenization
- Analyze challenges of adoption, scalability, and integration with legacy systems

Course Outcomes

CO1 (Understand): Explain how blockchain redefines processes in financial services

CO2 (Analyze): Evaluate blockchain use cases across banking, insurance, and investment sectors

CO3 (Apply): Design secure blockchain-based workflows for financial operations
CO4 (Apply): Assess integration, scalability, and regulatory strategies for blockchain solutions in finance

Course Content (45 Hours Total)

Module 1: Blockchain Basics for Finance – 11 Sessions (Understand)

Distributed ledgers and consensus, Cryptographic primitives (hashing, digital signatures), Smart contracts, Tokenization of assets, Permissioned vs permissionless blockchains, Architecture of financial blockchain platforms (Corda, Quorum)

Module 2: Applications in Core Financial Services – 11 Sessions (Analyze)

Cross-border payments (Ripple, Stellar), Clearing and settlement, Lending & credit scoring (DeFi, tokenized loans), Trade finance (Letter of credit digitization), Digital identity and KYC/AML

Module 3: Capital Markets, Insurance & Emerging Trends – 11 Sessions (Apply)

Tokenized securities and STOs, Fractional ownership, Reinsurance on chain, Parametric insurance, CBDCs and stablecoins, Robo-advisors with blockchain backend, ESG finance with smart contracts

Module 4: Risk, Regulation & Integration – 12 Sessions (Apply)

Security risks (51%, front-running, reentrancy), Regulatory standards (MiCA, FATF), Auditability and traceability, Integration with core banking systems, Blockchain sandboxing, Interoperability (Polkadot, Cosmos)

Course Title: Building Decentralized Applications (DApps) for Finance

L:T:P:C – 3:0:0:3

Prerequisite: CSE2019

Course Description

This course focuses on the **design and development of Decentralized Applications (DApps)** for financial use cases using blockchain platforms. Students will explore smart contract programming, Web3 integration, decentralized finance protocols, and wallet connectivity. The course emphasizes security, UX design, and compliance in DApp development.

Course Objectives

- Understand DApp architecture and smart contract fundamentals
- Learn to build secure, finance-focused DApps using Ethereum and Web3 tools
- Explore UI/UX design, wallet integration, and backend connectivity
- Analyze security, scalability, and deployment challenges in real-world DApps

Course Outcomes

CO1 (Understand): Explain the architecture and components of decentralized financial applications

CO2 (Analyze): Evaluate DApp frameworks, smart contract interactions, and Web3 interfaces

CO3 (Apply): Build and test secure DApps for financial services using blockchain tools

CO4 (Apply): Deploy and optimize DApps with wallet, API, and decentralized storage integration

Course Content (45 Hours Total)**Module 1: DApp Architecture & Financial Use Cases – 11 Sessions (Understand)**

Overview of DApps, Differences between traditional apps and DApps, Financial DApp use cases (wallets, lending, insurance), Blockchain platforms (Ethereum, Polygon), DApp lifecycle

Module 2: Smart Contracts for DApps – 11 Sessions (Analyze)

Solidity fundamentals, Contract structure, Inheritance and modifiers, Events and data flow, Interaction with oracles, Audit practices, Gas optimization, Contract upgradeability

Module 3: DApp Frontend, Wallet & Web3 Integration – 11 Sessions (Apply)

Web3.js/ethers.js setup, MetaMask and WalletConnect integration, DApp UI design principles, React.js frontend, Reading/writing contract data from frontend, Decentralized authentication

Module 4: Deployment, Storage & Real-World DApps – 12 Sessions (Apply)

IPFS and Arweave for decentralized storage, Hardhat/Truffle for testing and deployment, DeFi API integration (Uniswap, Aave), Use cases: DApp lending platform, staking, NFT marketplace, Compliance and user privacy

Course Code: CBC3415
Course Title: Smart Contracts for Financial Products
L:T:P:C – 3:0:0:3
Prerequisite: CSE2019

Course Description

This course focuses on the **design, development, and deployment of smart contracts** specifically for **financial products and services**. It introduces smart contract logic, digital agreements, automated settlements, and programmable finance using platforms like Ethereum and Hyperledger. Use cases include insurance, lending, escrow, tokenized assets, and derivatives.

Course Objectives

- Understand the fundamentals and architecture of smart contracts
- Learn how to model financial instruments using code-based contracts
- Build and deploy secure smart contracts for DeFi and traditional finance applications
- Explore risks, audit strategies, and compliance issues in financial smart contracts

Course Outcomes

CO1 (Understand): Explain the architecture, lifecycle, and legal implications of smart contracts in finance

CO2 (Analyze): Compare financial product types and model them using Solidity or other smart contract languages

CO3 (Apply): Build, test, and deploy smart contracts for loans, insurance, and tokenized securities

CO4 (Apply): Audit and optimize smart contracts for security, gas usage, and regulatory alignment

Course Content (45 Hours Total)

Module 1: Introduction to Smart Contracts – 11 Sessions (Understand)

Concept and origin, Contract lifecycle, Ethereum and EVM, Benefits and risks in finance, Platforms (Solidity, Vyper, DAML), Role of oracles and event logs

Module 2: Modeling Financial Instruments – 11 Sessions (Analyze)

Smart contracts for loans (collateralized, flash), Escrow services, Insurance contracts (parametric, peer-to-peer), Structured products, Tokenized bonds and equities

Module 3: Development, Testing & Deployment – 11 Sessions (Apply)

Solidity contract structure, Events and modifiers, Testing with Truffle/Hardhat, Gas optimization, Upgradable contracts using proxies, Remix and blockchain testnets

Module 4: Security, Audits & Compliance – 12 Sessions (Apply)

Smart contract vulnerabilities (overflow, reentrancy), Audit frameworks (Mythril, Slither), Access control (OpenZeppelin), Compliance considerations (MiCA, SEC), Real-world failures (DAO, Wormhole), Best practices

Course Title: Decentralized Autonomous Organizations and Risk Management in Finance

L:T:P:C – 3:0:0:3

Prerequisite: CSE2019

Course Description

This course explores **Decentralized Autonomous Organizations (DAOs)** and their application in **financial risk management**. It delves into governance models, treasury operations, legal status, and smart contract-driven automation of financial processes. It also covers various risk types—operational, smart contract, and market—and their mitigation strategies in decentralized environments.

Course Objectives

- Understand the structure and operational logic of DAOs
- Explore DAO use cases in investment, lending, and decentralized governance
- Learn how risk is modeled and managed within decentralized financial systems
- Analyze legal, regulatory, and technical frameworks for DAO-based finance

Course Outcomes

CO1 (Understand): Describe the architecture, governance, and funding mechanisms of DAOs

CO2 (Analyze): Evaluate DAO-based models for financial services and risk exposure

CO3 (Apply): Build and simulate DAO smart contracts and voting systems

CO4 (Apply): Develop risk mitigation strategies for DAO-managed financial operations

Course Content (45 Hours Total)

Module 1: DAO Fundamentals and Governance – 11 Sessions (Understand)

Definition and DAO structure, Key smart contracts in DAOs, Voting mechanisms (token-based, quadratic), Treasury management, Governance tokens, DAO platforms (Aragon, DAOstack)

Module 2: DAO Use Cases in Finance – 11 Sessions (Analyze)

DAO-based lending platforms, Investment DAOs, Yield aggregators, DAO-managed stablecoins, DAO for insurance and asset management, Real-world case studies (MakerDAO, Yearn Finance, ConstitutionDAO)

Module 3: Risk Management in DAO Ecosystems – 11 Sessions (Apply)

Types of risks: protocol, liquidity, operational, regulatory, Risk scoring systems, DAO treasury risk modeling, Smart contract vulnerabilities, Flash loan attacks, DAO governance attacks

Module 4: Legal Frameworks and Compliance – 12 Sessions (Apply)

Legal entity status of DAOs, Jurisdictions (Wyoming, Malta, Liechtenstein), DAO compliance toolkits, Auditing and reporting in DAO finance, Security vs utility tokens, Regulatory overlaps (SEC, MiCA, FATF)

Course Code: CBC3417**Course Title: Regulatory and Compliance Challenges in DeFi**

L:T:P:C – 3:0:0:3

Prerequisite: CSE2019

Course Description

This course explores the **regulatory, legal, and compliance frameworks** surrounding **Decentralized Finance (DeFi)**. It analyzes how DeFi challenges traditional financial regulation and examines global responses, such as MiCA, FATF, SEC guidance, and KYC/AML implementations. The course includes real-world case studies, compliance tools, and ethical considerations for DeFi innovation.

