21.	List of MOOC (NPTEL) Courses	36
22.	Recommended Semester Wise Course Structure / Flow including the Program / Discipline Elective Paths / Options	36
23.	Course Catalogue of all Courses Listed including the Courses Offered by other School / Department and Discipline / Program Electives	41

PART A – PROGRAM REGULATIONS

1. Vision & Mission of the University and the School / Department

1.1 Vision of the University

To be a Value-driven Global University, excelling beyond peers and creating professionals of integrity and character, having concern and care for society.

1.2 Mission of the University

- Commit to be an innovative and inclusive institution by seeking excellence in teaching, research and knowledge-transfer.
- Pursue Research and Development and its dissemination to the community, at large.
- Create, sustain and apply learning in an interdisciplinary environment with consideration for ethical, ecological and economic aspects of nation building.
- Provide knowledge-based technological support and services to the industry in its growth and development.
- To impart globally-applicable skill-sets to students through flexible course offerings and support industry's requirement and inculcate a spirit of new-venture creation.

1.3 Vision of Presidency School of Computer Science and Engineering

To be a value-based, practice-driven Presidency School of Computer Science and Engineering, committed to developing globally competent engineers, dedicated to developing cutting-edge technology to enhance the quality of life.

1.4 Mission of Presidency School of Computer Science and Engineering

- Cultivate a practice-driven environment with computing-based pedagogy, integrating theory and practice.
- Attract and nurture world-class faculty to excel in teaching and research in the realm of computing sciences.
- Establish state-of-the-art computing facilities for effective teaching and learning experiences.
- Promote interdisciplinary studies to nurture talent for global impact.
- Instill entrepreneurial and leadership skills to address social, environmental and community needs.

2. Preamble to the Program Regulations and Curriculum

This is the subset of Academic Regulations and it is to be followed as a requirement for the award of B.Tech degree.

The Curriculum is designed to take into the factors listed in the Choice Based Credit System (CBCS) with focus on Social Project Based Learning, Industrial Training, and Internship to enable the students to become eligible and fully equipped for employment in industries, choose higher studies or entrepreneurship.

In exercise of the powers conferred by and in discharge of duties assigned under the relevant provision(s) of the Act, Statutes and Academic Regulations of the University, the Academic Council hereby makes the following Regulations.

3.Short Title and Applicability

- a. These Regulations shall be called the Bachelor of Technology Degree Program Regulations and Curriculum 2025-2029.
- b. These Regulations are subject to, and pursuant to the Academic Regulations.
- c. These Regulations shall be applicable to the ongoing Bachelor of Technology Degree Programs of the 2025-2029 batch, and to all other Bachelor of Technology Degree Programs which may be introduced in future.
- d. These Regulations shall supersede all the earlier Bachelor of Technology Degree Program Regulations and Curriculum, along with all the amendments thereto.
- e. These Regulations shall come into force from the Academic Year 2024-2025.

4.Definitions

In these Regulations, unless the context otherwise requires:

- a. *"Academic Calendar" means the schedule of academic and miscellaneous events as approved by the Vice Chancellor;*
- b. *"Academic Council" means the Academic Council of the University;*
- c. *"Academic Regulations" means the Academic Regulations, of the University;*
- d. *"Academic Term" means a Semester or Summer Term;*
- e. *"Act" means the Presidency University Act, 2013;*
- f. *"AICTE" means All India Council for Technical Education;*
- g. *"Basket" means a group of courses bundled together based on the nature/type of the course;*
- h. *"BOE" means the Board of Examinations of the University;*
- i. *"BOG" means the Board of Governors of the University;*
- j. *"BOM" means the Board of Management of the University;*
- k. *"BOS" means the Board of Studies of a particular Department/Program of Study of the University;*
- l. *"CGPA" means Cumulative Grade Point Average as defined in the Academic Regulations;*
- m. *"Clause" means the duly numbered Clause, with Sub-Clauses included, if any, of these Regulations;*
- n. *"COE" means the Controller of Examinations of the University;*
- o. *"Course In Charge" means the teacher/faculty member responsible for developing and organising the delivery of the Course;*
- p. *"Course Instructor" means the teacher/faculty member responsible for teaching and evaluation of a Course;*
- q. *"Course" means a specific subject usually identified by its Course-code and Course-title, with specified credits and syllabus/course-description, a set of references, taught by some teacher(s)/course-instructor(s) to a specific class (group of students) during a specific Academic Term;*
- r. *"Curriculum Structure" means the Curriculum governing a specific Degree Program offered by the University, and, includes the set of Baskets of Courses along with minimum credit requirements to be earned under each basket for a degree/degree with specialization/minor/honours in addition to the relevant details of the Courses and Course catalogues (which describes the Course content and other important information*

about the Course). Any specific requirements for a particular program may be brought into the Curriculum structure of the specific program and relevant approvals should be taken from the BOS and Academic Council at that time.

- s. "DAC" means the Departmental Academic Committee of a concerned Department/Program of Study of the University;
- t. "Dean" means the Dean / Director of the concerned School;
- u. "Degree Program" includes all Degree Programs;
- v. "Department" means the Department offering the degree Program(s) / Course(s) / School offering the concerned Degree Programs / other Administrative Offices;
- w. "Discipline" means specialization or branch of B.Tech. Degree Program;
- x. "HOD" means the Head of the concerned Department;
- y. "L-T-P-C" means Lecture-Tutorial-Practical-Credit – refers to the teaching – learning periods and the credit associated;
- z. "MOOC" means Massive Open Online Courses;
- aa. "MOU" means the Memorandum of Understanding;
- bb. "NPTEL" means National Program on Technology Enhanced Learning;
- cc. "Parent Department" means the department that offers the Degree Program that a student undergoes;
- dd. "Program Head" means the administrative head of a particular Degree Program/s;
- ee. "Program Regulations" means the Bachelor of Technology Degree Program Regulations and Curriculum, 2025-2029;
- ff. "Program" means the Bachelor of Technology (B.Tech.) Degree Program;
- gg. "PSCS" means the Presidency School of Computer Science and Engineering;
- hh. "Registrar" means the Registrar of the University;
- ii. "School" means a constituent institution of the University established for monitoring, supervising and guiding, teaching, training and research activities in broadly related fields of studies;
- jj. "Section" means the duly numbered Section, with Clauses included in that Section, of these Regulations;
- kk. "SGPA" means the Semester Grade Point Average as defined in the Academic Regulations;
- ll. "Statutes" means the Statutes of Presidency University;
- mm. "Sub-Clause" means the duly numbered Sub-Clause of these Program Regulations;
- nn. "Summer Term" means an additional Academic Term conducted during the summer break (typically in June-July) for a duration of about eight (08) calendar weeks, with a minimum of thirty (30) University teaching days;
- oo. "SWAYAM" means Study Webs of Active Learning for Young Aspiring Minds.
- pp. "UGC" means University Grant Commission;
- qq. "University" means Presidency University, Bengaluru; and
- rr. "Vice Chancellor" means the Vice Chancellor of the University.

5. Program Description

The Bachelor of Technology Degree Program Regulations and Curriculum 2025-2029 are subject to, and, pursuant to the Academic Regulations. These Program Regulations shall be applicable to the following ongoing Bachelor of Technology (B.Tech.) Degree Programs of 2025-2029 offered by the Presidency School of Computer Science and Engineering (PSCS):

1. Bachelor of Technology in Computer Science and Engineering, abbreviated as CSE
2. Bachelor of Technology in Computer Science and Technology (Big Data), abbreviated as CBD
3. Bachelor of Technology in Computer Science and Engineering (Block Chain), abbreviated as CBC
4. Bachelor of Technology in Computer Science and Technology (Dev Ops), abbreviated as CDV
5. Bachelor of Technology in Computer Science and Engineering (Cyber Security), abbreviated as CCS
6. Bachelor of Technology in Computer Science and Engineering (Internet of Things), abbreviated as CIT
7. Bachelor of Technology in Computer Science and Engineering (Data Science), abbreviated as CSD
8. Bachelor of Technology in Computer Science and Technology, abbreviated as CSG
9. Bachelor of Technology in Information Science and Technology, abbreviated as IST
10. Bachelor of Technology in Computer Science and Information Technology, abbreviated as CSI
11. Bachelor of Technology in Computer Science and Engineering (Networks), abbreviated as CSN
12. Bachelor of Technology in Computer Engineering, abbreviated as COM
13. Bachelor of Technology in Information Science and Engineering, abbreviated as ISE and
14. Bachelor of Technology in Computer Science and Engineering (Artificial Intelligence and Machine Learning) abbreviated as CAI

5.1 These Program Regulations shall be applicable to other similar programs, which may be introduced in future.

5.2 These Regulations may evolve and get amended or modified or changed through appropriate approvals from the Academic Council, from time to time, and shall be binding on all concerned.

5.3 The effect of periodic amendments or changes in the Program Regulations, on the students admitted in earlier years, shall be dealt with appropriately and carefully, so as to ensure that those students are not subjected to any unfair situation whatsoever, although they are required to conform to these revised Program Regulations, without any undue favour or considerations

6. Minimum and Maximum Duration

- 6.1 Bachelor of Technology Degree Program is a Four-Year, Full-Time Semester based program. The minimum duration of the B.Tech. Program is four (04) years and each year comprises of two academic Semesters (Odd and Even Semesters) and hence the duration of the B.Tech. program is eight (08) Semesters.
- 6.2 A student who for whatever reason is not able to complete the Program within the normal period or the minimum duration (number of years) prescribed for the Program, may be allowed a period of two years beyond the normal period to complete the mandatory minimum credits requirement as prescribed by the concerned Program Regulations and Curriculum. In general, the permissible maximum duration (number of years) for completion of Program is 'N' + 2 years, where 'N' stands for the normal or minimum duration (number of years) for completion of the concerned Program as prescribed by the concerned Program Regulations and Curriculum.
- 6.3 The time taken by the student to improve Grades/CGPA, and in case of temporary withdrawal/re-joining (Refer to Clause 16.1 of Academic Regulations), shall be counted in the permissible maximum duration for completion of a Program.
- 6.4 In exceptional circumstances, such as temporary withdrawal for medical exigencies where there is a prolonged hospitalization and/or treatment, as certified through hospital/medical records, women students requiring extended maternity break (certified by registered medical practitioner), and, outstanding sportspersons representing the University/State/India requiring extended time to participate in National/International sports events, a further extension of one (01) year may be granted on the approval of the Academic Council.
- 6.5 The enrolment of the student who fails to complete the mandatory requirements for the award of the concerned Degree (refer Section 19.0 of Academic Regulations) in the prescribed maximum duration (Clauses 18.1 and 18.2 of Academic Regulations), shall stand terminated and no Degree shall be awarded.

7 Programme Educational Objectives (PEO)

After four years of successful completion of the program, the graduates shall be able to:

PEO1. Demonstrate success as Computer Science and Engineering with innovative skills, moral and ethical values.

PEO2. Engage in lifelong learning through research and professional development,

PEO3. Serve as a leader in the profession through consultancy, extension activities or entrepreneurship.

8 Programme Outcomes (PO) and Programme Specific Outcomes (PSO)

8.1 Programme Outcomes (PO)

On successful completion of the Program, the students shall be able to:

PO1: Engineering Knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization to develop to the solution of complex engineering problems.

PO2: Problem Analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development.

PO3: Design/Development of Solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required.

PO4: Conduct Investigations of Complex Problems: Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions.

PO5: Engineering Tool Usage: Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems.

PO6: The Engineer and The World: Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment.

PO7: Ethics: Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws.

PO8: Individual and Collaborative Team work: Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.

PO9: Communication: Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences

PO10: Project Management and Finance: Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.

PO11: Life-Long Learning: Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change.

8.2 Program Specific Outcomes (PSOs):

On successful completion of the Program, the students shall be able to:

PSO1:Leverage a strong foundation in computer science fundamentals to explain key concepts, analyze computational problems with theoretical knowledge, and design reliable and optimized computing systems.

PSO2:Make effective use of coding skills, software development knowledge, and understanding of big data systems to design and implement real-world applications that prepare individuals for different roles in software career, further studies, research work, or launching startups.

PSO3:Demonstrate collaborative skills, apply agile DevOps workflows, software engineering and automation principles to implement continuous integration (CI), continuous delivery (CD), and version control using modern DevOps tools and practices.

9 Admission Criteria (as per the concerned Statutory Body)

The University admissions shall be open to all persons irrespective of caste, class, creed, gender or nation. All admissions shall be made on the basis of merit in the qualifying examinations; provided that forty percent of the admissions in all Programs of the University shall be reserved for the students of Karnataka State and admissions shall be made through a Common Entrance Examination conducted by the State Government or its agency and seats shall be allotted as per the merit and reservation policy of the State Government from time to time. The admission criteria to the B.Tech. Program is listed in the following Sub-Clauses:

- 9.1 An applicant who has successfully completed Pre-University course or Senior Secondary School course (+2) or equivalent such as (11+1), 'A' level in Senior School Leaving Certificate Course from a recognized university of India or outside or from Senior Secondary Board or equivalent, constituted or recognized by the Union or by the State Government of that Country for the purpose of issue of qualifying certificate on successful completion of the course, may apply for and be admitted into the Program.
- 9.2 Provided further, the applicant must have taken Physics and Mathematics as compulsory subjects in the Pre-University / Higher Secondary / (10+2) / (11+1) examination, along with either Chemistry / Biology / Electronics / Computer Science / Biotechnology subject, and, the applicant must have obtained a minimum of 45% of the total marks (40% in case of candidates belonging to the Reserved Category as classified by the Government of Karnataka) in these subjects taken together.
- 9.3 The applicant must have appeared for Joint Entrance Examinations (JEE) Main / JEE (Advanced) / Karnataka CET / COMED-K, or any other State-level Engineering Entrance Examinations.
- 9.4 Reservation for the SC / ST and other backward classes shall be made in accordance with the directives issued by the Government of Karnataka from time to time.
- 9.5 Admissions are offered to Foreign Nationals and Indians living abroad in accordance with the rules applicable for such admission, issued from time to time, by the Government of India.
- 9.6 Candidates must fulfil the medical standards required for admission as prescribed by the University.
- 9.7 If, at any time after admission, it is found that a candidate had not in fact fulfilled all the requirements stipulated in the offer of admission, in any form whatsoever, including

possible misinformation and any other falsification, the Registrar shall report the matter to the Board of Management (BOM), recommending revoking the admission of the candidate.

9.8 The decision of the BOM regarding the admissions is final and binding.

10 Lateral Entry / Transfer Students requirements

10.1 Lateral Entry

The University admits students directly to the second year (3rd Semester) of the B.Tech/BE/BS Degree program as per the provisions and/or regulations of the Government of Karnataka pertaining to the "Lateral Entry" scheme announced by the Government from time to time. Further, the general conditions and rules governing the provision of Lateral Entry to the B.Tech. Program of the University are listed in the following Sub-Clauses:

- 10.1.1 Admission to 2nd year (3rd Semester) of the B.Tech. Degree program shall be open to the candidates who are holders of a 3-year Diploma in Engineering (or equivalent qualification as recognized by the University), who have secured not less than forty-five percentage (45%) marks in the final year examination (5th and 6th Semesters of the Diploma Program) in the appropriate branch of Engineering. Provided that, in case of SC / ST and OBC candidates from Karnataka the minimum marks for eligibility shall be forty percent (40%).
- 10.1.2 Provided further that, candidates seeking Lateral Entry may be required to complete specified bridge Courses as prescribed by the University. Such bridge Courses, if any, shall not be included in the CGPA computations.
- 10.1.3 All the existing Regulations and Policies of the University shall be binding on all the students admitted to the Program through the provision of Lateral Entry.
- 10.1.4 The Course requirements prescribed for the 1st Year of the B.Tech. Program shall be waived for the student(s) admitted through Lateral Entry and the duration of the B.Tech. Program for such students is three (03) years, commencing from the 3rd Semester (commencement of the 2nd Year) of the B.Tech. Program and culminating with the 8th Semester (end of the 4th Year) of the B.Tech. Program.
- 10.1.5 Provided that, if a Lateral Entry student misses any mandatory program specific courses that are typically offered in the 1st year (1st or 2nd semesters), then those courses must be cleared by the students as soon as possible, preferably during the Summer Term.
- 10.1.6 The existing Program Regulations of the concerned Program to which the student is admitted through the provision of Lateral Entry shall be binding on the student with effect from the 3rd Semester of the Program. i.e., the Program Structure and Curriculum from the 3rd to 8th Semesters of the Program concerned shall be binding on the student

admitted through Lateral Entry. Further, any revisions / amendments made to the Program Regulations thereafter, shall be binding on all the students of the concerned Program.

- 10.1.7 All the Courses (and the corresponding number of Credits) prescribed for the 1st Year of the concerned B.Tech. Program shall be waived for the student(s) admitted to the concerned B.Tech Program through Lateral Entry. Further, the *Minimum Credit Requirements* for the award of the B.Tech. Degree in the concerned Program shall be prescribed / calculated as follows:

The ***Minimum Credit Requirements*** for the award of the Bachelor of Technology (B.Tech.) Degree prescribed by the concerned Bachelor of Technology Degree Program Regulations and Curriculum, 2025-2029, minus the number of Credits prescribed / accepted by the Equivalence Committee for the 1st Year (1st and 2nd Semesters) of the B.Tech. Program.

For instance, if the *Minimum Credit Requirements* for the award of the Bachelor of Technology (B.Tech.) Degree as prescribed by the Regulations for B.Tech. (Computer Science and Technology-Dev Ops) is "N" Credits, and, if the total credits prescribed in the 1st Year (total credits of the 1st and 2nd Semesters) of the Program concerned is "M" Credits, then the *Minimum Credit Requirements* for the award of the B.Tech. in (Computer Science and Technology-Dev Ops) for a student who joins the Program through the provision of the Lateral Entry, shall be "N – M" Credits.

- 10.1.8 Further, no other waiver except the Courses prescribed for the 1st year of the B.Tech. Program of the University shall be permissible for students joining the B.Tech. Program through the provision of Lateral Entry.

10.2 Transfer of student(s) from another recognized University to the 2nd year (3rd Semester) of the B.Tech. Program of the University

A student who has completed the 1st Year (i.e., passed in all the Courses / Subjects prescribed for the 1st Year) of the B.Tech. / B.E. / B.S., Four-Year Degree Program from another recognized University, may be permitted to transfer to the 2nd Year (3rd Semester) of the B.Tech. Program of the University as per the rules and guidelines prescribed in the following Sub-Clauses:

- 10.2.1** The concerned student fulfils the criteria specified in Sub-Clauses 10.1.1, 10.1.2 and 10.1.3.

- 10.2.2** The student shall submit the Application for Transfer along with a non-refundable Application Fee (as prescribed by the University from time to time) to the University no later than July 10 of the concerned year for admission to the 2nd Year (3rd Semester) B.Tech. Program commencing on August 1 on the year concerned.

10.2.3 The student shall submit copies of the respective Marks Cards / Grade Sheets / Certificates along with the Application for Transfer.

10.2.4 The transfer may be provided on the condition that the Courses and Credits completed by the concerned student in the 1st Year of the B.Tech. Four Degree Program from the concerned University, are declared equivalent and acceptable by the Equivalence Committee constituted by the Vice Chancellor for this purpose. Further, the Equivalence Committee may also prescribe the Courses and Credits the concerned students shall have to mandatorily complete, if admitted to the 2nd Year of the B.Tech. Program of the University.

10.2.5 The Branch / Discipline allotted to the student concerned shall be the decision of the University and binding on the student.

11 Change of Branch / Discipline / Specialization

A student admitted to a particular Branch of the B.Tech. Program will normally continue studying in that Branch till the completion of the program. However, the University reserves the right to provide the option for a change of Branch, or not to provide the option for a change of Branch, at the end of 1st Year of the B.Tech. Program to eligible students in accordance with the following rules and guidelines: framed by the University from time to time.

11.1 Normally, only those students, who have passed all the Courses prescribed for the 1st Year of the B.Tech. Program and obtained a CGPA of not less than 6.50 at the end of the 2nd Semester, shall be eligible for consideration for a change of Branch.

11.2 Change of Branch, if provided, shall be made effective from the commencement of the 3rd Semester of the B.Tech. Program. There shall be no provision for change of Branch thereafter under any circumstances whatsoever.

11.3 The student provided with the change of Branch shall fully adhere to and comply with the Program Regulations of the concerned Branch of the B.Tech. Program, the Fee Policy pertaining to that Branch of the B.Tech. Program, and, all other rules pertaining to the changed Branch existing at the time.

11.4 Change of Branch once made shall be final and binding on the student. No student shall be permitted, under any circumstances, to refuse the change of Branch offered.

11.5 The eligible student may be allowed a change in Branch, strictly in order of *inter se* merit,

subject to the conditions given below:

11.5.1 The actual number of students in the 3rd Semester in any particular Branch to which the transfer is to be made, should not exceed the intake fixed by the University for the concerned Branch;

11.5.2 The actual number of students in any Branch from which transfer is being sought does not fall below 75% of the total intake fixed by the University for the concerned Branch.

The process of change of Branch shall be completed within the first five days of Registration for the 3rd Semester of the B.Tech. Program.

12 Specific Regulations regarding Assessment and Evaluation (including the Assessment Details of NTCC Courses, Weightages of Continuous Assessment and End Term Examination for various Course Categories)

12.1 The academic performance evaluation of a student in a Course shall be according to the University Letter Grading System based on the class performance distribution in the Course.

12.2 Academic performance evaluation of every registered student in every Course registered by the student is carried out through various components of Assessments spread across the Semester. The nature of components of Continuous Assessments and the weightage given to each component of Continuous Assessments (refer Clause 8.8 of academic regulations) shall be clearly defined in the Course Plan for every Course, and approved by the DAC.

12.3 Format of the End-Term examination shall be specified in the Course Plan.

12.4 Grading is the process of rewarding the students for their overall performance in each Course. The University follows the system of Relative Grading with statistical approach to classify the students based on the relative performance of the students registered in the concerned Course except in the following cases:

- Non-Teaching Credit Courses (NTCC)
- Courses with a class strength less than 30

Absolute grading method may be adopted, where necessary with prior approval of concerned DAC.

Grading shall be done at the end of the Academic Term by considering the aggregate performance of the student in all components of Assessments prescribed for the Course. Letter Grades (Clause 8.10 of academic regulations) shall be awarded to a student based on her/his overall performance relative to the class performance distribution in the concerned Course. These Letter Grades not only indicate a qualitative assessment

of the student's performance but also carry a quantitative (numeric) equivalent called the Grade Point.

12.5 Assessment Components and Weightage

Table 1: Assessment Components and Weightage for different category of Courses		
Nature of Course and Structure	Evaluation Component	Weightage
Lecture-based Course L component in the L-T-P Structure is predominant (more than 1) (Examples: 3-0-0; 3-0-2; 2-1-0; 2-0-2, 2-0-4 etc.)	Continuous Assessments	50%
	End Term Examination	50%
Lab/Practice-based Course P component in the L-T-P Structure is predominant (Examples: 0-0-4; 1-0-4; 1-0-2; etc.)	Continuous Assessments	75%
	End Term Examination	25%
Skill based Courses like Industry Internship, Capstone project, Research Dissertation, Integrative Studio, Interdisciplinary Project, Summer / Short Internship, Social Engagement / Field Projects, Portfolio, and such similar Non-Teaching Credit Courses, where the pedagogy does not lend itself to a typical L-T-P structure	Guidelines for the assessment components for the various types of Courses, with recommended weightages, shall be specified in the concerned Program Regulations and Curriculum / Course Plans, as applicable.	

The exact weightages of Evaluation Components shall be clearly specified in the concerned PRC and respective Course Plan.

Normally, for Practice/Skill based Courses, without a defined credit structure (L–T–P) [NTCC], but with assigned Credits (as defined in Clause 5.2 of the Academic Regulations), the method of evaluation shall be based only on Continuous Assessments. The various components of Continuous Assessments, the distribution of weightage among such components, and the method of evaluation/assessment, shall be as decided and indicated in the Course Plan/PRC. The same shall be approved by the respective DAC.

2.1 Minimum Performance Criteria:

2.1.1 Theory only Course and Lab/Practice Embedded Theory Course

A student shall satisfy the following minimum performance criteria to be eligible to earn the credits towards the concerned Course:

- a. A student must obtain a minimum of 30% of the total marks/weightage assigned to the End Term Examinations in the concerned Course.
- b. The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of the components of Continuous Assessments, Mid Term Examinations and End Term Examinations in the concerned Course.

2.1.2 Lab/Practice only Course and Project Based Courses

The student must obtain a minimum of 40% of the AGGREGATE of the marks/weightage of all assessment components in the concerned Course.

- 2.1.3** A student who fails to meet the minimum performance criteria listed above in a Course shall be declared as "Fail" and given "F" Grade in the concerned Course. For theory Courses, the student shall have to re-appear in the "Make-Up Examinations" as scheduled by the University in any subsequent semester, or, re-appear in the End Term Examinations of the same Course when it is scheduled at the end of the following Semester or Summer Term, if offered. The marks obtained in the Continuous Assessments (other than the End Term Examination) shall be carried forward and be included in computing the final grade, if the student secures the minimum requirements (as per Clauses 8.9.1 and 8.9.2 of academic regulations) in the "Make-Up Examinations" of the concerned Course. Further, the student has an option to re-register for the Course and clear the same in the summer term/ subsequent semester if he/she wishes to do so, provided the Course is offered.

13 Additional clarifications - Rules and Guidelines for Transfer of Credits from MOOC, etc. – Note: These are covered in Academic Regulations

The University allows students to acquire credits from other Indian or foreign institutions and/or Massive Open Online Course (MOOC) platforms, subject to prior approval. These credits may be transferred and counted toward fulfilling the minimum credit requirements for the award of a degree. The process of transfer of credits is governed by the following rules and guidelines:

- 3.1** The transfer of credits shall be examined and recommended by the Equivalence Committee (Refer ANNEXURE B of academic regulations) and approved by the Dean - Academics.
- 3.2** Students may earn credits from other Indian or foreign Universities/Institutions with which the University has an MOU, and that MOU shall have specific provisions, rules and guidelines for transfer of credits. These transferred credits shall be counted towards the minimum credit requirements for the award of the degree.
- 3.3** Students may earn credits by registering for Online Courses offered by *Study Web of Active Learning by Young and Aspiring Minds (SWAYAM)* and *National Program on Technology Enhanced Learning (NPTEL)*, or other such recognized Bodies/ Universities/Institutions as approved by the concerned BOS and Academic Council from time to time. The concerned School/Parent Department shall publish/include the approved list of Courses and the rules and guidelines governing such transfer of credits of the concerned Program from time to time. The Rules and Guidelines for the transfer

of credits specifically from the Online Courses conducted by SWAYAM/ NPTEL/ other approved MOOCs are as stated in the following Sub-Clauses:

- 3.3.1** A student may complete SWAYAM/NPTEL/other approved MOOCs as mentioned in Clause 17.3 (as per academic regulations) and transfer equivalent credits to partially or fully complete the mandatory credit requirements of Discipline Elective Courses and/or the mandatory credit requirements of Open Elective Courses as prescribed in the concerned Curriculum Structure. However, it is the sole responsibility of the student to complete the mandatory credit requirements of the Discipline Elective Courses and the Open Elective Courses as prescribed by the Curriculum Structure of the concerned Program.
- 3.3.2** SWAYAM/NPTEL/ other approved MOOCs as mentioned in Clause 17.3 (as per academic regulations) shall be approved by the concerned Board of Studies and placed (as Annexures) in the concerned PRC.
- 3.3.3** Parent Departments may release a list of SWAYAM/NPTEL/other approved MOOCs for Pre-Registration as per schedule in the Academic Calendar or through University Notification to this effect.
- 3.3.4** Students may Pre-Register for the SWAYAM/NPTEL/other approved MOOCs in the respective Departments and register for the same Courses as per the schedule announced by respective Online Course Offering body/institute/ university.
- 3.3.5** A student shall request for transfer of credits only from such approved Courses as mentioned in Sub-Clause 3.3.2 above.
- 3.3.6** SWAYAM/NPTEL/other approved MOOCs Courses are considered for transfer of credits only if the concerned student has successfully completed the SWAYAM/NPTEL/other approved MOOCs and obtained a certificate of successful/satisfactory completion.
- 3.3.7** A student who has successfully completed the approved SWAYAM/NPTEL/ other approved MOOCs and wants to avail the provision of transfer of equivalent credits, must submit the original Certificate of Completion, or such similar authorized documents to the HOD concerned, with a written request for the transfer of the equivalent credits. On verification of the Certificates/Documents and approval by the HOD concerned, the Course(s) and equivalent Credits shall forwarded to the COE for processing of results of the concerned Academic Term.
- 3.3.8** The credit equivalence of the SWAYAM/NPTEL/other approved MOOCs are based on Course durations and/or as recommended by the Course offering body/institute/university. The Credit Equivalence mapped to SWAYAM/ NPTEL approved Courses based on Course durations for transfer of credits is summarised in Table shown below. The Grade will be calculated from the marks received by the Absolute Grading Table 8.11 in the academic regulations.

Table 2: Durations and Credit Equivalence for Transfer of Credits from SWAYAM-NPTEL/ other approved MOOC Courses

Sl. No.	Course Duration	Credit Equivalence
1	4 Weeks	1 Credit
2	8 Weeks	2 Credits
3	12 Weeks	3 Credits

3.3.9 The maximum permissible number of credits that a student may request for credit transfer from MOOCs shall not exceed 20% of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree.

3.3.10 The University shall not reimburse any fees/expense; a student may incur for the SWAYAM/NPTEL/other approved MOOCs.

3.4 The maximum number of credits that can be transferred by a student shall be limited to forty percent (40%) of the mandatory minimum credit requirements specified by the concerned Program Regulations and Curriculum for the award of the concerned Degree. However, the grades obtained in the Courses transferred from other Institutions/MOOCs, as mentioned in this Section (13.0), shall not be included in the calculation of the CGPA.

PART B – PROGRAM STRUCTURE

14. Structure / Component with Credit Requirements Course Baskets & Minimum Basket wise Credit Requirements

The B.Tech. (Computer Science and Technology-Dev Ops) Program Structure (2025-2029) totalling 160 credits. Table 3 summarizes the type of baskets, number of courses under each basket and the associated credits that are mandatorily required for the completion of the Degree.

Table 3: B.Tech. (Computer Science and Technology-Dev Ops) 2025-2029: Summary of Mandatory Courses and Minimum Credit Contribution from various Baskets		
Sl. No.	Baskets	Credit Contribution
1	Humanities and Social Sciences including Management Courses (HSMC)	10
2	Basic Science Courses (BSC)	24
3	Engineering Science Courses (ESC)	22
4	Professional Core Courses (PCC)	64
5	Professional Elective Courses (PEC)	18
6	Open Elective Courses (OEC)	06
7	Project Work (PRW)	16
8	Mandatory Courses (MAC)	0
	Total Credits	160 (Minimum)

In the entire Program, the practical and skill based course component contribute to an extent of approximately 60% out of the total credits of 160 for B.Tech. (Computer Science and Technology-Dev Ops) program of four years' duration.

15. Minimum Total Credit Requirements of Award of Degree

As per the AICTE guidelines, a minimum of 160 credits is required for the award of a B.Tech. degree.

PART C – CURRICULUM STRUCTURE

16. Other Specific Requirements for Award of Degree, if any, as prescribed by the Statutory Bodies,

- 16.1 The award of the Degree shall be recommended by the Board of Examinations and approved by the Academic Council and Board of Management of the University.
- 16.2 A student shall be declared to be eligible for the award of the concerned Degree if she/he:
- Fulfilled the Minimum Credit Requirements and the Minimum Credits requirements under various baskets;
 - Secure a minimum CGPA of 4.50 in the concerned Program at the end of the Semester/Academic Term in which she/he completes all the requirements for the award of the Degree as specified in Sub-Clause 19.2.1 of Academic Regulations;
 - No dues to the University, Departments, Hostels, Library, and any other such Centers/ Departments of the University; and
 - No disciplinary action is pending against her/him.

17. Curriculum Structure – Basket Wise Course List (not Semester Wise)

List of Courses Tabled – aligned to the Program Structure

(Course Code, Course Name, Credit Structure (LTPC), Contact Hours, Course Basket, Type of Skills etc., as applicable).

Type of Skill	Course Caters to
F - Foundation	GS - Gender Sensitization
S - Skill Development	ES - Environment and sustainability
EM - Employability	HP - Human values and Professional Ethics
EN - Entrepreneurship

18. Practical / Skill based Courses – Internships / Thesis / Dissertation / Capstone Project Work / Portfolio / Mini project

Practical / Skill based Courses like internship, project work, capstone project, research project / dissertation, and such similar courses, where the pedagogy does not lend itself to a typical L-T-P-C Structure as defined in Clause 5.1 of the Academic Regulations are simply assigned the number of Credits based on the quantum of work / effort required to fulfill the learning objectives and outcomes prescribed for the concerned Courses. Such courses are referred to as Non-Teaching Credit Courses (NTCC). These Courses are designed to provide students with hands-on experience and skills essential for their professional development. These courses aim to equip students with abilities in problem identification, root cause analysis, problem-solving, innovation, and design thinking through industry exposure and project-based learning. The expected outcomes are first level proficiency in problem solving and design thinking skills to better equip B.Tech. graduates for their professional careers. The method of evaluation and grading for the Practical / Skill based Courses shall be prescribed and approved by the concerned Departmental Academic Committee (refer Annexure A of the Academic Regulations). The same shall be prescribed in the Course Handout.

18.1 Internship / In-plant Training / Skill-based Program / International Immersion (IM) / Recognition of Prior Learning (RPL)

A student may undergo an Internship / In-plant Training / Skill-based Program / IM / RPL for a period minimum 04 weeks in an industry / company, government bodies, academic / research institution or recognized online platforms offering certified skill-based programs during the semester break between 4th and 5th semesters, subject to the following conditions:

- 18.1.1** The Internship / In-plant Training / Skill-based Program / IM / RPL shall be conducted in accordance with the Internship Policy prescribed by the University from time to time.
- 18.1.2** Internship: student shall undergo internship, either in industry / company, academic / research organizations, government bodies, or international institutions. The objective is to provide practical exposure, industry insights, and real-world experience relevant to the student's field of study.
- 18.1.3** In-plant Training: student shall undergo training / industrial exposure program aimed at providing with practical insights into real-world working environments. The training may be conducted by industries / companies on-campus or through student visits to industries / companies, government bodies / institutions, or technical organizations.
- 18.1.4** Skill-based Program: student shall undergo a certified skill-based program of 30 hours / 04 weeks. Skill-based program should cater to Skill-Enhancement, Practical Focus, and Career orientation, Complementary to Curriculum or Industry relevant.
- 18.1.5** International Immersion (IM): student shall undergo IM aimed at providing global exposure through collaborations with foreign universities, industries, or research institutions. The International Immersion may include industry visits, expert interactions, and cultural exchange activities, enhancing students' international outlook, communication skills, and professional readiness.
- 18.1.6** Recognition of Prior Learning (RPL): student who shall undergo any formally recognize relevant prior work experience, internships, or project-based learning that meet the internship learning outcomes, thereby allowing students to earn internship credit without repeating equivalent practical training.
- 18.1.7** The number of Internships available for the concerned Academic Term. Further, the available number of Internships / In-plant training / Skill-based Program / IM / RPL shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student and as per the selection criteria. Provided further, the student fulfils the criteria, as applicable, specified by the industry / company, government bodies, academic / research or through certified courses.
- 18.1.8** A student may opt for Internship / In-plant Training / IM / RPL in an industry / company, government bodies / academic / research institution, international bodies of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the Internship / In-plant Training / IM / RPL

on her / his own. Provided further, that the industry / company, government bodies, academic / research institution national or international offering such Internship / Training confirms to the University that the Internship shall be conducted in accordance with the Program Regulations and Internship Policy of the University / Rubrics.

18.1.9 A student undergoing RPL must submit an application with supporting documents such as experience letters, project reports, employer feedback, certifications, a self-reflection report etc. Application must be submitted before the commencement of the internship semester.

18.1.10 A student selected for an Internship / In-plant Training / Skill-based Program / IM / RPL in an industry / company, government bodies, academic / research institution shall adhere to all the rules and guidelines prescribed in the Internship Policy of the University.

The performance will be assessed and grades awarded as per the university's academic grading policy. It may be included as a non-GPA course (Grade-based Satisfactorily Completed / Not Completed). The student must secure a minimum of 50% of the total marks to be declared as having successfully completed the course.

18.2 Mini Project

A student may opt to do a Mini Project for a period of 6-8 weeks in an Industry / Company or academic / research institution or the University Department(s) of Internship during the Semester Break between 4th and 5th Semesters or 6th and 7th Semesters or during the 5th / 6th / 7th Semester as applicable, subject to the following conditions:

18.2.1 The Mini Project shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.

18.2.2 The student may do the mini project in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 18.2.1). Provided further, that the Industry / Company or academic / research institution offering such project work confirms to the University that the project work will be conducted in accordance with the Program Regulations and requirements of the University.

18.3 Capstone Project

A student may undergo a Capstone Project for a period of 12-14 weeks in an industry / company or academic / research institution in the 7th / 8th Semester as applicable, subject to the following conditions:

18.3.1 The Capstone Project shall be conducted in accordance with the Capstone Project Policy prescribed by the University from time to time.

18.3.2 The selection criteria (minimum CGPA, pass in all Courses as on date, and any other qualifying criteria) as applicable / stipulated by the concerned Industry / Company or academic / research institution for award of the Capstone Project to a student;

18.3.3 The number of Capstone Project available for the concerned Academic Term. Further, the available number of Capstone Project shall be awarded to the students by the University on the basis of merit using the CGPA secured by the student. Provided further, the student fulfils the criteria, as applicable, specified by the Industry / Company or academic / research institution providing the Capstone Project, as stated in Sub-Clause 18.3.2 above.

18.3.4 A student may opt for Capstone Project in an Industry / Company or academic / research institution of her / his choice, subject to the condition that the concerned student takes the responsibility to arrange the I Capstone Project on her / his own. Provided further, that the Industry / Company or academic / research institution offering such Capstone Project confirms to the University that the Capstone Project shall be conducted in accordance with the Program Regulations and Capstone Policy of the University.

18.3.5 A student selected for a Capstone Project in an industry / company or academic / research institution shall adhere to all the rules and guidelines prescribed in the Capstone Project Policy of the University.

18.4 Research Project / Dissertation

A student may opt to do a Research Project / Dissertation for a period of 12-14 weeks in an Industry / Company or academic / research institution or the University Department(s) as an equivalence of Capstone Project, subject to the following conditions:

18.4.1 The Research Project / Dissertation shall be approved by the concerned HOD and be carried out under the guidance of a faculty member.

The student may do the Research Project / Dissertation in an Industry / Company or academic / research institution of her / his choice subject to the above mentioned condition (Sub-Clause 18.4.1). Provided further, that the Industry / Company or academic / research institution offering such Research Project / Dissertation confirms to the University that the Research Project / Dissertation work will be conducted in accordance with the Program Regulations and requirements of the University.

19.List of Elective Courses under various Specialisations / Stream Basket

Table 3.7 : Professional Electives Courses/Specialization Tracks – Minimum of 12 credits is to be earned by the student in a particular track and overall 18 credits.									
Track 1 – DevOps with Cloud Computing									
S.No	Course Code	Course Name	L	T	P	C	Contact Hours	Type of Skill	Pre requisite

21.List of MOOC Courses

21.1 Presidency University students are given the opportunity to study abroad in International Universities through a selection process coordinated by the Office of International Affairs (OIA). Such selected students need to complete their credits for the semester that they are abroad in the following way:

- 21.1.1 The student needs to study and complete School Core and Program Core Courses in offline mode only.
- 21.1.2 Massive Open Online Course (MOOC) courses maybe given for Open Elective and Discipline Elective Courses. These courses need to be approved by the concerned BOS and Academic Council from time to time.
- 21.1.3 SWAYAM/NPTEL/ other approved MOOCs shall be approved by the concerned Board of Studies and placed in the concerned PRC.
- 21.1.4 Student shall register for these courses in the ERP of Presidency University.
- 21.1.5 For these MOOC courses faculty coordinators are identified. These faculty should have undergone similar MOOC courses and therefore should be familiar with the mode of class conduction, types of assessments and evaluation procedures.
- 21.1.6 Study materials shall be provided to the students as video lectures shared by the MOOCs Coordinator(s), or the students may access the approved MOOCs Portal directly. The mode of class conduction is determined by the MOOCs coordinator(s) as detailed in the Course Catalogue and Course Plan.
- 21.1.7 The question paper shall be prepared by the MOOCs coordinator(s).
- 21.1.8 Students write the exams in online mode. These exams are scheduled and conducted by the School.
- 21.1.9 Results are evaluated by School and given to the Office of the Controller of Examinations (CoE).
- 21.1.10 The details of the duration, credits and evaluation are given below:

Sl#	Duration	Credits	Evaluation
1.	12 weeks	3	Continuous Assessment –50 Marks Mid Term –50 Marks End Term-100 Marks
2.	8 weeks	2	Mid Term-50 Marks End Term-100 Marks

3	4 weeks	1	End Term-100 Marks

21.2 MOOC - Discipline Elective Courses for B. Tech. Computer Science and Technology
DevOps

Table 3.5 : MOOC Discipline Elective Courses				
Sl.No	Course Code	Course Name	Credits	L-T-P-C
1	CSE3111	Artificial Intelligence: Search Methods for Problem Solving	3	3-0-0-3
2	CSE3112	Privacy and Security in Online Social Media	3	3-0-0-3
3	CSE3113	Computational Complexity	3	3-0-0-3
4	CSE3114	Deep Learning for Computer Vision	3	3-0-0-3
5	CSE3115	Learning Analytics Tools	3	3-0-0-3

22. Course Catalogue

Course Catalogue of all Courses Listed including the Courses Offered by other School / Department and Discipline / Programme Electives – Course Code, Course Name, Prerequisite, Anti-requisite, Course Description, Course Outcome, Course Content (with Blooms Level, CO, No. of Contact Hours), Reference Resources.

Sample Catalogue is given below for reference:

IV. Course Catalogues:

Each course shall have a course catalogue with the following details:

- i) Pre –Requisites of the course
- ii) Course Description
- iii) Course Outcome
- iv) Course Content
- iv) Reference Resources.

The Course Catalogues for the Courses offered in each basket are attached below:

Course Code: MAT2301	Course Title: Calculus and Differential Equations Type of Course: BSC	L-T- P- C	3	1	0	4
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	Calculus and differential equations are used ubiquitously throughout mathematics, statistics and operations research. In this course, students can be able to build upon the foundations of calculus established to greatly enhance their repertoire of theory and practice in these areas. The application of calculus and differential equations in the description and modelling of real-world problems will also be considered. This unit will extend the problem-solving skills, range of knowledge and use of techniques in differential and integral calculus. The course focuses on the concepts of Calculus and Differential Equations with reference to specific engineering problems. The course is of both conceptual and analytical type in nature.					
Course Objective	The goal of the course Calculus and Differential Equations is to facilitate the students with a concrete foundation of differential calculus and to solve the first and higher-order ordinary differential equations enabling them to acquire the knowledge of these mathematical tools.					
Course Out Comes	On successful completion of the course the students shall be able to: 1. Apply the knowledge of calculus to solve problems related to polar curves and its applications in determining the bentness of a curve. 2. Apply the principles of integral calculus to evaluate integrals. 3. Learn the notion of partial differentiation to calculate rate of change of multivariate functions and solve problems related to composite functions and Jacobian. 4. Solve first-order linear/nonlinear ordinary differential equations analytically using standard methods.					
Course Content:						

Module 1	Differential Calculus		(10 Classes)
Polar Coordinates, polar curves, angle between radius vector and the tangent, angle between two curves, pedal equations, curvature and radius of curvature. Limit, continuity and partial derivatives, directional derivatives, total derivative; Tangent plane and normal line; Maxima, minima and saddle points; Method of Lagrange multipliers; Gradient, curl and divergence.			
Module 2	Integral Calculus	Assignment	(10 Classes)
Evolutes and involutes; Evaluation of definite and improper integrals; Beta and Gamma functions and their properties; Applications of definite integrals to evaluate surface areas and volumes of revolutions. Rolle's theorem, Mean value theorems, Taylor's and Maclaurin theorems with remainders; Indeterminate forms and L'Hospital's rule; Maxima and minima.			
Module 3	Multivariable Calculus		(10 lectures)
Multiple Integration: Double integrals (Cartesian), change of order of integration in double integrals, Change of variables (Cartesian to polar), Applications: areas and volumes, Center of mass and Gravity (constant and variable densities); Triple integrals (Cartesian), orthogonal curvilinear coordinates, Simple applications involving cubes, sphere and rectangular parallelepipeds; Scalar line integrals, vector line integrals, scalar surface integrals, vector surface integrals, Theorems of Green, Gauss and Stokes.			
Module 4	Differential Equations	Assignment	(15 lectures)
Definition, types of Differential Equations, Applications, Variable Separable, Homogeneous, Exact, linear and Bernoulli's equations, Euler's equations, Equations not of first degree: equations solvable for p, equations solvable for y, equations solvable for x and Clairaut's type. Linear differential equations of second and higher order with constant coefficients - Non-Homogeneous term of the type $Q(x) = e^{ax}$, $\sin ax$, $\cos ax$, $e^{ax}v(x)$, $x^n v(x)$ - Method of variation of parameters.			
Targeted Application & Tools that can be used: Differential calculus is used extensively in science and engineering. It can solve problems related to motion, velocity, acceleration, angles of incline or curve on a surface, etc. Differential Equations are used to model the behavior of electromagnetic fields, including in the design of antennas, microwave ovens, and other devices. Biology: PDEs are used to model biological processes, such as the spread of diseases and the development of biological tissues. Tools Used: Python.			
Assignment:			
1. Select any one simple differential equation pertaining to the respective branch of engineering, identify the dependent and independent variable – Obtain the solution and compare the solution sets by varying the values of the dependent variable.

Topics relevant to SKILL DEVELOPMENT: The course focuses on the concepts of calculus and differential equation with reference to specific engineering problems. The course is of both conceptual and analytical type in nature through Problem solving. This is attained through the assessment component mentioned in course handout.

Course Code: PHY2501	Course Title: Optoelectronics and Quantum Physics Type of Course: BSC	L-T-P-C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	The purpose of this course is to enable the students to understand the fundamentals, working and applications of optoelectronic devices and to develop the basic abilities to appreciate the applications of advanced microscopy and quantum computers. The course develops the critical thinking and analytical skills.					
Course Out Comes	On successful completion of the course the students shall be able to: CO1: To understand the concepts of electrical conducting properties of metal, semiconductor and superconductivity.					

	CO2: To understand the principles of quantum mechanics. CO3: Discuss the quantum concepts used in quantum computers. CO4: Explain the applications of lasers and optical fibers in various technological fields.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of “Applied Physics for Computer Science Cluster “and to attain the basic knowledge related to quantum mechanics and computation.			
Course Content:				
Module 1	Electrical Conductivity of Solids and Semiconducting Devices	Assignment	Data collection on efficiency of solar cells.	12 Sessions
Topics: Classification of materials based on bandgap, Fermi energy and Fermi level, Fermi level in semiconductors, Law of mass action, Electrical conductivity of a semiconductor, Hall effect, Superconductivity, p-n junctions, Zener diode, Solar cells, I-V characteristics, and LEDs				
Module 2	Quantum Mechanics	Assignment		12 Sessions
Topics: Introduction, de-Broglie hypothesis, Heisenberg's uncertainty principle- statement and physical significance. Wave function-properties and physical significance. Schrodindger's time independent wave equation, Probability density and normalization of wave function. Wave Function in Ket Notation: Matrix form of wave function, Identity operator, Determination of $ 0\rangle$ and $ 1\rangle$, Pauli Matrices and its operations on 0 and 1 states, Mention of Conjugate and Transpose, Unitary Matrix U, Examples: 2x2 Matrices and their multiplication (Inner Product), Probability, Orthogonality				
Module 3	Quantum Computing	Term paper	Seminar on quantum computers.	11 Sessions
Topics: Introduction to quantum computing, Moore's law & its end, Differences between classical and quantum computing, Concept of Qubit and its properties, . Representation of qubit by Bloch sphere, Quantum Gates: Single Qubit Gates: Quantum Not Gate, Pauli Z Gate, Hadamard Gate, Phase Gate (or S Gate), T Gate. Multiple Qubit Gates: Controlled gate - CNOT Gate, (Discussion for 4 different input states). Representation of Swap gate, Controlled - Z gate, Toffoli gate. Problems.				
Module 4	Lasers And Optical Fibers	Term paper	Case study on medical applications of Lasers.	10 Sessions
Topics: Interactions of radiations with matter, expression for energy density of a system under thermal equilibrium in terms of Einstein's coefficients, conditions for LASER action using Einstein's coefficients, Characteristics of laser, conditions and requisites of laser, Principle of optical fibers, Numerical aperture and acceptance angle (Qualitative), Attenuation, Applications: Point to point communication with block diagram, application of optical fibers in endoscopy.				
Targeted Application & Tools that can be used: 1. Areas of application are optoelectronics industry, Solar panel technologies, quantum computing software, electronic devices using transistors and diodes, memory devices, endoscopy, SQUIDS in MRI, Advanced material characterizations using SEM and STM. 2. Origin, excel and Mat lab soft wares for programming and data analysis.				

Project work/Assignment: Mention the Type of Project /Assignment proposed for this course						
Assessment Type • Midterm exam • Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screen shot accessing digital resource.) • Quiz • End Term Exam • Self-Learning 1. Prepare a comprehensive report on non-conventional energy resources in Karnataka and their pros and cons. 2. Write a report on importance of quantum entanglement in supercomputers.

Topics relevant to “SKILL DEVELOPMENT”: Fundamentals of materials, Lasers and optical fibers. for Skill Development through Participative Learning Techniques. This is attained through the Assignment/ Presentation as mentioned in the assessment component in course handout.						

Course Code: MEC1006	Course Title: Engineering Graphics Type of Course: School Core & Theory Only	L- T-P- C	2	0	0	2
Version No.	1.2					

Course Pre-requisites	NIL			
Anti-requisites	NIL			
Course Description	The course is designed with the objective of giving an overview of engineering graphics. It is introductory in nature and acquaints the students with the techniques used to create engineering drawings. The course emphasizes on projection of points, lines, planes and solids and isometric projections.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of “Engineering Graphics” and attain SKILL DEVELOPMENT through Problem solving methodologies.			
Course Outcomes	On successful completion of this course the students shall be able to: 1. Demonstrate competency of Engineering Graphics as per BIS conventions and standards. 2. Comprehend the theory of projection for drawing projections of Points, Lines and Planes under different conditions. 3. Prepare multiview orthographic projections of Solids by visualizing them in different positions. 4. Prepare pictorial drawings using the principles of isometric projections to visualize objects in three dimensions.			
Course Content:				
Module 1	Introduction to Drawing	Assignment	Standard technical drawing	02 Sessions
Topics: Introduction, drawing instruments and their uses, relevant BIS conventions and standards, Lettering, Line conventions, dimensioning, Selection of drawing sheet size and scale.				
Module 2	Orthographic projections of Points, Straight Lines and Plane Surfaces	Assignment	Projection methods Analysis	10 Sessions
Topics: Introduction, Definitions – Elements of projection and methods of projection, Planes of projection, reference line and conventions adopted. First angle and third angle projections. Projection of Points in all 4 quadrants. Projections of Straight Lines (located in first quadrant/first angle projection only): True and apparent lengths, true and apparent Inclinations to reference planes. (No application problems). Projection of Plane surfaces (First angle projection): Regular plane surfaces – triangle, square, rectangle, pentagon, hexagon and circle – in different positions inclined to both the planes using change of position method only.				
Module 3	Orthographic Projections of Solids	Assignment	Multi-view drawing Analysis	10 Sessions

Topics: Introduction, Projection of right regular prisms, pyramids, cone, hexahedron and tetrahedron in different positions (Problems resting on HP only and First angle projection).				
Module 4	Isometric Projections of Solids (Using isometric scale only)	Assignment	Spatial Visualization	8 Sessions
Topics: Introduction, Isometric scale, Isometric projections of right regular prisms, cylinders, pyramids, cones and their frustums, spheres and hemispheres, hexahedron (cube), and combination of 2 solids, conversion of orthographic view to isometric projection of simple objects. [8 Hours: Application Level]				
Text Book: 1.N. D. Bhatt, "Engineering Drawing: Plane and Solid Geometry," Charotar Publishing House Pvt. Ltd.				
References: 1. K.R. Gopalakrishna, "Engineering Graphics", Subhash Publishers, Bangalore. 2. D. M. Kulkarni, A. P. Rastogi, A. K. Sarkar, "Engineering Graphics with AutoCAD," Prentice Hall. 3. D. A. Jolhe, "Engineering Drawing with Introduction to AutoCAD," Tata McGraw Hill. Web resources: https://nptel.ac.in/courses/112103019				
Topics relevant to "SKILL DEVELOPMENT": Projection in first and third angle for SKILL DEVELOPMENT through Problem Solving methodologies . This is attained through the assessment component mentioned in the course handout.				

ENG1900	English for Technical Communication	L- T- P- C	2	0	0	2
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	This course enhances the technical communication skills of BTech students, focusing on clarity, precision, and conciseness in academic and professional settings. Students will learn to differentiate between general and technical communication, analyze technical content, develop structured writing skills, and deliver effective presentations. Through interactive activities such as TED Talk analyses, report writing, and presentation practice, the course provides hands-on experience for real-world applications. By the end, students will be					

	equipped to communicate complex technical information effectively in various professional contexts.			
Course Outcomes	On successful completion of the course the students shall be able to: 1. Differentiate between general and technical communication. 2. Explain key reading comprehension techniques to enhance understanding of technical texts. 3. Write clear, concise, and well-structured technical reports and documents. 4. Deliver technical presentations and implement peer feedback for continuous improvement. 5. Explain ethical practices in digital communication for professional use.			
Course Content: Theory				
Module 1	Technical communication	Quiz	Listening	9 Hours
Introduction to Communication Technical vs. General Communication Characteristics of technical communication Importance of clarity, precision, and objectivity Activity: Watching TED Talks/videos to identify differences in technical and general vocabulary				
Module 2	Technical Reading	Assignment	Reading	12 Hours
Reading Comprehension Note making & Notetaking Content Analysis Activity: - Reading technical articles and answering comprehension questions - Note making techniques				
Module 3	Technical Writing	Assignment	Writing	12hours
Paragraph Writing Structure of a paragraph (topic sentence, supporting details, coherence) Report Writing Structure of technical and project reports (Introduction, Methods, Results, Discussion) Activity: - Writing a structured paragraph on a technical topic - Writing project reports				

Course Code: CSE1500	Course Title: Computational Thinking using Python Type of Course: ESC	L-T-P-C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	Nil					
Anti-requisites	NIL					
Course Description	The course efficiently introduces fundamental ideas including conditionals, loops, functions, lists, strings, and tuples through some inspiring examples. It then discusses dynamic programming like handling exceptions and file usage. In terms of data structures, the course covers Python dictionaries, classes, and objects for constructing user-defined datatypes like linear and binary search.					
Course Object	The objective of the course is to familiarize the learners with the concepts of Computational Thinking using Python and attain Skill Development through Participative Learning techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: 1) Describe algorithmic solutions for basic computing issues.. (Understand) 2) Explain data types and operators. (Understand) 3) Demonstrate control structures and Functions. (Apply) 4) Apply the data structures for the given data. (Apply) 5) Demonstrate the file operations. (Apply)					
Course Content:						
Module 1	Computational Thinking And Problem Solving	Assignment		Programming	6 Sessions	
Topics: Fundamentals of Computing– Identification of Computational Problems Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi						
Module 2	Datatypes, Expressions, Statements	Assignment		Programming	6 Sessions	
Topics: Python interpreter and interactive mode,debugging; values and types: int, float, boolean, string , and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; Illustrative programs:						

exchange the values of two variables, circulate the values of n variables, distance between two points.				
Module 3	Control flow, Functions, Strings	Assignment	Programming	6 Sessions
Topics: Conditionals: Boolean values and operators, conditional (if), alternative (if else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.				
Module 4	Lists, Tuples, Dictionaries	Assignment	Programming	6 Sessions
Topics: Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing- list comprehension; Illustrative programs: simple sorting, histogram, Students marks statement, Retail bill preparation.				
Module 5	Files	Assignment	Programming	6 Sessions
Files and exceptions: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs: word count, copy file, Voter's age validation, Marks range validation (0-100).				
Project work/Assignment:				
1. Assignment 1 on (Module 1 and Module 2) 2. Assignment 2 on (Module 3 and Module 4 & 5)				
Text Book				
1. Paul Deitel and Harvey Deitel, "Python for Programmers", Pearson Education, 1st Edition, 2021 2. Eric Matthes, Python Crash Course, : A Hands-On, Project-Based Introduction to Programming, 3rd Edition, 2023

Web Resources

W1. https://onlinecourses.nptel.ac.in/noc20_cs70/preview

Topics relevant to development of “Employability”: Data structures using python.

Topics relevant to “PROFESSIONAL ETHICS”: Naming and coding convention for simple programs using python.

Course Code: ECE2022	Course Title: Digital Design Type of Course: ESC		L- T-P- C	2	0	0	2
Version No.	1.0						
Course Pre-requisites	[1] Elements of Electronics/Electrical Engineering, 2] Basic concepts of number representation, Boolean Algebra						
Anti-requisites	NIL						
Course Description	The purpose of this course is to enable the students to appreciate the fundamentals of digital logic circuits and Boolean algebra focusing on both combinational and sequential logic circuits. The course emphasizes on minimization techniques for making canonical and low-cost digital circuit implementations. This course deals with analysis and design of digital electronic circuits. The course also creates a foundation for future courses which includes Computer Architecture, Microprocessors, Microcontrollers, and Embedded Systems etc. The course enhances the Design, Implementation and Programming abilities through laboratory tasks. The associated laboratory provides an opportunity to verify the theoretical knowledge.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of Digital Design and attain the SKILL DEVELOPMENT through EXPERIENTIAL LEARNING.						
Course Outcomes	On successful completion of this course the students shall be able to: i. Describe the concepts of number systems, Boolean algebra and logic gates. ii. Apply minimization techniques to simplify Boolean expressions. iii. Demonstrate the Combinational circuits for a given logic iv. Demonstrate the Sequential and programmable logic circuits						
Course Content:							
Module 1	Fundamentals of Number systems- Boolean algebra and digital logic	Application Assignment	Data Analysis task			06 classes	
Topics:							

Review of Number systems and logic gates, Number base conversions, Overview of Boolean functions and simplifications, two, three, four variable K-Maps- Don't care conditions- Both SOP and POS- Universal Gates (NAND & NOR) Implementations. Introduction to HDL.

Module 2	Boolean function simplification	Application Assignment	Data Analysis task	08 Classes

Topics:

Introduction to Combinational circuits, Analysis, Design procedure, Binary Adder and Subtractor, Magnitude comparator, Parity generator and checker, Multiplexers-Demultiplexers, Decoders, Encoders and Priority Encoders, HDL Models of combinational circuits.

Module 3	Combinational Logic circuits:	Application Assignment	Programming Task & Data Analysis task	08 Classes

Topics:

Introduction to sequential circuits, Storage elements: latches and flip flops, Characteristic tables and equations, excitation table, Analysis of clocked sequential circuits, Mealy & Moore Models of finite state machines - Registers & Counters. HDL Models of Sequential circuits.

Targeted Application & Tools that can be used:

Digital electronics is the foundation of all modern electronic devices such as cellular phones, MP3 players, laptop computers, digital cameras, high definition televisions, Home Automation, Communication in systems in industries Professionally Used Software: HDL/VHDL/Verilog HDL/ OOPS

Course Code: DES1146	Course Title: Introduction to Design Thinking Type of Course: Theory	L-T-P-C	1	0	0	1
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	The course aims to introduce students to the fundamental principles and processes of Design Thinking and will learn to apply Design Thinking methodologies to real-world challenges. The course emphasizes empathy, creativity, and collaboration, equipping students with essential skills for successful engineering practice.					
Course Objective	This course is designed to develop and familiarize the learners with the concepts of creating thinking and attain Entrepreneurship by using Participative Learning techniques.					
Course Outcomes	On successful completion of the course the students shall be able to: 1) Understand the concept and importance of Design Thinking. 2) Differentiate between traditional problem-solving and Design Thinking. 3) Identify the core stages of the Design Thinking process.					

Course Content:	All assignments and projects must be developed using the reference materials available from the PU e-resource database – JSTOR, EBSCO, Library OPAC, NPTEL Videos, etc.			
Module 1	Introduction to Design Thinking	Visual journal, book of essays, context-specific assignment/project	Visual output generation, by Visual Journal and narrative development.	3 hours
Topic 1) Definition and Introduction to Design Thinking 2) Understand the Design Thinking Process				
Module 2	Design Thinking in Action	Visual journal, book of essays, context-specific assignment/project	Visual output generation, by visual journal and narrative development.	12 hours
Topics: 1) Introduction to the steps of Design Thinking Process 2) Understand use cases of Design thinking 3) Design Thinking and Research Tools pertaining to Consumer Tech. , Home Tech. , Personal Tech. , Auto Tech. or Extended Reality.				
Targeted Application & Tools that can be used: 1) Design ideation tools like Miro , SCAMPER etc. 2) Research Tools for Human Centric Design using forecasting tools like WGSN 3) Feedback tools like Google Forms , etc. 4) Expert Lectures

Course Code: PHY2504	Course Title: Optoelectronics and Quantum Physics Lab Type of Course: BSC	L-T-P-C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	The laboratory provides an opportunity to validate the concepts taught and enhances the ability to use the concepts for technological applications. The laboratory tasks aim to develop following skills: An attitude of enquiry, confidence and ability to tackle new problems, ability to interpret events and results, observe and measure physical phenomena, select suitable equipment, instrument and materials, locate faults in systems.					

Course Out Comes	On successful completion of the course the students shall be able to: CO1: To understand electrical and optical properties of materials CO2: Interpret the results of various experiments to verify the concepts used in optoelectronics and advanced devices.
Course Objective	The objective of the course is to familiarize the learners with the concepts of “Applied Physics for Computer Science Cluster “and attain Skill Development through Experiential Learning techniques

List of Laboratory Tasks:

Experiment No. 1: Experimental errors and uncertainty using excel

Level 1: Calculation of accuracy and precision of a given data

Level 2: propagation of errors in addition, subtraction, multiplication and division.

Experiment NO 2: To determine the wavelength of semiconductor diode Laser and to estimate the particle size of lycopodium powder using diffraction.

Level 1: Determination of Wavelength of Laser

Level 2: Finding the particle size of lycopodium powder.

Experiment No. 3: To determine the proportionality of Hall Voltage, magnetic flux density and the polarity of Charge carrier.

Level 1: To determine the proportionality of Hall Voltage and magnetic flux density

Level 2: To determine the polarity of Charge carrier.

Experiment No. 4: To study the I-V characteristics of a given zener diode in forward and reverse bias conditions.

Level 1: To study I –V characteristics of the given Zener diode in reverse bias and to determine break down voltage.

Level 2: To study I –V characteristics of the given Zener diode in forward bias and to determine knee voltage and forward resistance.

Experiment No. 5: To study input and output characteristics of a given Transistor.

Level 1: To determine the input resistance of a given transistor.

Level 2: To determine current transfer characteristics and transistor parameters of a given transistor.

Experiment No. 6: Determination of Fermi energy and Fermi temperature of a given metal and bimetallic wire.

Level 1: Determination of Fermi energy and Fermi temperature of given metal wire.

Level 2: Determination of Fermi energy and Fermi temperature of given bimetallic wire.

Experiment No. 7: To study the I-V characteristics and I-R characteristics of a solar cell as a function of the irradiance.

Level 1: To study the I-V characteristics

Level 2: I-R characteristics of a solar cell as a function of the irradiance.

Experiment No. 8: Calculate the numerical aperture and study the losses that occur in optical fiber cable. .

Level 1: Calculate the numerical aperture.

Level 2: study the losses that occur in optical fiber cable.

Experiment No. 9: Plotting I-V characteristics in forward and reverse bias for LEDs and Determination of knee voltage.

Level 1: Plotting I-V characteristics in forward and reverse bias for LEDs

Level 2: Determination of knee voltage.

Experiment No. 10: Determination of Stefan's constant and verification of Stefan-Boltzmann Law.

Level 1: Determination of Stefan's constant

Level 2: Verification of Stefan-Boltzmann Law.

Experiment No. 11: Determination of dielectric constant of given materials.

Level 1: Determination of Stefan's constant

Level 2: compare the obtain results with other materials

Experiment No. 12: determine the wavelength of monochromatic light, such as sodium light, using Newton's rings.

Level 1: Determination of wavelength

Level 2: determine the radius of curvature of the Plano-convex lens.

Targeted Application & Tools that can be used:

3. Areas of application are optoelectronics industry, Solar panel technologies, quantum computing software, electronic devices using transistors and diodes, memory devices, endoscopy, SQUIDS in MRI, Advanced material characterizations using SEM and STM.
4. Origin, excel and Mat lab soft wares for programming and data analysis.

Project work/Assignment: Mention the Type of Project /Assignment proposed for this course

Assessment Type

- Midterm exam
 - Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screen shot accessing digital resource.)
 - Quiz
 - End Term Exam
 - Self-Learning
1. Prepare a comprehensive report on non-conventional energy resources in Karnataka and their pros and cons.
 2. Write a report on importance of quantum entanglement in supercomputers.

