Course Description:

Robotic Process Automation (RPA) enables automating business processes using software robots. Software robots interpret, trigger responses, and communicate with other systems just like humans do. Robotic processes and intelligent automation tools can help businesses improve the effectiveness of services faster and at a lower cost than current methods. *Robotic Process Automation* (*RPA*) is an advanced technology that automates huge quantities of redundant tasks by applying artificial intelligence (AI). *RPA* can be used for *processing* transactions, manipulating data, triggering responses and communicating with other digital systems.

Topics include: Introduction Robotic Process Automation, UiPath programming techniques to deploy robot configurations, data extraction techniques, Debug a programmed robot including logging and exception handling, Maintain code version and source control, Record and Play, Data Manipulation, Taking Control of the Controls, Handling User Events and Assistant Bots, Exception Handling, Debugging, and Logging, Managing and Maintaining the Code, Deploying and Maintaining the Bot.

Course Description

The course will address what agile methods are, how they are implemented, and their impact on software engineering. A variety of agile methods will be described, but the focus will be on XP (Extreme Programming) and Scrum models. Issues associated with planning and controlling agile projects, along with the implications of empowered teams on the customer-supplier dynamic, will give a fuller picture of how the agile practices are realized. The course will conclude with a discussion of agile testing and some of the issues facing organizations adopting agile methods.

Topics include: Introduction to Agile technology, Big Picture of Agile Requirements, User Stories, Agile Estimating and Velocity, Understanding XP, XP Lifecycle, Adopting XP, Pair Programming, Collaborating with XP, Version Control, SCRUM Model, SPRINT, Role of Scrum Master, SCRUM Metrics, Staffing and Metrics, Test-driven development, testing tools.

Resolution: Resolved that the program regulations and curriculum of the new programs 2020-2024 are approved with the following suggestions.

1. Thorough faculty mentorship should be introduced to guide students in efficiently selecting Elective courses (DE and OE) from third semester onwards

2. Since Electives are introduced as early as in third semester, proper exercise must be done to ensure the electives are not too difficult for an average third semester student to get hold of the associated concepts and applications.

3. In the course structures of 2020 Batch CSE and all allied programs, the courses Transform Techniques Partial Differential Equation and Probability (MAT 107) and Numerical Methods, Probability Distributions and Sampling Techniques (MAT 108) have been proposed in the third and fourth semesters respectively. The members suggested to interchange the semesters for the two courses. Numerical Methods, Probability Distributions and Sampling Techniques (MAT108) should be in third semester and Numerical Methods, Probability Distributions and Sampling Techniques (MAT108) should be in the subsequent, i.e. fourth semester.