Course Objectives

- Understand the regulatory landscape for DeFi and decentralized platforms
- Examine compliance obligations related to KYC, AML, and taxation
- Analyze global approaches to DeFi oversight, classification of tokens, and enforcement trends
- Explore solutions for integrating compliance into decentralized systems

Course Outcomes

CO1 (Understand): Identify the key regulatory concerns and frameworks applicable to DeFi systems
CO2 (Analyze): Evaluate compliance challenges in decentralized lending, trading, and asset issuance
CO3 (Apply): Implement KYC/AML procedures and governance models in DeFi applications
CO4 (Apply): Assess risk and compliance strategies using real-world legal and technical tools

Course Content (45 Hours Total)

Module 1: Introduction to DeFi Regulation – 11 Sessions (Understand)

What is DeFi and why it's difficult to regulate, Regulatory bodies (FATF, SEC, EU, BIS), Principles-based vs rules-based regulation, Legal identity and anonymity, Public vs permissioned protocols

Module 2: Global Regulatory Frameworks – 11 Sessions (Analyze)

MiCA (EU), FinCEN (USA), MAS (Singapore), FCA (UK), Taxation of crypto assets, Classifying tokens (security, utility, hybrid), Regulatory sandbox models, DAO regulation

Module 3: Compliance Integration in DeFi Platforms – 11 Sessions (Apply)

On-chain KYC/AML, Decentralized identity (DID, VC), Risk scoring and monitoring tools, AML compliance engines (Chainalysis, TRM Labs), Oracle-based compliance feeds, Smart contract-based compliance controls

Module 4: Case Studies, Ethics & Emerging Trends – 12 Sessions (Apply)

Notable enforcement actions (SEC vs Ripple, Tornado Cash sanctions), DeFi rug pulls and litigation, Data privacy (GDPR in DeFi), Self-regulatory organizations (SROs), Compliance-by-design models, Future of regulated DeFi

Special Elective

Course Code: UG COURSE: CAI3429	Course Title: Deep Learning Techniques for Computer Vision Type of Course: Discipline Elective - Theory & Integrated Laboratory	L-T-P-C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	MAT1003 Applied Statistics, Knowledge of Python, Machine Learning, and Digital image processing					
Anti-requisites	NIL					
Course Description	This course covers the fundamentals and advanced concepts of deep learning for computer vision applications. Students will explore convolutional neural networks (CNNs), object detection, image segmentation, and generative models. Hands-on lab experiments will reinforce theoretical concepts using frameworks like TensorFlow and PyTorch.					
Course Out Comes	On successful completion of the course the students shall be able to: Understand the Fundamentals of Deep Learning for Vision Explain the core concepts of neural networks and deep learning architectures for image processing. Implement and optimize convolutional neural networks (CNNs) for classification tasks. Apply Object Detection and Image Segmentation Techniques Implement and analyze state-of-the-art object detection algorithms such as YOLO, Faster R-CNN, and SSD. Develop and evaluate image segmentation models like U-Net and Mask R-CNN. Explore Advanced Deep Learning Techniques for Vision Utilize Vision Transformers (ViTs) and attention mechanisms for image classification. Generate and manipulate images using Generative Adversarial Networks (GANs). Deploy and Optimize Deep Learning Models for Real-World Applications					
Course Content:						
Module 1	Fundamentals of Deep Learning for Vision	Assignment	Practical		No. of Classes:8	

Introduction to Deep Learning & Neural Networks, Convolutional Neural Networks (CNNs) Architecture Backpropagation & Optimization in CNNs, Transfer Learning & Pretrained Models.				
Module 2	Object Detection & Image Segmentation	Assignment	Practical	No. of Classes:14
Introduction to Object Detection (R-CNN, SSD, YOLO), Region Proposal Networks (Faster R-CNN) Semantic & Instance Segmentation (U-Net, Mask R-CNN), Real-time Object Detection Applications				
Module 3	Advanced Topics in Vision	Assignment	Practical	No. of Classes:8
Attention Mechanisms & Vision Transformers (ViTs), Generative Adversarial Networks (GANs) for Image Generation, Self-supervised Learning for Vision, Multi-modal Learning (CLIP, DALL·E)				
Module 4	Applications & Deployment	Assignment	Practical	No. of Classes:8
Edge AI & Mobile Deployment (TensorFlow Lite, ONNX), Adversarial Attacks & Robustness in Vision Models, Explainability & Interpretability of Vision Models, Case Studies & Industry Applications				
Lab Experiments are to be conducted on the following topics:- Lab Sheet 1: Keras Sequential API model 1. Read in the data and explore 2. Define a Sequential API model 3. Define the hyperparameters and optimizer 4. Train the model and visualize the history 5. Testing Keras Functional API model: 1. Define a Functional API model 2. Train the model and visualize the history Lab Sheet 2: Softmax regression with Keras 1. Read in the data and prepare 2. Define a Sequential API model 3. Define the hyperparameters and optimizer 4. Train the model and visualize the history 5. Testing Lab Sheet 3: Convolutional Neural Network with Keras (grayscale images) 1. Read in the data: 2. Visualize the data:				

3. Prepare the data:
4. Define a CNN model:
5. Define the hyperparameters and optimizer:
6. Train the model and visualize the history:
7. Testing:

Lab Sheet 4:

Convolutional Neural Network with Keras (color images):

1. Read in the data:
2. Visualize the data:
3. Prepare the data:
4. Define a CNN model:
5. Define the hyperparameters and optimizer:
6. Train the model and visualize the history:
7. Testing:

Lab Sheet 5:

Time series and prediction:

1. Read in the data and explore:
2. Apply the exponential smoothing method and predict

Recurrent neural network (RNN):

1. Pre-processing:
2. Do the necessary definitions: (Hyper parameters, Model,
3. Train the model:
4. Predict the future:

Lab Sheet 6:

Document classification with LSTM network:

1. Read in the data:
2. Explore the data:
3. Data preprocessing:
4. Define the model:
5. Define the optimizer and compile:
6. Train the model and visualize the history:
7. Testing:

Lab Sheet 7:

Document classification with LSTM network (Binary):

1. Read in the data:
2. Explore the data:
3. Data preprocessing:
4. Define the model:
5. Define the optimizer and compile:
6. Train the model and visualize the history:
7. Testing:

Lab Sheet 8:

Document classification with LSTM + CNN network (Binary):

1. Read in the data:
2. Explore the data:
3. Data preprocessing:
4. Define the model:
5. Define the optimizer and compile:

6. Train the model and visualize the history: 7. Testing: <u>Lab Sheet 9:</u> Softmax regression to recognize the handwritten digits: 1. Download the MNIST data: 2. Take a look at the dataset: 3. Do the necessary definitions: 4. Training and Testing: Multi-layer neural network to recognize the handwritten digits: 1. Download the MNIST data: 2. Take a look at the dataset: 3. Do the necessary definitions: Training and Testing: <u>Lab Sheet 10:</u> Object Detection using YOLOv5 <u>Lab Sheet 11:</u> Image Segmentation using U-Net Custom Object Detection using Faster R-CNN <u>Lab Sheet 12:</u> Implementing Vision Transformers for Image Classification Generating Images using GANs (DCGAN, StyleGAN) <u>(Group Project)</u> 8. Object Detection and Recognition: a. Haar cascade object detection (e.g., face detection or object detection using pre-trained classifiers). b. Feature-based object detection using techniques like Speeded-Up Robust Features (SURF) or Scale-Invariant Feature Transform (SIFT). c. Deep learning-based object detection using Convolutional Neural Networks (CNNs) or You Only Look Once (YOLO) algorithm. 9. Optical Character Recognition (OCR): a. Preprocessing of text images (e.g., binarization, noise removal, or skew correction). b. Text localization using techniques like connected component analysis or Stroke Width Transform (SWT). c. Character recognition using machine learning algorithms like Support Vector Machines (SVM) or Convolutional Neural Networks (CNNs). 10. Gesture Recognition: a. Hand segmentation using techniques like background subtraction or skin color detection. b. Feature extraction from hand regions (e.g., finger counting, hand shape descriptors). c. Classification of gestures using machine learning algorithms (e.g., k-Nearest Neighbors or Support Vector Machines).
Tools/Software Required : 1. OpenCV 4 2. Python 3.7