Course Code:	Course Title: Probability and Statistics	L-T- P- C	3	1	0	4
MAT2402	Type of Course: BSC					
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	The course introduces the concepts of probability theory and statistical analysis, covering how to collect, organize, interpret, and draw inferences from data using mathematical models to understand randomness and uncertainty, with applications across various fields like science, engineering, economics, and social sciences.					
Course Objective	The objective of the course is to equip students with the foundational knowledge of probability theory and statistical methods, enabling them to collect, analyze, interpret data, and make informed decisions based on the likelihood of events occurring in various situations, often applied across different fields like science, engineering, and business.					
Course Out Comes	On successful completion of the course the students shall be able to: 1. Be able to compute conditional probabilities directly and using Bayes' theorem, and check for independence of events. 2. Be able to set up and work with discrete & continuous random variables; in particular, to understand the Bernoulli, binomial, geometric, Poisson distributions, uniform, normal, and exponential distributions. 3. Identifying different types of data relationships (linear, polynomial, exponential, logarithmic). 4. Be able to use specific significance tests, including z-test, t-test (one- and two-sample), and chi-squared test					
Course Content:						
Module 1	Basic Probability		(6 Classes)			
Probability of an Event, multiplication rule, combinations, permutations, Addition Law, Multiplication Law, Conditional Probability, Bayes's Theorem and Problems.						
Module 2	Random Variables and Bivariate Distributions	Assignment	(15 Classes)			
Random Variables (discrete and continuous), Probability Mass/Density Functions, Mathematical Expectations, discrete probability distributions - Binomial distribution, Poisson distribution, geometric distribution, Continuous uniform distribution - exponential distribution,						

normal distribution, gamma distribution. Bivariate distributions and their properties, distribution of sums and quotients, conditional densities, Bayes' rule.

Module 3	Curve Fitting & Statistical Methods		(13 Classes)

Curve Fitting (Straight Line ($y = a + bx$), Parabola ($y = a + bx + cx^2$), Exponential Curves ($y = ae^{bx}$, $y = ab^x$ and $y = ax^b$) Measures of Central tendency, Moments, skewness and Kurtosis, Correlation - Karl Pearson's coefficient of correlation and rank correlation (with & Without repetition, Multiple Correlation - Problems. Regression analysis - lines of regression, Multiple regression - Problems.

Module 4	Joint Probability Distribution and Sampling Theory	Assignment	(15 Classes)

Joint Probability distribution for two discrete random variables, expectation and covariance.

Random sampling, sampling distributions, Standard Error, Type I & Type II errors, Testing of Hypothesis, Test of significance - Large sample test for single proportion, difference of proportions, single mean, difference of means, and difference of standard deviations, Test for single mean, difference of means and correlation coefficients, test for ratio of variances - Chi-square test for goodness of fit and independence of attributes.

Targeted Application & Tools that can be used:

The contents of this course has direct applications in most of the core engineering courses for problem formulations, Problem Solution and system Design.

Tools Used: R software (Open Source)

Assignment:

1. Select any one simple differential equation pertaining to the respective branch of engineering, identify the dependent and independent variable – Obtain the solution and compare the solution sets by varying the values of the dependent variable.

Topics relevant to SKILL DEVELOPMENT: The course focuses on the concepts of Vector calculus and Linear Algebra with reference to specific engineering problems. The course is of both conceptual and analytical type in nature through Problem Solving. This is attained through the assessment component mentioned in the course handout.

Course Code: CHE7601	Environmental Studies Type of Course: MOOC course	L- T- P- C	-	-	-	-
		Contact hours	-	-	-	-
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	This course is designed to improve the learners' SKILL DEVELOPMENT by using PARTICIPATIVE LEARNING techniques. This course aims to familiarize students with fundamental environmental concepts and their relevance to business operations, preparing them to address forthcoming sustainability challenges. It is designed to equip students with the knowledge and skills needed to make decisions that account for environmental consequences, fostering environmentally sensitive and responsible future managers. This course is designed to cater to Environment and Sustainability					
Course Objective	The objective of the course is ‘SKILL DEVELOPMENT’ of the student by using ‘PARTICIPATIVE LEARNING’ techniques					
Course Outcomes	On successful completion of this course the students shall be able to: 1. Describe the issues related to natural resources, ecosystems and biodiversity 2. Identify environmental hazards affecting air, water and soil quality 3. Recognize the importance of healthy environment and finding the sustainable methods to protect the environment 4. Convert skills to address immediate environmental concerns through changes in environmental processes, policies, and decisions					

Course Content:				
Module 1	Understanding Environment, Natural Resources, and Sustainability			
Topics: Classification of natural resources, issues related to Population growth and their overutilization, and strategies for their conservation. Water, air, soil, mineral, energy and food source. Effect of human activities on natural resources. Concept of sustainability- Sustainable Development Goals (SDGs)- targets and indicators, challenges and strategies for SDGs; Sustainable practices in managing resources, including deforestation, water conservation, Desalination – types, energy security, and food security issues, Life Cycle thinking and Circular Economy.				
Module 2	Ecosystems, Biodiversity, and Sustainable Practices			
Topics: Ecosystems and ecosystem services: Various natural ecosystems, Major ecosystem types in India and their basic characteristics; forests, wetlands, grasslands, agriculture, coastal and marine; Ecosystem services- classification and their significance. The importance of biodiversity, Types of biodiversity, Biodiversity and Climate Change, the threats it faces, hotspots, and the methods used for its conservation. Strategies for in situ and ex situ conservation, mega diverse nation.				
Module 3	Environmental Pollution, Waste Management, and Sustainable Development			
Topics: Types of pollution- Chemical, - Biological, Biomedical, noise, air, water, soil, thermal, radioactive and marine pollution, and their impacts on society. Urbanization and Urban environmental problems; effects, and mitigation. Causes of pollution, such as global climate change, ozone layer depletion, the greenhouse effect, and acid rain, with a particular focus on pollution episodes in India. Importance of adopting cleaner technologies; Solid waste management; Sustainable Materials and Technologies: Biodegradable and compostable materials, Recycled and reclaimed materials (E-waste management), Sustainable manufacturing processes.				
Module 4	Social Issues, Legislation, and Practical Applications			
Topics: Overview of key environmental legislation and the judiciary's role in environmental protection, including the Water (Prevention and Control of Pollution) Act of 1974, the Environment (Protection) Act of 1986, and the Air (Prevention and Control of Pollution) Act of 1981. Hazardous waste Rule 1989, Biomedical Waste handling 1998, Fly Ash Rule 1999, Municipal Solid Waste Rule 2000,				

Battery Rules 2001, E- Waste Rules 2011, Plastic waste management Rules 2016, Construction Demolition waste Rules 2016 National Biodiversity Action Plan (NBAP)

Major International Environmental Agreements: Convention on Biological Diversity (CBD), The Biological Diversity (Amendment) Act, 2023, United Nations Framework Convention on Climate Change (UNFCCC); Kyoto Protocol; Paris Agreement.

Major International organisations and initiatives: United Nations Environment Programme (UNEP), United Nations Educational, Scientific and Cultural Organization (UNESCO), Intergovernmental Panel on Climate Change (IPCC).

Targeted Application & Tools that can be used:

Application areas are Energy, Environment and sustainability

Tools: Online Tools – NPTEL and Swayam.

Project work/Assignment:

Assessment Type

- Online exams (MCQs) will be conducted by the department of Chemistry

Online Link*:

- 1) Lecure by Dr. Samik Chowdhury, Dr. Sudha Goel, NPTEL course: Environmental Science, <https://nptel.ac.in/courses/109105203>, 2024.

Topics relevant to Skill Development:

1. An attitude of enquiry.
2. Write reports

The topics related to Environment and Sustainability :

All topics in theory component are relevant to Environment and Sustainability.

Course Code: CIV1200	Course Title: Foundations of Integrated Engineering Type of Course: ESC	L- T-P- C	2	0	0	2
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	This interdisciplinary course introduces first-year engineering students to foundational principles and practices across key engineering domains, emphasizing real-world problem-solving, sustainability, and ethical innovation. Students explore how civil, mechanical, electrical, and IT systems intersect with emerging technologies like IoT, AI, and geomatics to address global challenges. Through case studies, learners gain deeper understanding of smart infrastructure, prototyping mechanical/electronic systems, and securing IT solutions. Topics include bioinformatics for environmental monitoring, GIS-enabled urban planning, renewable energy integration, and cybersecurity fundamentals. The course cultivates a holistic understanding of engineering's role in sustainable development, safety, and ethical decision-making, preparing students to contribute meaningfully to multidisciplinary projects in a technology-driven world.					

Course Objective	The objective of the course is skill development of student by using Participative Learning techniques.			
Course Outcomes	On successful completion of this course the students shall be able to: 1] Recall key principles of Agile, DevOps, and bioinformatics used in interdisciplinary engineering contexts. 2] Explain the role of GIS, LiDAR, and sustainable materials in designing smart infrastructure and disaster management systems. 3] Describe core components of mechanical systems and their real-world applications. 4] Describe the functionality of IoT-enabled wearable devices, embedded systems, and renewable energy integration in smart grids. 5] List foundational IT concepts such as cloud computing architectures, cybersecurity threats, and blockchain applications.			
Course Content:				
Module 1	Foundations of Engineering Practice	Assignment	Case studies	6 Sessions
Real-world problem-solving using data logic and practical applications, Collaboration and Innovation through multi-domain project, Engineering Ethics & Environmental Impact Emerging Fields: Automation, and Introduction to bioinformatics and its application Sustainability & Safety: Circular economy principles, carbon footprint analysis.				
Module 2	Civil Engineering & Geomatics	Assignment	Article Review	6 Sessions
Smart Infrastructure & Geomatics: GIS mapping, LiDAR, drone surveys for urban planning, Geospatial data analysis for disaster management. Sustainable Construction: 3D-printed structures, self-healing concrete, Digital twins for infrastructure monitoring. Green Innovations: Net-zero energy buildings, rainwater harvesting systems.				
Module 3	Mechanical Engineering in Action	Assignment & Quiz	Data Collection	6 Sessions
Advanced Manufacturing: Collaborative robots (cobots), additive manufacturing and 3D printing, Reverse engineering and prototyping. Energy Systems: Solar/wind energy harvesting, piezoelectric applications. Biomechanics: Prosthetics design, ergonomic product lifecycle.				
Module 4	Electrical & Electronics Engineering	Assignment & Quiz	Data Collection and visualization	6 Sessions
Smart Devices & Systems: Embedded systems, Wearable technology, Edge computing and hardware platforms Energy Innovations: EV charging infrastructure, wireless power transfer, Smart grid integration with renewables.				

Module 5	Fundamentals of IT	Assignment & Quiz	Case studies	6 Sessions
Core IT Topics: Networking basics, Cloud computing Cybersecurity & Data: Encryption, phishing prevention, zero-trust models, Database management. Emerging Tech: Blockchain for supply chains, AI/ML basics, IoT integration with cloud platforms				
Targeted Application & Tools that can be used: Application Areas include Interdisciplinary problem-solving, Smart city planning, disaster management, Robotics prototyping, renewable energy systems, Wearable health tech, smart grids, Secure cloud systems. Tools: 3D Printers, Autocad, Tinkercad, ArcGIS / QGIS, Arduino/Raspberry Pi

Course Code: CHE2501	Course Title: Chemistry of Smart Materials Type of Course: Theory - BSC	L-T- P- C	3	0	0	3
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	The objective of the course is to introduce the students to concepts and applications of chemistry of smart materials. The course also aims to enhance the knowledge of smart materials associated with memory system, display devices, , sensors, energy devices and environment. It will also cultivate an ability to identify chemistry in each of smart engineered materials and interpret solutions for the challenges connected to memory, display, energy, smart, green and sustainable technologies. It targets to strengthen the fundamental concepts behind chemistry of smart materials and then builds an interface with their industrial applications. This course is designed to cater to Environment and Sustainability					

Course Objective	The objective of the course is 'SKILL DEVELOPMENT' of the student by using Participative learning techniques.			
Course Outcomes	On successful completion of this course the students shall be able to: 1. Relate the knowledge of chemistry to computational approaches to identify materials functionalities and properties 2. Recognize and interpret solutions for the challenges connected to memory, display, smart, green and sustainable technologies. 3. Explain the quality parameters of engineering materials associated with environment and sensors. 4. Interpret the knowledge of sustainable chemistry for E- waste management. 5. Analyse the importance of various electrochemical sources in energy systems.			
Course Content:				
Module 1	Computational Chemistry	Assignment	Data Collection and analysis	09 classes
Topics: Fundamental particles of atom – their mass, charge and location – atomic number and mass number, Stabilizing interactions: Bonded and non-bonded interactions. Chemistry of weak interactions – van der Waals force and hydrogen bonding, Density functional theory. 3D co-ordinate generation for small molecules, geometry optimization by Molview. Chemical Databases: Chemoinformatics, MSDS Self- learning topics: Scope, cost and efficiency of computational modeling.				
Module 2	Materials for Memory and Display Systems	Assignment	Data Collection and analysis	09 Classes
Topics: Memory Systems : Introduction, classification of electronic memory devices- Transistor, capacitor, charge -transfer and Resistor, types of materials - organic, polymeric and hybrid materials, and applications, manufacturing of semiconductor chips. Display Systems: photo and electroactive materials , materials for display - Principle, Properties and applications: Liquid crystals for LCD-Liquid crystals display, Basics of LED: OLED-organic light emitting diode and light emitting electrochemical cells.				

Self-learning topics: Green computing: Biocomposite based memory devices				
Module 3	Nanomaterials based Smart Sensors and Devices	Assignment	Data Collection and analysis	09 Classes
Topics: Nanomaterials- Introduction, classification based on dimensionality, quantum confinement. Size dependent properties, Synthesis, Properties of CNT and Graphene and their application as Materials for data analysis and packaging -RFID and IONT. Sensors: Introduction, types, Principle and applications- electrochemical sensor: nanomaterials for sensing applications - Glucose, VOC sensing. Self-learning topics: Fullerene, biomolecules in sensing, Strain sensors				
Module 4	Sustainable Materials and Development	Quiz/Seminar	Data Collection and analysis	09
Topics: E waste: Introduction, E waste Hazards, E- waste management, Recovery of precious metal- Cu by Hydrometallurgy. Green Chemistry: Fundamentals and 12 principles with examples, Carbon footprint and sequestration Sustainable Chemistry: -Introduction to Biomaterials- PLA , polymers in bio-compatible and bio-degradable materials - Poly(3-hydroxybutyrate-co-3-hydroxyvalerate) PHBV, synthesis and applications in drug delivery. Self-learning topics: circular economy- case studies.				
Module 5	Energy Science	Quiz/Seminar	Data Collection and analysis	09
Topics: Battery technology:Fundamentals of electrochemistry, Introduction to electrochemical storage devices: battery (Lithium-ion battery- LiMnO_2, LiCoO_2, metal air batteries- LiO_2) and supercapacitors-Introduction, Principle, Types - EDLC, pseudo and asymmetric capacitor. Photovoltaics: Solar cells - Construction and working principle; types- Inorganic, Organic and quantum dot sensitized (QDSSC's). Self-learning topics: Battery technology for e-mobility, Green hydrogen				
Targeted Application & Tools that can be used: Application areas are Data storage and analysis, logistics, Biomedicine, Energy, Environment and sustainability Tools: Molview, chemdraw, excel etc				
Project work/Assignment:				

Assessment Type

- Midterm exam
- Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screenshot accessing the digital resource.)
- Quiz/Student Seminar
- End Term Exam
- Self-learning

Skill Sets

All topics in theory component are relevant to Environment and Sustainability.

ENG2501	Advanced English	L- T- P- C	2	0	0	2
Version No.	2.0					
Course Pre-requisites	ENG1900 - English for Technical Communication					
Anti-requisites	NIL					
Course Description	This course is designed to equip students to enhance their communication abilities in Listening, Speaking, Reading, and Writing. The curriculum covers interpersonal communication principles, the art of speech writing and delivery (including impromptu speaking), strategic approaches to critical reading, the identification of logical fallacies, and persuasive writing. Furthermore, the course will introduce students to the potential of AI tools and the techniques of prompt engineering to elevate their communication skills in the digital age. Upon course completion, students will be well-prepared to communicate effectively and critically in both academic and professional environments.					
Course Outcome	On successful completion of the course the students shall be able to: 1. Recognize the elements of interpersonal and cross-cultural communication to address communication challenges effectively. 2. Demonstrate the ability to deliver structured and impromptu speeches using effective speaking techniques. 3. Interpret textual and visual materials using critical reading strategies to evaluate arguments, logic, and persuasion. 4. Produce persuasive and analytical essays using effective argumentation techniques and structured writing strategies.					
Course Content:						
Module 1	Foundations of Effective Communication	Case Studies/ Role play	Cross-Cultural Competency	12 Classes		
Topics: • Fundamentals of Interpersonal Communication • Verbal, Non-verbal, and Paraverbal communication. • Cultural dimensions theory (Hofstede's Cultural Dimensions).						

• Active Listening Techniques • Common Errors in Communication Activities: • Instagram/YouTube Vocabulary Activity • Charades with a Twist/Tone and Emotion Experiment/Mixed Messages Challenge/Role Reversal Conversations/Observation Exercise				
Module 2	Mastering Speech Delivery	JAM	Public Speaking Confidence	12 Classes
Topics: • Introduction to Prompt Engineering • Speech Preparation and Organization • Techniques for Effective Impromptu Speaking • Practice Speech Delivery Activities: • Speech Writing • Impromptu Speech				
Module 3	Critical Reading and Logical Analysis	Worksheet	Critical Thinking and Analysis	12 Classes
Topics: • Critical Reading Strategies: Contextualizing, Figurative Language, Evaluating Logic of an Argument, Recognizing Emotional Manipulation, Analysing Visuals • Recognizing Logical Fallacies: Slippery Slope, False Dilemma, Post Hoc, Hasty Generalization, Ad Hominem, Straw Man, Bandwagon, No True Scotsman, Red Herring, Appeal to Authority, Sunk Cost, Appeal to ignorance Activities: • Critical Reading Worksheet/Identifying Bias in News Articles				
Module 4	Writing Effective Arguments	Assignment	Clear and Coherent Writing	9 Classes
Topics: • Understanding Critical Writing • Building Arguments (Pathos, Ethos, Logos) • Techniques for Persuasion Activities: • Causes or Effects/Appeal Mash-Up/Debates on Controversial Topics • Opinion Writing				
Targeted Application & Tools that can be used: Quizziz, Chatgpt, Gemini, Youtube, Instagram, Quillbot, Grammarly, Padlet

Topics Relevant to “employability”: Teamwork and Collaboration, Critical Thinking and Problem-Solving

Topics Relevant to “Human Values and Professional Ethics”: Critical reasoning, Inclusivity and Fairness

Course Code: EEE1200	Course Title: Basics of Electrical and Electronics Engineering. Type of Course: Theory - ESC	L-T-P-C	3	0	0	3
Version No.	2.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	This is a fundamental Course which is designed to know the use of basics of electrical and electronics engineering principles occurs in various fields of Engineering. The course emphasises on the characteristics and applications of electrical and electronic devices. The course also emphasizes on the working, analysis and design of electrical circuits using both active & passive components. Additionally, this course creates a foundation for the future courses such as Electrical machines, power system, power electronics Linear Integrated Circuits, Analog Communication and Digital Communication etc.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Basics of Electrical and Electronics Engineering and attain Skill Development through Participative Learning techniques.					
Course Outcomes	On successful completion of this course the students shall be able to: Apply basic laws of Electrical Engineering to compute voltage, currents and other parameters in the circuits. Discuss various fundamental parameters appearing in the characteristics of semiconductor devices and their applications.					

	Summarize the operations of different biasing configurations of BJTs and amplifiers. Discuss the performance characteristics and applications of various electrical Machines.			
Course Content:				
Module 1	Introduction to Electrical Circuits	Assignment/ Quiz	Numerical solving Task	10 Sessions
DC Circuits: Concept of Circuit and Network, Types of elements, Network Reduction Techniques- Series and parallel connections of resistive networks, Star-to-Delta Transformations, Mesh Analysis, Nodal Analysis, Numerical examples. AC Circuits: Fundamentals of single phase circuits - Series RL, RC and R-L-C Circuits, Concept of active power, reactive power and Power factor, Numerical examples. Introduction to three phase system and relation between line and phase values in Star & Delta connection, Numerical examples.				
Module 2	Semiconductor and Diode applications	Assignment/ Quiz	Memory Recall based Quizzes	10 Sessions
Mass Action Law, Charge densities in a semiconductor, Types of SC, Junction diodes - Ideal and practical behaviour, Modelling the Diode Forward Characteristic, and Diode applications like rectifiers, Zener diode, characteristics and its applications like voltage regulator.				
Module 3	Transistors and its Applications	Assignment/ Quiz	Memory Recall-based Quizzes	10 Sessions
Transistor characteristics, Current components, BJT Configurations (CB, CC, CE configurations) and their current gains. Operating point, Biasing, Fixed Bias, and load line analysis. Single Stage amplifier. JFET (Construction, principal of Operation and Volt -Ampere characteristics). Pinch- off voltage, Comparison of BJT and FET. MOSFET (Construction, principal of Operation and symbol), MOSFET characteristics in Enhancement and Depletion modes.				
Module 4	Fundamentals of Electrical Machines	Assignment/ Quiz	Numerical solving Task	10 Sessions
Electrical Machines: Single phase transformers: principle of operation and EMF equation, Numerical examples. DC Motor: principle of operation, Back EMF, torque				

equation, Numerical examples. AC Motor: Principle operation of Induction Motors and its Applications.
Self-Learning Topics: • Clipping and clamping circuits, Stabilization Techniques, Voltage divider bias and its stability factor, Multistage amplifier, Darlington pair. • Special Machines: Introduction to special electrical machines and its applications.
Targeted Application & Tools that can be used: • Targeted Applications: Application Area includes all electrical and electronic circuits (power supply unit, regulator unit, embedded devices, hardware electronics etc.). The students will be able to join a profession which involves basics to high level of electronic circuit design. • Professionally Used Software: Multisim/ P Spice • Besides these software tools hardware equipment such as Multimeters, Function Generators, Power Supplies, Oscilloscopes etc., can be used to perform component/circuit testing and analysis..
Project Work/ Assignment:
1. Article review: At the end, of course an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. 2. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same. 3. Case Study: - At the end of the course students will be given a ‘real-world’ application based circuits like Power Amplifier, Signal/Function Generator etc. as a case study. Students will be submitting a report which will include Circuit Diagrams, Design, Working Mechanism and Results etc. in appropriate format

Topics relevant to “SKILL DEVELOPMENT”: Performing suitable experiments to compute the electric circuit parameters, performance operation of machines, and operation of semiconductor devices for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course plan.

Course Code: PPS1026	Course Title: Industry Readiness Program – II (Audited Course) Type of Course: Practical Only Course	L- T - P- C	0	0	2	0
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	This course is designed to enable students learn styles of communication, team building and use empathy in leadership. The course will benefit learners in preparing themselves effectively through various activities and learning methodologies.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of “Industry Readiness for Young Professionals” and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques.					
Course Out Comes	On successful completion of this course the students shall be able to: CO 1 Apply different communication skills for success in workplace CO 2 Practice team building skills for career success CO3 Demonstrate ethical leadership skills in workplace					
Course Content						

Course Code EEE1250	Course Title: Basics of Electrical and Electronics Engineering Laboratory Type of Course: Laboratory - ESC	L-T-P-C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	This fundamental laboratory provides an opportunity to validate the concepts taught in the basics of electrical and electronics engineering and enhances the ability to visualize real system performance, using both hardware and simulation tools.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Basics of Electrical and Electronics Engineering and attain Skill Development through Experiential Learning techniques.					
Basic skill sets required for the laboratory:						
	The students shall be able to develop: 1) An attitude of enquiry. 2) Confidence and ability to tackle new problems. 3) Ability to interpret events and results. 4) Ability to work as a leader and as a member of team. 5) Assess errors and eliminate them. 6) Observe and measure physical phenomenon. 7) Write Reports. 8) Select suitable equipment, instrument and materials. 9) Locate faults in systems. 10) Manipulative skills for setting and handling equipment. 11) The ability to follow standard test procedures. 12) An awareness of the need to observe safety precautions. 13) To judge magnitudes without actual measurement.					
Course Out Comes	On successful completion of the course the students shall be able to: 1. Apply basic laws of Electrical Engineering to compute voltage, currents, and other parameters in the circuits. 2. Demonstrate the working of electrical machines to observe performance characteristics. 3. Demonstrate the working of electronic circuits to obtain the V-I Characteristics of various semiconductor devices. 4. Sketch the characteristics and waveforms relevant to standard electrical and electronic circuits					
Course Content:						
	List of Laboratory Tasks: Experiment No 1: Verification of KVL and KCL for a given DC circuit. Level 1: Study and Verify KVL and KCL for the given electrical Circuit. Level 2: For the same circuit considered in level 1, perform the simulation using NI LabVIEW/Multisim/MATLAB.					

	Experiment No 2: Analyse AC series circuits – RL, RC and RLC . Level 1: Conduct an experiment to perform and verify the impedance, current and power of Series RL and RC circuits Level 2: Conduct an experiment to perform and verify the impedance and current of RLC series circuits. Experiment No 3: Calculation of power and power factor of the given AC Circuit. Level 1: Conduct an experiment to measure the power and power factor for given resistive load. Level 2: Conduct an experiment to measure the power and power factor for given inductive load. Experiment No 4: Perform the experiments on given Transformer. Level 1: Verify the EMF equation of a transformer and compute the voltage transformation ratio. Level 2: Study the effect of load on the secondary side of the transformer and verify the EMF equation under load conditions. Experiment No 5: Load test on DC shunt motor Level 1: Conduct load test on DC shunt motor and find its efficiency at different loads Level 2: Conduct load test on DC shunt motor and plot the performance characteristics. Experiment 6: Study of PN-Junction Diode Characteristics in Forward and Reverse Bias Conditions. Level 1: Carry out an experiment to plot VI Characteristics and hence find the cut-in voltage on forward characteristics for the Silicon P-N Junction diode. Level 2: Carry out an experiment to plot VI Characteristics of Zener diode and hence find the zener voltage on reverse characteristics for the Silicon P-N Junction zener diode. Experiment No. 7: To observe the output waveform of half wave and full wave rectifier circuit and compute ripple factor and efficiency Level 1: Identify the components required for a rectifier circuit, rig up the circuit, and sketch the output waveforms without filter. Level 2: Rig up the rectifier circuit with RC filter, observe the output waveforms, determine the efficiency and ripple factor. Experiment 8: To construct clipping and clamping circuits for different reference voltages and to verify the responses. Level 1: Identify the components required for building a Clipper / Clamper circuit. Rig up the circuit according to the circuit diagram given and sketch the output waveform. Level 2: Given a sinusoidal input of 10 V p-p, implement a positive / negative clipper with output clipped at 2 V. Experiment 9: To calculate various parameters of emitter follower circuit using BJT

	Level 1: Identify the components required to implement an emitter follower circuit. Rig up the circuit and observe the variations in output waveform with respect to the variations in input waveform. Level 2: Determine the values of Z_{in} input impedance and Z_{out} output impedance for Emitter Follower. Experiment 10: To Implement RC Coupled amplifier using a BJT and sketch the frequency response. Level 1: Identify the components required to implement an RC coupled amplifier circuit. Rig up the circuit and sketch the frequency response. Level 2: From the frequency response curve determine the value of the mid band gain and the bandwidth.

Targeted Application & Tools that can be used:

Targeted Applications: Application Area includes all electrical and electronic circuits (power supply unit, regulator unit, embedded devices, hardware electronics etc.). The students will be able to join a profession which involves basics to high level of electronic circuit design.

Professionally Used Software: Multisim/ P Spice

Besides these software tools hardware equipment such as Multimeters, Function Generators, Power Supplies, Oscilloscopes etc., can be used to perform component/circuit testing and analysis.

Course Code: ECE1511	Course Title: Design Workshop Course Type : ESC	L- T-P- C	1	0	2	2
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	This course is designed to provide an in-depth understanding of Arduino, microcontrollers Raspberry pi and their application in various real time projects involving sensors. Throughout the course, students will learn the fundamentals of Arduino and Raspberry Pi programming and gain hands-on experience with a wide range of sensors. Students will explore how to connect and interface sensors with Arduino and Raspberry Pi boards, read sensor data, and use it to control various output devices This course is suitable for beginners who are interested in exploring the world of electronics and developing practical applications using Arduino, Raspberry Pi and sensors.					
Course Objective	The objective of the course is Employability Skills of student by using PARTICIPATIVE LEARNING techniques.					
Course Outcomes	On successful completion of the course the students shall be able to 1. Explain the main features of the Arduino & the Raspberry Pi prototype board. 2. Demonstrate the hardware interfacing of the peripherals to Arduino and Raspberry Pi system. 3. Understand the types of sensors and its functions 4. Demonstrate the functioning of live projects carried out using Arduino and Raspberry Pi system.					

Course Content:				
Module 1	Basic concepts of Microcontrollers	Hands-on	Interfacing Task and Analysis	3 Sessions
Topics: Introduction to Arduino, ESP and Node MCU Pin configuration and architecture, Device and platform features, Concept of digital and analog ports, Familiarizing with Arduino Interfacing Board, API's , Introduction to Embedded C and Arduino platform, Arduino Datatypes and variables, Arduino i/o Functions, Arduino Communications, Arduino IDE, Various Cloud Platforms.				
Module 2	Sensory Devices	Hands-on	Interfacing Task and Analysis	3 Sessions
Arduino Sensors: Humidity Sensor, Temperature Sensor, Water Detector / Sensor, PIR Sensor, Ultrasonic Sensor, Connecting Switches and actuators, sensor interface with Arduino. Introduction to 3D Printer: 3D Printer technology and its working Principles, Applications. Introduction to online Simulators: Working with AutoCAD/Fusion 360 Simulator.				
Module 3	Introduction to Micro python	Hands-on	Interfacing Task and Analysis	4 Sessions
Topics: Introduction to MicroPython, Comparison with other programming languages, Setting up the MicroPython development environment, Basics of MicroPython syntax and structure.				
Module 4	Working with Raspberry-pi	Hands-on	Interfacing Task and Analysis	5 Sessions
Introduction to raspberry pi boards, pin-diagram, different types of raspberry pi boards and its application, LED and switch control. Mastering Modules, Setup Raspberry - PuTTY SSH,VNC Viewer to interface with more complicated sensors and actuators. Various Libraries and its functions.				
Lab: Name of the Experiments: Introduction Lab 1: Level 1: Overview on Arduino based Micro-controller, and sensors. Level 2: Interfacing of Arduino and ESP boards with sensors and other components. Lab 2: Smart Plant Monitoring Level 1- Push button-controlled LED. Level 2- Automatic Irrigation and monitoring System using Arduino Lab 3: Robotics with Arduino. Level 1- Servo Motor control using Arduino Level 2: DC Motor Control Using Arduino for Robotics. Lab 4: Environmental pollution using ESP. Level 1 - IoT based air Pollution Monitoring System. Level 2- IoT Based water pollution system Introduction Lab for raspberry pi: Level 1: Overview on Different Raspberry Pi Boards, and sensors. Level 2: Configuring the Raspberry Pi and Interfacing with sensors and other components.				

6. **Lab 7:** Raspberry Pi based Object Detection using TensorFlow and OpenCV.
7. **Lab 8:** Speech Recognition on Raspberry Pi for Voice Controlled Home Automation.
8. **Lab 9:** Design the website using HTML and CSS, and host the website on Raspberry Pi.
9. **Introduction Lab for 3D printing:**
Overview of 3D printing. Design of 3D structure using the CAD. Understand the steps of fabrication of simple rectangular box using 3D printer.
10. **Lab 10:** Design and print of Hollow Cylindrical structure using 3D CAD and 3D printer.
11. **Lab 11** Demonstration of Jetson nano board and its capability. **(OPTIONAL)**
12. **Lab 12:** Revision
13. **Lab 13:** Revision
14. **Lab 14:** Mini Project
15. **Lab 15:** Mini Project Evaluation.

Topics: Types of Arduino boards, Thonny Python, Python IDLE, sensors, 3D Printer

Targeted Application & Tools that can be used:

Application Area:

Home Automation, Environmental Monitoring, Agriculture and Farming, Industrial Automation, Internet of Things (IoT), Robotics, Wearable Devices, Security Systems, Education and Learning. These are just a few examples of the many application areas where Arduino, Raspberry Pi and sensors can be applied. The flexibility and affordability of Arduino, and Raspberry Pi combined with the wide range of sensors available, allow for endless possibilities in creating innovative projects.

Professionally Used Software: Students can use open SOURCE Software's Arduino IDE and Tincker CAD, Thonny Python, Python IDLE etc.

Project work/Assignment:

1. Projects: At the end of the course students will be completing the project work on solving many real time issues.

2. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. [Presidency University Library Link](#).

3. Presentation: There will be a presentation from interdisciplinary students group, where the students will be given a project on they have to demonstrate the working and discuss the applications for the same

Course Code: MAT2303	Course Title: Linear Algebra & Vector Calculus Type of Course: BSC	L-T- P- C	3	1	0	4

Version No.		1.0
Course Pre-requisites		Basic Concepts of Limits, Differentiation, Integration, Matrices (PU Level)
Anti-requisites		NIL
Course Description		This course explores the fundamental concepts of vectors, matrices, and their operations within the context of calculus, including vector differentiation and integration, while applying these tools to solve problems related to linear systems, transformations, and geometric interpretations in higher dimensions, often with applications in fields like physics, engineering, and computer graphics; key topics include vector algebra, matrix operations, determinants, eigenvalues, eigenvectors, gradients, divergence, curl, line integrals, surface integrals, and the fundamental theorems of vector calculus like Green's Theorem, Stokes' Theorem, and the Divergence Theorem.
Course Objective		The course is intended to develop computational proficiency involving procedures in Matrices, Linear Algebra and Vector Calculus which are useful to all engineering disciplines. This course is to equip students with the ability to understand and manipulate vectors in multidimensional space, apply matrix operations to solve systems of linear equations, and utilize concepts like gradients, divergence, and curl to analyze physical phenomena, all while developing a strong foundation for applying these tools in various scientific and engineering fields like physics, mechanics, and computer graphics.
Course Out Comes		On successful completion of the course the students shall be able to: CO1 - Use matrix methods and certain techniques to solve the system of linear equations and to find eigen values, eigen vectors of a matrix to check whether it is diagonalizable. CO2 - Understand the abstract notions of vector space and dimensionality of it. CO3 - find the matrix representation of a linear transformation given bases of the relevant vector spaces. CO4 - Learn different notions of vector and scalar fields with their properties. Understanding the major theorems (Green's, Stokes', Gauss') and some applications of these theorems.
Course Content:		
Module 1	Systems of Linear Equations	6. Classes)
Systems of Linear Equations, Matrices and Elementary Row Operations, Echelon forms, Matrix operations, invertible matrices, Determinants and their properties, Cramer's Rule, LU-decomposition, Applications of Systems of Linear Equations.		

Module 2	Vector Space	Assignment	(9Classes)
Linear Combinations and Linear Independence, Vectors in $n \mathbb{R}^n$, Linear Combinations, Linear Independence Vector Spaces, Definition of a Vector Space, Subspaces, Basis and Dimension, Coordinates and Change of Basis, Orthogonal bases and orthogonal projections.			
Module 3	Linear Transformations		(15 lectures)
Linear Transformations, Algebra of transformations, The Null Space and Range, Isomorphisms, Matrix Representation of Linear Transformations, Similarity Eigenvalues and Eigenvectors, Eigenvalues and Eigen vectors, Diagonalization.			
Inner Product Spaces, The Dot Product on $\mathbb{R}^n$ and Inner Product Spaces, Orthonormal Bases, Orthogonal Complements, Application: Least Squares Approximation, Diagonalization of Symmetric Matrices, Application: Quadratic Forms.			
Singular Value Decomposition: Singular values, computing singular value decomposition, and Introduction to principal component analysis.			
Module 4	Vector Calculus	Assignment	(15 lectures)
Vector & Scalar Functions and Fields, Derivatives, Curve, Arc length, Curvature & Torsion, Gradient of Scalar Field, Directional Derivative, Divergence of a Vector Field, Curl of a Vector Field, Physical interpretation, solenoidal and irrotational vector fields. Problems.			
Line Integrals, Path Independence of Line Integrals, Green`s Theorem in the plane, Surface Integrals, Divergence Theorem of Gauss, Stokes`s Theorem.			
Targeted Application & Tools that can be used: • Solve systems of linear equations using various methods including Gaussian and Gauss Jordan elimination and inverse matrices. • Perform matrix algebra, invertibility, and the transpose and understand vector algebra in $\mathbb{R}^n$. • Determine relationship between coefficient matrix invertibility and solutions to a system of linear equations and the inverse matrices. • Find eigenvalues and eigenvectors and use them in applications. • Find the dimension of spaces such as those associated with matrices and linear transformations. • Understand real vector spaces and subspaces and apply their properties. • Compute inner products in a real vector space and compute angle and orthogonality in inner product spaces. • Create orthogonal and orthonormal bases: Gram-Schmidt process and use bases and orthonormal bases to solve application problems.			

- Prove basic results in linear algebra using appropriate proof-writing techniques such as linear independence of vectors; properties of subspaces; linearity, injectivity and subjectivity of functions; and properties of eigenvectors and eigenvalues.

Assignment:

Preparation of power-point slides, which include videos, animations, pictures, graphics better understanding the applications of Linear Algebra and Vector Calculus to engineering applications – The faculty will allocate chapters/ parts of chapters to groups of students so that the syllabus of Linear Algebra and Vector Calculus is covered.

Topics relevant to SKILL DEVELOPMENT: The course focuses on the concepts of Vector calculus and Linear Algebra with reference to specific engineering problems. The course is of both conceptual and analytical type in nature through Problem Solving. This is attained through the assessment component mentioned in the course handout.	

Course Code: CSE2251	Course Title: Data Communications and Computer Networks Type of Course: Theory / PCC	L- T-P- C	3	0	0	3
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	The objective of this course is to provide knowledge in data communications and computer networks, its organization and its implementation, and gain practical experience in the installation, monitoring, and troubleshooting of LAN systems. The associated laboratory is designed to implement and simulate various networks using Cisco packet tracer, NS2. All the lab exercises will focus on the fundamentals of creating multiple networks, topologies and analyzing the network traffics.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Data Communications and Computer Networks and attain Employability through Problem Solving Methodologies.					
Course Outcomes	On successful completion of the course, the students shall be able to: 1] Illustrate the Basic Concepts Of Data Communication and Computer Networks. 2] Analyze the functionalities of the Data Link Layer. 3] Apply the Knowledge of IP Addressing and Routing Mechanisms in					

	Computer Networks. 4] Demonstrate the working principles of the Transport layer and Application Layer.			
Course Content:				
Module 1	Introduction and Physical Layer- CO1	Assignment	Problem Solving	7 Sessions
Introduction to Computer Networks and Data communications, Network Components – Topologies, Transmission Media –Reference Models -OSI Model – TCP/IP Suite. Physical Layer -Analog and Digital Signals – Digital and Analog Signals – Transmission - Multiplexing and Spread Spectrum.				
Module 2	Reference Models and Data Link Layer – CO2	Assignment	Problem Solving	7 Sessions
Data Link Layer - Error Detection and Correction – Parity, LRC, CRC, Hamming Code, Flow Control and Error Control, Stop and Wait, ARQ, Sliding Window, Multiple Access Protocols, CSMA/CD,CSMA/CA, IEEE 802.3, IEEE 802.11 Ethernet.				
Module 3	Network Layer – CO3	Assignment	Problem Solving	10 Sessions
Network Layer Services - Network Layer Services, Switching Techniques, IP Addressing methods- IPv4 IPV6 – Subnetting. Routing, - Distance Vector Routing – RIP-BGP-Link State Routing –OSPF-Multi cast Routing-MOSPF- DVMRP – Broad Cast Routing. EVPN-VXLAN, VPLS, ELAN.				
Module 4	Transport and Application Layer -CO3	Assignment	Problem Solving	10 Sessions
Transport Layers - Connection management – Flow control – Retransmission, UDP, TCP, congestion control, – Congestion avoidance (DECbit, RED) The Application Layer: Domain Name System (DNS), Domain Name Space, SSH, FTP, Electronic Mail (SMTP, POP3, IMAP, MIME) – HTTP – – SNMP, Web Services, Virtual Networking.				
Targeted Application & Tools that can be used: Cisco Packet Tracer, Wireshark, and NS2. Case Study/Assignment: Choose and analyze a network from any organization/Assignment proposed for this course in CO1-CO4 Problem Solving: Choose and appropriate devices and implement various network concepts. Programming: Simulation of any network using NS2.

Course Code: CSE2252	Course Title: Data Communications and Computer Networks Lab Type of Course: Lab / PCC	L- T-P- C	0	0	2	1
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	This lab-based course provides hands-on experience in the principles and practices of data communications and computer networking. It is designed to complement theoretical concepts covered in the associated lecture course. Through a series of structured experiments and practical exercises, students will gain proficiency in configuring, analyzing, and troubleshooting computer networks. Key topics include network topology design, IP addressing and subnetting, Ethernet and LAN technologies, routing and switching, TCP/IP protocol suite, and basic network security measures. Students will work with industry-standard tools and equipment, including routers, switches, protocol analyzers, and network simulation software such as Cisco Packet Tracer or Wireshark.					
Course Objective	The objective of this lab course is to provide students with practical, hands-on experience in the configuration, operation, and troubleshooting of data communication systems and computer networks. Through guided experiments and real-world scenarios, students will reinforce theoretical knowledge, develop essential technical skills, and gain a deeper understanding of networking concepts, protocols, and devices used in modern communication systems.					
Course Outcomes	On successful completion of the course, the students shall be able to: 1. Design and configure basic network topologies using routers, switches, and end devices to meet specified requirements. 2. Analyze and troubleshoot network connectivity and performance issues using tools such as Wireshark and network simulators.					

	3. Demonstrate understanding of key networking protocols (e.g., TCP/IP, ARP, ICMP, DHCP) through practical implementation and observation. 4. Apply IP addressing and subnetting techniques to efficiently allocate and manage network resources in various networking scenarios.			
Course Content:				
Module 1,2,3,4	Physical Layer, Network Layer, Transport Layer	Lab Assignment	Problem Solving	24 Sessions
List of Laboratory Tasks: Lab sheet -1, M-1, 3 [2 Hours] Experiment No 1: Level 1: Study of basic network commands and network configuration commands. Lab sheet -2, M-1[2 Hours] Experiment No 1: Level 1: Identify and explore Network devices, models and cables. Introduction to Cisco packet tracer. Experiment No. 2: Level 2 – Create various network topologies using a cisco packet tracer. Lab sheet -3, M-2,3 [2 Hours] Experiment No. 1: Level 2 - Basic Configuration of switch/router using Cisco packet tracer. Experiment No. 2: Level 2 -Configure the privilege level password and user authentication in the switch/router. Lab sheet – 4, M-3 [2 Hours] Experiment No. 1: Level 2 - Configure the DHCP server and wireless router and check the connectivity Lab sheet – 5, M-3 [2 Hours] Experiment No. 1: Level 2 - Configure the static routing in the Cisco packet tracer. Experiment No. 2: Level 2 - Configure the dynamic routing protocol in the Cisco packet tracer. Lab sheet – 6, M-4 [2 Hours] Experiment No. 1: Configuration of DNS Server with Recursive & Integrative approach in Cisco packet tracer. Lab sheet – 7, M-4 [2 Hours] Experiment No. 1: Configure the telnet protocol in the router using the Cisco packet tracer. Lab sheet – 8, M-4[2 Hours] Experiment No. 1:				

Level1- Introduction to NS2 and basic TCL program.

Lab sheet – 9, M-4 [2 Hours]

Experiment No. 1:

Level 1: Simulate three node Point to point network using UDP in NS2.

Experiment No. 2:

Simulate transmission of Ping message using NS2.

Lab sheet – 10, M-4[2 Hours]

Experiment No. 1:

Simulate Ethernet LAN using N-node in NS2.

Experiment No. 2:

Simulate Ethernet LAN using N-node using multiple traffic in NS2

Lab sheet –11, M-3,4 [2 Hours]

Experiment No. 1:

Level 1- Introduction to Wire Shark.

Experiment No. 2:

Level 2- Demonstration of packet analysis using wire shark.

Lab sheet –12, M-1,2,3 [2 Hours]

Experiment No. 1:

Level 2- Demonstration of switch and router configuration using real devices

Targeted Application & Tools that can be used: Cisco Packet Tracer, Wireshark, and NS2.

Case Study/Assignment: Choose and analyze a network from any organization/Assignment proposed for this course in CO1-CO4

Problem Solving: Choose and appropriate devices and implement various network concepts.

Programming: Simulation of any network using NS2.

Course Code: CSE2253	Course Title: Data Structures Type of Course: Theory		L-T- P- C	3	0	0	3
Version No.	1.0						
Course Pre-requisites							
Anti-requisites	NIL						
Course Description	This course introduces the fundamental concepts of data structures and to emphasize the importance of choosing an appropriate data structure and technique for program development. This course has theory and lab component which emphasizes on understanding the implementation and applications of data structures using Java programming language. With a good knowledge in the fundamental concepts of data structures and practical experience in implementing them, the student can be an effective designer, developer for new software applications.						
Course Objective	The objective of the course is SKILL DEVELOPMENT of student by using EXPERIENTIAL LEARNING techniques						
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Describe the concept of basic data structure, stacks, queues, and arrays and their operations. [Understand] CO2: Utilize linked lists for real-time scenarios. [Apply] CO3: Apply an appropriate non-linear data structure for a given scenario. [Apply] CO4: Demonstrate different searching and sorting techniques. [Apply]						
Course Content:							
Module 1	Introduction to Data Structure and Linear Data Structure - Stacks and Queues	Assignment	Program activity	9 Hours			
Introduction - Introduction to Data Structures, Types and concept of Arrays.							

Stack - Concepts and representation, Stack operations, stack implementation using array and Applications of Stack. Queues - Representation of queue, Queue Operations, Queue implementation using array, Types of Queue and Applications of Queue.				
Module 2	Linear Data Structure- Linked List	Assignment	Program activity	12 Hours
Topics: Linked List - Singly Linked List, Operation on linear list using singly linked storage structures, Circular List, Applications of Linked list. Recursion - Recursive Definition and Processes.				
Module 3	Non-linear Data Structures - Trees	Assignment	Program activity	12 Hours
Topics: Trees - Introduction to Trees, Binary tree: Terminology and Properties, Use of Doubly Linked List, Binary tree traversals: Pre-Order traversal, In-Order traversal, Post - Order traversal, Binary Search Tree, AVL Trees - Red Black Tree, Expression Tree , Heaps.				
Module 4	Non-linear Data Structures - Graphs and Hashing	Assignment	Program activity	6 Hours
Topics: Graphs: Basic Concept of Graph Theory and its Properties, Representation of Graphs . ADT, Elementary graph operations, Minimum Cost spanning trees, Shortest path and Transitive closure. Hashing: Introduction, Static Hashing, Dynamic Hashing				
Module 5	Searching & Sorting	Assignment	Program activity	6 Hours
Topic: Sorting & Searching - Sequential and Binary Search, Sorting – Selection and Insertion sort, Quick sort, Merge Sort, Bubble sort.				
List of Laboratory Tasks:				

Lab sheet -1

Level 1: Prompt the user, read input and print messages. Programs using class, methods and objects

Level 2: Programming Exercises on fundamental Data structure - Arrays based on Scenario.

Lab sheet -2

Level 1: Programming Exercises on Stack and its operations

Level 2: Programming Exercises on Stack and its operations with condition

Lab sheet -3

Level 1: Programming on Stack application infix to postfix Conversion

Level 2: -

Lab sheet -4

Level 1: Programming on Stack application – Evaluation of postfix

Lab sheet -5

Level 1: Programming Exercises on Queues and its operations with conditions

Level 2: -

Lab sheet -6

Level 1: Programming Exercises on Linked list and its operations.

Level 2: Programming Exercises on Linked list and its operations with various positions

Lab sheet -7

Level 1: Programming Exercises on Circular Linked list and its operations.

Level 2: Programming Exercises on Circular Linked list and its operations with various positions

Lab sheet -8

Level 1: Programming Exercises on factorial of a number

Level 2: Programming the tower of Hanoi using recursion

Lab sheet -9

Level 1: -

Level 2: Programming the tower of Hanoi using recursion

Lab sheet -10

Level 1: Programming Exercise on Doubly linked list and its operations

Level 2: - Lab sheet -11 Level 1: Program to Construct Binary Search Tree and Graph Level 2: Program to traverse the Binary Search Tree in three ways(in-order, pre-order and post-order) and implement BFS and DFS Lab sheet -12 Level 1: Program to Implement the Linear Search & Binary Search Level 2: Program to Estimate the Time complexity of Linear Search Lab sheet -13 Level 1: Program to Implement and Estimate the Time complexity of Selection Sort Level 2: Program to Implement and Estimate the Time complexity of Insertion Sort Lab sheet -14 (Beyond syllabus activity) Level 1: Program to Construct AVL Tree Level 2: Lab sheet -15 (Beyond syllabus activity) Level 1: Program to Construct RED BLACK Tree
Targeted Application & Tools that can be used Use of PowerPoint software for lecture slides and use of Modern IDE like VS Code and Eclipse for lab programs to execute.
Project work/Assignment:
Assignment: Students should complete the lab programs by end of each practical session and module wise assignments before the deadline.

Course Code: CSE2255	Course Title: Object Oriented Programming Using Java Type of Course: Theory - PCC	L-T- P- C	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Nil					
Anti-requisites	Nil					

Course Description	This course introduces the core concepts of object-oriented programming. This course has theory and lab component which emphasizes on understanding the implementation and application of object-oriented programming paradigm. It helps the student to build real time secure applications by applying these concepts and also for effective problem solving. The students interpret and understand the need for object oriented programming to build applications.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Problem-Solving using JAVA and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques			
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Describe the basic programming concepts. [Understand] CO2: Apply the concept of classes, objects and methods to solve problems. [Application] CO3: Apply the concept of arrays and strings. [Appy] CO4: Implement inheritance and polymorphism building secure applications. [Apply] CO5: Apply the concepts of interface and error handling mechanism. [Apply]			
Course Content:				
Module 1	Basic Concepts of Programming and Java	Assignment	Problem Solving	9 Sessions
Topics: Introduction to Principles of Programming: Process of Problem Solving, Java program structure, Download Eclipse IDE to run Java programs, Sample program, Data types, Identifiers, Variables, Constants in java, Operators, Assignments and Expression, Basic Input/Output functions, Control Statements: Branching and Looping.				
Module 2	Classes, objects, methods and Constructors	Assignment	Problem Solving	10 Sessions
Topics: Classes, Objects and Methods: Introduction to object Oriented Principles, defining a class, adding data members and methods to the class, access specifiers, instantiating objects, reference variable, accessing class members and methods. Static Polymorphism: Method overloading, constructors, constructor overloading, this keyword, static keyword, Nested classes, Accessing members in nested classes.				
Module 3	Arrays, String and String buffer	Assignment	Problem Solving	8 Sessions

Topics: Arrays: Defining an Array, Initializing & Accessing Array, Multi –Dimensional Array, Array of objects. String: Creation & Operation. String builder class, methods in String Buffer.

Module 4	Inheritance and Polymorphism	Assignment	Problem Solving	10 Sessions

Topics: Inheritance: Defining a subclass, Types of Inheritance, super keyword. Dynamic Polymorphism: Method overriding. Final keyword: with data members, with member functions and with class. Abstract keyword: with data members, with member functions and with class, Exception handling.

Module 5	Input & Output Operation in Java	Assignment	Problem Solving	8 Sessions

Input/output Operation in Java(java.io Package), Streams and the new I/O Capabilities, Understanding Streams, working with File Object, File I/O Basics, Reading and Writing to Files, Buffer and Buffer Management, Read/Write Operations with File Channel, Serializing Objects, Observer and Observable Interfaces.

5. static keyword and Inner classes
6. Inheritance and Polymorphism.

for **Skill Development** through **Experiential Learning** techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE2256	Course Title: Object Oriented Programming Using Java Lab Type of Course: Lab - PCC	L-T- P- C	0	0	2	1
Version No.	2.0					
Course Pre-requisites	Nil					
Anti-requisites	Nil					
Course Description	This course introduces the core concepts of object-oriented programming. This course has theory and lab component which emphasizes on understanding the implementation and application of object-oriented programming paradigm. It helps the student to build real time secure applications by applying these concepts and also for effective problem solving. The students interpret and understand the need for object oriented programming to build applications.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Problem-Solving using JAVA and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques					
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Demonstrate basic programming concepts. [Apply] CO2: Apply the concept of classes, objects and methods to solve problems. [Application] CO3: Apply the concept of arrays and strings. [Appy] CO4: Implement inheritance and polymorphism building secure applications. [Apply]					

	CO5: Apply the concepts of interface and error handling mechanism. [Apply]			
Course Content:				
Module 1	Basic Concepts of Programming and Java	Assignment	Problem Solving	12 Sessions
Download Eclipse IDE to run Java programs, Sample programs on Data types, Identifiers, Variables, Constants in java, Operators, Assignments and Expression, Basic Input/ Output functions, Control Statements: Branching and Looping.				
Module 2	Classes, objects, methods and Constructors	Assignment	Problem Solving	14 Sessions
Problem solving using Classes, Objects and Methods: defining a class, adding data members and methods to the class, access specifiers, instantiating objects, reference variable, accessing class members and methods. Use Static Polymorphism: Method overloading, constructors, constructor overloading, this keyword, static keyword, Nested classes, Accessing members in nested classes.				
Module 3	Arrays, String and String buffer	Assignment	Problem Solving	10 Sessions
Using Arrays and Strings : Defining an Array, Initializing & Accessing Array, Multi – Dimensional Array, Array of objects. String: Creation & Operation. String builder class, methods in String Buffer.				
Module 4	Inheritance and Polymorphism	Assignment	Problem Solving	12 Sessions
Inheritance: Defining a subclass, Types of Inheritance, super keyword. Dynamic Polymorphism: Method overriding. Final keyword: with data members, with member functions and with class. Abstract keyword: with data members, with member functions and with class, Exception handling.				
Module 5	Input & Output Operation in Java	Assignment	Problem Solving	12 Sessions
Input/output Operation in Java(java.io Package), Streams and the new I/O Capabilities, Understanding Streams, working with File Object, File I/O Basics, Reading and Writing to Files, Buffer and Buffer Management, Read/Write Operations with File Channel, Serializing Objects, Observer and Observable Interfaces.				
P1: Programming Exercises on Basic Concepts. LEVEL 1: Discuss about datatypes and variables.				

LEVEL 2: Demonstrate a simple java program

P2: Programming Exercises on Basic Concepts.

LEVEL 1: Discuss about datatypes and variables.

LEVEL 2: Demonstrate a simple java program

P3: Programming Exercises on operators, expressions based on a given scenario.

LEVEL 1: Explain operators, expressions.

LEVEL 2: Demonstrate operators

P4: Programming Exercises Command Line Arguments based on a given scenario.

LEVEL 1: Explain command line arguments

LEVEL 2: Demonstrate command line arguments

P5: Programming Exercises on basic Input/ Output functions and Control Statements: Branching

LEVEL 1: Explain Input/ Output functions

LEVEL 2: Demonstrate Control Statements: Branching

P6: Programming Exercises on Control Statements: Looping

LEVEL 1: Explain various loops.

LEVEL 2: Demonstrate Control Statements: Looping

P7: Programming Exercises on Creating Objects, classes on a given scenario.

LEVEL 1: Illustrate class, object and methods.

LEVEL 2: Execute java program using class and objects

P8: Programming Exercises on Adding methods and Constructors to the class based on a given scenario.

LEVEL 1: Illustrate methods and constructors

LEVEL 2: Execute java program using methods and constructors

P9: Programming Exercises on methods based on a given scenario.

LEVEL 1: Illustrate method overloading

LEVEL 2: Apply method overloading for the given scenario.

P10: Programming Exercises on methods based on a given scenario.

LEVEL 1: Illustrate constructors overloading

LEVEL 2: Apply constructor overloading for the given scenario

P11: Programming Exercises on methods for static members based on a given scenario.

LEVEL 1: Benefits of usage static members

LEVEL 2: Usage of Static Members for the given scenario

P12: Programming Exercises on static methods based on a given scenario.

LEVEL 1: Benefits of usage static methods

LEVEL 2: Usage of Static Methods for the given scenario.

P13: Programming Exercises on nested Classes based on a given scenario.

LEVEL 1: Benefits of usage nested classes

LEVEL 2: Apply the concept of usage of nested classes for the given scenario

P14: Programming Exercises on Arrays and its built-in functions based on a given scenario.

LEVEL 1: Illustrate one dimensional arrays and its functions.

LEVEL 2: Demonstrate programs with single-dimensional arrays and operations.

P15: Programming Exercises on Arrays and its built-in functions based on a given scenario.

LEVEL 1: Illustrate multi dimensional arrays and its functions.

LEVEL 2: Demonstrate programs with multi-dimensional arrays and operations.

P16: Programming Exercises on String Class and its built-in functions based on a given scenario.

LEVEL 1: Explain about String class and String methods.

LEVEL 2: Execute simple java applications for String and StringBuffer operations

P17: Programming Exercises on String Buffer Class and its built-in functions based on a given scenario.

LEVEL 1: Explain about StringBuffer class and String methods.

LEVEL 2: Execute simple java applications for String and StringBuffer operations

P18: Programming Exercises on String Builders and its built-in functions based on a given scenario.

LEVEL 1: Explain about String Builders.

LEVEL 2: Execute java applications for String Builders

P19: Programming Exercises on single, multi level Inheritance and super keyword based on given scenario.

LEVEL 1: Explain single and multi level inheritance.

LEVEL 2: Demonstrate simple applications for the different types of inheritance

P20: Programming Exercises hierarchical Inheritance and super keyword based on given scenario.

LEVEL 1: Explain hierarchical inheritance.

LEVEL 2: Demonstrate simple applications for hierarchical inheritance

P21: Programming Exercises on Overriding.

LEVEL 1: Differentiate method overloading and method overriding.

LEVEL 2: Demonstrate simple program with dynamic method dispatch.

P22: Programming Exercises on Final based on given scenario.

LEVEL 1: Implement programs using concept of final.

LEVEL 2: Use final keyword for the given problem

P23: Programming Exercises on Abstract keyword based on given scenario.

LEVEL 1: Implement programs using concept of Abstract.

LEVEL 2: Use abstract keyword for the given problem

P24: Programming Exercises on Interface based on a given scenario.

LEVEL 1: Differentiate abstract class about interface

LEVEL 2: Implement interfaces in the given problem

P25: Programming Exercises on Exception Handling based on a given scenario.

LEVEL 1: Explain exception handling

LEVEL 2: Solve the given problem using exception handling mechanism.

P26: Programming Exercises on Character Stream Classes based on a given scenario.

LEVEL 1: Explain Character Stream Classes

LEVEL 2: Solve the given problem using Character Stream Class.

P27: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

P28: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

P29: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

P30: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

Targeted Application & Tools that can be used : JDK /Eclipse IDE/Visual Studio Code / net Beans IDE.

Course Code: MAT2404	Course Title: Discrete Mathematics Type of Course: Theory - ESC	L-T- P- C	3	1	0	4
Version No.	1.0					
Course Pre-requisites	MAT2302					
Anti-requisites	NIL					
Course Description	The course explores the study of mathematical structures that are fundamentally discrete (not continuous), focusing on concepts like set theory, logic, graph theory, combinatorics, and number theory, with applications primarily in computer science fields like algorithms, software development, and cryptography; it covers topics such as propositional logic, proof techniques, relations, functions, counting principles, and basic graph algorithms, providing a foundation for analyzing discrete problems and structures within computer science.					
Course Objective	The main objective of the course is that students should learn a particular set of mathematical facts and how to apply them. It teaches students how to think logically and mathematically through five important themes: mathematical reasoning, combinatorial analysis, discrete structures, algorithmic thinking, and applications and modeling. A successful discrete mathematics course should carefully blend and balance all five themes.					
Course Outcomes	On successful completion of the course the students shall be able to: CO1 - Explain logical sentences through predicates, quantifiers and logical connectives. CO2 - Deploy the counting techniques to tackle combinatorial problems CO3 - Comprehend the basic principles of set theory and different types of relations. CO4 - Apply different types of structures of trees for developing programming skills					
Course Content:						
Module 1	Fundamentals of Logic					(10 Classes)

Basic Connectives and Truth Tables, Propositional Logic, Applications of Propositional Logic, Propositional Equivalences, Predicates and Quantifiers, Nested Quantifiers, Rules of Inference, Introduction to Proofs, Proof Methods and Strategy.			
Module 2	Principle of Counting	Assignment	(15 Classes)
The Well Ordering Principle – Mathematical Induction The Basics of Counting, Permutations and Combinations, Binomial Coefficients and Identities, Generalized Permutations and Combinations, Generating Permutations and Combinations Advanced Principle Counting: The Principle of Inclusion and Exclusion, Generalizations of the Principle, Derangements – Nothing is in its Right Place, Rook Polynomials.			
Module 3	Relations and Functions		(10 Classes)
Cartesian Products and Relations, Functions, One-to-One, Onto Functions. The Pigeon-hole Principle, Function Composition and Inverse Functions. Relations, Properties of Relations, Computer Recognition – Zero-One Matrices and Directed Graphs, Partial Orders, Lattice, Hasse Diagrams, Equivalence Relations and Partitions.			
Module 4	Recurrence Relations and Generating Functions		(10 Classes)
Homogeneous and inhomogeneous recurrences and their solutions - solving recurrences using generating functions - Repertoire method - Perturbation method - Convolutions - simple manipulations and tricks.			
Module 5	Graph Theory & Algorithms on Networks	Assignment	(15 Classes)
Definitions and basic results - Representation of a graph by a matrix and adjacency list - Trees - Cycles - Properties - Paths and connectedness - Sub graphs - Graph Isomorphism - Operations on graphs - Vertex and edge cuts - Vertex and edge connectivity, Euler and Hamilton Paths, Shortest-Paths. Tree - Definitions, Properties, and Examples, Routed Trees, Binary search tree, Decision tree, spanning tree: BFS, DFS. Algorithms on Networks - Shortest path algorithm- Dijkstra's algorithm, Minimal spanning tree- Kruskal algorithm and Prim's algorithm. Targeted Application & Tools that can be used: Discrete mathematics provides the mathematical foundations for many computer science courses including data structures, algorithms, database theory, automata theory, formal languages, compiler theory, computer security, and operating systems.			
Assignment:			
Assignment 1: Logic Equivalences and Predicate calculus. Assignment 2: Equivalence Relations and Lattices			

Assignment 3: Recurrence Relations						
Text Book

Topics relevant to SKILL DEVELOPMENT: The course focuses on the concepts of calculus and differential equation with reference to specific engineering problems. The course is of both conceptual and analytical type in nature through Problem solving. This is attained through the assessment component mentioned in course handout.						

Course Code: CSE2258	Course Title: Web Technologies	L-T- P- C	2	0	0	2
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					

Course Description		This course highlights the comprehensive introduction to scripting languages that are used for creating web-based applications. The associated laboratory provides an opportunity to implement the concepts and enhance critical thinking and analytical skills.			
Course Objective		The objective of the course is to familiarize the learners with the concepts of Web Technology and attain Skill Development through Experiential Learning techniques.			
Course Outcomes		On successful completion of this course the students shall be able to: CO1: Implement web-based application using client-side scripting languages. (Apply) CO2: Apply various constructs to enhance the appearance of a website. (Apply) CO3: Apply server-side scripting languages to develop a web page linked to a database. (Apply)			
Course Content:					
Module 1		Introduction to XHTML	Quizzes and Assignments	Quizzes on various features of XHTML, simple applications	20 Sessions
	Basics: Web, WWW, Web browsers, Web servers, Internet. XHTML: Origins and Evolution of HTML and XHTML: Basic Syntax, Standard XHTML Document Structure, Basic Text Markup, Images, Hypertext Links, Lists, Tables, Forms, Frames, Syntactic Differences between HTML and XHTML, Demonstration of applications using XHTML for Responsive web pages.				
Module 2		Advanced CSS	Quizzes and assignments	Comprehension based Quizzes and assignments; Application of CSS in designing webpages	20 Sessions
	Advanced CSS: Layout, Normal Flow, Positioning Elements, Floating Elements, Constructing Multicolumn Layouts, Approaches to CSS Layout, Responsive Design, CSS Frameworks				
XML: Basics, Demonstration of applications using XML with XSLT.					
Module 3		PHP – Application Level	Quizzes and assignments	Application of PHP in web designing	20 Sessions

PHP: Introduction to server-side Development with PHP, Arrays, Superglobal Arrays, \$GET and \$ POST,
\$_SERVER Array, \$_FILES Array, Reading/Writing Files, PHP Classes and Objects, Object Oriented Design, Working with Databases, SQL, Database APIs, Managing a MySQL Database. Accessing MySQL in PHP, Applications.

Project work/Assignment:

Assignments are given after completion of each module which the student need to submit within the stipulated deadline.

Accessing MySQL in PHP, Applications.					
List of Laboratory Tasks:					
Experiment No. 1: Demonstration of XHTML features					
Level 1: Demonstration of various XHTML Tags (Level 1)					
Level 2: Design and develop static web pages for an online Book store (Level 2).					
Experiment No. 2: Application of CSS in web designing					
Level 1: Design a document using XHTML and CSS to create a catalog of items for online electronic shopping.					
Level 2: Create and save XML document for students’ information and display the same using cascaded style sheet.					
Experiment No. 3: Application of PHP in web designing.					
Level 1: Write a PHP program to read the personal information of a person such as first name, last name, age, permanent address, and pin code entered by the user into a table created in MySQL. Read the same information from the database and display it on the front end.					
Level 2: Using PHP develop a web page that accepts book information such as ISBN number, title, authors, edition, and publisher and store information submitted through the web page in MySQL database.					
Experiment No. 4: Building a website.					
Build a website for organizing an International Conference. The conference website must be					

able to collect the author's details and upload a file.

Targeted Application & Tools that can be used: Xampp web server to be used to demonstrate PHP.

Project work/Assignment:

Assignments are given after completion of each module which the student need to submit within the stipulated deadline.

Course Code: CSE2261	Course Title: Database Management Systems Lab Type of Course: 1) Laboratory - PCC	L-T-P-C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	Foundational understanding of data types, basic programming knowledge, operating systems and file management.					
Anti-requisites	NIL					
Course Description	The Database Management Systems (DBMS) Laboratory is designed to provide students with hands-on experience in database design, implementation, and management using SQL and database management tools such as MySQL. The lab complements theoretical concepts learned in database courses by allowing students to practice database creation, querying, and optimization techniques. The DBMS Lab enables students to develop industry-relevant skills in database management, preparing them for careers in software development, data engineering, and database administration.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Database Management Systems and attain Employability through Problem Solving Methodologies.					

Course Out Comes	On successful completion of the course the students shall be able to: 1. Demonstrate the database concepts, practice, and SQL queries. [Apply] 2. Design and implement database schemas while applying normalization techniques to optimize structure. [Apply] 3. Develop and implement stored procedures, triggers, and views for automation and efficiency. [Apply] 4. To Design and build database applications for real world problems. [Apply]
Course Content:	
List of Laboratory Tasks: Create Employee, Student, Banking and Library databases and populate them with required data. Do the following experiments of different lab sheets on those databases. Labsheet-1 [3 Practical Sessions] Experiment No 1: [1 Session] 1. To study and implement the different language of Structured Query Language. Level 1: Perform operations using Data Definition Language and Data Manipulation Language commands including different variants of SELECT on Student DB. Level 2: Identify the given requirements; valid attributes and data types and Perform DDL and DML operations on a given scenario. [Banking Databases] Experiment No. 2: [2 Sessions] 2. To study and implement the concept of integrity constraints in SQL. Level 1: Create tables on Banking database using PRIMARY KEY, NOT NULL, UNIQUE, FOREIGN KEY and demonstrate the working of relational, logical, pattern matching, BETWEEN, IS NULL, IN and NOT IN Special Operators on Student Database. Level 2: Enforce different types of data and referential integrity constraints. Then try queries with special operators based on the student database. [Banking Database]. Labsheet-2 [3 Practical Sessions] Experiment No. 3: [1 Session] 3. Implement complex queries in SQL. Level 1: Implement the conjugate of GROUP BY, ORDER BY and aggregate functions on Banking Database. Level 2: Implement MySQL DB queries on library database using appropriate clauses and aggregate functions. Also order the data either in ascending and descending order using corresponding clause. [Library databases]. Experiment No. 4: [2 Session] 4. To study and implement different types of Set and Join Operations [2 Slots] Level 1: Demonstrate different types of Set Operations (UNION, UNION ALL, INTERSECT, MINUS) and Join Operations (INNER JOINS, OUTER JOINS, CROSS JOIN, NATURAL JOIN) on two or more tables of Airline Database. Level 2: Use Set and Join operations to retrieve the data from two or more relations (tables) as per the given scenario. [Airline Database] Labsheet-3 [2 Practical Sessions] Experiment No. 5: [2 sessions] 5. To study and implement Views, and Procedures in MySQL DB. Level 1: Implement MySQL Views, and Procedures in ORACLE DB on Employee database. Level 2: Analyze the requirement and construct views, and Procedures on Mini Project Domain. [Banking Database] Labsheet-4 [2 Practical Sessions] Experiment No. 6: [2 Sessions] 6. To study and implement Functions, and Triggers in MySQL DB. Level 1: Implement Oracle Functions and Triggers in Oracle on Employee database. Level 2: Analyze the requirement and construct Functions and Triggers. [Supply chain Database]	

Labsheet-5 [2 Practical Sessions]**Experiment No. 7: [2 Sessions]**

7. To study and implement Functions, and Triggers in MySQL DB.

Level 1: Implement Oracle Functions and Triggers in Oracle on Employee database.

Level 2: Determine the requirement and construct Functions and Triggers. [Supply chain Database]

Labsheet-6 [4 Practical Sessions]**Experiment No. 8: [2 Sessions]**

8. To implement the concept of forms and reports.

Level 1: Implement the concept of forms and reports.

Level 2: Examine the schema relationship.

Experiment No. 9: [2 Sessions]

9. Create the database using the given schema. (Flight Management)

Level 1: Implement a relational database based on the provided schema for the Flight Management system, including the creation of tables, relationships, and constraints.

Level 2: Demonstrate schema relationships by defining primary and foreign keys to ensure data integrity within the Flight Management database.

Labsheet-7 [4 Practical Sessions]**Experiment No. 10: [2 Sessions]**

10. Create the database using the given schema. (Company database)

Level 1: Implement the database schema by defining tables, relationships, and constraints according to the given Company Database schema.

Level 2: Demonstrate the schema's relationships and data integrity by creating and linking tables as per the specified requirements.

Experiment No. 11: [2 Sessions]

11. Create the database using the given schema. (Student Library)

Level 1: Implement forms and reports based on the provided Student Library database schema, ensuring effective data entry and reporting mechanisms.

Level 2: Demonstrate the schema relationships within the Student Library database, demonstrating how these relationships influence the creation and functionality of forms and reports.

Labsheet-8 [1 Sessions]

12. Design a mini project based on the databases such as Inventory Management System, University Management System, Hospital Management System, etc.

Level 1: Implement the real time database.

Level 2: Analyze the working of database in real time.

Course Code: CSE2260	Course Title: Database Management Systems Type of Course: Theory only - PCC	L-T-P-C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	Foundational understanding of data types, data structures, basic programming knowledge, familiarity with operating systems and file management. Basic knowledge of set theory, logic, and discrete mathematics to understand relational algebra and query formulation.					
Anti-requisites	NIL					

Course Description	This course introduces the foundational principles of database management systems, including data models, schemas, and architectures. This course provides a solid foundation on the relational model of data and the use of relational algebra. It develops skills in SQL for data definition, manipulation, and control, enabling students to construct and execute complex queries. The course also introduces the concept of object oriented and object relational databases and modern database technologies like NoSQL . The also course allows the students to gain insights into data storage structures and indexing strategies for optimizing query performance.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of DatabaseManagement Systems and attain Employability through Problem Solving Methodologies .			
Course Out Comes	On successful completion of the course the students shall be able to: 5. Describe the fundamental elements of relational database management systems. [Understand] 6. Examine databases using SQL query processing and Optimization. [Apply] 7. Design simple database systems applying the normalization constraints and demonstrate the database transaction processing, recovery, and security. [Apply] 8. Interpret the concept of advanced databases and its applications. [Apply]			
Course Content:				
Module 1	Introduction to Database Modelling and Relational Algebra (Understand)	Assignment	Problem Solving	10 Sessions
Topics: Introduction to Database: Schema, Instance, 3-shema architecture, physical and logical data independence, Data isolation problem in traditional file system, advantages of database over traditional file systems. Entity Relationship (ER) Model, ER Model to Relational Model, Examples on ER model. Relational Algebra with selection, projection, rename, set operations, Cartesian product, joins (inner and outer joins), and division operator. Examples on Relational Algebra Operations.				
Module 2	Fundamentals of SQL and Query Optimization (Apply)	Assignment	Programming	11 Sessions
Topics: SQL Database Querying, DDL, DML, Constraints, Operators, Set Operators, Aggregate Functions, Joins, Views, Procedures, Functions and Triggers. Database programming issues and techniques: Embedded SQL, Dynamic SQL; SQL / PSM and NoSQL. Query Optimization: Purpose, transformation of relational expressions, estimating cost and statistics ofexpression, choosing evaluation plans, linear and bushy plans, dynamic programming algorithms.				
Module 3	Relational Database Design & Transaction Management(Apply)	Assignmen t	Problem Solving	12 Sessions
Topics: Relational database design: Problems in schema design, redundancy and anomalies, Normal Forms based on Primary Keys-(1NF,2NF, 3NF), Boyce-Codd Normal Form, Multi valued Dependency (Fourth Normal Form), JoinDependencies (Fifth Normal Form), lossy and lossless decompositions, Database De-normalization. Transaction Management: The ACID Properties; Transactions and Schedules; Concurrent Execution of Transactions; Lock- Based Concurrency Control; Performance of locking; Transaction support in SQL; Introduction to crash recovery; 2PL, Serializability and Recoverability; Lock Management; The write-ahead log protocol; Check pointing; Recovering from a System Crash; Media Recovery; Other approaches and interactionwith concurrency control.				

Module 4	Advanced DBMS Topics (Apply)	Assignment	Case Study	12 Sessions
Topics: Advanced topics: Object oriented database management systems, Deductive database management systems, Spatial database management systems, Temporal database management systems, Constraint database management systems. New database applications and architectures such as Data warehousing, Multimedia, Mobility, NoSQL, NativeXML databases (NXD), Document-oriented databases, Statistical databases.				
Targeted Application & Tools that can be used: Application Area: Relational database systems for Business, Scientific and Engineering Applications. Tools/Simulator used: MySQL DB for student practice. Also demonstration of ORACLE DB on object-relational database creation and JDBC connection.				
1. Problem Solving: Constructing ER-Diagrams for a given real time requirements, Normalizing the databases, querying the databases using relational algebra. 2. Programming: Implementation of any given scenario using MySQL.				
Text Books: T1. Elmasri R and Navathe S B, “Fundamentals of Database System”, Pearson Publication, 7th Edition, 2018. T2. RamaKrishna & Gehrke, “Database Management Systems” 3rd Edition, 2018, McGraw-Hill Education. T3. W. Lemahieu, S. vanden Broucke and B. Baesens, “Principles of Database Management: Practical Guide to Storing, Managing and Analyzing Big and Small Data”, Cambridge University Press, 2018.				
References R1 Avi Silberschatz, Henry F. Korth, S. Sudarshan, “Database System Concepts”, McGraw-Hill, 7th Edition, 2019. R2 M. Kleppmann, “Designing Data-Intensive Applications: The Big Ideas Behind Reliable, Scalable, and Maintainable Systems”, O’Reilly, 2017.				
Topics relevant to development of “FOUNDATION SKILLS”: S - Skill Development: Relational database design using ER- Relational mapping, Implementation of given database scenario using MYSQLDB. Topics relevant to development of Employability: Develop, test and implement computer databases, creating sophisticated, interactive and secure database applications Topics relevant to “HUMAN VALUES & PROFESSIONAL ETHICS”: Nil				

Course Code: PPS400 6	Course Title: LOGICAL & CRITICAL THINKING Type of Course: HSMC	L- T-P- C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	Students should have the basic concepts of Logical reasoning and Critical thinking, along with its applications in real life problems.					
Anti-requisites	Nil					
Course Description	This is a skill-based training program for the engineering students (Undergraduate). This course is designed to enable the students to enhance their skills in Logical reasoning and Critical thinking.					

Course Objective	The objective of the course is to familiarize the learners with concepts in Logical reasoning and Critical thinking through problem solving techniques suitable for their career development.			
Course Outcomes	On successful completion of the course the students shall be able to:			
	CO1] Understand all the concepts.			
	CO2] Apply the concepts in problem solving (Bloom’s taxonomy Level 3)			
Course Content:				
Module 1	Logical Thinking	Assignment		16 Hours
Topics: Syllogisms, Cubes and Dices, Mirror and Water images, Paper cutting and Folding, Embedded figures & Completion of figures, Data Interpretation, Data sufficiency				
Module 2	Critical Thinking	Assignment		14 Hours
Topics: Analogy, Symbol and Notations, Statement and assumption, Cause of action, Statement and conclusion, Puzzles				
Targeted Application & Tools that can be used: Application area: Placement activities and Competitive examinations. Tools: LMS				
Evaluation	Continuous Evaluation			
	· Topic wise evaluation			
	· Mid-Term & End Term			
	Text Book			
	1. A new approach to reasoning verbal, non-verbal & analytical by BS Sijwali			
	2. R S Aggarwal			
	3. Kiran publications			
	References			
	1. www.indiabix.com			
	2. www.testbook.com			
	3. www.youtube.com/c/TheAptitudeGuy/videos			
	Topics relevant to Skill Development Logical reasoning and Critical thinking for Skill Development through Problem solving Techniques. This is attained through assessment component mentioned in course handout.			

Course Code: CSE7100	Course Title: Mini Project	L- T-P- C	0	0	0	4
Version No.	1.0					
Course Pre-requisites	Knowledge and Skills related to all the courses studied in previous semesters.					
Anti-requisites	NIL					

Course Description	Students observe science and technology in action, develop an awareness of the method of scientific experimentation, and often get an opportunity to see, study and operate sophisticated and costly equipment. They also learn about the implementation of the principles of management they have learnt in class, when they observe multidisciplinary teams of experts from engineering, science, economics, operations research, and management deal with techno-economic problems at the micro and macro levels. Finally, it enables them to develop and refine their language, communication and interpersonal skills, both by its very nature, and by the various evaluation components, such as seminar, group discussion, project report preparation, etc. The broad-based core education, strong in mathematics and science and rich in analytical tools, provides the foundation necessary for the student to understand properly the nature of real-life problems. The students have options to pursue this course as either Project Work and Dissertation at the university, or Project Work in an Industry/ Company/ Research Laboratory, or Internship Program in an Industry/Company.
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Professional Practice and attain Employability Skills through Experiential Learning techniques.
Course Outcomes	On successful completion of this course the students shall be able to: 1. Identify the engineering problems related to local, regional, national or global needs. (Understand) 2. Apply appropriate techniques or modern tools for solving the intended problem. (Apply) 3. Design the experiments as per the standards and specifications. (Analyze) 4. Interpret the events and results for meaningful conclusions. (Evaluate) 5. Appraise project findings and communicate effectively through scholarly publications. (Create)

Course Code: CSE7300	Course Title: Capstone Project	L- T-P- C	0	0	0	10
Version No.	1.0					
Course Pre-requisites	Knowledge and Skills related to all the courses studied in previous semesters.					
Anti-requisites	NIL					

Course Description	Students observe science and technology in action, develop an awareness of the method of scientific experimentation, and often get an opportunity to see, study and operate sophisticated and costly equipment. Course Objectives	The objective of the course is to familiarize the learners with the concepts of Professional Practice and attain Employability Skills through Experiential Learning techniques.
Course Outcomes	On successful completion of this course the students shall be able to: 1. Identify problems based on societal /research needs. (Understand) 2. Apply Knowledge and skill to solve societal problems in a group. (Apply) 3. Develop interpersonal skills to work as member of a group or leader. (Apply) 4. Analyze the inferences from available results through theoretical / Experimental / Simulations. (Analyze) 5. Analyze the impact of solutions in societal and environmental context for sustainable development. (Analyze) 6. Improve in written and oral communication. (Create) 7. Demonstrate capabilities of self-learning in a group, which leads to lifelong learning. (Understand)

Course Code: MAT1001	Course Title: Calculus and Linear Algebra Type of Course: Basic Sciences Theory	L-T-P-C	3	0	2	4
Version No.	3.0					

Course Pre-requisites	Basic Concepts of Limits, Differentiation, Integration			
Anti-requisites	NIL			
Course Description	The course focuses on the concepts of calculus and linear algebra with reference to specific engineering problems. The course is of both conceptual and analytical type in nature. The lab sessions associated with the course are concerned with acquiring an ability to use the MATLAB software.			
Course Objective	The objective of the course is Skill Development of student by using Problem Solving Techniques.			
Course Out Comes	On successful completion of the course the students shall be able to: 1) Comprehend the knowledge of applications of matrix principles. 2) Understand the concept of partial derivatives and their applications. 3) Apply the principles of integral calculus to evaluate integrals. 4) Adopt the various analytical methods to solve differential equations. 5) Demonstrate the use of MATLAB software to deal with a variety of mathematical problems.			
Course Content:				
Module 1	Linear Algebra			10 Sessions
Review: Types of matrices, elementary transformations, rank of a matrix, normal form, Solution of systems of linear equations: (Homogenous and non-homogenous system) $AX = O$ and $AX = B$ using rank method. Linear Algebra: Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton theorem – Diagonalization of matrices – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms. Engineering Applications of Linear Algebra.				
Module 2	Partial Derivatives			10 Sessions

Review: Differential calculus with single variable.

Partial Derivatives:

Homogeneous functions and Euler's theorem, Total derivative, Change of variables, Jacobians, Partial differentiation of implicit functions, Taylor's series for functions of two variables, Maxima and minima of functions of two variables, Lagrange's method of undetermined multipliers.

Engineering Applications of partial derivatives.

Module 3	Advanced Integral calculus			12 Sessions

Review: Integral calculus for single integrals.

Advanced Integral calculus:

Beta and Gamma functions–interrelation-evaluation of integrals using gamma and beta functions; error function-properties. Multiple Integrals- Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves, evaluation of triple integrals-change of variables between Cartesian and cylindrical and spherical polar co-ordinates.

Engineering applications of partial derivatives.

Module 4	Ordinary Differential Equations	Assignment	Programming	12 Sessions

Review: First order and first-degree Ordinary Differential Equations, Method of separation of variables, Homogeneous and Non- Homogeneous Equations reducible to Homogeneous form.

Linear Differential Equations, Bernoulli's Differential Equation, Exact and Non- Exact Differential Equations, Higher order Differential Equation with constant coefficients and with right hand side of the form e^{ax} , $\sin ax$, $\cos ax$, $e^{ax}f(x)$, $x^n f(x)$ etc., Linear equations with variable coefficients such as Cauchy Equation and Lagrange's Equation, D-operators and Inverse D- operators, Method of Variation of Parameters.

Engineering applications of differential equations.

List of Laboratory Tasks:

Introductory Task: Introduction to usage of the software and simple programming tasks. [3 Sessions]

Experiment NO 1: Solution of Simple differentiation with single variable and use of chain Rule.

Experiment No. 2: Solution based on application of Tailors' Series using software

Experiment No. 3: Application of Maxima and Minima condition using software.

Experiment No. 4 Computation of different functions for a specific problem

Experiment No. 5 Computation of Area under a curve.

Experiment No. 6 Solution of a set of simultaneous equations in matrix method

Experiment No. 7 Computation of Eigen Values and Eigen Vectors.

Experiment No. 8 Solution of Partial Differential equation

Experiment No. 9 solution using Cauchy Equation and Lagrange's Equation

Targeted Application & Tools that can be used:

The contents of this course has direct applications in most of the core engineering courses for problem formulations, Problem Solution and system Design.

Tools Used: MatLab, Zylink.

Assignment:

List at least 3 sets of Matrix Applications concerning the respective branch of Engineering and obtain the solution using MATLAB.

Select any one simple differential equation pertaining to the respective branch of engineering, identify the dependent and independent variable – Obtain the solution and compare the solution sets by varying the values of the dependent variable.

Course Code: PHY1002	Course Title: Optoelectronics and Device Physics Type of Course: Engineering Sciences Theory	L-T-P-C	2-0-2-3
Version No.	1.0		
Course Pre-requisites	NIL		
Anti-requisites	NIL		
Course Description	The purpose of this course is to enable the students to understand the fundamentals, working and applications of optoelectronic devices and to develop the basic abilities to appreciate the applications of advanced microscopy and quantum computers. The course develops the critical thinking, experimental and analytical skills. The associated laboratory provides an opportunity to validate the concepts taught and enhances the ability to use the concepts for technological applications. The laboratory tasks aim to develop following skills: An attitude of enquiry, confidence and ability to tackle new problems, ability to interpret events and results, observe and measure physical phenomena, select suitable equipment, instrument and materials, locate faults in systems.		
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Describe the concepts of semiconductors, magnetic materials and superconductors. CO2: Apply the concept of materials in the working of optoelectronic and magnetic devices. CO3: Discuss the quantum concepts used in advanced microscopy and quantum computers. CO4: Explain the applications of lasers and optical fibers in various technological fields. CO5: Interpret the results of various experiments to verify the concepts used in optoelectronics and advanced devices. [Lab oriented].		
Course Objective	The objective of the course is to familiarize the learners with the concepts of “Optoelectronics and device physics “and attain Skill Development through Experiential Learning techniques		
Course Content:			

Module 1	Fundamentals of Materials.	Assignment	Plotting of magnetization (M) v/s Magnetic field (H) for diamagnetic, paramagnetic and ferromagnetic materials using excel/ origin software.	7 Sessions
Topics: Concept of energy bands, charge carriers, carrier concentration, concept of Fermi level, Hall effect, Magnetic materials, Superconductors:				
Module 2	Advanced Devices and applications	Assignment	Data collection on efficiency of solar cells.	8 Sessions
Topics: p-n junctions, Zener diode, transistor characteristics, Optoelectronic devices:, Solar cells, I-V characteristics, and LEDs				
Module 3	Quantum concepts and Applications	Term paper	Seminar on quantum computers.	8 Sessions
Topics: Planck's quantum theory, applications of Quantum theory: de-Broglie hypothesis, matter waves, properties. de-Broglie wavelength associated with an electron. Heisenberg's uncertainty principle. Schrodinger time independent wave equation. Particle in a box				
Module 4	Lasers and Optical fibers	Term paper	Case study on medical applications of Lasers.	7 Sessions
Topics: Interactions of radiations with matter, Characteristics of laser, conditions and requisites of laser, Modern day applications of laser: LIDAR, LASIK, Cutting, Welding and Drilling. Principle of optical fibers, Numerical aperture and acceptance angle (Qualitative), Attenuation, Applications: Point to point communication with block diagram, application of optical fibers in endoscopy.				
List of Laboratory Tasks: Experiment No. 1: Experimental errors and uncertainty using excel Level 1: Calculation of accuracy and precision of a given data				

Level 2: propagation of errors in addition, subtraction, multiplication and division.

Experiment N0 2: To determine the wavelength of semiconductor diode Laser and to estimate the particle size of lycopodium powder using diffraction.

Level 1: Determination of Wavelength of Laser

Level 2: Finding the particle size of lycopodium powder.

Experiment No. 3: To determine the proportionality of Hall Voltage, magnetic flux density and the polarity of Charge carrier.

Level 1: To determine the proportionality of Hall Voltage and magnetic flux density

Level 2: To determine the polarity of Charge carrier.

Experiment No. 4: To study the I-V characteristics of a given zener diode in forward and reverse bias conditions.

Level 1: To study I –V characteristics of the given Zener diode in reverse bias and to determine break down voltage.

Level 2: To study I –V characteristics of the given Zener diode in forward bias and to determine knee voltage and forward resistance.

Experiment No. 5: To study input and output characteristics of a given Transistor.

Level 1: To determine the input resistance of a given transistor.

Level 2: To determine current transfer characteristics and transistor parameters of a given transistor.

Experiment No. 6: Determination of Fermi energy and Fermi temperature of a given metal and bimetallic wire.

Level 1: Determination of Fermi energy and Fermi temperature of given metal wire.

Level 2: Determination of Fermi energy and Fermi temperature of given bimetallic wire.

Experiment No. 7: To study the current vs voltage characteristics of CdS photo-resistor at constant irradiance and To measure the photo-current as a function of the irradiance at constant voltage.

Level 1 To study the current vs voltage characteristics of CdS photo-resistor at constant irradiance.

Level 2: To measure the photo-current as a function of the irradiance at constant voltage.

Experiment No. 8: To study the I-V characteristics and I-R characteristics of a solar cell as a function of the irradiance.

Level 1: To study the I-V characteristics

Level 2: I-R characteristics of a solar cell as a function of the irradiance.

Experiment No. 9: Calculate the numerical aperture and study the losses that occur in optical fiber cable. .

Level 1: Calculate the numerical aperture.

Level 2: study the losses that occur in optical fiber cable.

Experiment No. 10: To determine the magnetic susceptibility of a given diamagnetic and paramagnetic substances using Quincke's method.

Level 1: To determine the magnetic susceptibility of a given diamagnetic substance.

Level 2: To determine the magnetic susceptibility of a given paramagnetic substance.

Experiment No. 11: Plotting I-V characteristics in forward and reverse bias for LEDs and Determination of knee voltage.

Level 1: Plotting I-V characteristics in forward and reverse bias for LEDs

Level 2: Determination of knee voltage.

Experiment No. 12: Determination of Stefan's constant and verification of Stefan-Boltzmann Law.

Level 1: Determination of Stefan's constant

Level 2: Verification of Stefan-Boltzmann Law.

Targeted Application & Tools that can be used:

Areas of application are optoelectronics industry, Solar panel technologies, quantum computing software, electronic devices using transistors and diodes, memory devices, endoscopy, SQUIDS in MRI, Advanced material characterizations using SEM and STM. Origin, excel and Mat lab soft wares for programming and data analysis.
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course
Assessment Type Midterm exam Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screen shot accessing digital resource.) Quiz End Term Exam Self-Learning 1. Prepare a comprehensive report on non-conventional energy resources in Karnataka and their pros and cons. 2. Write a report on importance of quantum entanglement in supercomputers.

Topics relevant to “SKILL DEVELOPMENT”: Fundamentals of materials, Lasers and optical fibers. for Skill Development through Participative Learning Techniques. This is attained through the Assignment/ Presentation as mentioned in the assessment component in course handout.

Course Code: MEC1006	Course Title: Engineering Graphics Type of Course: Engineering Science & Theory Only	L- T-P- C	2	0	0	2
Version No.	1.2					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	The course is designed with the objective of giving an overview of engineering graphics. It is introductory in nature and acquaints the students with the techniques used to create engineering drawings. The course emphasizes on projection of points, lines, planes and solids and isometric projections.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of “Engineering Graphics” and attain SKILL DEVELOPMENT through Problem solving methodologies.					
	On successful completion of this course the students shall be able to: Demonstrate competency of Engineering Graphics as per BIS conventions and standards. Comprehend the theory of projection for drawing projections of Points, Lines and Planes under different conditions. Prepare multiview orthographic projections of Solids by visualizing them in different positions.					

Course Outcomes	Prepare pictorial drawings using the principles of isometric projections to visualize objects in three dimensions.			
Course Content:				
Module 1	Introduction to Drawing	Assignment	Standard technical drawing	02 Sessions
Topics: Introduction, drawing instruments and their uses, relevant BIS conventions and standards, Lettering, Line conventions, dimensioning, Selection of drawing sheet size and scale. [02 Hours: Comprehension Level]				
Module 2	Orthographic projections of Points, Straight Lines and Plane Surfaces	Assignment	Projection methods Analysis	10 Sessions
Topics: Introduction, Definitions – Elements of projection and methods of projection, Planes of projection, reference line and conventions adopted. First angle and third angle projections. Projection of Points in all 4 quadrants. Projections of Straight Lines (located in first quadrant/first angle projection only): True and apparent lengths, true and apparent Inclinations to reference planes. (No application problems). Projection of Plane surfaces (First angle projection): Regular plane surfaces – triangle, square, rectangle, pentagon, hexagon and circle – in different positions inclined to both the planes using change of position method only. [10 Hours: Application Level]				
Module 3	Orthographic Projections of Solids	Assignment	Multi-view drawing Analysis	10 Sessions

Topics: Introduction, Projection of right regular prisms, pyramids, cone, hexahedron and tetrahedron in different positions (Problems resting on HP only and First angle projection). [10 Hours: Application Level]				
Module 4	Isometric Projections of Solids (Using isometric scale only)	Assignment	Spatial Visualization	8 Sessions
Topics: Introduction, Isometric scale, Isometric projections of right regular prisms, cylinders, pyramids, cones and their frustums, spheres and hemispheres, hexahedron (cube), and combination of 2 solids, conversion of orthographic view to isometric projection of simple objects. [8 Hours: Application Level]				
Text Book: 1.N. D. Bhatt, "Engineering Drawing: Plane and Solid Geometry," Charotar Publishing House Pvt. Ltd. References: K.R. Gopalakrishna, "Engineering Graphics", Subhash Publishers, Bangalore. Web resources: https://nptel.ac.in/courses/112103019				
Topics relevant to "SKILL DEVELOPMENT": Projection in first and third angle for SKILL DEVELOPMENT through Problem Solving methodologies. This is attained through the assessment component mentioned in the course handout.				

Course Code: ENG1002	Course Title: Technical English Type of Course: Humanities Science / Theory	L-T-P-C	1-0-2-2	
Version No.	V. 3			
Course Pre-requisites	Intermediate Level English			
Course Anti-requisites	NIL			
Course Description	Technical English course is designed to equip students with the language skills necessary for effective communication in technical and scientific contexts. The course focuses on the specialized vocabulary, writing styles, and communication techniques used in various technical fields, including engineering and information technology.			
Course Objectives	The objective of this course is to develop the learners' EMPLOYABILITY SKILLS by using EXPERIENTIAL LEARNING and PARTICIPATIVE LEARNING TECHNIQUES.			
Course Outcomes	On successful completion of the course, the students shall be able to: Develop proficiency in using technical vocabulary and terminology. Apply language skills for better speaking skills in technical fields. Write technical descriptions Demonstrate writing skills in writing technical documents such as reports, manuals, and articles.			
Course Content:				
Module 1	Fundamentals of Technical Communication	Worksheets & Quiz	Vocabulary building	9 Classes
Introduction to Technical English Differences between Technical English and General English Technical Writing Basics Technical Vocabulary				
Module 2	Technical Presentation	Presentations	Speaking Skills	12 Classes

Introduction Planning the Presentation Creating the Presentation Giving the Presentation				
Module 3	Technical Description	Assignment	Group Presentation	12 Classes
Product Description Process Description User Manuals Transcoding: Diagrams, charts and images				
Module 4	Technical Writing	Assignment	Writing Skills	12 Classes
Email Writing Persuasive and Descriptive Language Professional Email Etiquette Writing clear and concise technical emails Communicating technical information effectively Technical Report Writing Types of technical reports (Lab reports, research reports, etc.) Components of technical reports Writing an abstract and executive summary Structure and content organization Transcoding: diagrams, charts and images				
List of Laboratory Tasks: Module-1 Level 1: Worksheets Level 2: Worksheets				

Module 2 Level 1: Preparing Presentation Level 2: Giving Presentation (Individual) Module-3 Level 1: Product Description & User Manual Level 2: Process Description & Transcoding Module 4 Level 1: Email Writing Level 2: Report Writing
Targeted Applications & Tools that can be used: Flipgrid Quizzes Youtube Videos Podcast
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course Bring out the essence of technical communication with reference to the conventions of technical communication, with examples Prepare a technical presentation on the importance of Technical Communication and its relevance in a technical field, with real-life examples.
The following individual, as well as group Assignments, will be given to the students. Presentation Describing a product/process Individual Reports

Speaking Skills, Writing Skills, Critical Thinking and Critical Analysis, and Group Communication.

Course Code: PPS 1001	Course Title: Introduction to Soft Skills Type of Course: Practical Only Course	L- T-P- C	0	2	1
Version No.	1.0				
Course Pre-requisites	Students are expected to understand Basic English. Students should have desire and enthusiasm to involve, participate and learn.				
Anti-requisites	NIL				

Course Description	This course is designed to enable students understand soft skills concepts and improve confidence, communication and professional skills to give the students a competitive advantage and increase chances of success in the professional world. The course will benefit learners in presenting themselves effectively through various activities and learning methodologies.		
Course Objective	The objective of the course is to familiarize the learners with the concepts of “Soft Skills” and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques.		
Course Out Comes	On successful completion of this course the students shall be able to: CO1: Recognize significance of soft skills CO2: Illustrate effective communication while introducing oneself and others CO3: List techniques of forming healthy habits CO4: Apply SMART technique to achieve goals and increase productivity		
Course Content:			
Module 1	INTRODUCTION TO SOFT SKILLS	Classroom activity	04 Hours
Topics: Setting Expectations, Ice Breaker, Significance of soft skills, Formal grooming, punctuality			
Module 2	EFFECTIVE COMMUNICATION	Individual Assessment	10 Hours
Topics: Different styles of communication, Difference between hearing and listening, Effective communication for success, Email etiquette, Self-introduction framework, Video introduction, email- writing, Resume Building- Digital, Video, Traditional.			
Module 3	HABIT FORMATION	Worksheets & Assignment	4 Hours
Topics: Professional and personal ethics for success, Identity based habits, Domino effect, Habit Loop, Unlearning, standing up for what is right			

Module 4	Goal setting & Time Management	Goal sheet	8 Hours
A session where students will be introduced to Time management, setting SMART Goals, Introduction to OKR Techniques, Time Management Matrix, steps to managing time through outbound group activity, making a schedule, Daily Plan and calendars (To Do List), Monitoring/charting daily activity			
Targeted Application & Tools that can be used: LMS			
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course			
Individual Assessment LMS MCQ			
The topics related to Skill Development: Communication and professional grooming, Goal setting and presentation for skill development through participative learning techniques. This is attained through assessment component mentioned in course handout.			

Course Code: CSE1004	Course Title: Problem Solving Using C Type of Course: School Core Lab Integrated.	L- T- P-C	1	0	4	3
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	The course is designed to provide complete knowledge of C language. Students will be able to develop logics which will help them to create programs and applications in C. ACAlso by learning the basic programming constructs they can easily switch over to any other language in future.					
Course Object	The objective of the course is to familiarize the learners with the concepts of Problem Solving Using C and attain Employability through Problem Solving Methodologies.					
Course Outcomes	On successful completion of this course the students shall be able to: Write algorithms and to draw flowcharts for solving problems Demonstrate knowledge and develop simple applications in C programming constructs Develop and implement applications using arrays and strings Decompose a problem into functions and develop modular reusable code Solve applications in C using structures and Union Design applications using Sequential and Random Access File Processing.					
Course Content:						
Module 1	Introduction to C Language	Quiz	Problem Solving	9 Hrs.		
Topics: Introduction to Programming – Algorithms – Pseudo Code - Flow Chart – Compilation – Execution – Preprocessor Directives (#define, #include, #undef) - Overview of C – Constants, Variables and Data types – Operators and Expressions – Managing Input and Output Operations – Decision Making and Branching - Decision Making and Looping.						
Module 2	Introduction to Arrays and Strings	Quiz	Problem Solving	9 Hrs.		

Topics: Arrays: Introduction – One Dimensional Array – Initialization of One Dimensional Arrays – Example Programs – Sorting (Bubble Sort, Selection Sort) – Searching (Linear Search) - Two Dimensional Arrays – Initialization of Two Dimensional Arrays. Example Programs – Matrix operations. Strings: Introduction – Declaring and Initializing String Variables – Reading Strings from Terminal – Writing String to Screen – String Handling Functions.				
Module 3	Functions and Pointers	Quiz	Problem Solving	9 Hrs.
Topics: Functions: Introduction – Need for User-defined functions – Elements of User-Defined Functions: declaration, definition and function call–Categories of Functions – Recursion. Pointers: Introduction – Declaring Pointer Variables – Initialization of Variables – Pointer Operators – Pointer Arithmetic – Arrays and Pointers – Parameter Passing: Pass by Value, Pass by Reference.				
Module 4	Structures and Union	Quiz	Problem Solving	9 Hrs.
Topics: Structures: Introduction – Defining a Structure – Declaring Structure Variable – Accessing Structure Members – Array of Structures – Arrays within Structures – Union: Introduction – Defining and Declaring Union – Difference Between Union and Structure.				
Module 5	File handling	Case Study	Problem Solving	9 Hrs.
Topics: Files: Defining and Opening a File – Closing a File – Input / Output Operations on File – Random Access Files				
List of Practical Tasks Lab Sheet 1 (Module I) Programs using IO Statements, Conditional Statements and Looping Statements Lab Sheet 2 (Module II) Programs using Arrays and Strings Lab Sheet 3 (Module III) Programs using Functions and Pointers Lab Sheet 4 (Module IV) Programs using Structures and Unions				

Lab Sheet 5 (Module V) Programs using Files

Course Code: ECE2007	Course Title: Digital Design Type of Course: Theory &Integrated Laboratory	L- T- P- C	2	0	2	3
Version No.	2.0					
Course Pre-requisites	[1] Elements of Electronics/Electrical Engineering, 2] Basic concepts of number representation, Boolean Algebra					
Anti-requisites	NIL					

Course Description	The purpose of this course is to enable the students to appreciate the fundamentals of digital logic circuits and Boolean algebra focusing on both combinational and sequential logic circuits. The course emphasizes on minimization techniques for making canonical and low-cost digital circuit implementations. This course deals with analysis and design of digital electronic circuits. The course also creates a foundation for future courses which includes Computer Architecture, Microprocessors, Microcontrollers, and Embedded Systems etc. The course enhances the Design, Implementation and Programming abilities through laboratory tasks. The associated laboratory provides an opportunity to verify the theoretical knowledge.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Digital Design and attain the SKILL DEVELOPMENT through EXPERIENTIAL LEARNING.			
Course Outcomes	On successful completion of this course the students shall be able to: Describe the concepts of number systems, Boolean algebra and logic gates. Apply minimization techniques to simplify Boolean expressions. Demonstrate the Combinational circuits for a given logic Demonstrate the Sequential and programmable logic circuits Implement various combinational and sequential logic circuits using gates.			
Course Content:				
Module 1	Fundamentals of Number systems- Boolean algebra and digital logic	Application Assignment	Data Analysis task	06 classes
Topics: Review of Number systems and logic gates, Number base conversions, Overview of Boolean functions and simplifications, two, three, four variable K-Maps- Don't care conditions- Both SOP and POS- Universal Gates (NAND & NOR) Implementations. Introduction to HDL.				
Module 2	Boolean function simplification	Application Assignment	Data Analysis task	08 Classes
Topics: Introduction to Combinational circuits, Analysis, Design procedure, Binary Adder and Subtractor, Magnitude comparator, Parity generator and checker, Multiplexers-				

Demultiplexers, Decoders, Encoders and Priority Encoders, HDL Models of combinational circuits.				
Module 3	Combinational Logic circuits:	Application Assignment	Programming Task & Data Analysis task	08 Classes
Topics: Introduction to sequential circuits, Storage elements: latches and flip flops, Characteristic tables and equations, excitation table, Analysis of clocked sequential circuits, Mealy & Moore Models of finite state machines - Registers & Counters. HDL Models of Sequential circuits.				
List of Laboratory Tasks: Experiment N0 1: Verify the Logic Gates truth table Level 1: By using Digital Logic Trainer kit Level 2: By using Analog devices like RPS, Volt meter, Resistors and ICs Experiment No. 2: Verify the Boolean Function and Rules Level 1: By using Digital Logic Trainer kit Level 2: By using Analog devices like RPS, Volt meter, Resistors and ICs Experiment No. 3: Design and Implementations of HA/FA Level 1: By using basic logic gates and Trainer Kit Level 2: By using Universal logic gates and Trainer Kit Experiment No. 4: Design and Implementations of HS/FS Level 1: By using basic logic gates and Trainer Kit Level 2: By using Universal logic gates and Trainer Kit Experiment No. 5: Design and Implementations of combinational logic circuit for specifications Level 1: Specifications given in the form of Truth table Level 2: Specification should be extracted from the given scenario				

Experiment No. 6: Study of Flip flops

Experiment No. 7: Design and Implementations of sequential logic circuit for specifications

Level 1: Specifications given in the form of Truth table

Level 2: Specification should be extracted from the given scenario

Experiment No.8: HDL coding for basic combinational logic circuits

Level 1: Gate level Modeling

Level 2: Behavioral Modeling

Experiment No.9: HDL coding for basic sequential logic circuit

Level 1: Gate level Modeling

Level 2: Behavioral Modeling

Targeted Application & Tools that can be used:

Digital electronics is the foundation of all modern electronic devices such as cellular phones, MP3 players, laptop computers, digital cameras, high definition televisions, Home Automation, Communication in systems in industries

Professionally Used Software: HDL/VHDL/Verilog HDL/ OOPS

Topics relevant to “SKILL DEVELOPMENT”: Adders, Multiplexers, Decoders / Encoders; Flip-Flops, Counters and Registers for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: DES1146	Course Title: Introduction to Design Thinking Type of Course: Theory	L-T-P- C	1	0	0	1
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	The course aims to introduce students to the fundamental principles and processes of Design Thinking and will learn to apply Design Thinking methodologies to real-world challenges. The course emphasizes empathy, creativity, and collaboration, equipping students with essential skills for successful engineering practice.					
Course Objective	This course is designed to develop and familiarize the learners with the concepts of creating thinking and attain Entrepreneurship by using Participative Learning techniques.					
Course Outcomes	On successful completion of the course the students shall be able to: Understand the concept and importance of Design Thinking. Differentiate between traditional problem-solving and Design Thinking. Identify the core stages of the Design Thinking process.					
Course Content:	All assignments and projects must be developed using the reference materials available from the PU e-resource database – JSTOR, EBSCO, Library OPAC, NPTEL Videos, etc.					
Module 1	Introduction to Design Thinking	Visual journal, book of		Visual output generation, by Visual Journal and narrative development.		3 hours

		essays, context-specific assignment/project			
Topic Definition and Introduction to Design Thinking Understand the Design Thinking Process					
Module 2	Design Thinking in Action	Visual journal, book of essays, context-specific assignment/project		Visual output generation, by visual journal and narrative development.	12 hours
Topics: Introduction to the steps of Design Thinking Process Understand use cases of Design thinking Design Thinking and Research Tools pertaining to Consumer Tech. , Home Tech. , Personal Tech. , Auto Tech. or Extended Reality.					
Targeted Application & Tools that can be used: Design ideation tools like Miro , SCAMPER etc. Research Tools for Human Centric Design using forecasting tools like WGSN Feedback tools like Google Forms , etc. Expert Lectures

Course Code: MAT1003	Course Title: Applied Statistics Type of Course: School Core	L-T- P-C	1	0	2	2
Version No.	3.0					
Course Pre-requisites	None					
Anti-requisites	None					
Course Description	The goal of this course is to provide a firm understanding of probability and statistics by means of a thorough treatment of descriptive statistics, probability and probability distributions keeping in mind the future courses having statistical, quantitative and probabilistic components. The course covers topics such as descriptive statistics, probability, rules for probability, random variables and probability distributions, standard discrete and continuous probability distributions.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of “Applied Statistics” and attain Skill Development Through Problem Solving techniques.					
Expected Outcome:	At the end of this course, students will be in a position to apply the techniques of descriptive statistics effectively interpret the ideas of probability and conditional probability demonstrate the knowledge of probability distributions					

	Compute statistical parameters, correlation and regression, probability and sampling distributions using R software.			
Module 1	Descriptive Statistics	Assignment	Coding needed	10 classes
Introduction to Statistics, Data and statistical thinking, review of basic statistical parameters, Covariance, Correlation, Types of Measures of Correlation - Karl Pearson's Correlation Coefficient, Spearman Rank Correlation, linear regression, Multi linear regression .				
Module 2	Probability			6 classes
Introduction to Probability, Probability of an event, Addition Principle, Multiplication law, Conditional Probability, Total Probability and Baye's theorem with examples				
Module 3	Random Variables and Probability Distributions		Coding needed	14 classes
Introduction to Random variables, Discrete Random Variables and Continuous Random Variables, Probability Distributions, Probability Mass Function and Probability Density Function, Various Probability distributions, Binomial, Negative Binominal (Self Study), Poisson, Normal and Exponential distributions				
Module 4	Sampling Theory		Coding needed	15 classes
Introduction to Sampling Theory, Population, Statistic, Parameter, Sampling Distribution, Standard Error. Testing of Hypothesis, Types of Errors, Critical Region, level of Significance. Difference between Parametric and Non-parametric Tests, Large Sample Tests: Z-Test for Single Mean and Difference of Means (Self Study), Small Sample Tests: Student's t-Test for Single Mean and Difference of Means, F-Test, Chi-Square Test.				
Targeted Application & Tools that can be used: The objective of the course is to familiarize students with the theoretical concepts of probability and statistics and to equip them with basic statistical tools to tackle engineering and real-life problems.				

Tools used: R Software / MS-Excel
Text Book Ronald E Walpole, Raymond H Myers, Sharon L Myers, and Keying E Ye, Probability and Statistics for Engineers and Scientists, Pearson Education, 2016.

Topics relevant to SKILL DEVELOPMENT: The goal of this course is to provide a firm understanding of probability and statistics by means of a thorough treatment of descriptive statistics, probability and probability distributions keeping in mind the future courses having statistical, quantitative and probabilistic components. The course covers topics such as descriptive statistics, probability, rules for probability, random variables and probability distributions, standard discrete and continuous probability distributions for Skill Development through Problem Solving methodologies. This is attained through assessment component mentioned in course handout.

Course Code: CHE1018	Course Title: Environmental Science	L- T- P- C	1	0	2	0
	Type of Course: School Core- Theory and Lab	Contact hours	1	0	2	3
Version No.	2.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	This course emphasizes the need to conserve biodiversity and adopt a more sustainable lifestyle by utilizing resources in a responsible way. Topics covered include basic principles of ecosystem functions; biodiversity and its conservation; human population growth; water resources, pollution; climate change; energy resources, and sustainability; Sustaining human societies, policies, and education. This course is designed to cater to Environment and Sustainability					
Course Objective	The objective of the course is to familiarize the learners with the concepts of “Environmental Science” and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques.					
Course Outcomes	On successful completion of this course the students shall be able to: Appreciate the historical context of human interactions with the environment and the need for eco-balance. Describe basic knowledge about global climate change with particular reference to the Indian context. Understand biodiversity and its conservation Develop an understanding on types of pollution and ways to protect the environment Learn about various strategies on Global environmental management systems					
Course Content:						
Module 1	Humans and the Environment	Assignment	Data Collection	01 class		

Topics: The man-environment interaction: Mastery of fire; Origin of agriculture; Emergence of city-states; Great ancient civilizations and the environment. Self-learning topics: Humans as hunter-gatherers; Industrial revolution and its impact on the environment; Environmental Ethics and emergence of environmentalism.				
Module 2	Natural Resources and Sustainable Development	Assignment		03 Classes

Topics: Overview of natural resources: Definition of resource; Classification of natural resources- biotic and abiotic, renewable and non-renewable. Water resources: Types of water resources- fresh water and marine resources; Soil and mineral resources: Important minerals; Mineral exploitation Soil as a resource and its degradation. Energy resources: Sources of energy and their classification, renewable and non-renewable sources of energy; Advantages and disadvantages. Self- learning topics: Availability and use of water resources; Environmental impact of over-exploitation, issues and challenges.; Environmental problems due to extraction of minerals and use; Sustainable Development Goals (SDGs)- targets, indicators, and challenges for SDGs.				
Module 3	Environmental Issues: Local, Regional and Global	Case study		02 Classes
Topics: Environmental Pollution: Types of Pollution- air, noise, water, soil, municipal solid waste, hazardous waste; Trans- boundary air pollution; Acid rain; Smog. Land use and Land cover change: land degradation, deforestation, desertification, urbanization. Global change: Ozone layer depletion; Climate change Self -learning topics: Environmental issues and scales				
	Module 4	Conservation of Biodiversity and Ecosystems	Assignment	02 Classes

Topics: Biodiversity-Introduction, types, Species interactions, Extinct, endemic, endangered and rare species, Threats to biodiversity: Natural and anthropogenic activities. Self-learning topics: Mega-biodiversity, Hot-spots, Major conservation policies. Biodiversity loss: past and current trends, impact.					
	Module 5	Environmental Pollution and Health	Case study		03 Classes
Topics: Pollution, Definition, point and nonpoint sources of pollution, Air pollution- sources, major air pollutants, health impacts of air pollution. Water pollution– Pollution sources, adverse health impacts on human and aquatic life and mitigation, Water quality parameters and standards. Soil pollution and solid waste- Soil pollutants and their sources, solid and hazardous waste, Impact on human health. Self-learning topics: Noise pollution, Thermal and radioactive pollution.					
	Module 6	Climate Change: Impacts, Adaptation and Mitigation	Assignment/case		02 Classes
Topics: Understanding climate change: Natural variations in climate; Projections of global climate change with special reference to temperature, rainfall and extreme events; Importance of 1.5 °C and 2.0 °C limits to global warming; Impacts					

Vulnerability and adaptation to climate change: Observed impacts of climate change on ocean and land systems; Sea level rise, changes in marine and coastal ecosystems; Impacts on forests and natural ecosystems; Indigenous knowledge for adaptation to climate change. Self-learning topics: Mitigation of climate change: Synergies between adaptation and mitigation measures; National and international policy instruments for mitigation.					
	Module 7	Environmental Management	Case study	Data analysis	02 Classes
Topics: Environmental management system: ISO 14001; Environmental risk assessment Pollution control and management; Waste Management- Concept of 3R (Reduce, Recycle and Reuse) and sustainability. Self-learning topics: Environmental audit and impact assessment; Eco labeling /Eco mark scheme					
	Module 8	Environmental Treaties and Legislation	Case study	Data analysis	01 Classes
Topics: Major International Environmental Agreements: Convention on Biological Diversity (CBD), Major Indian Environmental Legislations: Environmental Protection Act, Forest Conservation Act, Public awareness. Self-learning topics: Paris Agreement, Conference of the Parties (COP), India's status as a party to major conventions: Air (Prevention and Control of Pollution) Act, Water (Prevention and control of Pollution) Act, Wildlife Protection Act.					
List of laboratory tasks : Any eight experiments will be conducted Determination of total alkalinity of a water sample (knowledge) Estimation of water hardness by EDTA method and its removal (by zeolite/ ion exchange method) (Comprehensive) Estimation of copper from industrial effluents by colorimetric method (Comprehensive) Estimation of iron from industrial effluents by titrimetric method/potentiometric method (Comprehensive) Estimation of nickel from industrial effluents by titrimetric method (Comprehensive) Estimation of chloride in drinking water by titrimetric method (Comprehensive) Estimation of fluoride in ground water by colorimetric method (Comprehensive)					

Determination of calcium in aqueous solution (Comprehensive) Determination of Total Dissolved Salts, conductivity and pH of a water samples (Knowledge) Determination of Chemical oxygen demand in the industrial effluent. (Comprehensive) Biological oxygen demand of waste water sample (Comprehensive) Determination of dissolved oxygen of an industrial effluent (Comprehensive) Quality monitoring analysis of a soil sample (knowledge) Flame photometric estimation of Sodium and potassium (Application) Gas Chromatographic analysis of volatile organic compounds (Application)
Targeted Application & Tools that can be used: Application areas are Energy, Environment and sustainability Tools: Statistical analysis of environmental pollutants using excel, origin etc.
Project work/Assignment:
Assessment Type Midterm exam Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screenshot accessing the digital resource.) Lab evaluation/Assignment End Term Exam Self-learning Assignment 1: Write a Statement of Environment report of your town/city/state/country
Assignment 2: Individual students will carry out the analyses of polluted solid, liquid, and gaseous samples and propose suitable mitigation measures. A detailed and in-depth report needs to be submitted for each case. This may include preparation of reagents, sample preparation (extraction), chemical analysis carried out, instruments and tools used, data collected and processed, inferences made and conclusions arrived at. Necessary support is given in the form of lab manual and reference links to e-books.

Course Code: CIV1008	Course Title: Basic Engineering Sciences Type of Course: Theory Only	L-T-P-C	2	0	0	2
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	This basic course on engineering science is designed to introduce students to the fields of civil, mechanical and petroleum engineering. Student will be exposed to various fields in civil engineering and different manufacturing techniques in addition to machinery for power production and consumption. Additionally, students will be getting an overview of various sectors of oil & gas industries. This course					

	acquaints students to basics of Industry 4.0 and Construction 4.0. The course aims to enable students to appreciate the multidisciplinary nature of engineering design and operations in the current era with mechanization and digitization transforming every aspect of engineering.			
Course Objective	The objective of the course is skill development of student by using Participative Learning techniques.			
Course Outcomes	On successful completion of this course the students shall be able to: 1] Recognize the significance of various disciplines in Civil Engineering 2] Discuss the recent evolutions in Civil Engineering 3] Explain various energies, energy generating machineries and energy consumption machineries 4] Describe the fundamental concept and terminology associated with the Petroleum Industry 5] Distinguish between conventional and modern manufacturing techniques.			
Course Content:				
Module 1	Introduction to various fields in Civil Engineering	Assignment	Case studies on different Civil Engineering Projects	6 Sessions
Topics: Introduction to Civil Engineering: Definition, scope and branches of Civil Engineering, Role of Civil Engineer, Overview of Infrastructure.				
Module 2	Current Trends and Evolution in Civil Engineering	Assignment	Article Review	6 Sessions
Topics: Mechanization in Construction, Application of Digital Technologies in Planning, Design, execution, monitoring and maintenance of Construction. Overview of Smart Cities.				
Module 3	Power Production and Consumption Machinery	Assignment & Quiz	Data Collection	6 Sessions
Topics: Energy and its types, Engines and their applications, Pumps-Compressors and their applications.				

Module 4	Overview of Petroleum Engineering	Assignment & Quiz	Article Review	6 Sessions
Overview of the Petroleum Industry, Importance of Petroleum Engineering, lifecycle of Petroleum products, Classifications of E&P activities: Key difference between Offshore and Onshore, Onshore facilities, offshore platforms, Digitization of petroleum engineering				
Module 5	Industry 4.0	Assignment & Quiz	Data Collection	6 Sessions
Topics: Conventional manufacturing process: Metal forming, metal removal and metal joining process. Modern Manufacturing process: 3D Printing / Additive Manufacturing.				
Targeted Application & Tools that can be used: Application Areas include design and implementation of Smart City projects, Infrastructure maintenance, Power production, IC engines, Electric vehicles, onshore and offshore exploration and production activities				
Project work/Assignment:				
Assignment 1: Collect data and prepare report on various Mega Projects in Civil Engineering Assignment 2: Review Articles on current evolutions in Civil Engineering. Assignment 3: Collect data related to renewable energy generation (Wind, Solar) Assignment 4: Prepare an energy consumption chart for a compressor or pumps. Assignment 5: Prepare a report on role of 3D printing across various industries. Assignment 6: Prepare an assignment on geopolitical influence on oil and gas industries.

Course Code: CSE1006	Course Title: Problem Solving using JAVA Type of Course: Lab Integrated	L- T- P- C			4	3
Version No.	2.0					
Course Pre-requisites	CSE1004 – Problem-Solving Using C					
Anti-requisites	Nil					
Course Description	This course introduces the core concepts of object-oriented programming. This course has theory and lab component which emphasizes understanding the implementation and application of object-oriented programming paradigm. It helps the student to build real-time secure applications by applying these concepts and also for effective problem-solving. The students interpret and understand the need for object-oriented programming to build applications.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Problem-Solving using JAVA and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques					
Course Out Comes	On successful completion of the course, the students shall be able to: C.O. 1: Describe the basic programming concepts. [Knowledge] C.O. 2: Apply the concept of classes, objects and methods to solve problems. [Application] C.O. 3: Apply the concept of arrays and strings. [Application] C.O. 4: Implement inheritance and polymorphism in building secure applications. [Application] C.O. 5: Apply the concepts of interface and error handling mechanism. [Application]					
Course Content:						

Module 1	Basic Concepts of Programming and Java	Assignment	Data Collection/Interpretation	12 Sessions
Topics: Introduction to Principles of Programming: Process of Problem Solving, Java program structure, Download Eclipse IDE to run Java programs, Sample program, Data types, Identifiers, Variables, Constants in java, Operators, Assignments and Expression, Basic Input/ Output functions, Control Statements: Branching and Looping.				
Module 2	Classes, objects, methods and Constructors	Case studies / Case let	Case studies / Case let	12 Sessions
Topics: Classes, Objects and Methods: Introduction to object Oriented Principles, defining a class, adding data members and methods to the class, access specifiers, instantiating objects, reference variable, accessing class members and methods. Static Polymorphism: Method overloading, constructors, constructor overloading, this keyword, static keyword, Nested classes, Accessing members in nested classes.				
Module 3	Arrays, String and String buffer	Quiz	Case studies / Case let	14 Sessions
Topics: Arrays: Defining an Array, Initializing & Accessing Array, Multi-Dimensional Array, Array of objects. String: Creation & Operation. String builder class, methods in String Buffer.				
Module 4	Inheritance and Polymorphism	Quiz	Case studies / Case let	14 Sessions
Topics: Inheritance: Defining a subclass, Types of Inheritance, super keyword. Dynamic Polymorphism: Method overriding. Final keyword: with data members, with member functions and with class. Abstract keyword: with data members, with member functions and with class, Exception handling.				
Module 5	Input & Output Operation in Java	Quiz	Case studies / Case let	14 Sessions
Input/output Operation in Java(java.io Package), Streams and the new I/O Capabilities, Understanding Streams, working with File Objects, File I/O Basics, Reading and Writing to Files, Buffer and Buffer Management, Read/Write Operations with File Channel, Serializing Objects, Observer and Observable Interfaces.				
List of Laboratory Tasks: P1 - Problem Solving using Basic Concepts. P2 - Problem Solving using Basic Concepts and Command Line Arguments.				

P3 - Programming assignment with class, objects, methods and Constructors.

P4 - Programming assignment with method overloading.

P5 - Programming assignment with constructor overloading.

P6 - Programming assignment with Static members and static methods.

P7 - Programming assignment with Nested classes.

P8 - Programming assignment using Arrays.

P9 - Programming assignment using Strings.

P10 - Programming assignment using String Builder.

P11 - Programming assignment using Inheritance and super keyword.

P12 - Programming assignment using Method overriding and Dynamic method invocation.

P13 - Programming assignment using Final keywords.

P14 - Programming assignment using Abstract keywords.

P15 - Programming assignment using Interface.

P16 - Programming assignment using Interface.

P17 - Programming assignment CharacterStream Classes

P18 - Programming assignment Read/Write Operations with File Channel

Targeted Application & Tools that can be used : JDK /eclipse IDE/ net Beans IDE.

Inheritance and Polymorphism.

for Skill Development through Experiential Learning techniques. This is attained through the assessment component mentioned in the course handout.

ENG2001	Advanced English	L- T- P- C	1	0	2	2
Version No.	1.3					
Course Pre-requisites	ENG1002 Technical English					
Anti-requisites	NIL					
Course Description	The course emphasizes on technical communication at advanced level by exploring critical reading, technical presentation and review writing. The purpose of the course is to enable learners to review literature in any form or any technical article and deliver technical presentations. Extensive activities in practical sessions equip to express themselves in various forms of technical communications. Technical presentations and the module on career setting focus on learners’ area of interests and enhance their English language writing skills to communicate effectively.					
Course Out Come	On successful completion of the course the students shall be able to: Develop a critical and informed response reflectively, analytically, discursively, and creatively to their reading. Communicate effectively, creatively, accurately and appropriately in their writing. Deliver technical presentations Design resume and create professional portfolio to find a suitable career					

Course Content: Theory				
Module 1	Critical Reasoning and Writing	Writing Essays	Critical Reading	4 Classes
Topics: A Catalog of Reading Strategies The Myth of Multitasking A Guide to Writing Essays Speculating about Causes or Effects Is Google Making Us Stupid (Self Study)				
Module 2	Technical Presentation	Presentation	Oral Skills	3 Classes
Topics: Planning the presentation Creating the presentation Giving the presentation				
Module 3	Writing Reviews	Prezi	Review Writing	4 Classes
Topics: Review Writing Short film reviews Advanced English Grammar (Self Study)				
Module 4	Starting your Career	Online Writing Lab	Writing Skills	4 Classes
Topics: Preparing a Resume Writing Effective Application Letter Creating a Professional Portfolio				
Course Content: Practical Sessions				
Module 1	Critical Reasoning and Writing		8 Classes	
Reading and Analyzing Level 1 – Annotation Level 2 - Assumptions				

Writing Narrative Essays Level 1 – Draft 1 Level 2 – Draft 2		
Module 2	Technical Presentation	10 Classes
Fishbowl In Fishbowl, students form concentric circles with a small group inside and a larger group outside. Students in the inner circle engage in an in-depth discussion, while students in the outer circle listen and critique content, logic, and group interaction. Level 1 – within group Level 2 – Among 2 group Technical Group Presentation		
Module 3	Writing Reviews	Classes
Practice Worksheets Level 1 – Eliminating the Passive Voice Level 2 – Simple, compound and complex sentences Writing Short Film Reviews		
Module 4	Starting your Career	Classes
Collaborative Project Job search and writing report Writing Resume		
Module 1-4	Academic Journal	2 Classes
Academic Journal Writing Level 1- Mid Term Level 2 – End Term		
Targeted Application & Tools that can be used: Writing reports, Review writing, Group Discussion, Dyadic interviews, Grammarly.com		
Project work/Assignment:		
Academic Journal – Assignment		

In Academic Journal (CIJ), students compile task and activities completed in each module and submit to the instructor at the middle and end of the semester.

Course Code: PPS1012	Course Title: Enhancing Personality through Soft Skills Type of Course: Practical Only Course	L- T - P- C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	Students are expected to understand Basic English. Students should have desire and enthusiasm to involve, participate and learn.					
Anti-requisites	NIL					

Course Description	This course is designed to enable students understand soft skills concepts and improve confidence, communication and professional skills to give the students a competitive advantage and increase chances of success in the professional world. The course will benefit learners in presenting themselves effectively through various activities and learning methodologies.		
Course Objective	The objective of the course is to familiarize the learners with the concepts of “Personality Development through Soft Skills” and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques.		
Course Out Comes	On successful completion of this course the students shall be able to: CO 1 Identify the stages of team formation (Remember) CO 2 Demonstrate effective presentation skills (Apply) CO3 Prepare professional social media profile (Apply)		
Course Content:			
Module 1	Team Building	Classroom and outbound team building activities.	6 Hours
Topics: Importance of team, stages of Team Formation, Trust and collaboration, Virtual Team. Activity: Team Building outbound activity			
Module 2	Art of Questioning	Role plays	4 Sessions
Topics: Framing Questions, 5W1H Technique, Open-ended and Close-ended questions, Funnel technique, Probing questions, Leading questions			
Module 3	Presentation Skills	Practice and evaluation of individual / group presentation	10 Sessions

Topics: Content development, Delivery techniques, Audience Analysis, Timing and Pacing, handling questions and challenges. Activity: Individual presentations and team presentation			
Module 4	Professional Brand Building	Brand Framework Activity	4 Sessions
Topics: Personal brand definition, Crafting a compelling LinkedIn profile, Networking strategies. Activity: Create a basic online profile			
Module 5	Recap / Revision /Feedback Session		1 Session
Targeted Application & Tools that can be used: TED Talks You Tube Links Activities			
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course			
Presentation Evaluation			
Targeted Application & Tools that can be used: TED Talks YouTube Links Videos by L&D Team shared on Edhitch/YouTube.com LMS Assignments proposed for this course Evaluation on Presentation Assignment on LinkedIn Post

Course Code: EEE1007	Course Title: Basics of Electrical and Electronics Engineering. Type of Course: Engineering Science - Theory & Integrated Laboratory	L-T-P-C	3	0	2	4
Version No.	1.0					
Course Pre-requisites	NIL					

Anti-requisites	NIL			
Course Description	This is a fundamental Course which is designed to know the use of basics of electrical and electronics engineering principles occurs in various fields of Engineering. The course emphasis on the characteristics and applications of Electrical and Electronics devices, working, analysis and design of electrical circuits using both active & passive components, fundamentals of electrical machines and basics of transistors and its application. The associated laboratory provides an opportunity to validate the concepts taught and enhances the ability to visualize the real system performance, using both hardware and simulation tools.			
Course Objective	The objective of the course is to familiarize the learners with the concepts of Basics of Electrical and Electronics Engineering and attain Skill Development through Experiential Learning techniques.			
Course Outcomes	On successful completion of this course the students shall be able to: Explain basic laws of Electrical Engineering to compute voltage, currents and other parameters in the circuits. Discuss various fundamental parameters appearing in the characteristics of semiconductor devices and their applications. Summarize the operations of different biasing configurations of BJTs and amplifiers. Summarize the performance characteristics and applications of various electrical Machines. Demonstrate the working of electrical machines to observe performance characteristics Demonstrate the working of electronic circuits to obtain the V-I Characteristics of various semiconductor devices.			
Course Content:				
Module 1	Introduction to Electrical Circuits	Assignment / Quiz	Numerical solving Task	10 Sessions
DC Circuits: Concept of Circuit and Network, Types of elements, Network Reduction Techniques- Series and parallel connections of resistive networks, Star-to-Delta Transformations, Mesh Analysis, Numerical examples. AC Circuits: Fundamentals of single phase circuits - Series RL, RC and R-L-C Circuits, Concept of active power, reactive power and Power factor, Numerical examples. Introduction to three phase system and relation between line and phase values in Star & Delta connection, Numerical examples.				