3. MATLAB
Text Books 1. “Deep Learning for Computer Vision Image Classification, Object Detection and Face Recognition in Python” Jason Brownlee (2019) 2. “Deep Learning for Computer Vision with python” Adrian Rosebrock (2017)

Course Code: CAI3428	Course Title: Practical Deep Learning with TensorFlow Type of Course: Discipline Elective - Theory & Integrated Laboratory	L- T-P- C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	CSE 3001-Artificial Intelligence and Machine Learning					
Anti-requisites	NIL					
Course Description	This course introduces students to the concepts of deep neural networks and state of the art approaches to develop deep learning models. In this course students will be given an exposure to the details of neural networks as well as deep learning architectures and to develop end-to-end models for such tasks. It will help to design and develop an application-specific deep learning models and also provide the practical knowledge handling and analyzing end user realistic applications.					
Course Objective	This course is designed to improve the learners <u>EMPLOYABILITY SKILLS</u> by using <u>EXPERIENTIAL LEARNING</u> techniques.					
Course Outcomes	On successful completion of this course the students shall be able to: 1. Implement backpropagation and gradient descent techniques to train neural networks effectively. (Apply) 2. Build and train deep learning models using Python libraries such as TensorFlow and Keras for real-world applications. (Apply) 3. Utilize deep learning techniques for image classification, object detection, sentiment analysis, and language modeling. (Apply)					
Course Content:						
Module 1	Basics of Neural Networks	Assignment				18[8L+10P] Sessions
Topics: Understanding Perceptron with Excel, Understanding Multilayer Perceptron with Excel, From Multilayer Perceptron to Deep Learning, Error Backpropagation and Gradient Descent to reduce errors, Activation Functions, Deep Learning, Problems with Deep Learning with solutions.						
Module 2	TensorFlow Basics	Assignment				14[7L+7P] Sessions
Topics: Introduction to TensorFlow, TensorFlow dataset, Machine Learning with TensorFlow						
Module 3	Deep Learning methods with Tensor Flow and Keras	Assignment				14[6L+8P] Sessions

Topics: Main Features of TensorFlow, Keras basics, AI with Keras.
Project work/Assignment:
1. Assignment 1 on (Module 1 and Module 2) 2. Assignment 2 on (Module 3)
List of Laboratory Tasks: Lab 1: Working with Deep Learning Frameworks Objective: Explore various Deep Learning Frameworks Tasks: Identify deep learning frameworks (Keras, Tensorflow, Matplotlib, etc) Activity: Practice with various methods available in DL Frameworks to develop a Model. Lab 2: Build a Basic Artificial Neural Network Objective: Create a ANN with DL frameworks. Task: Identify suitable ANN Layers using Keras and Tensorflow. Activity: Design a basic Artificial Neural Networks using Keras with TensorFlow (pima-indians-diabetes) Lab 3: Build a MultiLayer Perceptron Objective: Create a MLP for classification task. Task: Identify suitable model for house price prediction. Activity: Design a MLP for implementing classification and fine-tuning using House price.csv Lab 4: Create a Tensor in TensorFlow using List or Numpy array. Objective: To understand how to create a tensor in TensorFlow using a Python list or NumPy array Task: Create a simple tensor using both a Python list and a NumPy array in TensorFlow. Activity: Create a tensor using a Python list and Numpy array Lab 5: Apply math operations on tensor using various mathematical functions. Objective: To learn how to apply mathematical operations on tensors using various TensorFlow mathematical functions.

Task: Perform basic mathematical operations (addition, subtraction, multiplication, division) and advanced functions (square, square root, exponential) on tensors.

Activity: Perform basic math operations: Add, Subtract, Multiply, Divide and Apply advanced math functions: Square, Square root, Exponential.

Lab 6: Connecting two tensors in dataset.

Objective: Combine two tensors using concatenation and stacking operations in TensorFlow.

Task: Combine two tensors using concatenation and stacking operations in TensorFlow

Activity: Concatenate them along a specific axis and Stack them along a new axis.

Lab 7: Building dataset from a file stored in a local drive

Objective: To learn how to build a dataset in TensorFlow from a file stored in a local drive.

Task: Load a dataset from a CSV file stored on the local drive and process it using TensorFlow

Activity: Load the file using TensorFlow's tf.data API and Process the dataset (e.g., convert it into tensors)

Lab 8: Loading Dataset from TensorFlow.dataset Library

Objective: To learn how to load a dataset from the tensorflow_datasets library and use it in machine learning models.

Task: Load a dataset from TensorFlow Datasets (tfds), preprocess it, and display sample data

Activity: Load a dataset (e.g., MNIST, CIFAR-10, IMDB Reviews) and Split the dataset into training and testing sets.

Lab 9: Build a Convolutional Neural Network

Objective: Create a CNN model.

Task: Build CNN architecture for Dog-Cat classification problem.

Activity: Implement a Convolution Neural Network (CNN) for dog/cat classification problem using keras.

Lab 10: Build a Time-Series Model

Objective: Create a RNN and LSTM Model

Task: Build RNN/LSTM Model for predicting time series data.

Activity Train a sentiment analysis model on IMDB dataset, use RNN layers with LSTM/GRU notes.

Course Code: CAI3427	Course Title: Language Models for Text Mining Type of Course: Discipline Elective - Theory & Integrated Laboratory		L-T-P-C	2	0	0	2
Version No.	1.0						
Course Pre-requisites	CSE3001 – Artificial Intelligence and Machine Learning						
Anti-requisites	NIL						
Course Description	This course introduces the basics of Text Mining and Natural Language Processing. The course will teach students different concepts such as text mining, NLP, Sequence Labeling, etc. Topics: Text Mining, NLP, Tokenization, Lemmatization, Stemming, One-hot encoding, Language modelling, Bag-of-words, Term-document Matrix, Cosine similarity, Viterbi Algorithm, etc.						
Course Objectives	The objective of the course is EMPLOYBILITY of student by using EXPERIENTIAL LEARNING techniques.						
Course Out Comes	On successful completion of this course the students shall be able to: 1. Process text data to derive information from text. [Apply] 2. Apply insights from textual information to real-world business. [Apply] 3. Develop solutions for a particular NLP problem using different machine learning and deep learning techniques. [Apply] 4. Utilize different NLP tools and packages. [Apply]						
Course Content:							
Module 1	Text Mining	Adversarial Quiz Tests	Module Tests	No. of Sessions: 09			
Introduction to Text Mining. Text Mining vs. NLP. Text Mining Algorithms. Steps in Text Mining - Extraction, Preprocessing, Analysis and Evaluation. Lexical Resource Creation (NEW). Data collection. String Manipulation to Clean Data. Natural Language Processing. Research Paradigms in NLP. Sequential Data. Sequence Labeling (NEW). Viterbi Algorithm (NEW). Corpus. Building a HMM using a Corpus (NEW). Unknown word handling (NEW).							
Module 2	Text Preprocessing	Adversarial Quiz Tests	Module Tests	No. of sessions: 06			
Introduction to Preprocessing. Tokenization. Stop Words Removal. Lemmatization and Stemming. PoS Tagging. Integer Encoding. Padding. One-Hot Encoding.							
Module 3	Text Representations	Adversarial Quiz Tests	Module Tests	No. of sessions: 08			
Language Modeling. N-Gram Language Model. Bag-of-Words Model. Term-Document Matrix. Term Frequency. Inverse Document Frequency. TF-IDF. Cosine Similarity. Naive Bayes Classifier using Bag-of-Words. Topic Modeling. Latent Semantic Analysis. Singular Value Decomposition. Truncated SVD and Topic Vector. LDA Algorithm.							
Module 4	Natural Language Processing with Keras	Adversarial Quiz Tests	Module Tests	No. of Sessions: 06			
Word Embeddings vs. One-Hot Encoding. Contextual Bag of Words (CBOW). Skipgram. Deep							