Module 2	Semiconductor and Diode applications	Assignment / Quiz	Memory Recall based Quizzes	11 Sessions
Mass Action Law, Charge densities in a semiconductor, Types of SC, Junction diodes -Ideal and practical behaviour, Modelling the Diode Characteristic, and Diode applications like rectifiers, Clipping and clamping circuits. Zener diode, characteristics and its applications like voltage regulator.				
Module 3	Fundamentals of Electrical Machines	Assignment / Quiz	Memory Recall-based Quizzes	12 Sessions
Electrical Machines: Single phase transformers: principle of operation and EMF equation, Numerical examples. DC Motor: principle of operation, Back EMF, torque equation, Numerical examples. AC Motor: Principle operation of Induction Motors and its Applications. Special Machines: Introduction to special electrical machines and its applications.				
Module 4	Transistors and its Applications	Assignment / Quiz	Numerical solving Task	12 Sessions
Transistor characteristics, Current components, BJT Configurations (CB, CC, CE configurations) and their current gains. Operating point, Biasing & stabilization techniques: Fixed Bias, Voltage divider bias and its stability factor and load line analysis. Single and multistage amplifier, Darlington pair. JFET (Construction, principal of Operation and Volt –Ampere characteristics). Pinch- off voltage, Comparison of BJT and FET. MOSFET (Construction, principal of Operation and symbol), MOSFET characteristics in Enhancement and Depletion modes.				
List of Laboratory Tasks: Experiment No 1: Verification of KVL and KCL for a given DC circuit. Level 1: Study and Verify KVL and KCL for the given electrical Circuit. Level 2: For the same circuit considered in level 1, perform the simulation using NI LabVIEW/Multisim/MATLAB. Experiment No 2: Analyse AC series circuits – RL, RC and RLC . Level 1: Conduct an experiment to perform and verify the impedance, current and power of Series RL and RC circuits Level 2:				

Experiment No 3: Calculation of power and power factor of the given AC Circuit.

Level 1: Conduct an experiment to measure the power and power factor for given resistive load.

Level 2: Conduct an experiment to measure the power and power factor for given inductive load.

Experiment No 4: Perform the experiments on given Transformer.

Level 1: Verify the EMF equation of a transformer and compute the voltage transformation ratio.

Level 2: Study the effect of load on the secondary side of the transformer and verify the EMF equation under load conditions.

Experiment 5: Load test on DC shunt motor

Level 1: Conduct load test on DC shunt motor and find its efficiency at different loads

Level 2: Conduct load test on DC shunt motor and plot the performance characteristics.

Experiment 6: Study of PN-Junction Diode Characteristics in Forward and Reverse Bias Conditions.

Level 1: Carry out an experiment to plot VI Characteristics and hence find the cut-in voltage on forward characteristics for the Silicon P-N Junction diode.

Level 2: Carry out an experiment to plot VI Characteristics of Zener diode and hence find the zener voltage on reverse characteristics for the Silicon P-N Junction zener diode.

Experiment 7: To observe the output waveform of half wave and full wave rectifier circuit and compute ripple factor and efficiency

Level 1: Identify the components required for a rectifier circuit, rig up the circuit, and sketch the output waveforms without filter.

Level 2: Rig up the rectifier circuit with RC filter, observe the output waveforms, determine the efficiency and ripple factor.

Experiment 8: To construct clipping and clamping circuits for different reference voltages and to verify the responses.

Level 1: Identify the components required for building a Clipper / Clamper circuit. Rig up the circuit according to the circuit diagram given and sketch the output waveform.

Level 2: Given a sinusoidal input of 10 V p-p, implement a positive / negative clipper with output clipped at 2 V. Experiment 9: To calculate various parameters of emitter follower circuit using BJT Level 1: Identify the components required to implement an emitter follower circuit. Rig up the circuit and observe the variations in output waveform with respect to the variations in input waveform. Level 2: Determine the values of Z_{in} input impedance and Z_{out} output impedance for Emitter Follower. Experiment 10: To Implement RC Coupled amplifier using a BJT and sketch the frequency response. Level 1: Identify the components required to implement an RC coupled amplifier circuit. Rig up the circuit and sketch the frequency response. Level 2: From the frequency response curve determine the value of the mid band gain and the bandwidth.
Targeted Application & Tools that can be used: Targeted Applications: Application Area includes all electrical and electronic circuits (power supply unit, regulator unit, embedded devices, hardware electronics etc.). The students will be able to join a profession which involves basics to high level of electronic circuit design. Professionally Used Software: Matlab/Multisim/ PSpice Besides these software tools hardware equipment such as Multimeters, Function Generators, Power Supplies, Oscilloscopes etc., can be used to perform component/circuit testing and analysis..

Topics relevant to “SKILL DEVELOPMENT”: Performing suitable experiments to compute the Electrical and electronics circuit parameters, performance operation of Machines, and semiconductor devices for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course plan.

Course Code: CSE1006	Course Title: Problem Solving using JAVA Type of Course: Integrated	L- T-P- C	1	0	4	3
Version No.	2.0					
Course Pre-requisites	CSE1004 – Problem Solving Using C					
Anti-requisites	Nil					
Course Description	This course introduces the core concepts of object-oriented programming. This course has theory and lab component which emphasizes on understanding the implementation and application of object-oriented programming paradigm. It helps the student to build real time secure applications by applying these concepts and also for effective problem solving. The students interpret and understand the need for object oriented programming to build applications.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Problem-Solving using JAVA and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques					
Course Out Comes	On successful completion of the course the students shall be able to: C.O. 1: Describe the basic programming concepts. [Knowledge]					

	C.O. 2: Apply the concept of classes, objects and methods to solve problems. [Application] C.O. 3: Apply the concept of arrays and strings. [Application] C.O. 4: Implement inheritance and polymorphism building secure applications. [Application] C.O. 5: Apply the concepts of interface and error handling mechanism. [Application]			
Course Content:				
Module 1	Basic Concepts of Programming and Java	Assignment	Data Collection/Interpretation	12 Sessions
Topics: Introduction to Principles of Programming: Process of Problem Solving, Java program structure, Download Eclipse IDE to run Java programs, Sample program, Data types, Identifiers, Variables, Constants in java, Operators, Assignments and Expression, Basic Input/ Output functions, Control Statements: Branching and Looping.				
Module 2	Classes, objects, methods and Constructors	Case studies / Case let	Case studies / Case let	12 Sessions
Topics: Classes, Objects and Methods: Introduction to object Oriented Principles, defining a class, adding data members and methods to the class, access specifiers, instantiating objects, reference variable, accessing class members and methods. Static Polymorphism: Method overloading, constructors, constructor overloading, this keyword, static keyword, Nested classes, Accessing members in nested classes.				
Module 3	Arrays, String and String buffer	Quiz	Case studies / Case let	14 Sessions
Topics: Arrays: Defining an Array, Initializing & Accessing Array, Multi –Dimensional Array, Array of objects. String: Creation & Operation. String builder class, methods in String Buffer.				
Module 4	Inheritance and Polymorphism	Quiz	Case studies / Case let	14 Sessions
Topics: Inheritance: Defining a subclass, Types of Inheritance, super keyword. Dynamic Polymorphism: Method overriding. Final keyword: with data members, with member functions and with class. Abstract keyword: with data members, with member functions and with class, Exception handling.				

Module 5	Input & Output Operation in Java	Quiz	Case studies / Case let	14 Sessions
Input/output Operation in Java(java.io Package), Streams and the new I/O Capabilities, Understanding Streams, working with File Object, File I/O Basics, Reading and Writing to Files, Buffer and Buffer Management, Read/Write Operations with File Channel, Serializing Objects, Observer and Observable Interfaces.				
List of Laboratory Tasks: P1 - Problem Solving using Basic Concepts. P2 - Problem Solving using Basic Concepts and Command Line Arguments. P3 - Programming assignment with class, objects, methods and Constructors. P4 - Programming assignment with method overloading. P5 - Programming assignment with constructor overloading. P6 - Programming assignment with Static members and static methods. P7 - Programming assignment with Nested classes. P8 - Programming assignment using Arrays. P9 - Programming assignment using Strings. P10 - Programming assignment using String Builder. P11 - Programming assignment using Inheritance and super keyword. P12 - Programming assignment using Method overriding and Dynamic method invocation. P13 - Programming assignment using Final keywords. P14 - Programming assignment using Abstract keywords. P15 - Programming assignment using Interface. P16 - Programming assignment using Interface. P17 - Programming assignment CharacterStream Classes P18 - Programming assignment Read/Write Operations with File Channel				
Targeted Application & Tools that can be used : JDK /eclipse IDE/ net Beans IDE.

Course Pre-requisites	Not Applicable		
Anti-requisites	Not Applicable		
Course Description	This Course is for beginners and gives an introduction of the French Language (basic grammar, conjugation, daily used vocabulary words, and basic conversations) and French culture. This Course is designed to build up all of the basic skills of French listening, reading, speaking, and writing introduced in the lessons. Besides, this Course offers an access to the French world, helping students to break cultural boundaries and raise cultural literacy.		

Course Objective	This course is designed to improve the learners Employability skills by using participative learning techniques to develop students' language proficiency and cross-cultural competence by active and participatory teaching methods.			
Course Outcomes	On successful completion of the course the students shall be able to: Identify the basics of French Grammar, vocabulary and Conjugation Apply the basics strategies of listening, reading, speaking and writing skills Use of French on everyday topics such as greetings, personal information, time and schedule Practice conversations in French language with peer speakers in different situations			
Course Content:	Learning of Basic French skills			
Module 1	Greetings and Introducing yourself		[Remember]	6 Periods
Chapter 1. Greetings Objectives: Greetings, introducing yourself, how to welcome someone, Grammar: Construction of a sentence, the days of the weeks and the months Chapter 2. Introducing yourself Objectives: Introduce oneself / ask for someone's personal information. Grammar: Mas or Fem noun, adjectives, present tense of the 1st group Usage of audio visual files				
Module 2	Expressing likes/dislikes and introducing someone		[Apply]	6 Periods
Chapter 3. Expressing likes and dislikes Objectives: How to expressing what you like and dislike. Grammar: Negative form, singular and plural. Culture: The polite way to address people in French Assignment Chapter 4. Introducing someone Objectives: How to describe someone,				

Grammar: Vocabulary of the family, Demonstrative adjectives, Present tense of verbs of the 2nd and 3rd group				
Module 3	Inviting someone and asking questions		[Apply]	9 Periods
Chapter 5. Inviting someone Objectives: How to invite someone, accept or refuse the invitation, Read the time, Grammar: Future tense, Interrogation. Culture: The art of accepting and declining an invitation politely in French Internal Chapter 6. Asking for information, Objectives: How to ask for information, giving information				
Module 4	Making a reservation and giving directions		[Apply]	9 Periods
Chapter 7: Making a Reservation Objectives: How to make a reservation, future tense Chapter 8 : Giving directions Objectives: How to ask for directions, Imperative tense Group discussions				
Targeted Application & Tools that can be used				
Project work /Assignments Assignment (Essay writing / presentation) Internal Group work / Group discussions				
Text Book L'Atelier 1 - - Méthode de Français--- Niveau A1 (Didier – 2019) Festival 1- - Méthode de Français--- Niveau A1 (CLE International – 2005)				
References Learning materials designed by the instructor				

Topics relevant to development of 'Employability Skills' through participative learning techniques:

Foreign language proficiency and cross-cultural competence by active and participatory teaching methods.

Course Code: ECE2010	Course Title: Innovative Projects using Arduino	L- T- P- C	-	-	-	1
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	This course is designed to provide an in-depth understanding of Arduino microcontrollers and their application in various real time projects involving sensors. Throughout the course, students will learn the fundamentals of Arduino programming and gain hands-on experience with a wide range of sensors. Students will explore how to connect and interface sensors with Arduino boards, read sensor data, and use it to control various output devices This course is suitable for beginners who are interested in exploring the world of electronics and developing practical applications using Arduino and sensors.					
Course Objective	The objective of the course is Employability Skills of student by using PARTICIPATIVE LEARNING techniques.					
Course Outcomes	On successful completion of the course the students shall be able to Explain the main features of the Arduino prototype board Demonstrate the hardware interfacing of the peripherals to Arduino system. Understand the types of sensors and its functions Demonstrate the functioning of live projects carried out using Arduino system.					
Course Content:						
Module 1	Basic concepts of Arduino	Hands-on	Interfacing Task and Analysis		4 Sessions	
Topics: Introduction to Arduino, Pin configuration and architecture, Device and platform features, Concept of digital and analog ports, Familiarizing with Arduino Interfacing Board, API's , Introduction to Embedded C and Arduino platform, Arduino Datatypes and variables, Arduino i/o Functions, Arduino Communications, Arduino IDE, Various Cloud Platforms.						

Module 2	Sensory Devices	Hands-on	Interfacing Task and Analysis	4 Sessions
Arduino Sensors: Humidity Sensor, Temperature Sensor, Water Detector / Sensor, PIR Sensor, Ultrasonic Sensor, Connecting Switches and actuators, sensor interface with Arduino. Introduction to 3D Printer: 3D Printer technology and its working Principles, Applications. Introduction to online Simulators: Working with Tinkercad Simulator.				
Topics: Types of Arduino boards, sensors, 3D Printer				
Targeted Application & Tools that can be used: Application Area: Home Automation, Environmental Monitoring, Agriculture and Farming, Industrial Automation, Internet of Things (IoT), Robotics, Wearable Devices, Security Systems, Education and Learning. These are just a few examples of the many application areas where Arduino and sensors can be applied. The flexibility and affordability of Arduino, combined with the wide range of sensors available, allow for endless possibilities in creating innovative projects. Professionally Used Software: students can use open SOURCE Softwares Arduino IDE and Tincker CAD				
Project work/Assignment:				
1. Projects: At the end of the course students will be completing the project work on solving many real time issues. 2. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. Presidency University Library Link . 3. Presentation: There will be a presentation from interdisciplinary students group, where the students will be given a project on they have to demonstrate the working and discuss the applications for the same

Topics relevant to development of “SKILL”: System design for achieving Sustainable Development Goals.

Course Code: MAT2501	Course Title: Integral Transforms and Partial Differential Equations Type of Course:1] School Core	L-T- P- C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	Calculus and Differential Equations					
Anti-requisites	NIL					
Course Description	This course aims to introduce various transform techniques such as Laplace transform, Fourier transform and Z-transform in addition to expressing functions in terms of Fourier series. The course covers applications of Laplace transform to LCR circuits and solutions of differential equations using Z-transform. The course also deals with the analytical methods for solving partial differential equations and the classical applications of partial differential equations.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of “Transform Techniques, Partial Differential Equations” and attain Skill Development through Problem Solving Techniques.					
Course Out Comes	On successful completion of the course the students shall be able to: CO1 - Express functions in terms of uniformly convergent Fourier series. CO2 - Apply Laplace transform technique to solve differential equations. CO3 - Employ Z-transform techniques to solve difference equations. CO4 - Solve a variety of partial differential equations analytically.					
Course Content:						
Module 1	Laplace Transforms		(12 Classes)			
Definition and Laplace transform of elementary functions. Properties of Laplace transform, and Laplace transform of periodic function, unit-step function and Impulse function – related problems. Inverse Laplace transform of standard functions - problems, initial and final value theorem. Convolution theorem, solution of linear and simultaneous differential equations and LCR Circuit.						

Module 2	Fourier Series	Assignment	(8 Classes)
Fourier Series: Periodic functions, Dirichlet's condition. Fourier series of periodic functions period 2π and arbitrary period. Half range Fourier series. Practical harmonic analysis.			
Module 3	Fourier Transforms and Z - Transforms		(13 Classes)
Fourier Transforms: Definitions, infinite Fourier transforms, Fourier sine and cosine transforms, inverse Fourier transforms, Problems. Difference equations and Z-transforms: Z-transforms – Basic definitions, Standard Z-transforms, Linearity property, Damping rule, Shifting rule, Initial value theorem, Final value theorem, Inverse Z-transforms. Difference equations – Basic definitions, Application of Z-transforms to solve difference equations.			
Module 4	Partial Differential Equations	Assignment	(12 Classes)
Formation of PDE, Solution of non-homogeneous PDE by direct integration, Solution of homogeneous PDE involving derivative with respect to one independent variable only (Both types with given set of conditions) Method of separation of variables. (First and second order equations) Solution of Lagrange's linear PDE. of the type $Pp + Qq = R$. Applications of PDE: Derivation of one-dimensional wave and heat equations. Various possible solutions of these by the method of separation of variables. D'Alembert's solution of wave equation. Two-dimensional Laplace's equation – various possible solutions. Solution of all these equations with specified boundary conditions (Boundary value problems).			
Targeted Application & Tools that can be used: The objective of the course is to familiarize students with a variety of numerical techniques and the theoretical concepts of probability and statistics to equip them with the necessary numerical approaches and basic statistical tools to tackle engineering and real-life problems.			
Assignment:			
Newton-Raphson Methods, Gauss-Seidel Method, LU Decomposition, Trapezoidal Rule, Simpson's rule, Runge-Kutta 4th Order.			
Text Book Erwin Kreyzig, Advanced Engineering Mathematics, John Wiley and sons, Inc. 10th Edition B. S. Grewal (2017), Higher Engineering Mathematics by, 44th Edition, Khanna Publishers.

<https://www.scu.edu.au/study-at-scu/units/math1005/2022/>

Topics relevant to SKILL DEVELOPMENT: The course focuses on the concepts of calculus and differential equation with reference to specific engineering problems. The course is of both conceptual and analytical type in nature through Problem solving. This is attained through the assessment component mentioned in course handout.

Course Code: CDV2000

Course Title: DevOps Foundations

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course provides foundational knowledge of DevOps culture, principles, tools, and practices. It covers version control, continuous integration and delivery (CI/CD), containerization, cloud deployment, and infrastructure as code. Students gain an understanding of how DevOps improves collaboration, automation, and software delivery lifecycle in modern development environments.

Course Objectives

- Understand the principles and lifecycle of DevOps practices
- Explore version control, build tools, and CI/CD pipelines
- Learn containerization, orchestration, and cloud deployment basics
- Apply DevOps tools to automate and streamline the software development lifecycle

Course Outcomes

CO1 (Understand): Describe DevOps principles, processes, and benefits

CO2 (Analyze): Examine CI/CD practices and DevOps toolchains

CO3 (Apply): Implement version control, automated builds, and test pipelines

CO4 (Apply): Deploy containerized applications using basic orchestration

Course Content (45 Hours Total)

Module 1: Introduction to DevOps and Culture – 11 Sessions (Understand)

Evolution of DevOps, Agile and Lean influence, DevOps lifecycle, CALMS framework, Dev vs Ops mindset, DevOps metrics, Toolchain overview, DevSecOps introduction

Module 2: Version Control and CI/CD – 11 Sessions (Analyze)

Git basics and branching, GitHub/GitLab workflows, Build automation (Maven, Gradle), Continuous Integration concepts, Jenkins, GitHub Actions, Continuous Delivery pipelines, Code quality and static analysis

Module 3: Containerization and Deployment – 11 Sessions (Apply)

Containers vs VMs, Docker architecture, Dockerfile and images, Docker Compose, Container registry, Application deployment and rollback, Kubernetes overview

Module 4: Infrastructure and Monitoring – 12 Sessions (Apply)

Infrastructure as Code (IaC) with Terraform/Ansible, Cloud provisioning (AWS/GCP/Azure basics), Monitoring and logging with Prometheus, ELK Stack, Alerts and dashboards, DevOps use cases in industry

Course Code: CSE2502	Course Title: Operating Systems Type of Course: Program Core and Theory Only		L-T- P- C	3	0	0	3
Version No.	1.0						
Course Pre-requisites	CSE2009- Computer Organization, Problem solving using C Students should have basic knowledge on computers, computer software & hardware, andComputer Organization. Prior programming experience in C is recommended.						
Anti-requisites	NIL						
Course Description	This course introduces the concepts of operating system operations, operating system structure and its design and implementation. It covers the classical operating systems internal algorithms such as process scheduling, synchronization, deadlocks detection and recovery and memory management. The course also enhances the problem solving, systemsprogramming ability and case studies.						
Course Object	The objective of the course is to familiarize the learners with the concepts of OperatingSystems and attain Employability through Problem Solving Methodologies .						
Course Out Comes	On successful completion of the course the students shall be able to: 1] Describe the fundamental concepts of operating Systems and case studies. [Knowledge] 2] Demonstrate various CPU scheduling algorithms. . [Application] 3] Apply various tools to handle synchronization problems. [Application] 4] Demonstrate deadlock detection and recovery methods [Application] 5] Illustrate various memory management techniques. [Application]						
Course Content:							
Module 1	Introduction to Operating System	Assignment	Programming			9 Hours	
Topics: Introduction to OS , Operating-System Operations, Operating System Services, , System Calls and its types, Operating System Structure, System Program and its types, Linkers and Loaders, Overview of OS design and implementation, Open-source operating system							
Module 2	Process Management	Assignment/Case Study	Programming/Simulation			11 Hours	

Topics: Process Concept, Operations on Processes, Inter Process Communication, Communication in client-server systems (sockets, RPC, Pipes), Introduction to threads - Multithreading Models, Thread Libraries, Threading Issues, Process Scheduling– Basic concepts, Scheduling Criteria, Scheduling Algorithms: FCFS, SJF, SRTF, RR and Priority.				
Module 3	Process Synchronization and Deadlocks	Assignment	Programming	11 Hours
Topics: The Critical-Section Problem- Peterson's Solution, Synchronization hardware, Semaphores, Classic Problems of Synchronization with Semaphore Solution- Producer-Consumer Problem, Reader-Writer problems, Dining Philosopher's Problem, . Introduction to Deadlocks, Necessary conditions for deadlock, Resource allocation Graph, Methods for handling deadlock: Deadlock Prevention and Implementation, Deadlock Avoidance and Implementation, Deadlock detection & Recovery from Deadlock.				
Module 4	Memory Management	Assignment	Programming/Simulation	10 Hours
Topics: Introduction to Memory Management, Basic hardware-Base and Limit Registers, Memory Management Unit(MMU), Dynamic loading and linking, Swapping, Contiguous and Non-Contiguous Memory Allocation, Segmentation, Paging - Structure of the Page Table – Virtual Memory and Demand Paging – Page Faults and Page Replacement Algorithms, Copy-on-write, Allocation of Frames, Thrashing Introduction to File system management: File System Interface (access methods, directory structures), File system implementation.				
Targeted Application: Application area is traffic management system, banking system, health care and many more systems wherein there are resources and entities that use and manage the resources. Software Tools: - Oracle Virtual Box/VMWare Virtualization software [Virtual Machine Managers]. Used to install and work on multiple guest Operating Systems on top of a host OS. - Intel Processor identification utility: This software is used to explain about multi-core processors. It helps to identify the specifications of your Intel processor, like no of cores, Chipset information, technologies supported by the processor etc.				
Project work/Assignment				
- Demonstrate process concepts in LINUX OS. - Simulation of CPU scheduling algorithms. - Develop program to demonstrate use of Semaphores in threads. - Develop program to demonstrate use of deadlock avoidance algorithms. - Develop program to demonstrate use of page replacement algorithms. - Simulation of memory allocation strategies [first fit, best fit and worst fit].

Course Code: CSE1508	Course Title: Data Structures Type of Course: Theory		3		0	3 3
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	This course introduces the fundamental concepts of data structures and to emphasize the importance of choosing an appropriate data structure and technique for program development. This course has theory and lab component which emphasizes on understanding the implementation and applications of data structures using Java programming language. With a good knowledge in the fundamental concepts of data structures and practical experience in implementing them, the student can be an effective designer, developer for new software applications.					
Course Objective	The objective of the course is SKILL DEVELOPMENT of student by using EXPERIENTIAL LEARNING techniques					
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Describe the concept of basic data structure, stacks, queues, and arrays and their operations. [Understand] CO2: Utilize linked lists for real-time scenarios. [Apply]					

	CO3: Apply an appropriate non-linear data structure for a given scenario. [Apply] CO4: Demonstrate different searching and sorting techniques. [Apply]			
Course Content:				
Module 1	Introduction to Data Structure and Linear Data Structure - Stacks and Queues	Assignment	Program activity	9 Hours
Introduction - Introduction to Data Structures, Types and concept of Arrays. Stack - Concepts and representation, Stack operations, stack implementation using array and Applications of Stack. Queues - Representation of queue, Queue Operations, Queue implementation using array, Types of Queue and Applications of Queue.				
Module 2	Linear Data Structure- Linked List	Assignment	Program activity	12 Hours
Topics: Linked List - Singly Linked List, Operation on linear list using singly linked storage structures, Circular List, Applications of Linked list. Recursion - Recursive Definition and Processes.				
Module 3	Non-linear Data Structures - Trees	Assignment	Program activity	12 Hours
Topics: Trees - Introduction to Trees, Binary tree: Terminology and Properties, Use of Doubly Linked List, Binary tree traversals: Pre-Order traversal, In-Order traversal,				

Post - Order traversal, Binary Search Tree, AVL Trees - Red Black Tree, Expression Tree , Heaps.				
Module 4	Non-linear Data Structures - Graphs and Hashing	Assignment	Program activity	6 Hours
Topics: Graphs: Basic Concept of Graph Theory and its Properties, Representation of Graphs . ADT, Elementary graph operations, Minimum Cost spanning trees, Shortest path and Transitive closure. Hashing: Introduction, Static Hashing, Dynamic Hashing				
Module 5	Searching & Sorting	Assignment	Program activity	6 Hours
Topic: Sorting & Searching - Sequential and Binary Search, Sorting – Selection and Insertion sort, Quick sort, Merge Sort, Bubble sort.				
List of Laboratory Tasks: Lab sheet -1 Level 1: Prompt the user, read input and print messages. Programs using class, methods and objects Level 2: Programming Exercises on fundamental Data structure - Arrays based on Scenario. Lab sheet -2 Level 1: Programming Exercises on Stack and its operations Level 2: Programming Exercises on Stack and its operations with condition Lab sheet -3 Level 1: Programming on Stack application infix to postfix Conversion Level 2: - Lab sheet -4 Level 1: Programming on Stack application – Evaluation of postfix Lab sheet -5				

Level 1: Programming Exercises on Queues and its operations with conditions

Level 2: -

Lab sheet -6

Level 1: Programming Exercises on Linked list and its operations.

Level 2: Programming Exercises on Linked list and its operations with various positions

Lab sheet -7

Level 1: Programming Exercises on Circular Linked list and its operations.

Level 2: Programming Exercises on Circular Linked list and its operations with various positions

Lab sheet -8

Level 1: Programming Exercises on factorial of a number

Level 2: Programming the tower of Hanoi using recursion

Lab sheet -9

Level 1: -

Level 2: Programming the tower of Hanoi using recursion

Lab sheet -10

Level 1: Programming Exercise on Doubly linked list and its operations

Level 2: -

Lab sheet -11

Level 1: Program to Construct Binary Search Tree and Graph

Level 2: Program to traverse the Binary Search Tree in three ways(in-order, pre-order and post-order) and implement BFS and DFS

Lab sheet -12

Level 1: Program to Implement the Linear Search & Binary Search

Level 2: Program to Estimate the Time complexity of Linear Search

Lab sheet -13

Level 1: Program to Implement and Estimate the Time complexity of Selection Sort

Level 2: Program to Implement and Estimate the Time complexity of Insertion Sort Lab sheet -14 (Beyond syllabus activity) Level 1: Program to Construct AVL Tree Level 2: Lab sheet -15 (Beyond syllabus activity) Level 1: Program to Construct RED BLACK Tree
Targeted Application & Tools that can be used Use of PowerPoint software for lecture slides and use of Modern IDE like VS Code and Eclipse for lab programs to execute.
Project work/Assignment:
Assignment: Students should complete the lab programs by end of each practical session and module wise assignments before the deadline.

Course Code: CSE2501	Course Title: Computer Organization and Architecture Type of Course: Program Core, Theory based		L-T-P-C	3	0	0	3
Version No.		2.0					
Course Pre-requisites		CSE2015 - Digital Design					
Anti-requisites		NIL					
Course Description		This course introduces the core principles of computer architecture and organization from basic to intermediate level. This theory based course emphasizes on understanding the interaction between computer hardware and software. It equips the students with the intuition behind assembly-level instruction set architectures. It helps the students to interpret the operational concepts of computer technology as well as performance enhancement.					
Course Objective		The objective of the course is to familiarize the learners with the concepts of Computer Organization and Architecture and attain Skill Development through Participative Learning techniques.					
Course Outcomes		On successful completion of the course the students shall be able to: 1] Describe the basic components of a computer and their interconnections. [Remember] 2] Explain Instruction Set Architecture and Memory Unit [Understand] 3] Apply appropriate techniques to carry out selected arithmetic operations [Apply] 4] Explain the organization of memory and processor sub-system [Understand]					
Course Content:							
Module 1	Basic Structure of computers	Assignment	Data Analysis task			12 Sessions	

	Topics: Computer Types, Functional Units, Basic Operational concepts, Bus Structures, Computer systems RISC & CISC, Performance – Processor Clock, Basic Performance Equation, Clock Rate, Performance Measurement. Arithmetic Operations on Signed numbers. Instructions and Instruction Sequencing, Instruction formats, Memory Instructions.				
Module 2	Instruction Set Architecture and Memory Unit	Assignment	Analysis, Data Collection		12 Sessions
	Topics: Instruction Set Architecture: Addressing Modes, Stacks and Subroutines. Memory System: Memory Location and Addresses, Memory Operations, Semiconductor RAM Memories, Internal Organization of Memory chips, Cache memory mapping Techniques.				
Module 3	Arithmetic and Input/output Design	Case Study	Data analysis task		10 Sessions
	Topics: Arithmetic: Carry lookahead Adder, Signed-Operand Multiplication, Integer Division, and Floating point operations. Input/output Design: Accessing I/O Devices, I/O communication, Interrupt Hardware, Direct Memory Access, Buses, Interface Circuits				
Module 4	BPU and Pipelining	Assignment	Analysis, Data Collection		11 Sessions
	Topics: Basic Processing Unit: Fundamental Concepts, Single Bus organization, Control sequence, Execution of a Complete Instruction, Multiple Bus Organization. Pipelining: Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, Hazards.				
	Targeted Application & Tools that can be used: Targeted employment sector is processor manufacturing and memory chip fabrication vendors like Intel, AMD, Motorola, NVidia, Samsung, Micron Technology, western Digital				

	etc. Targeted job profiles include Memory circuit design and verification engineers, Physical system design engineer, System programmer, Fabrication engineer etc. Tools: Virtual Lab, IIT KGP Tejas – Java Based Architectural Simulator, IIT Delhi
	Project work/Assignment:
	Each batch of students (self-selected batch mates – up to 4 in a batch) will be allocated case studies/assignments
	Textbook(s): 1. Carl Hamacher, Zvonko Vranesic, Safwat Zaky, “Computer Organization”, Sixth Edition, McGraw-Hill Higher Education, 2023 reprint. 2. William Stallings, “Computer Organization & Architecture – Designing for Performance”, 11th Edition, Pearson Education Inc., 2019.

	Topics relevant to “SKILL DEVELOPMENT”: Generation of Computers, CISC and RISC processors, Bus Arbitration, Collaboration and Data collection for Term assignments and Case Studies for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE1500	Course Title: Computational Thinking using Python		L- T- P- C	2	0	0	2
	Type of Course: Engineering Science Theory Integrated						
Version No.		1.0					
Course Pre-requisites		• •					
Anti-requisites		NIL					
Course Description		The course efficiently introduces fundamental ideas including conditionals, loops, functions, lists, strings, and tuples through some inspiring examples. It then discusses dynamic programming like handling exceptions and file usage. In terms of data structures, the course covers Python dictionaries, classes, and objects for constructing user-defined datatypes like linear and binary search.					
Course Object		The objective of the course is to familiarize the learners with the concepts of Computational Thinking using Python and attain Skill Development through Participative Learning techniques.					
Course Out Comes		On successful completion of the course the students shall be able to: 6) Describe algorithmic solutions for basic computing issues.. (Understand) 7) Explain data types and operators. (Understand) 8) Demonstrate control structures and Functions. (Apply) 9) Apply the data structures for the given data. (Apply) 10) Demonstrate the file operations. (Apply)					
Course Content:							
Module 1	Computational Thinking And Problem Solving	Assignment		Programming	6 Sessions		

	<u>Topics:</u> Fundamentals of Computing– Identification of Computational Problems Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi				
Module 2	Datatypes, Expressions, Statements	Assignment		Programming	6 Sessions
	<u>Topics:</u> Python interpreter and interactive mode,debugging; values and types: int, float, boolean, string , and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.				
Module 3	Control flow, Functions, Strings	Assignment		Programming	6 Sessions
	<u>Topics:</u> Conditionals:Boolean values and operators, conditional (if), alternative (if else),chained conditional (if-elif-else);Iteration: state, while, for, break, continue, pass; Fruitful functions: return values,parameters, local and global scope, function composition, recursion; Strings: string slices,immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.				
Module 4	Lists, Tuples, Dictionaries	Assignment		Programming	6 Sessions
	<u>Topics:</u> Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing- list comprehension; Illustrative programs: simple sorting, histogram, Students marks statement, Retail bill preparation.				
Module 5	Files	Assignment		Programmin g	6 Sessions
	Files and exceptions: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages;				

	Illustrative programs: word count, copy file, Voter's age validation, Marks range validation (0-100).
	Project work/Assignment:
1.	2. Assignment 1 on (Module 1 and Module 2) 3. Assignment 2 on (Module 3 and Module 4 & 5)
	Text Book 1) Paul Deitel and Harvey Deitel, "Python for Programmers", Pearson Education, 1st Edition, 2021 2) Eric Matthes, Python Crash Course, : A Hands-On, Project-Based Introduction to Programming, 3rd Edition, 2023

			C				
Version No.		1.0					
Course Pre-requisites	•	•					
Anti-requisites		NIL					
Course Description		The course efficiently introduces fundamental ideas and practical knowledge including control structures, functions, and tuples through hands on sessions. It also introduces dynamic programming like handling exceptions and file operations. The course covers Python dictionaries, classes, and objects for creating user-defined datatypes, such binary search, in terms of data structures.					
Course Object		The objective of the course is to familiarize the learners with the concepts of Computational Thinking using Python Lab and attain Skill Development through Experiential Learning techniques.					
Course Out Comes		On successful completion of the course the students shall be able to: 11) Explain algorithms to solve fundamental computational problem. (Understand) 12) Illustrate the use of different data types and operators in Python. (Apply) 13) Demonstrate conditionals, loops, and functions to address problem-solving tasks. (Apply) 14) Utilize appropriate data structures to efficiently manage and process data. (Apply) 15) Perform file handling tasks such as reading, writing, and modifying files in Python.. (Apply)					
Course Content:							
Module 1	Computational Thinking And Problem Solving	Assignment		Programming	6 Sessions		

	Lab sheet : Introduction to Python Programming. Demonstration of Colabs or Jupiter environment. Demonstrate Input function. Demonstrate int method. Demonstrate data types Demonstrate operators. Demonstrate simple programs for python environment. Python program that takes an integer input and calculates the sum of its digits.				
Module 2	Datatypes, Expressions, Statements	Assignment		Programming	14 Sessions
	Topics: Python program to count the number of times a given character appears in a string. Python program to identify the data types of given variables. A grocery store needs a billing system, write a python program that calculates the total bill amount based on the price of individual items and their quantities. A car rental company wants to calculate the mileage (km per liter) for different vehicles based on distance traveled and fuel consumed. Write a Python program to calculate the mileage. A company wants to calculate the net salary of an employee after deducting tax (10%) and provident fund (5%) from the gross salary. Write a Python program to calculate net salary. In a student grading system where the final grade depends on whether the student has passed both the written and practical exams. You need to check if the student has passed based on certain conditions: The student must score at least 40 in the written exam. The student must score at least 50 in the practical exam. The student must have attended at least 75% of the classes Write a Python program to check if a person is eligible to vote. The criteria are: The person must be at least 18 years old.				

- The person should be a citizen of the country.

Write a Python program to classify a person into age groups:

- Child: 0 to 12 years
- Teenager: 13 to 19 years
- Adult: 20 years and above

A user authentication system that checks if the user is authorized based on certain conditions, like having a correct password and being over the age of 18. Write a Python program for the above scenario.

In a student registration system, a student must meet certain criteria to be eligible for course registration:

- The student must have a GPA of 3.0 or above.
- The student must have completed the prerequisite course (True/False).

Module 3	Control flow, Functions, Strings	Assignment		Programming	16 Sessions

Lab Sheet:

An e-commerce store that offers discounts based on the following criteria:

- The customer must be a loyal customer (i.e., True).
- The total purchase amount must be greater than \$100.

Python program to print the Fibonacci sequence up to n terms

Python program to print the Fibonacci sequence up to n terms using Recursion.

Apply slicing on the given data or dictionary.

Python Programs to create array and print the array.

Python program to check if a given number is an Armstrong number. An Armstrong number for a 3-digit number is one where the sum of the cubes of its digits is equal to the number itself.

The media platform wants to count the number of words in user-submitted posts to enforce character limits or to analyze the length of posts. .

In a bookstore inventory system, You need to implement a feature that checks if a book title is a palindrome. The bookstore wants to offer special discounts for books with titles that are palindromes. You need to create a Python function that reads the book title and determines if it's a palindrome.

In a library management system. The library has a database of books identified by unique numbers (IDs). The library staff wants to apply a special offer to books

whose IDs are prime numbers. You need to create a Python program that finds all prime numbers between a given range of book IDs. In a school management system that stores the marks of students for each subject. You are asked to compute the average marks of a student to evaluate their overall performance. Write a Python program that takes the marks of a student in different subjects and calculates the average. A small inventory list where you need to search for a specific product ID. Since the list isn't sorted, you can use linear search, which checks each element sequentially until it finds the target. Write a python program to perform linear search. A sorted list of product IDs and need to quickly find a specific product. Binary search is ideal for this scenario because it efficiently narrows down the search space by repeatedly dividing the list into two halves.					
Module 4	Lists, Tuples, Dictionaries	Assignment		Programming	12 Sessions
<u>Lab Sheet:</u> Demonstrate List, Tuple and Dictionary. A supermarket wants to maintain a list of available products and update it when new products arrive or old products are sold out. A library maintains book records using dictionaries, where the book title is the key and the quantity available is the value. A school stores student grades in a list, and the teacher wants to see only the top 3 grades. A restaurant receives online orders in a queue (list) and processes the first 3 orders at a time. Write a Python program to handle orders using list slicing. A university has course details stored in tuples. The system should extract and display only the course codes. Write Python program to extract course code from tuples. A fitness tracking app stores a user's daily step count for a week and extracts steps from Monday to Friday. WAP to extract weekly steps using slicing. A school stores student marks in a list. Write a program to: • Find the highest and lowest marks. • Calculate the average marks. • Count how many students scored above 75.					

A company maintains a list of employees' names. Write a program to: • Add a new employee to the list. • Remove an employee from the list. • Sort and display all employees in alphabetical order. A tuple stores flight details (Flight Number, Destination, Duration). Write a program to: • Display all flights. • Find flights with a duration of more than 3 hours. • Access the destination of a specific flight. A grocery store stores item details as tuples (Item Name, Price per kg). Write a program to: • Calculate the total bill for a customer. • Find the cheapest item. • Sort items by price in ascending order. Use Dictionaries: A library stores book records as {Book Title: Copies Available}. Write a program to: • Borrow a book (decrease count). • Return a book (increase count). • Display all available books. Use List Comprehension: A company stores employee ID numbers. Write a Python program to extract only the even employee IDs from a given list.					
Module 5	Files	Assignment		Program ming	12 Sessions
<u>Lab Sheet:</u> Write a Python program that asks for a voter's age. If the age is below 18, raise an exception "Invalid Age: Must be 18 or older". Write a Python program that counts the total number of lines, words, and characters in a given text file. Write a Python program that reads text file and finds the most repeated word.					

	Write a program that searches for a word in a file ".txt" and replaces it with another word. Write a Python program that copies the content from "source.txt" to "destination.txt". If "destination.txt" does not exist, create it. Write a Python program that takes two numbers as command-line arguments and prints their sum. Write a Python program that asks for a user's name, age, and marks in three subjects, then formats and displays the result in a structured way. Generate report using string formatting. Create a module called "mymath.py" with functions add(a, b), subtract(a, b), and multiply(a, b). write a separate Python script that imports this module and uses these functions. Write a Python program that tries to read a file ".txt". If the file is not found, catch the exception and display a message.
	Project work/Assignment:
4.	1.Assignment 1 on (Module 1 and Module 2)
	5. Assignment 2 on (Module 3 and Module 4 & 5)

Course Code: CSE2000	Course Title: Software Design and Development Type of Course: School Core [Theory Only]	L- T- P- C	3-0-0-3
Version No.	1.0		
Course Pre-requisites	NIL		
Anti-requisites	NIL		
Course Description	The objective of this course is to provide the fundamentals concepts of Software Engineering process and principles. The course covers software requirement engineering processes, system analysis, design, implementation and testing aspects of software system development. The course covers software quality, configuration management and maintenance.		

Course Objectives	The objective of the course is to familiarize the learners with the concepts of Software Engineering and attain Skill Development through Participative Learning techniques.			
Course Out Comes	On successful completion of this course the students shall be able to: 1] Describe the Software Engineering principles, ethics and process models(Knowledge) 2] Identify the requirements, analysis and appropriate design models for a given application(Comprehension) 3] Understand the Agile Principles(Knowledge) 4] Apply an appropriate planning, scheduling, evaluation and maintenance principles involved in software(Application)			
Module 1	Introduction to Software Engineering and Process Models (Knowledge level)	Quiz		10 Hours
Introduction: Need for Software Engineering, Professional Software Development, Software Engineering Ethics, Software Engineering Practice-Essence of Practice, General Principles Software Development Life Cycle Models: Waterfall Model – Classical Waterfall Model, Iterative Waterfall Model, Evolutionary model-Spiral, Prototype.				
Module 2	Software Requirements, Analysis and Design (Comprehension level)	Assignment	Development of SRS documents for a given scenario	12 Hours
Requirements Engineering: Eliciting requirements, Functional and non- Functional requirements, Software Requirements Specification (SRS), Requirement Analysis and validation. Requirements modelling- Introduction to Use Cases, Activity diagram and Swim lane diagram. CASE support in Software Life Cycle, Characteristics of CASE Tools, Architecture of a CASE Environment. Design: Design concepts, Architectural design, Component based design, User interface design.				

Module 3	Agile Principles & Devops (Knowledge level)	Quiz		10 Hours
Agile: Scrum Roles and activities, Sprint Agile software development methods - Scaling, User Stories, Agile estimation techniques, Product backlogs, Stake holder roles, Dynamic System Development Method. Devops: Introduction, definition, history, tools.				
Module 4	Software Testing and Maintenance (Application Level)	Assignment	Apply the testing concepts using Programing	13 Hours
Software Testing-verification and validation, Test Strategies - White Box Testing, Black box Testing. Automation Tools for Testing. Software Quality Assurance-Elements of software quality assurance, SQA Tasks, Goals and Metrics, Software configuration management- SCM process, SCM Tools (GitHub). Maintenance- Characteristics of Software Maintenance, Software Reverse Engineering, Software Maintenance Process Models.				
Targeted Application & Tools that can be used: Selenium, GitHub, CASE Tools

Course Code: CSE150 9	Course Title: Data Structures Lab Type of Course: Lab	-				
		T	0	0	4	2
		P				
		C				
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	This course introduces the fundamental concepts of data structures and to emphasize the importance of choosing an appropriate data structure and technique for program development. This course has theory and lab component which emphasizes on understanding the implementation and applications of data structures using Java programming language. With a good knowledge in the fundamental concepts of data structures and practical experience in implementing them, the student can be an effective designer, developer for new software applications.					
Course Objective	The objective of the course is SKILL DEVELOPMENT of student by using EXPERIENTIAL LEARNING techniques					

Course Out Comes	On successful completion of the course the students shall be able to: CO1: Describe the concept of basic data structure, stacks, queues, and arrays and their operations. [Understand] CO2: Utilize linked lists for real-time scenarios. [Apply] CO3: Apply an appropriate non-linear data structure for a given scenario. [Apply] CO4: Demonstrate different searching and sorting techniques. [Apply]			
Course Content:				
Module 1	Introduction to Data Structure and Linear Data Structure - Stacks and Queues	Assignment	Program activity	9 Hours
Introduction - Introduction to Data Structures, Types and concept of Arrays. Stack - Concepts and representation, Stack operations, stack implementation using array and Applications of Stack. Queues - Representation of queue, Queue Operations, Queue implementation using array, Types of Queue and Applications of Queue.				
Module 2	Linear Data Structure- Linked List	Assignment	Program activity	12 Hours
Topics: Linked List - Singly Linked List, Operation on linear list using singly linked storage structures, Circular List, Applications of Linked list. Recursion - Recursive Definition and Processes.				
Module 3	Non-linear Data	Assignment	Program activity	12 Hours

	Structures - Trees			
Topics: Trees - Introduction to Trees, Binary tree: Terminology and Properties, Use of Doubly Linked List, Binary tree traversals: Pre-Order traversal, In-Order traversal, Post - Order traversal, Binary Search Tree, AVL Trees - Red Black Tree, Expression Tree , Heaps.				
Module 4	Non-linear Data Structures - Graphs and Hashing	Assignment	Program activity	6 Hours
Topics: Graphs: Basic Concept of Graph Theory and its Properties, Representation of Graphs . ADT, Elementary graph operations, Minimum Cost spanning trees, Shortest path and Transitive closure. Hashing: Introduction, Static Hashing, Dynamic Hashing				
Module 5	Searching & Sorting	Assignment	Program activity	6 Hours
Topic: Sorting & Searching - Sequential and Binary Search, Sorting – Selection and Insertion sort, Quick sort, Merge Sort, Bubble sort.				
List of Laboratory Tasks: Lab sheet -1 Level 1: Prompt the user, read input and print messages. Programs using class, methods and objects Level 2: Programming Exercises on fundamental Data structure - Arrays based on Scenario. Lab sheet -2 Level 1: Programming Exercises on Stack and its operations				

Level 2: Programming Exercises on Stack and its operations with condition

Lab sheet -3

Level 1: Programming on Stack application infix to postfix Conversion

Level 2: -

Lab sheet -4

Level 1: Programming on Stack application – Evaluation of postfix

Lab sheet -5

Level 1: Programming Exercises on Queues and its operations with conditions

Level 2: -

Lab sheet -6

Level 1: Programming Exercises on Linked list and its operations.

Level 2: Programming Exercises on Linked list and its operations with various positions

Lab sheet -7

Level 1: Programming Exercises on Circular Linked list and its operations.

Level 2: Programming Exercises on Circular Linked list and its operations with various positions

Lab sheet -8

Level 1: Programming Exercises on factorial of a number

Level 2: Programming the tower of Hanoi using recursion

Lab sheet -9

Level 1: -

Level 2: Programming the tower of Hanoi using recursion

Lab sheet -10

Level 1: Programming Exercise on Doubly linked list and its operations

Level 2: -

Lab sheet -11

Level 1: Program to Construct Binary Search Tree and Graph

Level 2: Program to traverse the Binary Search Tree in three ways(in-order, pre-order and post-order) and implement BFS and DFS Lab sheet -12 Level 1: Program to Implement the Linear Search & Binary Search Level 2: Program to Estimate the Time complexity of Linear Search Lab sheet -13 Level 1: Program to Implement and Estimate the Time complexity of Selection Sort Level 2: Program to Implement and Estimate the Time complexity of Insertion Sort Lab sheet -14 (Beyond syllabus activity) Level 1: Program to Construct AVL Tree Level 2: Lab sheet -15 (Beyond syllabus activity) Level 1: Program to Construct RED BLACK Tree
Targeted Application & Tools that can be used Use of PowerPoint software for lecture slides and use of Modern IDE like VS Code and Eclipse for lab programs to execute.
Project work/Assignment:
Assignment: Students should complete the lab programs by end of each practical session and module wise assignments before the deadline.

Course Code: MAT2602	Course Title: Numerical Computations Type of Course:1] School Core	L-T-P- C	3	0	0	3
Version No.		1.0				
Course Pre-requisites		Calculus, Linear Algebra, Differential Equations				
Anti-requisites		NIL				
Course Description		The course explores mathematical techniques used to approximate solutions to complex problems that are difficult to solve analytically, often utilizing computers to perform calculations, including methods for root finding, interpolation, numerical differentiation and integration, solving systems of linear equations, and approximating solutions to differential equations, with applications across various scientific and engineering fields. It focuses on understanding the theoretical basis behind these methods, their implementation in programming languages, and analyzing their accuracy and stability.				
Course Objective		The objective of the course is to equip students with understanding and ability to apply various numerical techniques to approximate solutions to complex mathematical problems that are difficult or impossible to solve analytically, particularly focusing on areas like solving systems of equations, finding roots of functions, interpolation, numerical differentiation, and integration, often utilizing computational tools to implement these methods.				

Course Out Comes		On successful completion of the course the students shall be able to: CO1 - Calculate errors induced in the values by truncation of a series expansion. CO2 - Demonstrate the applications of numerical methods to find the roots of polynomial equations and eigen values of real symmetric matrices. CO3 - Apply the knowledge of numerical methods in modelling of various physical and engineering phenomena. CO4 - Apply various numerical methods for solving linear Ordinary & Partial differential equations arising in engineering field.		
Course Content:				
Module 1	Solution of Linear Systems of Equation			(12 Classes)
Numerical Computation: Motivation and Objectives, Number Representation, Machine Precision, Round-of Error, Truncation Error, Random Number Generation. Solution of algebraic and transcendental equations: Various types of errors - Bisection method, Regula-Falsi method, Newton-Raphson method, Graffe's method - Bairstow's method - Newton's method for solving $f(x,y) = 0$ and $g(x,y) = 0$, secant method, Fixed point iteration method, Solution of linear system of equations, Gauss elimination method, Pivoting, Gauss Jordan method, Iterative methods of Gauss Jacobi and Gauss Seidel, Sufficient conditions for convergence - LU decomposition method, Eigenvalues of a matrix by Power method and Jacobi's method for symmetric matrices.				
Module 2	Interpolation and Approximation	Assignment		(8 Classes)
Interpolation with equal intervals, Newton's forward and backward difference formulae, Interpolation with unequal intervals, Lagrange's interpolation, Newton's divided difference interpolation, Cubic Splines, Difference operators and relations.				
Module 3	Numerical Differentiation and Integration			(10 Classes)
Numerical differentiation, Approximation of derivatives using interpolation polynomials, Numerical integration using Trapezoidal rule, Simpson's one-third rule, Simpson's three-eighth rule, Weddle's rule, Romberg's Method, Two point and three point Gaussian quadrature formulae, Evaluation of double integrals by Trapezoidal rule and Simpson's one-third rule				
Module 4	Initial & Boundary Value Problems for Ordinary & Partial Differential Equations	Assignment		(15 Classes)
Single step methods — Taylor's series method, Modified Euler's method, Fourth order Runge-Kutta method for solving first order equations, Multi step methods, Milne's and Adams, Bash forth predictor corrector methods for solving first order equations. Finite difference methods for solving second order, two-point linear boundary value problems, Finite difference techniques for the solution of two-dimensional Laplace's and Poisson's				

equations on rectangular domain, One-dimensional heat flow equation by explicit and implicit (Crank Nicholson) methods, One-dimensional wave equation by explicit method.
Targeted Application & Tools that can be used: The contents of this course has direct applications in most of the core engineering courses for problem formulations, Problem Solution and system Design. Tools Used: Python.
Assignment:
2. Select any one simple differential equation pertaining to the respective branch of engineering, identify the dependent and independent variable – Obtain the solution and compare the solution sets by varying the values of the dependent variable.

Topics relevant to SKILL DEVELOPMENT: The course focuses on the concepts of calculus and differential equation with reference to specific engineering problems. The course is of both conceptual and analytical type in nature through Problem solving. This is attained through the assessment component mentioned in course handout.

Course Code: MAT2013	Course Title: Discrete Mathematics Type of Course:1] School Core	L-T-P- C	4	0	0	4
Version No.	1.0					
Course Pre-	Linear Algebra					

requisite s			
Anti- requisite s		NIL	
Course Descript ion		The course explores the study of mathematical structures that are fundamentally discrete (not continuous), focusing on concepts like set theory, logic, graph theory, combinatorics, and number theory, with applications primarily in computer science fields like algorithms, software development, and cryptography; it covers topics such as propositional logic, proof techniques, relations, functions, counting principles, and basic graph algorithms, providing a foundation for analyzing discrete problems and structures within computer science.	
Course Objectiv e		The main objective of the course is that students should learn a particular set of mathematical facts and how to apply them. It teaches students how to think logically and mathematically through five important themes: mathematical reasoning, combinatorial analysis, discrete structures, algorithmic thinking, and applications and modeling. A successful discrete mathematics course should carefully blend and balance all five themes.	
Course Outcom es		On successful completion of the course the students shall be able to: CO1 - Explain logical sentences through predicates, quantifiers and logical connectives. CO2 - Deploy the counting techniques to tackle combinatorial problems CO3 - Comprehend the basic principles of set theory and different types of relations. CO4 - Apply different types of structures of trees for developing programming skills	
Course Content :			
Module 1	Fundamentals of Logic		(10 Classes)
Basic Connectives and Truth Tables, Propositional Logic, Applications of Propositional Logic, Propositional Equivalences, Predicates and Quantifiers, Nested Quantifiers, Rules of Inference, Introduction to Proofs, Proof Methods and Strategy.			
Module 2	Principle of Counting	Assignment	(15 Classes)
The Well Ordering Principle – Mathematical Induction The Basics of Counting, Permutations and Combinations, Binomial Coefficients and Identities, Generalized Permutations and Combinations, Generating Permutations and Combinations			

Advanced Principle Counting: The Principle of Inclusion and Exclusion, Generalizations of the Principle, Derangements – Nothing is in its Right Place, Rook Polynomials.			
Module 3	Relations and Functions		(10 Classes)
Cartesian Products and Relations, Functions, One-to-One, Onto Functions. The Pigeon-hole Principle, Function Composition and Inverse Functions. Relations, Properties of Relations, Computer Recognition – Zero-One Matrices and Directed Graphs, Partial Orders, Lattice, Hasse Diagrams, Equivalence Relations and Partitions.			
Module 4	Recurrence Relations and Generating Functions		(10 Classes)
Homogeneous and inhomogeneous recurrences and their solutions - solving recurrences using generating functions - Repertoire method - Perturbation method - Convolutions - simple manipulations and tricks.			
Module 5	Graph Theory & Algorithms on Networks	Assignment	(15 Classes)
Definitions and basic results - Representation of a graph by a matrix and adjacency list - Trees - Cycles - Properties - Paths and connectedness - Sub graphs - Graph Isomorphism - Operations on graphs - Vertex and edge cuts - Vertex and edge connectivity, Euler and Hamilton Paths, Shortest-Paths. Tree - Definitions, Properties, and Examples, Routed Trees, Binary search tree, Decision tree, spanning tree: BFS, DFS. Algorithms on Networks - Shortest path algorithm- Dijkstra's algorithm, Minimal spanning tree- Kruskal algorithm and Prim's algorithm.			
Targeted Application & Tools that can be used: Discrete mathematics provides the mathematical foundations for many computer science courses including data structures, algorithms, database theory, automata theory, formal languages, compiler theory, computer security, and operating systems.			
Assignment:			
3. Assignment 1: Logic Equivalences and Predicate calculus. 4. Assignment 2: Equivalence Relations and Lattices 5. Assignment 3: Recurrence Relations

Topics relevant to SKILL DEVELOPMENT: The course focuses on the concepts of calculus and differential equation with reference to specific engineering problems. The course is of both conceptual and analytical type in nature through Problem solving. This is attained through the assessment component mentioned in course handout.

Course Code: CSE1512	Course Title: Analysis of Algorithms Type of Course: THEORY Only	L- T- P- C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	CSE2001 - Data Structures and Algorithms.					
Anti-requisites	Nil					
Course Description	This course introduces techniques for the design and analysis of efficient algorithms and methods of applications. This course discusses the classic approaches for algorithm design such as Divide and Conquer, Dynamic Programming, Greedy method. This course also describes other basic strategies searching solution space. The core concepts of analyzing algorithms and classifying them into various complexity classes is covered in the end.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Analysis of Algorithms and attain Skill Development through Problem Solving Methodologies.					
Course Out Comes	On successful completion of the course the students shall be able to: 1. Compute efficiency of a given algorithm.[Applying] 2. Apply divide and conquer technique for searching and sorting Problems.[Applying] 3. Apply the Dynamic Programming technique for a given problem. [Applying] 4. Apply greedy technique for solving a Problem.[Applying]					

	5. Demonstrate Back tracking technique and limitations of Algorithms.[Applying]			
Course Content:				
Module 1	Introduction	Assignment	Simulation/Data Analysis	10 Sessions
Introduction, Asymptotic Notations and its properties, Best case, worst case and average case- Sequential search, Sorting; Mathematical analysis for Recursive and Non-recursive algorithms: Substitution method and Master's Theorem.				
Module 2	Divide-and-conquer	Assignment	Simulation/Data Analysis	08 Sessions
Introduction. Insertion Sort; Merge sort, Quick sort, Binary search.				
Module 3	Dynamic programming	Term paper/Assignment	Simulation/Data Analysis	10 Sessions
Introduction with examples, Principles of Memoization, 0-1 Knapsack Problem, Bellman-Ford algorithm, Floyd-Warshall's Algorithms. Chain Matrix Multiplication.				
Module 4	Greedy technique	Term paper/Assignment	Simulation/Data Analysis	09 Sessions
Introduction, Fractional Knapsack Problem, Minimal Spanning Tree: Prim's Algorithm and Kruskal's Algorithm, Single-source Shortest Path: Dijkstra's Algorithm				
Module 5	Complexity Classes	Term paper/Assignment	Simulation/Data Analysis	08 Sessions
Complexity Classes- P,NP- NP Hard and NP Complete - Boolean Satisfiability Problem (SAT). Branch and Bound: Knapsack problem; Backtracking, - N-Queens problem.

Topics relevant to “SKILL DEVELOPMENT”: knapsack, prim’s, kruskal’s algorithm, quick sort, binary search for **Skill Development** through **Problem Solving methodologies**. This is attained through assessment component mentioned in course handout.

Course Code: CSE1514	Course Title: CSEXXXX - Object Oriented Programming Using Java Type of Course: Theory	L-T-P-C	3	0	0	3
Version No.	2.0					
Course Pre-requisites	CSEXXXX – Problem Solving Using C					
Anti-requisites	Nil					
Course Description	This course introduces the core concepts of object-oriented programming. This course has theory and lab component which emphasizes on understanding the implementation and application of object-oriented programming paradigm. It helps the student to build real time secure applications by applying these concepts and also for effective problem solving. The students interpret and understand the need for object oriented programming to build applications.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Problem-Solving using JAVA and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques					
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Describe the basic programming concepts. [Understand] CO2: Apply the concept of classes, objects and methods to solve problems. [Application] CO3: Apply the concept of arrays and strings. [Appy] CO4: Implement inheritance and polymorphism building secure applications. [Apply]					

	CO5: Apply the concepts of interface and error handling mechanism. [Apply]			
Course Content:				
Module 1	Basic Concepts of Programming and Java	Assignment	Problem Solving	9 Sessions
Topics: Introduction to Principles of Programming: Process of Problem Solving, Java program structure, Download Eclipse IDE to run Java programs, Sample program, Data types, Identifiers, Variables, Constants in java, Operators, Assignments and Expression, Basic Input/ Output functions, Control Statements: Branching and Looping.				
Module 2	Classes, objects, methods and Constructors	Assignment	Problem Solving	10 Sessions
Topics: Classes, Objects and Methods: Introduction to object Oriented Principles, defining a class, adding data members and methods to the class, access specifiers, instantiating objects, reference variable, accessing class members and methods. Static Polymorphism: Method overloading, constructors, constructor overloading, this keyword, static keyword, Nested classes, Accessing members in nested classes.				
Module 3	Arrays, String and String buffer	Assignment	Problem Solving	8 Sessions
Topics: Arrays: Defining an Array, Initializing & Accessing Array, Multi –Dimensional Array, Array of objects. String: Creation & Operation. String builder class, methods in String Buffer.				
Module 4	Inheritance and Polymorphism	Assignment	Problem Solving	10 Sessions
Topics: Inheritance: Defining a subclass, Types of Inheritance, super keyword. Dynamic Polymorphism: Method overriding. Final keyword: with data members, with member functions and with class. Abstract keyword: with data members, with member functions and with class, Exception handling.				
Module 5	Input & Output Operation in Java	Assignment	Problem Solving	8 Sessions
Input/output Operation in Java(java.io Package), Streams and the new I/O Capabilities, Understanding Streams, working with File Object, File I/O Basics, Reading and Writing to Files, Buffer and Buffer Management, Read/Write Operations with File Channel, Serializing Objects, Observer and Observable Interfaces.

[Appy] CO4: Implement inheritance and polymorphism building secure applications. [Apply] CO5: Apply the concepts of interface and error handling mechanism. [Apply]					
Course Content:						
Module 1	Basic Concepts of Programming and Java	Assignment	Problem Solving	12 Sessions		

Download Eclipse IDE to run Java programs, Sample programs on Data types, Identifiers, Variables, Constants in java, Operators, Assignments and Expression, Basic Input/ Output functions, Control Statements: Branching and Looping.				
Module 2	Classes, objects, methods and Constructors	Assignment	Problem Solving	14 Sessions
Problem solving using Classes, Objects and Methods: defining a class, adding data members and methods to the class, access specifiers, instantiating objects, reference variable, accessing class members and methods. Use Static Polymorphism: Method overloading, constructors, constructor overloading, this keyword, static keyword, Nested classes, Accessing members in nested classes.				
Module 3	Arrays, String and String buffer	Assignment	Problem Solving	10 Sessions
Using Arrays and Strings : Defining an Array, Initializing & Accessing Array, Multi – Dimensional Array, Array of objects. String: Creation & Operation. String builder class, methods in String Buffer.				
Module 4	Inheritance and Polymorphism	Assignment	Problem Solving	12 Sessions
Inheritance: Defining a subclass, Types of Inheritance, super keyword. Dynamic Polymorphism: Method overriding. Final keyword: with data members, with member functions and with class. Abstract keyword: with data members, with member functions and with class, Exception handling.				
Module 5	Input & Output Operation in Java	Assignment	Problem Solving	12 Sessions
Input/output Operation in Java(java.io Package), Streams and the new I/O Capabilities, Understanding Streams, working with File Object, File I/O Basics, Reading and Writing to Files, Buffer and Buffer Management, Read/Write Operations with File Channel, Serializing Objects, Observer and Observable Interfaces.				
P1: Programming Exercises on Basic Concepts. LEVEL 1: Discuss about datatypes and variables. LEVEL 2: Demonstrate a simple java program P2: Programming Exercises on Basic Concepts. LEVEL 1: Discuss about datatypes and variables. LEVEL 2: Demonstrate a simple java program P3: Programming Exercises on operators, expressions based on a given scenario. LEVEL 1: Explain operators, expressions. LEVEL 2: Demonstrate operators P4: Programming Exercises Command Line Arguments based on a given scenario. LEVEL 1: Explain command line arguments LEVEL 2: Demonstrate command line arguments				

P5: Programming Exercises on basic Input/ Output functions and Control Statements: Branching

LEVEL 1: Explain Input/ Output functions

LEVEL 2: Demonstrate Control Statements: Branching

P6: Programming Exercises on Control Statements: Looping

LEVEL 1: Explain various loops.

LEVEL 2: Demonstrate Control Statements: Looping

P7: Programming Exercises on Creating Objects, classes on a given scenario.

LEVEL 1: Illustrate class, object and methods.

LEVEL 2: Execute java program using class and objects

P8: Programming Exercises on Adding methods and Constructors to the class based on a given scenario.

LEVEL 1: Illustrate methods and constructors

LEVEL 2: Execute java program using methods and constructors

P9: Programming Exercises on methods based on a given scenario.

LEVEL 1: Illustrate method overloading

LEVEL 2: Apply method overloading for the given scenario.

P10: Programming Exercises on methods based on a given scenario.

LEVEL 1: Illustrate constructors overloading

LEVEL 2: Apply constructor overloading for the given scenario

P11: Programming Exercises on methods for static members based on a given scenario.

LEVEL 1: Benefits of usage static members

LEVEL 2: Usage of Static Members for the given scenario

P12: Programming Exercises on static methods based on a given scenario.

LEVEL 1: Benefits of usage static methods

LEVEL 2: Usage of Static Methods for the given scenario.

P13: Programming Exercises on nested Classes based on a given scenario.

LEVEL 1: Benefits of usage nested classes

LEVEL 2: Apply the concept of usage of nested classes for the given scenario

P14: Programming Exercises on Arrays and its built-in functions based on a given scenario.

LEVEL 1: Illustrate one dimensional arrays and its functions.

LEVEL 2: Demonstrate programs with single-dimensional arrays and operations.

P15: Programming Exercises on Arrays and its built-in functions based on a given scenario.

LEVEL 1: Illustrate multi dimensional arrays and its functions.

LEVEL 2: Demonstrate programs with multi-dimensional arrays and operations.

P16: Programming Exercises on String Class and its built-in functions based on a given scenario.

LEVEL 1: Explain about String class and String methods.

LEVEL 2: Execute simple java applications for String and StringBuffer operations

P17: Programming Exercises on String Buffer Class and its built-in functions based on a given scenario.

LEVEL 1: Explain about StringBuffer class and String methods.

LEVEL 2: Execute simple java applications for String and StringBuffer operations

P18: Programming Exercises on String Builders and its built-in functions based on a given scenario.

LEVEL 1: Explain about String Builders.

LEVEL 2: Execute java applications for String Builders

P19: Programming Exercises on single, multi level Inheritance and super keyword based on given scenario.

LEVEL 1: Explain single and multi level inheritance.

LEVEL 2: Demonstrate simple applications for the different types of inheritance

P20: Programming Exercises hierarchical Inheritance and super keyword based on given scenario.

LEVEL 1: Explain hierarchical inheritance.

LEVEL 2: Demonstrate simple applications for hierarchical inheritance

P21: Programming Exercises on Overriding.

LEVEL 1: Differentiate method overloading and method overriding.

LEVEL 2: Demonstrate simple program with dynamic method dispatch.

P22: Programming Exercises on Final based on given scenario.

LEVEL 1: Implement programs using concept of final.

LEVEL 2: Use final keyword for the given problem

P23: Programming Exercises on Abstract keyword based on given scenario.