Learning for Document Classification.
List of Laboratory Tasks: Experiment No. 1: File Handling Level 1: Read text files using Python and extract meaningful content. Level 2: Parse text files using Python to preprocess the data for NLP tasks. Experiment No. 2: Introduction to NLP Tools Level 1: Install and use NLTK for basic text processing. Level 2: Install and use SpaCy for tokenization, PoS tagging, and Named Entity Recognition. Experiment No. 3: Corpus Cleaning Techniques Level 1: Use NLTK for corpus cleaning techniques such as tokenization, stopwords removal, and stemming. Level 2: Prepare cleaned text data for downstream NLP tasks like classification or translation. Experiment No. 4: Word Vector Usage Level 1: Download and use pre-trained word vectors (e.g., Word2Vec, GloVe, or FastText). Level 2: Compute similarity between two words, find the most similar word, and complete word analogies (e.g., king - man + woman = queen). Experiment No. 5 & 6: Language Identification Level 1: Build a simple language identifier using Bag-of-Words (BoW) features. Level 2: Predict the language of a given text using the trained model. Experiment No. 7 & 8: Lexical Simplification Level 1: Implement a lexical simplifier to replace complex words with simpler alternatives. Level 2: Generate a simplified version of a given word or sentence while preserving meaning. Experiment No. 9 & 10: Sentiment Analysis Level 1: Implement a basic sentiment classifier using a lexicon-based or machine learning approach. Level 2: Compare the performance of an existing sentiment classifier (e.g., VADER, TextBlob, or a pre-trained Transformer model). Experiment No. 11: Named Entity Recognition (NER) Level 1: Extract named entities from a text using NLTK. Level 2: Extract named entities using SpaCy and compare results. Experiment No. 12 & 13: Implement a Hidden Markov Model (HMM) Level 1: Implement a generic HMM for sequence prediction. Level 2: Calculate the forward probability of a given sequence using HMM. Experiment No. 14: Linguistic HMM Level 1: Develop a Hidden Markov Model (HMM) for NLP tasks such as PoS tagging. Level 2: Evaluate the performance of the HMM on a specific NLP task (e.g., Named Entity Recognition or Chunking). Experiment No. 15: Machine Translation Level 1: Implement Machine Translation (MT) using a pre-trained model from Hugging Face Transformers. Level 2: Evaluate the quality of MT output via Round-Trip Translation (translate text to another language and back to check accuracy). Targeted Application & Tools that can be used: 1. Google Colab 2. Python IDEs like PyCharm

Project work/Assignment: Mention the Type of Project /Assignment proposed for this course 1. Group project on some NLP Task like text classification (Creating a Simple Text Classifier: Use Scikit-learn to classify positive vs. negative reviews from a dataset), sentiment analysis, etc.

Course Code: CBC3400

Course Title: Cryptography and Security in Blockchain

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course provides a deep dive into the **cryptographic principles and security mechanisms** that underpin blockchain technology. It explores key cryptographic algorithms, consensus protocols, wallet security, smart contract vulnerabilities, and advanced security features essential for safeguarding decentralized systems.

Course Objectives

- Understand core cryptographic techniques used in blockchain ecosystems
- Explore consensus protocols and their security implications
- Analyze common attacks and vulnerabilities in blockchain networks
- Apply cryptographic methods for secure blockchain applications and smart contracts

Course Outcomes

CO1 (Understand): Explain the role of cryptographic primitives in securing blockchain data and identity

CO2 (Analyze): Evaluate consensus protocols and blockchain attack surfaces

CO3 (Apply): Implement and test cryptographic algorithms and secure wallet mechanisms

CO4 (Apply): Identify and mitigate security flaws in smart contracts and blockchain systems

Course Content (45 Hours Total)

Module 1: Cryptographic Foundations – 11 Sessions (Understand)

Symmetric vs. asymmetric cryptography, Hash functions (SHA-256, Keccak), Digital

signatures (ECDSA), Message integrity and non-repudiation, Merkle trees, Zero-knowledge proofs basics
Module 2: Consensus and Blockchain Security – 11 Sessions (Analyze) Proof of Work (PoW), Proof of Stake (PoS), PBFT, Delegated PoS, Sybil attacks, 51% attack, Forking issues, Blockchain scalability vs. security trade-offs
Module 3: Wallets and Transaction Security – 11 Sessions (Apply) Public/private key generation, Wallet types (hot, cold, hardware), Multisig wallets, Transaction signing and verification, Secure key storage, Replay protection
Module 4: Smart Contract and Platform Security – 12 Sessions (Apply) Smart contract vulnerabilities (reentrancy, overflow), DAO case study, Formal verification, Auditing tools (Mythril, Slither), Secure coding standards, Layer-2 security (ZK-rollups, state channels), Privacy coins (ZCash, Monero)

Course Code: CBC3401 Course Title: Crypto Trading Strategies & Risk Management L:T:P:C – 3:0:0:3 Prerequisite: Nil
Course Description This course provides an in-depth understanding of crypto trading mechanisms, investment strategies, and risk management techniques . It covers technical and fundamental analysis, trading indicators, automated strategies, and regulatory considerations. Emphasis is placed on market psychology, portfolio diversification, and risk mitigation in highly volatile crypto markets.
Course Objectives — Understand cryptocurrency markets, exchanges, and trading instruments — Learn technical and fundamental analysis techniques for crypto assets — Explore risk assessment models and portfolio protection strategies — Apply trading strategies and automation tools within regulatory frameworks
Course Outcomes

CO1 (Understand): Explain cryptocurrency market structures, instruments, and volatility characteristics
CO2 (Analyze): Evaluate and compare crypto trading strategies and their performance indicators
CO3 (Apply): Apply risk management techniques and portfolio diversification methods
CO4 (Apply): Use tools to implement, simulate, or automate crypto trading strategies

Course Content (45 Hours Total)

Module 1: Cryptocurrency Markets & Exchanges – 11 Sessions (Understand)

Overview of crypto assets, Exchanges (CEX vs DEX), Trading pairs, Order types (market, limit, stop-loss), Market liquidity and volatility, Understanding spreads, slippage, and fees

Module 2: Trading Strategies and Analytics – 11 Sessions (Analyze)

Technical indicators (MACD, RSI, Bollinger Bands), Candlestick patterns, Moving averages, Breakout and momentum strategies, Arbitrage and swing trading, Volume analysis, On-chain analytics

Module 3: Risk Management in Crypto Trading – 11 Sessions (Apply)

Position sizing, Risk-reward ratio, Stop-loss vs trailing stops, Leverage and margin risks, Portfolio diversification, Drawdown analysis, Hedging strategies

Module 4: Automation, Tools & Regulations – 12 Sessions (Apply)

Trading bots and scripting basics (Python, Pionex), Backtesting tools (TradingView, CryptoCompare), Trading APIs (Binance, Coinbase), Regulatory risks, KYC/AML, Taxation, Real-world strategy simulation

Course Title: Bitcoin and Ethereum Protocols

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course offers an in-depth exploration of the **technical protocols behind Bitcoin and Ethereum**, the two most prominent blockchain platforms. It focuses on consensus algorithms, cryptographic structures, transaction lifecycles, smart contract execution, protocol upgrades, and governance models. Students will gain foundational knowledge to build, secure, and innovate on these platforms.