LEVEL 1: Implement programs using concept of Abstract.

LEVEL 2: Use abstract keyword for the given problem

P24: Programming Exercises on Interface based on a given scenario.

LEVEL 1: Differentiate abstract class about interface

LEVEL 2: Implement interfaces in the given problem

P25: Programming Exercises on Exception Handling based on a given scenario.

LEVEL 1: Explain exception handling

LEVEL 2: Solve the given problem using exception handling mechanism.

P26: Programming Exercises on Character Stream Classes based on a given scenario.

LEVEL 1: Explain Character Stream Classes

LEVEL 2: Solve the given problem using Character Stream Class.

P27: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

P28: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

P29: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

P30: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

Targeted Application & Tools that can be used : JDK /Eclipse IDE/Visual Studio Code / net Beans IDE.

Course Code: CSE1504	Course Title: Web Technology Type of Course: Program core Theory Only	L- T- P- C	2-0-0-2
Version No.	2.0		
Course Pre-requisites	NIL		
Anti-requisites	NIL		
Course Description	This course highlights the basic web design using Hypertext Markup Language and Cascading Style Sheets. Students will be trained in planning and designing effective web pages by writing code using current leading trends in the web domain, enhancing web pages with the use of page layout techniques, text formatting, graphics, images, and multimedia. The focus is on popular key technologies that will help students to build Internet- and web-based applications that interact with other applications and with databases.		

Course Objective	The objective of the course is to familiarize the learners with the concepts of Web Technology and attain Skill Development through Experiential Learning techniques.			
Course Outcomes	On successful completion of this course the students shall be able to: CO1: Implement web-based application using client-side scripting languages. (Application level) CO2: Apply various constructs to enhance the appearance of a website. (Application level) CO3: Illustrate java-script concepts to demonstration dynamic web site (Application level) CO4: Apply server-side scripting languages to develop a web page linked to a database. (Application level)			
Course Content:				
Module 1	Introduction to XHTML	Quizzes and Assignments	Quizzes on various features of XHTML, simple applications	8 Sessions
Topics: Basics: Web, WWW, Web browsers, Web servers, Internet. XHTML: Origins and Evolution of HTML and XHTML: Basic Syntax, Standard XHTML Document Structure, Basic Text Markup, Images, Hypertext Links, Lists, Tables, Forms, Frames, Syntactic Differences between HTML and XHTML.				
Module 2	Advanced CSS	Quizzes and assignments	Comprehension based Quizzes and assignments; Application of CSS in designing webpages	8 Sessions
Topics: CSS: Introduction to CSS, Defining & Applying a style, Creating style sheets, types of style sheet, selectors, CSS font properties, border properties, Box model, opacity, CSS pseudo class and pseudo-elements.				

Advanced CSS: Layout, Normal Flow, Positioning Elements, Floating Elements, Responsive Design, CSS Frameworks XML: Basics, demonstration of applications using XML				
Module 3	Fundamentals of JavaScript	Quizzes and assignments	Application of JavaScript for dynamic web page designing	7 Sessions
Topics: JavaScript: Introduction to JavaScript, Basic JavaScript Instructions, Functions, Methods & Objects, Decisions and Loops, Document Object Model, Event handling, handling window pop-ups, JavaScript validation.				
Module 4	PHP – Application Level	Quizzes and assignments	Application of PHP in web designing	7 Sessions
Topics: PHP: Introduction to server-side Development with PHP, Arrays, \$GET and \$ POST, \$_Files Array, Reading/Writing Files, PHP Classes and Objects, Working with Databases, SQL, Database APIs, Managing a MySQL Database. Accessing MySQL in PHP.				
Targeted Application & Tools that can be used: Xampp web server to be used to demonstrate PHP.				
Project work/Assignment:				
Assignments are given after completion of each module which the student need to submit within the stipulated deadline.				
Textbook(s): 1] Robert. W. Sebesta, "<i>Programming the World Wide Web</i>", Pearson Education, 8th Edition, 2015. 2] <i>CSS Notes for Professionals</i>, ebook available at https://books.goalkicker.com/CSSBook/ (Retrieved on Jan. 20, 2022) 3] Deitel, Deitel, Goldberg, "<i>Internet & World Wide Web How to Program</i>", Fifth Edition, Pearson Education, 2021.

Course Code: CSE1511	Course Title: Database Management Systems Laboratory Type of Course: 1) Laboratory	L-T-P-C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	Foundational understanding of data types, basic programming knowledge, operating systems and file management.					
Anti-	NIL					

requisites	
Course Description	The Database Management Systems (DBMS) Laboratory is designed to provide students with hands-on experience in database design, implementation, and management using SQL and database management tools such as MySQL. The lab complements theoretical concepts learned in database courses by allowing students to practice database creation, querying, and optimization techniques. The DBMS Lab enables students to develop industry-relevant skills in database management, preparing them for careers in software development, data engineering, and database administration .
Course Objective	The objective of the course is to familiarize the learners with the concepts of Database Management Systems and attain Employability through Problem Solving Methodologies .
Course Out Comes	On successful completion of the course the students shall be able to: 0. Demonstrate the database concepts, practice, and SQL queries. [Apply] 0. Design and implement database schemas while applying normalization techniques to optimize structure. [Apply] 1. Develop and implement stored procedures, triggers, and views for automation and efficiency. [Apply] 2. To Design and build database applications for real world problems. [Apply]
Course Content:	
List of Laboratory Tasks: Create Employee, Student, Banking and Library databases and populate them with required data. Do the following experiments of different lab sheets on those databases. Labsheet-1 [3 Practical Sessions] Experiment No 1: [1 Session] 1. To study and implement the different language of Structured Query Language. Level 1: Perform operations using Data Definition Language and Data Manipulation Language commands including different variants of SELECT on Student DB. Level 2: Identify the given requirements; valid attributes and data types and Perform DDL and DML operations on a given scenario. [Banking Databases] Experiment No. 2: [2 Sessions] 2. To study and implement the concept of integrity constraints in SQL. Level 1: Create tables on Banking database using PRIMARY KEY, NOT NULL, UNIQUE, FOREIGN KEY and demonstrate the working of relational, logical, pattern matching, BETWEEN, IS NULL, IN and NOT IN Special Operators on Student Database. Level 2: Enforce different types of data and referential integrity constraints. Then try queries with special operators based on the student database. [Banking Database]. Labsheet-2 [3 Practical Sessions] Experiment No. 3: [1 Session] 3. Implement complex queries in SQL. Level 1: Implement the conjugate of GROUP BY, ORDER BY and aggregate functions on Banking Database. Level 2: Implement MySQL DB queries on library database using appropriate clauses and aggregate functions. Also order the data either in ascending and descending order using corresponding clause. [Library databases]. Experiment No. 4: [2 Session] 4. To study and implement different types of Set and Join Operations [2 Slots] Level 1: Demonstrate different types of Set Operations (UNION, UNION ALL, INTERSECT, MINUS) and Join Operations (INNER JOINS, OUTER JOINS, CROSS JOIN, NATURAL JOIN) on two or more tables of Airline Database. Level 2: Use Set and Join operations to retrieve the data from two or more relations (tables) as per the given scenario. [Airline Database]	

Labsheet-3 [2 Practical Sessions]**Experiment No. 5: [2 sessions]**

5. To study and implement Views, and Procedures in MySQL DB.

Level 1: Implement MySQL Views, and Procedures in ORACLE DB on Employee database.

Level 2: Analyze the requirement and construct views, and Procedures on Mini Project Domain.

[Banking Database]

Labsheet-4 [2 Practical Sessions]**Experiment No. 6: [2 Sessions]**

6. To study and implement Functions, and Triggers in MySQL DB.

Level 1: Implement Oracle Functions and Triggers in Oracle on Employee database.

Level 2: Analyze the requirement and construct Functions and Triggers. [Supply chain Database]

Labsheet-5 [2 Practical Sessions]**Experiment No. 7: [2 Sessions]**

7. To study and implement Functions, and Triggers in MySQL DB.

Level 1: Implement Oracle Functions and Triggers in Oracle on Employee database.

Level 2: Determine the requirement and construct Functions and Triggers. [Supply chain Database]

Labsheet-6 [4 Practical Sessions]**Experiment No. 8: [2 Sessions]**

8. To implement the concept of forms and reports.

Level 1: Implement the concept of forms and reports.

Level 2: Examine the schema relationship.

Experiment No. 9: [2 Sessions]

9. Create the database using the given schema. (Flight Management)

Level 1: Implement a relational database based on the provided schema for the Flight Management system, including the creation of tables, relationships, and constraints.

Level 2: Demonstrate schema relationships by defining primary and foreign keys to ensure data integrity within the Flight Management database.

Labsheet-7 [4 Practical Sessions]**Experiment No. 10: [2 Sessions]**

10. Create the database using the given schema. (Company database)

Level 1: Implement the database schema by defining tables, relationships, and constraints according to the given Company Database schema.

Level 2: Demonstrate the schema's relationships and data integrity by creating and linking tables as per the specified requirements.

Experiment No. 11: [2 Sessions]

11. Create the database using the given schema. (Student Library)

Level 1: Implement forms and reports based on the provided Student Library database schema, ensuring effective data entry and reporting mechanisms.

Level 2: Demonstrate the schema relationships within the Student Library database, demonstrating how these relationships influence the creation and functionality of forms and reports.

Labsheet-8 [1 Sessions]

12. Design a mini project based on the databases such as Inventory Management System, University Management System, Hospital Management System, etc.

Level 1: Implement the real time database.

Level 2: Analyze the working of database in real time.

Course Code: CSE1513	Course Title: Analysis of Algorithms Laboratory Type of Course: Integrated	L- T- P- C	0	0	2	1
Version No.	1					
Course Pre-requisites	CSE2001 - Data Structures and Algorithms.					
Anti-requisites	NIL					
Course Description	This course introduces techniques for the design and analysis of efficient algorithms and methods of applications. This course discusses the classic approaches for algorithm design such as Divide and Conquer, Dynamic Programming, Greedy method. This course also describes other basic strategies searching solution space. The core concepts of analyzing algorithms and classifying them into various complexity classes is covered in the end.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Analysis of Algorithms and attain Skill Development through Experiential Learning Methodologies.					
Course Out Comes	On successful completion of the course the students shall be able to: 1. Compute efficiency of a given algorithm. [Applying] 2. Apply divide and conquer technique for searching and sorting Problems.[Applying] 3. Apply the Dynamic Programming technique for a given problem. [Applying] 4. Apply greedy technique for solving a Problem.[Applying] 5. Demonstrate Back tracking technique and limitations of Algorithms.[Applying]					
Course Content						
Module 1	Introduction				3 Sessions	
Measuring running time of an algorithm, Compare running time of algorithms, Implement sorting algorithms such as bubble sort, selection sort						
Module 2	Divide-and-conquer				3 Sessions	

Compare searching algorithms: Linear Search, Binary Search; Compare Sorting algorithms: Insertion Sort, Merge Sort, QuickSort.		
Module 3	Dynamic programming	3 Sessions
Introduction and memorization: Factorial; Coin Change Problem ; Floyd-Warshall's Algorithm.		
Module 4	Greedy technique	3 Sessions
Fractional Knapsack Problem; Minimal Spanning Tree Algorithms-Prim's Algorithm, Kruskal's algorithm		
Module 5	Complexity Classes	3 Sessions
Branch and Bound: Knapsack problem; Backtracking, - N-Queens problem.		
	List of Laboratory Tasks: 1. Measuring running time of an algorithm Objective: To experimentally determine the running time of basic algorithms for input size $n=10, 100, 1000$, etc. by taking difference of starting time and ending time. 2. Compare running time of algorithms Objective: To execute two algorithms to solve the same problem, and to comparatively evaluate the better algorithm for large values of N. 3. Implement sorting algorithms such as bubble sort, selection sort Objective: To implement comparison based sorting strategies. 4. Compare searching algorithms Objective: To implement two searching strategies and compare their performance. 5. Compare Sorting algorithms Objective: To implement searching strategies that follow top down design approach(Insertion sort, merge sort). 6. Quick Sort Objective: To demonstrate Quick sort and its variants, and their impact on running time. 7. Dynamic Programming	

	Objective: To demonstrate Dynamic Programming approach with the help of Factorial algorithm. 8. Coin Change Problem Objective: To implement an efficient algorithm for the Coin Change problem. 9. Floyd-Warshall's Algorithm Objective: To demonstrate how dynamic programming is used with the help of Floyd-Warshall's algorithm. 10. Fractional Knapsack Problem Objective: To demonstrate how greedy method can be used to solve the Fractional Knapsack Problem. 11. Minimal Spanning Tree Algorithm Objective: To implement greedy strategy to solve the Minimal Spanning Tree problem using Prim's Algorithm. 12. Kruskal's Minimal Spanning Tree Algorithm Objective: To implement greedy strategies to solve the Minimal Spanning Tree problem using Kruskal's Algorithm. 13. Knapsack Problem Objective: To implement Knapsack problem using branch and bound technique. 14. N-Queen's Problem Objective: To demonstrate backtracking method with the help of N-Queen's problem. 15. Case Study Objective: To demonstrate how various techniques can be used to solve the same problem with the help of Knapsack problem.
	Targeted Application & Tools that can be used 1. PyTorch/Jupyter Notebook – For Python programming

	Topics relevant to “EMPLOYABILITY SKILLS”: The lab experiments and assessments enable the student to acquire Skill Development through Experiential Learning techniques

Course Code: CDV2501	Course Title: Agile Structures and Frameworks	Type of Course: School Core	L- P- C	3	0	3
Version No.	1.0					
Course Pre-requisites	Software Engineering					
Anti-requisites	NIL					
Course Description	This course imparts knowledge to students in the basic concepts of Agile Software Process, methodology and its development The objective of this course is to provide the fundamentals concepts of Agile and its Significance. This course covers the Agile and its methodologies. The objective of the course is to understand the Agility and Assurance.					

Course Objectives	The objective of the course is to familiarize the learners with the concepts of Agile Structures and Frameworks and attain Skill Development through Participative Learning techniques.			
Course Out Comes	On successful completion of this course the students shall be able to: 1] Understand the basic concepts of Agile Software Process. (Knowledge level) 2] Comprehend the various Agile Methodologies. (Comprehension level) 3] Develop Agile Software Process. (Knowledge level) 4] Apply principles of Agile Testing. (Application level)			
Module 1	Introduction	Assignment	Agile Estimation	08 Sessions
Introduction to Agile technology, Iterative and Evolutionary Methods, Agile – Agile Development. Agile Values, Agile Principles, Compare and Contrast the agile with traditional methods. Agile Benefits. Agile Estimation Techniques. Case Study				
Module 2	Agile and Its Significance	Assignment	Comparison of Agile technologies with traditional methods	09 Sessions
Agile Story : Evolutionary delivery ,Scrum Demo, Planning game, Sprint back log, adaptive planning. Agile Motivation – Problems With The Waterfall - Research Evidence. Scrum : Method Overview ,Life cycle phases and Work product roles and practices.				
Module 3	Agile methodology		Case Study	12 Sessions
Extreme Programming: Method Overview ,Life cycle phases and Work product roles and practices. Unified process : Method Overview ,Life cycle phases and Work product roles and practices. EVO : Method Overview ,Life cycle phases and Work product roles and practices. Case Study.				
Module 4	Agility and Quality Assurance	Assignment	Apply the testing concepts using Programming	09 Sessions
Agile product development – Agile Metrics – Feature Driven Development (FDD). Agile approach to Quality Assurance. Test Driven Development – Agile approach in Global Software Development. Agile Technology Tools.				
Targeted Application & Tools that can be used: JIRA				
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course				
Agile Estimation Comparison of Agile technologies with traditional methods 3. Case Study: Student group must collaborate and report together along with assigned batch members. Collect the requirements from the client and adopt the suitable agile practice method for your project Installation and features of JIRA tool.

Topics relevant to "SKILL DEVELOPMENT": Agile Estimation techniques for skill development through Participative Learning techniques . This is attained through the assessment component mentioned in the course handout.

Course Code: CDV2502	Course Title: DevOps Tools And Internals Type of Course: Theory	L-T-P-C	3-0-0-3
Version No.	1.2		
Course Pre-requisites	Fundamentals of Devops		
Anti-requisites	NIL		
Course Description	This course is designed to offer profound perceptions and knowledge in various tools like Git, Ansible, Selenium and Jenkins. With the proficient learning of DevOps course, a student will be able to work in all the above tools and become a trained practitioner in the integration and monitoring of software. DevOps Tool is an application that helps the software development process to industrialize. It mainly focuses on communication and collaboration between product management, software development, and operations professionals. The objective of this course is to discuss and implement the various tools usage and internals practically.		
Course Objective	The objective of the course is to familiarize the learners with the concepts of DevOps Tools And Internals and attain Skill Development through Experiential Learning techniques.		
Course Outcomes	On successful completion of this course the students shall be able to: 1] Apply the features and common Git workflow. [Application] 2] Practice the filters and plugins to populate, manipulate, and manage data used by Ansible Playbooks. [Application] 3] Compute the features of selenium IDE. [Application] 4] Interpret the installation and features of Jenkins and build jobs. [Application]		
Course Content:			

Module 1	Git	Quiz	Quiz on Git commands	5L +4P Classes
Topics: Introduction to Git, Features of Git, Benefits, Workflow, Git vs GitHub, Installation of Git on Windows/Linux and Environment set up, All Git Commands-Working with local and remote repositories, Running first Git command, Fundamentals of Repository structure and file status life cycle, Working locally with staging, unstaging and commit.				
Module 2	Containerization Usin gDocker	Quiz	Quiz on Ansible tool usage	5L +4P Classes
Topics: Docker Life Cycle,Docker Installation, Docker Operations,Docker Concepts - Registry, Repository, Tag, Image and Containers, Create A Docker Hub Account, Docker Images and Containers, Pushing Docker To Container Hub, Docker File.				
Module 3	Ansible	Assignm ent	Assignments on Selenium tool usage and test case	5L +4P Classes
Topics: Ansible Workflow, Architecture, Installation in Linux/Windows, ad-hoc Commands, Playbooks, Tower, Roles ,Variables open link, Tags, Galaxy, Commands Cheat Sheets, Modules, Shell, Templates, YAML, Inventory, Debug, Apt, Lineinfile, Copy, Command, File, Vault, Windows, Yum, AWX, Unarchive, Ansible Pip				
Module 4	Jenkins	Assignment	Assignments on Jenkins tool usage and Build jobs	5L +4P Classes
Topics: Introduction To Continuous Integration, Jenkins Architecture, Managing Nodes On Jenkins, Jenkins Master Node Connection, Jenkins Integration With Devops Tools, Understanding CI/CD Pipelines, Creating A CI/CD Pipeline

Course Objective	The objective of the course is to familiarize the learners with the concepts of DevOps Tools And Internals and attain Skill Development through Experiential Learning techniques.			
Course Outcomes	On successful completion of this course the students shall be able to: 4] Apply the features and common Git workflow. [Application] 5] Practice the filters and plugins to populate, manipulate, and manage data used by Ansible Playbooks. [Application] 6] Compute the features of selenium [Application] 4] Interpret the IDE. installation and features of Jenkins and build jobs. [Application]			
Course Content:				
Module 1	Git	Quiz	Quiz on Git commands	5L +4P Classes
Topics: Introduction to Git, Features of Git, Benefits, Workflow, Git vs GitHub, Installation of Git on Windows/Linux and Environment set up, All Git Commands-Working with local and remote repositories, Running first Git command, Fundamentals of Repository structure and file status				

life cycle, Working locally with staging, unstaging and commit.				
Module 2	Containerization gDocker	Usin	Quiz Quiz on Ansible tool usage	5L +4P Classes
Topics: Docker Life Cycle,Docker Installation, Docker Operations,Docker Concepts - Registry, Repository, Tag, Image and Containers, Create A Docker Hub Account, Docker Images and Containers, Pushing Docker To Container Hub, Docker File.				
Module 3	Ansible	Assignm ent	Assignments on Selenium tool usage and test case	5L +4P Classes
Topics: Ansible Workflow, Architecture, Installation in Linux/Windows, ad-hoc Commands, Playbooks, Tower, Roles, Variables open link, Tags, Galaxy, Commands Cheat Sheets, Modules, Shell, Templates, YAML, Inventory, Debug, Apt, Lineinfile, Copy, Command, File, Vault, Windows, Yum, AWX, Unarchive, Ansible Pip				
Module 4	Jenkins	Assignment	Assignments on Jenkins tool usage and Build jobs	5L +4P Classes

Topics:

Introduction To Continuous Integration, Jenkins Architecture, Managing Nodes On Jenkins, Jenkins Master Node Connection, Jenkins Integration With Devops Tools, Understanding CI/CD Pipelines, Creating A CI/CD Pipeline

List of Laboratory Tasks:

Git

1. Level 1: Installation of Git on windows Level 2: Git commands-Local repositories Level 2: Git commands-Remote repositories
2. How Git can handle automatically file modifications when they are not related to the same lines of text.
Level 1: You are in a new repository located in C:\Repos\Exercises\Ch2-1.
Level 1: You have a master branch with two previous commits: the first commit with a file1.txt file and thesecond commit with a file2.txt file.
Level 2: After the second commit, you created a new branch called File2Split. You realized that file2.txt is too big,and you want to split its content by creating a new file2a.txt file. Do it, and then commit the modifications.
3. How to resolve conflicts when Git cannot merge files automatically.
Level 1: You are in the same repository used earlier, C:\Repos\Exercises\Ch2-1. On the master branch, you add the file3.txt file and commit it.
Level 2: Then, you realize that it is better to create a new branch to work on file3.txt, so you create the File3Work branch. You move in this branch, and you start to work on it, committing modifications.
Level 2: The day after, you accidentally move to the master branch and make some modifications on the file3.txtfile, committing it. 5. Then, you try to merge it.
4. Level 1: Installation of Ansible
Level 2: Create a basic inventory file
Level 2: Running your first Ad-Hoc Ansible command.

Ansible

5. Ansible Archive
Level 1: Compressing the Directory with TAR and tar and gz
Level 1: Compress the file – Default File Compress format and Remove the Source files after archivingLevel 2: Create a ZIP file archive – File and Directory
Level 2: Create a BZIP archive – File and Directory
6. A Quick Syntax of Ansible Shell module – ADHOC
Level 1: A Quick Syntax of Ansible Shell module in a PlaybookLevel 1: Ansible Shell Examples
Level 2: Execute a Single Command with Ansible Shell Level 2: Execute a Command with Pipe and Redirection
- . Level 1: Run playbook
Level 2: Create the file on the target machines or servers as mentioned in the inventory file and the webserver'sgroup, save the below code with .yaml extension and run the playbook.
Level 2: Create multiple directories. To create multiple directories with one single task you can use the loop **with_items** statement. So when you run the below playbook it is interpreted as 3 different tasks.

Selenium

- . Level 1: Selenium IDE Download and Install
Level 2: Selenium IDE - First Test Case, Login Test and command usage
- . Level 1: Write a script to open google.co.in using chrome browser (ChromeDriver).
Level 2: Write a script to open google.com and verify that title is Google and also verify that it is redirected togoogle.co.in.
10. Level 1: Write a script to open google.co.in using internet explorer (InternetExplorerDriver).Level 2: Write a script to create browser instance based on browser name.

11. Level 1: Write a script to close all the browsers without using quit() method. Level 2: Write a script to search for specified option in the listbox Jenkins 12. Level 1: Environment Setup Level 2: Jenkins downloading and installation 13. Level 1: 1. Setup a Jenkins Job with Apache Ant Build Tool 2. Setup a Jenkins Job with Apache Maven Level 2 : 1. Setup a Jenkins Job with Batch Script. 14. Level 1: Add a Linux Node (Also Check SSH Slaves plugin plugins) Level 1: Add a Windows Node Level 2: Assign a Java Based Job to Linux and Build it Level 2: Assign a MSBuild Based to Windows and Build it						
Targeted Application & Tools that can be used: Tracking changes in the source code and source code management Automates web browsers Configuration Management and IT automation. Integration of Individual Jobs and Effortless Auditing Tools: Git, Ansible, Selenium and Jenkins						
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course						
Each batch of students (self-selected batch mates) will identify projects from searching on Google and implement with the most suitable 2 or 3 antecedents.

Course Code: CDV2504	Software Testing	L-T-P-C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	CDV2000 DevOps Foundations					

Anti-requisites	NIL			
Course Description	This course introduces students to fundamental principles and practices of software testing. It emphasizes various testing techniques including black-box and white-box testing, test case design, test automation, debugging, and reliability assessment. The course provides insights into the role of testing in software quality assurance and equips students to apply systematic testing strategies in real-world software projects.			
Course Objectives	To understand the importance of software testing in the software development lifecycle. To learn various testing techniques and their applications in software quality assurance. To analyze testing outcomes and debugging strategies. To explore tools and methodologies for automated testing and test management.			
Course Out Comes	CO1: Understand various software testing levels, techniques, and models used in industry. (Understand Level) CO2: Analyze software testing strategies and defect tracking mechanisms. (Analyze Level) CO3: Apply white-box and black-box testing techniques to evaluate software functionality and performance. (Apply Level) CO4: Implement and manage automated test scripts using industry tools. (Apply Level)			
Module 1	Fundamentals of Software Testing		Understand	No. of Sessions: 11
Software Development Life Cycle, Role of Testing in SDLC, Verification vs Validation, Static vs Dynamic Testing, Levels of Testing, Types of Testing – Unit, Integration, System, Acceptance, Regression.				
Module 2	Test Case Design Techniques and Defect Management		Analyse	No. of Sessions: 11
Black Box Testing: Equivalence Class Partitioning, Boundary Value Analysis, Decision Tables; White Box Testing: Statement, Branch, Path, and Condition Coverage; Defect Lifecycle, Bug Tracking Systems, Test Reporting.				
Module 3	Test Management and Automation		Apply	No. of Sessions: 11
Test Planning, Test Metrics, Traceability Matrix, Test Environment Setup; Automation Testing Concepts, Selenium, JUnit/NUnit, Script Writing, Continuous Testing in CI/CD.				
Module 4	Advanced Testing and Tools		Apply	No. of Sessions: 12
Performance Testing (JMeter), Load Testing, Security Testing (OWASP overview), Mutation Testing, Test Data Generation, Model-Based Testing, Introduction to AI-driven Testing Tools.				

1. Manual Testing Tools

- **TestLink** – Test management and documentation
- **Bugzilla** – Bug reporting and tracking
- **MantisBT** – Lightweight issue tracker

2. Unit Testing Tools

- **JUnit** – Unit testing for Java
- **TestNG** – Advanced unit testing for Java
- **PyTest** – Unit testing for Python
- **NUnit** – Unit testing for .NET applications

3. Automation Testing Tools

- **Selenium IDE** – Record-and-playback for browser testing
- **Selenium WebDriver** – Code-based automation for web apps
- **Katalon Recorder** – Selenium-based test recorder (Chrome plugin)

4. Mobile Application Testing

- **Appium** – Automation for Android and iOS apps

5. Integration / CI Tools

- **Jenkins** – Continuous integration, pipeline integration
- **GitHub Actions** – Cloud-based CI/CD automation

6. Performance and Load Testing Tools

- **Apache JMeter** – Load, stress, and performance testing for web applications
- **Gatling** – High-performance load testing

7. Code Coverage Tools

- **JaCoCo** – Java code coverage
- **Coverage.py** – Python code coverage
- **Clover** – Code coverage for Java/Groovy

8. Code Quality & Static Analysis

- **SonarQube** – Code quality and security analysis
- **PMD** – Java source code analyzer
- **FindBugs / SpotBugs** – Bug detection in Java

9. Cross-Browser Testing

- **Selenium Grid** – Parallel testing on different browsers/machines
- **Browsershots** – Web design testing in various browsers

List of Experiments

1. Introduction to software testing, SDLC vs STLC, writing simple test cases

2. **Manual testing – Functional and Non-functional test case design for a sample application**
3. **Boundary Value Analysis (BVA) and Equivalence Class Partitioning**
4. **Decision Table and State Transition testing techniques**
5. **Path coverage and control flow graph-based white-box testing**
6. **JUnit testing for Java programs – Unit Testing**
7. **Writing automation test scripts using Selenium IDE**
8. **Developing automated test cases using Selenium WebDriver**
9. **Cross-browser testing using Selenium Grid**
10. **Integration of Selenium with JUnit/TestNG for automation testing**
11. **Bug reporting and tracking using Bugzilla or Mantis**
12. **Test case execution and defect tracking on sample project**
13. **Performance testing using Apache JMeter**
14. **Preparing test plans, test suites, and test summary reports**
15. **Mini-project: Complete test life cycle on a web/mobile application including documentation**

Course Code: CSE1700	Course Title: Essentials of AI Type of Course: Theory	L- T-P- C	3	0	0	3
Version No.	2.0					

Course Pre-requisites	Basic knowledge of programming, mathematics, understanding of data handling			
Anti-requisites	NIL			
Course Description	This course is a comprehensive introductory course designed to equip learners with the fundamental Python programming skills necessary to work with artificial intelligence (AI) technologies. This course is aimed at individuals who are new to AI but have a basic understanding of programming concepts. It combines Python programming fundamentals with hands-on experience in implementing AI techniques such as machine learning, neural networks, and natural language processing.			
Course Objective	The objective of the course is to Understand Python Programming Fundamentals, Manipulate and Process Data with Python, Implement Machine Learning Algorithms and Build and Train Neural Networks for AI Applications.			
Course Outcomes	On successful completion of the course the students shall be able to: CO 1: Apply Python Programming to AI Projects CO 2: Build and Train Machine Learning Models CO 3: Develop Deep Learning Models with Neural Networks CO 4: Deploy AI Solutions and Understand Ethical Implications			
Course Content:				
Module 1	Introduction to Python Programming for AI	Assignment	Implementation	10 Sessions
Topics: Python Basics: Variables, Data Types, Operators, and Control Flow Functions, Loops, and Conditionals statements, Data Structures: Lists, Tuples, Dictionaries, Sets ,Introduction to Libraries: NumPy and Pandas for data manipulation, Basic Input/Output and File Handling Introduction to Python for AI: Libraries and Frameworks Overview				
Module 2	Data Processing, Visualization	Assignment	Implementation	10 Sessions
Topics: cleaning and preprocessing with Pandas, Handling missing data, outliers, and duplicates, Data transformation (Normalization, Encoding), Introduction to Matplotlib and Seaborn for Data Visualization, Exploratory Data Analysis (EDA), Visualizing datasets to understand patterns and relationships.				
Module 3	Introduction to Machine Learning	Mini - Project	Implementation	10 Sessions
Topics: What is Machine Learning? Types of ML algorithms Supervised Learning: Regression, Classification, Unsupervised Learning: Clustering, Key ML Algorithms: Linear Regression, Decision Trees, K-Means ,Introduction to Scikit-learn library Model evaluation (Accuracy, Precision, Recall, Confusion Matrix)				
Module 4	Neural Networks and Deep Learning	Quiz	Implementation	10 Sessions
Topics: Introduction to Neural Networks and Deep Learning, Perceptron Model and Backpropagation Deep Neural Networks and Activation Functions, Introduction to TensorFlow and Keras, Building and Training Neural Networks for Image and Text Classification, Overview of Convolutional Neural Networks (CNNs) and Recurrent Neural Networks (RNNs)				
Targeted Application & Tools that can be used: Applications: 1. Data Preprocessing: Clean and manipulate data from various sources such as CSV, Excel, SQL databases, and APIs.				

2. Exploratory Data Analysis (EDA): Gain insights into datasets by identifying trends, patterns, and outliers. 3. Predictive Modeling: Build models for classification (e.g., spam detection) and regression (e.g., house price prediction). 4. Clustering: Group data into clusters for unsupervised learning tasks (e.g., customer segmentation). 5. Model Evaluation: Assess model performance using appropriate metrics such as accuracy, precision, recall, and F1-score. Tools: ● Pandas: For data manipulation and cleaning (e.g., handling missing values, merging datasets). ● NumPy: For numerical operations and working with arrays and matrices. ● Matplotlib: For creating static, animated, and interactive visualizations. ● Seaborn: For advanced data visualizations (e.g., heatmaps, pair plots). ● Plotly: For creating interactive visualizations, especially useful for large datasets. ● Scikit-learn: The go-to library for implementing machine learning algorithms (e.g., linear regression, decision trees, k-means clustering). ● XGBoost: For advanced gradient boosting models, particularly for large-scale machine learning tasks. ● TensorFlow (for deep learning in Module 4): A powerful open-source library for building machine learning and deep learning models. ● Keras: High-level neural network API, built on top of TensorFlow, to easily create deep learning models. NLTK: The Natural Language Toolkit for various text processing tasks like tokenization, stemming, and part-of-speech tagging. spaCy: A fast NLP library for advanced NLP tasks such as named entity recognition and dependency parsing. Transformers (by Hugging Face): A powerful library for using pre-trained Transformer-based models like BERT, GPT, and others for advanced NLP tasks.

Course Code: CSE1701	Course Title: Essentials of AI LAB Type of Course: Lab	L- T- P- C	0	0	4	2
Version No.	2.0					
Course Prerequisites	Basic Java Programming Knowledge, Mathematics: Linear Algebra and Probability, Basic Data Structures and Algorithms, Familiarity with Libraries and Tools, Understanding of Basic Machine Learning Concepts.					
Anti-requisites	NIL					
Course Description	This course introduces students to the essential concepts and techniques of Artificial Intelligence (AI) with a focus on practical implementation using Python. Students will explore core AI topics such as search algorithms, knowledge representation, machine learning, and neural networks, while gaining proficiency in using popular Python libraries like NumPy, pandas, scikit-learn, and TensorFlow. Through a series of lab exercises and projects, students will apply AI principles to solve real-world problems, develop intelligent applications, and understand how AI systems function at a foundational level.					

Course Objective	The primary objectives of the course are to Gain Proficiency in AI Concepts and Python Implementation, Develop and Implement Machine Learning Models, Understand and Build Neural Networks, Apply AI to Real-World Problems			
Course Outcomes	On successful completion of the course the students shall be able to: 1. Proficiency in Implementing AI Algorithms Using Python 2. Ability to Build and Evaluate Machine Learning Models 3. Hands-on Experience with Neural Networks and Deep Learning 4. Practical Application of AI to Solve Real-World Problems			
Course Content:				
Module 1	Introduction to AI and Python for AI	Assignment	Implementation	8 Sessions
<i>Lab Assignment 1: Setting Up the Python Environment</i> ● Objective: Get familiar with setting up a Python environment for AI projects. ● Tasks: 1. Install Python, Anaconda, and Jupyter Notebook. 2. Set up a virtual environment for AI development. 3. Install essential Python libraries: numpy, pandas, matplotlib, and scikit-learn. 4. Write and execute simple Python code to verify installation (e.g., print a “Hello AI” message). <i>Lab Assignment 2: Basic Python Programming for AI</i> ● Objective: Understand and practice the basic Python syntax and data structures used in AI. ● Tasks: 1. Write Python code to work with basic data types (integer, float, string, boolean). 2. Implement and manipulate Python lists, tuples, sets, and dictionaries. 3. Create basic control flow structures: if-else, for loops, while loops. 4. Use functions and lambda functions to solve small AI-related problems, such as calculating factorial or Fibonacci numbers. <i>Lab Assignment 3: Data Exploration and Preprocessing</i> ● Objective: Learn how to work with data for AI models. ● Tasks: 1. Load a dataset (e.g., Titanic or Iris dataset) using pandas. 2. Clean the dataset by handling missing values, removing duplicates, and converting data types if needed. 3. Explore the dataset by visualizing it using matplotlib and seaborn. 4. Perform basic data preprocessing tasks such as feature scaling, encoding categorical variables, and splitting data into training and testing sets.				
Module 2	Data Processing, Visualization	Assignment	Implementation	8 Sessions
Lab Assignment 1: Data Preprocessing with Pandas Objective: Learn the fundamentals of data preprocessing, including cleaning, handling missing values, and performing basic transformations using Pandas. Tasks: 1. Load and Inspect the Dataset: ○ Load a dataset (e.g., Iris, Titanic, Wine Quality dataset) using pandas.read_csv() or pandas.read_excel(). ○ Inspect the first few rows of the dataset using .head() and check basic information using .info().				

2. Handle Missing Values:

- Identify missing values in the dataset using `.isnull()` or `.isna()`.
- Handle missing data by imputing with mean, median, or mode using `SimpleImputer` from `sklearn`, or remove rows with missing data using `.dropna()`.

3. Data Transformation:

- Convert categorical variables to numerical values using one-hot encoding or label encoding.
- Normalize/standardize numerical columns using `StandardScaler` or `MinMaxScaler` from `sklearn`.

4. Subset and Filter Data:

- Create subsets based on certain conditions (e.g., select rows where a specific feature value is greater than a threshold).
- Filter outliers from numerical data using interquartile range (IQR).

Lab Assignment 2: Data Aggregation and Grouping with Pandas

Objective:

Master aggregation and grouping techniques using **Pandas** for summarizing data.

Tasks:

1. Group Data by Category:

- Group data by one or more categorical features (e.g., "class" in the Iris dataset or "embarked" in Titanic dataset).
- Use `.groupby()` to calculate aggregate statistics such as mean, median, sum, and count.

2. Pivot Tables:

- Create a pivot table to summarize data (e.g., aggregate the average age of passengers in the Titanic dataset by class and gender).
- Use `.pivot_table()` to perform multi-dimensional aggregation.

3. Data Aggregation and Custom Functions:

- Apply custom aggregation functions to the grouped data (e.g., calculate custom metrics or perform complex transformations within each group).

4. Sorting and Ranking Data:

- Sort the dataset by multiple columns (e.g., sorting by "age" or "fare").
- Rank data based on specific metrics (e.g., assign ranks to passengers by fare in the Titanic dataset).

Lab Assignment 3: Data Visualization with Matplotlib and Seaborn

Objective:

Learn to visualize datasets using **Matplotlib** and **Seaborn** for better understanding and insights.

Tasks:

1. Basic Plotting with Matplotlib:

- Create simple plots like line plots, bar plots, and histograms using **Matplotlib**.
- Customize the plots by setting titles, labels, and legends.
- Create scatter plots to visualize relationships between two variables.

2. Advanced Plotting with Seaborn:

- Use **Seaborn** to create advanced visualizations like pair plots, heatmaps, box plots, and violin plots.
- Customize visualizations with color palettes, styling, and themes.
- Create a correlation heatmap to visualize correlations between features in the dataset.

3. Distribution Visualizations:

- Plot distributions of continuous variables using **Seaborn's** `distplot()` or `kdeplot()`.
- Create bar plots for categorical variables to understand their frequency distribution.

4. Multi-Plot Grid Layouts:

- Use **Matplotlib's** `subplots()` function to create multiple plots in a grid layout for comparison (e.g., scatter plot and histogram in the same figure).

Lab Assignment 4: Visualizing Relationships and Feature Importance

Objective:

Understand how to visualize relationships between features and evaluate feature importance for predictive models.

Tasks:

1. Scatter Plot Matrix:

- Use **Seaborn's** `pairplot()` to create a scatter plot matrix to visualize the relationships between multiple features.
- Analyze the pairwise relationships between features and identify any patterns or correlations.

2. Heatmap of Correlation Matrix:

- Use **Pandas** to calculate the correlation matrix of numeric features.
- Visualize the correlation matrix using **Seaborn's** `heatmap()` to understand feature correlations and multicollinearity.

3. Feature Importance from Models:

- Train a decision tree or random forest model using **scikit-learn** on a dataset (e.g., **Iris** or **Titanic**).
- Visualize feature importance using a bar chart to understand which features have the most impact on the model.

4. Visualizing Predictions vs. Actual Values:

- For regression tasks, visualize the predicted values against the actual values using a scatter plot.
- For classification tasks, visualize the classification results with a confusion matrix.

Lab Assignment 5: Time Series Data Visualization and Processing

Objective:

Learn how to process and visualize time series data, which is common in AI applications like forecasting and trend analysis.

Tasks:

1. Load and Preprocess Time Series Data:

- Load a time series dataset (e.g., stock market data, weather data).
- Parse dates properly and set the date column as the index using `pd.to_datetime()` and `.set_index()`.

2. Plot Time Series Data:

- Plot a time series line chart using **Matplotlib** to visualize trends over time.
- Create rolling averages (e.g., 7-day, 30-day) to smooth out short-term fluctuations in the time series data.

3. Seasonal Decomposition of Time Series:

- Use **statsmodels** to decompose a time series into seasonal, trend, and residual components.
- Visualize the decomposed components to understand seasonal variations.

4. Forecasting with Simple Models:

- Use simple forecasting models (e.g., moving average, ARIMA) to predict future values.
- Visualize the forecasted data along with actual historical data.

Module 3	Introduction to Machine Learning	Assignments	Implementation	8 Sessions

Lab Assignment 3: Implementing Linear Regression

● Tasks:

1. Load a real-world dataset (e.g., **Boston Housing Price** dataset).
2. Train a **Linear Regression** model using `LinearRegression()` from `scikit-learn`.
3. Evaluate the model using **Mean Squared Error (MSE)** and **R-squared Score**.
4. Visualize the regression line using `Matplotlib`.

Lab Assignment 4: Logistic Regression for Classification

● Tasks:

1. Load the **Iris** or **Breast Cancer** dataset.
2. Preprocess the dataset (handle missing values, encode categorical variables, scale data).
3. Train a **Logistic Regression** model using `LogisticRegression()`.
4. Evaluate performance using **Accuracy, Precision, Recall, F1-score**.
5. Plot the **Confusion Matrix** and **ROC Curve**.

Lab Assignment 5: Implementing K-Nearest Neighbors (KNN)

● Tasks:

1. Load the **Iris dataset** and split it into training and testing sets.
2. Train a **KNN classifier** using `KNeighborsClassifier()`.
3. Experiment with different values of **K** and evaluate performance.
4. Visualize decision boundaries using a **scatter plot**.

Lab Assignment 6: Decision Trees and Random Forests

● Tasks:

1. Train a **Decision Tree classifier** on the Titanic dataset.
2. Visualize the tree structure using `plot_tree()`.
3. Train a **Random Forest classifier** and compare performance with the decision tree.
4. Determine the **feature importance** using `feature_importances_`.

Module 4	Neural Networks and Deep Learning	Quiz	Implementation	6 Sessions

Lab Assignment 7: Introduction to Perceptron and Activation Functions

Tasks:

1. Implement a **single-layer perceptron** using NumPy.
2. Train the perceptron to classify **AND, OR, XOR** gates.
3. Experiment with different **activation functions** (Sigmoid, ReLU, Tanh).
4. Visualize decision boundaries.

Lab Assignment 8: Building a Simple Neural Network with Keras

Tasks:

1. Load the **MNIST dataset** from `keras.datasets`.
2. Preprocess the data (normalize pixel values, reshape input).
3. Create a **fully connected neural network** using Sequential API.
4. Train and evaluate the model using **categorical cross-entropy loss** and **accuracy**.

Lab Assignment 9: Implementing CNN from Scratch

Tasks:

1. Load the **CIFAR-10 dataset**.
2. Build a CNN with **Conv2D, MaxPooling2D, Flatten, Dense, Dropout** layers.
3. Use **Adam optimizer** and **categorical cross-entropy loss**.
4. Train and visualize loss/accuracy curves.

Lab Assignment 10: Image Augmentation & Regularization

Tasks:

1. Apply **data augmentation** (rotation, zoom, flipping) using ImageDataGenerator.
2. Add **dropout and batch normalization** to prevent overfitting.
3. Compare model performance with and without augmentation.

Lab Assignment 11: Transfer Learning with Pre-trained Models

Tasks:

1. Use **VGG16 or ResNet50** pre-trained on ImageNet.
2. Replace the output layer to classify **new images**.
3. Freeze earlier layers and fine-tune deeper layers.
4. Evaluate the model on a custom **dataset (e.g., Cats vs. Dogs)**.

Lab Assignment 12: Implementing RNN for Text Classification

Tasks:

1. Load **IMDB movie reviews dataset** from keras.datasets.
2. Preprocess text (tokenization, padding sequences).
3. Build an **RNN with Embedding, SimpleRNN, Dense** layers.
4. Train and evaluate the model.

Lab Assignment 13: Building an LSTM for Time Series Prediction

Tasks:

1. Load a **time series dataset** (e.g., stock prices, temperature data).
2. Preprocess the data (normalize, reshape).
3. Build an **LSTM-based model**.
4. Predict future values and visualize trends.

Targeted Application & Tools that can be used:

Applications:

1. **Data Preprocessing:** Clean and manipulate data from various sources such as CSV, Excel, SQL databases, and APIs.
- **Exploratory Data Analysis (EDA):** Gain insights into datasets by identifying trends, patterns, and outliers.
- **Predictive Modeling:** Build models for classification (e.g., spam detection) and regression (e.g., house price prediction).
- **Clustering:** Group data into clusters for unsupervised learning tasks (e.g., customer segmentation).
- **Model Evaluation:** Assess model performance using appropriate metrics such as accuracy, precision, recall, and F1-score.

Tools:

- **Pandas:** For data manipulation and cleaning (e.g., handling missing values, merging datasets).
- **NumPy:** For numerical operations and working with arrays and matrices.

- **Matplotlib:** For creating static, animated, and interactive visualizations.
- **Seaborn:** For advanced data visualizations (e.g., heatmaps, pair plots).
- **Plotly:** For creating interactive visualizations, especially useful for large datasets.
- **Scikit-learn:** The go-to library for implementing machine learning algorithms (e.g., linear regression, decision trees, k-means clustering).
- **XGBoost:** For advanced gradient boosting models, particularly for large-scale machine learning tasks.
- **TensorFlow** (for deep learning in Module 4): A powerful open-source library for building machine learning and deep learning models.
- **Keras:** High-level neural network API, built on top of TensorFlow, to easily create deep learning models.

NLTK: The Natural Language Toolkit for various text processing tasks like tokenization, stemming, and part-of-speech tagging.

spaCy: A fast NLP library for advanced NLP tasks such as named entity recognition and dependency parsing.

Transformers (by Hugging Face): A powerful library for using pre-trained Transformer-based models like BERT, GPT, and others for advanced NLP tasks.

Course Code: CSE7000	Course Title: Internship Type of Course:	L- T-P- C	-	-	-	2
Version No.	1.0					
Course Pre-requisites	Knowledge and Skills related to all the courses studied in previous semesters.					
Anti-requisites	NIL					
Course Description	Students observe science and technology in action, develop an awareness of the method of scientific experimentation, and often get an opportunity to see, study and operate sophisticated and costly equipment. They also learn about the implementation of the principles of management they have learnt in class, when they observe multidisciplinary teams of experts from engineering, science, economics, operations research, and management deal with techno-economic problems at the micro and macro levels. Finally, it enables them to develop and refine their language, communication and inter-personal skills, both by its very nature, and by the various evaluation components, such as seminar, group discussion, project report preparation, etc. The broad-based core education, strong in mathematics and science and rich in analytical tools, provides the foundation necessary for the student to understand properly the nature of real-life problems.					

Course Objectives	The objective of the course is to familiarize the learners with the concepts of Professional Practice and attain Employability Skills through Experiential Learning techniques.
Course Outcomes	On successful completion of this course the students shall be able to: 1. Identify the engineering problems related to local, regional, national or global needs. (Understand) 2. Apply appropriate techniques or modern tools for solving the intended problem. (Apply) 3. Design the experiments as per the standards and specifications. (Analyze) 4. Interpret the events and results for meaningful conclusions. (Evaluate)

Course Code: CSE2508	Course Title: Mobile Applications and Development Type of Course: Theory	L- T-P- C	2	0	0	2
Version No.	2.0					
Course Pre-requisites	CSE3514 Object Oriented Programming Using Java					
Anti-requisites	NIL					
Course Description	The course deals with the basics of android platform and application life cycle. The goal of the course is to develop mobile applications with Android containing at least one of the following phone material components: GPS, accelerometer or phone camera, use simple GUI applications and work with database to store data locally or in a server. Topics include user interface design; user interface building; input methods; data handling; network techniques and URL loading; GPS and motion sensing. Android application framework and deployment. Power management, Screen resolution, Touch interface, Store data on the device.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Mobile Applications and Development as mentioned above and attain Employability Skills through Experiential Learning Techniques.					
Course Outcomes	On successful completion of the course the students shall be able to: 1. Discuss the fundamentals of mobile application development and its architecture. (Comprehension) 2. Illustrate mobile applications with appropriate android view. (Application) 3. Demonstrate the use of services, broadcast receiver, Notifications and content provider.(Application) 4. Apply data persistence techniques, to perform CRUD operations. (Application) 5. Use advanced concepts for mobile application development. (Application)					
Course Content:						

Module 1	Introduction and Architecture of Android	Assignment	Simulation/Data Analysis	5 Sessions
Topics: Android: History and features, Architecture, Development Tools, Android Debug Bridge (ADB), and Life cycle.				
Module 2	User Interfaces, Intent and Fragments	Term paper/Assignment	Simulation/Data Analysis	6 Sessions
Topics: Views, Layout, Menu, Intent and Fragments.				
Module 3	Components of Android	Term paper/Assignment	Simulation/Data Analysis	6 Sessions
Topics: Activities, Services, Broadcast receivers, Content providers, User Navigation				
Module 4	Notifications and Data Persistence	Term paper/Assignment	Simulation/Data Analysis	6 Sessions
Topics: Notification, Shared Preferences, SQLite database, Android Room with a View, Firebase.				
Module 5	Advance App Development	Term paper/Assignment	Simulation/Data Analysis	7 Sessions
Topics: Graphics and Animation, App Widgets, Sensors, Performance, Location, Places, Mapping, Custom Views, Canvas.				
Targeted Application & Tools that can be used: Applications: Native Android Applications Native iOS Applications Cross Platform mobile Apps Mobile web Applications

Course Code: CSE2509	Course Title: Mobile Applications and Development Lab Type of Course: Lab	L- T-P- C	0	0	4	2
Version No.	2.0					
Course Pre-requisites	EEE1007 Problem Solving using JAVA					
Anti-requisites	NIL					
Course Description	The course provides hands-on experience in designing, developing, and deploying mobile applications for Android and iOS platforms. Students will work with native development frameworks such as Android Studio (Java/Kotlin)					

	and Xcode (Swift), as well as explore cross-platform tools like Flutter or React Native.			
Course Objective	The objective of the course is to develop Native and Cross-Platform Mobile Applications, design Interactive and Responsive User Interfaces, integrate Backend Services and APIs, implement State Management and Performance Optimization, ensure Mobile App Security and Data Protection			
Course Outcomes	On successful completion of the course the students shall be able to: 1. Develop Functional Mobile Applications 2. Design and Implement Interactive UIs 3. Integrate Cloud Services and APIs 4. Integrate Backend Systems and Data Management 5. Deploy, Publish, and Maintain advanced Mobile Application			
Course Content:				
Module 1	Introduction and Architecture of Android	Assignment	Simulation/Data Analysis	8 Sessions
1.a. Design an app to read user inputs using edit text and display the result of arithmetic operations using toast message. 1.b. Create an android app to calculate the current age of yourself, select your DOB using date picker. 2. Design an app to input your personal information. Use an autocomplete text view to select your place of birth.				
Module 2	User Interfaces, Intent and Fragments	Term paper/Assignment	Simulation/Data Analysis	13 Sessions
3. a. Design an app to select elective course using spinner view and on click of the display button, toast your ID and selected elective course. 3. b. Design a restaurant menu app to print the total amount of orders.				
Module 3	Components of Android	Term paper/Assignment	Simulation/Data Analysis	13 Sessions
4. Develop an android app that uses intent to maintain the following scenario. Check the eligibility criteria for voting. Input the Aadhar no., Name & age in the first activity. If the age is above 18, display the voter's detail in the second activity. Else, display, “You are not eligible to vote” in the second Activity. 5. Demonstrate the use of fragment with list of buttons representing various colors, and on click of these buttons, the appropriate color is filled in the next fragment. Create an Android application to				

input the vitals of a person (temperature, BP). If the vitals are abnormal, give proper notification to the user.

6. Create an android app to for movie ticket booking. Save the user name of the customer using shared preferences. After completion of booking, retrieve the username from the shared preferences and print the ticket details.

Module 4	Notifications and Data Persistence	Term paper/Assignment	Simulation/Data Analysis	13 Sessions

7. Create an android application to manage the details of students' database using SQLite. Use necessary UI components, which perform the operations such as insertion, modification, removal and

view. Presidency University needs an APP for Admission eligibility checking for students, for that you need to take the following information from the Student: registration ID, physics, chemistry and mathematics marks (PCM), fees is allotted as below criteria.

PCM (Total marks %) Fee concession

90 above 80 %

70 to 89 60 %

Below 69 % no concession

On click on the button “Registration” details should be stored in the database using SQLite. Create button DISPLAY ALL (full students list) on click on the button it should display the students list per the fee

concession.

8. A company need to design an app that plays soft music automatically in the background. Create an app to achieve this functionality.

9. Create an android application such that your view object in the Activity can be Animated with fade-in effect. Create an appropriate XML file named fade-in and write the application to perform the property animation.

Module 5	Advance App Development	Term paper/Assignment	Simulation/Data Analysis	13 Sessions

10. Demonstrate how to send SMS and email.

11. Create an android application to transfer a file using WiFi. Create an android application “Where am I” with an Activity that uses the GPS Location provider to find the device’s last known location.

Targeted Application & Tools that can be used:

Applications:

- Native Android Applications (Java/Kotlin)
- Android Mobile Apps built for Android smartphones and tablets using Java or Kotlin programming languages.

- o Target audience: Android users.
- 2. Native iOS Applications (Swift)
 - o iOS Mobile Apps designed for iPhone and iPad using Swift.
 - o Target audience: iOS users (Apple ecosystem).
- 3. Cross-Platform Mobile Apps (Flutter, React Native)
 - o Cross-platform apps designed to run on both Android and iOS from a single codebase using frameworks like Flutter or React Native.
 - o Target audience: Users on both Android and iOS platforms.
- 4. Mobile Web Applications (Progressive Web Apps - PWA)
 - o Mobile-optimized web applications using HTML5, CSS3, and JavaScript that run in a browser with native-like functionality (offline support, push notifications).
 - o Target audience: Users accessing apps via mobile browsers.

Development Tools and Frameworks

- 1. Integrated Development Environments (IDEs)
 - o Android Studio (for Android): The official IDE for Android development, supporting Java, Kotlin, and Android SDK.
 - o Xcode (for iOS): The official IDE for iOS development with Swift and Objective-C, providing a comprehensive suite of development tools for iPhone/iPad applications.
 - o Visual Studio Code (VS Code): Lightweight IDE for working with Flutter, React Native, and web development projects.
- 2. Cross-Platform Development Frameworks
 - o Flutter: Open-source UI framework by Google for building natively compiled applications for mobile, web, and desktop from a single codebase.
 - o React Native: Open-source framework developed by Facebook for building cross-platform apps with JavaScript and React.
- 3. Backend & Cloud Tools
 - o Firebase: Google's backend-as-a-service (BaaS) platform offering authentication, real-time databases, cloud storage, and push notifications for mobile apps.
 - o AWS Amplify: Cloud platform for backend services (API, storage, authentication) and mobile deployment.
 - o SQLite / Realm: Local storage solutions for mobile apps to manage data storage and retrieval on-device.
- 4. Mobile App Testing and Debugging Tools
 - o Android Emulator (for Android): A virtual device to run and test Android apps without needing physical devices.
 - o Xcode Simulator (for iOS): A tool to simulate different iOS devices and test apps during development.

- o Appium: Open-source tool for automated testing across native, hybrid, and mobile web applications.
- 5. Version Control and Collaboration
 - o Git: Version control system for managing code changes and collaborating with teams.
 - o GitHub / GitLab / Bitbucket: Online platforms for hosting Git repositories, collaboration, and version control management.
- 6. Mobile App Deployment Tools
 - o Google Play Console: For managing Android app publishing, distribution, and monitoring.
 - o Apple App Store Connect: For managing iOS app submissions, reviews, and releases on the Apple App Store.
- 7. UI/UX Design Tools
 - o Figma / Adobe XD: Tools for UI/UX design and wireframing to create the visual elements of mobile applications before development.
 - o Sketch: Vector-based design tool for iOS UI design and prototyping

Course Code: CSE2510	Course Title: Competitive Programming and Problem Solving Type of Course: Program Core	L-T-P-C	0	0	4	2
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	The Competitive Programming and Problem Solving course equips students with efficient problem-solving skills for coding competitions and real-world challenges. Starting with brute-force solutions, students learn to optimize time and space complexity using advanced techniques like dynamic programming, greedy algorithms, and backtracking. Hands-on practice on platforms like CodeChef and Codeforces helps tackle problems involving number theory, data structures, and algorithmic paradigms. By understanding CP constraints and fostering a strategic mindset, students gain the confidence to excel in competitions, technical interviews, and practical applications.					
Course Out Comes	On successful completion of the course the students shall be able to: CO1 : Understanding the issues of online platforms and Competitive Programming (CP) and developing brute force coding for commonly asked CP problems. CO2 : Analyzing the space and time complexity of brute force solutions and designing efficient solutions. CO3 : Evaluating the applicability of suitable algorithmic approaches to solve relevant CP problems. CO4: Creating efficient solutions of CP problems using the learnt algorithmic approaches.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Competitive Programming and Problem Solving and attain Skill Development through Experiential Learning techniques.					
Module 1: Introduction to Competitive Programming Overview of Efficient Coding for Problem Solving and CP: Introduction to competitive programming (CP); revisit of complexity analysis; introduction to online platforms such as codechef, codeforces etc and online submission; constraints during CP, online testing process and common errors such as TLE; use of STL						

Module 2: Number Theory for Problem-Solving

Use of Number Theory for problem-solving: reducing time/space complexity of brute force coding solution of Sieve Method, Inverse Module, Euclidian Method of factorization; efficient coding

for Permutation Combination; XORing based and pattern-based solutions.

Module 3: Optimizing Time & Space Using Sequential Storage

Coding for Optimizing time and Space using Sequential Storage: two pointer approach; problem-solving using arrays and strings such as rotation on sorted arrays, duplicate removal, string

matching algorithms; Kadane's algo, stacks, priority-queues and hashing based efficient coding; median based problems and alternate solutions.

Module 4: Non-Linear Data Structures

Applying Non-Linear Data Structures for real-life problems: design of efficient solutions for problems such as finding loops in a linked list, memory efficient DLL, block reversal in LL; problem solving using trees and binary trees, Catalan numbers, applications of graphs, spanning tree and path

algos for CP problems with reduced time/space complexity.

Module 5: Problem Solving using Advanced Topics

CP Problem Solving using Advanced Topics: concept of disjoint sets and their efficient representation, algorithmic approaches such as Greedy, Backtracking, Dynamic Programming and applying them for CP problems using bottom-up dynamic programming.

List of Laboratory Tasks:

1. You are given the finishing times of 'N' runners in a marathon. Write a program to find the runner who finished in the third position. **Focus:** Basic data structures (arrays), sorting algorithms (e.g., insertion sort, selection sort), and basic input/output.
2. In the same marathon, you are given the finishing times of 'N' runners and their bib numbers. Write a program to efficiently find the top 10 runners and their corresponding bib numbers. **Focus:** Efficient sorting algorithms (e.g., merge sort, quick sort), data structures like priority queues, and optimizing for large datasets.
3. A library maintains a list of books with their unique IDs. Write a program to check if a given book ID is present in the library. **Focus:** Searching algorithms (linear search), basic data structures (arrays or lists).
4. The library wants to implement a system to quickly find books by their titles. Suggest an efficient data structure (e.g., a hash table or a trie) and explain how to implement it to achieve fast book lookups. **Focus:** Understanding the trade-offs between different data structures, choosing the most appropriate data structure for a specific problem, and implementing efficient search operations.
5. An online store sells products with different prices. Write a program to calculate the total cost of a given list of products. **Focus:** Basic arithmetic operations, working with arrays or lists to store product prices.
6. The online store offers discounts based on the total purchase amount. Design an algorithm to efficiently calculate the final cost of an order, considering different discount rules (e.g., percentage discounts, fixed amount discounts, tiered discounts). **Focus:** Algorithmic design, conditional statements, handling complex scenarios with multiple rules, and potentially using dynamic programming techniques for optimization.
7. You are given two integers, 'a' and 'm'. Calculate 'a' raised to the power 'm' modulo a large prime number 'p'. **Focus:** Basic modular arithmetic operations (modular exponentiation), understanding the modulo operator.
8. In a secure communication system, you need to efficiently compute the modular exponentiation for very large values of 'm'. Implement and analyze the efficiency of the binary exponentiation algorithm for this task. **Focus:** Efficient algorithms for modular exponentiation (binary exponentiation), time complexity analysis, and understanding the importance of efficient algorithms in cryptography.

9. You have a deck of 'N' cards. Calculate the total number of possible hands of size 'K' that can be drawn from the deck. **Focus:** Basic combinatorics (combinations), factorial calculations.
10. In a card game, you need to calculate the probability of drawing certain combinations of cards (e.g., a pair, a three-of-a-kind) from a shuffled deck. Design an efficient algorithm to calculate these probabilities. **Focus:** Advanced combinatorics (permutations and combinations with repetitions), probability calculations, and optimizing calculations to avoid overflows.
11. You are given a network of devices represented as a graph. Determine if there is a path between two given devices in the network. **Focus:** Graph traversal algorithms (depth-first search or breadth-first search).
12. In a secure network, you need to detect and isolate compromised devices. Design an algorithm that efficiently identifies devices that exhibit anomalous behavior (e.g., unusual traffic patterns) using XOR-based techniques for data comparison and pattern matching. **Focus:** Applying XOR operations for data comparison and pattern recognition, understanding the properties of XOR (e.g., commutative, associative), and designing algorithms for network anomaly detection.
13. You are given an array representing the speeds of cars on a highway. Find the minimum time required for all cars to pass a certain point. **Focus:** Basic array traversal, finding the minimum element in an array.
14. In a more realistic scenario, cars have different lengths. Implement a two-pointer approach to simulate the movement of cars and determine the minimum time for all cars to pass a given point. **Focus:** Two-pointer technique, simulating real-world scenarios with arrays, optimizing time complexity.
15. Given a string, find the number of occurrences of a specific substring within the string. **Focus:** Basic string manipulation, string matching (brute-force approach).
16. Implement the KMP (Knuth-Morris-Pratt) string matching algorithm to efficiently find all occurrences of a given pattern within a large text document. **Focus:** Advanced string matching algorithms, understanding the concept of the "next" array in KMP, optimizing for large input sizes.
17. An online auction platform receives bids for different items. Implement a data structure (e.g., a priority queue) to efficiently track the highest bid for each item. **Focus:** Priority queues, insertion and extraction operations on priority queues, basic implementation of a priority queue using an array or a suitable library.
18. The auction platform needs to handle a large number of bids concurrently. Design and implement a system that efficiently processes bids, updates the highest bid for each item, and handles potential race conditions. **Focus:** Concurrent data structures and algorithms, thread safety, handling race conditions, optimizing for high-throughput scenarios.
19. A social network can be represented as a graph where users are nodes, and connections between users are edges. Write an algorithm to find if two given users are connected in the network. **Focus:** Graph traversal algorithms (depth-first search or breadth-first search), basic graph representation (adjacency list or adjacency matrix).
20. In a large social network, efficiently finding the shortest path between two users is crucial. Implement Dijkstra's algorithm to find the shortest paths between users in the network, considering edge weights (e.g., representing the strength of connections). **Focus:** Shortest path algorithms (Dijkstra's algorithm), graph algorithms with weighted edges, optimizing for large graphs.
21. A file system can be modeled as a tree structure. Implement a function to traverse the file system and print the names of all files and directories. **Focus:** Tree traversal algorithms (depth-first search or breadth-first search), basic tree representation (using nodes and pointers).
22. Design and implement a file system that supports efficient operations like creating directories, deleting files, and finding files based on their names or paths. Consider using a combination of tree structures and hash tables for efficient indexing and searching. **Focus:** Designing and implementing file system structures, using multiple data structures together, optimizing for common file system operations.

23. An online shopping cart can be represented as a tree, where each node represents an item or a category of items. Write an algorithm to calculate the total price of all items in the shopping cart. **Focus:** Tree traversal, calculating sums within a tree structure.
24. Implement a system that allows customers to apply discounts and coupons to their shopping carts. Consider using a combination of trees and other data structures (e.g., hash tables) to efficiently apply discounts and calculate the final price. **Focus:** Applying discounts and promotions to tree-like structures, efficient implementation of discount rules, optimizing for complex pricing scenarios.
25. In a social network, users can form groups. Given a list of friendships, determine if all users in a specific group are connected (directly or indirectly) through friendships. **Focus:** Disjoint set union (DSU) data structure, basic connectivity checks.
26. Design an efficient algorithm to find the minimum number of new friendships needed to connect all users in the social network into a single, connected component. **Focus:** Applying DSU for finding connected components, greedy algorithms, optimization for minimizing connections.
27. A treasure hunt involves a series of clues leading to the final treasure. Given a list of possible paths and their associated costs, find the cheapest path to reach the treasure. **Focus:** Greedy algorithms (e.g., Dijkstra's algorithm for shortest paths), basic graph representation.
28. In a more complex treasure hunt, there are time constraints associated with each path. Design an algorithm to find the fastest path to the treasure while considering both path costs and time constraints. **Focus:** Combining greedy approaches with other techniques (e.g., priority queues), handling multiple constraints, optimizing for time-critical scenarios.
29. In a simplified chess game with only rooks, determine the minimum number of moves required for a rook to reach a specific target square on an empty board. **Focus:** Breadth-first search (BFS) on a graph (the chessboard), basic graph traversal.
30. In a more realistic chess game with multiple pieces and obstacles, implement a minimax algorithm with alpha-beta pruning to determine the best move for a player. **Focus:** Game tree search, minimax algorithm, optimization techniques like alpha-beta pruning, handling complex game states.