Course Objectives

- Understand the architecture and protocols of Bitcoin and Ethereum blockchains
- Explore the transaction mechanisms and consensus protocols of both platforms
- Learn how Ethereum enables smart contracts and decentralized applications
- Analyze protocol limitations, upgrades, and scalability efforts

Course Outcomes

CO1 (Understand): Describe the technical components and operation of Bitcoin and Ethereum

CO2 (Analyze): Compare consensus mechanisms and data structures used in both platforms

CO3 (Apply): Trace transaction flow and analyze smart contract execution

CO4 (Apply): Evaluate scaling solutions, forks, and governance in decentralized networks

Course Content (45 Hours Total)**Module 1: Bitcoin Protocol Internals – 11 Sessions (Understand)**

Bitcoin architecture, UTXO model, SHA-256 and ECDSA cryptography, Merkle trees, Block structure and mining, Proof-of-Work (PoW), Difficulty adjustment, Nakamoto consensus

Module 2: Ethereum Platform and EVM – 11 Sessions (Analyze)

Ethereum accounts model (EOA vs Contract), Gas and transaction fees, Ethereum Virtual Machine (EVM), Solidity basics, State transitions, Keccak-256 hashing, Contract storage and execution

Module 3: Transaction Lifecycle & Security – 11 Sessions (Apply)

Transaction creation, mempool, mining and validation, Transaction finality, Smart contract deployment, Reentrancy and gas-related vulnerabilities, Forking and transaction replay

Module 4: Protocol Upgrades, Governance & Scaling – 12 Sessions (Apply)

Bitcoin forks (SegWit, Taproot), Ethereum forks (Byzantium to Shanghai), Ethereum 2.0 and Proof-of-Stake (PoS), Rollups and Layer 2 scaling, DAO governance models, Limitations and innovations

Course Code: CBC3403
Course Title: Blockchain for Digital Identity Management
L:T:P:C – 3:0:0:3
Prerequisite: Nil

Course Description

This course explores how **blockchain technology** is revolutionizing **digital identity management** by enabling decentralized, secure, and privacy-preserving solutions. Topics include identity lifecycle, verifiable credentials, decentralized identifiers (DIDs), self-sovereign identity (SSI), and regulatory compliance. Real-world platforms and government use cases are also covered.

Course Objectives

- Understand the challenges of traditional identity management systems
- Explore blockchain-based identity frameworks and standards
- Learn to design and implement decentralized digital identity models
- Evaluate security, privacy, and compliance aspects in identity solutions

Course Outcomes

CO1 (Understand): Describe the principles and components of blockchain-based digital identity systems

CO2 (Analyze): Compare centralized and decentralized identity models and their implications

CO3 (Apply): Design verifiable credentials and DIDs using standard protocols

CO4 (Apply): Evaluate use cases and compliance aspects of blockchain-enabled identity frameworks

Course Content (45 Hours Total)

Module 1: Digital Identity Concepts & Challenges – 11 Sessions (Understand)

Digital identity basics, Authentication vs authorization, Centralized identity systems, Federated login issues, Identity theft and fraud, Introduction to identity on blockchain

Module 2: Decentralized Identity & Standards – 11 Sessions (Analyze)

Decentralized Identifiers (DIDs), Verifiable Credentials (VCs), Self-Sovereign Identity (SSI), DIDComm, W3C standards, Privacy-preserving principles (ZKP, selective disclosure)

Module 3: Platforms & Architecture – 11 Sessions (Apply)

Sovrin, uPort, Hyperledger Indy, Aries, Trust over IP (ToIP), Blockchain identity layers, Wallets and credential holders, Issuer-verifier-holder architecture

Module 4: Implementation & Regulatory Compliance – 12 Sessions (Apply)

Smart contract-enabled identity, GDPR compliance, KYC/AML on blockchain, Identity in banking and e-governance, Cross-border identity solutions, Use cases: Aadhaar on blockchain, eIDAS, decentralized healthcare ID

Course Code: CBC3404

Course Title: Cryptocurrency Wallet Development

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course focuses on the **design, development, and security of cryptocurrency wallets**, which are essential tools for interacting with blockchain networks. Students will learn about wallet types, key management, transaction signing, wallet APIs, and user interface design, along with best practices for developing secure and user-friendly crypto wallets.

Course Objectives

- Understand the fundamentals of cryptocurrency wallets and key management
- Learn to build and secure wallets for Bitcoin, Ethereum, and other blockchains
- Explore wallet SDKs, libraries, and integration techniques
- Apply secure coding practices to prevent theft, fraud, and misuse

Course Outcomes

CO1 (Understand): Explain the architecture and functionality of cryptocurrency wallets

CO2 (Analyze): Compare wallet types and evaluate their security mechanisms

CO3 (Apply): Design and develop wallets with secure key storage and transaction capabilities

CO4 (Apply): Integrate wallet features with DApps and blockchain networks using APIs and SDKs

Course Content (45 Hours Total)**Module 1: Wallet Architecture & Key Management – 11 Sessions (Understand)**

Wallet types (hot, cold, custodial, non-custodial), Mnemonic phrases and HD wallets (BIP32/39/44), Public-private key pairs, Address generation, Key encryption, Backup and recovery mechanisms

Module 2: Wallet Security & Compliance – 11 Sessions (Analyze)

Threats and attack vectors (phishing, malware, keylogging), Secure enclave and HSM, 2FA and biometric protection, Anti-fraud mechanisms, KYC/AML integration, Regulatory frameworks (FATF, GDPR)

Module 3: Wallet Development – 11 Sessions (Apply)

Bitcoin and Ethereum transaction lifecycle, Signing and broadcasting transactions, Wallet SDKs (Web3.js, ethers.js, bitcoinjs-lib), QR code integration, Multi-currency support, UI/UX for wallet apps

Module 4: DApp Integration & Advanced Features – 12 Sessions (Apply)

Interfacing with smart contracts, MetaMask integration, Web3 wallets, WalletConnect protocol, Hardware wallet integration (Ledger, Trezor), Lightning wallets, Token swap and staking support

Course Code: CBC3405**Course Title: Blockchain Security & Ethical Hacking**

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course focuses on **security challenges and ethical hacking techniques** specific to blockchain systems. It explores vulnerabilities in smart contracts, consensus mechanisms, cryptographic exploits, and network-level attacks. Students will gain hands-on knowledge in penetration testing, auditing, and securing decentralized applications in a responsible and ethical manner.

Course Objectives

- Understand blockchain security principles and ethical hacking frameworks
- Explore attack vectors in consensus, smart contracts, wallets, and networks
- Learn secure development practices and ethical exploitation techniques
- Apply auditing tools and mitigation strategies to secure blockchain ecosystems

Course Outcomes

CO1 (Understand): Describe blockchain security models, attack surfaces, and ethical hacking methodologies

CO2 (Analyze): Identify and assess vulnerabilities in blockchain components and smart contracts
CO3 (Apply): Simulate blockchain-specific attacks in a controlled environment
CO4 (Apply): Use auditing tools and secure coding techniques to mitigate real-world blockchain threats

Course Content (45 Hours Total)

Module 1: Blockchain Threat Landscape & Security Models – 11 Sessions (Understand)

Security principles in decentralized systems, Attack surfaces in blockchain, Common vulnerabilities (51% attack, Sybil attack, DDoS), Smart contract security flaws, Wallet security risks, Ethics and legalities in hacking

Module 2: Ethical Hacking & Penetration Testing – 11 Sessions (Analyze)

Reconnaissance and scanning, Blockchain-specific enumeration, Network sniffing, Exploit development for smart contracts, Bug bounty frameworks (Immunefi, HackenProof), Legal compliance and scope setting

Module 3: Secure Development & Mitigation – 11 Sessions (Apply)

Secure coding standards (Solidity), Gas optimization and fallback protection, Reentrancy guards, Rate limiting and throttling, Smart contract auditing lifecycle, Continuous security integration (DevSecOps)

Module 4: Tools & Real-World Case Studies – 12 Sessions (Apply)

Tools: Mythril, Slither, Hardhat, Truffle Security, Wireshark, Metasploit, Analysis of DAO hack, Poly Network breach, DeFi protocol exploits, Wallet draining scams, Building a secure DApp from scratch

Course Title: Introduction to Artificial Intelligence in Blockchain

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course introduces how **Artificial Intelligence (AI)** can be integrated with **blockchain technology** to create intelligent, secure, and autonomous decentralized systems. Topics include AI-driven smart contracts, secure data sharing, AI model integrity on-chain, blockchain for AI auditability, and applications in finance, healthcare, and supply chain.