Targeted Application & Tools that can be used:

1. C or C++ Compiler (g++): The standard compiler for CP. Familiarize students with compilation flags (e.g., -O2 for optimization).
2. IDE (Integrated Development Environment): Code:: Blocks, Visual Studio, CLion, or similar IDEs. These provide debugging capabilities, code completion, and other helpful features.
3. Online Judges (CodeChef, Codeforces, LeetCode, HackerRank): Essential for practicing and submitting solutions.
4. Debugger (gdb): Crucial for understanding code execution and finding bugs. Origin, excel and Mat lab soft wares for programming and data analysis.
5. Number Theory Libraries: Some libraries provide pre-built functions for number theory operations (though often it's better to implement them yourself for learning).
6. Wolfram Alpha: A useful tool for verifying number theory calculations and exploring concepts.
7. **String Libraries:** Familiarize students with the string manipulation functions available in C++.
8. **Graph Visualization Tools:** Tools like Graphviz can be helpful for visualizing graphs and understanding graph algorithms.
9. **DP Debugging Techniques:** Practice debugging DP solutions, as they can be complex. Visualizing the DP table can be helpful.

Project work/Assignment: Mention the Type of Project /Assignment proposed for this course**Assessment Type**

- Midterm exam
- Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screen shot accessing digital resource.)
- Quiz
- End Term Exam
- Self-Learning

Course Code: CDV2507	Continuous Integration and Continuous Delivery Pipelines Lab	L-T-P-C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	CDV2000 DevOps Foundations					
Anti-requisites	NIL					
Course Description	This lab course is designed to provide practical exposure to CI/CD practices in modern software development. It emphasizes hands-on experience in setting up automated build, test, and deployment pipelines using open-source tools. Students will work with source control, configuration management, testing frameworks, containerization, and monitoring solutions to understand the entire DevOps pipeline lifecycle.					
Course Objectives	1. To familiarize students with the CI/CD concepts through practical tools and workflows. 2. To enable implementation of automated build and test pipelines using version control systems. 3. To equip students with the skills to containerize applications and integrate deployment in a pipeline. 4. To develop proficiency in monitoring, error tracking, and performance management in pipelines.					
Course Out Comes	CO1: Understand and set up basic CI/CD pipelines using tools like Jenkins and Git. CO2: Integrate automated testing and static analysis tools within pipelines. CO3: Implement container-based deployment using Docker and Kubernetes in CI/CD. CO4: Apply monitoring and logging tools to manage and optimize CI/CD workflows.					

List of Open Source Tools Used

Jenkins – For building and automating CI/CD pipelines.

GitLab/GitHub Actions – For version control and pipeline automation.

Docker – For containerization of applications in the delivery pipeline.

SonarQube – For integrating code quality and static analysis into pipelines.

List of Experiments

- 1 Introduction to DevOps: Install and configure Git and Jenkins**
- 2 Create a simple pipeline in Jenkins using a sample Java/Python project**
- 3 Integrate GitHub or GitLab repository with Jenkins for source control and automated build**
- 4 Automate unit testing with JUnit or PyTest in a Jenkins pipeline**
- 5 Perform static code analysis using SonarQube in Jenkins pipeline**
- 6 Create a multi-stage pipeline with Jenkinsfile**
- 7 Set up GitHub Actions CI workflow for Node.js/Python project**
- 8 Build Docker containers for application and push to DockerHub**
- 9 Integrate Docker with Jenkins: Build and deploy Docker containers**
- 10 CI/CD with Kubernetes: Deploy containerized apps using Helm and Jenkins**
- 11 Canary and Blue-Green deployment setup using Jenkins and Kubernetes**
- 12 Infrastructure as Code: Use Terraform to provision infrastructure for CI/CD**
- 13 Add monitoring tools like Prometheus and Grafana in a pipeline**
- 14 CI/CD security: Use secrets management and Snyk for vulnerability scans**
- 15 Final mini-project: Build full CI/CD pipeline for a microservice-based app**

Course Code: CDV2506	Continuous Integration and Continuous Delivery Pipelines	L-T-P-C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	CDV2000 DevOps Foundations					
Anti-requisites	NIL					
Course Description	This course introduces the principles and practices of Continuous Integration and Continuous Delivery (CI/CD) in modern software development. Students will learn how to automate the software build, test, and deployment processes using industry-standard tools. Emphasis will be given to DevOps culture, pipeline as code, infrastructure automation, and integrating quality assurance into CI/CD workflows.					
Course Objectives	Understand the fundamental concepts of CI/CD and its role in DevOps. Explore various CI/CD tools and pipelines for software build, testing, and deployment automation. Analyze pipeline performance, integration with testing tools, and deployment strategies. Apply CI/CD practices to real-world applications with automation and monitoring.					
Course Out Comes	CO1 (Understand): Describe the role of CI/CD in modern software engineering and DevOps culture. CO2 (Analyze): Analyze different CI/CD tools, pipelines, and strategies for continuous delivery and deployment. CO3 (Apply): Develop automated CI/CD pipelines integrating version control, build, and test tools. CO4 (Apply): Implement secure and scalable deployment strategies using infrastructure automation tools.					
Module 1	Introduction to CI/CD and DevOps		Understand	No. of Sessions: 10		
CI/CD overview, Agile and DevOps synergy, DevOps lifecycle, Benefits of CI/CD, Software release cycle, CI vs CD, Key metrics in CI/CD.						
Module 2	CI/CD Tools and Pipeline Architecture		Analyse	No. of Sessions: 12		
Jenkins, GitLab CI, GitHub Actions, CircleCI, Travis CI, Pipeline as code (Jenkinsfile), YAML scripting, Pipeline stages and best practices.						
Module 3	Build Automation, Testing, and Security Integration		Apply	No. of Sessions: 12		

Build automation (Maven, Gradle), Unit testing (JUnit, PyTest), Static analysis (SonarQube), Integration with Docker, Secrets management, Security testing (OWASP, Snyk).				
Module 4	Deployment, Monitoring, and Infrastructure Automation		Apply	No. of Sessions: 11
Docker and Kubernetes in CI/CD, Blue-green & Canary deployment, Helm, Terraform, Infrastructure as Code (IaC), Monitoring with Prometheus and Grafana, Real-world CI/CD case studies.

Course Code: CDV2508	Edge Computing and DevOps	L-T-P-C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	CDV2000 DevOps Foundations					
Anti-requisites	NIL					
Course Description	This course introduces the integration of Edge Computing and DevOps, focusing on how computational workloads are distributed across edge and cloud environments. It explores real-time data processing at the edge, latency reduction, and automation in deployment cycles using DevOps principles. Students will learn edge system architecture, containerization, orchestration, CI/CD pipeline automation, and performance monitoring in edge-centric applications.					

Course Objectives	To provide foundational understanding of Edge Computing concepts and architectures.			
	To explore DevOps methodologies and tools in the context of edge-based deployments.			
	To understand the role of containers, microservices, and orchestration in edge applications.			
	To enable automation, monitoring, and performance tuning of edge-cloud integrated systems			
Course Out Comes	CO1 (Understand): Explain the fundamentals and significance of edge computing and DevOps in distributed systems.			
	CO2 (Analyze): Evaluate architectural models and deployment strategies for edge computing using DevOps pipelines.			
	CO3 (Apply): Implement edge-based applications using containerization and orchestration tools.			
	CO4 (Apply): Automate CI/CD pipelines and monitor edge-cloud systems using modern DevOps practices.			
Module 1	Fundamentals of Edge Computing and DevOps		Understand	No. of Sessions: 10
Edge computing concepts, edge vs cloud computing, use cases in IoT and real-time applications, DevOps principles, Agile, version control, CI/CD overview, benefits of DevOps in edge environments.				
Module 2	Architecture of Edge Systems and DevOps Integration		Analyse	No. of Sessions: 12
Edge nodes, edge-cloud continuum, data flow models, microservices architecture, edge orchestration, containerization (Docker), DevOps lifecycle for edge applications, Git workflows, DevOps tools for edge.				
Module 3	CI/CD Pipeline Design for Edge Applications		Apply	No. of Sessions: 11
Jenkins, GitLab CI, GitHub Actions for edge deployment, creating Jenkins pipelines, integrating testing, static analysis, building and pushing edge containers, Helm charts, Kubernetes on edge.				
Module 4	Monitoring, Security and Case Studies		Apply	No. of Sessions: 12
Security in edge environments, secrets management, edge-to-cloud monitoring with Prometheus and Grafana, anomaly detection, edge analytics, real-world applications in healthcare, smart cities, and autonomous vehicles.

Course Code: CDV2509	DevSecOps	L-T- P-C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	CDV2000 DevOps Foundations					
Anti-requisites	NIL					
Course Description	DevSecOps integrates security practices within the DevOps process, aiming to build secure applications from the start of development to deployment. This course introduces the concepts of secure software development, automation of security testing, threat modeling, and secure CI/CD pipelines. It emphasizes tools and techniques for vulnerability detection, compliance, governance, and secure deployment strategies across cloud-native environments.					
Course Objectives	1. To understand the foundational principles and goals of DevSecOps and its importance in secure software delivery. 2. To learn the integration of security in the DevOps pipeline through automated tools and practices. 3. To explore secure software development life cycle (SSDLC), threat modeling, and code analysis techniques. 4. To implement compliance and governance in CI/CD pipelines and containerized environments.					
Course Out Comes	CO1 (Understand): Explain the concepts, importance, and practices of DevSecOps in modern software development. CO2 (Analyze): Identify security threats, vulnerabilities, and compliance issues in DevOps pipelines. CO3 (Apply): Implement secure code analysis and automate security testing tools in					

	CI/CD workflows. CO4 (Apply): Deploy and manage secure containerized applications with policy enforcement and governance.			
Module 1	Introduction to DevSecOps and Security Integration		Understand	No. of Sessions: 10
DevOps vs DevSecOps, need for shift-left security, secure SDLC, security culture, security champions, automation in security integration, principles of secure by design.				
Module 2	Threat Modeling and Secure Code Practices		Analyse	No. of Sessions: 12
OWASP top 10, STRIDE and DREAD threat models, secure coding guidelines, static code analysis tools (SonarQube, Checkmarx), secure repositories, source code auditing.				
Module 3	CI/CD Security Automation		Apply	No. of Sessions: 11
Security in Jenkins, GitHub Actions, GitLab CI, container security with Trivy, automated security scans (SAST, DAST, SCA), dependency checking, DevSecOps pipelines.				
Module 4	Container Security, Governance, and Compliance		Apply	No. of Sessions: 12
Docker image hardening, Kubernetes security (RBAC, PSP), policy enforcement tools (OPA, Kyverno), compliance as code, audit logging, SIEM tools, case studies.

Course Code: CDV3400
Course Title: Fundamentals of Cloud Computing
L:T:P:C – 3:0:0:3
Prerequisite: CDV2000 – DevOps Foundations

Course Description This course introduces the fundamental principles and practices of cloud computing. It covers cloud service models, deployment models, virtualization, containerization, and cloud architecture. The course also explores cloud platforms such as AWS, Azure, and Google Cloud, focusing on how to build, manage, and scale applications in cloud environments.
Course Objectives — Understand core concepts and architecture of cloud computing — Explore service models (IaaS, PaaS, SaaS) and deployment models — Learn virtualization, containers, and cloud resource provisioning — Apply cloud computing practices using leading cloud platforms
Course Outcomes CO1 (Understand): Explain cloud computing principles, architecture, and service models CO2 (Analyze): Compare deployment models and evaluate cost, scalability, and reliability CO3 (Apply): Use virtualization and containerization tools for cloud deployment CO4 (Apply): Work with cloud platforms to provision, monitor, and scale services
Course Content (45 Hours Total)
Module 1: Introduction to Cloud Computing – 11 Sessions (Understand) Definition and evolution, Cloud characteristics, Service models: IaaS, PaaS, SaaS, Deployment models: Public, Private, Hybrid, Community, Benefits and limitations
Module 2: Cloud Architecture and Virtualization – 11 Sessions (Analyze) Cloud architecture layers, Virtualization concepts: Hypervisors, VMs, Containers vs. VMs, Docker basics, Container orchestration overview, Cloud scalability, Elasticity, Fault tolerance
Module 3: Cloud Services and Resource Management – 11 Sessions (Apply) Compute, Storage, and Network services in AWS/Azure/GCP, Identity and Access Management (IAM), Billing and metering, Cloud storage options, Auto-scaling and load balancing
Module 4: Cloud Platforms and Use Cases – 12 Sessions (Apply) Hands-on with AWS Console, Azure Portal, Google Cloud Console, Cloud-native application development, Real-world use cases in e-commerce, banking, healthcare, education

Course Code: CDV3401 Course Title: Version Control with Git & GitHub/GitLab L:T:P:C – 3:0:0:3 Prerequisite: CDV2000 – DevOps Foundations	
Course Description This course focuses on modern version control practices using Git and collaborative platforms like GitHub and GitLab. It covers distributed version control concepts, branching strategies, pull requests, issue tracking, and CI/CD integration. Emphasis is placed on collaborative software development, change management, and automation in DevOps pipelines.	
Course Objectives – Understand distributed version control principles using Git – Learn collaboration workflows with GitHub and GitLab – Apply branching strategies, merge techniques, and conflict resolution – Integrate version control with DevOps practices like CI/CD	
Course Outcomes CO1 (Understand): Describe the role of version control in modern software development CO2 (Analyze): Compare and manage Git workflows, branching, and collaboration strategies CO3 (Apply): Use Git and GitHub/GitLab to manage, track, and collaborate on code projects CO4 (Apply): Integrate version control with CI/CD and DevOps automation tools	
Course Content (45 Hours Total)	
Module 1: Introduction to Git and Version Control – 11 Sessions (Understand) Version control systems: centralized vs. distributed, Git basics: install, config, init, clone, status, Git objects and internal model, Commits, Logs, Aliases	
Module 2: Branching, Merging, and Conflict Resolution – 11 Sessions (Analyze) Creating and managing branches, Fast-forward and recursive merges, Merge conflicts and resolution, Rebase vs merge, Git stash, cherry-pick, reflog	
Module 3: Collaborative Workflows with GitHub/GitLab – 11 Sessions (Apply) Remote repositories, Forks, pull requests, code reviews, Issue tracking and labels, Branch protection rules, GitHub Actions/GitLab CI/CD basics	
Module 4: Git in DevOps and Automation – 12 Sessions (Apply) Git hooks and automation, Webhooks, CI/CD integration, Secrets and security, GitOps basics, Infrastructure as code versioning, Real-world project workflows (feature branching, trunk-based)

Course Code: CDV3402
Course Title: Serverless Computing
L:T:P:C – 3:0:0:3
Prerequisite: Nil

Course Description

This course introduces the principles and practices of serverless computing as a cloud-native development model. It focuses on event-driven architectures, Function-as-a-Service (FaaS), API gateways, backend-as-a-service (BaaS), containerless deployments, and scalability. Students gain hands-on experience with platforms like AWS Lambda, Azure Functions, and Google Cloud Functions.

Course Objectives

- Understand the serverless paradigm and its advantages over traditional architectures
- Explore FaaS, BaaS, and event-driven workflows
- Develop and deploy serverless functions using major cloud platforms
- Apply serverless architectures to real-world application scenarios

Course Outcomes

CO1 (Understand): Explain the concepts and evolution of serverless computing
CO2 (Analyze): Compare traditional, microservices, and serverless architectures
CO3 (Apply): Build and deploy cloud-based serverless applications using FaaS platforms
CO4 (Apply): Implement event-driven services with monitoring, logging, and scaling

Course Content (45 Hours Total)

Module 1: Introduction to Serverless Computing – 11 Sessions (Understand)

Cloud computing evolution, Serverless vs. traditional vs. container-based models, Characteristics of serverless architecture, Benefits and challenges, Overview of FaaS and BaaS

Module 2: Serverless Architecture and Platforms – 11 Sessions (Analyze)

Event-driven architectures, FaaS internals, Serverless lifecycle, API Gateway, Function triggers (HTTP, storage, message queues), Stateless functions, Timeout and cold starts, Pricing models

Module 3: Developing Serverless Applications – 11 Sessions (Apply)

Deploying functions on AWS Lambda, Azure Functions, Google Cloud Functions, Using SDKs and CLI, Writing handler code, Environment variables, Deployment frameworks (Serverless Framework, SAM, Terraform)

Module 4: Use Cases, Integration & Monitoring – 12 Sessions (Apply)

Serverless use cases: data processing, real-time analytics, automation, ChatOps, CI/CD pipelines, Logging (CloudWatch, Stackdriver), Monitoring (X-Ray, OpenTelemetry), Security, Governance, Case studies

Course Code: CDV3403

Course Title: Infrastructure as Code (IaC) with Terraform & Ansible

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course introduces the principles and practical implementation of Infrastructure as Code (IaC), focusing on automation tools such as Terraform and Ansible. Students will learn how to provision, configure, and manage cloud infrastructure using declarative and procedural approaches, integrating with DevOps workflows to ensure consistent, scalable, and reliable environments.

Course Objectives

- Understand the concepts and benefits of Infrastructure as Code
- Explore the features and syntax of Terraform and Ansible
- Develop and deploy infrastructure in public and private clouds
- Apply configuration management and provisioning to DevOps pipelines

Course Outcomes

CO1 (Understand): Describe the purpose, workflow, and tools of Infrastructure as Code

CO2 (Analyze): Compare declarative and imperative approaches for managing infrastructure

CO3 (Apply): Automate cloud provisioning using Terraform modules and workspaces

CO4 (Apply): Use Ansible for system configuration, orchestration, and remote execution

Course Content (45 Hours Total)

Module 1: Introduction to IaC and Cloud Infrastructure – 11 Sessions (Understand)

IaC definition and evolution, Benefits and challenges, Comparison of tools (Terraform, Ansible, Chef, Puppet), Overview of cloud service providers, Resource provisioning, Version control for IaC

Module 2: Terraform for Cloud Automation – 11 Sessions (Analyze)

Terraform basics: providers, resources, variables, state files, Modules, Workspaces, Provisioners, Dependency management, Remote backends, Best practices in writing Terraform scripts

Module 3: Configuration Management with Ansible – 11 Sessions (Apply)

Ansible architecture and YAML syntax, Inventory files, Playbooks and roles, Tasks and handlers, Modules (file, service, package, shell), Loops and conditionals, Idempotency, Ansible Galaxy

Module 4: IaC in DevOps Pipelines and Cloud Use Cases – 12 Sessions (Apply)

CI/CD with Terraform and Ansible, Secure secrets management (Vault, AWS Secrets Manager), Infrastructure testing (InSpec, Molecule), IaC in AWS/GCP/Azure, Real-world scenarios: auto-scaling, load balancing, HA architecture

Textbooks**T1:** Yevgeniy Brikman, *Terraform: Up & Running*, O'Reilly Media, **2023****T2:** Lorin Hochstein, *Ansible: Up and Running*, O'Reilly Media, **2023****Reference Books****R1:** Russell Jones, *Learning Infrastructure as Code*, Packt Publishing, **2022****R2:** Steve Smith, *Infrastructure as Code Handbook*, Leanpub, **2023****R3:** James Turnbull, *The Terraform Book*, James Turnbull Publications, **2022****R4:** Gourav Shah, *Mastering Ansible*, Packt Publishing, **2022****Web Resources****W1:** <https://www.terraform.io/docs>**W2:** <https://docs.ansible.com>**W3:** <https://learn.hashicorp.com>**W4:** <https://www.redhat.com/en/technologies/management/ansible>**W5:** <https://github.com/ansible/ansible-examples>**Course Code: CDV3404****Course Title: Cloud Automation & Orchestration****L:T:P:C – 3:0:0:3****Prerequisite:** Nil**Course Description**

This course explores the principles and tools used to automate and orchestrate cloud resources. It covers scripting for automation, orchestration tools, event-driven automation, and infrastructure lifecycle management. Students will gain practical exposure to tools like Terraform, Ansible, Kubernetes, and CI/CD systems that enable efficient, repeatable, and scalable cloud operations.

Course Objectives

- Understand automation and orchestration concepts in cloud environments
- Learn how to automate infrastructure and service deployment
- Explore orchestration tools like Kubernetes, Terraform, and Jenkins
- Apply automation and orchestration in DevOps and cloud-native workflows

Course Outcomes**CO1 (Understand):** Explain the need and principles of cloud automation and orchestration**CO2 (Analyze):** Evaluate automation workflows and orchestration strategies across tools**CO3 (Apply):** Automate cloud infrastructure provisioning and application deployments**CO4 (Apply):** Use orchestration tools to manage services in cloud-native environments**Course Content (45 Hours Total)****Module 1: Introduction to Cloud Automation – 11 Sessions (Understand)**

Automation fundamentals, Infrastructure lifecycle, Scripting basics (Bash, Python), Cloud SDKs and CLIs, Infrastructure as Code (IaC) overview, Configuration management tools

Module 2: Orchestration Platforms and Strategies – 11 Sessions (Analyze)

Orchestration vs. automation, Kubernetes core components, Workload orchestration, Helm charts, Workflow engines (Argo Workflows, Jenkins Pipelines), Container orchestration use cases

Module 3: Infrastructure Automation Tools – 11 Sessions (Apply)

Terraform deep dive, Resource planning, Modules and state management, CloudFormation basics, Policy-as-Code, Ansible orchestration, CI/CD pipeline integration

Module 4: Cloud-native Automation and Monitoring – 12 Sessions (Apply) Event-driven automation (CloudWatch Events, Azure Event Grid), Auto-scaling, Serverless automation, Secrets management (Vault), Monitoring and alerting (Prometheus, Grafana), Real-world case studies

Course Code: CDV3405 Course Title: Cloud Infrastructure and Systems Software L:T:P:C – 3:0:0:3 Prerequisite: Nil	
Course Description This course explores the foundational components and systems software that support cloud computing infrastructure. Topics include virtualization, operating systems for cloud platforms, resource management, storage systems, networking, and containerization. It also introduces the role of hypervisors, system-level abstractions, and cloud resource orchestration.	
Course Objectives — Understand the architectural components of cloud infrastructure — Learn how systems software enables virtualization and containerization — Explore cloud storage, computing, and networking models — Apply tools and techniques to manage virtualized environments	
Course Outcomes CO1 (Understand): Explain the architecture and components of cloud infrastructure CO2 (Analyze): Evaluate the functionality of systems software in cloud environments CO3 (Apply): Deploy and manage virtual machines and containers CO4 (Apply): Configure system-level services for performance and scalability	
Course Content (45 Hours Total)	
Module 1: Cloud Infrastructure Overview – 11 Sessions (Understand) Cloud architecture: compute, storage, network layers, Service and deployment models, Cloud datacenters, Resource pooling, SLA management, Multi-tenancy and elasticity	
Module 2: Virtualization and Hypervisors – 11 Sessions (Analyze) Hypervisor types (Type 1 and 2), VM lifecycle, Resource allocation, VirtualBox, KVM, VMware, Container vs VM, Container engines (Docker), Image layering	

Module 3: Systems Software in Cloud – 11 Sessions (Apply)

Operating systems for virtualization, Kernel-level support, Filesystems and process management, Cloud-init, Remote management tools (SSH, Ansible), User and permission management

Module 4: Resource Management and Monitoring – 12 Sessions (Apply)

Cloud storage: block vs object vs file, Open-source storage (Ceph, GlusterFS), Cloud networking basics, IPAM, DNS, Load balancers, Monitoring tools (Nagios, Zabbix), Logs and metrics

Course Title: AI-Powered Chatbots & Automation in DevOps

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course explores the integration of AI-powered chatbots and automation tools in modern DevOps workflows. It covers the fundamentals of natural language understanding, chatbot frameworks, and AI-assisted automation for monitoring, deployment, and collaboration. Students will build chatbots and integrate them with tools like Slack, Jenkins, and incident response platforms to enhance DevOps efficiency.

Course Objectives

- Understand the role of conversational AI in DevOps and IT automation
- Learn chatbot architecture, NLP concepts, and development frameworks
- Apply automation for continuous integration, delivery, and operations
- Integrate AI assistants with DevOps tools for smart alerts and task execution

Course Outcomes

CO1 (Understand): Describe the role of chatbots and AI in DevOps environments

CO2 (Analyze): Evaluate chatbot design patterns and NLP techniques

CO3 (Apply): Develop conversational bots using open-source tools and APIs

CO4 (Apply): Automate DevOps tasks using AI assistants integrated with pipelines and monitoring tools

Course Content (45 Hours Total)**Module 1: Conversational AI Foundations – 11 Sessions (Understand)**

Chatbot types (rule-based, AI-based), Natural Language Processing (NLP) basics, Intent recognition, Entity extraction, Dialog management, Conversational UX, Overview of tools (Rasa, Dialogflow, Microsoft Bot Framework)

Module 2: Chatbot Architecture & Development – 11 Sessions (Analyze) Bot architecture, Intent classification with ML, Slot filling, Fallback strategies, Integration with APIs and databases, Creating flows and actions, Context handling, Testing and analytics
Module 3: DevOps Integration with Chatbots – 11 Sessions (Apply) Slack and Microsoft Teams bot integrations, Triggering Jenkins pipelines via chatbot, Monitoring tools integration (Prometheus, Grafana), Incident response automation, GitHub/GitLab bot interactions
Module 4: Intelligent Automation for DevOps – 12 Sessions (Apply) AI-based alert triage, Anomaly detection and root cause analysis, ChatOps principles, Voicebot overview, Use of LLMs (ChatGPT) in DevOps workflows, Real-time use cases and mini project demos
Textbooks T1: Navin Sabharwal, <i>Intelligent Automation with AI and Chatbots</i>, BPB Publications, 2023 T2: Jason D. Brownlee, <i>Deep Learning for Natural Language Processing</i>, Machine Learning Mastery, 2023

Course Code: CDV3407 Course Title: AIOps – AI-Driven DevOps & IT Operations L:T:P:C – 3:0:0:3 Prerequisite: Nil
Course Description This course explores AIOps (Artificial Intelligence for IT Operations), combining big data and machine learning to automate and enhance IT operations. Students will learn how AIOps platforms process telemetry data, detect anomalies, predict outages, automate root cause analysis, and improve system performance across DevOps pipelines.
Course Objectives — Understand the principles and architecture of AIOps platforms — Explore how AI and ML are used to monitor, correlate, and automate IT operations — Analyze telemetry data for alert prioritization, root cause detection, and predictions — Apply AIOps tools for real-time automation in DevOps and enterprise environments
Course Outcomes CO1 (Understand): Explain the fundamentals, components, and benefits of AIOps CO2 (Analyze): Correlate events and alerts using ML models and behavior analysis

C03 (Apply): Build anomaly detection and automation pipelines using AIOps tools C04 (Apply): Integrate AIOps with DevOps workflows for intelligent system management	
Course Content (45 Hours Total)	
Module 1: Introduction to AIOps – 11 Sessions (Understand) Definition, evolution, and scope of AIOps, Role in DevOps and ITSM, AIOps architecture: data sources, analysis, and automation layers, Telemetry types (logs, metrics, traces), Observability vs Monitoring	
Module 2: Data Collection and Event Correlation – 11 Sessions (Analyze) Ingesting data from multiple sources (agents, APIs, cloud), Time-series analysis, Noise reduction, Pattern detection, Incident clustering, Correlation engines, Real-time event streams (Kafka, Fluentd)	
Module 3: ML in AIOps – 11 Sessions (Apply) Anomaly detection (statistical, supervised, unsupervised), Root cause analysis, Forecasting system health, Alert prioritization using NLP, AI models for log classification and enrichment	
Module 4: AIOps in Practice – 12 Sessions (Apply) AIOps tools (Dynatrace, Moogsoft, Splunk ITSI, Elastic, DataDog), Integration with CI/CD tools, Automated remediation and chatbot-based ops, Cloud-native AIOps, Case studies in fintech, healthcare, and SRE

Course Code: CDV3408 Course Title: Predictive Analytics for System Monitoring & Performance Optimization L:T:P:C – 3:0:0:3 Prerequisite: Nil	
Course Description This course focuses on applying predictive analytics techniques to monitor, assess, and optimize system and application performance in IT environments. Students will explore the use of machine learning, statistical models, and real-time data to forecast system failures, reduce downtime, and ensure proactive operations.	
Course Objectives — Understand the fundamentals of predictive analytics in IT operations — Learn to collect, preprocess, and analyze performance metrics	

— Apply machine learning models for anomaly detection and forecasting — Use visualization and automation tools for system performance optimization	
Course Outcomes CO1 (Understand): Explain the role of predictive analytics in system monitoring CO2 (Analyze): Evaluate patterns and anomalies in performance metrics CO3 (Apply): Implement predictive models to forecast system failures or overload CO4 (Apply): Use monitoring tools and dashboards to support performance optimization	
Course Content (45 Hours Total)	
Module 1: Introduction to Predictive Analytics & Monitoring – 11 Sessions (Understand) Concept of predictive analytics, Types of system metrics (CPU, memory, I/O, latency), Time-series analysis basics, Data sources and collection, Real-time vs batch monitoring, Monitoring frameworks overview (Prometheus, Grafana, Nagios)	
Module 2: Data Preparation and Feature Engineering – 11 Sessions (Analyze) Log and metric preprocessing, Feature extraction, Windowing and lag features, Outlier handling, Correlation analysis, Dimensionality reduction techniques (PCA, t-SNE)	
Module 3: Predictive Modeling Techniques – 11 Sessions (Apply) Supervised and unsupervised learning, Regression models (linear, ridge, lasso), Classification models (decision trees, random forests), Anomaly detection (Isolation Forest, DBSCAN), Forecasting (ARIMA, LSTM)	
Module 4: System Optimization & Visualization – 12 Sessions (Apply) Alert thresholds and automation, KPI dashboards with Grafana, Capacity planning and auto-scaling, Use of AI/ML in alert prioritization, Real-world case studies in cloud environments	
Textbooks T1: Usha Batra, <i>Predictive Analytics for IT Operations</i> , Wiley, 2023 T2: Valliappa Lakshmanan, <i>Data Science on the Google Cloud Platform</i> , O'Reilly Media, 2023

Web Resources W1: https://prometheus.io W2: https://grafana.com W3: https://scikit-learn.org W4: https://www.tensorflow.org W5: https://cloud.google.com/monitoring	
Course Code: CDV3409 Course Title: AI-Enabled Cloud Cost Optimization L:T:P:C – 3:0:0:3 Prerequisite: Nil	
Course Description This course focuses on leveraging Artificial Intelligence (AI) and Machine Learning (ML) to optimize cloud infrastructure costs. It covers cloud pricing models, cost drivers, and resource management strategies using predictive analytics, anomaly	

detection, and intelligent scaling. Students will apply AI techniques to monitor, forecast, and automate cloud usage for efficiency and cost savings.

Course Objectives

- Understand cloud billing models, cost structures, and optimization challenges
- Learn to analyze and visualize usage patterns across cloud environments
- Apply AI/ML techniques for cost forecasting and anomaly detection
- Automate cost-saving strategies using cloud-native and third-party tools

Course Outcomes

CO1 (Understand): Explain cloud cost structures and factors affecting pricing

CO2 (Analyze): Examine usage data to identify inefficiencies and cost trends

CO3 (Apply): Use AI/ML models to forecast usage and automate optimization

CO4 (Apply): Implement tools and strategies for continuous cost governance

Course Content (45 Hours Total)

Module 1: Cloud Billing & Cost Management Basics – 11 Sessions (Understand)

Cloud pricing models (on-demand, reserved, spot), Service-level costing (compute, storage, bandwidth), Billing dashboards, Cloud provider cost calculators, Introduction to FinOps

Module 2: Cloud Usage Analytics & Visualization – 11 Sessions (Analyze)

Collecting and aggregating usage data, Data wrangling and transformation, Cost and usage reports, Budget alerting, Visualization tools (Grafana, AWS Cost Explorer, Azure Cost Management)

Module 3: Predictive Cost Optimization with AI – 11 Sessions (Apply)

ML for cost forecasting, Time-series models (ARIMA, Prophet), Workload prediction using regression/classification, Detecting outliers in billing, Auto-recommendations for rightsizing

Module 4: Automation and Governance – 12 Sessions (Apply)

Policy enforcement, Tag-based budgeting, Auto-scaling and scheduling, Cloud-native tools (AWS Compute Optimizer, Azure Advisor, GCP Recommender), Third-party platforms (CloudHealth, Spot.io), Real-world case studies

Course Title: AI-Powered Incident Management & Root Cause Analysis

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description This course introduces the integration of Artificial Intelligence in managing IT incidents and performing automated Root Cause Analysis (RCA). It explores predictive modeling, anomaly detection, log analysis, alert correlation, and intelligent remediation. The course emphasizes minimizing system downtime and improving operational efficiency through AI-driven solutions.	
Course Objectives — Understand the fundamentals of incident lifecycle and RCA in IT operations — Explore AI techniques for event correlation and anomaly detection — Apply machine learning models to automate incident identification and RCA — Integrate AI with monitoring and alerting systems for proactive response	
Course Outcomes C01 (Understand): Explain the incident management lifecycle and challenges in RCA C02 (Analyze): Detect anomalies and correlate events using AI models C03 (Apply): Use ML algorithms to automate RCA using logs and metrics C04 (Apply): Integrate AI-powered tools to improve incident response and remediation	
Course Content (45 Hours Total)	
Module 1: Incident Management Foundations – 11 Sessions (Understand) Incident vs. problem vs. change management, Incident lifecycle, MTTR/MTBF/MTTI metrics, Escalation models, SLA management, RCA methods (fishbone, 5 Whys, fault tree)	
Module 2: Event Collection & Anomaly Detection – 11 Sessions (Analyze) System telemetry: logs, metrics, traces, Feature extraction, Time-series anomaly detection, Unsupervised techniques (Isolation Forest, k-means), Event correlation with NLP, Noise reduction	
Module 3: ML for Root Cause Analysis – 11 Sessions (Apply) Log parsing and template mining, Feature encoding from logs, Classification/regression models for root cause prediction, Pattern recognition in incident sequences, RCA graphs, Alert deduplication	
Module 4: Tools & Automation in Incident Resolution – 12 Sessions (Apply) Integration with observability platforms (Prometheus, ELK Stack, Splunk), Incident automation platforms (PagerDuty, Moogsoft), ChatOps for incident response, Auto-remediation, Use cases and dashboards

Course Code: CDV3411 Course Title: Reinforcement Learning for Self-Healing DevOps Pipelines L:T:P:C – 3:0:0:3 Prerequisite: Nil	
Course Description This course introduces the application of Reinforcement Learning (RL) techniques in building self-healing and autonomous DevOps pipelines. Students will learn foundational RL concepts and how to use them for intelligent automation, failure prediction, adaptive testing, and pipeline optimization. It emphasizes reliability, learning from feedback, and proactive system recovery.	
Course Objectives — Understand core concepts of Reinforcement Learning and its integration with DevOps — Explore the design of reward systems and learning agents for automation — Learn techniques for implementing self-healing actions in CI/CD environments — Apply RL to build adaptive and resilient DevOps pipelines	
Course Outcomes CO1 (Understand): Explain the principles of Reinforcement Learning and its role in automation CO2 (Analyze): Examine RL models for adaptive testing and pipeline optimization CO3 (Apply): Implement RL agents for identifying and healing failures in CI/CD workflows CO4 (Apply): Integrate RL with DevOps tools for real-time decision making and system recovery	
Course Content (45 Hours Total)	
Module 1: Reinforcement Learning Basics – 11 Sessions (Understand) Agent-environment interaction, MDPs, Rewards and policies, Value and Q-functions, Exploration vs exploitation, Q-learning, SARSA, Deep Q-Networks (DQN)	
Module 2: RL for DevOps Environments – 11 Sessions (Analyze) DevOps lifecycle and failure points, Identifying reward signals in pipelines, State representation of CI/CD stages, Adaptive testing models, Log and metric feedback as input features	
Module 3: Building Self-Healing Agents – 11 Sessions (Apply) Designing and training RL agents, Environment simulation, Detecting build/test/deploy failures, Automated rollback and rerun policies, Integration with Jenkins, GitHub Actions, Kubernetes	
Module 4: Real-World Use Cases and Optimization – 12 Sessions (Apply) Pipeline performance tuning with RL, Scaling resource usage adaptively, Anomaly mitigation using RL, Real-time case studies (Netflix, Google SRE, GitLab), RL + AIOps hybrid architectures

Course Code: CDV3412
Course Title: DevOps Fundamentals for Financial Services
L:T:P:C – 3:0:0:3
Prerequisite: Nil

Course Description

This course provides an industry-oriented foundation in DevOps, tailored for the **financial services domain**. It covers key principles of DevOps, secure CI/CD pipelines, regulatory compliance, high-frequency deployment, and infrastructure automation in banking, insurance, and fintech environments. The course emphasizes scalability, resilience, and compliance-critical deployments.

Course Objectives

- Understand the DevOps lifecycle and its application in financial systems
- Explore automation, monitoring, and deployment practices tailored to finance
- Apply security and compliance practices in CI/CD pipelines
- Integrate DevOps with high-availability, auditability, and traceability requirements

Course Outcomes

CO1 (Understand): Describe the DevOps culture, principles, and practices for regulated industries

CO2 (Analyze): Evaluate DevOps toolchains, policies, and risk management in fintech

CO3 (Apply): Implement secure CI/CD pipelines with compliance enforcement

CO4 (Apply): Automate and monitor infrastructure and application delivery in financial services

Course Content (45 Hours Total)

Module 1: DevOps in Financial Services – 11 Sessions (Understand)

DevOps lifecycle and benefits, Financial sector IT requirements, Key challenges (latency, availability, auditability), Role of DevSecOps in finance, Compliance (PCI-DSS, SOC 2), Legacy system modernization

Module 2: CI/CD and Security Best Practices – 11 Sessions (Analyze)

Pipeline design in regulated environments, Secure builds, secrets management, Static and dynamic security testing, Approval workflows, Deployment gates, Artifact integrity verification

Module 3: Infrastructure Automation & Monitoring – 11 Sessions (Apply)

Infrastructure as Code (Terraform, Ansible), Cloud deployment (AWS, Azure for BFSI), Service monitoring (Prometheus, Grafana), Observability and alerting, Chaos engineering, Incident response

Module 4: Fintech Use Cases and Audit-Ready Pipelines – 12 Sessions (Apply)

DevOps in core banking and digital wallets, API testing and sandboxing, Audit trails and logging, Change management automation, FinOps alignment, Case studies from banking, insurance, and trading systems

Textbooks

This course introduces the foundational concepts of **Financial Technology (FinTech)** and **Digital Banking**. It covers financial innovation, payment systems, blockchain in banking, digital lending, robo-advisory, regulatory frameworks, and emerging trends such as Open Banking and Embedded Finance. The course prepares learners for the rapidly evolving landscape of technology-driven financial services.

Course Objectives

- Understand the evolution of financial technology and digital transformation in banking
- Explore digital payment systems, lending platforms, and neobanking models
- Learn about key technologies driving FinTech (blockchain, AI, APIs)
- Examine regulations, cybersecurity, and ethics in FinTech ecosystems

Course Outcomes**CO1 (Understand):** Describe the foundations of FinTech and key concepts in digital banking**CO2 (Analyze):** Evaluate FinTech models, revenue strategies, and technology stacks**CO3 (Apply):** Explore the application of APIs, mobile banking, and data-driven lending**CO4 (Apply):** Examine real-world FinTech case studies, innovation, and regulatory compliance**Course Content (45 Hours Total)****Module 1: FinTech Fundamentals – 11 Sessions (Understand)**

History of FinTech, FinTech vs traditional banking, Ecosystem and stakeholders, Types of FinTech (payments, lending, investments), Overview of neobanks and challenger banks

Module 2: Digital Payments & Lending – 11 Sessions (Analyze)

UPI, RTGS, SWIFT, wallets, BNPL models, Crowdfunding, P2P lending, Credit scoring using AI/ML, Embedded lending, Payment gateways, Fraud detection

Module 3: Technologies Behind FinTech – 11 Sessions (Apply)

Blockchain in banking and smart contracts, API-based banking and Open Banking (PSD2), Mobile-first development, Cloud adoption, Conversational banking with chatbots, Robo-advisory

Module 4: Regulations, Security & Future Trends – 12 Sessions (Apply)

Digital banking licenses, KYC/AML, GDPR and data privacy, Cybersecurity and

threat intelligence, InsurTech and RegTech, FinTech in DeFi, ESG-driven FinTech innovation

Course Title: Microservices Architecture for Banking Applications

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course introduces the principles of **microservices architecture** and its application in building scalable, secure, and modular **banking systems**. It focuses on service decomposition, inter-service communication, security, API gateways, containerization, and deployment strategies specific to financial systems with high availability and regulatory compliance.

Course Objectives

- Understand microservices architecture and its relevance in banking systems
- Explore design patterns, communication protocols, and deployment strategies
- Learn containerization and orchestration in building cloud-native microservices
- Apply secure and scalable microservice practices in real-world fintech applications

Course Outcomes

CO1 (Understand): Describe the architecture and benefits of microservices in financial services

CO2 (Analyze): Evaluate service decomposition, inter-service communication, and database strategies

CO3 (Apply): Build and deploy microservices using containers and orchestration tools

CO4 (Apply): Implement security, observability, and fault tolerance for banking microservices

Course Content (45 Hours Total)

Module 1: Microservices Architecture Fundamentals – 11 Sessions (Understand)

Monolith vs microservices, Banking system case study, Domain-driven design (DDD), Service decomposition strategies, RESTful services, Event-driven architecture basics

Module 2: Communication & Database Design – 11 Sessions (Analyze)

Synchronous vs asynchronous communication (REST, gRPC, messaging), Service discovery, API gateway patterns, Saga and CQRS patterns, Polyglot persistence, Data consistency challenges

Module 3: Containerization & Deployment – 11 Sessions (Apply)

Dockerizing banking microservices, Kubernetes for orchestration, Service mesh

(Istio/Linkerd), CI/CD pipelines for microservices, Canary and blue-green deployments, Versioning and rollback
Module 4: Security, Compliance & Observability – 12 Sessions (Apply) OAuth2, JWT, API security, Threat modeling in banking, Centralized logging and tracing (ELK, Jaeger), Health checks, Circuit breakers, SLA/SLO monitoring, Regulatory compliance (PCI DSS, RBI norms)
Textbooks T1: Sourabh Sharma, <i>Mastering Microservices with Java</i> , Packt Publishing, 2023 T2: Morgan Bruce & Paulo A. Pereira, <i>Microservices: Flexible Software Architecture</i> , O'Reilly Media, 2023

Course Code: CDV3415 Course Title: Automated Testing & Monitoring in FinTech L:T:P:C – 3:0:0:3 Prerequisite: Nil
Course Description This course focuses on automated testing and real-time monitoring practices in FinTech environments . It introduces testing strategies, continuous testing pipelines, observability principles, performance testing, and monitoring tools critical for ensuring reliability, compliance, and user trust in financial applications.
Course Objectives — Understand the role of automated testing and monitoring in financial systems — Learn about test frameworks, tools, and CI/CD integration in FinTech — Explore system observability, metrics collection, and alerting techniques — Apply test automation and monitoring strategies for compliance and audit readiness
Course Outcomes CO1 (Understand): Describe testing types, observability concepts, and their role in FinTech platforms CO2 (Analyze): Evaluate test automation frameworks and monitoring architectures CO3 (Apply): Implement functional, security, and performance testing for digital banking systems CO4 (Apply): Use monitoring tools and dashboards for real-time health checks and compliance reporting
Course Content (45 Hours Total)
Module 1: Testing in FinTech Applications – 11 Sessions (Understand) Functional testing (unit, integration, system), Non-functional testing (security, performance), Compliance-driven testing, Regression testing, Test strategy for financial systems

Module 2: Automation Frameworks & CI/CD Integration – 11 Sessions (Analyze)

Selenium, TestNG, Postman, JMeter for APIs and load testing, BDD (Cucumber), CI tools (Jenkins, GitHub Actions), Test orchestration in cloud-native pipelines

Module 3: Observability & Monitoring – 11 Sessions (Apply)

Metrics, logs, traces overview, OpenTelemetry, Prometheus & Grafana, Distributed tracing (Jaeger), Alerting strategies, Uptime monitoring, SLA & SLO validation

Module 4: Secure, Scalable, and Auditable Test Environments – 12 Sessions (Apply)

Test data management, Masking and anonymization, Monitoring security events, Audit trails, Incident simulation, Sandbox environments, Case studies from FinTech APIs, wallets, and neobanks

Course Code: CDV3416**Course Title: DevSecOps in Financial Services**

L:T:P:C – 3:0:0:3

Prerequisite: Nil

Course Description

This course explores the implementation of **DevSecOps** practices in the **highly regulated financial services sector**. It focuses on integrating security into DevOps pipelines, compliance automation, secure coding, threat modeling, and governance frameworks essential for building secure, compliant, and resilient financial applications.

Course Objectives

- Understand the role of DevSecOps in financial application development and deployment
- Learn to integrate security controls and compliance policies into CI/CD workflows
- Explore tools and techniques for vulnerability detection and mitigation
- Apply DevSecOps principles to meet audit, regulatory, and operational requirements

Course Outcomes

CO1 (Understand): Describe the DevSecOps lifecycle and security needs of financial applications

CO2 (Analyze): Evaluate security threats and compliance risks in DevOps pipelines

CO3 (Apply): Implement automated security testing and compliance checks

CO4 (Apply): Integrate policy-as-code and governance in financial DevOps systems

Course Content (45 Hours Total)
Module 1: DevSecOps Foundations in Finance – 11 Sessions (Understand) Introduction to DevSecOps, Financial system threat landscape, Secure SDLC, Shared responsibility model, Security and compliance requirements (PCI DSS, SOX, GDPR, RBI guidelines)
Module 2: Secure CI/CD Pipelines – 11 Sessions (Analyze) Secure coding practices, Static and dynamic analysis (SAST, DAST), Secret management (Vault, GitGuardian), Container security (image scanning), Supply chain security, SBOM (Software Bill of Materials)
Module 3: Automation and Policy-as-Code – 11 Sessions (Apply) Infrastructure as Code security (Checkov, tfsec), Policy enforcement (OPA, Sentinel), IAM automation, Audit logging, SIEM integration, Compliance-as-code tools and frameworks
Module 4: DevSecOps Tools & Governance – 12 Sessions (Apply) Security tools: SonarQube, Aqua, Snyk, Trivy, Real-time threat detection, DevSecOps maturity models, Governance frameworks, Case studies from banking and fintech (risk scoring, audit readiness)

Course Code: CDV3417 Course Title: Blockchain & Smart Contracts for Financial Transactions L:T:P:C – 3:0:0:3 Prerequisite: Nil
Course Description This course explores the application of blockchain technology and smart contracts in modern financial ecosystems . It covers decentralized ledgers, consensus mechanisms, digital tokens, and the development of smart contracts using platforms like Ethereum and Hyperledger. The focus is on secure, transparent, and automated financial transactions.
Course Objectives — Understand blockchain fundamentals and their relevance to the financial domain — Learn about cryptocurrency, tokens, and smart contracts for finance — Develop and test smart contracts using industry-standard platforms — Analyze blockchain-based financial applications and their regulatory implications
Course Outcomes

C01 (Understand): Explain blockchain architecture, transaction flow, and consensus in financial systems C02 (Analyze): Evaluate the benefits, risks, and use cases of smart contracts in financial services C03 (Apply): Develop and deploy smart contracts for secure and automated financial transactions C04 (Apply): Assess blockchain financial applications considering legal and compliance frameworks					
Course Content (45 Hours Total)					
Module 1: Blockchain Fundamentals & Financial Systems – 11 Sessions (Understand) Distributed ledger concepts, Types of blockchain (public, private, consortium), Consensus algorithms (PoW, PoS, PBFT), Blockchain components, Cryptographic hashing, Blockchain in banking, insurance, and cross-border payments					
Module 2: Smart Contracts for Finance – 11 Sessions (Analyze) Smart contract principles and lifecycle, Languages (Solidity, Vyper), Ethereum Virtual Machine (EVM), Events and modifiers, Risks and attack vectors, Use cases: escrow, tokenized lending, KYC automation					
Module 3: Development & Deployment – 11 Sessions (Apply) Solidity programming basics, Smart contract structure, Remix IDE, Truffle and Ganache, Blockchain testnets, Transaction gas and optimization, Oracles and external data integration					
Module 4: Applications & Regulation – 12 Sessions (Apply) Decentralized Finance (DeFi), NFTs in finance, CBDCs, Hyperledger Fabric and Corda in enterprise banking, AML/KYC with blockchain, Smart contract auditing, Legal & compliance considerations (RBI, SEC, GDPR)

Course Code:	Course Title: Operating Systems Lab	L-T- P- C	0	0	2	1
CSE2514						

	Type of Course: Lab Only						
Version No.	1.0						
Course Pre-requisites	CSE2009- Computer Organization Students should have basic knowledge on computers, computer software & hardware, and Computer Organization. Prior programming experience in C is recommended.						
Anti-requisites	NIL						
Course Description	This laboratory course provides hands-on experience with the core concepts of operating systems through practical assignments, simulations, and case studies. It covers foundational aspects such as system calls, process and thread management, inter-process communication, synchronization, deadlocks, memory management, and file systems. Students will implement and simulate real-time OS components and scheduling algorithms, fostering deeper understanding of OS architecture and design. The lab also introduces modern OS tools, programming interfaces, and the basics of open-source OS environments.						
Course Object	The objective of the course is to familiarize the learners with the concepts of Operating Systems and attain Employability through Problem Solving Methodologies .						
Course Out Comes	On successful completion of the course the students shall be able to: 1] Demonstrate system-level programming using system calls and OS structures. [Apply] 2] Simulate process scheduling and multithreading techniques. [Apply] 3] Apply various tools to handle synchronization problems using semaphores and shared memory. [Apply] 4] Demonstrate memory management and file system concepts using simulation or scripting. [Apply]						
Course Content:							
Module 1	Introduction to Operating System	Assignment	Programming			9 Hours	
Topics: Introduction to OS , Operating-System Operations, Operating System Services, , System Calls and its types, Operating System Structure, System Program and its types, Linkers and Loaders, Overview of OS design and implementation, Open-source operating system							
Module 2	Process Management	Assignment/Case Study	Programming/Simulation			11 Hours	
Topics: Process Concept, Operations on Processes, Inter Process Communication, Communication in client-server systems (sockets, RPC, Pipes), Introduction to threads - Multithreading Models, Thread							

Libraries, Threading Issues, Process Scheduling– Basic concepts, Scheduling Criteria, Scheduling Algorithms: FCFS, SJF, SRTF, RR and Priority.

Module 3	Process Synchronization and Deadlocks	Assignment	Programming	11 Hours

Topics:

The Critical-Section Problem- Peterson’s Solution, Synchronization hardware, Semaphores, Classic Problems of Synchronization with Semaphore Solution- Producer-Consumer Problem, Reader-Writer problems, Dining Philosopher’s Problem, . Introduction to Deadlocks, Necessary conditions for deadlock, Resource allocation Graph, Methods for handling deadlock: Deadlock Prevention and Implementation, Deadlock Avoidance and Implementation, Deadlock detection & Recovery from Deadlock.

Module 4	Memory Management	Assignment	Programming/Simulation	10 Hours

Topics:

Introduction to Memory Management, Basic hardware-Base and Limit Registers, Memory Management Unit(MMU), Dynamic loading and linking, Swapping, Contiguous and Non-Contiguous Memory Allocation, Segmentation, Paging - Structure of the Page Table – Virtual Memory and Demand Paging – Page Faults and Page Replacement Algorithms, Copy-on-write, Allocation of Frames, Thrashing

Introduction to File system management: File System Interface (access methods, directory structures), File system implementation.

Targeted Application:

Application area is traffic management system, banking system, health care and many more systems where in there are resources and entities that use and manage the resources.

Software Tools:

Oracle Virtual Box/VMWare Virtualization software [Virtual Machine Managers]. Used to install and work on multiple guest Operating Systems on top of a host OS.

Intel Processor identification utility: This software is used to explain about multi-core processors. It helps to identify the specifications of your Intel processor, like no of cores, Chipset information, technologies supported by the processor etc.

List of Laboratory Tasks:

Lab sheet -1

L1: Write a program to demonstrate the use of fork() and exec() system calls in process creation.

L2: A system has limited memory and high-priority real-time processes. Design a scheduling algorithm that ensures responsiveness while preventing starvation.

Lab sheet -2

L1: Implement First-Come-First-Serve (FCFS) process scheduling using C or Python.

L2: You are designing a server that handles thousands of client connections. Compare multithreading and multiprocessing for this task and implement a basic server model.

Lab sheet -3

L1: Implement Round Robin Scheduling with a fixed time quantum.

L2: In a banking system, concurrent access to accounts leads to data corruption. Design a synchronization solution to avoid race conditions.

Lab sheet -4

L1: Write a program to create threads using Pthreads or Python's threading module.

L2: You're tasked with building a file access tracker in an OS. Implement a system to log file access patterns and identify frequent accesses.

Lab sheet -5

L1: Demonstrate inter-process communication (IPC) using pipes.

L2: A simulation tool needs to emulate process suspension and resumption. Design and implement such a mechanism using signals or condition variables.

Lab sheet -6

L1: Simulate the Producer-Consumer problem using semaphores.

L2: You're developing a system where sensor devices (producers) generate temperature readings, and data processors (consumers) store and process these readings. To prevent race conditions and ensure buffer safety, implement a synchronization mechanism using semaphores.

Lab sheet -7

L1: Implement Dining Philosophers Problem using threads and synchronization.

L2: In a multi-threaded cafeteria simulation, five philosophers sit around a circular table, each alternating between thinking and eating. To eat, a philosopher must hold two forks (represented by shared resources). Your task is to avoid deadlock and ensure no philosopher starves using thread synchronization techniques.

Lab sheet -8

L1: Write a program to simulate First Fit, Best Fit, and Worst Fit memory allocation strategies.

L2: A system with limited memory blocks needs to allocate memory to processes arriving with various size requests. Your task is to implement three classic memory allocation strategies—First Fit, Best Fit, and Worst Fit—to allocate memory to each process efficiently. Simulate and compare how memory gets allocated in each strateg

Lab sheet -9

L1: Demonstrate paging using a simple page table simulation.

L2: A program has a logical address space divided into pages. The system's memory is divided into equal-sized frames. When a program executes, its pages are loaded into available frames in main memory. Simulate the address translation process using a page table and demonstrate how a logical address is converted to a physical address.

Lab sheet -10

L1: Write a program to simulate page replacement algorithms like FIFO and LRU.

L2: In a virtual memory system, a process accesses pages in a specific order. The memory can only hold a limited number of pages (frames). When a page is needed and the memory is full, a page replacement algorithm is used to decide which page to evict. Simulate and compare FIFO and LRU algorithms for a given page reference string.

Lab sheet -11

L1: Simulate file directory structure (single level/two level).

L2: A university campus computer lab has limited memory space available for each student login session. When students open files or run programs, memory pages are loaded into available memory frames. Due to the limited number of frames, some pages must be replaced when new ones are needed. The lab system uses page replacement algorithms to decide which pages to evict when memory is full..

Lab sheet -12

L1: Write a shell script to demonstrate file handling commands in Linux.

L2: Design a command-line mini shell that can run background and foreground processes and handle basic built-in commands like cd, pwd, exit.

Project work/Assignment

Demonstrate process concepts in LINUX OS.

Simulation of CPU scheduling algorithms.

Develop program to demonstrate use of Semaphores in threads.

Develop program to demonstrate use of deadlock avoidance algorithms.

Develop program to demonstrate use of page replacement algorithms.

Simulation of memory allocation strategies [first fit, best fit and worst fit].

Course Code: CSE1500	Course Title: Computational Thinking Using Python Type of Course: Integrated	L- T-P- C	2	0	2	3
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	This course introduces students to the essential skills of computational thinking and their practical application through the Python programming language . By combining problem-solving strategies with coding, students will learn to decompose complex challenges, identify patterns, abstract general principles, and design algorithms to build functional programs					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Computational Thinking and use the Computational Thinking Principles to solve the computational Problems using Python Language					
Course Outcomes	Upon successful completion of this course, students will be able to: - Explain and apply the core principles of computational thinking: - Decomposition - Pattern Recognition - Abstraction - Algorithm Design - Use Python to implement solutions to real-world problems. - Write and debug Python code using functions, loops and conditions - Design simple programs and algorithms to automate repetitive or complex tasks. - Collaborate effectively and communicate problem-solving approaches using pseudocode and Python.					
Course Content:						
Module 1	Pillars of Computational Thinking	Comprehension				9 Sessions
What is computational thinking? Why is it important? Pillars of computational thinking: decomposition; pattern recognition; data representation and abstraction; algorithms Applying computational thinking to case studies						
Module 2	Algorithm Design & Problem-Solving Strategies	Application				9 Sessions
Introduction to Algorithms, Introduction to Problem Solving techniques: Brute Force, Divide and conquer, Common algorithms: find-max, linear search, binary search and other simple Algorithms						

Module 3	Applied Computational Thinking using Python	Application		12 Sessions
Introduction to Python, Data representation: variables, lists, Conditionals, Loops and Iteration				
Basic Example programs to illustrate the programming constructs				
Targeted Application & Tools that can be used:				
Google Colab, Python				
Text Book				
1. "Computational Thinking for the Modern Problem Solver" – David D. Riley & Kenny A. Hunt 2. “Mastering Python 3 Programming: Ultimate Guide to Learn Python Coding Fundamentals and Real-World Applications” Subburaj Ramaswamy, BPB publications

Topics relevant to “SKILL DEVELOPMENT”: Decomposition, Abstraction, Pattern recognition, Data Representation ,Algorithms				

Course Code: MAT2301	Course Title: Calculus and Differential Equations Type of Course: BSC	L-T- P- C	3	1	0	4
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	Calculus and differential equations are used ubiquitously throughout mathematics, statistics and operations research. In this course, students can be able to build upon the foundations of calculus established to greatly enhance their repertoire of theory and practice in these areas. The application of calculus and differential equations in the description and modelling of real-world problems will also be considered. This unit will extend the problem-solving skills, range of knowledge and use of techniques in differential and integral calculus. The course focuses on the concepts of Calculus and Differential Equations with reference to specific engineering problems. The course is of both conceptual and analytical type in nature.					
Course Objective	The goal of the course Calculus and Differential Equations is to facilitate the students with a concrete foundation of differential calculus and to solve the first and higher-order ordinary differential equations enabling them to acquire the knowledge of these mathematical tools.					
Course Out Comes	On successful completion of the course the students shall be able to: 5. Apply the knowledge of calculus to solve problems related to polar curves and its applications in determining the bentness of a curve. 6. Apply the principles of integral calculus to evaluate integrals. 7. Learn the notion of partial differentiation to calculate rate of change of multivariate functions and solve problems related to composite functions and Jacobian. 8. Solve first-order linear/nonlinear ordinary differential equations analytically using standard methods.					
Course Content:						
Module 1	Differential Calculus		(10 Classes)			
Polar Coordinates, polar curves, angle between radius vector and the tangent, angle between two curves, pedal equations, curvature and radius of curvature. Limit, continuity and partial derivatives, directional derivatives, total derivative; Tangent plane and normal line; Maxima, minima and saddle points; Method of Lagrange multipliers; Gradient, curl and divergence.						
Module 2	Integral Calculus	Assignment	(10 Classes)			
Evolutes and involutes; Evaluation of definite and improper integrals; Beta and Gamma functions and their properties; Applications of definite integrals to evaluate surface areas and volumes of revolutions. Rolle's theorem, Mean value theorems, Taylor's and Maclaurin theorems with remainders; Indeterminate forms and L'Hospital's rule; Maxima and minima.						
Module 3	Multivariable Calculus		(10 lectures)			
Multiple Integration: Double integrals (Cartesian), change of order of integration in double integrals, Change of variables (Cartesian to polar), Applications: areas and volumes, Center of mass and Gravity (constant and variable densities); Triple integrals (Cartesian), orthogonal curvilinear coordinates, Simple applications involving cubes, sphere and rectangular parallelepipeds; Scalar line integrals,						

vector line integrals, scalar surface integrals, vector surface integrals, Theorems of Green, Gauss and Stokes.			
Module 4	Differential Equations	Assignment	(15 lectures)
Definition, types of Differential Equations, Applications, Variable Separable, Homogeneous, Exact, linear and Bernoulli's equations, Euler's equations, Equations not of first degree: equations solvable for p, equations solvable for y, equations solvable for x and Clairaut's type. Linear differential equations of second and higher order with constant coefficients - Non-Homogeneous term of the type $Q(x) = e^{ax}$, $\sin ax$, $\cos ax$, $e^{ax}v(x)$, $x^n v(x)$ - Method of variation of parameters.			
Targeted Application & Tools that can be used: Differential calculus is used extensively in science and engineering. It can solve problems related to motion, velocity, acceleration, angles of incline or curve on a surface, etc. Differential Equations are used to model the behavior of electromagnetic fields, including in the design of antennas, microwave ovens, and other devices. Biology: PDEs are used to model biological processes, such as the spread of diseases and the development of biological tissues. Tools Used: Python.			
Assignment:			
6. Select any one simple differential equation pertaining to the respective branch of engineering, identify the dependent and independent variable – Obtain the solution and compare the solution sets by varying the values of the dependent variable.			
Text Book - Erwin Kreyzig, Advanced Engineering Mathematics, John Wiley and sons, Inc. 10th Edition B. S. Grewal (2017), Higher Engineering Mathematics by, 44th Edition, Khanna Publishers.

Topics relevant to SKILL DEVELOPMENT: The course focuses on the concepts of calculus and differential equation with reference to specific engineering problems. The course is of both conceptual and analytical type in nature through Problem solving. This is attained through the assessment component mentioned in course handout.			

Course Code: MEC1006	Course Title: Engineering Graphics Type of Course: School Core & Theory Only		L- T-P- C	2	0	0	2
Version No.	1.2						
Course Pre-requisites	NIL						
Anti-requisites	NIL						
Course Description	The course is designed with the objective of giving an overview of engineering graphics. It is introductory in nature and acquaints the students with the techniques used to create engineering drawings. The course emphasizes on projection of points, lines, planes and solids and isometric projections.						
Course Objective	The objective of the course is to familiarize the learners with the concepts of “Engineering Graphics” and attain SKILL DEVELOPMENT through Problem solving methodologies.						
Course Outcomes	On successful completion of this course the students shall be able to: 5. Demonstrate competency of Engineering Graphics as per BIS conventions and standards. 6. Comprehend the theory of projection for drawing projections of Points, Lines and Planes under different conditions. 7. Prepare multiview orthographic projections of Solids by visualizing them in different positions. 8. Prepare pictorial drawings using the principles of isometric projections to visualize objects in three dimensions.						
Course Content:							
Module 1	Introduction to Drawing	Assignment	Standard technical drawing			02 Sessions	
Topics: Introduction, drawing instruments and their uses, relevant BIS conventions and standards, Lettering, Line conventions, dimensioning, Selection of drawing sheet size and scale.							
Module 2	Orthographic projections of Points, Straight Lines and Plane Surfaces	Assignment	Projection methods Analysis			10 Sessions	
Topics: Introduction, Definitions – Elements of projection and methods of projection, Planes of projection, reference line and conventions adopted. First angle and third angle projections. Projection of Points in all 4 quadrants. Projections of Straight Lines (located in first quadrant/first angle projection only): True and apparent lengths, true and apparent Inclinations to reference planes. (No application problems). Projection of Plane surfaces (First angle projection): Regular plane surfaces – triangle, square, rectangle, pentagon, hexagon and circle – in different positions inclined to both the planes using change of position method only.							
Module 3	Orthographic Projections of Solids	Assignment	Multi-view drawing Analysis			10 Sessions	
Topics: Introduction, Projection of right regular prisms, pyramids, cone, hexahedron and tetrahedron in different positions (Problems resting on HP only and First angle projection).							

Module 4	Isometric Projections of Solids (Using isometric scale only)	Assignment	Spatial Visualization	8 Sessions
Topics: Introduction, Isometric scale, Isometric projections of right regular prisms, cylinders, pyramids, cones and their frustums, spheres and hemispheres, hexahedron (cube), and combination of 2 solids, conversion of orthographic view to isometric projection of simple objects. [8 Hours: Application Level]				
Text Book: 1.N. D. Bhatt, "Engineering Drawing: Plane and Solid Geometry," Charotar Publishing House Pvt. Ltd.				
References: 4. K.R. Gopalakrishna, "Engineering Graphics", Subhash Publishers, Bangalore. 5. D. M. Kulkarni, A. P. Rastogi, A. K. Sarkar, "Engineering Graphics with AutoCAD," Prentice Hall. 6. D. A. Jolhe, "Engineering Drawing with Introduction to AutoCAD," Tata McGraw Hill. Web resources: https://nptel.ac.in/courses/112103019				
Topics relevant to "SKILL DEVELOPMENT": Projection in first and third angle for SKILL DEVELOPMENT through Problem Solving methodologies . This is attained through the assessment component mentioned in the course handout.				

ENG2501	Advanced English	L- T- P- C	2	0	0	2
Version No.	2.0					
Course Pre-requisites	ENG1900 - English for Technical Communication					
Anti-requisites	NIL					
Course Description	This course is designed to equip students to enhance their communication abilities in Listening, Speaking, Reading, and Writing. The curriculum covers interpersonal communication principles, the art of speech writing and delivery (including impromptu speaking), strategic approaches to critical reading, the identification of logical fallacies, and persuasive writing. Furthermore, the course will introduce students to the potential of AI tools and the techniques of prompt engineering to elevate their communication skills in the digital age. Upon course completion, students will be well-prepared to communicate effectively and critically in both academic and professional environments.					
Course Outcome	On successful completion of the course the students shall be able to: 5. Recognize the elements of interpersonal and cross-cultural communication to address communication challenges effectively.					