Course Objectives

- Understand the synergy between AI and blockchain technologies
- Explore architectures that combine decentralized data with intelligent decision-making
- Learn use cases of AI-powered blockchain applications
- Analyze challenges in data privacy, trust, and model governance in AI-blockchain systems

Course Outcomes

CO1 (Understand): Explain the fundamentals of AI and blockchain and their convergence

CO2 (Analyze): Evaluate use cases and architectures of AI-powered blockchain systems

CO3 (Apply): Integrate AI models into smart contracts and decentralized applications

CO4 (Apply): Examine the challenges and ethical concerns of deploying AI on the blockchain

Course Content (45 Hours Total)

Module 1: Fundamentals of AI and Blockchain – 11 Sessions (Understand)

Overview of AI (ML, DL, NLP), Blockchain structure, consensus, and smart contracts, AI vs blockchain roles, Benefits of integration, Blockchain for AI audit trails and data provenance

Module 2: Intelligent Smart Contracts & AI Models On-Chain – 11 Sessions (Analyze)

Embedding decision-making into contracts, Oracle networks, AI-driven DApps, Federated learning and blockchain, Edge AI and decentralized AI agents

Module 3: Use Cases in Industry – 11 Sessions (Apply)

AI in DeFi fraud detection, Healthcare diagnostics with secure sharing, Predictive analytics in blockchain logistics, Tokenizing AI models, Model training marketplaces, NFT + AI systems

Module 4: Challenges, Ethics & Future Directions – 12 Sessions (Apply)

Data privacy, GDPR, Explainable AI (XAI) on blockchain, Resource constraints, Model verification and updates, Regulatory landscape, Ethical implications, Roadmap to autonomous decentralized AI

Course Title: Machine Learning for Cyber Threat Detection

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course focuses on the application of **machine learning techniques** for detecting and preventing **cybersecurity threats**. It explores supervised, unsupervised, and deep learning methods for anomaly detection, intrusion detection systems (IDS), malware analysis, and phishing detection. Real-time threat analytics, datasets, and evaluation metrics are emphasized.

Course Objectives

- Understand the fundamentals of cyber threats and threat detection strategies
- Learn to apply machine learning models to identify malicious activities
- Explore threat datasets, feature engineering, and evaluation metrics
- Analyze and compare ML techniques for cybersecurity use cases

Course Outcomes

CO1 (Understand): Explain the types of cyber threats and the role of machine learning in threat detection

CO2 (Analyze): Evaluate datasets and select appropriate ML models for different security tasks

CO3 (Apply): Build and train ML models for intrusion detection and malware classification

CO4 (Apply): Implement real-time threat detection and evaluate model performance

Course Content (45 Hours Total)

Module 1: Introduction to Cybersecurity and Threat Types – 11 Sessions (Understand)

Cyber threat landscape, Attack vectors (phishing, malware, DoS, ransomware), Indicators of compromise (IOCs), Traditional IDS vs ML-based IDS, Need for intelligent threat detection

Module 2: Machine Learning for Threat Modeling – 11 Sessions (Analyze)

Supervised vs unsupervised learning, Feature selection from logs/packets, Preprocessing and encoding, Cyber threat datasets (NSL-KDD, CICIDS, CTU-13), Model selection strategies

Module 3: Model Development and Application – 11 Sessions (Apply)

Logistic regression, Decision trees, SVM, Random Forests, K-means, Autoencoders, Neural networks for classification, Evaluation metrics (precision, recall, F1, ROC-AUC)

Module 4: Advanced Detection and Real-World Use Cases – 12 Sessions (Apply)

Deep learning for APT and malware detection, Threat intelligence integration, Adversarial ML, Real-time IDS with streaming data, SOC and SIEM integration, Case studies: phishing, botnet, zero-day detection

Course Title: AI-Powered Fraud Detection in Blockchain

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course explores the application of **Artificial Intelligence (AI)** for detecting **fraudulent activities** in blockchain-based systems. It covers anomaly detection, behavioral analysis, graph-based fraud detection, and ML techniques to identify suspicious patterns in transactions, smart contracts, and decentralized applications. Real-world case studies and tools for fraud prevention are also included.

Course Objectives

- Understand the nature of fraud in blockchain networks and DeFi systems
- Explore AI and ML techniques for fraud detection
- Apply anomaly detection and classification models on blockchain datasets
- Learn to deploy real-time fraud detection pipelines and interpret alerts

Course Outcomes

CO1 (Understand): Describe types of fraud in blockchain systems and the role of AI in detecting them

CO2 (Analyze): Evaluate transaction patterns using AI algorithms to identify anomalies

CO3 (Apply): Implement supervised and unsupervised models for fraud detection in smart contracts and wallets

CO4 (Apply): Build and test AI-driven fraud analytics dashboards for real-time monitoring

Course Content (45 Hours Total)

Module 1: Blockchain Fraud & Risk Landscape – 11 Sessions (Understand)

Types of fraud: double-spending, Sybil attacks, wash trading, flash loan exploits, rug pulls, Ponzi schemes in DeFi, Anti-fraud mechanisms, AML/KYC challenges, Role of explainable AI (XAI)

Module 2: ML Techniques for Fraud Detection – 11 Sessions (Analyze)

Supervised learning (logistic regression, decision trees, SVM), Unsupervised methods (k-means, Isolation Forest, PCA), Graph-based approaches (Graph Neural Networks), Transaction feature engineering, Datasets (EtherScan, Elliptic, AMLSim)

Module 3: Smart Contract & Wallet Behavior Analysis – 11 Sessions (Apply)

Contract flow analysis, Malicious patterns in Solidity, Detecting honeypots and backdoors, Wallet profiling, Time-series analysis of transfers, API integration for behavioral monitoring

Module 4: Tools, Visualization & Real-Time Analytics – 12 Sessions (Apply)

Building fraud dashboards with Kibana/Grafana, Stream analytics for fraud signals, Alerting engines, Case studies (DAO exploit, PolyNetwork hack), Integration with Chainalysis, CipherTrace, AML Bot APIs

Course Title: Optimizing Blockchain Networks with AI

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course focuses on leveraging **Artificial Intelligence (AI)** to enhance the **performance, scalability, and security of blockchain networks**. It explores optimization techniques for transaction throughput, consensus efficiency, node management, and predictive maintenance using AI models. The course emphasizes both theoretical foundations and practical applications of AI in blockchain infrastructure.

Course Objectives

- Understand performance challenges in blockchain networks
- Explore AI techniques for optimizing consensus, throughput, and latency
- Learn predictive models for network behavior and threat detection
- Apply intelligent algorithms to improve scalability and resource management

Course Outcomes

CO1 (Understand): Explain the performance and scalability limitations of blockchain networks

CO2 (Analyze): Evaluate the role of AI in enhancing consensus mechanisms and throughput

CO3 (Apply): Design and test AI models to predict congestion, detect anomalies, and optimize node behavior

CO4 (Apply): Integrate AI algorithms for energy efficiency, resource allocation, and real-time network tuning

Course Content (45 Hours Total)

Module 1: Blockchain Network Architecture & Bottlenecks – 11 Sessions (Understand)

Node types and network topology, Transaction processing pipeline, Consensus protocol overview (PoW, PoS, PBFT), Throughput and latency issues, Scalability trilemma, Gas fee dynamics

Module 2: AI Techniques for Network Optimization – 11 Sessions (Analyze)

Reinforcement Learning for block size tuning, Neural networks for congestion prediction, Anomaly detection in peer behavior, AI-assisted block propagation, ML models for dynamic fee estimation

Module 3: Resource & Energy Optimization – 11 Sessions (Apply)

AI for miner/validator selection, Load balancing, Smart node clustering, Energy-efficient scheduling, Predictive fault detection in blockchain nodes, Real-time node health monitoring

Module 4: Intelligent Consensus & Future Directions – 12 Sessions (Apply)

AI-enhanced consensus models, Swarm intelligence, Federated learning for decentralized AI, Hybrid optimization architectures (AI + DLT), Use cases in DeFi, supply chain, and CBDC networks

Course Title: Generative AI for Blockchain Applications

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course introduces the integration of **Generative AI** with **Blockchain technology** to develop intelligent, decentralized, and automated applications. It focuses on the use of models like GPT, LLMs, and diffusion networks to enhance smart contracts, autonomous agents, decentralized content creation, NFT generation, and AI transparency using blockchain.

Course Objectives

- Understand the fundamentals of Generative AI and its potential in blockchain ecosystems
- Explore the use of LLMs and generative models for smart contracts, NFTs, and decentralized apps
- Apply decentralized storage and blockchain for provenance and model verification
- Investigate real-world use cases and ethical implications of AI-generated content on-chain

Course Outcomes

CO1 (Understand): Describe the principles of Generative AI and how it enhances blockchain use cases

CO2 (Analyze): Evaluate generative models for decentralized identity, content, and NFTs

CO3 (Apply): Design applications that combine smart contracts with LLM-generated outputs

CO4 (Apply): Implement provenance, audit trails, and ownership models using blockchain for AI-generated assets

Course Content (45 Hours Total)

Module 1: Introduction to Generative AI & Blockchain – 11 Sessions (Understand)

Overview of Generative AI: GPT, GANs, VAEs, Diffusion Models, Blockchain basics: smart contracts, transactions, oracles, Benefits of integrating AI with blockchain (immutability, trust, decentralization)

Module 2: Generative AI for NFTs and Smart Contracts – 11 Sessions (Analyze)

AI-generated NFTs and metadata, Smart contract-driven art/music/token generation, Prompt engineering for blockchain use, Ethereum, IPFS, and Arweave for content storage, Creative commons and licensing on-chain

Module 3: Autonomous Agents & Decentralized AI Apps – 11 Sessions (Apply)

Autonomous AI agents for DeFi and DAO governance, Blockchain-based prompt markets, Agent verification and staking, AI for DAO proposals and decision-making, Combining LLMs with Chainlink oracles

Module 4: Security, Ethics & Use Cases – 12 Sessions (Apply)

AI model validation and IP protection using blockchain, Verifiable credentials, Combatting AI-generated misinformation, Case studies: OpenAI tokens, Alethea AI, Bittensor, Web3 AI marketplaces, Regulatory landscape and ethical concerns

Course Code: CBC3411 Course Title: Quantum Computing & Blockchain-AI Security L:T:P:C – 3:0:0:3 Prerequisite: Nil
Course Description This course provides an interdisciplinary overview of quantum computing and its implications for the security of blockchain and AI systems. It covers quantum algorithms, post-quantum cryptography, quantum-safe blockchain protocols, and the impact of quantum advancements on AI model integrity, smart contracts, and decentralized security mechanisms.
Course Objectives — Understand the fundamentals of quantum computing and its threat to classical cryptography — Explore quantum-resistant cryptographic techniques and blockchain adaptations — Analyze the vulnerabilities in AI and blockchain systems in a post-quantum world — Apply hybrid security models combining quantum safety, blockchain, and AI
Course Outcomes CO1 (Understand): Explain the principles of quantum computing and quantum threats to cryptographic systems CO2 (Analyze): Evaluate the impact of quantum algorithms on blockchain consensus and AI model security CO3 (Apply): Implement basic post-quantum algorithms and analyze their integration in blockchain CO4 (Apply): Propose secure architectures combining AI, blockchain, and quantum-safe techniques
Course Content (45 Hours Total)
Module 1: Foundations of Quantum Computing – 11 Sessions (Understand) Qubits, superposition, entanglement, quantum gates and circuits, Quantum parallelism, Quantum vs classical models, Introduction to quantum programming (Qiskit, Cirq)

Module 2: Quantum Threats to Blockchain and AI – 11 Sessions (Analyze)
Shor’s algorithm, Grover’s algorithm, Breaking RSA/ECC, Threats to Bitcoin and Ethereum, Risks to AI model integrity, Quantum attacks on hashes and signatures

Module 3: Post-Quantum Cryptography & Blockchain – 11 Sessions (Apply)
Lattice-based, hash-based, code-based cryptography, NIST PQC candidates, Blockchain modifications for quantum resistance, Quantum key distribution (QKD), Hybrid encryption in smart contracts

Module 4: Secure Architectures & Use Cases – 12 Sessions (Apply)
Combining AI with quantum-safe blockchains, Use cases: quantum voting, decentralized identity, healthcare AI security, IBM Q and Google Quantum AI tools, Regulatory and ethical considerations

Course Title: Introduction to Decentralized Finance (DeFi)

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course provides a foundational understanding of **Decentralized Finance (DeFi)**—an open financial ecosystem built on blockchain networks. It covers core DeFi primitives such as lending, staking, token exchanges, liquidity pools, stablecoins, DAOs, and yield farming. Emphasis is placed on smart contract mechanics, platform security, and regulatory considerations.

Course Objectives

- Understand the architecture and protocols that power DeFi systems
- Explore key DeFi applications including lending, trading, and insurance
- Learn how smart contracts automate financial services in DeFi
- Analyze risks, governance, and compliance challenges in decentralized finance

Course Outcomes

CO1 (Understand): Explain the foundational concepts, architecture, and drivers of DeFi

C02 (Analyze): Evaluate DeFi protocols such as DEXs, lending markets, and stablecoins
C03 (Apply): Simulate DeFi operations such as liquidity provision and staking on testnets
C04 (Apply): Analyze risks (smart contract, liquidity, governance) and suggest mitigation strategies

Course Content (45 Hours Total)

Module 1: Introduction to DeFi and Blockchain Infrastructure – 11 Sessions (Understand)

What is DeFi?, DeFi vs TradFi, Ethereum and EVM, Smart contracts in DeFi, Token standards (ERC-20, ERC-721), Role of oracles, Introduction to wallets (MetaMask, Ledger)

Module 2: DeFi Applications & Protocols – 11 Sessions (Analyze)

Decentralized exchanges (Uniswap, Curve), Lending/borrowing protocols (Aave, Compound), Stablecoins (DAI, USDC, algorithmic types), Derivatives and synthetic assets, Cross-chain DeFi

Module 3: Participation in DeFi Ecosystem – 11 Sessions (Apply)

Liquidity provision, Yield farming, Staking and governance tokens, DAO voting, Token bonding curves, Farming simulations on testnets (Ropsten, Mumbai)

Module 4: Security, Risks & Regulation – 12 Sessions (Apply)

Smart contract bugs and audits, Flash loan attacks, Liquidity risks, Rug pulls, DeFi insurance, Regulatory overview (FATF, SEC, MiCA), DeFi compliance tools and trends

Course Title: Blockchain in Financial Services

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course explores how **blockchain technology is transforming the financial services industry**, from traditional banking to insurance and capital markets. Topics

include decentralized clearing and settlement, digital identity, smart contracts, CBDCs, and regulatory frameworks. Emphasis is placed on architecture, security, scalability, and practical applications.

Course Objectives

- Understand blockchain fundamentals in the context of financial services
- Explore real-world applications in payments, lending, trade finance, and capital markets
- Learn about digital identity, regulatory compliance, and tokenization
- Analyze challenges of adoption, scalability, and integration with legacy systems

Course Outcomes

CO1 (Understand): Explain how blockchain redefines processes in financial services

CO2 (Analyze): Evaluate blockchain use cases across banking, insurance, and investment sectors

CO3 (Apply): Design secure blockchain-based workflows for financial operations

CO4 (Apply): Assess integration, scalability, and regulatory strategies for blockchain solutions in finance

Course Content (45 Hours Total)

Module 1: Blockchain Basics for Finance – 11 Sessions (Understand)

Distributed ledgers and consensus, Cryptographic primitives (hashing, digital signatures), Smart contracts, Tokenization of assets, Permissioned vs permissionless blockchains, Architecture of financial blockchain platforms (Corda, Quorum)

Module 2: Applications in Core Financial Services – 11 Sessions (Analyze)

Cross-border payments (Ripple, Stellar), Clearing and settlement, Lending & credit scoring (DeFi, tokenized loans), Trade finance (Letter of credit digitization), Digital identity and KYC/AML

Module 3: Capital Markets, Insurance & Emerging Trends – 11 Sessions (Apply)

Tokenized securities and STOs, Fractional ownership, Reinsurance on chain, Parametric insurance, CBDCs and stablecoins, Robo-advisors with blockchain backend, ESG finance with smart contracts

Module 4: Risk, Regulation & Integration – 12 Sessions (Apply)

Security risks (51%, front-running, reentrancy), Regulatory standards (MiCA, FATF), Auditability and traceability, Integration with core banking systems, Blockchain sandboxing, Interoperability (Polkadot, Cosmos)

Course Code: CBC3414
Course Title: Building Decentralized Applications (DApps) for Finance
L:T:P:C – 3:0:0:3
Prerequisite: Nil

Course Description

This course focuses on the **design and development of Decentralized Applications (DApps)** for financial use cases using blockchain platforms. Students will explore smart contract programming, Web3 integration, decentralized finance protocols, and wallet connectivity. The course emphasizes security, UX design, and compliance in DApp development.