	6. Demonstrate the ability to deliver structured and impromptu speeches using effective speaking techniques. 7. Interpret textual and visual materials using critical reading strategies to evaluate arguments, logic, and persuasion. 8. Produce persuasive and analytical essays using effective argumentation techniques and structured writing strategies.			
Course Content:				
Module 1	Foundations of Effective Communication	Case Studies/ Role play	Cross-Cultural Competency	12 Classes
Topics: - Fundamentals of Interpersonal Communication - Verbal, Non-verbal, and Paraverbal communication. - Cultural dimensions theory (Hofstede’s Cultural Dimensions). - Active Listening Techniques - Common Errors in Communication Activities: - Instagram/YouTube Vocabulary Activity - Charades with a Twist/Tone and Emotion Experiment/Mixed Messages Challenge/Role Reversal Conversations/Observation Exercise				
Module 2	Mastering Speech Delivery	JAM	Public Speaking Confidence	12 Classes
Topics: - Introduction to Prompt Engineering - Speech Preparation and Organization - Techniques for Effective Impromptu Speaking - Practice Speech Delivery Activities: - Speech Writing - Impromptu Speech				
Module 3	Critical Reading and Logical Analysis	Worksheet	Critical Thinking and Analysis	12 Classes
Topics: - Critical Reading Strategies: Contextualizing, Figurative Language, Evaluating Logic of an Argument, Recognizing Emotional Manipulation, Analysing Visuals - Recognizing Logical Fallacies: Slippery Slope, False Dilemma, Post Hoc, Hasty Generalization, Ad Hominem, Straw Man, Bandwagon, No True Scotsman, Red Herring, Appeal to Authority, Sunk Cost, Appeal to ignorance Activities: - Critical Reading Worksheet/Identifying Bias in News Articles				
Module 4	Writing Effective Arguments	Assignment	Clear and Coherent Writing	9 Classes
Topics: Understanding Critical Writing				

• Building Arguments (Pathos, Ethos, Logos) • Techniques for Persuasion Activities: • Causes or Effects/Appeal Mash-Up/Debates on Controversial Topics • Opinion Writing
Targeted Application & Tools that can be used: Quizziz, Chatgpt, Gemini, Youtube, Instagram, Quillbot, Grammarly, Padlet

Topics Relevant to “employability”: Teamwork and Collaboration, Critical Thinking and Problem-Solving Topics Relevant to “Human Values and Professional Ethics”: Critical reasoning, Inclusivity and Fairness

Course Code: ECE2022	Course Title: Digital Design Type of Course: ESC	L- T-P- C	2	0	0	2
Version No.	1.0					
Course Pre-requisites	[1] Elements of Electronics/Electrical Engineering, 2] Basic concepts of number representation, Boolean Algebra					
Anti-requisites	NIL					
Course Description	The purpose of this course is to enable the students to appreciate the fundamentals of digital logic circuits and Boolean algebra focusing on both combinational and sequential logic circuits. The course emphasizes on minimization techniques for making canonical and low-cost digital circuit implementations. This course deals with analysis and design of digital electronic circuits. The course also creates a foundation for future courses which includes Computer Architecture, Microprocessors, Microcontrollers, and Embedded Systems etc. The course enhances the Design, Implementation and Programming abilities through laboratory tasks. The associated laboratory provides an opportunity to verify the theoretical knowledge.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Digital Design and attain the SKILL DEVELOPMENT through EXPERIENTIAL LEARNING.					

Course Outcomes	On successful completion of this course the students shall be able to: v. Describe the concepts of number systems, Boolean algebra and logic gates. vi. Apply minimization techniques to simplify Boolean expressions. vii. Demonstrate the Combinational circuits for a given logic viii. Demonstrate the Sequential and programmable logic circuits			
Course Content:				
Module 1	Fundamentals of Number systems- Boolean algebra and digital logic	Application Assignment	Data Analysis task	06 classes
Topics: Review of Number systems and logic gates, Number base conversions, Overview of Boolean functions and simplifications, two, three, four variable K-Maps- Don't care conditions- Both SOP and POS- Universal Gates (NAND & NOR) Implementations. Introduction to HDL.				
Module 2	Boolean function simplification	Application Assignment	Data Analysis task	08 Classes
Topics: Introduction to Combinational circuits, Analysis, Design procedure, Binary Adder and Subtractor, Magnitude comparator, Parity generator and checker, Multiplexers-Demultiplexers, Decoders, Encoders and Priority Encoders, HDL Models of combinational circuits.				
Module 3	Combinational Logic circuits:	Application Assignment	Programming Task & Data Analysis task	08 Classes
Topics: Introduction to sequential circuits, Storage elements: latches and flip flops, Characteristic tables and equations, excitation table, Analysis of clocked sequential circuits, Mealy & Moore Models of finite state machines - Registers & Counters. HDL Models of Sequential circuits.				
Targeted Application & Tools that can be used: Digital electronics is the foundation of all modern electronic devices such as cellular phones, MP3 players, laptop computers, digital cameras, high definition televisions, Home Automation, Communication in systems in industries Professionally Used Software: HDL/VHDL/Verilog HDL/ OOPS

Topics relevant to "SKILL DEVELOPMENT": Adders, Multiplexers, Decoders / Encoders; Flip-Flops, Counters and Registers for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: PHY2504	Course Title: Optoelectronics and Quantum Physics Lab Type of Course: BSC	L-T-P-C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	The laboratory provides an opportunity to validate the concepts taught and enhances the ability to use the concepts for technological applications. The laboratory tasks aim to develop following skills: An attitude of enquiry, confidence and ability to tackle new problems, ability to interpret events and results, observe and measure physical phenomena, select suitable equipment, instrument and materials, locate faults in systems.					
Course Out Comes	On successful completion of the course the students shall be able to: CO1: To understand electrical and optical properties of materials					

	CO2: Interpret the results of various experiments to verify the concepts used in optoelectronics and advanced devices.
Course Objective	The objective of the course is to familiarize the learners with the concepts of “ Applied Physics for Computer Science Cluster “and attain Skill Development through Experiential Learning techniques

List of Laboratory Tasks:

Experiment No. 1: Experimental errors and uncertainty using excel

Level 1: Calculation of accuracy and precision of a given data

Level 2: propagation of errors in addition, subtraction, multiplication and division.

Experiment NO 2: To determine the wavelength of semiconductor diode Laser and to estimate the particle size of lycopodium powder using diffraction.

Level 1: Determination of Wavelength of Laser

Level 2: Finding the particle size of lycopodium powder.

Experiment No. 3: To determine the proportionality of Hall Voltage, magnetic flux density and the polarity of Charge carrier.

Level 1: To determine the proportionality of Hall Voltage and magnetic flux density

Level 2: To determine the polarity of Charge carrier.

Experiment No. 4: To study the I-V characteristics of a given zener diode in forward and reverse bias conditions.

Level 1: To study I –V characteristics of the given Zener diode in reverse bias and to determine break down voltage.

Level 2: To study I –V characteristics of the given Zener diode in forward bias and to determine knee voltage and forward resistance.

Experiment No. 5: To study input and output characteristics of a given Transistor.

Level 1: To determine the input resistance of a given transistor.

Level 2: To determine current transfer characteristics and transistor parameters of a given transistor.

Experiment No. 6: Determination of Fermi energy and Fermi temperature of a given metal and bimetallic wire.

Level 1: Determination of Fermi energy and Fermi temperature of given metal wire.

Level 2: Determination of Fermi energy and Fermi temperature of given bimetallic wire.

Experiment No. 7: To study the I-V characteristics and I-R characteristics of a solar cell as a function of the irradiance.

Level 1: To study the I-V characteristics

Level 2: I-R characteristics of a solar cell as a function of the irradiance.

Experiment No. 8: Calculate the numerical aperture and study the losses that occur in optical fiber cable. .

Level 1: Calculate the numerical aperture.
Level 2: study the losses that occur in optical fiber cable.
Experiment No. 9: Plotting I-V characteristics in forward and reverse bias for LEDs and Determination of knee voltage.
Level 1: Plotting I-V characteristics in forward and reverse bias for LEDs
Level 2: Determination of knee voltage.
Experiment No. 10: Determination of Stefan's constant and verification of Stefan-Boltzmann Law.
Level 1: Determination of Stefan's constant
Level 2: Verification of Stefan-Boltzmann Law.
Experiment No. 11: Determination of dielectric constant of given materials.
Level 1: Determination of Stefan's constant
Level 2: compare the obtain results with other materials
Experiment No. 12: determine the wavelength of monochromatic light, such as sodium light, using Newton's rings.
Level 1: Determination of wavelength
Level 2: determine the radius of curvature of the Plano-convex lens.
Targeted Application & Tools that can be used:
5. Areas of application are optoelectronics industry, Solar panel technologies, quantum computing software, electronic devices using transistors and diodes, memory devices, endoscopy, SQUIDS in MRI, Advanced material characterizations using SEM and STM.
6. Origin, excel and Mat lab soft wares for programming and data analysis.
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course
Assessment Type
- Midterm exam - Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screen shot accessing digital resource.) - Quiz - End Term Exam - Self-Learning
1. Prepare a comprehensive report on non-conventional energy resources in Karnataka and their pros and cons.
2. Write a report on importance of quantum entanglement in supercomputers.

Course Code: MAT2402	Course Title: Probability and Statistics Type of Course: BSC	L-T- P- C	3	1	0	4
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	The course introduces the concepts of probability theory and statistical analysis, covering how to collect, organize, interpret, and draw inferences from data using mathematical models to understand randomness and uncertainty, with applications across various fields like science, engineering, economics, and social sciences.					

Course Objective	The objective of the course is to equip students with the foundational knowledge of probability theory and statistical methods, enabling them to collect, analyze, interpret data, and make informed decisions based on the likelihood of events occurring in various situations, often applied across different fields like science, engineering, and business.		
Course Out Comes	On successful completion of the course the students shall be able to: 5. Be able to compute conditional probabilities directly and using Bayes’ theorem, and check for independence of events. 6. Be able to set up and work with discrete & continuous random variables; in particular, to understand the Bernoulli, binomial, geometric, Poisson distributions, uniform, normal, and exponential distributions. 7. Identifying different types of data relationships (linear, polynomial, exponential, logarithmic). 8. Be able to use specific significance tests, including z-test, t-test (one- and two-sample), and chi-squared test		
Course Content:			
Module 1	Basic Probability		(6 Classes)
Probability of an Event, multiplication rule, combinations, permutations, Addition Law, Multiplication Law, Conditional Probability, Bayes’s Theorem and Problems.			
Module 2	Random Variables and Bivariate Distributions	Assignment	(15 Classes)
Random Variables (discrete and continuous), Probability Mass/Density Functions, Mathematical Expectations, discrete probability distributions - Binomial distribution, Poisson distribution, geometric distribution, Continuous uniform distribution - exponential distribution, normal distribution, gamma distribution. Bivariate distributions and their properties, distribution of sums and quotients, conditional densities, Bayes' rule.			
Module 3	Curve Fitting & Statistical Methods		(13 Classes)
Curve Fitting (Straight Line ($y = a + bx$), Parabola ($y = a + bx + cx^2$), Exponential Curves ($y = ae^{bx}$, $y = ab^x$ and $y = ax^b$) Measures of Central tendency, Moments, skewness and Kurtosis, Correlation - Karl Pearson’s coefficient of correlation and rank correlation (with & Without repetition, Multiple Correlation - Problems. Regression analysis - lines of regression, Multiple regression - Problems.			
Module 4	Joint Probability Distribution and Sampling Theory	Assignment	(15 Classes)
Joint Probability distribution for two discrete random variables, expectation and covariance. Random sampling, sampling distributions, Standard Error, Type I & Type II errors, Testing of Hypothesis, Test of significance - Large sample test for single proportion, difference of proportions, single mean, difference of means, and difference of standard deviations, Test for single mean, difference of means and correlation coefficients, test for ratio of variances - Chi-square test for goodness of fit and independence of attributes.			
Targeted Application & Tools that can be used:			
The contents of this course has direct applications in most of the core engineering courses for problem formulations, Problem Solution and system Design. Tools Used: R software (Open Source)			

Assignment:						
2. Select any one simple differential equation pertaining to the respective branch of engineering, identify the dependent and independent variable – Obtain the solution and compare the solution sets by varying the values of the dependent variable.

Topics relevant to SKILL DEVELOPMENT: The course focuses on the concepts of Vector calculus and Linear Algebra with reference to specific engineering problems. The course is of both conceptual and analytical type in nature through Problem Solving. This is attained through the assessment component mentioned in the course handout.						

Course Code: CIV1200	Course Title: Foundations of Integrated Engineering Type of Course: ESC	L- T-P- C	2	0	0	2
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					

Course Description	This interdisciplinary course introduces first-year engineering students to foundational principles and practices across key engineering domains, emphasizing real-world problem-solving, sustainability, and ethical innovation. Students explore how civil, mechanical, electrical, and IT systems intersect with emerging technologies like IoT, AI, and geomatics to address global challenges. Through case studies, learners gain deeper understanding of smart infrastructure, prototyping mechanical/electronic systems, and securing IT solutions. Topics include bioinformatics for environmental monitoring, GIS-enabled urban planning, renewable energy integration, and cybersecurity fundamentals. The course cultivates a holistic understanding of engineering's role in sustainable development, safety, and ethical decision-making, preparing students to contribute meaningfully to multidisciplinary projects in a technology-driven world.			
Course Objective	The objective of the course is skill development of student by using Participative Learning techniques.			
Course Outcomes	On successful completion of this course the students shall be able to: 1] Recall key principles of Agile, DevOps, and bioinformatics used in interdisciplinary engineering contexts. 2] Explain the role of GIS, LiDAR, and sustainable materials in designing smart infrastructure and disaster management systems. 3] Describe core components of mechanical systems and their real-world applications. 4] Describe the functionality of IoT-enabled wearable devices, embedded systems, and renewable energy integration in smart grids. 5] List foundational IT concepts such as cloud computing architectures, cybersecurity threats, and blockchain applications.			
Course Content:				
Module 1	Foundations of Engineering Practice	Assignment	Case studies	6 Sessions
Real-world problem-solving using data logic and practical applications, Collaboration and Innovation through multi-domain project, Engineering Ethics & Environmental Impact Emerging Fields: Automation, and Introduction to bioinformatics and its application Sustainability & Safety: Circular economy principles, carbon footprint analysis.				
Module 2	Civil Engineering & Geomatics	Assignment	Article Review	6 Sessions
Smart Infrastructure & Geomatics: GIS mapping, LiDAR, drone surveys for urban planning, Geospatial data analysis for disaster management. Sustainable Construction: 3D-printed structures, self-healing concrete, Digital twins for infrastructure monitoring. Green Innovations: Net-zero energy buildings, rainwater harvesting systems.				
Module 3	Mechanical Engineering in Action	Assignment & Quiz	Data Collection	6 Sessions
Advanced Manufacturing: Collaborative robots (cobots), additive manufacturing and 3D printing, Reverse engineering and prototyping. Energy Systems: Solar/wind energy harvesting, piezoelectric applications. Biomechanics: Prosthetics design, ergonomic product lifecycle.				

Module 4	Electrical & Electronics Engineering	Assignment & Quiz	Data Collection and visualization	6 Sessions
Smart Devices & Systems: Embedded systems, Wearable technology, Edge computing and hardware platforms Energy Innovations: EV charging infrastructure, wireless power transfer, Smart grid integration with renewables.				
Module 5	Fundamentals of IT	Assignment & Quiz	Case studies	6 Sessions
Core IT Topics: Networking basics, Cloud computing Cybersecurity & Data: Encryption, phishing prevention, zero-trust models, Database management. Emerging Tech: Blockchain for supply chains, AI/ML basics, IoT integration with cloud platforms				
Targeted Application & Tools that can be used: Application Areas include Interdisciplinary problem-solving, Smart city planning, disaster management, Robotics prototyping, renewable energy systems, Wearable health tech, smart grids, Secure cloud systems. Tools: 3D Printers, Autocad, Tinkercad, ArcGIS / QGIS, Arduino/Raspberry Pi

Course Code: CHE2501	Course Title: Chemistry of Smart Materials Type of Course: Theory - BSC		L-T- P- C	3	0	0	3
Version No.	1.0						
Course Pre-requisites							
Anti-requisites	NIL						
Course Description	The objective of the course is to introduce the students to concepts and applications of chemistry of smart materials. The course also aims to enhance the knowledge of smart materials associated with memory system, display devices, , sensors, energy devices and environment. It will also cultivate an ability to identify chemistry in each of smart engineered materials and interpret solutions for the challenges connected to memory, display, energy, smart, green and sustainable technologies. It targets to strengthen the fundamental concepts behind chemistry of smart materials and then builds an interface with their industrial applications. This course is designed to cater to Environment and Sustainability						
Course Objective	The objective of the course is ‘SKILL DEVELOPMENT’ of the student by using Participative learning techniques.						
Course Outcomes	On successful completion of this course the students shall be able to: 6. Relate the knowledge of chemistry to computational approaches to identify materials functionalities and properties 7. Recognize and interpret solutions for the challenges connected to memory, display, smart, green and sustainable technologies. 8. Explain the quality parameters of engineering materials associated with environment and sensors. 9. Interpret the knowledge of sustainable chemistry for E- waste management. 10. Analyse the importance of various electrochemical sources in energy systems.						
Course Content:							
Module 1	Computational Chemistry	Assignmen t	Data Collection and analysis	09 classes			
Topics: Fundamental particles of atom – their mass, charge and location – atomic number and mass number, Stabilizing interactions: Bonded and non-bonded interactions. Chemistry of weak interactions – van der Waals force and hydrogen bonding, Density functional theory. 3D co-ordinate generation for small molecules, geometry optimization by Molview. Chemical Databases: Chemoinformatics, MSDS Self- learning topics: Scope, cost and efficiency of computational modeling.							

Module 2	Materials for Memory and Display Systems	Assignment	Data Collection and analysis	09 Classes
Topics: Memory Systems : Introduction, classification of electronic memory devices- Transistor, capacitor, charge -transfer and Resistor, types of materials - organic, polymeric and hybrid materials, and applications, manufacturing of semiconductor chips. Display Systems: photo and electroactive materials , materials for display -Principle, Properties and applications: Liquid crystals for LCD-Liquid crystals display, Basics of LED: OLED-organic light emitting diode and light emitting electrochemical cells. Self- learning topics: Green computing: Biocomposite based memory devices				
Module 3	Nanomaterials based Smart Sensors and Devices	Assignment	Data Collection and analysis	09 Classes
Topics: Nanomaterials- Introduction, classification based on dimensionality, quantum confinement. Size dependent properties, Synthesis, Properties of CNT and Graphene and their application as Materials for data analysis and packaging -RFID and IONT. Sensors: Introduction, types, Principle and applications- electrochemical sensor: nanomaterials for sensing applications - Glucose, VOC sensing. Self-learning topics: Fullerene, biomolecules in sensing, Strain sensors				
Module 4	Sustainable Materials and Development	Quiz/Seminar	Data Collection and analysis	09 Classes
Topics: E waste: Introduction, E waste Hazards, E- waste management, Recovery of precious metal- Cu by Hydrometallurgy. Green Chemistry: Fundamentals and 12 principles with examples, Carbon footprint and sequestration Sustainable Chemistry: -Introduction to Biomaterials- PLA , polymers in bio-compatible and bio-degradable materials - Poly(3-hydroxybutyrate-co-3-hydroxyvalerate) PHBV, synthesis and applications in drug delivery. Self-learning topics: circular economy- case studies.				
Module 5	Energy Science	Quiz/Seminar	Data Collection and analysis	09 Classes
Topics: Battery technology:Fundamentals of electrochemistry, Introduction to electrochemical storage devices: battery (Lithium-ion battery- LiMnO_2, LiCoO_2, metal air batteries- LiO_2) and supercapacitors-Introduction, Principle, Types - EDLC, pseudo and asymmetric capacitor. Photovoltaics: Solar cells - Construction and working principle; types- Inorganic, Organic and quantum dot sensitized (QDSSC's). Self -learning topics: Battery technology for e-mobility, Green hydrogen				
Targeted Application & Tools that can be used: Application areas are Data storage and analysis, logistics, Biomedicine, Energy, Environment and sustainability				

Tools: Molview, chemdraw, excel etc

Project work/Assignment:

Assessment Type

- Midterm exam
- Assignment (review of digital/ e-resource from PU link given in references section - mandatory to submit screenshot accessing the digital resource.)
- Quiz/Student Seminar
- End Term Exam
- Self-learning

Skill Sets

All topics in theory component are relevant to Environment and Sustainability.

Course Code: CSE2200	Course Title: Program Solving Using C Type of Course: Theory - PCC			L- T-P-C	2	0	0	2
Version No.	1.0							
Course Pre-requisites	NIL							
Anti-requisites	NIL							
Course Description	The course is designed to provide complete knowledge of C language. Students will be able to develop logics which will help them to create programs and applications in C. Also by learning the basic programming constructs they can easily switch over to any other language in future.							
Course Object	The objective of the course is to familiarize the learners with the concepts of Problem Solving Using C and attain Employability through Problem Solving Methodologies.							
Course Outcomes	On successful completion of this course the students shall be able to: 1. Write algorithms and to draw flowcharts for solving problems 2. Demonstrate knowledge and develop simple applications in C programming constructs 3. Develop and implement applications using arrays and strings 4. Decompose a problem into functions and develop modular reusable code 5. Solve applications in C using structures and Union 6. Design applications using Sequential and Random Access File Processing.							
Course Content:								
Module 1	Introduction to C Language	Quiz	Problem Solving	6 Sessions				
Topics: Introduction to Programming – Algorithms – Pseudo Code - Flow Chart – Compilation – Execution – Preprocessor Directives (#define, #include, #undef) - Overview of C – Constants, Variables and Data types – Operators and Expressions – Managing Input and Output Operations – Decision Making and Branching - Decision Making and Looping.								
Module 2	Introduction to Arrays and Strings	Quiz	Problem Solving	6 Sessions				
Topics: Arrays: Introduction – One Dimensional Array – Initialization of One Dimensional Arrays – Example Programs – Sorting (Bubble Sort, Selection Sort) – Searching (Linear Search) - Two Dimensional Arrays – Initialization of Two Dimensional Arrays. Example Programs – Matrix operations. Strings: Introduction – Declaring and Initializing String Variables – Reading Strings from Terminal – Writing String to Screen – String Handling Functions.								
Module 3	Functions and Pointers	Quiz	Problem Solving	6 Sessions				

Topics: Functions: Introduction – Need for User-defined functions – Elements of User-Defined Functions: declaration, definition and function call–Categories of Functions – Recursion. Pointers: Introduction – Declaring Pointer Variables – Initialization of Variables – Pointer Operators – Pointer Arithmetic – Arrays and Pointers – Parameter Passing: Pass by Value, Pass by Reference.				
Module 4	Structures and Union	Quiz	Problem Solving	6 Sessions
Topics: Structures: Introduction – Defining a Structure – Declaring Structure Variable – Accessing Structure Members – Array of Structures – Arrays within Structures – Union: Introduction – Defining and Declaring Union – Difference Between Union and Structure.				
Module 5	File handling	Case Study	Problem Solving	6 Sessions
Topics: Files: Defining and Opening a File – Closing a File – Input / Output Operations on File – Random Access Files

Course Code: EEE1200	Course Title: Basics of Electrical and Electronics Engineering. Type of Course: Theory - ESC	L-T-P-C	3	0	0	3
Version No.	2.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	This is a fundamental Course which is designed to know the use of basics of electrical and electronics engineering principles occurs in various fields of Engineering. The course emphasises on the characteristics and applications of electrical and electronic devices. The course also emphasizes on the working, analysis and design of electrical circuits using both active & passive components. Additionally, this course creates a foundation for the future courses such as Electrical machines, power system, power electronics Linear Integrated Circuits, Analog Communication and Digital Communication etc.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Basics of Electrical and Electronics Engineering and attain Skill Development through Participative Learning techniques.					
Course Outcomes	On successful completion of this course the students shall be able to:					

	Apply basic laws of Electrical Engineering to compute voltage, currents and other parameters in the circuits. Discuss various fundamental parameters appearing in the characteristics of semiconductor devices and their applications. Summarize the operations of different biasing configurations of BJTs and amplifiers. Discuss the performance characteristics and applications of various electrical Machines.			
Course Content:				
Module 1	Introduction to Electrical Circuits	Assignment/ Quiz	Numerical solving Task	10 Sessions
DC Circuits: Concept of Circuit and Network, Types of elements, Network Reduction Techniques- Series and parallel connections of resistive networks, Star-to-Delta Transformations, Mesh Analysis, Nodal Analysis, Numerical examples. AC Circuits: Fundamentals of single phase circuits - Series RL, RC and R-L-C Circuits, Concept of active power, reactive power and Power factor, Numerical examples. Introduction to three phase system and relation between line and phase values in Star & Delta connection, Numerical examples.				
Module 2	Semiconductor and Diode applications	Assignment/ Quiz	Memory Recall based Quizzes	10 Sessions
Mass Action Law, Charge densities in a semiconductor, Types of SC, Junction diodes -Ideal and practical behaviour, Modelling the Diode Forward Characteristic, and Diode applications like rectifiers, Zener diode, characteristics and its applications like voltage regulator.				
Module 3	Transistors and its Applications	Assignment/ Quiz	Memory Recall-based Quizzes	10 Sessions
Transistor characteristics, Current components, BJT Configurations (CB, CC, CE configurations) and their current gains. Operating point, Biasing, Fixed Bias, and load line analysis. Single Stage amplifier. JFET (Construction, principal of Operation and Volt –Ampere characteristics). Pinch-off voltage, Comparison of BJT and FET. MOSFET (Construction, principal of Operation and symbol), MOSFET characteristics in Enhancement and Depletion modes.				
Module 4	Fundamentals of Electrical Machines	Assignment/ Quiz	Numerical solving Task	10 Sessions
Electrical Machines: Single phase transformers: principle of operation and EMF equation, Numerical examples. DC Motor: principle of operation, Back EMF, torque equation, Numerical examples. AC Motor: Principle operation of Induction Motors and its Applications.				

Self-Learning Topics:

- Clipping and clamping circuits, Stabilization Techniques, Voltage divider bias and its stability factor, Multistage amplifier, Darlington pair.
- Special Machines: Introduction to special electrical machines and its applications.

Targeted Application & Tools that can be used:

- Targeted Applications: Application Area includes all electrical and electronic circuits (power supply unit, regulator unit, embedded devices, hardware electronics etc.). The students will be able to join a profession which involves basics to high level of electronic circuit design.
- Professionally Used Software: Multisim/ P Spice
- Besides these software tools hardware equipment such as Multimeters, Function Generators, Power Supplies, Oscilloscopes etc., can be used to perform component/circuit testing and analysis..

Project Work/ Assignment:

1. Article review: At the end, of course an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format.
2. Presentation: There will be a group presentation, where the students will be given a topic. They will have to explain/demonstrate the working and discuss the applications for the same.
3. Case Study: - At the end of the course students will be given a 'real-world' application based circuits like Power Amplifier, Signal/Function Generator etc. as a case study. Students will be submitting a report which will include Circuit Diagrams, Design, Working Mechanism and Results etc. in appropriate format

Topics relevant to “SKILL DEVELOPMENT”: Performing suitable experiments to compute the electric circuit parameters, performance operation of machines, and operation of semiconductor devices for Skill Development through Participative Learning techniques. This is attained through assessment component mentioned in course plan.

Course Code: CSE2201	Course Title: Program Solving Using C Lab Type of Course: Lab - PCC	L- T-P-C	0	0	4	2
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	The course is designed to provide complete knowledge of C language. Students will be able to develop logics which will help them to create programs and applications in C. Also by learning the basic programming constructs they can easily switch over to any other language in future.					
Course Object	The objective of the course is to familiarize the learners with the concepts of Problem Solving Using C and attain Employability through Problem Solving Methodologies.					

Course Outcomes	On successful completion of this course the students shall be able to: 1. Write algorithms and to draw flowcharts for solving problems 2. Demonstrate knowledge and develop simple applications in C programming constructs 3. Develop and implement applications using arrays and strings 4. Decompose a problem into functions and develop modular reusable code 5. Solve applications in C using structures and Union 6. Design applications using Sequential and Random Access File Processing.
Course Content:	
List of Practicals: Lab Sheet 1: 10 Sessions Program 1: Sum of Two Numbers Program 2: Find the Greatest of Three Numbers Program 3: Check Even or Odd using Conditional Operator Program 4: Print Multiplication Table using Loop Program 5: Count Digits in a Number using While Loop Program 6: Demonstration of Preprocessor Directives Program 7: Simple Calculator using Switch Case Lab Sheet 2: 10 Sessions Program 1: Check Whether a Number is Positive, Negative or Zero Program 2: Find the Sum of First N Natural Numbers Program 3: Check Whether a Number is Prime or Not Program 4: Find Factorial of a Number Program 5: Reverse a Number Program 6: Simple Number Guessing Game Lab Sheet 3: 10 Sessions Program 1: Linear Search in a One-Dimensional Array Program 2: Bubble Sort on an Integer Array Program 3: Matrix Addition (2D Arrays) Program 4: Count Vowels in a String Program 6: Selection Sort on an Array Lab Sheet 4: 10 Sessions Program 1: Sum of Two Numbers Using User-Defined Function Program 2: Factorial Using Recursion Program 3: Swap Two Numbers Using Call by Value (No Swap) Program 4: Swap Two Numbers Using Call by Reference (With Swap) Program 5: Pointer Basics - Access and Modify Variable via Pointer Program 6: Accessing Array Elements Using Pointers Lab Sheet 5: 10 Sessions Program 1: Basic Structure Usage Program 2: Input and Display Array of Structures Program 3: Array Inside Structure (Student Marks) Program 4: Structure with Nested Structures (Date of Birth) Program 5: Union Example and Member Access Lab Sheet 6: 10 Sessions	

Program 1: Write to a File (Text Mode) Program 2: Read from a File (Text Mode) Program 3: Append Data to a File Program 4: Count Characters, Words and Lines in a File Program 5: Write and Read Structure to/from a Binary File Program 6: Random Access in File (Update a Record)

Course Code: PPS1026	Course Title: Industry Readiness Program – II (Audited Course) Type of Course: Practical Only Course	L- T - P- C	0	0	2	0
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	This course is designed to enable students learn styles of communication, team building and use empathy in leadership. The course will benefit learners in preparing themselves effectively through various activities and learning methodologies.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of “Industry Readiness for Young Professionals” and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques.					
Course Out Comes	On successful completion of this course the students shall be able to: CO 1 Apply different communication skills for success in workplace CO 2 Practice team building skills for career success CO3 Demonstrate ethical leadership skills in workplace					
Course Content						
Module 1	Effective Communication	Classroom activities			10 Hours	

Topics: Practice effective communication skills (Verbal, Non-verbal, Written and Visual) Activity: Use social media prompts to prepare self-introduction videos			
Module 2	Team Building	Group Activity	10 Hours
Topics: Skills of an effective team player Activity: Student group activity to build class networking			
Module 3	Leadership	Case study	10 Hours
Topics: Types of leadership, using empathy in leadership Activity: Individual presentation by students on corporate leaders.			
Faculty : L&D			
Targeted Application & Tools that can be used: 1. TED Talks 2. You Tube Links 3. Activities			
Assignment proposed for this course Assignment 1: One minute reel Assignment 2: Team building assignment			
Continuous Individual Assessment Module 1: L-S-R-W class assessment Module 2: Team Presentation Module 3: Individual Assessment			
The topics related to skill development: Students acquire knowledge on effective communication skills, team building skills and how to prepare themselves to be leaders in workplace using empathy and implement various skill sets during the course of their time in the university.			

Course Code EEE1250	Course Title: Basics of Electrical and Electronics Engineering Laboratory Type of Course: Laboratory - ESC	L-T- P- C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	This fundamental laboratory provides an opportunity to validate the concepts taught in the basics of electrical and electronics engineering and enhances the ability to visualize real system performance, using both hardware and simulation tools.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Basics of Electrical and Electronics Engineering and attain Skill Development through Experiential Learning techniques.					
Basic skill sets required for the laboratory:						
	The students shall be able to develop: 14) An attitude of enquiry. 15) Confidence and ability to tackle new problems. 16) Ability to interpret events and results. 17) Ability to work as a leader and as a member of team. 18) Assess errors and eliminate them. 19) Observe and measure physical phenomenon. 20) Write Reports. 21) Select suitable equipment, instrument and materials. 22) Locate faults in systems. 23) Manipulative skills for setting and handling equipment. 24) The ability to follow standard test procedures. 25) An awareness of the need to observe safety precautions. 26) To judge magnitudes without actual measurement.					
Course Out Comes	On successful completion of the course the students shall be able to: 5. Apply basic laws of Electrical Engineering to compute voltage, currents, and other parameters in the circuits. 6. Demonstrate the working of electrical machines to observe performance characteristics. 7. Demonstrate the working of electronic circuits to obtain the V-I Characteristics of various semiconductor devices. 8. Sketch the characteristics and waveforms relevant to standard electrical and electronic circuits					
Course Content:						
	List of Laboratory Tasks: Experiment No 1: Verification of KVL and KCL for a given DC circuit. Level 1: Study and Verify KVL and KCL for the given electrical Circuit. Level 2: For the same circuit considered in level 1, perform the simulation using NI LabVIEW/Multisim/MATLAB. Experiment No 2: Analyse AC series circuits – RL, RC and RLC . Level 1: Conduct an experiment to perform and verify the impedance, current and power of Series RL and RC circuits Level 2: Conduct an experiment to perform and verify the impedance and current of RLC series circuits.					

	Experiment No 3: Calculation of power and power factor of the given AC Circuit. Level 1: Conduct an experiment to measure the power and power factor for given resistive load. Level 2: Conduct an experiment to measure the power and power factor for given inductive load. Experiment No 4: Perform the experiments on given Transformer. Level 1: Verify the EMF equation of a transformer and compute the voltage transformation ratio. Level 2: Study the effect of load on the secondary side of the transformer and verify the EMF equation under load conditions. Experiment No 5: Load test on DC shunt motor Level 1: Conduct load test on DC shunt motor and find its efficiency at different loads Level 2: Conduct load test on DC shunt motor and plot the performance characteristics. Experiment 6: Study of PN-Junction Diode Characteristics in Forward and Reverse Bias Conditions. Level 1: Carry out an experiment to plot VI Characteristics and hence find the cut-in voltage on forward characteristics for the Silicon P-N Junction diode. Level 2: Carry out an experiment to plot VI Characteristics of Zener diode and hence find the zener voltage on reverse characteristics for the Silicon P-N Junction zener diode. Experiment No. 7: To observe the output waveform of half wave and full wave rectifier circuit and compute ripple factor and efficiency Level 1: Identify the components required for a rectifier circuit, rig up the circuit, and sketch the output waveforms without filter. Level 2: Rig up the rectifier circuit with RC filter, observe the output waveforms, determine the efficiency and ripple factor. Experiment 8: To construct clipping and clamping circuits for different reference voltages and to verify the responses. Level 1: Identify the components required for building a Clipper / Clamper circuit. Rig up the circuit according to the circuit diagram given and sketch the output waveform. Level 2: Given a sinusoidal input of 10 V p-p, implement a positive / negative clipper with output clipped at 2 V. Experiment 9: To calculate various parameters of emitter follower circuit using BJT Level 1: Identify the components required to implement an emitter follower circuit. Rig up the circuit and observe the variations in output waveform with respect to the variations in input waveform. Level 2: Determine the values of Z_{in} input impedance and Z_{out} output impedance for Emitter Follower. Experiment 10: To Implement RC Coupled amplifier using a BJT and sketch the frequency response. Level 1: Identify the components required to implement an RC coupled amplifier circuit. Rig up the circuit and sketch the frequency response. Level 2: From the frequency response curve determine the value of the mid band gain and the bandwidth.
Targeted Application & Tools that can be used:	

Targeted Applications: Application Area includes all electrical and electronic circuits (power supply unit, regulator unit, embedded devices, hardware electronics etc.). The students will be able to join a profession which involves basics to high level of electronic circuit design.

Professionally Used Software: Multisim/ P Spice

Besides these software tools hardware equipment such as Multimeters, Function Generators, Power Supplies, Oscilloscopes etc., can be used to perform component/circuit testing and analysis.

Topics relevant to "SKILL DEVELOPMENT": All the experiments which are listed are for **Skill Development** through **Experiential Learning Techniques**. This is attained through the assessment component mentioned in course handout.

Course Code: ECE1511	Course Title: Design Workshop Course Type : ESC	L- T-P- C	1	0	2	2
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					

Course Description	This course is designed to provide an in-depth understanding of Arduino, microcontrollers Raspberry pi and their application in various real time projects involving sensors. Throughout the course, students will learn the fundamentals of Arduino and Raspberry Pi programming and gain hands-on experience with a wide range of sensors. Students will explore how to connect and interface sensors with Arduino and Raspberry Pi boards, read sensor data, and use it to control various output devices This course is suitable for beginners who are interested in exploring the world of electronics and developing practical applications using Arduino, Raspberry Pi and sensors.			
Course Objective	The objective of the course is Employability Skills of student by using PARTICIPATIVE LEARNING techniques.			
Course Outcomes	On successful completion of the course the students shall be able to 5. Explain the main features of the Arduino & the Raspberry Pi prototype board. 6. Demonstrate the hardware interfacing of the peripherals to Arduino and Raspberry Pi system. 7. Understand the types of sensors and its functions 8. Demonstrate the functioning of live projects carried out using Arduino and Raspberry Pi system.			
Course Content:				
Module 1	Basic concepts of Microcontrollers	Hands-on	Interfacing Task and Analysis	3 Sessions
Topics: Introduction to Arduino, ESP and Node MCU Pin configuration and architecture, Device and platform features, Concept of digital and analog ports, Familiarizing with Arduino Interfacing Board, API's , Introduction to Embedded C and Arduino platform, Arduino Datatypes and variables, Arduino i/o Functions, Arduino Communications, Arduino IDE, Various Cloud Platforms.				
Module 2	Sensory Devices	Hands-on	Interfacing Task and Analysis	3 Sessions
Arduino Sensors: Humidity Sensor, Temperature Sensor, Water Detector / Sensor, PIR Sensor, Ultrasonic Sensor, Connecting Switches and actuators, sensor interface with Arduino. Introduction to 3D Printer: 3D Printer technology and its working Principles, Applications. Introduction to online Simulators: Working with AutoCAD/Fusion 360 Simulator.				
Module 3	Introduction to Micro python	Hands-on	Interfacing Task and Analysis	4 Sessions
Topics: Introduction to MicroPython, Comparison with other programming languages, Setting up the MicroPython development environment, Basics of MicroPython syntax and structure.				
Module 4	Working with Raspberry-pi	Hands-on	Interfacing Task and Analysis	5 Sessions
Introduction to raspberry pi boards, pin-diagram, different types of raspberry pi boards and its application, LED and switch control. Mastering Modules, Setup Raspberry - PuTTY SSH,VNC Viewer to interface with more complicated sensors and actuators. Various Libraries and its functions.				
Lab: Name of the Experiments: 16. Introduction Lab 1: Level 1: Overview on Arduino based Micro-controller, and sensors. Level 2: Interfacing of Arduino and ESP boards with sensors and other components. 17. Lab 2: Smart Plant Monitoring				

- Level 1- Push button-controlled LED.
- Level 2- Automatic Irrigation and monitoring System using Arduino
- 18. **Lab 3: Robotics with Arduino.**
 - Level 1- Servo Motor control using Arduino
 - Level 2: DC Motor Control Using Arduino for Robotics.
- 19. **Lab 4: Environmental pollution using ESP.**
 - Level 1 - IoT based air Pollution Monitoring System.
 - Level 2- IoT Based water pollution system
- 20. **Introduction Lab for raspberry pi:**
 - Level 1: Overview on Different Raspberry Pi Boards, and sensors.
 - Level 2: Configuring the Raspberry Pi and Interfacing with sensors and other components.
- 21. **Lab 7:** Raspberry Pi based Object Detection using TensorFlow and OpenCV.
- 22. **Lab 8:** Speech Recognition on Raspberry Pi for Voice Controlled Home Automation.
- 23. **Lab 9:** Design the website using HTML and CSS, and host the website on Raspberry Pi.
- 24. **Introduction Lab for 3D printing:**
 - Overview of 3D printing. Design of 3D structure using the CAD. Understand the steps of fabrication of simple rectangular box using 3D printer.
- 25. **Lab 10:** Design and print of Hollow Cylindrical structure using 3D CAD and 3D printer.
- 26. **Lab 11** Demonstration of Jetson nano board and its capability. **(OPTIONAL)**
- 27. **Lab 12:** Revision
- 28. **Lab 13:** Revision
- 29. **Lab 14:** Mini Project
- 30. **Lab 15:** Mini Project Evaluation.

Topics: Types of Arduino boards, Thonny Python, Python IDLE, sensors, 3D Printer

Targeted Application & Tools that can be used:

Application Area:

Home Automation, Environmental Monitoring, Agriculture and Farming, Industrial Automation, Internet of Things (IoT), Robotics, Wearable Devices, Security Systems, Education and Learning. These are just a few examples of the many application areas where Arduino, Raspberry Pi and sensors can be applied. The flexibility and affordability of Arduino, and Raspberry Pi combined with the wide range of sensors available, allow for endless possibilities in creating innovative projects.

Professionally Used Software: Students can use open SOURCE Software's Arduino IDE and Tincker CAD, Thonny Python, Python IDLE etc.

Project work/Assignment:

1. Projects: At the end of the course students will be completing the project work on solving many real time issues.

2. Book/Article review: At the end of each module a book reference or an article topic will be given to an individual or a group of students. They need to refer the library resources and write a report on their understanding about the assigned article in appropriate format. [Presidency University Library Link](#).

3. Presentation: There will be a presentation from interdisciplinary students group, where the students will be given a project on they have to demonstrate the working and discuss the applications for the same

Course Code: MAT2303	Course Title: Linear Algebra & Vector Calculus Type of Course:BSC	L-T- P- C	3	1	0	4

Version No.		1.0	
Course Pre-requisites		Basic Concepts of Limits, Differentiation, Integration, Matrices (PU Level)	
Anti-requisites		NIL	
Course Description		This course explores the fundamental concepts of vectors, matrices, and their operations within the context of calculus, including vector differentiation and integration, while applying these tools to solve problems related to linear systems, transformations, and geometric interpretations in higher dimensions, often with applications in fields like physics, engineering, and computer graphics; key topics include vector algebra, matrix operations, determinants, eigenvalues, eigenvectors, gradients, divergence, curl, line integrals, surface integrals, and the fundamental theorems of vector calculus like Green's Theorem, Stokes' Theorem, and the Divergence Theorem.	
Course Objective		The course is intended to develop computational proficiency involving procedures in Matrices, Linear Algebra and Vector Calculus which are useful to all engineering disciplines. This course is to equip students with the ability to understand and manipulate vectors in multidimensional space, apply matrix operations to solve systems of linear equations, and utilize concepts like gradients, divergence, and curl to analyze physical phenomena, all while developing a strong foundation for applying these tools in various scientific and engineering fields like physics, mechanics, and computer graphics.	
Course Out Comes		On successful completion of the course the students shall be able to: CO1 - Use matrix methods and certain techniques to solve the system of linear equations and to find eigen values, eigen vectors of a matrix to check whether it is diagonalizable. CO2 - Understand the abstract notions of vector space and dimensionality of it. CO3 - find the matrix representation of a linear transformation given bases of the relevant vector spaces. CO4 - Learn different notions of vector and scalar fields with their properties. Understanding the major theorems (Green's, Stokes', Gauss') and some applications of these theorems.	
Course Content:			
Module 1	Systems of Linear Equations		7. Classes)
Systems of Linear Equations, Matrices and Elementary Row Operations, Echelon forms, Matrix operations, invertible matrices, Determinants and their properties, Cramer's Rule, LU-decomposition, Applications of Systems of Linear Equations.			
Module 2	Vector Space	Assignment	(9Classes)
Linear Combinations and Linear Independence, Vectors in $n \mathbb{R}^n$, Linear Combinations, Linear Independence Vector Spaces, Definition of a Vector Space, Subspaces, Basis and Dimension, Coordinates and Change of Basis, Orthogonal bases and orthogonal projections.			
Module 3	Linear Transformations		(15 lectures)

Linear Transformations, Algebra of transformations, The Null Space and Range, Isomorphisms, Matrix Representation of Linear Transformations, Similarity Eigenvalues and Eigenvectors, Eigen values and Eigen vectors, Diagonalization.

Inner Product Spaces, The Dot Product on $\mathbb{R}^n$ and Inner Product Spaces, Orthonormal Bases, Orthogonal Complements, Application: Least Squares Approximation, Diagonalization of Symmetric Matrices, Application: Quadratic Forms.

Singular Value Decomposition: Singular values, computing singular value decomposition, and Introduction to principal component analysis.

Module 4	Vector Calculus	Assignment	(15 lectures)

Vector & Scalar Functions and Fields, Derivatives, Curve, Arc length, Curvature & Torsion, Gradient of Scalar Field, Directional Derivative, Divergence of a Vector Field, Curl of a Vector Field, Physical interpretation, solenoidal and irrotational vector fields. Problems.

Line Integrals, Path Independence of Line Integrals, Green's Theorem in the plane, Surface Integrals, Divergence Theorem of Gauss, Stokes's Theorem.

Targeted Application & Tools that can be used:

- Solve systems of linear equations using various methods including Gaussian and Gauss Jordan elimination and inverse matrices.
- Perform matrix algebra, invertibility, and the transpose and understand vector algebra in $\mathbb{R}^n$.
- Determine relationship between coefficient matrix invertibility and solutions to a system of linear equations and the inverse matrices.
- Find eigenvalues and eigenvectors and use them in applications.
- Find the dimension of spaces such as those associated with matrices and linear transformations.
- Understand real vector spaces and subspaces and apply their properties.
- Compute inner products in a real vector space and compute angle and orthogonality in inner product spaces.
- Create orthogonal and orthonormal bases: Gram-Schmidt process and use bases and orthonormal bases to solve application problems.
- Prove basic results in linear algebra using appropriate proof-writing techniques such as linear independence of vectors; properties of subspaces; linearity, injectivity and surjectivity of functions; and properties of eigenvectors and eigenvalues.

Assignment:

Preparation of power-point slides, which include videos, animations, pictures, graphics for better understanding the applications of Linear Algebra and Vector Calculus to engineering applications – The faculty allocate chapters/ parts of chapters to groups of students so that the entire syllabus of Linear Algebra and Vector Calculus is covered.

Topics relevant to SKILL DEVELOPMENT: The course focuses on the concepts of Vector calculus and Linear Algebra with reference to specific engineering problems. The course is of both conceptual and analytical type in nature through Problem Solving. This is attained through the assessment component mentioned in the course handout.

Course Code: MAT2404	Course Title: Discrete Mathematics Type of Course: Theory - ESC	L-T- P- C	3	1	0	4
Version No.	1.0					
Course Pre-requisites	MAT2302					
Anti-requisites	NIL					
Course Description	The course explores the study of mathematical structures that are fundamentally discrete (not continuous), focusing on concepts like set theory, logic, graph theory, combinatorics, and number theory, with applications primarily in computer science fields like algorithms, software development, and cryptography; it covers topics such as propositional logic, proof techniques, relations, functions, counting principles, and basic graph algorithms, providing a foundation for analyzing discrete problems and structures within computer science.					
Course Objective	The main objective of the course is that students should learn a particular set of mathematical facts and how to apply them. It teaches students how to think logically and mathematically through five important themes: mathematical reasoning, combinatorial analysis, discrete structures, algorithmic thinking, and applications and modeling. A successful discrete mathematics course should carefully blend and balance all five themes.					
Course Outcomes	On successful completion of the course the students shall be able to: CO1 - Explain logical sentences through predicates, quantifiers and logical connectives. CO2 - Deploy the counting techniques to tackle combinatorial problems CO3 - Comprehend the basic principles of set theory and different types of relations. CO4 - Apply different types of structures of trees for developing programming skills					
Course Content:						
Module 1	Fundamentals of Logic		(10 Classes)			
Basic Connectives and Truth Tables, Propositional Logic, Applications of Propositional Logic, Propositional Equivalences, Predicates and Quantifiers, Nested Quantifiers, Rules of Inference, Introduction to Proofs, Proof Methods and Strategy.						
Module 2	Principle of Counting	Assignment	(15 Classes)			
The Well Ordering Principle – Mathematical Induction The Basics of Counting, Permutations and Combinations, Binomial Coefficients and Identities, Generalized Permutations and Combinations, Generating Permutations and Combinations Advanced Principle Counting: The Principle of Inclusion and Exclusion, Generalizations of the Principle, Derangements – Nothing is in its Right Place, Rook Polynomials.						
Module 3	Relations and Functions		(10 Classes)			
Cartesian Products and Relations, Functions, One-to-One, Onto Functions. The Pigeon-hole Principle, Function Composition and Inverse Functions. Relations, Properties of Relations, Computer Recognition – Zero-One Matrices and Directed Graphs, Partial Orders, Lattice, Hasse Diagrams, Equivalence Relations and Partitions.						

Module 4	Recurrence Relations and Generating Functions		(10 Classes)
Homogeneous and inhomogeneous recurrences and their solutions - solving recurrences using generating functions - Repertoire method - Perturbation method - Convolutions - simple manipulations and tricks.			
Module 5	Graph Theory & Algorithms on Networks	Assignment	(15 Classes)
Definitions and basic results - Representation of a graph by a matrix and adjacency list - Trees - Cycles - Properties - Paths and connectedness - Sub graphs - Graph Isomorphism - Operations on graphs - Vertex and edge cuts - Vertex and edge connectivity, Euler and Hamilton Paths, Shortest-Paths.			
Tree - Definitions, Properties, and Examples, Routed Trees, Binary search tree, Decision tree, spanning tree: BFS, DFS.			
Algorithms on Networks - Shortest path algorithm- Dijkstra's algorithm, Minimal spanning tree- Kruskal algorithm and Prim's algorithm.			
Targeted Application & Tools that can be used:			
Discrete mathematics provides the mathematical foundations for many computer science courses including data structures, algorithms, database theory, automata theory, formal languages, compiler theory, computer security, and operating systems.			
Assignment:			
Assignment 1: Logic Equivalences and Predicate calculus. Assignment 2: Equivalence Relations and Lattices Assignment 3: Recurrence Relations			
Text Book

Course Code: PPS4006	Course Title: LOGICAL & CRITICAL THINKING Type of Course: HSMC		L- T-P- C	0	0	2	1
Version No.	1.0						
Course Pre-requisites	Students should have the basic concepts of Logical reasoning and Critical thinking, along with its applications in real life problems.						
Anti-requisites	Nil						
Course Description	This is a skill-based training program for the engineering students (Undergraduate). This course is designed to enable the students to enhance their skills in Logical reasoning and Critical thinking.						
Course Objective	The objective of the course is to familiarize the learners with concepts in Logical reasoning and Critical thinking through problem solving techniques suitable for their career development.						
Course Outcomes	On successful completion of the course the students shall be able to:						
	CO1] Understand all the concepts.						
	CO2] Apply the concepts in problem solving (Bloom’s taxonomy Level 3)						
Course Content:							
Module 1	Logical Thinking	Assignment					16 Hours
Topics: Syllogisms, Cubes and Dices, Mirror and Water images, Paper cutting and Folding, Embedded figures & Completion of figures, Data Interpretation, Data sufficiency							
Module 2	Critical Thinking	Assignment					14 Hours
Topics: Analogy, Symbol and Notations, Statement and assumption, Cause of action, Statement and conclusion, Puzzles							
Targeted Application & Tools that can be used: Application area: Placement activities and Competitive examinations. Tools: LMS							
Evaluation	Continuous Evaluation

Course Code: CSE7100	Course Title: Mini Project	L- T-P- C	0	0	0	4
Version No.	1.0					
Course Pre-requisites	Knowledge and Skills related to all the courses studied in previous semesters.					
Anti-requisites	NIL					
Course Description	Students observe science and technology in action, develop an awareness of the method of scientific experimentation, and often get an opportunity to see, study and operate sophisticated and costly equipment. They also learn about the implementation of the principles of management they have learnt in class, when they observe multidisciplinary teams of experts from engineering, science, economics, operations research, and management deal with techno-economic problems at the micro and macro levels. Finally, it enables them to develop and refine their language, communication and inter-personal skills, both by its very nature, and by the various evaluation components, such as seminar, group discussion, project report preparation, etc. The broad-based core education, strong in mathematics and science and rich in analytical tools, provides the foundation necessary for the student to understand properly the nature of real-life problems. The students have options to pursue this course as either Project Work and Dissertation at the university, or Project Work in an Industry/ Company/ Research Laboratory, or Internship Program in an Industry/Company.					
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Professional Practice and attain Employability Skills through Experiential Learning techniques.					
Course Outcomes	On successful completion of this course the students shall be able to: 6. Identify the engineering problems related to local, regional, national or global needs. (Understand) 7. Apply appropriate techniques or modern tools for solving the intended problem. (Apply) 8. Design the experiments as per the standards and specifications. (Analyze) 9. Interpret the events and results for meaningful conclusions. (Evaluate) 10. Appraise project findings and communicate effectively through scholarly publications. (Create)

Course Objectives	The objective of the course is to familiarize the learners with the concepts of Professional Practice and attain Employability Skills through Experiential Learning techniques.
Course Outcomes	On successful completion of this course the students shall be able to: 8. Identify problems based on societal /research needs. (Understand) 9. Apply Knowledge and skill to solve societal problems in a group. (Apply) 10. Develop interpersonal skills to work as member of a group or leader. (Apply) 11. Analyze the inferences from available results through theoretical / Experimental / Simulations. (Analyze) 12. Analyze the impact of solutions in societal and environmental context for sustainable development. (Analyze) 13. Improve in written and oral communication. (Create) 14. Demonstrate capabilities of self-learning in a group, which leads to lifelong learning. (Understand)

Course Code: CSE2252	Course Title: Data Communications and Computer Networks Lab Type of Course: Lab / PCC	L- T-P- C	0	0	2	1
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					

Course Description	This lab-based course provides hands-on experience in the principles and practices of data communications and computer networking. It is designed to complement theoretical concepts covered in the associated lecture course. Through a series of structured experiments and practical exercises, students will gain proficiency in configuring, analyzing, and troubleshooting computer networks. Key topics include network topology design, IP addressing and subnetting, Ethernet and LAN technologies, routing and switching, TCP/IP protocol suite, and basic network security measures. Students will work with industry-standard tools and equipment, including routers, switches, protocol analyzers, and network simulation software such as Cisco Packet Tracer or Wireshark.			
Course Objective	The objective of this lab course is to provide students with practical, hands-on experience in the configuration, operation, and troubleshooting of data communication systems and computer networks. Through guided experiments and real-world scenarios, students will reinforce theoretical knowledge, develop essential technical skills, and gain a deeper understanding of networking concepts, protocols, and devices used in modern communication systems.			
Course Outcomes	On successful completion of the course, the students shall be able to: Design and configure basic network topologies using routers, switches, and end devices to meet specified requirements. Analyze and troubleshoot network connectivity and performance issues using tools such as Wireshark and network simulators. Demonstrate understanding of key networking protocols (e.g., TCP/IP, ARP, ICMP, DHCP) through practical implementation and observation. Apply IP addressing and subnetting techniques to efficiently allocate and manage network resources in various networking scenarios.			
Course Content:				
Module 1,2,3,4	Physical Layer, Network Layer, Transport Layer	Lab Assignment	Problem Solving	24 Sessions
List of Laboratory Tasks: Lab sheet -1, M-1, 3 [2 Hours] Experiment No 1: Level 1: Study of basic network commands and network configuration commands. Lab sheet -2, M-1[2 Hours] Experiment No 1: Level 1: Identify and explore Network devices, models and cables. Introduction to Cisco packet tracer. Experiment No. 2: Level 2 – Create various network topologies using a cisco packet tracer.				

Lab sheet -3, M-2,3 [2 Hours]

Experiment No. 1:

Level 2 - Basic Configuration of switch/router using Cisco packet tracer.

Experiment No. 2:

Level 2 -Configure the privilege level password and user authentication in the switch/router.

Lab sheet – 4, M-3 [2 Hours]

Experiment No. 1:

Level 2 - Configure the DHCP server and wireless router and check the connectivity

Lab sheet – 5, M-3 [2 Hours]

Experiment No. 1:

Level 2 - Configure the static routing in the Cisco packet tracer.

Experiment No. 2:

Level 2 - Configure the dynamic routing protocol in the Cisco packet tracer.

Lab sheet – 6, M-4 [2 Hours]

Experiment No. 1: Configuration of DNS Server with Recursive & Integrative approach in Cisco packet tracer.

Lab sheet – 7, M-4 [2 Hours]

Experiment No. 1:

Configure the telnet protocol in the router using the Cisco packet tracer.

Lab sheet – 8, M-4[2 Hours]

Experiment No. 1:

Level1- Introduction to NS2 and basic TCL program.

Lab sheet – 9, M-4 [2 Hours]

Experiment No. 1:

Level 1: Simulate three node Point to point network using UDP in NS2.

Experiment No. 2:

Simulate transmission of Ping message using NS2.

Lab sheet – 10, M-4[2 Hours]

Experiment No. 1:

Simulate Ethernet LAN using N-node in NS2.

Experiment No. 2:

Simulate Ethernet LAN using N-node using multiple traffic in NS2

Lab sheet –11, M-3,4 [2 Hours]

Experiment No. 1:

Level 1- Introduction to Wire Shark.

Experiment No. 2:

Level 2- Demonstration of packet analysis using wire shark.

Lab sheet –12, M-1,2,3 [2 Hours]

Experiment No. 1:

Level 2- Demonstration of switch and router configuration using real devices

Targeted Application & Tools that can be used: Cisco Packet Tracer, Wireshark, and NS2.

Case Study/Assignment: Choose and analyze a network from any organization/Assignment proposed for this course in CO1-CO4

Problem Solving: Choose and appropriate devices and implement various network concepts.

Programming: Simulation of any network using NS2.

Course Code: CSE2253	Course Title: Data Structures Type of Course: Theory	L-T- P- C	3	0	0	3
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	This course introduces the fundamental concepts of data structures and to emphasize the importance of choosing an appropriate data structure and technique for program development. This course has theory and lab component which emphasizes on understanding the implementation and applications of data structures using Java programming language. With a good knowledge in the fundamental concepts of data structures and practical experience in implementing them, the student can be an effective designer, developer for new software applications.					
Course Objective	The objective of the course is SKILL DEVELOPMENT of student by using EXPERIENTIAL LEARNING techniques					
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Describe the concept of basic data structure, stacks, queues, and arrays and their operations. [Understand] CO2: Utilize linked lists for real-time scenarios. [Apply] CO3: Apply an appropriate non-linear data structure for a given scenario. [Apply] CO4: Demonstrate different searching and sorting techniques. [Apply]					
Course Content:						
Module 1	Introduction to Data Structure and Linear Data Structure - Stacks and Queues	Assignment	Program activity		9 Hours	

Introduction - Introduction to Data Structures, Types and concept of Arrays. Stack - Concepts and representation, Stack operations, stack implementation using array and Applications of Stack. Queues - Representation of queue, Queue Operations, Queue implementation using array, Types of Queue and Applications of Queue.				
Module 2	Linear Data Structure- Linked List	Assignment	Program activity	12 Hours
Topics: Linked List - Singly Linked List, Operation on linear list using singly linked storage structures, Circular List, Applications of Linked list. Recursion - Recursive Definition and Processes.				
Module 3	Non-linear Data Structures - Trees	Assignment	Program activity	12 Hours
Topics: Trees - Introduction to Trees, Binary tree: Terminology and Properties, Use of Doubly Linked List, Binary tree traversals: Pre-Order traversal, In-Order traversal, Post - Order traversal, Binary Serach Tree, AVL Trees - Red Black Tree, Expression Tree , Heaps.				
Module 4	Non-linear Data Structures - Graphs and Hashing	Assignment	Program activity	6 Hours
Topics: Graphs: Basic Concept of Graph Theory and its Properties, Representation of Graphs . ADT, Elementary graph operations, Minimum Cost spanning trees, Shortest path and Transitive closure. Hashing: Introduction, Static Hashing, Dynamic Hashing				
Module 5	Searching & Sorting	Assignment	Program activity	6 Hours
Topic: Sorting & Searching - Sequential and Binary Search, Sorting - Selection and Insertion sort, Quick sort, Merge Sort, Bubble sort.				
List of Laboratory Tasks: Lab sheet -1 Level 1: Prompt the user, read input and print messages. Programs using class, methods and objects Level 2: Programming Exercises on fundamental Data structure - Arrays based on Scenario. Lab sheet -2				

Level 1: Programming Exercises on Stack and its operations

Level 2: Programming Exercises on Stack and its operations with condition

Lab sheet -3

Level 1: Programming on Stack application infix to postfix Conversion

Level 2: -

Lab sheet -4

Level 1: Programming on Stack application – Evaluation of postfix

Lab sheet -5

Level 1: Programming Exercises on Queues and its operations with conditions

Level 2: -

Lab sheet -6

Level 1: Programming Exercises on Linked list and its operations.

Level 2: Programming Exercises on Linked list and its operations with various positions

Lab sheet -7

Level 1: Programming Exercises on Circular Linked list and its operations.

Level 2: Programming Exercises on Circular Linked list and its operations with various positions

Lab sheet -8

Level 1: Programming Exercises on factorial of a number

Level 2: Programming the tower of Hanoi using recursion

Lab sheet -9

Level 1: -

Level 2: Programming the tower of Hanoi using recursion

Lab sheet -10

Level 1: Programming Exercise on Doubly linked list and its operations

Level 2: -

Lab sheet -11

Level 1: Program to Construct Binary Search Tree and Graph

Level 2: Program to traverse the Binary Search Tree in three ways(in-order, pre-order and post-order) and implement BFS and DFS

Lab sheet -12

Level 1: Program to Implement the Linear Search & Binary Search

Level 2: Program to Estimate the Time complexity of Linear Search Lab sheet -13 Level 1: Program to Implement and Estimate the Time complexity of Selection Sort Level 2: Program to Implement and Estimate the Time complexity of Insertion Sort Lab sheet -14 (Beyond syllabus activity) Level 1: Program to Construct AVL Tree Level 2: Lab sheet -15 (Beyond syllabus activity) Level 1: Program to Construct RED BLACK Tree
Targeted Application & Tools that can be used Use of PowerPoint software for lecture slides and use of Modern IDE like VS Code and Eclipse for lab programs to execute.
Project work/Assignment:
Assignment: Students should complete the lab programs by end of each practical session and module wise assignments before the deadline.

Topics relevant to development of “Skill Development”: Linked list and stacks

Itgalpur, Rajankunte, Yelahanka, Bengaluru - 560064

Course Code: CSE2254	Course Title: Data Structures Lab Type of Course: Lab	L-T- P- C	0	0	2	1
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	This course introduces the fundamental concepts of data structures and to emphasize the importance of choosing an appropriate data structure and technique for program development. This course has theory and lab component which emphasizes on understanding the implementation and applications of data structures using Java programming language. With a good knowledge in the fundamental concepts of data structures and practical experience in implementing them, the student can be an effective designer, developer for new software applications.					
Course Objective	The objective of the course is SKILL DEVELOPMENT of student by using EXPERIENTIAL LEARNING techniques					
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Describe the concept of basic data structure, stacks, queues, and arrays and their operations. [Understand] CO2: Utilize linked lists for real-time scenarios. [Apply] CO3: Apply an appropriate non-linear data structure for a given scenario. [Apply] CO4: Demonstrate different searching and sorting techniques. [Apply]					
Course Content:						
Module 1	Introduction to Data Structure and Linear Data Structure - Stacks and Queues	Assignment	Program activity		9 Hours	

Introduction - Introduction to Data Structures, Types and concept of Arrays. Stack - Concepts and representation, Stack operations, stack implementation using array and Applications of Stack. Queues - Representation of queue, Queue Operations, Queue implementation using array, Types of Queue and Applications of Queue.				
Module 2	Linear Data Structure- Linked List	Assignment	Program activity	12 Hours
Topics: Linked List - Singly Linked List, Operation on linear list using singly linked storage structures, Circular List, Applications of Linked list. Recursion - Recursive Definition and Processes.				
Module 3	Non-linear Data Structures - Trees	Assignment	Program activity	12 Hours
Topics: Trees - Introduction to Trees, Binary tree: Terminology and Properties, Use of Doubly Linked List, Binary tree traversals: Pre-Order traversal, In-Order traversal, Post - Order traversal, Binary Search Tree, AVL Trees - Red Black Tree, Expression Tree , Heaps.				
Module 4	Non-linear Data Structures - Graphs and Hashing	Assignment	Program activity	6 Hours
Topics: Graphs: Basic Concept of Graph Theory and its Properties, Representation of Graphs . ADT, Elementary graph operations, Minimum Cost spanning trees, Shortest path and Transitive closure. Hashing: Introduction, Static Hashing, Dynamic Hashing				
Module 5	Searching & Sorting	Assignment	Program activity	6 Hours
Topic: Sorting & Searching - Sequential and Binary Search, Sorting - Selection and Insertion sort, Quick sort, Merge Sort, Bubble sort.				
List of Laboratory Tasks: Lab sheet -1 Level 1: Prompt the user, read input and print messages. Programs using class, methods and objects Level 2: Programming Exercises on fundamental Data structure - Arrays based on Scenario. Lab sheet -2				

Level 1: Programming Exercises on Stack and its operations

Level 2: Programming Exercises on Stack and its operations with condition

Lab sheet -3

Level 1: Programming on Stack application infix to postfix Conversion

Level 2: -

Lab sheet -4

Level 1: Programming on Stack application – Evaluation of postfix

Lab sheet -5

Level 1: Programming Exercises on Queues and its operations with conditions

Level 2: -

Lab sheet -6

Level 1: Programming Exercises on Linked list and its operations.