Course Objectives

- Understand DApp architecture and smart contract fundamentals
- Learn to build secure, finance-focused DApps using Ethereum and Web3 tools
- Explore UI/UX design, wallet integration, and backend connectivity
- Analyze security, scalability, and deployment challenges in real-world DApps

Course Outcomes

CO1 (Understand): Explain the architecture and components of decentralized financial applications

CO2 (Analyze): Evaluate DApp frameworks, smart contract interactions, and Web3 interfaces

CO3 (Apply): Build and test secure DApps for financial services using blockchain tools

CO4 (Apply): Deploy and optimize DApps with wallet, API, and decentralized storage integration

Course Content (45 Hours Total)

Module 1: DApp Architecture & Financial Use Cases – 11 Sessions (Understand)

Overview of DApps, Differences between traditional apps and DApps, Financial DApp use cases (wallets, lending, insurance), Blockchain platforms (Ethereum, Polygon), DApp lifecycle

Module 2: Smart Contracts for DApps – 11 Sessions (Analyze)

Solidity fundamentals, Contract structure, Inheritance and modifiers, Events and data flow, Interaction with oracles, Audit practices, Gas optimization, Contract upgradeability

Module 3: DApp Frontend, Wallet & Web3 Integration – 11 Sessions (Apply)

Web3.js/ethers.js setup, MetaMask and WalletConnect integration, DApp UI design principles, React.js frontend, Reading/writing contract data from frontend, Decentralized authentication

Module 4: Deployment, Storage & Real-World DApps – 12 Sessions (Apply)

IPFS and Arweave for decentralized storage, Hardhat/Truffle for testing and deployment, DeFi API integration (Uniswap, Aave), Use cases: DApp lending platform, staking, NFT marketplace, Compliance and user privacy

Course Code: CBC3415**Course Title: Smart Contracts for Financial Products**

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course focuses on the **design, development, and deployment of smart contracts** specifically for **financial products and services**. It introduces smart contract logic, digital agreements, automated settlements, and programmable finance using platforms like Ethereum and Hyperledger. Use cases include insurance, lending, escrow, tokenized assets, and derivatives.

Course Objectives

- Understand the fundamentals and architecture of smart contracts
- Learn how to model financial instruments using code-based contracts
- Build and deploy secure smart contracts for DeFi and traditional finance applications
- Explore risks, audit strategies, and compliance issues in financial smart contracts

Course Outcomes

CO1 (Understand): Explain the architecture, lifecycle, and legal implications of smart contracts in finance

CO2 (Analyze): Compare financial product types and model them using Solidity or other smart contract languages

CO3 (Apply): Build, test, and deploy smart contracts for loans, insurance, and tokenized securities

CO4 (Apply): Audit and optimize smart contracts for security, gas usage, and regulatory alignment

Course Content (45 Hours Total)

Module 1: Introduction to Smart Contracts – 11 Sessions (Understand) Concept and origin, Contract lifecycle, Ethereum and EVM, Benefits and risks in finance, Platforms (Solidity, Vyper, DAML), Role of oracles and event logs
Module 2: Modeling Financial Instruments – 11 Sessions (Analyze) Smart contracts for loans (collateralized, flash), Escrow services, Insurance contracts (parametric, peer-to-peer), Structured products, Tokenized bonds and equities
Module 3: Development, Testing & Deployment – 11 Sessions (Apply) Solidity contract structure, Events and modifiers, Testing with Truffle/Hardhat, Gas optimization, Upgradable contracts using proxies, Remix and blockchain testnets
Module 4: Security, Audits & Compliance – 12 Sessions (Apply) Smart contract vulnerabilities (overflow, reentrancy), Audit frameworks (Mythril, Slither), Access control (OpenZeppelin), Compliance considerations (MiCA, SEC), Real-world failures (DAO, Wormhole), Best practices

Course Code: CBC3416 Course Title: Decentralized Autonomous Organizations and Risk Management in Finance L:T:P:C – 3:0:0:3 Prerequisite: Nil
Course Description This course explores Decentralized Autonomous Organizations (DAOs) and their application in financial risk management. It delves into governance models, treasury operations, legal status, and smart contract-driven automation of financial processes. It also covers various risk types—operational, smart contract, and market—and their mitigation strategies in decentralized environments.
Course Objectives — Understand the structure and operational logic of DAOs — Explore DAO use cases in investment, lending, and decentralized governance

- Learn how risk is modeled and managed within decentralized financial systems
- Analyze legal, regulatory, and technical frameworks for DAO-based finance

Course Outcomes

CO1 (Understand): Describe the architecture, governance, and funding mechanisms of DAOs

CO2 (Analyze): Evaluate DAO-based models for financial services and risk exposure

CO3 (Apply): Build and simulate DAO smart contracts and voting systems

CO4 (Apply): Develop risk mitigation strategies for DAO-managed financial operations

Course Content (45 Hours Total)

Module 1: DAO Fundamentals and Governance – 11 Sessions (Understand)

Definition and DAO structure, Key smart contracts in DAOs, Voting mechanisms (token-based, quadratic), Treasury management, Governance tokens, DAO platforms (Aragon, DAOstack)

Module 2: DAO Use Cases in Finance – 11 Sessions (Analyze)

DAO-based lending platforms, Investment DAOs, Yield aggregators, DAO-managed stablecoins, DAO for insurance and asset management, Real-world case studies (MakerDAO, Yearn Finance, ConstitutionDAO)

Module 3: Risk Management in DAO Ecosystems – 11 Sessions (Apply)

Types of risks: protocol, liquidity, operational, regulatory, Risk scoring systems, DAO treasury risk modeling, Smart contract vulnerabilities, Flash loan attacks, DAO governance attacks

Module 4: Legal Frameworks and Compliance – 12 Sessions (Apply)

Legal entity status of DAOs, Jurisdictions (Wyoming, Malta, Liechtenstein), DAO compliance toolkits, Auditing and reporting in DAO finance, Security vs utility tokens, Regulatory overlaps (SEC, MiCA, FATF)

Course Code: CBC3417

Course Title: Regulatory and Compliance Challenges in DeFi

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course explores the **regulatory, legal, and compliance frameworks** surrounding **Decentralized Finance (DeFi)**. It analyzes how DeFi challenges traditional financial regulation and examines global responses, such as MiCA, FATF, SEC guidance, and KYC/AML implementations. The course includes real-world case studies, compliance tools, and ethical considerations for DeFi innovation.

Course Objectives

- Understand the regulatory landscape for DeFi and decentralized platforms
- Examine compliance obligations related to KYC, AML, and taxation
- Analyze global approaches to DeFi oversight, classification of tokens, and enforcement trends
- Explore solutions for integrating compliance into decentralized systems

Course Outcomes

CO1 (Understand): Identify the key regulatory concerns and frameworks applicable to DeFi systems

CO2 (Analyze): Evaluate compliance challenges in decentralized lending, trading, and asset issuance

CO3 (Apply): Implement KYC/AML procedures and governance models in DeFi applications

CO4 (Apply): Assess risk and compliance strategies using real-world legal and technical tools

Course Content (45 Hours Total)

Module 1: Introduction to DeFi Regulation – 11 Sessions (Understand)

What is DeFi and why it's difficult to regulate, Regulatory bodies (FATF, SEC, EU, BIS), Principles-based vs rules-based regulation, Legal identity and anonymity, Public vs permissioned protocols

Module 2: Global Regulatory Frameworks – 11 Sessions (Analyze)

MiCA (EU), FinCEN (USA), MAS (Singapore), FCA (UK), Taxation of crypto assets, Classifying tokens (security, utility, hybrid), Regulatory sandbox models, DAO regulation

Module 3: Compliance Integration in DeFi Platforms – 11 Sessions (Apply)

On-chain KYC/AML, Decentralized identity (DID, VC), Risk scoring and monitoring tools, AML compliance engines (Chainalysis, TRM Labs), Oracle-based compliance feeds, Smart contract-based compliance controls

Module 4: Case Studies, Ethics & Emerging Trends – 12 Sessions (Apply)

Notable enforcement actions (SEC vs Ripple, Tornado Cash sanctions), DeFi rug pulls and litigation, Data privacy (GDPR in DeFi), Self-regulatory organizations (SROs), Compliance-by-design models, Future of regulated DeFi