Level 2: Programming Exercises on Linked list and its operations with various positions

Lab sheet -7

Level 1: Programming Exercises on Circular Linked list and its operations.

Level 2: Programming Exercises on Circular Linked list and its operations with various positions

Lab sheet -8

Level 1: Programming Exercises on factorial of a number

Level 2: Programming the tower of Hanoi using recursion

Lab sheet -9

Level 1: -

Level 2: Programming the tower of Hanoi using recursion

Lab sheet -10

Level 1: Programming Exercise on Doubly linked list and its operations

Level 2: -

Lab sheet -11

Level 1: Program to Construct Binary Search Tree and Graph

Level 2: Program to traverse the Binary Search Tree in three ways(in-order, pre-order and post-order) and implement BFS and DFS

Lab sheet -12

Level 1: Program to Implement the Linear Search & Binary Search

Level 2: Program to Estimate the Time complexity of Linear Search Lab sheet -13 Level 1: Program to Implement and Estimate the Time complexity of Selection Sort Level 2: Program to Implement and Estimate the Time complexity of Insertion Sort Lab sheet -14 (Beyond syllabus activity) Level 1: Program to Construct AVL Tree Level 2: Lab sheet -15 (Beyond syllabus activity) Level 1: Program to Construct RED BLACK Tree
Targeted Application & Tools that can be used Use of PowerPoint software for lecture slides and use of Modern IDE like VS Code and Eclipse for lab programs to execute.
Project work/Assignment:
Assignment: Students should complete the lab programs by end of each practical session and module wise assignments before the deadline.
Text Book T1 Ellis Horowitz and Sartaj Sahni, Fundamentals of Data Structures in C, 2nd Edition, Universities Press, reprint 2018. T2 Seymour Lipschutz, Data Structures Schaum's Outlines, Revised 1st Ed, McGraw Hill, 2014.

Course Code: CSE2255	Course Title: Object Oriented Programming Using Java Type of Course: Theory - PCC	L-T- P- C	3	0	0	3
Version No.	2.0					
Course Pre-requisites	Nil					
Anti-requisites	Nil					
Course Description	This course introduces the core concepts of object-oriented programming. This course has theory and lab component which emphasizes on understanding the implementation and application of object-oriented programming paradigm. It helps the student to build real time secure applications by applying these concepts and also for effective problem solving. The students interpret and understand the need for object oriented programming to build applications.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Problem-Solving using JAVA and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques					
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Describe the basic programming concepts. [Understand] CO2: Apply the concept of classes, objects and methods to solve problems. [Application] CO3: Apply the concept of arrays and strings. [Appy] CO4: Implement inheritance and polymorphism building secure applications. [Apply] CO5: Apply the concepts of interface and error handling mechanism. [Apply]					
Course Content:						
Module 1	Basic Concepts of Programming and Java	Assignment	Problem Solving	9 Sessions		
Topics: Introduction to Principles of Programming: Process of Problem Solving, Java program structure, Download Eclipse IDE to run Java programs, Sample program, Data types, Identifiers, Variables, Constants in java, Operators, Assignments and Expression, Basic Input/ Output functions, Control Statements: Branching and Looping.						

Module 2	Classes, objects, methods and Constructors	Assignment	Problem Solving	10 Sessions
Topics: Classes, Objects and Methods: Introduction to object Oriented Principles, defining a class, adding data members and methods to the class, access specifiers, instantiating objects, reference variable, accessing class members and methods. Static Polymorphism: Method overloading, constructors, constructor overloading, this keyword, static keyword, Nested classes, Accessing members in nested classes.				
Module 3	Arrays, String and String buffer	Assignment	Problem Solving	8 Sessions
Topics: Arrays: Defining an Array, Initializing & Accessing Array, Multi –Dimensional Array, Array of objects. String: Creation & Operation. String builder class, methods in String Buffer.				
Module 4	Inheritance and Polymorphism	Assignment	Problem Solving	10 Sessions
Topics: Inheritance: Defining a subclass, Types of Inheritance, super keyword. Dynamic Polymorphism: Method overriding. Final keyword: with data members, with member functions and with class. Abstract keyword: with data members, with member functions and with class, Exception handling.				
Module 5	Input & Output Operation in Java	Assignment	Problem Solving	8 Sessions
Input/output Operation in Java(java.io Package), Streams and the new I/O Capabilities, Understanding Streams, working with File Object, File I/O Basics, Reading and Writing to Files, Buffer and Buffer Management, Read/Write Operations with File Channel, Serializing Objects, Observer and Observable Interfaces.

for Skill Development through Experiential Learning techniques. This is attained through assessment component mentioned in course handout.

Course Code: CSE2256	Course Title: Object Oriented Programming Using Java Lab Type of Course: Lab - PCC	L-T- P- C	0	0	2	1
Version No.	2.0					
Course Pre-requisites	Nil					
Anti-requisites	Nil					
Course Description	This course introduces the core concepts of object-oriented programming. This course has theory and lab component which emphasizes on understanding the implementation and application of object-oriented programming paradigm. It helps the student to build real time secure applications by applying these concepts and also for effective problem solving. The students interpret and understand the need for object oriented programming to build applications.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Problem-Solving using JAVA and attain SKILL DEVELOPMENT through EXPERIENTIAL LEARNING techniques					
Course Out Comes	On successful completion of the course the students shall be able to: CO1: Demonstrate basic programming concepts. [Apply] CO2: Apply the concept of classes, objects and methods to solve problems. [Application] CO3: Apply the concept of arrays and strings. [Appy] CO4: Implement inheritance and polymorphism building secure applications. [Apply] CO5: Apply the concepts of interface and error handling mechanism. [Apply]					
Course Content:						

Module 1	Basic Concepts of Programming and Java	Assignment	Problem Solving	12 Sessions
Download Eclipse IDE to run Java programs, Sample programs on Data types, Identifiers, Variables, Constants in java, Operators, Assignments and Expression, Basic Input/ Output functions, Control Statements: Branching and Looping.				
Module 2	Classes, objects, methods and Constructors	Assignment	Problem Solving	14 Sessions
Problem solving using Classes, Objects and Methods: defining a class, adding data members and methods to the class, access specifiers, instantiating objects, reference variable, accessing class members and methods. Use Static Polymorphism: Method overloading, constructors, constructor overloading, this keyword, static keyword, Nested classes, Accessing members in nested classes.				
Module 3	Arrays, String and String buffer	Assignment	Problem Solving	10 Sessions
Using Arrays and Strings : Defining an Array, Initializing & Accessing Array, Multi –Dimensional Array, Array of objects. String: Creation & Operation. String builder class, methods in String Buffer.				
Module 4	Inheritance and Polymorphism	Assignment	Problem Solving	12 Sessions
Inheritance: Defining a subclass, Types of Inheritance, super keyword. Dynamic Polymorphism: Method overriding. Final keyword: with data members, with member functions and with class. Abstract keyword: with data members, with member functions and with class, Exception handling.				
Module 5	Input & Output Operation in Java	Assignment	Problem Solving	12 Sessions
Input/output Operation in Java(java.io Package), Streams and the new I/O Capabilities, Understanding Streams, working with File Object, File I/O Basics, Reading and Writing to Files, Buffer and Buffer Management, Read/Write Operations with File Channel, Serializing Objects, Observer and Observable Interfaces.				
P1: Programming Exercises on Basic Concepts.				

LEVEL 1: Discuss about datatypes and variables.

LEVEL 2: Demonstrate a simple java program

P2: Programming Exercises on Basic Concepts.

LEVEL 1: Discuss about datatypes and variables.

LEVEL 2: Demonstrate a simple java program

P3: Programming Exercises on operators, expressions based on a given scenario.

LEVEL 1: Explain operators, expressions.

LEVEL 2: Demonstrate operators

P4: Programming Exercises Command Line Arguments based on a given scenario.

LEVEL 1: Explain command line arguments

LEVEL 2: Demonstrate command line arguments

P5: Programming Exercises on basic Input/ Output functions and Control Statements: Branching

LEVEL 1: Explain Input/ Output functions

LEVEL 2: Demonstrate Control Statements: Branching

P6: Programming Exercises on Control Statements: Looping

LEVEL 1: Explain various loops.

LEVEL 2: Demonstrate Control Statements: Looping

P7: Programming Exercises on Creating Objects, classes on a given scenario.

LEVEL 1: Illustrate class, object and methods.

LEVEL 2: Execute java program using class and objects

P8: Programming Exercises on Adding methods and Constructors to the class based on a given scenario.

LEVEL 1: Illustrate methods and constructors

LEVEL 2: Execute java program using methods and constructors

P9: Programming Exercises on methods based on a given scenario.

LEVEL 1: Illustrate method overloading

LEVEL 2: Apply method overloading for the given scenario.

P10: Programming Exercises on methods based on a given scenario.

LEVEL 1: Illustrate constructors overloading

LEVEL 2: Apply constructor overloading for the given scenario

P11: Programming Exercises on methods for static members based on a given scenario.

LEVEL 1: Benefits of usage static members

LEVEL 2: Usage of Static Members for the given scenario

P12: Programming Exercises on static methods based on a given scenario.

LEVEL 1: Benefits of usage static methods

LEVEL 2: Usage of Static Methods for the given scenario.

P13: Programming Exercises on nested Classes based on a given scenario.

LEVEL 1: Benefits of usage nested classes

LEVEL 2: Apply the concept of usage of nested classes for the given scenario

P14: Programming Exercises on Arrays and its built-in functions based on a given scenario.

LEVEL 1: Illustrate one dimensional arrays and its functions.

LEVEL 2: Demonstrate programs with single-dimensional arrays and operations.

P15: Programming Exercises on Arrays and its built-in functions based on a given scenario.

LEVEL 1: Illustrate multi dimensional arrays and its functions.

LEVEL 2: Demonstrate programs with multi-dimensional arrays and operations.

P16: Programming Exercises on String Class and its built-in functions based on a given scenario.

LEVEL 1: Explain about String class and String methods.

LEVEL 2: Execute simple java applications for String and StringBuffer operations

P17: Programming Exercises on String Buffer Class and its built-in functions based on a given scenario.

LEVEL 1: Explain about StringBuffer class and String methods.

LEVEL 2: Execute simple java applications for String and StringBuffer operations

P18: Programming Exercises on String Builders and its built-in functions based on a given scenario.

LEVEL 1: Explain about String Builders.

LEVEL 2: Execute java applications for String Builders

P19: Programming Exercises on single, multi level Inheritance and super keyword based on given scenario.

LEVEL 1: Explain single and multi level inheritance.

LEVEL 2: Demonstrate simple applications for the different types of inheritance

P20: Programming Exercises hierarchical Inheritance and super keyword based on given scenario.

LEVEL 1: Explain hierarchical inheritance.

LEVEL 2: Demonstrate simple applications for hierarchical inheritance

P21: Programming Exercises on Overriding.

LEVEL 1: Differentiate method overloading and method overriding.

LEVEL 2: Demonstrate simple program with dynamic method dispatch.

P22: Programming Exercises on Final based on given scenario.

LEVEL 1: Implement programs using concept of final.

LEVEL 2: Use final keyword for the given problem

P23: Programming Exercises on Abstract keyword based on given scenario.

LEVEL 1: Implement programs using concept of Abstract.

LEVEL 2: Use abstract keyword for the given problem

P24: Programming Exercises on Interface based on a given scenario.

LEVEL 1: Differentiate abstract class about interface

LEVEL 2: Implement interfaces in the given problem

P25: Programming Exercises on Exception Handling based on a given scenario.

LEVEL 1: Explain exception handling

LEVEL 2: Solve the given problem using exception handling mechanism.

P26: Programming Exercises on Character Stream Classes based on a given scenario.

LEVEL 1: Explain Character Stream Classes

LEVEL 2: Solve the given problem using Character Stream Class.

P27: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

P28: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

P29: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

P30: Programming Exercises on Read/Write Operations with File Channel based on a given scenario.

LEVEL 1: Explain Read/Write Operations with File Channel

LEVEL 2: Solve the given problem using Read/Write Operations with File Channel.

Targeted Application & Tools that can be used : JDK /Eclipse IDE/Visual Studio Code / net Beans IDE.

Course Code: CSE2271	Course Title: Software Design and Development	L-T- P- C	3-0-0-3
Version No.	1.0		
Course Pre-requisites	NIL		
Anti-requisites	NIL		
Course Description	The objective of this course is to provide the fundamentals concepts of Software Engineering process and principles. The course covers software requirement engineering processes, system analysis, design, implementation and testing aspects of software system development. The course covers software quality, configuration management and maintenance.		
Course Objectives	The objective of the course is to familiarize the learners with the concepts of Software Engineering and attain Skill Development through Participative Learning techniques.		
Course Out Comes	On successful completion of this course the students shall be able to: 1] Describe the Software Engineering principles, ethics and process models(Knowledge) 2] Identify the requirements, analysis and appropriate design models for a given application(Comprehension) 3] Understand the Agile Principles(Knowledge)		

	4] Apply an appropriate planning, scheduling, evaluation and maintenance principles involved in software(Application)			
Module 1	Introduction to Software Engineering and Process Models (Knowledge level)	Quiz		10 Hours
Introduction: Need for Software Engineering, Professional Software Development, Software Engineering Ethics, Software Engineering Practice-Essence of Practice, General Principles Software Development Life Cycle Models: Waterfall Model – Classical Waterfall Model, Iterative Waterfall Model, Evolutionary model-Spiral, Prototype.				
Module 2	Software Requirements, Analysis and Design (Comprehension level)	Assignment	Development of SRS documents for a given scenario	12 Hours
Requirements Engineering: Eliciting requirements, Functional and non- Functional requirements, Software Requirements Specification (SRS), Requirement Analysis and validation. Requirements modelling- Introduction to Use Cases, Activity diagram and Swim lane diagram. CASE support in Software Life Cycle, Characteristics of CASE Tools, Architecture of a CASE Environment. Design: Design concepts, Architectural design, Component based design, User interface design.				
Module 3	Agile Principles & Devops (Knowledge level)	Quiz		10 Hours
Agile: Scrum Roles and activities, Sprint Agile software development methods - Scaling, User Stories, Agile estimation techniques, Product backlogs, Stake holder roles, Dynamic System Development Method.				

Devops: Introduction, definition, history, tools.				
Module 4	Software Testing and Maintenance (Application Level)	Assignment	Apply the testing concepts using Programing	13 Hours
Software Testing-verification and validation, Test Strategies - White Box Testing, Black box Testing. Automation Tools for Testing. Software Quality Assurance-Elements of software quality assurance, SQA Tasks, Goals and Metrics, Software configuration management- SCM process, SCM Tools (GitHub). Maintenance- Characteristics of Software Maintenance, Software Reverse Engineering, Software Maintenance Process Models.				
Targeted Application & Tools that can be used: Selenium, GitHub, CASE Tools				
Text Book 1. Roger S. Pressman, “Software Engineering – A Practitioner’s Approach”, VII Edition, McGraw-Hill, 2011. 2] B2. Bob Hughes, Mike Cotterell, Rajib Mall, “Software Project Management”, VI Edition, McGraw-Hill, 2011				
References 7. Rajib Mall, “Fundamentals of Software Engineering”, VI Edition, PHI learning private limited, 2015. 8. Ian Sommerville, “Software Engineering”, IX Edition, Pearson Education Asia, 2011. 9. Agile Software Development Principles, Patterns and Practices. 1st Edition, Wiley, 2002				
Topics Relevant to “Skill Development: Black box Testing, White box Testing, Automated Testing for Skill development through Participative Learning Techniques. This is attained through assessment mentioned in the course handout				

Course Code: CSE2258	Course Title: Web Technologies	L-T- P- C	2	0	0	2
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	NIL					
Course Description	This course highlights the comprehensive introduction to scripting languages that are used for creating web-based applications. The associated laboratory provides an opportunity to implement the concepts and enhance critical thinking and analytical skills.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Web Technology and attain Skill Development through Experiential Learning techniques.					
Course Outcomes	On successful completion of this course the students shall be able to: CO1: Implement web-based application using client-side scripting languages. (Apply) CO2: Apply various constructs to enhance the appearance of a website. (Apply) CO3: Apply server-side scripting languages to develop a web page linked to a database. (Apply)					
Course Content:						
Module 1	Introduction to XHTML	Quizzes and Assignments	Quizzes on various features of XHTML, simple applications			20 Sessions

Basics: Web, WWW, Web browsers, Web servers, Internet. XHTML: Origins and Evolution of HTML and XHTML: Basic Syntax, Standard XHTML Document Structure, Basic Text Markup, Images, Hypertext Links, Lists, Tables, Forms, Frames, Syntactic Differences between HTML and XHTML, Demonstration of applications using XHTML for Responsive web pages.					
Module 2	Advanced CSS	Quizzes and assignments	Comprehension based Quizzes and assignments; Application of CSS in designing webpages		20 Sessions
Advanced CSS: Layout, Normal Flow, Positioning Elements, Floating Elements, Constructing Multicolumn Layouts, Approaches to CSS Layout, Responsive Design, CSS Frameworks					
XML: Basics, Demonstration of applications using XML with XSLT.					
Module 3	PHP – Application Level	Quizzes and assignments	Application of PHP in web designing		20 Sessions
PHP: Introduction to server-side Development with PHP, Arrays, Superglobal Arrays, \$GET and \$POST, \$_SERVER Array, \$_FILES Array, Reading/Writing Files, PHP Classes and Objects, Object Oriented Design, Working with Databases, SQL, Database APIs, Managing a MySQL Database. Accessing MySQL in PHP, Applications.					
Project work/Assignment:					
Assignments are given after completion of each module which the student need to submit within the stipulated deadline.

Course Content:					
Module 1	Introduction to XHTML Features	Quizzes and Assignments	Quizzes on various features of XHTML, simple applications		8 Sessions
	Standard XHTML Document Structure, Basic Text Markup such as headings, paragraphs, lists, tables, forms, and semantic tags.				
Module 2	CSS Styling	Quizzes and assignments	Comprehension based Quizzes and assignments; Application of CSS in designing webpages		10 Sessions
	Apply CSS3 to style HTML elements, including layout techniques, color schemes, typography, and responsive design principles.				
XML: Basics, Demonstration of applications using XML with XSLT.					
Module 3	PHP – Application Level	Quizzes and assignments	Application of PHP in web designing		12 Sessions
PHP: Introduction to server-side Development with PHP, Arrays, Superglobal Arrays, \$GET and \$ POST, \$_SERVER Array, \$_Files Array, Reading/Writing Files, PHP Classes and Objects, Object Oriented Design, Working with Databases, SQL, Database APIs, Managing a MySQL Database. Accessing MySQL in PHP, Applications.					

List of Laboratory Tasks:

Experiment No. 1: Demonstration of XHTML features

Level 1: Demonstration of various XHTML Tags (Level 1)

Level 2: Design and develop static web pages for an online Book store (Level 2).

Experiment No. 2: Application of CSS in web designing

Level 1: Design a document using XHTML and CSS to create a catalog of items for online electronic shopping.

Level 2: Create and save XML document for students' information and display the same using cascaded style sheet.

Experiment No. 3: Application of PHP in web designing.

Level 1: Write a PHP program to read the personal information of a person such as first name, last name, age, permanent address, and pin code entered by the user into a table created in MySQL. Read the same information from the database and display it on the front end.

Level 2: Using PHP develop a web page that accepts book information such as ISBN number, title, authors, edition, and publisher and store information submitted through the web page in MySQL database.

Experiment No. 4: Building a website.

Build a website for organizing an International Conference. The conference website must be able to collect the author's details and upload a file.

Targeted Application & Tools that can be used:

Xampp web server to be used to demonstrate PHP.

Project work/Assignment:

Assignments are given after completion of each module which the student need to submit within the stipulated deadline.

Topics related to development of "FOUNDATION":

- 10. Web, WWW, Web browsers, Web servers, Internet.
- 11. CSS, PHP.
- 12. Designing the website for healthcare.

The objective of the course is to familiarize the learners with the concepts of Web Technology and attain Skill Development through Experiential Learning techniques.

Course Code: CSE2260	Course Title: Database Management Systems Type of Course: Theory only - PCC	L-T-P-C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	Foundational understanding of data types, data structures, basic programming knowledge, familiarity with operating systems and file management. Basic knowledge of set theory, logic, and discrete mathematics to understand relational algebra and query formulation.					
Anti-requisites	NIL					
Course Description	This course introduces the foundational principles of database management systems, including data models, schemas, and architectures. This course provides a solid foundation on the relational model of data and the use of relational algebra. It develops skills in SQL for data definition, manipulation, and control, enabling students to construct and execute complex queries. The course also introduces the concept of object oriented and object relational databases and modern database technologies like NoSQL . The also course allows the students to gain insights into data storage structures and indexing strategies for optimizing query performance.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of DatabaseManagement Systems and attain Employability through Problem Solving Methodologies.					
Course Out Comes	On successful completion of the course the students shall be able to: 13. Describe the fundamental elements of relational database management systems. [Understand] 14. Examine databases using SQL query processing and Optimization. [Apply] 15. Design simple database systems applying the normalization constraints and demonstrate the database transaction processing, recovery, and security. [Apply] 16. Interpret the concept of advanced databases and its applications. [Apply]					
Course Content:						
Module 1	Introduction to Database Modelling and Relational Algebra (Understand)	Assignment	Problem Solving	10 Sessions		

Topics: Introduction to Database: Schema, Instance, 3-shema architecture, physical and logical data independence, Data isolation problem in traditional file system, advantages of database over traditional file systems. Entity Relationship (ER) Model, ER Model to Relational Model, Examples on ER model. Relational Algebra with selection, projection, rename, set operations, Cartesian product, joins (inner and outer joins), and division operator. Examples on Relational Algebra Operations.				
Module 2	Fundamentals of SQL and Query Optimization (Apply)	Assignment	Programming	11 Sessions
Topics: SQL Database Querying, DDL, DML, Constraints, Operators, Set Operators, Aggregate Functions, Joins, Views, Procedures, Functions and Triggers. Database programming issues and techniques: Embedded SQL, Dynamic SQL; SQL / PSM and NoSQL. Query Optimization: Purpose, transformation of relational expressions, estimating cost and statistics of expression, choosing evaluation plans, linear and bushy plans, dynamic programming algorithms.				
Module 3	Relational Database Design & Transaction Management (Apply)	Assignment	Problem Solving	12 Sessions
Topics: Relational database design: Problems in schema design, redundancy and anomalies, Normal Forms based on Primary Keys-(1NF, 2NF, 3NF), Boyce-Codd Normal Form, Multi valued Dependency (Fourth Normal Form), Join Dependencies (Fifth Normal Form), lossy and lossless decompositions, Database Denormalization. Transaction Management: The ACID Properties; Transactions and Schedules; Concurrent Execution of Transactions; Lock- Based Concurrency Control; Performance of locking; Transaction support in SQL; Introduction to crash recovery; 2PL, Serializability and Recoverability; Lock Management; The write-ahead log protocol; Check pointing; Recovering from a System Crash; Media Recovery; Other approaches and interaction with concurrency control.				
Module 4	Advanced DBMS Topics (Apply)	Assignment	Case Study	12 Sessions
Topics: Advanced topics: Object oriented database management systems, Deductive database management systems, Spatial database management systems, Temporal database management systems, Constraint database management systems. New database applications and architectures such as Data warehousing, Multimedia, Mobility, NoSQL, NativeXML databases (NXD), Document-oriented databases, Statistical databases.				

Targeted Application & Tools that can be used:

Application Area: Relational database systems for Business, Scientific and Engineering Applications.

Tools/Simulator used: MySQL DB for student practice.

Also demonstration of ORACLE DB on object-relational database creation and JDBC connection.

3. Problem Solving: Constructing ER-Diagrams for a given real time requirements, Normalizing the databases, querying the databases using relational algebra.
4. Programming: Implementation of any given scenario using MySQL.

Course Code: CSE2261	Course Title: Database Management Systems Lab Type of Course: 1) Laboratory - PCC	L-T-P-C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	Foundational understanding of data types, basic programming knowledge, operating systems and file management.					
Anti-requisites	NIL					
Course Description	The Database Management Systems (DBMS) Laboratory is designed to provide students with hands-on experience in database design, implementation, and management using SQL and database management tools such as MySQL. The lab complements theoretical concepts learned in database courses by allowing students to practice database creation, querying, and optimization techniques. The DBMS Lab enables students to develop industry-relevant skills in database management, preparing them for careers in software development, data engineering, and database administration.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Database Management Systems and attain Employability through Problem Solving Methodologies.					
Course Out Comes	On successful completion of the course the students shall be able to: 17. Demonstrate the database concepts, practice, and SQL queries. [Apply] 18. Design and implement database schemas while applying normalization techniques to optimize structure. [Apply] 19. Develop and implement stored procedures, triggers, and views for automation and efficiency. [Apply] 20. To Design and build database applications for real world problems. [Apply]					
Course Content:						
List of Laboratory Tasks: Create Employee, Student, Banking and Library databases and populate them with required data. Do the following experiments of different lab sheets on those databases.						
Labsheet-1 [3 Practical Sessions]						
Experiment No 1: [1 Session]						
1. To study and implement the different language of Structured Query Language. Level 1: Perform operations using Data Definition Language and Data Manipulation Language commands including different variants of SELECT on Student DB. Level 2: Identify the given requirements; valid attributes and data types and Perform DDL and DML operations on a given scenario. [Banking Databases]						
Experiment No. 2: [2 Sessions]						
2. To study and implement the concept of integrity constraints in SQL. Level 1: Create tables on Banking database using PRIMARY KEY, NOT NULL, UNIQUE, FOREIGN KEY and demonstrate the working of relational, logical, pattern matching, BETWEEN, IS NULL, IN and NOT IN Special Operators on Student Database. Level 2: Enforce different types of data and referential integrity constraints. Then try queries with special operators based on the student database. [Banking Database].						
Labsheet-2 [3 Practical Sessions]						
Experiment No. 3: [1 Session]						
3. Implement complex queries in SQL. Level 1: Implement the conjugate of GROUP BY, ORDER BY and aggregate functions on Banking Database. Level 2: Implement MySQL DB queries on library database using appropriate clauses and aggregate functions. Also order the data either in ascending and descending order using corresponding						

clause. [Library databases].

Experiment No. 4: [2 Session]

4. To study and implement different types of Set and Join Operations [2 Slots]

Level 1: Demonstrate different types of Set Operations (UNION, UNION ALL, INTERSECT, MINUS) and Join Operations (INNER JOINS, OUTER JOINS, CROSS JOIN, NATURAL JOIN) on two or more tables of Airline Database. Level 2: Use Set and Join operations to retrieve the data from two or more relations (tables) as per the given scenario. [Airline Database]

Labsheet-3 [2 Practical Sessions]

Experiment No. 5: [2 sessions]

5. To study and implement Views, and Procedures in MySQL DB.

Level 1: Implement MySQL Views, and Procedures in ORACLE DB on Employee database.

Level 2: Analyze the requirement and construct views, and Procedures on Mini Project Domain. [Banking Database]

Labsheet-4 [2 Practical Sessions]

Experiment No. 6: [2 Sessions]

6. To study and implement Functions, and Triggers in MySQL DB.

Level 1: Implement Oracle Functions and Triggers in Oracle on Employee database.

Level 2: Analyze the requirement and construct Functions and Triggers. [Supply chain Database]

Labsheet-5 [2 Practical Sessions]

Experiment No. 7: [2 Sessions]

7. To study and implement Functions, and Triggers in MySQL DB.

Level 1: Implement Oracle Functions and Triggers in Oracle on Employee database.

Level 2: Determine the requirement and construct Functions and Triggers. [Supply chain Database]

Labsheet-6 [4 Practical Sessions]

Experiment No. 8: [2 Sessions]

8. To implement the concept of forms and reports.

Level 1: Implement the concept of forms and reports.

Level 2: Examine the schema relationship.

Experiment No. 9: [2 Sessions]

9. Create the database using the given schema. (Flight Management)

Level 1: Implement a relational database based on the provided schema for the Flight Management system, including the creation of tables, relationships, and constraints.

Level 2: Demonstrate schema relationships by defining primary and foreign keys to ensure data integrity within the Flight Management database.

Labsheet-7 [4 Practical Sessions]

Experiment No. 10: [2 Sessions]

10. Create the database using the given schema. (Company database)

Level 1: Implement the database schema by defining tables, relationships, and constraints according to the given Company Database schema.

Level 2: Demonstrate the schema's relationships and data integrity by creating and linking tables as per the specified requirements.

Experiment No. 11: [2 Sessions]

11. Create the database using the given schema. (Student Library)

Level 1: Implement forms and reports based on the provided Student Library database schema, ensuring effective data entry and reporting mechanisms.

Level 2: Demonstrate the schema relationships within the Student Library database, demonstrating how these relationships influence the creation and functionality of forms and reports.

Labsheet-8 [1 Sessions]

12. Design a mini project based on the databases such as Inventory Management System, University Management System, Hospital Management System, etc.

Level 1: Implement the real time database.
 Level 2: Analyze the working of database in real time.

Targeted Application & Tools that can be used:

Application Area: Relational database systems for Business, Scientific and Engineering Applications.

Tools/Simulator used: MySQL DB for student practice.

Also demonstration of ORACLE DB on object-relational database creation and JDBC connection.

Percentage of changes in this version: 50% of changes from earlier version. New topics are highlighted initalic.

5. Problem Solving: Constructing ER-Diagrams for a given real time requirements, Normalizing the databases, querying the databases using relational algebra.
6. Programming: Implementation of any given scenario using MySQL.

Text Books:

Course Code: CSE2262	Course Title: Analysis of Algorithms Type of Course: Theory PCC	L- T- P- C	3	1	0	4
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	Nil					
Course Description	This course introduces techniques for the design and analysis of efficient algorithms and methods of applications. This course discusses the classic approaches for algorithm design such as Divide and Conquer, Dynamic Programming, Greedy method. This course also describes other basic strategies searching solution space. The core concepts of analyzing algorithms and classifying them into various complexity classes is covered in the end.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Analysis of Algorithms and attain Skill Development through Problem Solving Methodologies.					

Course Out Comes	On successful completion of the course the students shall be able to: 1. Compute efficiency of a given algorithm.[Apply] 2. Apply divide and conquer technique for searching and sorting Problems.[Apply] 3. Apply the Dynamic Programming technique for a given problem. [Apply] 4. Apply greedy technique for solving a Problem.[Apply] 5. Demonstrate Back tracking technique and limitations of Algorithms.[Apply]			
Course Content:				
Module 1	Introduction	Assignment	Simulation/Data Analysis	10 Sessions
Introduction, Asymptotic Notations and its properties, Best case, worst case and average case- Sequential search, Sorting; Mathematical analysis for Recursive and Non-recursive algorithms: Substitution method and Master's Theorem.				
Module 2	Divide-and-conquer	Assignment	Simulation/Data Analysis	08 Sessions
Introduction. Insertion Sort; Merge sort, Quick sort, Binary search.				
Module 3	Dynamic programming	Term paper/Assignment	Simulation/Data Analysis	10 Sessions
Introduction with examples, Principles of Memoization, 0-1 Knapsack Problem, Bellman-Ford algorithm, Floyd-Warshall's Algorithms. Chain Matrix Multiplication.				
Module 4	Greedy technique	Term paper/Assignment	Simulation/Data Analysis	09 Sessions
Introduction, Fractional Knapsack Problem, Minimal Spanning Tree: Prim's Algorithm and Kruskal's Algorithm, Single-source Shortest Path: Dijkstra's Algorithm				
Module 5	Complexity Classes	Term paper/Assignment	Simulation/Data Analysis	08 Sessions
Complexity Classes- P,NP- NP Hard and NP Complete - Boolean Satisfiability Problem (SAT). Branch and Bound: Knapsack problem; Backtracking, - N-Queens problem.				
Text Book 3. Anany Levitin, <i>"Introduction to the Design and Analysis of Algorithms"</i>, 3rd edition, Pearson Education, 2018. 4. Thomas H.Cormen, Charles E.Leiserson, Ronald L. Rivest and Clifford Stein, <i>"Introduction to Algorithms"</i>, 4th edition, MIT Press, 2022.

7. [Algorithms Specialization in Coursera by Stanford University\(Group of 4 courses\).](#)
8. [Algorithms Coding Contest Links maintained by Prof Gerth Stølting Brodal of Aarhus University](#)

Topics relevant to “SKILL DEVELOPMENT”: knapsack, prim’s, kruskal’s algorithm, quick sort, binary search for **Skill Development** through **Problem Solving methodologies**. This is attained through assessment component mentioned in course handout.

Course Code: CSE2263	Course Title: Analysis of Algorithms Lab Type of Course: Lab - PCC	L- T-P- C	001
Version No.	1		
Course Pre-requisites	Nil		
Anti-requisites	NIL		
Course Description	This course introduces techniques for the design and analysis of efficient algorithms and methods of applications. This course discusses the classic approaches for algorithm design such as Divide and Conquer, Dynamic Programming, Greedy method. This course also describes other basic strategies searching solution space. The core concepts of analyzing algorithms and classifying them into various complexity classes is covered in the end.		
Course Objective	The objective of the course is to familiarize the learners with the concepts of Analysis of Algorithms and attain Skill Development through Experiential Learning Methodologies.		
Course Out Comes	On successful completion of the course the students shall be able to: 1. Compute efficiency of a given algorithm. [Applying] 2. Apply divide and conquer technique for searching and sorting Problems.[Applying] 3. Apply the Dynamic Programming technique for a given problem. [Applying] 4. Apply greedy technique for solving a Problem.[Applying] 5. Demonstrate Back tracking technique and limitations of Algorithms.[Applying]		
Course Content			
Module 1	Introduction		3 S e s s i o n s
Measuring running time of an algorithm, Compare running time of algorithms, Implement sorting algorithms such as bubble sort, selection sort			
Module 2	Divide-and-conquer		3 S e s s i o n s

		n s
Compare searching algorithms: Linear Search, Binary Search; Compare Sorting algorithms: Insertion Sort, Merge Sort, QuickSort.		
Module 3	Dynamic programming	3 S e s s i o n s
Introduction and memorization: Factorial; Coin Change Problem ; Floyd-Warshall's Algorithm.		
Module 4	Greedy technique	3 S e s s i o n s
Fractional Knapsack Problem; Minimal Spanning Tree Algorithms-Prim's Algorithm, Kruskal's algorithm		
Module 5	Complexity Classes	3 S e s s i o n s
Branch and Bound: Knapsack problem; Backtracking, - N-Queens problem.		
	List of Laboratory Tasks: 1. Measuring running time of an algorithm Objective: To experimentally determine the running time of basic algorithms for input size $n=10, 100, 1000$, etc. by taking difference of starting time and ending time. 2. Compare running time of algorithms Objective: To execute two algorithms to solve the same problem, and to comparatively evaluate the better algorithm for large values of N.	

	3. Implement sorting algorithms such as bubble sort, selection sort Objective: To implement comparison based sorting strategies. 4. Compare searching algorithms Objective: To implement two searching strategies and compare their performance. 5. Compare Sorting algorithms Objective: To implement searching strategies that follow top down design approach(Insertion sort, merge sort). 6. Quick Sort Objective: To demonstrate Quick sort and its variants, and their impact on running time. 7. Dynamic Programming Objective: To demonstrate Dynamic Programming approach with the help of Factorial algorithm. 8. Coin Change Problem Objective: To implement an efficient algorithm for the Coin Change problem. 9. Floyd-Warshall's Algorithm Objective: To demonstrate how dynamic programming is used with the help of Floyd-Warshall's algorithm. 10. Fractional Knapsack Problem Objective: To demonstrate how greedy method can be used to solve the Fractional Knapsack Problem. 11. Minimal Spanning Tree Algorithm Objective: To implement greedy strategy to solve the Minimal Spanning Tree problem using Prim's Algorithm. 12. Kruskal's Minimal Spanning Tree Algorithm Objective: To implement greedy strategies to solve the Minimal Spanning Tree problem using Kruskal's Algorithm. 13. Knapsack Problem Objective: To implement Knapsack problem using branch and bound technique. 14. N-Queen's Problem Objective: To demonstrate backtracking method with the help of N-Queen's problem. 15. Case Study Objective: To demonstrate how various techniques can be used to solve the same problem with the help of Knapsack problem.
	Targeted Application & Tools that can be used 2. PyTorch/Jupyter Notebook – For Python programming

Course Code: CSE2264	Course Title: Essentials of AI Type of Course: Program Core Course -Theory	L-T-P-C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	This course introduces the student to the basics of artificial intelligence. In this course, the student first learns the various search methods for problem-solving, followed by knowledge-based logic representations. After that, the student will learn about uncertainty in AI, as well as approaches to solve such challenges such as Naïve Bayes Classifier and Hidden Markov Models. Topics: Uninformed search, Heuristic search, Local search, Adversarial search, Constraint satisfaction, logic, First Order Resolution, Probability, Naïve Bayes Classifier, and Hidden Markov Model (HMM).					

Course Objectives	The objective of the course is EMPLOYABILITY of student by using EXPERIENTIAL LEARNING techniques.			
Course Out Comes	On successful completion of this course the students shall be able to: 1. Explain different methods of searching, proving, and analysis in AI [Understand] 2. Implement various graphical and adversarial search algorithms. [Apply] 3. Prove, by resolution, different situations using First Order Logic [Apply] 4. Solve sequence labeling problems using HMM [Apply]			
Course Content:				
Module 1	Search Methods for Problem-Solving	Problem-Solving Tests	NPTEL Assignments	No. of Sessions: 13
Introduction – History of AI, Agents and Environment, Types of AI and Learning. State Space Search; General Formulation of Search Problems; Data Structures used in Searching. Uninformed Search Algorithms – Breadth First Search, Depth First Search, Uniform Cost Search, Generalized Uniform Cost Search (a.k.a Dijkstra’s Single-Source Shortest Path), Iterative Deepening Depth-First Search, Time and Space Complexity Analysis of Uninformed Search Algorithms. Heuristic Search Algorithms – Heuristics and Admissibility, Greedy Best-First Search, A* Search and weighted A* Search.				
Module 2	Advanced Search Methods	Problem-Solving Tests	NPTEL Assignments	No. of Sessions: 12
Local Search – Local Search, Hill Climbing, Genetic Algorithms, Gradient Descent. Adversarial Search – Minimax Search, Alpha-Beta Pruning, Ideal Ordering. Constraint Satisfaction – Constraint Satisfaction Problems Definitions and Examples – Map Colouring, N Queens, Cryptarithmic, Generalized CSP; Back-tracking Heuristics; Arc Consistency and Path Consistency				
Module 3	Knowledge-Based Logic Representation	Automated Theorem Proving using FOL Resolution	NPTEL Assignments	No. of Sessions: 10
Propositional Logic – Syntax and Semantics of Propositional Logic. Logical connectives. Inference Rules. Conjunctive and Disjunctive Normal Forms. First Order Logic – Syntax and Semantics of Propositional Logic. Logical connectives. Inference Rules. Conjunctive and Disjunctive Normal Forms. Resolution – Resolution Principle. Propositional and First Order Resolution. Applications for solving story problems using Resolution				
Module 4	Uncertainty in AI	Representing problems as HMM	NPTEL Assignments	No. of Sessions: 06
Probability – Probability Definitions. Conditional Probability. Bayes Theorem. Naïve Bayes Classifier. Using Naïve Bayes Classifier for Supervised Learning. Hidden Markov Models – Definition of HMM. Sequence Labeling and Markov Assumption. Sub-Problems in HMM and their solutions – Forward Probability and Viterbi Algorithm. Applications of Sequence Labeling in Natural Language Processing (Eg. Part-of-Speech Tagging). Introduction to Deep Learning – Artificial Neurons, Activation Functions, Multilayer Perceptron.				
Targeted Application & Tools that can be used: 1. Implementation of a shortest-path finder using different search algorithms. 2. Implementation of a sequence labeler using Viterbi Algorithm.				
Project work/Assignment: Mention the Type of Project /Assignment proposed for this course 1. Group project on one of the topics mentioned above (Eg. Adversarial search).

Course Content:		No. of Sessions: 15 (30 hours)				
Experiment No. 1: File Handling Level 1: Read text files using Python Level 2: Parse text files using Python						
Experiment No. 2: Implementation of Graph Representations Level 1: Implement graph representations by taking input from the console Level 2: Implement graph representations by taking input from files.						
Experiment No. 3 & 4: Implementation of Uninformed Search Algorithms Level 1: Implement uninformed search algorithms – BFS and DFS – on unweighted graphs. Level 2: Implement uninformed search algorithms – Uniform Cost Search and Dijkstra’s SSSP – on weighted graphs						
Experiment No. 5: Implementation of Heuristic Search Algorithms						

Level 1: Calculate the upper-bounds of admissible heuristics using Dijkstra's SSSP.

Level 2: Implement Greedy Best-First Search and A* Search Algorithms.

Experiment No. 6 & 7: Implementation of Adversarial Search

Level 1: Implement a Game Tree

Level 2: Perform Alpha-Beta Pruning and Ideal Ordering

Experiment No. 8 & 9: Implementation of a CSP Solver

Level 1: Implement a CSP solver to solve a cryptarithmic problem

Level 2: Implement a CSP solver for map colouring

Experiment No. 10: Using Python Packages for CSP

Level 1: Implement a CSP solver for Sudoku

Level 2: Implement a CSP solver for Addoku

Experiment No. 11: Implement a Family Tree Parser

Level 1: Perform logic programming using logpy.

Level 2: Implement a family tree parser

Experiment No. 12 & 13: Implement a Decision Maker

Level 1: Implement a Minesweeper solver

Level 2: Implement a Battleship solver

Experiment No. 14 & 15: Hidden Markov Model

Level 1: Implement a generic HMM

Level 2: Build a PoS Tagger using a HMM with the Brown Corpus and the Universal Dependencies Tagset.

Targeted Application & Tools that can be used:

3. Google Colab
4. Python IDEs like PyCharm

Project work/Assignment: Mention the Type of Project /Assignment proposed for this course

The course is a lab-based course with all the assessments centrally evaluated. Every experiment consists of **two sessions**. The first session involves exploring a solution to the problem. The second session involves solving a particular problem.

REACH GREATER HEIGHTS

Approved by AICTE, New Delhi

Course Code: CSE2266	Course Title: Theory of Computation	L- T-P- C	3	0	0	3
Version No.	2.0					
Course Pre-requisites	nil					
Anti-requisites	NIL					
Course Description	The course deals with introduction of formal languages and the correspondence between language classes and the automata that recognize them. Topics include: Formal definitions of grammars and acceptors, Deterministic and Nondeterministic systems, Grammar ambiguity, finite state and push-down automata; normal forms; Turing machines and its relations with algorithms.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Theory of Computation as mentioned above and attain Skill Development through Problem Solving Methodologies.					
Course Outcomes	On successful completion of the course the students shall be able to: 1. Describe various components of Automata. (Knowledge) 2. Illustrate Finite Automata for the given Language. (Application) 3. Distinguish between Regular grammar and Context free grammar. (Comprehension) 4. Construct Push down Automata. (Application) 5. Construct Turing machine for a Language. (Application)					
Course Content:						
Module 1	Introduction to automata theory	Assignment	Problems on Strings and Language operations	6 classes		
Topics: Introduction to Automata Theory, Applications of Automata Theory, Alphabets, Strings, Languages & operations on languages, Representation of automata, Language recognizers, Finite State Machines (FSM): Deterministic FSM, Regular languages, Designing FSM, Nondeterministic FSMs						
Module 2	Finite Automata	Assignment	Assignment Problems on DFA, NFA's	13 Sessions		

Topics:

Basic concepts of Finite automata, DFA- definitions of DFA, Deterministic Accepters
Transition Graphs and Languages

and DFA's, Regular Languages, NFA- Definition of a Nondeterministic Acceptor,
Languages and NFA's Why Non- determinism? Equivalence of Deterministic and
Nondeterministic Finite Accepters, Reduction of the Number of States in Finite Automata.

Module 3

Regular Expressions &
Context Free Grammar

Assignment

Problems on RE,
CFG, PT, PL and
Ambiguity

12
Sessions

Topics: Formal Definition of a Regular Expression, Languages Associated with Regular Expressions, Languages, Regular Languages (RL) and Non-regular Languages: Closure properties of RLs, to show some languages are not RLs, Closure Properties of Regular Context Free Grammars-Examples of Context-Free Languages, Leftmost and Rightmost Derivations, Derivation Trees, Relation Between Sentential Forms and Derivation Trees, Ambiguity in Grammars and Languages: Ambiguous Grammars, Removing Ambiguity, Chomsky Normal Form, Gribiche Normal Form.

Module 4

Push down
Automata

Assignment

Problems on
pushdown
Automaton

08 Sessions

Topics:

Definition of a Pushdown Automaton, Language Accepted by a Pushdown Automaton,
Acceptance by Final State, Acceptance by Empty Stack, From Empty Stack to Final State,
From Final State to Empty Stack Equivalence of PDA's and CFG's: From Grammars to
Pushdown Automata.

Module 5

Turing Machine

Assignment

Problems on
Turning Machine

07 Sessions

Topics:

Definition of a Turing Machine, Turing Machines as Language Accepters, Example
Languages to construct Turing

machine, Turing Machines as Transducers, Halting Programming Techniques for Turing
Machines

Targeted Application & Tools that can be used:

Targeted Application:

1. Text Processing

2. Compilers

3. Text Editors

4. Robotics Applications

5. Artificial Intelligence

Tools:

1. JFLAP (Java Formal Language and Automata Package) Software simulation tool. It's interactive educational

software written in Java to experiment topics in automata theory.

2. Turing machine Online simulators.

Text Book(s):

1. Peter Linz, "An introduction to Formal Languages and Automata", Jones and Bartlett Publications 6th Ed, 2018.

Reference(s):

1. Aho, Ullman and Hopcroft, "Theory of Computation", Pearson India 3rd Edition 2008.

2. Michael Sipser, "Theory of Computation", Cengage India 3rd Ed, 2014.

E-Resources

NPTEL course – https://onlinecourses.nptel.ac.in/noc21_cs83/preview

Course Code: CSE2269	Course Title: Operating Systems	L-T- P- C	3	0	0	3
Version No.	1.0					
Course Pre-requisites	Nil					

Anti-requisites	NIL			
Course Description	This course introduces the concepts of operating system operations, operating system structure and its design and implementation. It covers the classical operating systems internal algorithms such as process scheduling, synchronization, deadlocks detection and recovery and memory management. The course also enhances the problem solving, systems programming ability and case studies.			
Course Object	The objective of the course is to familiarize the learners with the concepts of Operating Systems and attain Employability through Problem Solving Methodologies.			
Course Out Comes	On successful completion of the course the students shall be able to: 1] Describe the fundamental concepts of operating Systems and case studies. [Knowledge] 2] Demonstrate various CPU scheduling algorithms. .[Application] 3] Apply various tools to handle synchronization problems.[Application] 4] Demonstrate deadlock detection and recovery methods [Application] 5] Illustrate various memory management techniques.[Application]			
Course Content:				
Module 1	Introduction to Operating System	Assignment	Programming	9 Hours
Topics: Introduction to OS , Operating-System Operations, Operating System Services, , System Calls and its types, Operating System Structure, System Program and its types, Linkers and Loaders, Overview of OS design and implementation, Open-source operating system				
Module 2	Process Management	Assignment/Case Study	Programming/Simulation	11 Hours
Topics: Process Concept, Operations on Processes, Inter Process Communication, Communication in client-server systems (sockets, RPC, Pipes), Introduction to threads - Multithreading Models, Thread Libraries, Threading Issues, Process Scheduling– Basic concepts, Scheduling Criteria, Scheduling Algorithms: FCFS, SJF, SRTF, RR and Priority.				
Module 3	Process Synchronization and Deadlocks	Assignment	Programming	11 Hours
Topics:				

The Critical-Section Problem- Peterson's Solution, Synchronization hardware, Semaphores, Classic Problems of Synchronization with Semaphore Solution- Producer-Consumer Problem, Reader-Writer problems, Dining Philosopher's Problem, . Introduction to Deadlocks, Necessary conditions for deadlock, Resource allocation Graph, Methods for handling deadlock: Deadlock Prevention and Implementation, Deadlock Avoidance and Implementation, Deadlock detection & Recovery from Deadlock.

Module 4	Memory Management	Assignment	Programming/Simulation	10 Hours

Topics:

Introduction to Memory Management, Basic hardware-Base and Limit Registers, Memory Management Unit(MMU), Dynamic loading and linking, Swapping, Contiguous and Non-Contiguous Memory Allocation, Segmentation, Paging - Structure of the Page Table – Virtual Memory and Demand Paging – Page Faults and Page Replacement Algorithms, Copy-on-write, Allocation of Frames, Thrashing

Introduction to File system management: File System Interface (access methods, directory structures), File system implementation.

Targeted Application:

Application area is traffic management system, banking system, health care and many more systems where in there are resources and entities that use and manage the resources.

Software Tools:

Oracle Virtual Box/VMWare Virtualization software [Virtual Machine Managers]. Used to install and work on multiple guest **Operating Systems** on top of a host OS.

Intel Processor identification utility: This software is used to explain about multi-core processors. It helps to identify the specifications of your Intel processor, like no of cores, Chipset information, technologies supported by the processor etc.

Project work/Assignment

Demonstrate process concepts in LINUX OS.

Simulation of CPU scheduling algorithms.

Develop program to demonstrate use of Semaphores in threads.

Develop program to demonstrate use of deadlock avoidance algorithms.

Develop program to demonstrate use of page replacement algorithms.

Simulation of memory allocation strategies [first fit, best fit and worst fit].

Course Code: CSE2270	Course Title: Operating Systems Lab	L-T- P- C	0	0	2	1
Version No.	1.0					
Course Pre-requisites	Nil					
Anti-requisites	NIL					
Course Description	This laboratory course provides hands-on experience with the core concepts of operating systems through practical assignments, simulations, and case studies. It covers foundational aspects such as system calls, process and thread management, inter-process communication, synchronization, deadlocks, memory management, and file systems. Students will implement and simulate real-time OS components and scheduling algorithms, fostering deeper understanding of OS architecture and design. The lab also introduces modern OS tools, programming interfaces, and the basics of open-source OS environments.					
Course Object	The objective of the course is to familiarize the learners with the concepts of Operating Systems and attain Employability through Problem Solving Methodologies .					
Course Out Comes	On successful completion of the course the students shall be able to: 1] Demonstrate system-level programming using system calls and OS structures. [Apply] 2] Simulate process scheduling and multithreading techniques. [Apply] 3] Apply various tools to handle synchronization problems using semaphores and shared memory. [Apply] 4] Demonstrate memory management and file system concepts using simulation or scripting. [Apply]					
Course Content:						
Targeted Application: Application area is traffic management system, banking system, health care and many more systems where in there are resources and entities that use and manage the resources. Software Tools: Oracle Virtual Box/VMWare Virtualization software [Virtual Machine Managers]. Used to install and work on multiple guest Operating Systems on top of a host OS. Intel Processor identification utility: This software is used to explain about multi-core processors. It helps to identify the specifications of your Intel processor, like no of cores, Chipset information, technologies supported by the processor etc.						
List of Laboratory Tasks: Lab sheet -1 L1: Write a program to demonstrate the use of fork() and exec() system calls in process creation.						

L2: A system has limited memory and high-priority real-time processes. Design a scheduling algorithm that ensures responsiveness while preventing starvation.

Lab sheet -2

L1: Implement First-Come-First-Serve (FCFS) process scheduling using C or Python.

L2: You are designing a server that handles thousands of client connections. Compare multithreading and multiprocessing for this task and implement a basic server model.

Lab sheet -3

L1: Implement Round Robin Scheduling with a fixed time quantum.

L2: In a banking system, concurrent access to accounts leads to data corruption. Design a synchronization solution to avoid race conditions.

Lab sheet -4

L1: Write a program to create threads using Pthreads or Python's threading module.

L2: You're tasked with building a file access tracker in an OS. Implement a system to log file access patterns and identify frequent accesses.

Lab sheet -5

L1: Demonstrate inter-process communication (IPC) using pipes.

L2: A simulation tool needs to emulate process suspension and resumption. Design and implement such a mechanism using signals or condition variables.

Lab sheet -6

L1: Simulate the Producer-Consumer problem using semaphores.

L2: You're developing a system where sensor devices (producers) generate temperature readings, and data processors (consumers) store and process these readings. To prevent race conditions and ensure buffer safety, implement a synchronization mechanism using semaphores.

Lab sheet -7

L1: Implement Dining Philosophers Problem using threads and synchronization.

L2: In a multi-threaded cafeteria simulation, five philosophers sit around a circular table, each alternating between thinking and eating. To eat, a philosopher must hold two forks (represented by shared resources). Your task is to avoid deadlock and ensure no philosopher starves using thread synchronization techniques.

Lab sheet -8

L1: Write a program to simulate First Fit, Best Fit, and Worst Fit memory allocation strategies.

L2: A system with limited memory blocks needs to allocate memory to processes arriving with various size requests. Your task is to implement three classic memory allocation strategies—First Fit, Best Fit, and Worst Fit—to allocate memory to each process efficiently. Simulate and compare how memory gets allocated in each strateg

Lab sheet -9

L1: Demonstrate paging using a simple page table simulation.

L2: A program has a logical address space divided into pages. The system's memory is divided into equal-sized frames. When a program executes, its pages are loaded into available frames in main memory. Simulate the address translation process using a page table and demonstrate how a logical address is converted to a physical address.

Lab sheet -10

L1: Write a program to simulate page replacement algorithms like FIFO and LRU.

L2: In a virtual memory system, a process accesses pages in a specific order. The memory can only hold a limited number of pages (frames). When a page is needed and the memory is full, a page replacement algorithm is used to decide which page to evict. Simulate and compare FIFO and LRU algorithms for a given page reference string.

Lab sheet -11

L1: Simulate file directory structure (single level/two level).

L2: A university campus computer lab has limited memory space available for each student login session. When students open files or run programs, memory pages are loaded into available memory frames. Due to the limited number of frames, some pages must be replaced when new ones are needed. The lab system uses page replacement algorithms to decide which pages to evict when memory is full..

Lab sheet -12

L1: Write a shell script to demonstrate file handling commands in Linux.

L2: Design a command-line mini shell that can run background and foreground processes and handle basic built-in commands like cd, pwd, exit.

Project work/Assignment

Demonstrate process concepts in LINUX OS.

Simulation of CPU scheduling algorithms.

Develop program to demonstrate use of Semaphores in threads.

Develop program to demonstrate use of deadlock avoidance algorithms.

Develop program to demonstrate use of page replacement algorithms.

Simulation of memory allocation strategies [first fit, best fit and worst fit].

Course Code: APT4002	Course Title: Introduction to Aptitude (Audited)	L-T-P- C	0	0	2	0
Version No.	1.0					
Course Pre-requisites						
Anti-requisites	Nil					
Course Description	The objective of this course is to prepare the trainees to tackle the questions on various topics and various difficulty levels based on Quantitative Ability, and Logical Reasoning asked during the placement drives. There will be sufficient focus on building the fundamentals of all the topics, as well as on solving the higher order thinking questions. The focus of this course is to teach the students to not only get to the correct answers, but to get there faster than ever before, which will improve their employability factor.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Aptitude and attain Skill Development through Problem Solving techniques.					

Course Outcomes	On successful completion of the course the students shall be able to: CO1] Recall all the basic mathematical concepts they learnt in high school. CO2] Identify the principle concept needed in a question. CO3] Solve the quantitative and logical ability questions with the appropriate concept. CO4] Analyze the data given in complex problems. CO5] Rearrange the information to simplify the question			
Course Content:				
Module 1	Quantitative Ability	Assignment	Bloom's Level : Application	12 Hours
Topics: Introduction to Aptitude, working of Tables, Squares, Cubes				
Module 2	Logical Reasoning	Assignment	Bloom's Level : Application	18 Hours
Topics: Linear & Circular Arrangement Puzzle, Coding & Decoding, Blood Relations, Directions, Ordering and Ranking, Clocks and Calendars, Number Series, Wrong number series, Visual Reasoning				
Targeted Application & Tools that can be used: Application area: Placement activities and Competitive examinations. Tools: LMS				
Text Book 1. Quantitative Aptitude by R S Aggarwal 2. Verbal & Non-Verbal Reasoning by R S Aggarwal				
References 1. www.indiabix.com 2. www.youtube.com/c/TheAptitudeGuy/videos				
Topics relevant to Skill development: Quantitative and reasoning aptitude for Skill Development through Problem solving Techniques. This is attained through assessment component mentioned in course handout.				

Course Code: APT4004	Course Title: Aptitude Training- Intermediate Type of Course: Practical Only Course	L- T - P- C	0	0	2	0
Version No.						
Course Pre-requisites	Students should have the basic concepts of Quantitative aptitude along with its applications in real life problems.					
Anti-requisites	NIL					
Course Description	This is a skill-based training program for the students. This course is designed to enable the students to enhance their skills in Quantitative Aptitude.					
Course Objective	The objective of the course is to familiarize the learners with the concepts of Aptitude and attain Skill Development through Problem Solving techniques.					
Course Out Comes	On successful completion of this course the students shall be able to: CO1: Recall all the basic mathematical concepts. CO2: Identify the principle concept needed in a question. CO3: Solve the quantitative and logical ability questions with the appropriate concept. CO4: Analyze the data given in complex problems.					
Course Content:						
Module 1	Quantitative Ability 1	Assignment	16 Hours			

Topics:

Number System, Percentage, Ratio and Proportion, Average, Mixture and Allegation, Time and Work, Profit and Loss

Module 2	Quantitative Ability 2	Assignment	14 Hours

Topics:

Time Speed and Distance, Boats and Streams, Simple Interest, Compound Interest, Probability, Permutation and Combination

Targeted Application & Tools that can be used:

Application area: Placement activities and Competitive examinations. Tools: LMS

Continuous Evaluation:

CA1 – Online Test CA2 – Online Test CA3 – Online Test Assignment

Course Code: CIV7601	Course Title: Universal Human Values and Ethics Type of Course: MAC course	L-T-P-C	-	-	-	0
Course Pre-requisites	NIL					
Anti-requisites	NIL					
Course Description	The purpose of the course is to develop a holistic perspective in students’ life. The course adopts a self-reflective methodology of teaching and is designed to equip the students to explore their role in all aspects of living as a part of the society. It presents a universal approach to value education by developing the right understanding of reality through the process of self-exploration. This self-exploration develops more confidence and commitment in students enabling them to critically evaluate their pre-conditioning and present beliefs. As an outcome of the holistic approach, the students will be able to practice the ethical conduct in the social and professional life. The prime focus throughout the course is toward affecting a qualitative transformation in the life of the student rather than just a transfer of information. This course is designed to cater to Human Values and Professional Ethics.					
Course Objective	The objective of the course is ‘SKILL DEVELOPMENT’ of the student by using ‘SELF LEARNING’ techniques					
Course Outcomes	On successful completion of this course the students shall be able to: CO.1 Recognize the importance of Value Education through the process of self-exploration CO.2 Explain the human being as the co-existence of the self and the body in harmony. CO.3 Describe the role of foundational values in building harmonious relationships. CO.4 Summarize the importance of a holistic perspective in developing ethical professional behavior.					
Course Content:						
Module 1	Introduction to Value Education	Online Assessment	MCQ Quiz	5 Sessions		
Topics: Right Understanding, Relationship and Physical Facility (Holistic Development and the Role of Education), Understanding Value Education, Self-exploration as the Process for Value Education, Continuous Happiness and Prosperity – the Basic Human Aspirations, Happiness and Prosperity – Current Scenario, Method to Fulfil the Basic Human Aspirations.						
Module 2	Harmony in the Human Being	Online Assessment	MCQ Quiz	5 Sessions		

Topics:

Understanding Human being as the Co-existence of the Self and the Body, Distinguishing between the Needs of the Self and the Body, The Body as an Instrument of the Self, Understanding Harmony in the Self, Harmony of the Self with the Body, Programme to ensure self-regulation and Health

Module 3

Harmony in the Family and Society

Online Assessment

MCQ Quiz

5 Sessions

Topics:

Harmony in the Family – the Basic Unit of Human Interaction, 'Trust' – the Foundational Value in Relationship, 'Respect' – as the Right Evaluation, Other Feelings, Justice in Human-to-Human Relationship, Understanding Harmony in the Society, Vision for the Universal Human Order.

Module 4

Implications of the Holistic Understanding –
A Look at Professional Ethics

Online
Assessment

MCQ Quiz

5 Sessions

Topics:

Natural Acceptance of Human Values, Definitiveness of (Ethical) Human Conduct, A Basis for Humanistic Education, Humanistic Constitution and Universal Human Order, Competence in Professional Ethics, Holistic Technologies, Strategies for Transition towards Value-based Life and Profession

Targeted Application & Tools that can be used:

Application areas are Personal life, Education and Career, Workplace, Society and Environmental Responsibility

Tools: Online Tools – NPTEL and Swayam.

Project work/Assignment:

Assessment Type

- Online exams (MCQs) will be conducted by the Department of Civil Engineering through Linways.

The topics related to Human values and Professional ethics:

All topics in are relevant to Human values and Professional ethics.

Course Code: APT4006	Course Title: Logical and Critical Thinking Type of Course: Audited			L- T-P- C	0	0	2	0
Version No.	1.0							
Course Pre-requisites	Students should have the basic concepts of Logical reasoning and Critical thinking, along with its applications in real life problems.							
Anti-requisites	Nil							
Course Description	This is a skill-based training program for the engineering students (Undergraduate). This course is designed to enable the students to enhance their skills in Logical reasoning and Critical thinking.							
Course Objective	The objective of the course is to familiarize the learners with concepts in Logical reasoning and Critical thinking through problem solving techniques suitable for their career development.							
Course Outcomes	On successful completion of the course the students shall be able to: CO1] Understand all the concepts. CO2] Apply the concepts in problem solving. CO3] Analyze and structure the reasoning techniques and spatial visualization skills							
Course Content:								
Module 1	Logical Thinking	Assignment					16 Hours	
Topics: Syllogisms, Cubes and Dices, Mirror and Water images, Paper cutting and Folding, Embedded figures & Completion of figures, Data Interpretation, Data sufficiency								
Module 2	Critical Thinking	Assignment					14 Hours	
Topics: Analogy, Symbol and Notations, Statement and assumption, Cause of action, Statement and conclusion, Puzzles								
Targeted Application & Tools that can be used: Application area: Placement activities and Competitive examinations. Tools: LMS								
Evaluation	Continuous Evaluation							
	Topic wise evaluation Internal Assessments

Topics relevant to Skill Development Logical reasoning and Critical thinking for Skill Development through Problem solving Techniques. This is attained through assessment component mentioned in course handout.

Course Code: PPS 3018	Course Title: Preparedness for Interview Type of Course: Practical Only Course	L- T- P- C	0	0	2	1
Version No.		1.0				
Course Pre-requisites		Students are expected to understand Basic English. Students should have desire and enthusiasm to involve, participate and learn.				
Anti-requisites		NIL				
Course Description		This course is designed to enable students to understand soft skills concepts to be corporate ready. The modules are set to improve self-confidence, communicate effectively and Prepare for the Interview to assist in employability. It helps the students to get a glimpse of the acceptable corporate readiness and equip them with the fundamental necessities of being able to confidently deal with the highly competitive corporate environment and helps in crafting different types of resumes. The pedagogy used will be group discussions, flipped classrooms, continuous feedback, role-play and mentoring.				
Course Objective		The objective of the course is to familiarize the learners with the concepts of "Preparing for Interview" and attain SKILL DEVELOPMENT through PARTICIPATIVE LEARNING techniques.				

Course Out Comes		On successful completion of this course the students shall be able to: CO1: Develop professional Resumes CO2: Illustrate Resumes effectively CO3: Apply skills and knowledge learnt for active and effective Group Discussions and Interview		
Course Content:				
Module 1	Resume Building	Classroom activity		10 Hours
	Topics: Resume structure, use of templates, Do's and Don'ts, ATS methods, Cover Letter and Video Resume Activity: Real world scenarios			

Module 2	Group Discussion	Mock G D		9 Hours
	Topics: -Group discussion as a placement process, GD techniques like Keyword. SPELT & POV of affected parties. Do & Don't of GD, Case-lets and topics for GD, practice session and evaluation Activity:- Real world scenarios			
Module 3	Personal Interview	Grooming checks + Evaluation + Mock Interview+ Role Play		9 Hours
	Topics: Placement process, Different interview rounds, HR interviews, Interview questions and desired answers, Different types of interviews, Do's and Don'ts. Activity: - Role Play & Real-world scenario			
Module 4	Recap/Revision /Feedback Session	Practice sessions		2 Hours
	Targeted Application & Tools that can be used: 1. TED Talks 2. You Tube Links 3. Role Play activities			
	Project work/Assignment: Mention the Type of Project /Assignment proposed for this course			
	Continuous Individual Assessment			
	The Topics related to Skill Development: Art Of Presentation and Group Discussion for Skill Development through Participative Learning Techniques. This is attained through assessment Component mentioned in course handout.			

PRESIDENCY UNIVERSITY

Presidency University Act, 2013 of the Karnataka Act No. 41 of 2013 | Established under Section 2(f) of UGC Act, 1956
Approved by AICTE, New Delhi
